Ver. 836. But leſt experience itſelf ſhould be thought to contradict the arguments he has brought from experience, he owns in theſe twenty verſes, that he cannot deny that wood, ſtone, and earth mixed together, do ſometimes remain inſenſible; otherwiſe we ſhould ſee living houſes, and ſenſible towers. He therefore confeſſes, that inſenſible things, unleſs they have a certain figure and magnitude, unleſs they be agitated in a due motion, and diſpoſed in a certain order, never compoſe ſenſible things. But let all things neceſſary and requiſite be allowed them, and then an animal will be produced from the moſt inſenſible of all things. For let wood putrify, or earth grow rotten with conſtant ſhowers, and you will ſoon behold a numerous train of animals ſpring from that putrified wood and rotten earth.

Ver. 856. Theſe five verſes contain another argument to this effect. If the principles of which,

ſenſe conſiſts be ſenſible, they muſt conſequently be ſoft; becauſe no hard or ſolid body is capable of ſenſe; and if they are ſoft, they muſt be corruptible likewiſe; for unleſs they are ſolids, they may be divided, and therefore loſe their nature. But the principles of things, as is before declared, ought to perſevere and remain uncorrupted. Thus the philoſopher Gaſſendus rightly explains this paſſage; but the grammarian Lambinus gives it a different interpretation; more agreeable to the rules of grammar, than to the doctrine of Lucretius. Moreover, this argument is chiefly deſigned againſt Plato and Anaxagoras: the firſt of whom held that all things are animated and ſenſible: the latter, that all things are in all things in ſuch a manner that the inſenſible parts of things are mixed with the ſenſible. Thus both they and their followers held, that ſenſibles proceed from ſenſibles.

Ver. 861. In theſe fifteen verſes, he propoſes another argument. Let us ſuppoſe, ſays he, with Plato and Anaxagoras, that theſe ſenſible, as they will have them to be, and conſequently ſoft principles of things, can be eternal, and not ſubject to diſſolution; yet they cannot be ſaid to be ſenſible; neither as parts, becauſe ſeparated parts have no ſenſe; for each part requires a union with the other parts to make it capable of ſenſe: and without a vital conſent and accord of the parts, there is no ſenſe whatever; nor as wholes, becauſe they then would be a certain kind of animals, and therefore mortal and corruptible, which contradicts the ſuppoſition.

Ver. 875. He goes on, in theſe five verſes; becauſe, ſays he, though they be admitted both as animals, and as immortal too, yet not an animal, at leaſt like any of thoſe we now ſee, would, or could be generated, that is to ſay, of its own, or combined into one ſpecies; but only a heap or crowd of various animalcules. Thus Gaſſendus: but Faber gives it another interpretation. Let it be granted, ſays he, that the principles are ſenſible; and ſince you will have ſo, not corruptible neither. What after all could be produced of them? Certainly nothing but animals: no tree, no metal, &c.

Ver. 880. In theſe eight verſes, he derides thoſe who aſſert, that atoms are indeed endowed with ſenſe, but not with that which appears afterwards in the animals that are made of thoſe atoms: to which he ſubjoins another argument, like that which he alleged above, at v. 820. Birds, ſays he, are made of eggs, and worms of rotten earth; but, who ever yet pretended that the eggs were ſenſible, or the putrid clods alive?

Ver. 888. But ſome perhaps will ſay, that the principles of things are indeed inſenſible, but that by the power and virtue of the thing that generates, thoſe principles are changed into ſenſibles, and enjoy ſenſe before they combine into an animal. To this Lucretius anſwers, in theſe fifteen verſes, that the principles, ſeparately taken, are altogether incapable of change; and that the ſenſe of no animal can be produced before the animal itſelf be perfect; while ſenſe requires ſuch a conſent and agreement of vital motions, as we ſhould in vain expect in the principles of things, which fly confuſedly ſcattered up and down in the air, the earth, the water, and fire. Here the poet ſeems to hint at thoſe philoſophers, who taught that all things are made of the four elements.

Ver. 903. The poet purſues his ſubject; and, in theſe ten verſes, appeals once more to the truth of experience. For, ſays he, a violent ſtroke which only diſſolves the texture and connection of the little bodies of which the animal conſiſts, takes away all manner of ſenſe; the animal is ſtunned, the ſoul is diſſipated; and its particles being diſpelled through the pores and iſſues of the body, death inevitably enſues.

Ver. 913. In theſe ten verſes, he declares, that if the ſtroke be ſomething weaker, all things may be reſtored to their former ſtate, after ſome ſmall diſcompoſure of the little bodies; the diſpoſition to vital motion ſtill having the upper hand; and not being quite broken and diſſolved. Thus the ſtunned ſenſes revive afreſh, the animal returns from the very gates of death, and recovers its former convaleſcency.

Ver. 923. In the next place, he proves, in theſe ten verſes, that the ſeeds of pleaſure and pain are therefore void of all ſenſe; becauſe, as pain proceeds from the violent expulſion of the ſeeds out of the ſtate in which they are; ſo pleaſure ariſes from the reſtoring of them into the ſame ſtate again. But the principles of things are ſimple; nor can their parts be driven from the ſtate in which they are, nor reſtored into the ſame ſtate again. And, thus ſince the atoms are incapable of being affected with pleaſure or with pain, they muſt be deſtitute of all ſenſe.

Ver. 934. In theſe twenty-three verſes, he compels his adverſaries to mere abſurdities. For, if things, becauſe they are ſenſible, muſt be made of ſenſibles likewiſe, that is to ſay, like things of like; men, for example, muſt, of neceſſity, conſiſt of principles, which even themſelves laugh, weep, diſcourſe, and reaſon concerning the mixture and compoſition of things, and even of their own ſelves, and inquire into what principles they are made of; for men laugh, weep, diſcourſe, and reaſon. But if laughing, weeping, and wiſe things can be compoſed of principles that neither laugh, weep, nor are wiſe, why ſhould not ſenſible things proceed from principles that are wholly inſenſible? He alſo urges another abſurdity: for if you aſſent that laughing, weeping, &c. things proceed from laughing, weeping, &c. principles, even thoſe ſeeds muſt be compoſed of others that are like them, and they again of others: and thus the progreſſion would be infinite, and never at an end.

Ver. 937. I have already obſerved, book i. ver. 925, that theſe two verſes are in the third book of Cowley's Davideis.

Ver. 955. He concludes, in theſe thirty-two verſes, this long diſputation concerning the production of ſenſible things: he recapitulates his former arguments, urges them yet more home,

and explains at large his opinion of the origin of ſenſe. When the earth, ſays he, receives the ſhowers that fall from heaven, ſhe becomes fruitful, and produces corn, graſs, and fruits, with which men and beaſts, ſenſible things, are nouriſhed. But Heaven, the father of all, is inſenſible; the deſcending ſhowers are inſenſible, and earth, the mother of all, no more ſenſible than they. Laſtly, When animals are diſſolved, part of them flies back to heaven, part returns to earth; inſenſible things both of them. Thus the particles that at one time are wholly deſtitute of ſenſe, being diſpoſed in a new order and poſition, become ſenſible at another time. Thus, too, ſenſible things, when that order and poſition of the ſeed is changed, grow ſtupid, and loſe their whole power of ſenſe and perception.

Seed celeſtial. aërial. ethereal. Thus, too, in the firſt book, ver. 298.

——When father ether kindly pours
On fertile mother earth his ſem'nal ſhow'rs.

For the rain that impregnates the earth, and makes her produce all things, comes not out of heaven, but falls down from the air. Some by the word celeſtial underſtand divine: an interpretation that agrees but ill with the opinion of Epicurus, who would not allow the gods to be the authors of things. Yet the other poets uſe the words *Aer*, *Æther*, *Cælum* & *Deus*, to ſignify the ſame thing. Hence Clemens. Alexand. out of Æſchylus, Strom. 5. Ζεὺς ἐστὶν αἰθὴρ, Ζεὺς τε γῆ, Ζεὺς δὲ οὐρανὸς, Ζεὺς τοὶ πάντα. Jupiter is the air, Jupiter is the earth, Jupiter is heaven, Jupiter is all things. Thus Ariſtotle, in the firſt book, de Generat. ſays, that ſome aſcribe to the earth, as it were, a female nature, and make her a mother, but call the heavens the ſun, and other things of like nature, a father. And this opinion Virgil follows, Georgic ii. ver. 325.

Tum Pater Omnipotens fœcundis imbribus Æther
Conjugis in gremium lætæ deſcendit, et omnes
Magnus alit, magno commixtus corpore, fœtus.

For then Almighty Jove deſcends, and pours
Into his buxom bride his fruitful ſhow'rs:
And mixing his large limbs with hers, he feeds
Her births with timely juice, and foſters teeming ſeeds. *Dryden.*

Ver. 964. Lucretius ſeems to have taken this from Epicharmus, who, ſpeaking of the death of I know not whom, ſays, Συντριβὴ καὶ διικρίθη, καὶ ἀπῆλθεν ὅθεν ἦνθε, πάλιν· γᾶ μὲν ἰς γᾶν, πνεῦμα δὲ ἄνω· τὶ τῶνδε χαλεπὸν, οὐδὲ ἐν· That is, he had been compounded and was diſſolved, and returned to the place from whence he came: the earth to earth, the ſpirit upwards. What mighty harm is there in all this? None at all. Euripides too had been drawing out of the ſame fountain; witneſs theſe verſes:

Ὅθεν δὲ ἕκαστος ἰς τὸ σῶμ' ἀφίκετο,
Ἐνταῦθ' ἀπῆλθε. πνεῦμα μὲν πρὸς αἰθέρα
Τὸ σῶμα δὲ ἰς γῆν·

And the following verſes are aſcribed to Ovid:

Bis duo ſunt homini: manes, caro, ſpiritus, umbra:
Quatuor iſta, loci bis duo ſuſcipiunt.
Terra tegit carnem, tumulum circumvolat umbra,
Orcus habet Manes, ſpiritus aſtra petit.

But how much they are in the right, who, contrary to the doctrine of Lucretius, interpret this paſſage as a conceſſion of the immortality of the ſoul, let themſelves judge. For, let it be granted that our ſouls conſiſt of the matter of ether, allow them made of fire, it will certainly follow that they are of a corporeal nature; and conſequently thoſe expoſitors are of the ſame opinion with Lucretius.

Ver. 980. The poet has ſeveral times already uſed this compariſon. See it explained, book i. v. 733, and v. 835, as likewiſe v. 643 of this book.

Ver. 986. To do juſtice to Lucretius, whom his interpreter in this place imperfectly renders, it is neceſſary to give his own words:

Sic ipſis in rebus item jam materiai
Intervalla, viæ, connexus, pondera, plagæ,
Concurſus, motus, ordo, poſitura, figuræ
Cum permutantur, mutari res quoque debent.

In theſe two verſes "intervalla, viæ," &c. upon which our tranſlator beſtows but theſe three words, order, figure, motion, are nevertheleſs contained all the conjuncts and events, or properties and accidents of the Epicurean atoms The poet mentions them in general, book i. ver. 493, where we have explained in general, likewiſe what is meant by them: He alſo, as may have been obſerved, has frequently made mention of ſome of them in many places of his arguments: but this being the ſole place where he has put them altogether, I have reſerved it to give a particular explication of them one by one. Firſt, *Intervala*, The intervals, that is to ſay, the diſtance and ſpace that intervenes between the atoms, when they aſſemble or come together to produce concrete bodies. Second, *Viæ*, The ways, are the regions and places, out of which, into which, through which, and in which the atoms are moved and continue. Third, *Connexus*, The connections are the proximities by which the atoms are more or leſs cloſely joined together. Fourth, *Pondera*, Weight, is the natural motion, by which they are carried downwards by their own heavineſs, in a direct line, or decline a little from it. Fifth, *Plagæ*, The ſtrokes or blows, which make them rebound when they ſtrike one another. Sixth, *Concurſus*, The concourſe or meeting of the atoms, by which they aſſemble and grow together. Seventh, *Motus*, Motion, is the lation, by which they are borne upwards, downwards, or any other way. Eighth, *Ordo*, The order, is the ordination, and diſpoſition, which they keep among themſelves in the procreation of things. Ninth, *Poſitura*, The ſite, and poſition in which they are placed. Tenth, *Figuræ*, The figures, are the exterior forms which they exhibit in things. Now, ſome of theſe are called conjuncts or properties; others, events, or accidents. Of the conjuncts three are ſaid to be primary: of the events, two. The three conjuncts of the atoms are magnitude, figure, and

weight, on which the other conjuncts depend. For motion, concourse, and stroke, are a consequence of weight. The two events are their site, and order, on which the other events likewise depend: for the intervals and connections depend on the site and position of the atoms; and the ways, places, or regions, on their order. Moreover, Lucretius will have all the qualities of concrete things to proceed from all the conjuncts and events of the atoms; though Epicurus seems to acknowledge but three of them to be necessary: Figure, site, and order; as may be seen in Laertius, lib. x. Empiricus adv Phys. lib. ii. and Lactantius, lib. iii. cap. 17. And as to the manner how all the qualities of concrete bodies proceed from these three last conjuncts and events of the atoms, you may consule P. Gassendus, l. 10. in Laert. pag. 218. & 317. where all those matters are at large explained.

Ver. 989. The seeds being now rightly prepared, and instructed with motion, he requires a work of them, than which nothing is greater, nothing more prudent, nothing more noble.

He builds with them other earths, other suns, other stars, and in a word, innumerable worlds in the infinite void. He owns this opinion to be new and incredible, but will not have it therefore rejected: And would his Memmius be attentive to his arguments, and weigh the matter seriously, it would daily appear less and less strange and wonderful: for many things seem indeed astonishing for a while, to which when men are once accustomed, they no longer suspect the truth of them ἀλλὰ μὴν τε Κόσμοι ἄπειροι εἰσὶ οἵ' ὁμοιοι τούτῳ, οἵτ' ἀνόμοιοι; says Epicurus to Herodotus.

Here the translator has totally omitted the four following verses of his author:

Quærit enim ratione animus, cum summa loci sit
Infinita foris hæc extra mœnia mundi;
Quid sit ibi porro, quò prospicere usque velit mens,
Atque animi jactus liber quo per volet ipse.

And indeed the interpreters vary in opinion concerning them; some retain them absolutely, others as positively reject them. In my opinion, they are neither absurd nor useless: for they explain the argument of the subsequent disputation; and the meaning of them is this: For I ask, says Lucretius, since without the walls of this world, these visible heavens, there is an infinite space, what is contained in that space, into which the mind is desirous to look, and by its own strength can freely consider without any hindrance or obstruction. This is the interpretation our translator himself gives this passage in the Latin edition of Lucretius.

Ver. 1006. If you will give credit to Epicurus, it is certain, that there is an infinite void; and that an infinity of seeds are flying up and down in it; but all those seeds did not combine into one body to compose this world of ours: Why then should we not believe, that in other parts of the infinite space, some atoms compose other frames, very like, or unlike this world which we inhabit and behold: especially since the same nature reigns every where, and exercises the same power in all the parts of the infinite void. This argument is contained in nineteen verses. Epicurus himself writes thus to Herodotus: αἱ τὲ γὰρ ἀτόμοι ὅσαι φέρονται τὴ πόῤῥω ταύτε, τὲ ἀλλόδε ἄλλαι ἐὶς ἀπερῤῥισίαν κόσμων ἀπείρων σαυερχονται· ὲ γὰρ κατηνάλονται αι τοιῦται ἀτόμοι (ἐξ ὧν ἄν γένοιτο ὁ κόσμος οὗτος, ἢ ἐξ ὧν ἄν ποιηθείη ἄλλος) ἤτ' ἐὶς ἕνα, (so Melbomius reads it) ἤτ' ἐὶς πεπερασμένες, ἤτ' ὅσοι τοιῦτω. ἀθ' ὅσοι διάφοροι τύτω, ὥσε ᾠδεν τὸ ἐμποδίζον εἰὶ πρὸὶ τὴν ἀπειρίαν τῶν κόσμων.

Ver. 1025. In these nine verses, he argues farther to this purpose. When all things that are requisite for the production of any thing are ready and at hand, why should not that thing be produced? But there is a sufficient store of matter, a place besides very proper; nor is there wanting that strength and power of nature, which composed this world of ours, of atoms that met fortuitously, and combined and joined together: Why then should not the same nature join together other matter likewise, which is prepared for her, and obedient to her; and produce other heavens, other earths, other seas, men, animals, &c. in other places of the infinite void? Metrodorus, an intimate friend of Epicurus, has comprised this and the preceding argument in these words: ἄτοπον εἶναι ἐν μεγάλῳ πεδίῳ ἕνα στάχυν γινεσθῆναι, καὶ ἕνα κόσμον ἐν τῷ ἀπείρῳ· ὅτι δὲ ἄπειροι καλὸ τὸ πλῆθος ὅπλον ἐκ τ ἀπείρε τὰ αἴτια εἶναι ἐὶ γὰρ ὁ μὲν κόσμος πεπερασμένος, τὰ δὲ αἴτια πάντα ἄπειρα ἐξ ὧν ὕδε ὁ κόσμος γέγονεν, ἀνάγκη ἀπειρυς εἶναι, ὅπε γὰρ τὰ πάντα γέγονεν αἴτια, ἐκεῖ καὶ τὰ ἀπο]ελέσματα. Plutarchus de Placit. Philosoph. lib. 1. cap 5.

Ver. 1034. Lastly. He proposes his third argument in these ten verses. Consider all created things, you will find in each kind a numerous train of like animals, which are called individuals: as in the human kind, men; in the brute, beasts, &c. Will you then pretend that there is only one sun and one earth: since the sun, the earth, the heavens, &c. are alike subject to perish, as are the other compound bodies. For according to the doctrine of those philosophers, against whom Lucretius here disputes, the reason why the several kinds of animals contain many of each kind is, because the individuals die.

Thus our poet ends his arguments to prove the plurality of worlds. But Epicurus and Lucretius were not the only men who held an infinite number of worlds. For, to say nothing of Plutarch, who, in the first de Placit. Philosoph. says expressly, there are many worlds: nor of Heraclitus, who, together with the Stoics, held an innumerability of worlds successively, as they call it, that is to say, that the worlds were renewed and made out of one another: nor of Heraclides, who, as well as the Pythagoreans, believed all the stars that glitter in the heavens, and light this globe of ours, to be so many other worlds: not to mention, I say, any of these, it is certain, from the testimony of Stobæus, Eclog. Phys. lib. ix. that Anaximander, Anaximenes, Archelaus, Xenophanes, Diogenes, Leucippus, admitted an in-

finite number of worlds. To these we may likewise add Anaxarchus, who, as Plutarch says, drew tears from Alexander the Great, by telling him, that the number of worlds was infinite. Democritus and Epicurus spoke aloud, that there were infinite worlds: And their disciple Metrodorus too was of the same opinion, and said, that it is no less absurd to imagine that there is but one world in the infinite universe, than it would be to affirm, that but one blade of corn is growing in a vast, spacious, and fruitful plain: as Plutarch witnesses in the place above cited. Thales indeed affirmed there is but one world, and that it was created by God. Empedocles too taught the same doctrine; but then he held it to consist of a very small particle of the universe. Yet why may there not be an actual multiplicity, though not an infinity of worlds: let us content ourselves with the belief of a possibility that there may be more than we know, or are aware of: For indefinite is not infinite; man may not find the term, and yet a term there may be. Let us only modestly remember to reserve the infinite, which the divines term *essentiæ*, that the speculation may be the safer. The rational and acute Bruno has travelled far on this argument, and strives to evince that there is a plurality of worlds: and for my part, so long as the considerations of these things rather adds to, and heightens the adoration of that infinite power of the great God, who, even by the author of the epistle to the Hebrews, is more than once only said to have created the worlds, Heb. i. 2. and xi. 3. I cannot see why we should censure such as have favoured and promoted these doctrines and opinions: among whom, besides the ancients before mentioned, are many of our late and best astronomers, as Kepler, Tycho Brahe, Galileo, Des Cartes, Gassendus, Hevelius, and divers others of extraordinary note and reputation: Yet we need not be obstinate, or too dogmatical, "adeo nefas existimandum est ea scrutari, quæ deus voluit esse celata," says Lactantius in his treatise de Origine Erroris. And whether or no there be more worlds than one, God only knows, who is both *intus* and *foris*; not as *in loco* but as being "ens infinitum, principiumque, cui omne innititur ens." I will therefore conclude this infinitely confounding and incomprehensible subject with these very pertinent words of Pliny, who, speaking of the globe of this vast universe, says: "Furor est, profecto furor est egredi ex eo, et tanquam ejus cunctæ plane jam sint nota, ire scrutari extra: quasi verò mensuram ullius rei possit agere qui sui nesciat, aut mens hominis videre quæ mundus ipse non capiat." Nat. Hist. lib. ii. cap. 1. It is a madness, indeed a mere madness, to go beyond the limits of this world, and to be perpetually seeking without it; as if we had already attained a perfect knowledge of the things that are within it: For how can he, who knows not his own, take the exact dimensions of any thing else: or how should the wit of any man pretend to perceive those things, which the very world itself cannot comprehend or contain?

Ver. 1044. In these fifteen verses, Lucretius, after his usual manner, takes occasion from the foregoing positions, to fall foul upon Providence: He has before given peace and quiet to his gods; because nothing can be happy that has any thing to do: But let us now suppose, says he, that this blessed and happy Deity can be disturbed and vexed with business or the care of any thing: yet what strength, what power is sufficient to preside over, and to govern an infinite number of worlds, of suns, of earths, &c.? For to rule an infinite number of worlds, is too great an office to be administered with ease, even by a god who would be always busy, and allow himself no rest at all. Thus our impious poet treats that puny god, whom he feigned to be like man; and at length he concludes the whole with a scoff that atheists commonly advance, and which indeed is of more weight than this argument against Providence. Epicurus writes to the same purpose to Pythocles: Καὶ μὴν ἐν τοῖς μεμερισμένοις φόβον, καὶ τροπὴν, καὶ ἐκλείψιν, καὶ ἀναλλὴν, καὶ δύσιν, καὶ τὰ σύστοιχα τούτοις, μήτε λειτουργοῦντος τίνος νομίζειν χρῆναι δέεσθαι, μήτε διατάττοντος ἢ διατάξαντος, καὶ ἅμα τὴν πᾶσαν μακαριότητα ἔχοντος, μετὰ ἀφθαρσίας· ἡ γὰρ συμφόρησι πραγματεῖαι, καὶ φροντίδες, καὶ χάριτες μακαριότητι, ἄλλα ἀσθενείᾳ καὶ φόβῳ, καὶ προσδέησιν τῶν πλησίον.

Thus we see that Lucretius was so inveterate an enemy to the Divine Providence and Omnipotence, that he could not comprehend what Virgil not long after him visibly saw and believed, when in his 4th Georg. verse 221. he said,

——Deum namque ire per omnes
Terrasque, tractusque maris, cœlumque profundum, &c.

But the doctrine of Epicurus would not suffer our poet to believe, that the nature of our gods was sufficiently powerful to govern the affairs of the universe; and therefore he held, that all things arrive by accident, and that chance is the supreme disposer and governor of all. Plutarch tells us, that he embraced this opinion, having observed, "Malis esse benè, et bonis male:" i. e. to use the words of St. Ambrose, "Improbos abundare bonis, et bonos egere:" That the wicked abound in good things, and that the good are in want. An impious belief, which even Cicero himself condemns in the first book of the Nature of the Gods, where he says: "Sunt philosophi, et fuerunt, qui omnino nullam habere censerent humanarum rerum procurationem Deos. Quorum si vera est sententia, quæ potest esse pietas, quæ religio? Hæc enim omnia pure et caste tribuenda Deorum numini ita sunt, si animadvertuntur ab his, et si est aliquid a Diis immortalibus hominum generi tributum. Sin autem Dii neque possunt nos juvare, neque volunt, nec curant omnino, nec, quod agamus, animadvertunt, nec est, quod ab his ad hominum vitam permanere possit, quid est, quod ullos Diis immortalibus cultus, honores, preces adhibeamus?" In specie autem fictæ simulationis, sicut reliquæ virtutes, ita pietas inesse non potest, cum qua simul et sanctitatem et religionem tolli necesse est.

Quibus ſublatis perturbatio vitæ ſequitur et magna confuſio: atque haud ſcio an pietat adverſus Deos ſublata, fides etiam et ſocietas humani generis, et una excellentiſſima virtus juſtitiæ tollatur."

Ver. 1049. "Proh ſancta Deum tranquilla pectora pace!" ſays Lucretius. And Epicurus is obſerved by Dionyſius, biſhop of Alexandria, to fill his books with oaths and adjurations: "Ὅρκους δὲ καὶ ὁρκίσμους μυρίους τοῖς ἰδίοις ἀγγράφει, ὁμνύς τε σανεχῶς μὲν Δία, καὶ νὴ Δία ἐξορκῶν τὰς ἐνθυμήσεις, καὶ πρὸς ὕς διαλέγοντο, πρὸς τῶν Θεῶν" Euſebius, Prep. lib. 14. cap. 27. He aſſerts many oaths and adjurations in his books, ſwearing often, and adjuring his readers by Jupiter and all the gods. And we may find Lucretius too ſometimes of this humour, as appears by this paſſage, and ſome others, that may be obſerved here and there in this poem.

Ver. 1059. Having built an infinite number of worlds, and affirmed them to be mortal like animals, he now, in theſe twelve verſes, aſſerts, that they are nouriſhed, increaſe, and ſometimes diminiſh, and at length die away. For the infinite univerſe ſupplies ſeeds, which the world receives, and they duly joining with it, it becomes more ſtrong and vigorous: when it emits, and parts with as many ſeeds as it receives, then it ſtints its growth, and ſtays at a ſtand, that is, neither increaſes nor decreaſes: but when more ſeeds fly away from the world than it receives, and are duly conjoined to its maſs, then it waxes feeble, decays by degrees, and draws to an end.

This was the opinion of Epicurus, and he grounded this belief on theſe reaſons: I. Becauſe the world was once made, and had its beginning in time: as Cicero ſays, 1. de Nat. Deor. II. Becauſe he held the world to be of a like nature with animals. III. Becauſe each individual part of this world conſiſts of bodies that are born and die. IV. Becauſe there is a continual war between all the parts that compoſe this whole, which are always contending with one another, and which contention muſt of neceſſity weaken, and will at length occaſion the deſtruction of the whole frame. V. Becauſe he would not allow any thing in nature to be not born, incorruptible and eternal, except theſe three things, the atoms, the void, and the τὸ πᾶν ALL, or the univerſe. But theſe opinions of his concerning his infinite worlds, or the decay of this, depending on his abſurd, fortuitous concourſe, muſt of neceſſity have the ſame fate, and fall with it. Beſides, we may bid any man, who is fond of theſe opinions, look on the face of the world, as it is painted in hiſtories down from the Trojan wars, (for I preſs not more ancient, infallible records), about which time ſociety firſt began, and he will ſee it look as young now, as it did then, and that its vigour is ſtill as great.

However, ſome of the fathers of the Chriſtian church have not diſſented from this opinion: eſpecially not St. Cyprian, who writes to Demetrianus in theſe words: "Scire debes jam mundum non illis viribus ſtare, quibus prius ſteterat: nec vigore ac robore eo eſſe, quo ante prævalebat. Hoc, etiam nobis tacentibus, et nulla deſcripturis ſanctis prædicationibuſque divinis documenta præbentibus, mundus ipſe jam loquitur, et occaſum ſui rerum labentium probatione teſtatur. Non hyeme nutriendis ſeminibus tanta imbrium copia eſt: non frugibus æſtate torrendis ſolita flagrantia eſt: nec ſic verna temperie ſata læta ſunt; nec adeo aboreis fœtibus autumno fæcunda ſunt: Minus de effoſſis et fatigatis fontibus eruuntur marmorum cruſta: minus auri et argenti opes ſuggerunt: exhauſta jam metalla, et pauperes venæ breviantur in dies ſingulos: Decreſcit in arvis agricola: in mari nauta: miles in caſtris: innocentia in foro: juſtitia in judicio: in amicitia concordia: in artibus peritia: in moribus diſciplina. Minuatur neceſſe eſt, quidque fine jam proxima in occidua, et in extrema devergit."

Ver. 1067. Ovid. Metam. xv. ver. 214. ſays to the ſame purpoſe with Lucretius.

Noſtra quoque ipſorum ſemper, requique fine ulla,
Corpora vertuntur: nec quod fuimuſve, fumuſve,
Cras erimus.——

Which Dryden thus renders:

Thus even our bodies daily change receive;
Some part of what was theirs before they leave:
Nor are to-day what yeſterday they were:
Nor the whole ſame to-morrow will appear.

Ver. 1071. Having aſſerted that his worlds grow ſometimes bigger, ſometimes leſs, he explains in theſe twenty-ſeven verſes the whole reaſon of the growth and decay of animals, and affirms that the ſame reaſon holds good in other things likewiſe. Now animals grow, becauſe in the firſt part of their life, more nouriſhment is converted into their ſubſtance, than departs, and is loſt from it: in the middle part of their life, when they are grown to maturity, as much only is converted into the ſubſtance, as goes away from it: then the age of the animal is at a ſtand; that is to ſay, the animal neither grows nor decreaſes; but in its declining age, more flies away from its ſubſtance, than is converted into it. Thus the animal increaſes and waſtes away: but how it comes to paſs, that in the firſt part of life more is received and conjoined, in the middle part as much, and in the laſt leſs, the poet does not think fit to inquire: And indeed the reaſon of that is concealed, and to my knowledge ever will be ſo from atheiſts.

Ver. 1074. Thus Cicero, in the ſecond book de Nat. Deor. deſcribes the manner by which the food is diſtributed into all the parts of the body. It is firſt, ſays he, received into the mouth to be chewed and ground to pieces by the teeth; when it is thus chewed, it is conveyed through the meat-pipe into the ſtomach, to be concocted; when it is there concocted, it is carried firſt to the liver, then to the heart, and is diſtributed from thence by the veins into all other parts and members of the body: and by this means and manner it is, that the whole animal grows, and is nouriſhed.

Ver. 1081. Virg. Georg. 3. v. 66.

Optima quæque dies miseris mortalibus ævi
Prima fugit: subeunt morbi, tristisque senectus;
Et labor, & duræ rapit inclementia mortis.

In youth alone unhappy mortals live;
But ah! the mighty bliss is fugitive:
Discolour'd sickness, anxious labours come,
And age, and death's inexorable doom. *Dryd.*

Ver. 1098. He concludes in these thirty verses, that the world grows old in the same manner as animals do; that is to say, that the conduits and passages in the world, which answer to the veins in animals, being impaired and weakened by the continual blows they meet with from external bodies, receive with great difficulty the matter that flows down out of the infinite void, and is proper to support and repair the world. And this mighty frame is extended so far and wide, that it parts with more matter out of its substance, than it receives afresh from the void; and, therefore, must, of necessity diminish, grow feeble, and decay. The earth, as Epicurus held, produced formerly of her own accord, all kinds of animals, fruits, trees, &c. but we now find by experience, that she is past her teeming time; and, therefore, it cannot be denied but she now grows old.

Ver. 1105. I affirm, says the poet, that all these things did proceed from the earth: for animals were not let down from heaven, as the asserters of Providence pretend, by that chain, which none but one Homer ever saw: nor were they born of the sea, or from the waves that insult the shores. But that very earth, which at this day feeds and nourishes all kinds of things, is the very same earth that formerly brought them forth.

Ver. 1108. Homer feigned that all things were let down from heaven to earth by a golden chain. Yet, if we may take Plato's word for it, Homer meant only the sun, and shows that to be a chain of gold; because, while the sun rolls round the universe and enlightens it, all things are safely preserved, and live and flourish, as well as those that are among the gods, as in our earthly abodes. But if the sun should stand still, and cease from his revolution, as if he were bound in chains, all things must of necessity perish. Macrobius on the dream of Scipio, will have that chain of Homer to be an uninterrupted connection of causes, that bind themselves together by mutual bands, even from the Supreme God to the last dregs of matter. "Cumque omnia continuis successionibus se sequantur, degenerantia per ordinem ad imum meandi; invenietur pressius intuenti à summo Deo usque ad ultimam rerum sœcem una mutuis se vinculis religans, & nusquam interrupta connexio: & hæc est Homeri carena aurere, quam pendere de cœlo in terras Deum jussisse commemorat." Macrob. in Somn. Scip. lib. i. cap. 44.

Ver. 1111. Thus too Ovid, Metamorph. i. ver. 101.

Ipsa quoque, immunis rastroque intacta, nec ullis
Saucia vomeribus, per se dabat omnia Tellus.

And v. 107.

Ver erat æternum, placidique tepentibus auris
Mulcebant Zephyri natos sine semine flores.
Mox etiam fruges tellus inarata ferebat,
Nec renovatus ager gravidis canebat aristis.
Flumina jam lactis, jam flumina Nectaris ibant.
Flavaque de viridi stillabant ilice mella.

The teeming earth, yet guiltless of the plough,
And unprovok'd did fruitful stores allow.
The flow'rs unsown, in fields and meadows reign'd,
And western winds immortal spring maintain'd.
In soil'wing years the bearded corn ensu'd
From earth unask'd, nor was that earth renew'd:
From veins of valleys milk and nectar broke,
And honey sweated through the pores of oak.
Dryd.

To which I subjoin these incomparable verses of the same poet, in his translation of the fourth eclogue of Virgil:

Unlabour'd harvests did the fields adorn,
And cluster'd grapes then blush'd on ev'ry thorn:
The knotted oak did show'rs of honey weep,
And through the matted grass the liquid gold did creep.

Ver. 1115. The earth is become so barren, that though we provoke her by constant tillage, even till we weary our oxen, and wear out our peasants with continual labour, yet the ungrateful soil deludes the hopes of the tiller, and produces not the crop he had reason to expect from his toil and industry. An evident and convincing proof, that the earth is now grown old and worn out to that degree, that she can no longer bring forth as she did in her youthful years.

Ver. 1121. The poet has subjoined to the argument taken from the doctrine of Epicurus, the poetical fable of the Golden Age. But being jealous that men would ascribe the fertility of the earth in those days to the benevolence of the Deity, and to the bounty and goodness of the gods to the pious men of that age, he scoffs at that opinion, and despises their ignorance, who do not yet know that the earth is grown feeble and barren with old age.

Ver. 1123. Because in the beginning of the world, men had nothing to do but to worship the gods: since the earth then produced the fruits of its own accord, and they had no need to employ their time in tilling it.

ANIMADVERSION,

BY WAY OF RECAPITULATION, ON THE SECOND BOOK OF LUCRETIUS.

In this book are deposited all the treasures of Epicurus; of no great value indeed; yet many of the ancients were continually pillaging them, till at length Tully entirely rifled and laid them waste. Lucretius with great labour strove to renew and establish them again; but has met with the suc-

ſeſs he deſerved: for it has fared with the doctrine of Epicurus, as with a child of a ſickly race; though you cram it with the moſt nouriſhing and healthful food, it will at beſt be puny and infirm.

From v. 68. to v. 82. the poet teaches, that there is motion, nor do we diſown it. And that the motion of all things proceeds from the motion of the principles; and this too we grant. But when, v. 84. he aſcribes weight to the ſeeds, and aſſerts that to be the cauſe of their motion, he is too indulgent to himſelf and his atoms. Who can grant weight to all matter, and the ſame weight to bodies of the ſame bulk? Senſe and certain experience cry out againſt it. But Epicurus had obſerved, that ſtones, wood, in ſhort, all things that are contained within the bounds of this world tend downwards; and, therefore, believed that all things had deſcended from all eternity; which opinion, whoever embraces, will indeed be "nitidiſſimus de grege Epicuri Philoſophus." He may as reaſonably pretend, that the wheels, ſprings, or any other of the members and parts of an engine, will do the ſame thing ſeparately, which they perform jointly. But, let us even grant this too. He preſents us in the next place with infinite atoms, tending downwards through an infinite void by juſt degrees, and with equal velocity. In the immenſity of the longitudes, latitudes, and altitudes, an infinity of innumerable atoms are flying to and fro: and theſe atoms overtaking, and laying hold of one another in the interjected void, cling and join together, and thus compoſe all the forms and figures of things. But how came they to overtake and catch hold of one another, ſince they all move with equal ſwiftneſs? To this he anſwers, v. 210. and ſays, they decline a little, even the leaſt that can be. But even this declination is feigned at pleaſure; for, as Cicero ſays, 2 de Finib. "Ait declinare Atomos ſine cauſa, quo nihil turpuis eſt Phyſico: & illum motum naturalem omnium ponderum, è regione inferiorem locum petentium, ſine cauſa eripuit atomis: Nec tamen id, cujus cauſa hæc finxerat, aſſecutus eſt: nam ſive omnes Atomi declinabunt, nullæ unquam cohærebunt; ſive aliæ declinabunt, aliæ ſuo motu recte ferentur: primum erit hoc quaſi provincias Atomis dare, quæ recte, quæ oblique ferantur." For he ſays that the atoms decline, without alleging any reaſon for their declination, than which nothing is more unbecoming of a natural philoſopher. And without any reaſon likewiſe he has taken from the atoms that natural motion of all weights, that tend in a direct line to a lower place. Nor after all has he gained the point, for the ſake of which he invented all this; for either all the atoms will decline, none will ever ſtick together; or ſome will decline while others move, as they naturally ought in a right line. And this is, in a manner, to preſcribe to atoms their proper offices, and to enjoin ſome to deſcend in a direct line, others obliquely.

Lucretius himſelf is aware of this difficulty, v. 216. where he is ſo far from ſolving it, that he rather yields and ſubmits to its ſtrength. But, v. 240. he ſtarts another difficulty, by the help of which he endeavours to extricate himſelf from the former: or like the cuttle-fiſh, throws out clouds of darkneſs and obſcurity, that it may be more difficult to find and take him. For he aſſerts, that without this declination of the ſeeds, no reaſon can be given for the freedom of will which we perceive in all animals. But the ſame Cicero in the firſt book of the Nature of the Gods, anſwers him thus: "Hoc perſæpe facitis, Epicurei, ut cum aliquid non verſimile dicatis, & reprehenſionem effugere velitis; efferatis aliquid quod omnino ne fieri poſſit: at ſatius fuerit illud ipſum, de quo ambigebatur, concedere, quam tam impudenter reſiſtere; velit Epicurus, cum videret, ſi Atomi ferrentur in locum inferiorem ſuopte pondere, nihil fore in noſtra poteſtate, quod eſſet, earum motus certus & neceſſarius: invenit quo modo neceſſitatem effugeret, quod viz. Democritum fugerat: Ait Atomum, cum pondere & gravitate directâ deorſum feratur, declinare paulum. Hoc dicere turpius eſt, quam illud, quod vult, non poſſe defendere." The cuſtom of you Epicureans is this; when you aſſert any thing that is improbable to be true, and are deſirous to avoid reprehenſion, you advance ſomething that is wholly impoſſible to be done; but you would act more ingenuouſly, if you granted the matter in doubt, rather than inſiſted ſo obſtinately on your own opinions, like Epicurus, who, when he ſaw that if the atoms were moved downwards by their own weight, nothing would be in our power, becauſe their motion would be certain and neceſſary, found a way which Democritus never thought of, to avoid this neceſſity; and ſaid, that an atom, though by its own weight and heavineſs it he carried directly downwards, yet declines a little. To ſay this is more weak and diſhonourable than not being able to make good what he aſſerted. And in his book, De Fato, Cicero likewiſe ſays: "Epicurus uno tempore, res duas ſuſcipit inenodabiles; unam, ut ſine cauſa fiat aliquid, ex quo exiſtet, ut de nihilo quippiam fiat; quod nec ipſi, nec cuiquam Phyſico placet; alteram, ut cum duo Individua per inanitatem ferantur, alterum è regione moveatur, alterum declinet." Epicurus takes upon him at once to make good two things, for either of which no reaſon can be given: one, that any thing can be done without a cauſe; from whence it will follow, that any thing can be made of nothing; which neither himſelf nor any natural philoſopher will allow: the other, that when two indiviſible bodies are moved through the void, one of them ſhould deſcend in a ſtraight line, the other by declination. And, in the ſame book he goes yet farther; and ſays, "Quæ ergo nova cauſa in natura eſt, quæ declinat Atomum? aut num ſortiuntur inter ſe, quæ declinet, que non? aut cur minimo declinet intervallo, majore non? aut cur declinet uno Minimo, non declinet duobus aut tribus? Optare hoc quidem eſt, non diſputare; nam neque extrinſecus impulſam Atomum loco moveri & declinare dicit, neque in illo Inani, per quod feratur Atomus, quidquam fuiſſe cauſæ, cur ea non è regione ferretur, nec in ipſa Atomo mutationis aliquid factum eſt, quamobrem naturalem

ſui ponderis motum non teneret. Ita cum attuliſſet Epicurus nullam cauſam, quæ iſtam Declinationem efficeret, tamen aliquid ſibi dicere videtur, quam id dicat, quod omnium mentes aſpernentur & reſpuant." What new cauſe is there then in nature that can make an atom decline? Or have they caſt lots among themſelves which ſhall decline, and which not? Or, why does an atom decline the leaſt interval of ſpace, and not a greater? Or, why does it decline one leaſt, and not two or three? This is to chooſe what he will ſay, not to diſpute: for he neither ſays, that an atom declines in its motion, by reaſon of any outward impulſe, nor that in the void through which the atom is moved, there is any cauſe why it does not deſcend in a direct line; nor, laſtly, that any change is made in the atom itſelf that may oblige it not to keep and obſerve the natural motion of its own weight. Thus, though Epicurus alleges no cauſe of that declination, yet he ſeems to himſelf to ſay ſomething, even when he ſays that which the underſtanding and reaſon of all men deſpiſe and reject. And thus Cicero has laid waſte the gardens of Epicurus, and overthrown all that philoſophy that attacked even Providence itſelf.

But Lucretius is more ſucceſsful in that long diſputation, from v. 319. to v. 547. concerning the variety of the figures of his atoms: and likewiſe in that of the ſeeds of different figures that enter into the contexture of every compound body, which begins at v. 547. and ends at 683. He alſo adorns his arguments with fables properly introduced and applied, and ſupports his aſſertions with ſeveral ſtrong and convincing reaſons.

Nor will any adverſary of the Epicurean philoſophy ever be able to evade thoſe arguments, by which, from v. 684. to v 988. he demonſtrates, that his atoms are void of colour, ſmell, heat, in a word, of every quality, and of all manner of ſenſe. I confeſs he does not rightly explain the origin of ſenſe, but he proves, that the ſenſe of animals is not due to ſenſible ſeeds, which was his chief deſign in this book, with a ſharpneſs of wit and ſtrength of judgment, even worthy of Lucretius himſelf.

At length, from v. 589. to v. 1059. he builds innumerable worlds: and this too might have been granted, if he had aſſigned any proper architect for ſo great a work. "Sed quis credit ex Atomorum Concurſione fortuita hujus Mundi pulcherrimum ornatum eſſe perfectum? An cum machinatione quadam aliquid moveri videmus, ut Sphæram, ut Horas, ut alia permulta, non dubitamus quin ſint opera illa rationis? Cum autem impetum Cœli cum admirabili celeritate moveri, vertique videamus, conſtantiſſime conficientem viciſſitudines anniverſarias cum ſumma ſalute & converſatione rerum omnium, dubitamus quin ea non ſolum ratione fiant, ſed etiam excellenti quadam divinaque ratione? Quod ſi Mundos efficere poteſt Concurſus Atomorum, cur Porticum, cur Templum, cur Domum non poteſt, quæ ſunt minus operoſa, & multo quidem faciliora." Cicero, de Nat. Deor. lib. 2. Who can believe that this moſt beautiful frame of the world was produced and perfected by a fortuitous concourſe of atoms? When we ſee any thing move, as it were by art and ſkill, as the ſpheres, the ſeaſons, and many other things, do we doubt whether they are the works of reaſon? When we ſee with what wonderful celerity the ſun is moved and whirled around, and how he cauſes the annual changes and viciſſitudes to the utmoſt benefit and preſervation of all things, do we doubt that all theſe things are not the work of reaſon, nay, of an excellent and divine reaſon too? And if a concourſe of atoms can make worlds, why can it not make a portico, a temple, or a houſe, which requires leſs ſkill and labour, and are much more eaſy to make? Thus Cicero, that moſt grateful champion of Providence.

Laſtly, from v. 1060. to the end of this book, the reader may behold innumerable worlds born daily, and dying every day, and bleſs his own good fortune, that he remains ſafe and unhurt in the midſt of ſo many and ſo great ruins and devaſtations. Meanwhile, he cannot but ſmile to ſee ſome infant ſucking worlds, and others grown feeble and doddered with age, now dying with hunger, now choked up with fat. For nothing is more certain, than that Lucretius always luſes himſelf when he falls foul upon Providence.

PREFACE TO THE READER.

This is that book of Lucretius, which, above all the reſt, ought to be read with moſt judgment and diſcretion. For, ſince it is in this that the poet endeavours to prove the ſoul to be of a corporeal nature, it may fall out that ſome will too credulouſly yield themſelves up to his arguments; while others, perſuaded that ſuch a doctrine, right or wrong, ought to be condemned without mercy, will voluntarily deprive themſelves of reading ſo excellent a book. Leſt this ſhould happen, it will not be amiſs to put them in mind that many of the ancients were of opinion, that ſpirits are to be reckoned in the number of corporeal things. Among thoſe was not only Porphyrius, in his admirable Πραγματεία περὶ ἀποχῆς· but Plotinus and Jamblichus; and of us Chriſtians, Tertullian, Baſil, and Auguſtin, not to mention the more modern. Now, if theſe ancients were not condemned for following this belief concerning ſpirits, I think there is no reaſon that we ſhould be ſo much offended at Lucretius's opinion of corporeal ſouls. Hitherto is nothing but what you may read without being ſcandalized at it. And would to God Lucretius had ſtopped here: For others have af-

ferted the immortality of the ſoul, which, nevertheleſs, they believed to be of the ſame nature with ſpirits; however, they reſerved to it its own right, or what the bounty of God has beſtowed upon it. But our author, when he has ſhown the ſoul of a man to be a corporeal ſubſtance, ſtrenuouſly and obſtinately aſſerts, that it is impoſſible but that it muſt likewiſe be ſubject to death and diſſolution; and that the generality of men being aſtoniſhed, caſt down, and overawed by the tyranny of religion, are horribly miſtaken, to believe, that

Æternas nigra pænas in morte timendum.
Lucret.

they have any reaſon to dread eternal torments after death. Thus you ſee the rocks and ſhelves that you ought to avoid and fly from and you will do well to compare this doctrine of the Epicurean ſect with the arguments of the Platoniſts, who aſſerted the immortality of the ſoul: but much better, if laying aſide the diſputations and controverſies of this wavering and uncertain philoſophy, you apply yourſelf directly to him, who has demonſtrated, that the Parent and Father of all things is GOD OF THE LIVING, BUT NOT OF THE DEAD. Another thing, reader, you ought continually to have before your eyes, which is this: Be our ſouls ſpiritual, or if you will, corporeal: yet we ought not much to trouble our heads about theſe arguments of Lucretius, ſince being Chriſtians, as we are, we verily and unfeignedly believe, that the time will come that this brute and ſenſeleſs maſs of the body, which the ſoul now informs and guides, when after a courſe of years it is turned into corruption and duſt, and then ſcattered and diſperſed away will, nevertheleſs, at length unite again; and being thus collected and got together out of water, air, and earth, will remain and perſevere for an endleſs ſucceſſion of ages. Let Lucretius then prove, if he will, the nature of the ſoul to be corporeal, and therefore liable to death; he will advance nothing that will ſtartle a true Chriſtian; ſince we believe the future reſurrection and immortality of the body, upon ſurer grounds than any arguments of vulgar phyſiology, and of chemiſtry itſelf (for that wonderful experiment, of which Quercetanus and others make mention, concludes nothing for the reſurrection of the body), though they are equally, nay, more difficult to prove and believe. Let me add one thing more. The treatiſe of Tertullian, which is intituled De Anima, will aſſiſt you very much in the right underſtanding of this book: if you read it, you will peruſe the moſt excellent work of that great man. To conclude, If in this book, or in any other of my writings, the falſe opinions of Lucretius have dropped from me, either through haſte or inadvertency, I deſire it may be remembered that I am the actor, not the poet; and that I here unſay and recant all things of that nature which may have ſlipped from me by either of thoſe means. Nor, indeed, is my courſe of life ſuch, that when my ſoul comes to be ſeparated from my body, I ſhould willingly expect that end which nature has ordained for the brute animals that periſh. Farewell.

TANAQUIL FABER.

BOOK III.

THE ARGUMENT.

The poet flatters himſelf, that, in the two former books, he has fully and rightly explained the nature, and the properties of his atoms. In the four remaining books, he applies himſelf very attentively to deſcribe the effects which thoſe atoms produce. And firſt, as he had reaſon to do, he brings upon the ſtage the parts of the mind, and of the ſoul: And this is the ſubject of the diſputation of all this book, which he begins, I. With the praiſe of Epicurus, whom, from ver. 1. to ver. 92, he extols for having been the firſt who taught, that this world, and all things in it, were not made by the Deity, but by a fortuitous concourſe of atoms; and for delivering, by that doctrine, the minds of men from the fear of the gods, of death, and of puniſhments after death. II. Having by way of preface, ſaid this of Epicurus, he teaches, from ver. 92. to ver. 133, that the mind and the ſoul are a part of man, in like manner as the feet, the hands, the arms, the head, and the other members; and not a vital habit of the whole body, or an accord and conſent of all the parts of the body, which ſome of the ancient philoſophers called harmony. But that he may diſpute diſtinctly, and without confuſion, becauſe he uſes promiſcuouſly the words mind and ſoul, he teaches, III. from ver. 133. to ver. 160. that the mind and the ſoul are but one thing; but that the mind is the chief part, and reſides in the heart, becauſe fear, joy, and all the other paſſions, which obey and depend on the mind, diſcover themſelves there, while the ſoul, in which the locomotive faculty is ſolely placed, being diffuſed through the whole body, is moved as the mind pleaſes. IV. Then, from ver. 161. to 177, he endeavours to demonſtrate, that the nature of the mind and ſoul is corporeal, becauſe the mind touches the ſoul, and moves it, and the ſoul touches the body: but where there is no body there can be no touch. V. From ver. 178. to 307, he teaches, that this corporeal mind is compoſed of atoms extremely ſubtle, minute, and round. And particularly that this mind conſiſts of heat, wind, or vapour, and air, and of another thing, which conſiſting of the ſeeds the moſt ſubtle, the moſt minute, and the moſt ſubject to motion, is the principal and original cauſe of

ſenſe. But how the heat, the wind, the air, and this fourth, nameleſs thing, are mingled, or what proportion of each makes up the compoſition, he ingenuouſly confeſſes he cannot tell. VI. From ver. 308. to 331. he aſſerts, that the ſoul and body are ſo united together, that they cannot be ſeparated without the deſtruction of both of them. And, VII. from ver. 333. to 353, he aſſerts, that not only the mind, but the body too has perception, or rather the whole animal, compoſed of body and ſoul. VIII. After this, from ver. 353. to 396, he refutes the opinion of Democritus, who taught that the reſpective parts of the ſoul are fitted and joined to the reſpective parts of the body. And having affirmed before that the mind is the moſt excellent part of the whole compound, he now farther aſſerts, that the life and preſervation of the animal depends more on the mind than on the ſoul. IX. From ver. 396. to 809, he endeavours to prove, by ſix and twenty arguments, that minds and ſouls are born with the bodies, and die with them, and, by the way, derides the tranſmigration of Pythagoras. X. In the next place, from ver. 810. to 836, he teaches, that death is nothing, becauſe the ſoul, being mortal, has nothing to fear after death; nay, that if it be granted that the ſoul is immortal, as Plato held, yet death ſtill is nothing, ſince the ſeparated ſoul would not remember that ſhe had ever been before. XI. Then to ver. 874, he laughs at the vain anxiety of men concerning their ſepulture: and thence, to ver. 915. proves that death is not an ill, becauſe the dead want not thoſe good things which the living enjoy, but are exempted from thoſe calamities which afflict and torment us wretches that are alive. XII. That even life itſelf is not a thing very deſirable, becauſe it has nothing new to give us, but always the ſame maukiſh pleaſures, till at length we lothe them, to ver. 976. XIII. But leſt the fables, which the poets feign of hell and of future puniſhments, ſhould fright us, he explains thoſe fables, and ſhows, that they are verified upon earth; that we feel thoſe torments while we are living, and have no reaſon to dread them after we are dead, to ver. 1026. XIV. Laſtly, To the end of this book, he puts us in mind, that it is both fooliſh and abſurd to bemoan ourſelves that we muſt die, ſince the wiſeſt of men, and the moſt potent princes and emperors, have been forced to ſubmit to the inevitable power of death. And he teaches, that men lead unquiet and anxious lives, becauſe they avoid the thoughts and contemplation of death, and are fooliſhly fond of that life which they muſt one day loſe, which can ſupply them with no new delights, and is expoſed to innumerable dangers and afflictions. And that, after all, by the longeſt life to which they can attain, they ſave not one moment from the length of death, which is as much eternal to them who die to-day, as to thoſe who died many ages ago.

THEE who haſt light from 'midſt thick darkneſs brought,
And firſt life's benefits and pleaſures taught;
Thee, chiefeſt glory of the Grecian ſtate,
I ſtrictly trace, willing to imitate,
Not contradict: For how can larks oppoſe
The vig'rous ſwan? They are unequal foes:
Or how can tender kids, with feeble force,
Contend in racing with the noble horſe?
Thou, parent of philoſophy, haſt ſhown
The way to truth by precepts of thy own.
For, as from ſweeteſt flow'rs the lab'ring bee
Extracts her precious ſweets, great ſoul! from thee
We all our golden ſentences derive;
Golden, and fit eternally to live.
For when I hear thy mighty reaſons prove,
This world was made without the pow'rs above,
All fears and terrors waſte, and fly apace;
Through parted heav'ns, I ſee the mighty ſpace,
The riſe of things, the gods, and happy ſeats,
Which ſtorm, or vi'lent tempeſt never beats,
Nor ſnow invades, but with the pureſt air,
And gaudy light diffus'd look gay and fair:
There bounteous nature makes ſupplies for eaſe,
There minds enjoy uninterrupted peace:
But that which ſenſeleſs we ſo groſsly fear,
No hell, no ſulph'rous lakes, no pools appear:
And through the earth I can diſtinctly view,
What underneath the buſy atoms do.
From thoughts like theſe I mighty pleaſure find,
And ſilently admire thy ſtrength of mind,
By whoſe one ſingle force to curious eyes,
All naked and expos'd whole nature lies.
Since then I've taught what ſeeds of bodies are,
And how they move, what diff'rent ſhapes they wear,
And how from theſe, all beings firſt may ſpring:
Next of the mind, and of the ſoul I'll ſing;
And chaſe that dread of hell, thoſe idle fears,
That ſpoil our lives with jealouſies and cares,
Diſturb our joys with dread of pains beneath,
And fully them with the black fear of death.
For though ſome talk they ſhould leſs fear to die,
Than live in a diſeaſe, or infamy:
That they know well, the ſoul conſiſts in blood,
And our philoſophy can do no good:
Obſerve, they talk thus rather out of love
To empty praiſe, than what they ſay, approve:
For theſe ſame men, to chains, or baniſhment
Condemned; to gallies, or to priſon ſent;
Though infamous by horrid crimes they're grown,
Yet ſtill to endure, and patiently live on:
Nay more, where'er theſe boaſting wretches come,
They ſacrifice black ſheep on every tomb,
To pleaſe the manes; and of all the rout,
When cares and dangers preſs, grow moſt devout.
Therefore to know mens ſouls, and what they are,
View them beſet with dangers, and with care.
For then their words will with their thoughts agree,
And, all the maſk pull'd off, ſhow what they be.

Beſides, all blind ambition, and fierce luſt
Of avarice, thoſe parents of unjuſt,
Which make men plunge through ſins, and vex each hour
With cares and pains, to climb to wealth and pow'r,
This ſhame, theſe great diſturbers of our breath,
Are chiefly nouriſh'd by the fear of death:
For infamy, contempt, and poverty,
All ſeem ſo near the gates of death to lie,
That while by ſenſeleſs fears, men frighted ſtrive
As far remov'd, as poſſible, to live:
By civil wars endeavour to get more;
And, doubling murders, double their vaſt ſtore;
Laugh o'er their brother's graves, and tim'rous gueſts
All hate, and dread their neareſt kinſmans feaſts.
From the ſame cauſe the meagre envious riſe,
And look on other's wealth with troubled eyes;
Complaints they make, and paſſion'tly repine,
That ſome with pow'r, and ſome with honour ſhine;
While they lie mean, and low, and without fame;
And thus they die for ſtatues and a name.
When ſome this dread ſtrikes deep, ev'n life they hate;
And their own hands prevent the ſtroke of fate:
Yet ſtill are ignorant that this vain fear
Breeds all their trouble, jealouſy, and care;
Makes men unkind, unchaſte, and break their truſt;
In ſhort, deſtroys whate'er is good and juſt.
So ſome their parents, and their country ſell,
To free themſelves from death, and following hell.
For we by day, as boys by night, do fear
Shadows, as vain and ſenſeleſs as thoſe are.
Wherefore that darkneſs that o'erſpreads our ſouls,
What can diſperſe, but thoſe eternal rules,
Which from firm premiſes true reaſon draws,
And a deep inſight into nature's laws.
Firſt then, the mind in which the reaſon lies,
Is part of man; as hands, and feet, and eyes
Are part of animals: though ſome have taught,
And ev'n philoſophers, that ſenſe and thought
Do no partic'lar ſeat, no part controul,
But are a vital habit of the whole;
In Greek call'd harmony; and that from thence
Flows all our reaſon, life, and thought, and ſenſe;
But 'tis no part: ſo health and ſtrength belong
To man; but are no parts of him that's ſtrong.
But this is falſe.———
For often when theſe vis'ble members ſmart,
Briſk joys ſtill ſeated in ſome unſeen part:
And ſo o'th' contrary, when minds oppreſs'd,
Sink under cares, their bodies are at reſt.
So often, when the hand or foot complains,
The head is vigorous, and free from pains.
Beſides, when charms of ſleep have clos'd our eyes,
Languid, and void of ſenſe, the body lies:
Yet even then ſome other part appears
Diſturb'd with hope, with joy, and empty fears.
But farther, to convince you that the ſoul
Ispart, and not th' harmony of the whole;
For, though ſome limbs are loſt, life keeps her ſeat;
But when few particles of vital heat,
And our laſt breath goes out, life likewiſe flies,
And the forſaken carcaſe waſtes and dies:
Which proves, our lives not equally depend,
For their firſt riſe, continuance, and end,
On ev'ry part, but chiefly heat and air
Make life within us, and preſerve it there:
Then both theſe two are there; but ſwiftly gone,
And leave our limbs, as treach'rous death comes on.
Now ſince the nature of the mind and ſoul
Is fully found, and prov'd a part o' th' whole;
Let thoſe that call it harmony, and pleaſe
Their fancies, to derive ſuch words as theſe,
From muſic's ſounds, or whenceſoe'er it came,
Apply'd to that which had no proper name,
Take back their term again; 'tis here o'erthrown,
And uſeleſs prov'd: Let us go farther on.
Next, then, I muſt affirm the ſoul and mind
Make up one ſingle nature, cloſely join'd:
But yet the mind's the head and ruling part,
Call'd reaſon, and 'tis ſeated in the heart:
For there our paſſions live, our joy, our fear,
And hope, which proves the mind muſt needs be there:
But the inferior part, the ſoul, confin'd
To all the limbs, obeys the ruling mind,
And moves as that directs; for only that
Can of itſelf rejoice, or fear, or hate.
Paſſion and thought belong to that alone;
For ſoul and limbs are capable of none.
As when the hand, or eye, or head complains,
All the whole body is not vex'd with pains:
So often, when the lab'ring mind, oppreſs'd,
Sinks under cares, the ſoul enjoys her reſt.
But when the mind a violent paſſion ſhakes,
Of that diſturbance too the ſoul partakes;
Cold ſweats bedew the limbs, the face looks pale,
The tongue begins to faulter, ſpeech to fail,
The ears are fill'd with noiſe, the eyes grow dim,
And feeble ſhakings ſeize on ev'ry limb,
And thus, on ſudden frights men often ſwoon,
A ſtrange effect! from which 'tis plainly known,
The mind and ſoul are join'd, and make but one.
For here the mind's force ſtrikes the ſoul, and ſo
The ſtroke goes on, and ſtrikes the body too,
But, to enlarge this inſtance more, this proves
The mind material too, becauſe it moves
And ſhakes the limbs, makes them look pale and wan;
In ſhort, directs and governs the whole man;
All which is done by touch: And all that touch
Are bodies; therefore mind and ſoul are ſuch.
You find the ſpirit with the body dies:
Both pain and pleaſure ſhare but mutual ties:
For when by manly force the hearded darts,
Shot through the membranes, jag the tender parts;
Though preſent death does not attend the wound,
Yet chilling damps the ſick'ning ſoul ſurround:
Drooping we bend towards the magnet ground

With such desire, as shows an earth-born mind,
Doubtful to take its flight, or lag behind.
Hence the soul's kindred with the body's plain,
Since by corporeal darts it suffers pain.
The mind prov'd body, I'll go on to find
What sort of body 'tis that makes the mind.
First then, it is a small and subtle one;
Because no action is so swiftly done,
As what the mind begins. This instance proves
The mind, than other things more swiftly moves.
But what thus easy to be mov'd is found
Of very little seeds, and very round
Must needs be fram'd; so that the weakest shove
May push them forward on, and make them move.
Water by slightest strokes is mov'd, and flows,
'Cause small and slipp'ry parts the streams compose.
But honey and thick liquors stubborn prove;
Made dull, and heavy, and unapt to move;
For all their parts more join'd, and closer fall,
Because they're not so round, so smooth, and small.
So heaps of poppy seed, so sand, dis-join'd,
Is scatter'd by the softest breath of wind;
But massy stones, or darts, together cast,
Stand firm against, and scorn the roughest blast;
Which proves that seeds small, smooth, and round, are best
For vig'rous motion; rough, and great for rest.
Now since the nature of the mind is found
So apt to move; of bodies small and round
It must be fram'd: Which knowledge, lovely youth,
Will lead thee on to undiscover'd truth.
For hence, by easy inf'rence, you may guess
How subtle all its parts! what small recess,
If crush'd together, it would all possess!
For when the stroke of fate invades the heart,
And the affrighted mind and soul depart,
The weight and bulk remain; contented death
Leaves all secure, but vital sense and breath:
Therefore the seeds that frame this soul, through all
Our limbs diffus'd, are subtle, thin, and small:
Because when that's all gone, each limb retains
The former bulk, the former weight remains.
So when the brisker spirits leap from wine,
And parts from odours with the air combine;
When from our limbs a subtle humour flows,
The body weighs the same, the same bulk shows;
Because small seeds all juice, all smells compose.
'Tis certain then the seeds that frame the mind
Are thin, and small, and subtle, and refin'd;
For when the mind is gone, the former weight
Each limb retains, the bulk remains as great.
And yet 'tis mix'd; for when life's pow'rs decay,
A gentle breeze, with vapour, flies away;
This vapour likewise shows that air is there,
All heat has air; for heat, by nature rare,
Must still be intermix'd with parts of air.
Well then, we know the mind and soul comprise
Three things; yet from all these no sense can
No vig'rous thought from such a frame as this.
Then we must add a fourth thing to this frame;
And yet that fourth, though something, has no name:
Its parts are smooth, small, subtle, apt to move,
When press'd, or troubl'd by the weakest shove:
From this comes sense. This the first stroke receives,
And then the impulse to the vapour gives,
Then to the unseen wind, then to the air,
Thence through our limbs 'tis scatter'd ev'ry where.
The blood, with troubled motion, strikes the heart,
And a quick sense runs through each inward part:
Then through the marrow, then through ev'ry bone,
Whether it be a sharp, or pleasing one:
But vi'lent passions, as strong grief, or fear
Scarce enter far, and make disturbance there;
But strange convulsions run our body o'er,
And life and soul fly out at ev'ry pore.
But oft the motion on the surface plays,
Stops there; and that's the reason that life stays.
Next, how these four are mix'd, I would rehearse,
How fitly join'd; but now my flowing verse
The poorness of the Latin tongue does check;
Yet briefly, and as that permits, I'll speak.
They all confus'dly move; no diff'rent space
To each allotted, and no proper place
Where this divides from that, and lies alone;
But all their pow'rs conjoin'd arise as one.
So gen'rally, in ev'ry peace of meat,
Our sense discovers odour, savour, heat,
The flesh the same: So heat, and air, and wind
Make up one nature mix'd, and closely join'd
With that quick force, which makes them move, and whence
Through all the bodies parts springs vig'rous sense.
This nature's deeply hid; this does possess
The inmost space, and most remote recess.
As in our limbs, the soul's remov'd from view,
Because its seeds are thin, and small, and few;
So this fourth nameless force within the soul
Lies hid, its chiefest part, and rules the whole.
So likewise must the heat, and air, and wind
Be in convenient place, and order join'd:
This must be uppermost, that lower fall,
To make it seem one nature, fram'd of all;
Lest heat and air, plac'd sep'rately, distract
The power of sense, and make it cease to act.
Heat in the mind is shown, when passions rise;
When anger burns, it sparkles through the eyes:
And when the trembling body shakes for fear,
And blood grows cold, we know that wind is there.
In those the pow'r of air is chiefly seen,
Whose heart's untroubled, and their looks serene:
Those have most heat, by nature most inclin'd
To rage; such is the lion's furious mind,
Who, roaring, bursts with gen'rous disdain,
Nor can his breast hi, vi'lent rage contain.
Most parts of wind compose the deer's cold soul;
From whence a trembling chill runs through the whole.

The peaceful ox contains moſt parts of air;
And is not ſubject to much rage, or fear:
A temper, 'midſt the lion and the deer.
So mens minds differ too; though moral rules
And arts can poliſh, and reform our ſouls:
Yet ſtill ſome ſeeds remain; they ſtill appear
Through all the maſks and vizards we can wear;
Some ſmall remainders of the primitive mind,
Some evil paſſions will be left behind:
Whence ſome are prone to rage, ſome to diſtruſt;
Some fearful are, and ſome more mild than juſt.
A thouſand more varieties they ſhow;
Each diff'rent mind has diff'rent manners too.
Whoſe hidden cauſes I ſhall ne'er explain,
Or names ſufficient, and expreſſive feign
For all thoſe infinite varieties
Of ſhapes, whence all theſe diff'rent manners
Yet this, methinks, might be affirm'd as true;
Thoſe tracts of nature are ſo weak, ſo few,
Which learning leaves unchas'd; that we, in
ſpite of theſe,
May rival ev'n the gods in happineſs.
This nature through the limbs ſpreads ev'ry
where,
And life, and health, preſerves with prov'dent
care:
For they are join'd, and each on them depends,
And the leaſt ſeparation death attends.
As when from grains of myrrh you force away
The rav'ſhing ſmell, their natures too decay;
So parts the ſoul and limbs, you all deſtroy;
So cloſe they join, and common life enjoy!
Nor can the ſoul and body, ſeparate,
Perceive or think in their divided ſtate:
For the firſt ſtroke is by the nerves convey'd,
And from their jointly motions ſenſe is made.
Beſides, the body is not born alone,
Nor grows, nor lives, when mind and ſoul are
gone:
For though the water, heated o'er the fire,
May loſe ſome vapours, yet remain entire,
The limbs, when mind and ſoul are fled, ſubmit
To the ſame fate, and die, and rot with it.
Nay more, e'er tender infants ſee the light,
Before they paſs the confines of the night:
While yet within their mothers womb they lie,
If theſe two ſeparate, they fail, and die.
Whence learn, that ſince the cauſe of life's com-
bin'd,
And lies in both, their natures too are join'd.
Farther, who to the limbs all ſenſe denies,
And ſays, the ſoul, which through the body lies,
Is ſubject of that motion we call ſenſe,
He fights againſt the cleareſt evidence.
What need of arguments, what need of words;
The ſtrongeſt proof the thing itſelf affords:
Yet ev'ry limb wants ſenſe, the ſoul once gone,
And loſes much as feeble age comes on.
That eyes no objects ſee, to ſight oppos'd;
But that the ſoul, as through wide doors unclos'd,
Looks through them, is plain nonſenſe: 'Tis
reſel'd
Ev'n by their ſenſe, who this wild fancy held:
This ſeems ſo plain, 'tis brought ſo near our eyes,
That he is blind, or ſhuts them, who denies:
Chiefly when fulgid objects view'd, the ſight
Grows dim, and dazzled by too great a light:
For doors unclos'd, no harm, no danger know,
Whatever body 'tis that paſſes through.
Were the eyes doors through which the ſoul
did look,
View'd all around, and her fair proſpect took,
Our ſight would ſtronger, quicker, better prove,
If' th' eyes pluck'd out, we all the bars remove.
And now to ſolve theſe doubts, muſt not be
brought,
As learn'd Democritus's ſchool has taught,
That ſoul and limbs are equal, o'er the whole,
To ev'ry limb an equal part of ſoul.
For firſt, the ſeeds of ſouls are leſs than thoſe,
Which all the bodies groſſer parts compoſe;
Neither in number, nor in bulk ſo great,
And o'er the limbs in diſtant ſpaces ſet:
So that as few, and little as ſuffice
For that weak motion, whence our ſenſes riſe;
So few, ſo little, we muſt all confeſs
Thoſe diff'rent ſpaces which thoſe ſeeds poſſeſs.
For often falling duſt we ſcarce perceive;
Nor dew by night, nor what the ſpiders weave,
When o'er our limbs the ſubtle chains are ſpread,
Or the decaying web falls o'er our head:
Nor plumes, nor chaff, nor ſuch light things as
theſe;
Nor the ſoft motion of the wand'ring fleas:
So that a ſtrong impreſſion muſt be made,
And the quick ſtroke to many parts convey'd,
Before the little bodies of the ſoul
Can feel, and through thoſe diſtant ſpaces roll,
Meet, ſtrike, and part again, and thus perceive;
Be pleas'd with the firſt object's ſtroke, or grieve.
The mind's the chiefeſt part of all the whole;
Life more depends on that, than on the ſoul:
When that departs, no ſoul can longer ſtay;
But ſervilely attends, and flies away,
Expires, and vaniſhes in the ſame breath,
And leaves the limbs in the cold hands of death.
But he ſtill lives, whoſe mind remains alone;
Although his limb's lop'd off, the ſoul is gone.
So let ingenious tyrants malice ſtrive,
Of many limbs, though not of all, deprive;
And ſo divide the ſoul, the man will live.
Thus leave the pupil ſound, but cut the white,
We ſtill enjoy the nobler pow'r of ſight:
But that once hurt, though all the parts around
Be left entire, and firm, and free from wound,
The pow'r decays; and an eternal night,
And frightful darkneſs all o'erſpreads the ſight;
Darkneſs, where'er the wounded eye-balls roll:
And like theſe two, in this, are mind and ſoul.
And now, my lovely youth, to let thee know,
That ſouls and minds are born, and mortal too
I'll write ſuch verſe, as ſhall appear to be
By curious labour wrought, and worthy thee:
Do you take both expreſs'd by either name,
Both words in this diſpute expreſs the ſame.
So that, for inſtance, when the ſoul you find
Prov'd mortal, think I likewiſe mean the mind:
Since both do make but one, two natures join'd.
Firſt then, ſince I have prov'd the ſoul conſiſts
Of ſmaller parts than water, ſmoke, or miſt;

Becauſe than all theſe three more apt to move,
And take impreſſion from a weaker ſhove;
For by the images of ſmoke and ſtreams,
And thinneſt miſts, 'tis mov'd, as when in dreams
From fancy'd altars ſmoky clouds ariſe,
And in dark rolls are ſcatter'd through the ſkies;
Thoſe thoughts are rais'd by ſubtle images.
And ſince you ſee, that when the veſſel's broke,
The waters runs away: ſince the thin ſmoke,
By ev'ry tempeſt ſcatter'd through the air,
Confus'dly mixes with it, and does periſh there;
Conclude the thin contexture of the mind,
An eaſier prey to ev'ry rougher wind,
With eaſe diſſolv'd when from the body gone;
'Tis toſs'd in air, all naked and alone.
For ſince the limbs, that veſſel of the ſoul,
Could not contain its parts, and keep it whole,
When bruis'd, or drain'd of blood; how then can air,
A body, than our fleſh and blood more rare.
Beſides: 'tis plain that ſouls are born and grow;
And all by age decay, as bodies do:
To prove this truth; in infants, minds appear
Infirm, and tender as their bodies are:
In man, the mind is ſtrong; when age prevails,
And the quick vigour of each member fails,
The mind's pow'rs too decreaſe, and waſte apace:
And grave and rev'rend folly takes the place.
'Tis likely then the ſoul and mind muſt die;
Like ſmoke in air, its ſcatter'd atoms fly:
Since all theſe proofs have ſhown, theſe reaſons told,
'Tis with the body born, grows ſtrong, and old.
Farther: as vi'lent pains, and ſtrong diſeaſe
Torment the limbs, and all the body ſeize;
So grief and trouble mind and ſoul ſurpriſe:
'Tis likely therefore, that the ſoul too dies.
Sometimes, when vi'lent fevers vex the brain,
The mind grows mad, and raves with equal pain.
Sometimes, when dull and death-like lethargy,
And laſting ſleep ſits heavy on the eye,
The ſoul is lull'd: the man nor knows, nor hears;
His friend's kind voice, nor ſees their falling tears;
While they with pious care about him weep,
And ſtrive to rouſe him from his death of ſleep.
Since then the limb's diſeaſe affects the mind,
That muſt be mortal too: for ſtill we find,
By thouſand inſtances, diſeaſes wait
On death, as the ſad meſſengers of fate.
Beſides; when wine's quick force has pierc'd the brain,
And the briſk heat's diffus'd through ev'ry vein;
Why do the members all grow dull, and weak?
The tongue not with its uſual ſwiftneſs ſpeak?
The eye-balls ſwim? the legs not firm, and ſtrait:
But bend beneath the bodies nat'ral weight?
Unmanly quarrels, noiſe, and ſobs deface
The pow'rs of reaſon, and uſurp their place?
How could this be, did not the precious juice
Affect the mind itſelf, and ſpoil its uſe?
Now things, that can be thus diſturb'd, that ceaſe
From uſual actions, by ſuch lets as theſe,
Would die, ſuppoſe the force, or ſtrokes increaſe.
Oftimes with vi'lent fits a patient falls,
As if with thunder ſtruck; and foams and bawls,
Talks madly, ſhakes, moves here and there, breathes ſhort;
Extends, and tires his limbs with antic ſport;
Becauſe the venom, ſcatter'd o'er the whole,
Makes ſuch ſtrange ſtirs, and motions through the ſoul;
As boiſt'rous ſtorms, which o'er th' ocean rave,
And raiſe white curls upon the foaming wave:
He groans, becauſe, when pain'd, the ſeeds of voice
Break forth in a confus'd and troubled noiſe:
He's mad, becauſe the parts of ſoul and mind
Are by the poiſon's violence diſjoin'd,
Diſturb'd and toſs'd: but when the cauſes ceaſe,
The black malignant humours, and diſeaſe,
In ſome convenient veſſel lurk in peace;
His weakneſs wears, and he forgets his pain:
His ſtrength, his life, his ſenſe return again.
Now ſince diſeaſes can this ſoul divide,
While ſtrengthen'd by, and to the members ty'd;
Who can believe, this tender ſubſtance, mind,
When from the body loos'd, can brave the wind?
And ſince our minds as well as bodies feel
The pow'rs of medicines that change or heal,
They muſt be mortal: for to change the ſoul,
You muſt, or change the order of the whole,
Take off ſome old, or add ſome parts anew:
Now what's immortal, common ſenſe has told,
Can gain not one new part, nor loſe one old:
For whatſoever ſuffers change, unties
Its union, is not what it was; but dies.
Therefore the mind, or by diſeaſes griev'd,
Or by the pow'r of medicines reliev'd,
Shows herſelf mortal: Such plain evidence,
Drawn from the ſtrongeſt reaſon, ſureſt ſenſe,
Does all their ſpecious ſophiſtry oppoſe,
And either way confutes, and overthrows.
Beſides, experience ſhows that patients die
By piecemeal; through the toes, then legs, then thigh [moves,
Creeps treach'rous death; then through the reſt it
By ſlow degrees; and this one inſtance proves
That the ſoul mortal is; ſince death does ſlowly ſpread;
And ſome parts are alive at once, and ſome at once are dead.
But if you think the ſoul, by fate oppreſt,
Can to one limb retire, and leave the reſt,
That part, where ſo much ſoul has reſidence,
A greater muſt enjoy, and quicker ſenſe:
But ſince none ſuch appears, 'tis plain it flies
By piecemeal through the air, and therefore dies.
But grant what's falſe; the ſoul can backward fly,
And huddled up, within one member lie;
Yet this infers the ſoul's mortality.
For what's the diff'rence, if by lateſt breath,
Expell'd, or huddled up, 'tis cruſh'd to death?
While from the limbs the ſenſes ſteal away,
And by degrees the pow'rs of life decay.
And ſince the ſoul is part, and ſince it lies
Fix'd in one certain place, as ears, or eyes;
So, ev'n as thoſe, when from the body gone,
Perceive not, nor endure, but periſh ſoon;
The mind can't live, divided from the whole,
The limbs, which ſeem the veſſel of the ſoul,

Or ſomewhat, if you pleaſe, more nearly join'd;
Becauſe theſe two the cloſeſt ties do bind.
Laſtly, both ſoul and body join'd perceive,
Exert their nat'ral pow'rs, endure, and live:
Nor can the ſoul, without the limbs, diſpenſe
Her vital pow'rs; nor limbs, without the ſoul, have ſenſe.
For as the eye grows ſtiff, and dark, and blind,
When torn from off her ſeat; ſo ſoul and mind
Loſe all their pow'rs, when from the limbs diſjoin'd;
Becauſe 'tis ſpread o'er all, and there preſerves
Her life, by vital union with the nerves.
Nor could the little ſeeds of ſoul commence
Thoſe ſhort vibrations, that are fit for ſenſe,
Were the ſpace great; which, ſtrictly all enclos'd,
They well perform: but from the body loos'd,
And to the wide inconſtant air expos'd,
Could ne'er enjoy; becauſe the air and mind
Can never, as the ſoul and limbs be join'd;
For could the thin inconſtant air controul,
And keep in order too the fleeting ſoul,
And ſhe thoſe motions too of ſenſe maintain,
Which now ſhe does through ev'ry nerve and vein,
And all our limbs; then we might juſtly call
The air a body, and an animal.
Thus then the ſoul, all naked and alone,
When from the body loos'd, her cov'ring gone,
Muſt die, both ſoul and mind, for both are one.
Beſides: ſince when the mind and ſoul are fled,
The carcaſe ſtinks, and rots as ſoon as dead;
How can'ſt thou doubt but that, the union broke,
The ſcatter'd ſoul flies through the limbs, like ſmoke.
And therefore muſt the body's fabric fall,
Becauſe the ſoul, that did preſerve the all,
Upheld, and ſtrengthen'd it, is now no more,
But fled through ev'ry paſſage, ev'ry pore,
Which ſhows the ſoul, as all her pow'rs decay,
Her parts diſſolv'd, flies ſcatter'd all away.
Nay more: whilſt in theſe limbs, as death comes on,
Her parts are all diſſolv'd, before ſhe's gone;
Nay while ſhe's yet alive, ſome ſtrokes prevail,
And ſhake the ſoul; her pow'rs begin to fail;
The members tremble, and the face looks pale,
As if 'twere real death. This happens when we ſwoon;
Ev'n then the mind and ſoul are almoſt gone,
The ties of union almoſt all undone:
For then the mind's aſſaulted, and would bow
To fate, if ſhaken by a ſtronger blow
Then who can think, that from the members gone,
Expos'd to th' air, all naked, and alone,
It can, but one ſhort moment be ſecure;
Much leſs, as long as time, as endleſs years, endure;
Beſides; what patient e'er perceiv'd the ſoul
Forſake the dying members, ſafe and whole?
Or that by ſlow degrees it ſeems to riſe,
Firſt through the throat, then higher jaws; then flies:
But ev'ry ſenſe in'ts proper organ dies.
And were the ſoul immortal, would the mind
Complain of death; and not rejoice to find,
Herſelf let looſe, and leave this clay behind?
As ſnakes, whene'er the circling year returns,
Rejoice to caſt their ſkins; or deer their horns.
And why is not the ſoul produc'd in any part,
I' th' head, or hands? Why only in the heart?
But that each being has its proper ſeat;
And there begins; there grows mature, and great:
Thus flames ne'er riſe from waves, nor cold from heat.
And if the ſoul's immortal; if ſhe lives
Divided from the body; if perceives,
She muſt enjoy five ſenſes ſtill: for who
Can fancy how the ſoul can live below,
Unleſs 'tis thus endow'd? Thus painters pleaſe,
And poets too, to draw their ſouls with theſe.
But as without the ſoul, nor eye, nor ear,
Nor either hand can touch, or ſee, or hear,
So neither can this ſoul, this mind perceive
Without theſe hands, theſe eyes, theſe ears; nor live.
Beſides; our vital ſenſe is ſpread o'er all;
The whole compoſure makes one animal:
So that if ſudden, vi'lent ſtrokes divide
This whole, and caſt the parts on either ſide;
The ſoul and mind too ſuffer the ſame fate,
And part remains in this, and part in that.
Now what can be divided, what can lie,
And waſte in ſeveral parts, can likewiſe die.
So chariots arm'd on ev'ry ſide, to wound,
When fiercely driv'n, bring death to all around:
And yet the wounded man, ſo quick's the blow,
Is ſcarce diſturb'd; ſcarce ſeems to feel, or know
His wound: and now but half a body grown,
Still haſtes to fight, ſtill eagerly goes on;
Nor miſſes he his arm, dragg'd o'er the field,
And by the chariots torn, much leſs his ſhield;
Others, that loſe their hands, that climb the wall,
Reach on, or feel; and wonder at their fall:
Others, their legs lopp'd off, attempt to riſe,
While the poor foot lies trembling by, and dies:
And when the head's chopp'd off, the eyes and face
Still keep their nat'ral, ſtill their vital grace;
The look is vivid ſtill, nor ſeems like dead,
Till every particle of ſoul is fled.
So likewiſe chop a ven'mous ſerpent's train,
You'll ſee each ſingle part is vex'd with pain;
Each turns, each bleeds, and ſprinkles all the ground
With pois'nous gore, each wriggles at the wound:
What then? Has ev'ry part its proper ſoul?
This were to place a thouſand in one whole.
Thus then the ſoul, by the ſame fatal blow,
That chopp'd the pois'nous tail, is cut in two:
Therefore 'tis mortal, ſubject unto fate,
Becauſe diviſible as well as that.
Farther: were ſoul's immortal, ne'er began,
But creep'd into the limbs to make up man,
Why cannot they remember what was done
In former times? Why all their mem'ry gone?
Now if the mind's frail pow'rs ſo far can waſte,
As to forget thoſe num'rous actions paſt,
'Tis almoſt dead; and ſure can die at laſt.

Therefore the former soul must needs be dead;
And that, which now informs us, newly made.
But when the body's made, when we begin
To view the light, if then the soul creep'd in,
How is it likely it should seem to grow,
Increase, and flourish, as the members do?
No: she would live confin'd to her close cage,
With pow'rs, as great in infancy, as age.
Again then and again, the soul is born and dies:
For let's suppose it fram'd without; what ties
Could knit this soul so close? How could this mind,
As sense assures, with ev'ry limb be twin'd?
For now 'tis knit to ev'ry nerve, and vein,
To ev'ry bone, that ev'n the teeth feel pain:
As when with sudden chop they grind a stone;
Or when cold water thrills the heated bone.
Since then 'tis join'd so close, how can this soul,
Loos'd from limbs, bones, and nerves, fly off secure and whole?
But now suppose the mind was fram'd before,
And then infus'd: Grant this, I'll ask no more:
This proves 'tis mortal too: for while the soul
Insinuates her substance o'er the whole,
Its parts must be dissolv'd; the nat'ral tie
Of union loos'd: Therefore the soul can die.
As meats, diffus'd through all the members, lose
Their former nature, diff'rent things compose:
So minds, though safe and whole they first begin
To enter, are dissolv'd in ent'ring in,
Because those subtle parts, this soul contains,
Must be diffus'd through all the nerves and veins:
And that which enter'd, rules the body now,
Is the same soul, that dy'd in passing through;
And therefore souls are born, and perish too.
Besides; from carcases, some parts alone,
Or the whole substance of the soul is gone,
If only part, 'tis dead; its seeds disjoin'd;
For some do fly away, some lurk behind:
But if all goes, why then do troops of flies,
Why num'rous insects from the bodies rise,
Swarm o'er the members? What's the cause of this?
But grant you can believe, a proper soul
For ev'ry worm descends secure and whole;
Nor think it strange, that when the former's gone,
A thousand little souls should come for one;
Yet still 'tis doubtful, whether ev'ry mind
Hunts carefully for seeds of proper kind,
And fashions its own case, or else does wait
Till all the limbs are perfect, all complete,
And then goes proudly in, and takes her seat.
For what should prompt the soul to all this pains?
What make her work? Since free from slavish chains
Of matter; hunger, cold, no sharp disease,
To anxious cares her happy substance seize:
From the united limbs she suffers these.
But grant it good for minds to put on clay,
How are the bodies form'd, what curious way?
How, in what manner is the action done?
Souls cannot, therefore do not frame their own.
And did they enter perfect frames, what art
Could subtly twine one soul with ev'ry part;
That this should act on that, so nearly join'd;
The mind affect the limbs; the limbs the mind?
Besides; why lions fury? Why the deer
From their cold fires derive their nat'ral fear?
Why foxes craft? Why proper pow'rs adorn
Each diff'rent kind, unless the souls are born?
For were the souls immortal, could the mind
Fly off, and leave his former case behind,
And take another of a diff'rent kind?
What change in an'mals manners must appear?
The tyger-dog would fly pursuing deer;
The hawk forget his rage, and learn to fear,
Trembling at ev'ry little dove that flies;
Men would be foolish all; and beasts be wise.
For 'tis absurd, that this immortal mind
Should change according to the diff'rent kind
Of body, unto which the soul's confin'd.
For things thus changeable, the nat'ral tie
Of union broke, the scatter'd parts can fly
Dispers'd, disorder'd, and themselves can die.
But if they say, that souls, expell'd by fate,
To other bodies of like kind retreat;
Then tell me why: Why does the wisest soul,
When creep'd into a child, become a fool?
Why cannot new-born colts perform the course
With equal straining as a full grown horse?
But that the souls are born, increase, and grow,
And rise mature, as all their bodies do.
Perchance they'll say; weak minds, and tender sense
Belong to tender bodies: Poor defence!
This yields the cause: this grants that minds are frail,
Whose former life and pow'rs can change and fail.
Besides; come tell me, why a soul should grow,
And rise mature, as all the members do?
If 'twere not born? When feeble age comes on,
Why is't in haste, and eager to be gone?
What? does it fear, it makes such haste away,
To be imprison'd in the stinking clay?
What? does it fear the aged heap's decay?
Or that 'twill fall, and crush the mind beneath?
Fond fear! immortal beings are exempt from death.
'Tis fond to think, that whilst wild beasts beget,
Or bear their young, a thousand souls do wait,
Expect the falling body, fight and strive,
Which first shall enter in, and make it live.
Or is t agreed, do previous leagues declare,
That 'tis her lawful right, who first comes there,
To enter in; and so no need of war?
Besides: no trees in heav'n, no stars below,
The hills no fish, the stones no moisture know;
Each has its proper place to live and grow.
So neither souls can live without the blood,
And nerves, and veins, and bones: for grant they could,
Then through one single part, as arm, or head,
'Twould first be fram'd; and thence o'er th' others spread;
As water, into vessels pour'd, does fall
First to one part, then rise, and cover all.
But since 'tis certain, that a proper place
Is settled for the life, and the increase
Of mind and soul, 'tis folly to believe,
They can be made without the limbs, or live.

Therefore the ſoul, ſpread o'er the limbs, muſt fail,
And die with them, as years and death prevail.
For that immortal beings ſhould lie confin'd
To mortal, and their diff'rent pow'rs be join'd,
And act on one another, is abſurd; [ford,
Plain nonſenſe! What more fond can dreams af-
Than mortal with immortal join'd in one,
Should feel thoſe harms, 'twas free from when alone?
Beſides, what is immortal, muſt be ſo
Becauſe 'tis ſolid, 'bove the pow'r of blow;
Whoſe parts no wedge divides; which knows no pore;
And ſuch are ſeeds, as I explain'd before:
Or elſe, becauſe like empty ſpace, 'tis ſuch
As is ſecure from ſtroke, and free from touch;
Or elſe, becauſe it can admit no bound,
'Tis infinite, and knows no place beyond
To which the ſeeds may ſink: this makes the all
Eternal; there's no place whence ſeeds may fall,
And breed confuſion there: no ſpace does lie
Without the whole, to which the parts may fly,
And leave the mighty all to waſte and die.
Now 'tis not perfect ſolid; ev'ry maſs
Between the ſeeds contains ſome empty ſpace:
Nor is it void untouch'd; for ſubtle wind,
With rapid ſtorms, can hurry on the mind,
Or take one part, and leave the reſt behind.
Beſides, there's ſpace enough, to which the tie
Of union loos'd, the ſcatter'd parts may fly.
Thus then the mind is mortal, and can die.
But if you think't immortal, free from wound,
Becauſe its ſubſtance is encompaſs'd round,
Fenc'd from deſtructive cauſes; or that ſuch
Can very ſeldom if at all approach:
Or if they ſhould fly off before they make
Confuſion there: this is a grand miſtake:
For, not to mention how diſeaſes vex
The ſoul, what fears of future ills perplex;
Whence guilty conſcience ſhall affright the mind;
For ſins ſtrike deep, and leave deſpair behind:
'Tis mad, forgetful, ſometimes lethargy,
And deadlike ſleep ſit heavy on the eye.
Then what has bugbear death to frighten man,
Since ſoul can die as well as bodies can?
For as we neither knew, nor felt thoſe harms,
When dreadful Carthage frighted Rome with arms,
And all the world was ſhook with fierce alarms;
Whilſt undecided yet, which part ſhould fall,
Which nation riſe the glorious lord of all:
So after death, when we ſhall be no more,
What though the ſeas forſake their uſual ſhore,
And riſe to heav'n? What though ſtars drop from thence?
How can all this diſturb our periſh'd ſenſe?
But now, ſuppoſe the ſoul when ſeparate,
Can live, and think in a divided ſtate;
Yet what is that to us, who are the whole,
A frame compos'd of body, join'd with ſoul?
Nay grant the [illegible]er'd aſhes of our urn
Be join'd [illegible] life and ſenſe return;
Yet how [illegible]ern us when 'tis done;
Since [illegible] of paſt life is gone?

Now we ne'er joy, nor grieve to think that we
Were heretofore, nor what thoſe things ſhall be,
Which, fram'd from us, the foll'wing age ſhall ſee.
When we revolve how num'rous years have run,
How oft the eaſt beheld the riſing ſun,
Ere we began, and how the atoms move,
How the unthinking ſeeds for ever ſtrove;
'Tis probable, and reaſon's laws allow,
Theſe ſeeds of ours were once combin'd as now:
Yet now who minds, who knows his former ſtate,
The interim of death, the hand of fate,
Or ſtopp'd the ſeeds, or made them all commence
Such motions, as deſtroy'd the former ſenſe?
He that is miſerable, muſt perceive
Whilſt he is ſo: he then muſt be and live:
But now, ſince death permits to feel no more
Thoſe cares, thoſe troubles which we felt before:
It follows too, that when we die again,
We need not fear; for he muſt live who lives in pain.
But now the dead, though they ſhould all return
To life again, would grieve no more, nor mourn
For evils paſt, than if they'd ne'er been born.
Now when you hear a man complain, and moan,
And mourn his fate, becauſe, when life is gone,
His limbs muſt waſte, and rot in earth, or feaſt
The greedy flames, or ſome devouring beaſt,
All is not well: He, by ſtrong fancy led,
Imagines ſenſe remains among the dead.
Nor can I think, though he himſelf denies,
And openly declares the whole man dies,
But that ſome ſtrong conceits he ſtill believes,
Fond fool! that he himſelf himſelf ſurvives:
For now, ev'n while he breathes, ev'n while he lives,
And thinks he muſt be torn, or burnt, he grieves:
Thinks ſtill his carcaſe muſt be he, and thence
His idle fears infer, there muſt be ſenſe:
And hence he grieves, that he was born to die,
Subject to treacherous mortality: [death
But never thinks, fond fool! that when kind
Shall cloſe his eyes in night, and ſtop his breath,
Then nothing of this thinking thing remains
To mourn his fate, or feel ſharp griefs and pains.
And if 'tis miſerable to be torn
By beaſts, when dead; why is't not ſo to burn?
If that's an ill, why not as great a one
To be oppreſs'd with earth, or marble ſtone?
Or dipp'd all o'er in honey? or be roll'd,
O'er boiſt'rous waves, on cliffs expos'd to cold?
Ay, but he now is ſnatch'd from all his joys;
No more ſhall his chaſte wife, or prattling boys
Run to their dad with eager haſte, and ſtrive
Which firſt ſhall have a kiſs, as when alive.
Ay, but he now no more from wars ſhall come,
Bring peace and ſafety to his friends at home.
Wretched, O wretched man! one fatal day
Has ſnatch'd the vaſt delights of life away:
Thus they bewail, but go no farther on;
Nor add, that his deſires and wants are gone;
Which if they thought, how ſoon would all give o'er
Their empty, cauſeleſs fears, and weep no more?

'Tis true, thou ſleep'ſt in death, and there ſhalt lie,
Free from all cares, to all eternity:
But we ſhall mourn thee ſtill; no length of years
Shall overcome our grief or dry our tears.
Now I would gladly know, come tell me why,
Why doſt thou pine with grief, and weep, and ſigh?
Why doſt thou vex thyſelf, and beat thy breaſt,
Becauſe thou once muſt ſleep in death, and reſt?
So when the jolly blades, with garlands crown'd,
Sit down to drink, while frequent healths go round,
Some, looking grave, this obſervation make:
All the delights are ſhort we men can take:
Now we enjoy, but gone, we wiſh in vain,
In vain deſire to call them back again:
As if the greateſt ill in graves they fear,
Were thirſt, or to want wine, or garlands there,
Or any other thing they fancy here.
Fools! ev'n in common ſleep what cares moleſt?
What thoughts for life, or health, diſturb our reſt?
For men eternally might ſtill ſleep on,
Free from ſuch cares, their reſt diſturb'd with none:
Yet then the mind is well, 'tis whole, it lives,
And aptly moves, nay, and almoſt perceives;
Small ſtrokes will make the man, and he revives.
Then death, if there can be a leſs than leaſt,
Is troubled leſs with anxious cares than reſt.
Becauſe in death few parts of mind remain;
And he that ſleeps in death ne'er wakes again.
But now, if nature ſhould begin to ſpeak,
And thus with loud complaints our folly check:
Fond mortal, what's the matter thou doſt ſigh?
Why all theſe fears, becauſe thou once muſt die,
Muſt once ſubmit to ſtrong mortality?
For if the race thou haſt already run
Was pleaſant; if with joy thou ſaw'ſt the ſun;
If all thy pleaſures did not paſs thy mind
As through a ſieve, but left ſome ſweets behind,
Why doſt thou not then, like a thankful gueſt,
Riſe cheerfully from life's abundant feaſt,
And with a quiet mind go take thy reſt?
But if all thoſe delights are loſt and gone,
Spilt idly all, and life a burden grown;
Then why, fond mortal, doſt thou aſk for more,
Why ſtill deſire t' increaſe thy wretched ſtore,
And wiſh for what muſt waſte like thoſe before?
Not rather free thyſelf from pains and fear,
And end thy life, and neceſſary care?
My pleaſures always in a circle run,
The ſame returning with the yearly ſun.
And thus, though thou doſt ſtill enjoy thy prime;
And though thy limbs feel not the rage of time;
Yet I can find no new, no freſh delight,
The ſame dull joys muſt vex the appetite,
Although thou could'ſt prolong thy wretched breath
For num'rous years, much more if free from death.
What could we anſwer, wha excuſes truſt?
We muſt confeſs that her reproofs are juſt.
But if a wretch a man oppreſs'd by fate,
Mourns coming death, and begs a longer date,
Him ſhe more fiercely chides: Forbear, thy ſighs,
Thou wretch, ceaſe thy complaints, and dry thy eyes.
If old, thou haſt enjoy'd the mighty ſtore
Of gay delights, and now can'ſt taſte no more;
But yet becauſe thou ſtill did'ſt ſtrive to meet
The abſent, and contemn'dſt the preſent ſweet,
Death ſeems unwelcome, and thy race half run,
Thy courſe of life ſeems ended, when begun;
And unexpected haſty death deſtroys,
Before thy greedy mind is full of joys.
Yet leave theſe toys, that none befit thy age;
New actors now come on; reſign the ſtage.
If thus ſhe chides, I think 'tis well enough;
I think 'tis nothing but a juſt reproof:
For riſing beings ſtill the old purſue,
And take their place; old die, and frame the new:
But nothing ſinks to hell, and ſulph'rous flames,
The ſeeds remain to make the future frames:
All which ſhall yield to fate as well as thou;
And things fell heretofore ev'n juſt as now:
And ſtill decaying things ſhall new produce;
For life's not giv'n to poſſeſs, but uſe.
Thoſe ages that in long poſſeſſion ran,
And meaſur'd haſty time, ere we began;
What are they all to us? From this think farther.
And what is time to us, when life is gone?
Beſides, what dreadful things in death appear?
What tolerable cauſe for all our fear?
What ſad, what diſmal thoughts do bid us weep?
Death is a quiet ſtate, and ſoft as ſleep.
And all, which we from poets tales receive,
As done below, we ſee, ev'n whilſt alive.
No wretched Tantalus, as ſtories tell,
Looks up, and dreads th' impending ſtone in hell:
But heavy weights of ſuperſtitious care
Oppreſs the living; they diſturb us here,
And force us chance, and future ills to fear.
No Tityus there is by the eagle torn;
No new ſupplies of liver ſtill are born:
For grant him big enough, that all the nine,
Thoſe poets acres, his vaſt limbs confine
To narrow bounds; but let him ſpread o'er all,
And let his arms claſp round the wat'ry ball;
Yet how could he endure eternal pain?
And now his eaten liver grow again?
But he's the Tityus here, that lies oppreſs'd
With vexing love, or whom fierce cares moleſt:
Theſe are the eagles that ſtill tear his breaſt.
He's Siſyphus, that ſtrives with mighty pain
To get ſome offices, but ſtrives in vain;
Who poorly, meanly, begs the people's voice,
But ſtill refus'd, and ne'er enjoys the choice:
For ſtill to ſeek, and ſtill in hopes devour,
And never to enjoy the long'd-for pow'r,
What is it but to roll a weighty ſtone
Againſt the hill, which ſtraight will tumble down?
Almoſt at top, it muſt return again,
And with ſwift force roll through the humble plain.
Laſtly, ſince nature feeds with gay delight,
And never fills the greedy appetite;
Since ev'ry year, with the returning ſprings,
She new delights, and joys, and pleaſures brings:

And yet our minds, amidſt this mighty ſtore,
Are ſtill unſatisfy'd, and wiſh for more:
Sure this they mean, who teach that maids below
Do idle pains, and care, and time beſtow,
In pouring ſtreams into a leaky urn,
Which flow as faſt again, as faſt return.
The furies, Cerberus, black hell, and flames,
Are airy fancies all, mere empty names:
But whilſt we live, the fear of dreadful pains
For wicked deeds, the priſon, ſcourge, and chains,
The wheel, the block, the fire, affright the mind,
Strike deep, and leave a conſtant ſting behind.
Nay, thoſe not felt, the guilty ſoul preſents
Theſe dreadful ſhapes, and ſtill herſelf torments,
Scourges and ſtings; nor even ſeems to know
An end of theſe, but fears more fierce below,
Eternal all. Thus fancy'd pains we feel,
And live as wretched here as if in hell.
But more to comfort thee———
Conſider, Ancus periſh'd long ago;
Ancus, a better man by much than thou:
Conſider, mighty kings in pomp and ſtate
Fall, and ingloriouſly ſubmit to fate.
Conſider, even he, that mighty he,
Who laugh'd at all the threat'ning of the ſea;
Who chain'd the ocean once, and proudly led
His legions o'er the fetter'd waves, is dead.
Scipio, that ſcourge of Carthage, now the grave
Keeps pris'ner, like the meaneſt common ſlave.
Nay, greateſt wits, and poets too, that give
Eternity to others, ceaſe to live.
Homer, their prince, that darling of the nine
(What Troy would at a ſecond fall repine
To be thus ſung)' is nothing now but fame;
A laſting, far-diffus'd, but empty name.
Democritus, as feeble age came on,
And told him it was time he ſhould be gone;
For then his mind's briſk pow'rs grew weak, he cry'd,
I will obey thy ſummons, fate, and dy'd.
Nay, Epicurus' race of life is run;
That man of wit, who other men outſhone,
As far as meaner ſtars the mid-day ſun.
Then how dar'ſt thou repine to die, and grieve,
Thou meaner ſoul, thou dead, ev'n whilſt alive?
That ſleep'ſt, and dream'ſt the moſt of life away;
Thy night is full as rational as thy day?
Still vex'd with cares, who never underſtood
The principles of ill, nor uſe of good;
Nor whence thy care, proceed: but reel'ſt about
In vain unſettled thoughts, condemn'd to doubt.
Did men perceive what 'tis diſturbs their reſt,
Whence riſe their fears, and that their thoughtful breaſt
Is by the mind's own nat'ral weight oppreſs'd.
Did they know this, as they all think they know,
They would not lead ſuch lives as now they do;
Not know their own deſires, but ſeek to find
Strange places out, and leave this weight behind.
One, tir'd at home, forſakes his ſtately ſeat,
And ſeeks ſome melancholy cloſe retreat,
But ſoon returns; for, preſs'd beneath his load
Of cares, he finds no more content abroad:
Others, with full as eager haſte, retire,
As if their father's houſe were all on fire,
To their ſmall farm; but yet, ſcarce enter'd there,
They grow uneaſy with their uſual care;
Or, ſeeking to forget their grief, lie down
To thoughtleſs reſt, or elſe return to town:
Thus they all ſtrive to ſhun themſelves in vain,
For troubleſome he ſticks cloſe; the cares remain;
For they ne'er know the cauſe of all their pain:
Which if they did, how ſoon would all give o'er
Their fruitleſs toys, and ſtudy nature more? 1080
That is a noble ſearch, and worth our care;
On that depends eternal hope or fear:
That teaches how to look beyond our fate,
And fully ſhows us all our future ſtate.
Our life muſt once have end: in vain we fly
Purſuing fate; ev'n now, ev'n now we die.
Life adds no new delights to thoſe poſſeſs'd;
But ſince the abſent pleaſures ſeem the beſt,
With wing'd deſire and haſte we thoſe purſue:
But thoſe enjoy'd we lothe, and call for new. 1090
Life, life we wiſh, ſtill greedy to live on;
And yet what fortune with the foll'wing ſun
Will riſe, what chance will bring, is all unknown.
What though a thouſand years prolong thy breath,
How can this ſhorten the long ſtate of death?
For though thy life ſhall num'rous ages fill,
The ſtate of death will be eternal ſtill:
And he that dies to-day, ſhall be no more,
As long as thoſe that periſh'd long before.

NOTES ON BOOK III.

Ver. 1. In the firſt thirty-two verſes of this book, Lucretius addreſſes himſelf to Epicurus of Athens, and calls him the father of the Epicurean philoſophy. Democritus, indeed, was the firſt who ſet it on foot; but Epicurus ſo improved and perfected it, that the poet, with good reaſon, ſtyles him the parent and inventor of it. He praiſes him for the happineſs of his wit, and acknowledges the benefits he has conferred on mankind, in having explained the Nature of Things, overthrown all belief of Providence, and expelled the fears and terrors that aroſe from that opinion. Then he aſſerts almoſt the ſame thing, that L. Torquatus does, in Cicero, lib. i. de Finib. "Ego arbitror Epicurum unum vidiſſe verum, maximiſque erroribus hominum animos liberaſſe,

et omnia tradidiſſe, quæ pertinent ad bene beateque vivendum." I am of opinion, that Epicurus only diſcovered the truth, that he delivered the minds of men from the greateſt errors, and taught all things that conduce to a good and happy life.

Ver. 3. He means Epicurus. See the note on ver. 88. Book i.

Ver. 5. The words in the original are,

——Quid enim contendat hirundo
Cicnis?——

And how our tranſlator came to change the ſwallow to larks, I cannot well tell; nor why, in this place, he gives to the ſwan the epithet of vigorous: Lucretius certainly alludes to the ſinging of the ſwan, not to his ſtrength: Beſides, the lark is a tuneful bird, and perhaps ſings ſweeter than the ſwan; for ſwans and geeſe, I believe, are alike melodious; though the firſt of them have had the good fortune to be celebrated by all the ancient poets for the ſweetneſs of their voice: And even Macrobius, on the dream of Scipio, lib. ii cap. 3. ſays, "Aves quoque, ut luſciniæ, ut cygni ahæque id genus, cantum veluti quadam diſciplina artis exercent." See the note on ver. 479 of Book ii. But ſwallows, on the contrary, are blamed for their harſh chattering. Thus Anacreon, Ode xii.

Τίσοὶ θέλεις ποιήσαι;
Τί χωτίλε χελιδών;

Fooliſh prater, what doſt thou
So early at my window do,
With thy tuneleſs ſerenade? *Cowley.*

Yet from the fabulous, though univerſally received traditions of the ſweet ſinging of ſwans before their death, the poets have aſſumed to themſelves the title of ſwans. And Horace would even be thought to be changed into a ſwan:

Jam jam reſidunt cruribus aſperæ
Pelles, et album mutor in alitem
Superne, naſcunturque leves
Per digitos humeroſque plumæ.
Lib. ii. *Od.* 20.

And the Anthology gives the ſame name to Pindar:

Θήβης ὠγυγίης Ἑλικώνιος ἵστατο κύκνος
Πίνδαρος ὁμηρόφωνος.

Tuneful Pindar, the Heliconian ſwan of ancient Thebes: Thus too Virgil is called "Mantuanus Olor," the Swan of Mantua: And Theocritus terms the poets Μουσῶν ὄρνιθες, the birds of the muſes, as the commentators ſay, in alluſion to ſwans, which Callimachus calls Μουσάων ὄρνιθης· and in another place, Ἀπόλλωνος παρεὶδ ῥοι, the aſſociates of Apollo, which is indeed a bold expreſſion; but they were conſecrated to him, and conſequently beloved by the muſes and poets. Moreover, Cicero, in Tuſcul. i. ſays, that the ſwallow being an importunate, chattering bird, repreſents the ignorant; but the ſwan, who never ſings till he feels his death approaching, ſeems by that to foreſee that there is ſome good in death, and therefore it is an emblem of the learned: Whence the Greek adage, Τοῖ ἄτονται κύκνοι, ὅταν χολοιὰ σιωπήσωσι· The ſwans will ſing, when the jays hold their peace, is ſaid of thoſe ſilly tattlers, who ought to be ſilent in preſence of the learned.

Ver. 11. An excellent compariſon! Lucretius avouches, that, like the induſtrious bee, he gathers honey from the moſt fragrant flowers, while he collects and follows the wiſe doctrine and leſſons of Epicurus.

Ver. 13. Faber believes he alludes in this place to the Χρύσα Ἔπη, golden verſes of Pythagoras.

Ver. 17. For what reaſon is there that men ſhould fear the gods, whom they now know not to have been the authors of this world, nor to take any notice or care of the affairs of it?

Ver. 19. "Apparet divum nomen," ſays Lucretius, looking through the gaping walls of the world, I plainly ſee the gods, no leſs than I do all things elſe; but "nuſquam apparent Acheruſia templa,"

No hell, no ſulph'rous lakes, no pools appear.
Ver. 26.

Therefore there are none, and they are only idle dreams, and empty fictions.

The words of the original are,

——Sedeſque quietæ,
Quas neque confutiunt venti, neque nubila nimbis
Adſpergunt, neque nix acri concreta pruina
Cana cadens violat: ſemperque innubilus æther
Integit, et large diffuſo lumine ridet.

Which Lucretius tranſlated from this paſſage of Homer:

Οὐλυμπόνδε, ἔθι φάσι θεῶν ἕδος ἀσφαλὲς αἰεὶ
Ἔμμεναι· οὔτ' ἀνέμοισι τινάσσεται, οὔτε ποτ' ὄμβρῳ
Δεύεται, οὔτε χιὼν ἐπιπίλναται· ἀλλὰ μάλ' αἴθρη
Πέπταται ἀνέφελος, λευκὸν δ' ἐπιδέδρομεν αἴγλη.
Οδυσσ. Ζ.

Ver. 23. That is to ſay, for the gods. Thus too, Book i. ver. 81. ſpeaking of the nature of the gods, he aſſerts it to be

Sufficient to its own felicity;

And that it wants nothing that is in our power to give it.

Ipſa ſuis pollens opibus, nil indiga noſtri.
Lucr. l. i. *v.* 61.

Ver. 26. Lucretius ſays only,

—Nuſquam apparent Acheruſia templa.

See the note, Book i. ver. 152. And methinks our tranſlator, in this place, ſeems to have had in view, not ſo much the fabulous hell of the heathens, which Lucretius denied, and derided, as that real place of eternal torment that we Chriſtians juſtly believe, and tremble at; and which is thus excellently painted by Milton, in all its horror:

The lake that's fraught, and burns with liquid fire,
Unquenchable: the houſe of woe and pain!
A dungeon horrible! which, all ſides round,
As one vaſt furnace, flames: yet from thoſe flames
No light, but rather darkneſs viſible
Serves only to diſcover ſights of woe,
Regions of ſorrow, doleful ſhades, where peace
And reſt can never dwell; hope never comes
That comes to all; but torture without end
Still urges, and a fiery deluge fed
With ever-burning ſulphur, unconſum'd, &c.

Ver. 32. The author of Hudibras ſeems to have regarded this paſſage, when he ſays,

——As he profeſs'd,
He had firſt matter ſeen undreſs'd;
He took her naked, all alone,
Before one rag of form was on.
The Chaos too he had deſcry'd,
And ſeen quite through: or elſe he ly'd.

Ver. 33. Having in the firſt and ſecond book treated at large of the ſeeds themſelves, and of their figures and motions, he now promiſes, in theſe eight verſes, an accurate diſputation concerning the ſoul, the mortality of which he will endeavour to evince, to the end he may deliver mankind from the fear of death, and the dread of future puniſhment after it.

Ver. 40. The words in Lucretius are, "Omnia ſuffundens mortis nigrore;" and Creech, in his note upon them, ſays, that nothing was ever more elegantly expreſſed, and that there is no where to be found a more beautiful image. I wiſh I could ſay the like of his interpretation of it: But to fully with fear, is, in my opinion, not to paſs a more ſevere cenſure upon it, a very bold metaphor.

Ver. 41. But ſome perhaps may ſay, that other philoſophers have done what Lucretius promiſes, and that not Epicurus only delivered men from the fear of hell, ſince many others taught, that the ſoul is mortal, and conſequently that we have nothing to fear after death; and therefore that Epicurus does not deſerve this mighty praiſe, nor does Lucretius confer a greater benefit on mankind than others have done before him. To which the poet anſwers, in theſe fourteen verſes, that other philoſophers did indeed talk very big, but when the trial came, they ſtarted, and ſtood aghaſt at death, as much as any of the vulgar; they patiently lived on, and endured torments, infamy, and all the calamities of life; and when dangers threatened, or ſickneſs ſeized them, they confeſſed, of all men, the moſt abject ſouls, and betrayed a mind moſt ſubject to ſuperſtition.

Ver. 43. Some of the ancients believed the ſoul to be a ſuffuſion of blood about the heart, and conſequently that it is the blood itſelf; as Empedocles and Critias. Witneſs Ariſtotle, de Anima, lib. 1. c. 2. Cicero, Tuſcul. 1 Macrobius, on the dream of Scipio, l. 1. c. 14. and Tertullian of the Soul, cap. 4. According to this opinion, Homer gives death the epithet, purple: πορφύρεος θάνατος. Iliad. v. v. 83. Virgil likewiſe alludes to it: Æneid, ix. v. 349.

Purpuream vomit ille animam.

And Æn. x. v. ult.

Undantique animam diffundit in arma cruore.

Nor are we without frequent inſtances of this in our Engliſh poets. Milton ſays of Abel,

——He fell, and deadly pale,
Groan'd out his ſoul, with guſhing blood effus'd.

And Sir R. Blackmore:

Gaſping he lay, and from the grieſly wound
The crimſon life ebb'd out upon the ground.

And Lee, in the tragedy of Nero:

With many a wound ſhe made her boſom gay;
Her wounds, like flood gates, did themſelves diſplay,
Through which life ran in purple ſtreams away.

And Cowley, David. 4.

His life for ever ſpilt, ſtain'd all the graſs around.

And even Moſes often ſays, that the ſoul is in the blood: he repeats it no leſs than thrice in one chapter, Lev. xvii., and alleges it as a reaſon for the precept, not to eat blood.

Ver. 52. By the manes the ancients underſtood three different things: I. The ſouls of the dead: II. The place in hell, to which the ſouls went after death, and where they had their abodes: and in this ſenſe Virgil, Georg. iv. v. 467. ſays of Orpheus, that he went to the manes:

Tænarias etiam fauces, alta oſtia Ditis,
Et caligantem nigra formidine lucum
Ingreſſus, Maneſque adiit, Regemque tremendum, &c.

III. The infernal gods. In which ſenſe too the ſame Virgil, Georg. iv. v. 489. ſpeaking likewiſe of Orpheus, ſays,

——Incautum dementia cepit amantem,
Ignoſcenda quidem, ſcirent ſi ignoſcere manes.

And Cicer. 2. de Leg. 37. "Deorum Manium jura ſancta ſunto." But of the manes, or ſouls of the dead, in which ſenſe our author is to be taken, Apuleius, lib. De Deo Socratis, gives this account: "Manes animæ dicuntur melioris meriti, quæ in corpore noſtro Genii dicuntur: corpori renunciantes, Demures: cum domos incurſionibus infeſtarent, Larvæ appellabantur: contra ſi bonæ fuerint, Lares familiares." From whence we may gather, I. That, in general, they are called Lemures: II. That of theſe Lemures, they who were at reſt, took care of the houſes of their living relations, and were called Lares, houſehold gods. III. That the ſouls of thoſe who had led wicked lives, had no reſting places after death, but being excluded from the infernal manſions, remained upon earth, puniſhed, as it were, with exile, and haunting the houſes of the living, were

called Larvæ, hobgoblins. IV. When it was doubtful what fate had happened to the soul, i. e. whether it was a Lar, or a Larva, they called it Deus manes. They were called Manes, either *à manando*, because they glide and skim through the air: For so says Festus in these words: "Manes Dii ab Auguribus vocabantur, quòd per omnia manare credebant: eosq; Deos superos et inferos dicebant:" where we see, that they gave sometimes the name of manes to the gods above, as well as to those below: Or, as others say, from the old word manus, which signifies good, or merciful: But Servius says, that the infernal gods were called Manes by Antiphrasis. *quia non boni*, because they are not good. Moreover, the ancients were wont to sacrifice black victims to the manes, to the infernal gods, and to the dead, but white to the gods above. Thus Proteus, in Virgil, directing Aristæus how to appease the manes of Eurydice, commands him to sacrifice to her a black sheep:

Placatam Eurydicen vitulâ venerabere cæsâ,
Et nigram mactabis ovem, &c.
Georg. iv. *v.* 546.

And the ghost of Anchises, foretelling Æneas of his future descent into hell, says to him,

——Huc casta Sybilla
Nigrantum multo pecudum te sanguine ducet.
Æneid, v. *v.* 735.

And in the sixth Æneid, v. 233. Virgil describing those sacrifices, says,

Quatuor hic primum nigrantes terga juvencos
Constituit,—
Voce vocans Hecaten, &c.

And again:

——Ipse atri velleris agnam
Æneas matri Eumenidum, magnæque sorori
Ense ferit, &c. *V.* 249.

Of which Arnobius adv. Gentes, lib. 7. deriding the superstitious ceremonies of the Pagan religion, gives the reason in these words: "Quæ in coloribus ratio est, ut merito his albas, illis nigras conveniat, nigerrimasque mactari? Quia superis Diis, inquitis, atque hominum dexteritate pollentibus, color albus acceptus est, ac fœlix hilaretate candoris. At vero Diis lævis, sedesque habitantibus inferas, color sulvus est gratior, et tristibus suffectus è fucis."

These sacrifices to the manes were called *inferiæ*, under which word six things were contained; water, honey, milk, wine, blood, and hair: of all which, see at large, Euripid. in Orest. and in Iphig. Virg. Æn. iii. v. 66. and v. v. 77. Senec. in Oedip. &c.

Ver. 55. Having given these instances of the vainness of those philosophers, whose followers had set them up for rivals to Epicurus, and shown, even by their own practice, that their doctrines are incapable to take away the fear of death, he adds in these four verses, that no credit is to be given to men who talk big, when they are blessed with the smiles of fortune: But if when men are beset with dangers, and oppressed with misery, they then give proofs of an unshaken temper of soul, it must be granted, that philosophy has improved their minds, and been of use to them.

Ver. 59. Faber says, that the twenty-eight following verses cannot be sufficiently read and considered, so many good things are contained in them. For it is certain that the fear of death is the cause of avarice, treachery, ambition, cruelty, envy, despair, &c. And hence arises the great glory of Epicurus, who, as Lucretius pretends, has chased away that dread of death, which is the root of so many evils.

Ver. 71. Macrobius Saturnal. lib. vi. cap. 2. observes, that Virgil has imitated this passage of Lucretius, in his second Georgic, v. 510. in these words,

——Gaudent perfusi sanguine fratrum;
Exilioque domos et dulci limina mutant,
Atque alio patriam quærunt sub sole jacentem.

Which Dryden interprets thus:

Some thro' ambition, or thro' thirst of gold,
Have slain their brothers, or their country sold;
And, leaving their sweet homes, in exile run,
To lands that lie beneath another sun.

Ver. 73. How much better he, who repines not at the prosperity of others; but satisfied and pleased with what he is, acts cheerfully and well the part that is allotted him. Persius, in his sixth Satire, says very pertinently to this purpose,

Heic ego securus vulgi, et quid præparet auster
Infœlix pecori, securus, et angulus ille
Vicine nostro quia pinguior: et si adeo omnes
Ditescant, orti pejoribus.

Which Dryden has thus excellently paraphrased:

Secure, and free from hus'ness of the state,
And more secure of what the vulgar prate,
Here I enjoy my private thoughts, nor care
What rot for sheep the southern winds prepare;
Survey the neighb'ring fields, and not repine
When I behold a larger crop than mine:
To see a beggar's brat in riches flow,
Adds not a wrinkle to my even brow.

Ver. 79. Fannius, flying from the enemy, killed himself, for fear of falling into their hands:

Hostem cum fugeret, se Fannius ipse peremit:
Hic, rogo, non furor est; ne moriare, mori?

says Martial, l. 2. Epigram 80. To whom we may observe, by the way, that the author of Hudibras was beholden for his thought, when describing the effects of fear, he says, that it makes men

Do things not contrary alone
To th' force of nature, but its own;
The courage of the bravest daunt,
And turn poltroons to valiant:
For men as resolute appear
With too much, as too little fear;

And when they're out of hopes of flying,
Will run away from death by dying.

Self-murder is certainly one of the moſt unaccountable frenzies that ever raged in the minds of miſerable men: And yet how frequent are the deplorable inſtances of ſuch wretches, as, groaning under the calamities of life, put an end to themſelves and their diſcontents together; or, as Dryden ſomewhere elegantly expreſſes it,

Who, when oppreſs'd, and weary of their breath,
Throw off the burden, and ſuborn their death.

And the ſame poet, in his deſcription of the temple of Mars, has painted one of theſe homicides in colours ſo lively, as ſcarce any pencil but his own can imitate:

The ſlayer of himſelf yet ſaw I there;
The gore, congeal'd, was clotter'd in his hair:
With eyes half-cloſ'd, and gaping mouth, he lay,
And grim, as when he breath'd his ſullen ſoul away.

This is the effect of deſpair: But many of the ancients, even of thoſe who held the ſoul to be immortal, laid violent hands on themſelves, believing they ſhould go directly to heaven. Of this number were Clearchus and Chryſippus, Zeno and Empedocles; the laſt of whom threw himſelf one night, unſeen of any, into the flaming chaſm of Mount Ætna, that, by diſappearing on a ſudden, it might be believed he was gone to the gods. Among the Latins, beſides many others, we have the famous example of Cato, that prince of the Roman wiſdom, who all his life was an exact imitator of the Socratic doctrine, and who before he killed himſelf, is ſaid to have read Plato's treatiſe of the Immortality of the Soul, and by the authority of that philoſopher, to have been encouraged to commit the moſt horrid of crimes. And Cleambrotus too killed himſelf, upon reading of that very book. Democritus, who was of another perſuaſion, yet nevertheleſs,

Sponte ſua letho caput obtulit obvius ipſe.
Lucret.

But as Lactantius obſerves, all theſe philoſophers were deteſtable homicides: For if he, who takes away the life of another, be guilty of murder, ſo too is he who takes away his own. Nay, his crime is the more heinous, in that it can be puniſhed by none but God alone; and as we came not into this life of our own accord, ſo neither may we leave this tenement of clay, unbidden of him, who placed us in it. "Sic homicida nefarius eſt, qui hominis extinctor eſt; eidem ſceleri obſtrictus eſt qui ſe necat, qui hominem necat; imò verò majus eſſe facinis exiſtimandum eſt, cujus ultio Deo ſoli ſubjacet: Nam ſicut in hanc vitam non noſtra ſponte venimus, ita rurſus ex hoc domicilio corporis, quod tuendum nobis aſſignatum eſt, ejuſdem juſſu nobis recedendum eſt, qui nos in hoc corpus induxit tam diu habitaturos, donec jubeat emitti." De falſa Sapient. cap. 18. And Virgil himſelf, all heathen as he was, has nevertheleſs allotted to ſuch execrable wretches that place of torments, to which the juſtice of God has decreed them:

Proxima deinde tenent mœſti loca, qui ſibi letum
Inſontes peperere manu, lucemque: peroſi
Projecere animas. Quam vellent æthere in alto
Nunc et pauperiem, et duros perferre labores!
Fata obſtant, triſtique palus inamabilis unda
Alligat, et novies Styx interfuſa coercet.
Æn. 6. v. 434.

Which Dryden renders thus:

The next in place and puniſhment are they,
Who prodigally throw their lives away:
Fools, who repining at their wretched ſtate,
And loathing anxious life, ſuborn'd their fate:
With late repentance now they would retrieve
The bodies they forſook, and wiſh to live,
Their pains and poverty deſire to bear,
To view the light of heav'n, and breathe the vital air.
But fate forbids: the Stygian pools oppoſe,
And, with nine circling ſtreams, the captive ſouls encloſe.

Ver. 87. Theſe ſix verſes are repeated, from Book II. v. 58. and will be ſo again, Book VI. v. 32.

Ver. 93, 94. Some of the ancient philoſophers held the mind to be a vital habit of body, as health in a man who is well. Of this opinion Ariſtoxenus is ſaid to have been the author: He practiſed phyſic, and was an excellent muſician: He firſt was a hearer of Lamptus of Erythræa, then of Zenophilus the Pythagorean; and laſtly of Ariſtotle. Yet Cicero does not allow him to have been the author, but only a favourer of this opinion. "Ariſtoxenus, Muſicus, idemque philoſophus, animum eſſe cenſet ipſius corporis intentionem quandam, velut in cantu et fidibus quæ harmonio dicitur: ſic ex corporis totius natura et figura varios motus oriri, tanquam in cantu ſonos. Hic ab artificio ſuo non receſſit, et tamen dixit aliquid, quod ipſum, quale eſſet, erat multo ante et dictum, et explanatum a Platone." Ariſtoxenus, the muſician, and philoſopher, held the mind to be a certain conſent and accord of the body, as that in muſical inſtruments, which is called Harmony. Thus from the nature and figure of the whole body proceed various motions, as different notes in muſic. This man ſtraggled not away from his employment, and yet ſaid a thing, which, ſuch as it was, Plato had both ſaid and explained long before. This paſſage of Plato, which Cicero here ſpeaks of, is in his Phædon, and contained in theſe words: Καὶ γὰρ ἔν ὦ Σώκρατες, οἶμαι ἔγωγε καὶ αὐτόν σε τοῦτο ἐνθυμῆσθαι, ὅτι τοιοῦτο τί μάλιστα ὑπολαμβάνομεν τὴν ψυχὴν εἶναι, ὥσπερ ἐντεταμένης τῷ σώματος ἡμῶν. καὶ συνεχόμενα ὑπὸ θερμοῦ, τε ψυχροῦ, τε ξηροῦ τε ὑγροῦ τοιούτων τινῶν κράσιν εἶναι, τὴν ἁρμονίαν αὐτῶν τούτων τὴν ψυχὴν ἡμῶν, ἐπεὶδε ἡ ταῦτα καλῶς τε μεμείχθαι κραθῇ πρὸς ἄλληλα. Yet, whoever will take the pains to conſider it, will find, notwithſtanding what Cicero ſays, that Ariſtoxenus ſeems to have taught one doctrine,

and Plato another. But Lactantius, Inſtitut. 7. cap. 13. explains this harmony of Ariſtoxenus in a few words. " Sicut in fidibus, ex intentione Nervorum efficitur concors ſonus atque cantus, quem Muſici Harmoniam vocant: ita in corporibus, ex compage viſcerum et vigore membrorum vis ſentiendi exiſtit." As in muſical inſtruments, an accord and conſent of ſounds, which muſicians call harmony, is made by the due diſpoſition and tuning of the ſtrings; ſo in bodies, the power and faculty of perception proceeds from the due connection and vigour of all the members and interior parts of the body. Macrobius, on the dream of Scipio, lib. i. cap. 14. aſcribes this opinion to Pythagoras and Philolaus. Now Lucretius, in theſe ſeventeen verſes, explains the meaning of it, and brings his firſt argument againſt it, to this purpoſe. It often happens, ſays he, that when a man feels pain in his body, he rejoices in his mind; and often when his body enjoys a perfect indolence, his mind is moſt miſerably tormented. The ſoul therefore is not an accord, not a vital habit, or due diſpoſition and temperament of the whole body; but a part of the man, diſtinct from the body, no leſs than the hand, the foot, the head, &c. are parts of a human body, diſtinct from one another.

The mind.] The chief part of the ſoul; for the ſoul conſiſts of the three parts: viz. the mind, the memory, and the will.

Ver. 94. The poet is in the right to ſay, that the mind is a part of man; for it is, indeed, the informing, but not an aſſiſting part, as a mariner in a ſhip, and a coachman in his box, as the academics believed. But he is groſsly miſtaken, when he adds, that it is as much a part of man as the feet, the hands, the eyes, &c. are parts of the whole animal. For in this he makes no diſtinction between the integral and eſſential parts, as we term them; for the integral, or integrating parts, make up the whole compound, inaſmuch as it conſiſts of matter: thus the head, the eyes, the hands, the feet, the legs, &c. conſtitute the whole body; but the eſſential parts make the eſſence and exiſtence of the whole compound. Thus matter and form, thus body and ſoul conſtitute the whole man; but Lucretius believed with Epicurus, that the ſoul is corporeal, and ſo held it to be an integral part of man.

Ver. 96. This Lucretius calls Senſum Animi, the ſenſe, the operation of the mind, as we expreſs it, and which he pretends is in man, in like manner as the ſight, the hearing, the touch, &c. Now the ſenſe of ſeeing is made in the eyes, the ſenſe of hearing in the ears, &c. And thus he would fix the ſenſe of the mind in a certain part of man.

Ver. 98. A due proportion, agreement, or accord of all its parts.

Ver. 105. The mind, which is hid within us; for the body is the conſpicuous or viſible part of man, but the mind is concealed within us, and inviſible.

Ver. 110. In theſe four verſes, he brings his ſecond argument, not unlike the former. In ſleep the joints are relaxed, the nerves, as it were, unbraced. There is then no accord of the interior parts, no conſent of the members; but the whole frame, and each part of it, is untuned and languid; yet, even then in dreams, ſomething that belongs to the man that is agitated, is grieved, rejoices, &c. Now, it is the mind which then perceives. The mind, therefore, is not the harmony of the whole body, ſince the body is relaxed by ſleep, in like manner as there is no harmony in an inſtrument when the ſtrings are ſlackened.

Ver. 114. His third argument, to prove that the ſoul is not the harmony of the body, is contained in theſe twelve verſes to this effect. As in muſical inſtruments, if you take off ſome of the ſtrings, the whole accord periſhes; ſo if ſome of the members of a body were lopped off, the whole body would periſh likewiſe; and thus there would be no life, no ſenſe remaining. But we know very well, that men who are mutilated, and have loſt ſome of their limbs, live nevertheleſs, and enjoy their ſenſes. Even when a man has loſt many of his limbs, his life and ſenſes will remain entire; but if ſome certain particles of heat and air fly away from the body, the animal drops down, and dies: no life or faculty of perception remains. From whence it appears, that life and ſenſe do not proceed from the harmony of all the members, nerves and bowels, but depend on thoſe particles of heat and air.

Ver. 122. Lucretius ſays, " Eſt igitur Calor & Ventus vitalis in ipſo—Corpore, &c." And our interpreter is in the wrong to uſe the word air in this place, inſtead of wind or vapour. This will evidently appear by and by, when the poet comes to treat of the different kinds of atoms that compoſe the Epicurean ſoul.

Ver. 126. In theſe eight verſes, he concludes this diſputation concerning the harmony of the ſoul and body: and after his uſual manner, derides and ſcoffs at that belief. Let theſe fiddlers, ſays he, hug themſelves in their harmony, a term fooliſhly invented, and more fooliſhly explained. I will loſe no more time in refuting their nonſenſe.

Ver. 130. The poet adds not this without reaſon: for the word harmony is likewiſe taken for the jointing and ſetting together of words, or any other more ſolid matter. Thus we read in Ariſtophanes ἁρμονιῶν διαχάσκυσιῶν. And thus, too, Heſychius, on a certain paſſage of Herodotus, interprets the word ἁρμονίαν by Σύζυξιν, conjunction, or joining together.

Ver. 131. " Proprio quæ tum res nomine egebat," are the words of Lucretius. And Faber, in his note upon them ſeems ſurpriſed that our poet ſays, the ſoul had no proper name before it was called a harmony, ſince the words Θυμὸς, νοῦς, and ψυχὴ, were in uſe long before. As for Θυμὸς, ſays he, it may be objected againſt propter Πολυσημασίαν becauſe of its many ſignifications; and ſome perhaps will urge, that νοῦς is an action, not a faculty. But what can be alleged againſt ψυχὴ; for, though it be ſometimes uſed to ſignify the blood, as in the Clouds of Ariſtophanes, where he ſays, that the bugs,

which he calls Corinthian bugs, *τὴν ψυχὴν ἐκπίνεσιν*, drink up the soul, yet it ought to be taken after the common opinion of the Oriental nations, who placed the seat of the soul in the blood. Thus far Faber; upon which Creech says, with good reason, that that critic might have spared his labour, if he had reflected, that Lucretius says all this by way of scoff and derision.

Ver. 144. Lucretius uses the words mind and soul indifferently one for the other; and, indeed, why should he not, since both of them compose but one nature? But he places the mind, in which the reason resides, and is the chief and noblest part of that nature, in the heart, where all the passions have their seat likewise, and show themselves *τὸ δὲ λογικὸν νὲ Στώϊκοι, ὡς δῆλον ἐκ τῶν φόβων, καὶ τῆς χαρᾶς*· says Diogenes Laertius. And Epicurus himself taught, *τὰ πάθη τὰ τῶν αἰσθήσεις ἐν τοῖς περὶ θυμοὺς τόποις εἶναι*. Plutarch. de Plac. Philosoph lib. 4. cap 4 But the soul, the inferior part of this nature, and in which the locomotive faculty is chiefly placed, is diffused through the whole body, and moved as the mind directs: yet, though it obeys the mind, it partakes not of all its passions, but of those alone that are violent. Hence the mind is often oppressed with grief and sadness, when the soul is in perfect tranquillity. But if the whole soul be affected with any mighty grief, the animal falls into a swoon, nor is even life itself out of danger. Whence it is certain, that the mind is joined to the soul, because it moves it; and by means of that impulse, the soul too moves the body. This is contained in twenty-seven verses, and with this agrees what the same Plutarch says in the place above cited: *Δημόκριτος, Ἐπικοῦρος, διμερῆ τὴν ψυχὴν, τὸ μὲν λογικὸν ἔχουσαν ἐν τῷ Στόμαχῳ καθεδρυμένον τὸ δὲ ἄλογον καθ' ὅλην τὴν σύγκρισιν τοῦ σώματος διεσταλμένον*

Ver. 136, 137. The words in Lucretius are,

Sed Caput esse quasi, & dominari in corpore toto
Consilium, quod nos Animum Mentemque vocamus.

To which purpose I have seen an excellent expression of Tertullian, where he calls the mind, "Suggestum animæ," which I know not how to render otherwise than the prompter of the soul. The whole passage, as I find it cited, runs thus: Proinde & Animum, sive Mens est, NOTΣ apud Græcos, non aliud quid intelligimus quam Suggestum animæ, ingenitum & infinitum, & nativitus proprium, quo agit, quo sapit, &c.

Ver. 137 Not Epicurus and Lucretius only seated the mind in the heart; for Epedocles, Parmenides, and Democritus placed it there likewise. Yet Aristotle, Plato, Phythagoras, and Hippocratus taught, that the rational part of the mind is seated in the brain; and the irascible part of it in the heart. But of this see at large, Lactantius, de Officio Dei. c. 16

Ver. 138. In these two verses, he argues, that the seat of the mind is in the heart, because the passions of joy and fear exult, and show themselves there: for fear and joy are the chief passions of the mind. Therefore, where the effects of any thing are, there, too, the thing itself must of necessity be. But this reason seems to be weak: for otherwise we must grant a mind and understanding in beasts likewise; for even in their breasts the passions of fear and of joy exult, and discover themselves no less than in ours.

Ver. 140. Here Lucretius seems to advance contradictions: For, I. If the mind and soul are joined together, and the mind only be seated in the heart, and no where else, how can the soul, that part of the mind, wander through the whole body? II. If the soul obeys the commands of the mind, she either obeys always, or sometimes resists. If she obeys always, she understands of herself, as well as the mind, since she is so subservient to the will of her master: but to what serves this obedience? That she may partake with the mind, not in little, but in violent emotions, as if the mind were conscious to herself alone of slight disturbances, and imparted nothing of them to the soul.

Ver. 152. Even some of our English poets seem to have been obliged to Lucretius for this description of a person falling into a trance: and Dryden among the rest.

———A sickly qualm his heart assail'd,
His ears rung inward, and his senses fail'd.
Pal. & Arc.

His sight grows dim; and ev'ry object dances,
And swims before him in the maze of death.
All for Love.

And Otway in like manner:

A sudden trembling seiz'd on all his limbs,
His eyes distorted grew, his visage pale,
His speech forsook him, life itself seem'd fled.
Orph.

Ver. 161. In these six verses, he proves by the same argument, that the mind and soul are of a corporeal nature: for the mind must of necessity touch the soul, because it moves it; and since the soul drives on the body, that too must be done by touch.

Tangere enim & tangi, nisi corpus nulla potest res.
Nothing but body can be touch'd, or touch.

Epicurus himself has comprehended this and the following argument in these words: *οἱ λέγοντες ἀσώματον εἶναι τὴν ψυχὴν μαλαιάζουσιν· οὐδὲν γὰρ ἂν δύναιτο ποιεῖν οὐδὲ πάσχειν εἰ μὴ τοιαύτη ἡ φύσις ἐστὶν ἐναργῶς ἀμφοῖν ταῦτα διαλαμβάνει περὶ τῆς ψυχῆς τὰ συμπτώματα*. In this argument, our translator has omitted one instance of the effects that the mind works upon the body, which Lucretius has expressed by these words, "corripere ex somno corpus," that it awakes the body from sleep.

Ver. 167. These twelve verses contain another argument to prove the materiality of the soul. The mind suffers with the body; a wound hurts the one, and the other languishes. And whether the weapon, or the wounded body excite these motions, and perturbations in the mind; it is the same thing: for either of them evinces the mind to be of a corporeal nature.

Creech had totally omitted this paſſage of his author, as he likewiſe has ſeveral others; and theſe eleven verſes are not his; nor indeed do I know whoſe they are: they were ſent to me, and I was the rather willing to inſert them, that this edition might be complete, and want nothing that is contained in the original. I think I have in this note given the ſenſe of Lucretius, and from thence the reader may judge how rightly theſe lines expreſs it. Meanwhile, he may, if he like them better, inſtead of the two firſt of theſe verſes, take the two following:

Beſides the mind and body bear a part,
By mutual bands compell'd to mutual ſmart.

Lucretius is not in this place proving the ſoul to be mortal but only a fellow-ſufferer with the body, and conſequently material; nor will he by any means allow it to be a ſpirit.

Ver. 169. This paſſage, in the original, runs thus:

Si minus offendit vitam vis horrida Teli,
Oſſibus ac nervis diſcluſis, intus adacti;
Attamen inſequitur languor, terraque petitus
Suavis, & in terra mentis qui gignitur æſtus,
Interdumque quaſi exſurgendi incerta voluntas.

Theſe five verſes Lambinus ſuſpects to be ſuppoſititious, and deems them unworthy of Lucretius And the judicious Gaſſendus, whoſe opinion is juſtly held to be of more weight than that of a thouſand ſuch as Gifaneus and Pareus, who admit of theſe verſes, approves of his ſuſpicion. But Faber endeavourso illuſtrate and correct them.

In terra mentis qui gignitur æſtus,

He changes into

Interdum moriendi gignitur æſtus;

then he adds: They, who through any affliction of mind, have, at any time, fallen into ſwoons, know very well what this means: for then, we, faultering, ſeek the ground ("ſuccidui terram petimus,") not without ſome ſenſe of eaſe and pleaſure. Sometimes, too, we deſire to die, and ſometimes the wavering will fluctuates between an uncertain and doubtful reſolution, whether to live or die. Virgil deſcribes ſomething like this in the dying Dido, after ſhe had ſtabbed herſelf. The verſes are admirable.

Illa graves oculos conata attollere, rurſus
Deficit: infixum ſtridet ſub pectore vulnus.
Ter ſeſe attolens, cubitoque inixa, levavit;
Ter revoluta toro eſt: oculiſq. errantibus, alto
Quæſivit cœlo lucem, ingemuitq. repertâ.
Æn. 4. *v.* 688.

Thrice Dido try'd to raiſe her drooping head,
And fainting thrice, fell grov'lling on the bed.
Thrice op'd her heavy eyes, and ſought the light,
And having found it, ſicken'd at the ſight.
Dryd.

Moreover, the "æſtus moriendi," means a full purpoſe, a certain reſolution, &c. to die. They who by nature or afflictions are inclined to be ſad, will, I believe, approve of this emendation; nor will others perhaps diſlike it. Thus far Faber. But Creech is of another opinion. I, ſays he, who, both by nature and through croſſes and afflictions, am more than a little diſpoſed to ſadneſs and melancholy, nevertheleſs diſapprove this correction. The poet deſcribes the perturbations of the mind in a wounded body. It drops as ſoon as it receives the blow; while it lies on the ground it feels other emotions. and ſometimes it is ſeized with a deſire or will, but that not fully bent and determined to riſe up from the ground. The wounded perceive all this; and why may not Lucretius deſcribe what they experience? I therefore interpret, "Mentis in terra," Of the mind grovelling on the ground, together with the wounded body. Thus Creech; but the perſon, who tranſlated this paſſage, ſeems to be rather of Faber's opinion.

Ver. 178. If we may give credit to Lucretius, he has ſufficiently evinced the mind to be of a corporeal nature; and in theſe twenty-ſix verſes, he teaches, of what ſort of body this mind conſiſts. The atoms, ſays he, that compoſe the mind, are very ſmall, ſmooth, and round. For the mind is moſt eaſy to be moved; and whatever is ſo, muſt be compoſed of particles, which, by reaſon of their texture, as well as of their ſize and figure, are moſt ſubject to motion. For let us but conſider other things, water, for example, is very ſubject to move, becauſe its parts are ſmall and voluble: but honey moves with more difficulty, becauſe its parts are more intricate, and more cloſely joined together. Again; a heap of the ſeeds of poppies, or of graſs, is ſcattered by a gentle wind; but a heap of darts or of ſtones reſiſts a much ſtronger blaſt: the ſtones and darts are heavy and rough bodies, but the ſeeds are round, ſmooth, and ſmall; ψυχὴ συγκεῖται ἐξ ἀτόμων λειοτάτων, τὲ σραγγυλοτάτων, ὠ (Gaſſendus inſerts this particle) πολλῶ τινὶ διαφερουσῶν ἔ πυρός. Epicurus in Laertius, lib. x. But not only Epicurus and Lucretius held that the mind is moſt eaſy to be moved; and that it moves of itſelf; for Plato taught the ſame thing. And ſo too did the Pythagoreans, who defined the mind, "Numerus ſeipſum movens," a ſelf-moving number. But Ariſtotle, I. de Anim. denies that the ſoul is moved in the leaſt; and affirms it to be the motionleſs cauſe of the motion of the body. But he was more in the right, who ſaid,

Τὶ ψυχὴ; τὸ κινέμενον.
Τὶ ἀψυχὸν; τὸ μὴ κινέμενον.
Nician. apud Gloſſog.

Of theſe different opinions of the Platoniſts and Peripatetics, you may ſee at large, Macrob. in Somn. Scip. lib. ii. c. 14.

Ver, 183. Hence, perhaps Cowley, David. iii. deſcribing the ſwiftneſs of Aſabel, ſays,

Scarce could the nimble motions of his mind
Outgo his feet; ſo ſtrangely would he run,
That time itſelf perceiv'd not what was done.

Ver. 204. The poet has taught, that the mind conſiſts of ſmall, ſmooth, and round atoms, becauſe it is very ſubject to motion. He, now, in

theſe twenty verſes, teaches, that the nature of the mind and ſoul is ſubtle, of very ſlight contexture, and compacted of minute bodies. For when an animal dies, the whole ſoul flies away; and yet if you meaſure the dead body, you will find the bulk of the limbs to be as large as when the animal was alive: if you weigh it, you will find it as heavy. Therefore, what flies out of it, is ſomething that is extremely ſubtle and minute. For, take away any ſolid or large part, the ſize will be different, and different the weight. In a word, as we conclude that the ſpirits of wine, the fragrancy of odorous bodies, and the taſte of ſavoury, conſiſt of ſubtle and minute particles; becauſe, when the wine is become flat and vapid, when the odorous body has loſt its fragrancy, and the ſavoury is grown taſteleſs and inſipid; yet the bodies themſelves retain the ſame weight, and the ſame bulk they had before; ſo, for the ſame reaſon, we ought to conclude the like of the ſoul alſo. Epicurus, in the tenth book of Laertius, ſays, ψυχὴ σῶμα ἐστὶ λεπτομερὲς, παρ' ὅλον τὸ ἄθροισμα παρεσπαρμένον. The ſoul is a body conſiſting of very tenuious parts, and diffuſed through the whole bulk of the animal.

Ver. 224. In theſe five verſes, he aſſerts, that the ſubtle atoms, of which he has compoſed the mind, are of different kinds: for he had obſerved, that a vapour exhales from dying animals, and that warm too, together with intermixed air; without which there is generally no heat. But a dying perſon expires, or breathes out his ſoul: therefore, that ſoul conſiſts of vapour, air, and heat. Ψυχὴ σῶμα ἐστὶ λεπτομερὲς παρ' ὅλον τὸ ἄθροισμα παρεσπαρμένον, προσεμφερέσταον δὲ πνεύματι θερμῷ τίνα κρᾶσιν ἔχοντι, καὶ τῇ μὲν τοῦτο προσεμφερὲς, τῇ δὲ τούτῳ says Epicurus, in Laert. lib. x. And in Plutarch, Adverſus Colorem, the Epicureans are ſaid τὴν τε ψυχὴν ἐσίαν συμπήγνοντες ἐκ τίνος θερμοῦ, καὶ πνευματικοῦ, καὶ ἀεροειδέος.

Ver. 229. This ſoul, that conſiſts of vapour, air, and heat, is manifeſtly imperfect; it has not yet the faculty of perception or thinking; therefore ſome fourth thing, whatever it be, muſt be added to the other three. This fourth thing conſiſts of the very ſmalleſt, ſmootheſt, and moſt ſubtle atoms; becauſe it is the firſt thing that moves, and by its motion ſtirs up the vapour, the heat and the air; and according to its different motions, all the parts of the body feel either pleaſure or pain. If this motion be more violent than the texture of the mind can ſuffer, if it penetrates even to the bones and marrow, the ſoul is diſſipated, and death follows. If the motion be leſs vehement, and ſtop at the ſurface of the body, then the ſoul remains whole and entire; and a ſenſe ariſes either of pleaſure or of pain. This the poet has compriſed in twenty-one verſes, Plutarch 4. de Plac. Philoſ. c. 3 ſays, that Epicurus did not make the nature of the ſoul ſimple, but held it to be κρᾶμα ἐκ τεσσάρων, ἐκ τοιοῦ πυροειδοῦς, ἐκ τοιοῦ ἀεροειδοῦς, ἐκ τοιοῦ πνευματικοῦ, ἐκ τεσσάρων τινος ἀκατονομαστικοῦ, ὃ ἦν αὐτῷ αἰσθητικόν, ſomething compoſed of four certain things, viz. of ſomething fiery, of ſomething airy, of ſomething windy, and of a fourth nameleſs ſomething, from which proceeds its faculty of ſenſe and perception

Ver. 237. Here our interpreter has committed a like fault with that we obſerved above, ver. 122. What he here calls vapour, he ſhould have called heat or fire. Lucretius always uſes the words *ventus* or vapour, wind or vapour indiſcriminately, but never either of them to expreſs the heat or the air of which the ſoul is compoſed. His words in this place are,

Prima cietur enim parvis perfecta Figuris,
Inde Calor motus, et venti cœca poteſtas
Accipit; inde Aer. inde omnia mobilitantur.

Ver. 250. Here the poet tells us, that he is going to undertake a difficult taſk, and that the Latin tongue does not ſupply him with proper and ſignificant words to expreſs his ſubject, and to keep up to the dignity of it. He proceeds, however, and in theſe twenty ſix verſes, teaches, that theſe four things, heat, vapour or wind, air, and the fourth ſomething without a name, are entirely blended with one another; inſomuch, that they compoſe one moſt ſubtle ſubſtance, which being diffuſed through the whole body of the animal, is contained by, and within the body, and is the cauſe of its preſervation; yet they are not all ſeated in the ſame place. That part of the body, which is properly called the mind, being placed deepeſt and moſt inwardly, or in the inmoſt receſſes of the whole body, is, as it were, the foundation of the whole ſoul; but the wind, the heat, and the air, are ſo mingled with one another, that they compoſe one ſubſtance, according to the different nature of animals. Thus heat, ſavour, and odour, are mixed together in every animal, yet conſtitute but one body.

Thus we have the compoſition of the Epicurean ſoul; but how contemptibly the ancients erred in explaining the nature of the mind and ſoul, is ſufficiently manifeſt even from their different opinions concerning it. Cicero, Lib. i. Tuſcul. Quæſt. reckons up no leſs than thirteen, which are as follows. I. Some held the mind to be the heart itſelf. II. Others, not the heart, but that it is ſeated in the heart. III. Others thought fit to make it a part of the brain. IV. Others would not have it a part of the brain, but held that it is ſeated in the brain. V. Empedocles believed the ſoul to be a ſuffuſion of blood in the heart. VI. Others held it to be a breath, or gentle wind. VII. Zeno taught that it is a fire. VIII. Ariſtoxenus, a harmony. IX. Pythagoras and Xenocrates, a number X. Plato taught, that it conſiſts of three parts: 1. Reaſon in the head: 2. Anger in the heart: 3. Cupidity in the lower part of the diaphragma XI. Dicæarchus held, that it was nothing at all, but a mere empty name. XII. Ariſtotle believed it an ἐντελεχεία, perpetual and never-ceaſing motion. XIII. Democritus and Epicurus, a contexture of tenuious atoms. And others had ſtill other opinions concerning it. See book i. ver. 141.

Ver. 254 In theſe four verſes, he gives the reaſon why the manner in which theſe four natures

combine to make up one ſoul, cannot be perceived: viz. becauſe the atoms, of which theſe four different natures conſiſt, are ſo ſubject to motion, that by reaſon of their continual and ceaſeleſs agitation, they are confounded with one another; ſo that their ſeparate and peculiar powers cannot be diſtinguiſhed either in time or place.

Ver. 262. He means the fourth nameleſs thing, which Lucretius himſelf calls in this place, "Animæ Anima," the ſoul of the ſoul, becauſe it gives motion and ſenſe to each and every of the members of the body; and for that it excels the other three natures, wind, heat, and air, in ſubtlety, and in quickneſs of motion.

Ver. 270. In theſe ſix verſes, he gives the reaſon why thoſe three natures, vapour or wind, air, and heat, ought to be ſubject to the fourth nature that has no name; leſt, ſays he, either the air, the heat, or the wind, ſhould prevail ſeparately; and by that means prejudice, nay, entirely deſtroy the ſenſes: therefore, that fourth nature ought to govern, that it may impart out of itſelf to the other three, the motions that are called ſenſiferous, i. e. that confer ſenſe.

Ver. 276. In theſe fifteen verſes, the poet proves, that even the minds of irrational animals are compoſed of vapour or wind, heat and air. Grant this, ſays he, and then it is eaſy to give a reaſon for all their different tempers. For why, for example, is a man prone to anger and rage, but becauſe the heat prevails in his mind? Whence proceeds the timidity of deer, but from the vapours that predominate in their ſouls? The ox owes his quietneſs of temper, and evenneſs of mind, being neither much inclined to fear or anger, to the calm and peaceful air. For the eyes of an enraged animal glow with heat; nay, we not only ſee the ſparkles themſelves flaſhing out; the deer tremble and quake for fear, and the drudging ox is grave and quiet. And here, if Gaſſendus will not take it amiſs, I will inſert the following paſſage out of Stobæus: τὸ μὲν πνεῦμα κίνησιν ὕδε ἀὴρ ἠρεμίαν, τὸ δὲ θερμὸν τὴν φαινομένην θερμότητα τῷ σώματος, τὸ δὲ ἀνώνυμον τὴν ἐν ἡμῖν ἐμπνοεῖ αἴσθησιν. The wind the cauſe of motion, the air of reſt, the heat of the warmth that is ſeen in the body; and, laſtly, the nameleſs thing of the ſenſe that is within us.

Ver. 291. In theſe eighteen verſes, he teaches, that one of theſe three things predominates in man likewiſe, for ſome are prone to anger, others to fear, while others are mild, ſedate, and eaſy. And the innumerable variety of tempers proceeds from the variety of the mixtures that may be made of theſe three things, by reaſon of the different degrees of each ingredient. Yet philoſophy may greatly mend a vicious nature, though not ſo much, but that ſome footſteps, τῆς κακίας, of innate malice will ſtill remain; which, nevertheleſs, will not hinder any man from living with leſs content and pleaſure; though we ſee, that they who have had the greateſt advantages of learning and education, cannot entirely ſubdue their natural paſſions, nor put a full ſtop to their career.

Ver. 308. Thus the poet extols the power and efficacy of his philoſophy, imitating therein the vain-glorious boaſt of Epicurus, ζῆσαι δὲ ὡς θεὸς ἐν ἀνθρώποις· and οὐδὲν γὰρ ἔοικε θνητῷ ζῶν ἄνθρωπος ἐν ἀθανάτοις ἀγαθοῖς.

Ver. 309. In theſe twelve verſes, he joins this ſoul, which is formed of heat, vapour, air, and the fourth ſomething that wants a name, to the body, and blends them in ſuch a manner, that neither the body can remain whole and ſafe without the ſoul, nor the ſoul entire without the body. The Epicureans held, that the ſoul is contained in the body, [Epicurus, in Laertius, uſes the word στηρίζεσθαι, to hide, and in Empiricus, διακρίπτεσθαι, to keep ſafe] and that the body is mutually held by the ſoul, that it may not precipitately ruſh to diſſolution. For they believed an animal to be, as it were a web in the loom, that the body is as the chain, and the ſoul the woof; ſo that the intertexture of each with the other, compoſes the whole work; but if either of them be diſſolved, the other, and therefore both together muſt be diſſolved likewiſe. For example, take a lump of frankincenſe, and ſeparate the odour from it, and neither the frankincenſe nor the odour will remain entire; and we ought to believe the ſame of the ſoul and body.

This was the opinion of the Epicureans; a doctrine no leſs impious than falſe: for though the ſoul be the keeper and ſafeguard of the body, yet the body is not likewiſe the keeper and ſafeguard of the ſoul; nor are they interchangeably the cauſe of each other's preſervation. The ſoul gives to the body vital motion, ſenſe, and life; nor is even the underſtanding itſelf bound to the body by any corporeal organ. The form, indeed, contains the body, but is not contained. Therefore his aſſertion is falſe, that the ſoul is contained by the body, and that it cannot act without the organs of the body. But the Epicureans were of opinion, that the ſoul is contained in the body almoſt in the ſame manner as water is in a veſſel, which keeps it in, becauſe it is a thicker ſubſtance; thus they will have the ſoul to conſiſt of very tenuious atoms, but the body of much thicker principles. This is almoſt what Lucretius himſelf ſays by and by, ver. 424.

For ſince the limbs, that veſſel of the ſoul,
Could not contain its parts, &c.

Ver. 311 He means the ſoul and body which compoſe the nature he ſpeaks of two verſes before.

Ver. 315. That is, the ſoul, the mind, and the body; the whole animal, the whole man.

Ver 316. That is to ſay, that the atoms of which the ſoul conſiſts, cannot exiſt apart, and ſeparated from thoſe that compoſe the body; nor on the contrary.

Ver. 321. He again demonſtrates in theſe twelve verſes, this adunation of the ſoul and body. The body, ſays he, is neither generated, nor grows without the ſoul: and when the ſoul takes its flight, when its particles are withdrawn, the vital chain is unlinked, the members putrify, and at length the body periſhes. Meanwhile, what becomes of the ſoul? It is diſperſed into empty air

and vaniſhes away. Since, therefore, neither of them are ſafe and whole, without the other, we muſt believe that their ſubſtances are moſt cloſely combined and united together.

Ver. 333. Hitherto the poet has aſſerted, that neither the body can act or perceive apart from the ſoul; nor the ſoul when ſeparated from the body. But that ſenſe is produced in all the members, by the common motion of both of them, acting conjointly. He now, in theſe eight verſes, oppoſes thoſe philoſophers, who affirm that the ſoul only is capable of that motion which we call ſenſe; and appeals to experience againſt their opinion; for, let it be granted, that the body feels, we could not be more conſcious of that ſenſe than we now are; therefore, it muſt be granted, that the body does feel. But ſome may object, if the body have ſenſe, how comes it not to retain that power and faculty of perception, when the ſoul is gone out of it? Becauſe that power and faculty belong not to the body alone, but to the body conjoined and united to the ſoul. Epicurus, in the 10th book of Laertius, aſſerts the ſame doctrine in theſe words: ὁ μὲν (Anima) ἀλόγῳ ἂν παύῃν (ſentiendi facultatem) εἰ μὴ ὑπὸ τῷ λοιπῷ ἀθροίσματος ἐτεάγζιο τῶς· τὸ δὲ λοιπὸν ἄθροισμα παρασκεύασαν ἐκείνη τὸν ἀΐδιαν παῆην, μηδεὶληφε τὲ αὐτὴ τοιέτε συμπώματος παρ' ἐκείνης διὸ ἀπαλλαγέσης τῆς ψυχῆς ἐκ ἔχει τὸν ἄισθησιν, ὁ γὰρ αὐτὸ ἐν ἑαυτῷ ἐκίκ-ηῆο τὴν δύναμιν, ἀλλ' ἑτέρῳ ἅμα συγγεγονημένω αὐτῷ αὐτὴν ἀφύσις παρσκευαζει.

Ver 341. Now becauſe there were ſome who held that the whole compound body, that is to ſay, an animal ought not to be ſaid to have ſenſe, or to perceive, but that the ſoul by itſelf and alone performs that office, without the aſſiſtance or co-operation of the organs, which they pretend are but in the nature of doors, that being thrown open, the ſoul that is ſeated within, ſees all external objects: among whom was Epicharmus, whoſe ſaying νῷς ὁρᾷ, νῷς ἀκύει, the mind ſees, the mind hears, is very well known; and Cicero too is of the ſame opinion, Tuſcul. i. where he ſays: "Nos enim ne nunc quidem cernimus ea, quæ videmus. Neque enim ullus ſenſus eſt in corpore, ſed, ut non ſolum phyſici docent, verum etiam medici, qui iſta aperta et patefacta viderunt, viæ quaſi ſunt ad oculus, ad aures, ad natures, à ſede animi perforatæ." For we do not even now perceive thoſe things which we ſee. Neither is there any ſenſe in the body; but as not only the natural philoſophers teach, but the phyſicians too, who have plainly ſeen them open and diſplayed abroad, there are, as it were, ways and paſſages bored through to the eyes, to the ears, and noſtrils, from the ſeat of the ſoul. Lucretius, therefore, in theſe fourteen verſes, brings two arguments to evince the weakneſs of this opinion; for if the eyes, ſays he, were merely doors, how come they to feel any violence and pain from bright and glittering objects? Beſides, pluck out thoſe eyes, thoſe mere doors as you call them, the ſoul ought then to perceive external objects much better, becauſe the proſpect would then be more free and uninterrupted.

Ver. 355. Lucretius has before aſſerted, that the ſoul is extremely ſmall in bulk, and that its whole ſubſtance, if it were aſſembled apart into one, might be contained in a very little ſpace; and he now, in theſe twenty-eight verſes, declares the ſame more at large, in oppoſition to Democritus, who held, that as many parts as there are of the body, ſo many parts too of the ſoul are contained in them, that is to ſay, in each one; and conſequently, that the ſoul has as many parts as the body. But were this true, we ſhould feel every thing that touched any part of the body. For when any particle of the body, and the part of the ſoul that is joined to it, come to be moved, why ſhould not ſenſe ariſe from that motion? But there are many things, as he proves by ſeveral examples, which we do not perceive when they touch us; they therefore are miſtaken, who join a part of the ſoul to every part of the body.

Ver. 356. Democritus a philoſopher, born at Abdera in Thrace, about five hundred years before Jeſus Chriſt. He learned aſtronomy of the Chaldeans, and geometry of the Perſians; at length he went to Athens, and gave all he had to the republic, reſerving to himſelf only a little garden, where he might freely meditate on the works of nature. This is that philoſopher, who is ſaid to have laughed at the viciſſitudes of fortune, and at the vain anxieties and follies of men; from whence he was ſirnamed Gelaſinus. See more of him below, ver. 1044, and Book iv. ver. 335.

Ver. 379. Lucretius, ver. 134, of this book, has ſeated the mind, in which the reaſon and the faculty of ſenſe reſide, in the heart; but he has diffuſed the ſoul, in which the locomotive faculty is placed through the whole body. Now, in theſe nineteen verſes, he makes that mind the chief inſtrument in the preſervation of life. And whatever others think, this is not abſurd nor diſſonant to the Epicurean philoſophy. The mind, ver. 270, which for the moſt part conſiſts of that fourth nameleſs ſomething of Epicurus, which alone beſtows the faculty of ſenſe, is joined to the animal in ſuch a manner, that it is the foundation of the whole frame, ſoul and all together But withdraw the foundation, and all the ſuperſtructure muſt of neceſſity tumble down. The mind and the ſoul, continues he, may properly be compared to the eye; the ball, the mind; the ſoul, the reſt of the orb: wound the ball, and blindneſs inevitably follows: wound any other part of the eye, the power of ſight will nevertheleſs remain.

Ver. 389. The gladiators at Rome, when almoſt all their limbs were wounded and hacked to ſuch a degree, that they had no manner of uſe of them, and even when many of them were entirely cut off, yet lived a great while in that maimed condition. And Nardius relates, that at this day, at Cairo in Egypt, the robbers on the high way, who are cut aſunder near the naval, and then thrown on a heap of unſlacked lime, live for ſeveral hours, talk to the ſtanders by, and anſwer them queſtions.

Ver. 390. The cryſtalline part of the eye,

which a vitreous humour follows inwardly and outwardly an aqueous. It is commonly called the light, or ſight of the eye. The vitreous humour is contained in a tunicle or little ſkin, which the Greeks therefore call ἀμφιβλήστρον, ſurrounding.

Ver. 398 Being now going to prove, that the ſoul is mortal he promiſes, in theſe nine verſes, that he will ſpare no labour in this diſputation; but becauſe he has diſtinguiſhed, as the ſtoics likewiſe do, between the ſoul and the mind, leſt his Memmius ſhould not rightly comprehend the force of his reaſons, he gives notice, that all his arguments are bent with equal ſtrength againſt the mind and ſoul likewiſe; both of which compoſe but one ſubſtance.

Ver. 407. In theſe twenty-one verſes, he brings his firſt argument, to prove the mortality of the ſoul, under which name he comprehends the mind alſo, from the ſubtleneſs and tenuity of it, which he has before demonſtrated, and now confirms again. For the ſoul, ſays he, is a corporeal ſomething, more ſubtle, more apt to move, and more ſubject to diſſolution, not only than water, but even than miſt or ſmoke; ſince it is ſtirred and moved by things more thin and ſubtle than either ſmoke or miſt, to wit, by the very images of thoſe things, which often move the ſoul in our dreams; and, therefore, it muſt of neceſſity be more eaſily diſſipated than they. And it is in vain for any one to object, that when it is diſſolved from the body, it remains entire in the air; for how can the ſubtle air preſerve that ſafe, which often exhales through the pores of a thick body?

Ver. 410. Becauſe the ſoul is moved by the very images of water, miſt, and ſmoke, when the mind thinks of thoſe things in ſleep. And the images of all things whatever are more tenuious than the things themſelves.

Ver. 411. For Epicurus held, that nothing can be ſeen, nay, not ſo much as thought upon, or even dreamed of but by the means of images; as we learn from Cicero, 1. de Finibus.

Ver. 420. The concluſion is falſe; as indeed is this whole argument, to prove the corporeality, and conſequently the mortality of the ſoul: and it is anſwered in one word, that the ſoul is a ſpirit. Beſides, though the mind, when the body is aſleep, does not think of ſmoke, water, miſt, or other things of the like ſort, it is not ſhe that receives the images of thoſe things, but the fancy, which is an interior faculty of the ſoul: and theſe images being thus admitted into the fancy, the mind makes uſe of them, to know the things whoſe images they are. Add to this, that the mind knows other things whoſe images are neither received within herſelf, nor in the fancy neither. Thus it is no proof that the ſoul is corporeal, becauſe the mind makes uſe of corporeal images, to come at the knowledge of things. And, therefore, the poet adds, without reaſon, that when the ſoul is gone out of the body, it cannot ſubſiſt in ſafety, from the very air, which is more rare than the body, by which alone the ſoul could be contained; for the ſoul is a ſpirit and wants not air to preſerve and keep itſelf alive.

Ver. 424. As if, becauſe the water runs out, when the veſſel that contains it is broken; the ſoul were contained in the body in ſuch a manner, that when this is deſtroyed, that too muſt diſſolve, and vaniſh into air. But certainly Lucretius ſtabs himſelf with his own weapon; for if the ſoul be diſſolved, when the body is broken to pieces, as the water runs out of a broken veſſel; then the more the body is obſtructed and cloſed up, the faſter the ſoul will be detained and kept in it, as a well-cloſed veſſel holds the water more ſafely than one that is leaky; yet, though in a violent death the body be not broken, nay, though in men that are hanged, it be in ſome meaſure cloſed and ſtopped up, the ſoul nevertheleſs flies out of it with greater eaſe, than when the body is cut to pieces limb by limb. It is indeed a veſſel, but made of earth, and the ſoul is contained in it, but proceeds from heaven; and when death comes, both of them return to the place from whence they came; the body is committed to the earth, and the ſoul ſeeks her native heaven. Let Lucretius then make the moſt of his weak argument.

Ver. 428. In theſe twelve verſes, is contained his ſecond argument againſt the immortality of the ſoul. Whatever, ſays he, is generated, grows up, waxes old, and decays with the body is mortal: But all this is true of the ſoul: For children are no leſs infirm in mind, than weak in body; as they grow up, and the ſtrength of their body increaſes, they ſtrengthen in judgment likewiſe. But in old age, both mind and body decay, and dodder alike

This argument is confuted by Lactantius, lib. vii. de Div. Præm. c 12, where he argues to this purpoſe. This reaſon, ſays he, holds not good as to the ſoul, though indeed it be true inaſmuch as it relates to the body; which, becauſe it is made of a periſhing element, is corruptible: but the human ſoul, becauſe it is derived from a celeſtial ſubtility neither dies nor is corruptible; on the contrary, it is an eternal ſpirit, that deduces its origin from the ſpirit of God. Therefore this common axiom, "Quicquid natum eſt, interire neceſſe eſt," whatever is born, muſt of neceſſity die, can hold good only in corporeal things. The ſoul, indeed, is born with the body, but it proceeds perfect from God; nor does age add any thing to it, or take any thing from it. The ſtrength of the mind does indeed increaſe and decay, but this happens not through any imperfection in the ſoul itſelf, but through the deficiency of the organs of the body Ariſtotle too argues to the ſame effect, 1. de Anim cap. 4

Ver. 440. Theſe ſixteen verſes contain his third argument When the body is ſeized with a fit of ſickneſs, the mind is poſſeſſed with grief, fear, &c. But in that diſeaſe the body is waſted; and it is likely too that the mind waſtes with ſorrow. Nay, the mind is ſometimes diſeaſed itſelf; for the mind of a lunatic raves, and the mind of a lethargic perſon is ſtupid. Since, therefore, the

violence of diſeaſe and pain penetrates into the very mind, we ought to believe that the mind is mortal. Panætius, in Cicero, Tuſcul. 1. uſes the ſame argument, which Cicero likewiſe there confutes in theſe words: "Sunt hæc ignorantis, cum de æternitate animorum dicantur, de mente dici, quæ omni turbido motu ſemper vacat; non de partibus iis, in quibus ægritudines, iræ, libidineſque verſentur; quas is, contra quem hæc dicuntur, ſemotas à mente & diſcluſas putat," &c.

Ver. 466. This diſeaſe, Celſus lib. v. cap. 20. calls a ſtupid heavineſs, and an almoſt irreſiſtible neceſſity of ſleep, with an alienation of mind. Hence they derive it from the Greek word Λήθη, oblivion, becauſe that diſeaſe is attended with a forgetfulneſs of all things; occaſioned by the brain's being oppreſſed with too great a quantity of pituitous matter.

Oldham deſcribes it thus:

A ſleep, dull as the laſt——
On all the magazines of life did ſeize,
No more the blood its circling courſe did run;
But in the veins, like icicles, it hung.
No more the heart, now void of quick'ning heat,
The tuneful march of vital motion beat;
Stiffneſs did into all the ſinews climb,
And a ſhort death crept cold through ev'ry limb.

Ver. 453. Lactantius, de Divin. Præm. lib. vii. cap. 12. ſhows the weakneſs of this concluſion in theſe words: "Quia anima juncta eſt cum corpore, ſi virtute careat corpus, contagio ejus ægreſcet: imbecillitas de ſocietate fragilitatis redundat ad mentem." Becauſe the ſoul is united with the body, if the body want ſtrength or health, the ſoul will ſicken with the contagion of the body; a weakneſs redounds to the mind from its fellowſhip with frailty. Thus the mind is ſaid to be ſick or in pain, only by way of metaphor: for it is the defect of the body only, that makes the mind ceaſe to operate, or that cauſes it to operate amiſs. Thus too Ariſtotle, de Anim. lib. i. cap. 4. teaches that hate, love, anger, fear, grief, and all the other paſſions, as we call them of the mind, are not indeed defects or weakneſſes of the underſtanding, but of the body in which it reſides: For the underſtanding is ſomething that is more divine and free from all paſſion. And, therefore, as the ſame Lactantius argues very well; "cum diſſociata fuerit à corpore, vigebit ipſa per ſe; nec ulla jam fragilitatis conditione tentabitur, quia indumentum fragile projecit. Loco citat."

Ver. 456. Theſe thirteen verſes contain his fourth argument, in which he produces a drunken man, bawling and raving without ſenſe or reaſon, confounding heaven and earth together, and neither his hands, his feet, his eyes, his ears, nor even his mind itſelf capable of performing their proper offices. Now what can be the cauſe of all this, ſays he, but the briſk and impetuous ſpirits of the wine, which having diffuſed themſelves through the whole body, affect, diſturb, and diſtract the mind? And certainly whatever can be diſordered to this degree by a ſlender force, may be deſtroyed by a more violent.

Ver. 462. Singultus, the word Lucretius here uſes, ſignifies not only a ſobbing, but a yexing, which we commonly call the hiccough, a frequent effect of too much drinking.

Ver. 465. This too is falſe; for the mind is not affected by the ſtrength of the wine, but the brain and the fancy, which the fumes of the wine render cloudy and confuſed; and this is the reaſon that the mind cannot perceive and act with the ſame clearneſs as before. It is not therefore any fault or defect of the mind, but of the organs of the body. In like manner, the weakneſs and heavineſs of the members that attend drunkenneſs, cannot be imputed to the mind, but to the body, which being weakened by the ſtrength of the wine, is become incapable of being guided and governed by the ſoul. Thus the ſun is not ſaid to have contracted a blemiſh, becauſe he ſhines not into a room whoſe windows are cloſed up. Nor is the hand grown weak, becauſe it throws not the duſt of a pounded ſtone ſo far as it did the ſtone, while it was yet whole and unbroken.

Ver. 469. His drunkard having made his exit, the poet, in theſe twenty-one verſes, for his fifth argument, brings in a man ſeized with an epileptic fit, and proſtrate on the ground; a horrid ſpectacle which none are willing to behold. However, the elegance and livelineſs with which Lucretius deſcribes this image, make us regard it not without ſome pleaſure; for he extends the wretch in ſo moving a manner, and ſo ſtrongly paints his ſtrugglings and his other motions, that even though we ſhould be diſpleaſed at his ill-placed wit, we cannot but forgive the artiſt. Being ſeized with the fit, he raves and talks wildly; but that raving, ſays the poet, is a mark of the diſſolution of the ſubſtance of the mind, at leaſt of the perturbation of it. And he who can believe, that what may be diſſipated within the body itſelf, can remain entire in the open air (for when the ſoul is freed from the body, it can be no where elſe), may with as much reaſon pretend, that water will ſtay in a veſſel full of holes, and leak out of one that is ſound.

This argument being but a confirmation of the laſt, requires no other ſolution than that has had already: nor, indeed, does that ſtrength of diſeaſe diſturb the mind, but diſtorts the body and all its members; and yet the ſoul is then ſaid to ſuffer, becauſe it does not act after its uſual manner. Thus how ſkilful ſoever be the player on a harp, yet if the ſtrings of his inſtrument be out of tune, he can make them utter no other than diſcordant and unharmonious ſounds.

Ver. 490. The ſixth argument is in theſe ſixteen verſes to this effect. We ſee that this mad and raving mind may, by the help of phyſic, be recovered and reſtored to its former ſtate: and thus, there is ſome change made in the mind. Therefore, either ſome new parts are added, or ſome are taken away, or elſe the particles of the mind are placed in another order; for all change

is made either by addition, detraction, or tranſpoſition of the particles. But every thing muſt, of neceſſity be mortal that receives new parts, that loſes any of its parts, or of whoſe parts the poſition and order is changed. Therefore, whether the mind grow ſick, which the foregoing arguments have proved, or whether it grow well again, it either way confeſſes its own mortality.

Ver. 501. Not in the leaſt for the reaſon here alleged; becauſe, though the raving or madneſs of the mind be cured by helleborc, or other remedies of like nature, yet the cure is not of the mind, but of the brain; which being reſtored to its former health, the mind performs her functions as before.

Ver. 505. The ſeventh argument is included in the e nineteen verſes. Men often die limb by limb, and expire by degrees. Therefore, the ſoul too dies by degrees. For, who will pretend that the ſoul, that moſt lively and ſenſible thing, reſides in the dead members of the body that are void of all ſenſe. But if you think that the ſoul retires out of the dying members into the more inward parts of the body; why do not thoſe parts to which the ſoul retreats, and where ſhe is contracted into a narrower ſpace, enjoy a more lively and briſker ſenſe? Has the ſoul, by being thus ſhut up in a leſs compaſs, loſt the power of ſenſe? Take care of granting that; for what decays and loſes its nature by being thus contracted and huddled up, is as much mortal as that which flies diſperſed, and is torn to pieces in the air.

Ver. 516. The falſehood of this concluſion may be evinced even from the doctrine of Lucretius himſelf. For ver. 137. of this book, he fixes the ſeat of the mind in the heart; but the ſoul, becauſe he believed it corporeal, he has diffuſed through the whole body, and yet not disjoined it from the mind. Therefore, it may by degrees contract itſelf from the extremeſt parts of the body to the heart, where the mind, to which it is joined, has its reſidence. But there is another anſwer to this argument: for ſince the ſoul is incorporeal, it is diffuſed whole through all the body, and whole in every part of the body; ſo that when any part of the body dies, or is cut off, the ſoul does not therefore die, nor is it therefore cut off: but remains ſafe and whole in the other ſound and whole parts of the body: nor does it go out of the body, till the body be diſſolved by death. Thus, for example, the intentional ſpecies, as they call it, is whole in all the place, and whole in each part of the place: For inſtance; in whatever place, or in whatever part of a place you ſet a mirror, or fix your eye, there the whole image will every where be found. Thus too, ſay the Romaniſts, the body of our Lord Jeſus Chriſt is whole under the whole ſpecies of the bread, and whole under every part of the bread, in the bleſſed ſacrament of the Euchariſt.

Ver. 524. Theſe eight verſes contain the eighth argument. The mind is a part of man, as is proved above, ver 93 and has a certain place allotted for it; as there is for the noſe, the eyes, &c. But pluck out the eyes, and cut off the noſtrils, and neither will thoſe perceive colours, nor theſe ſmell odours. Therefore, we muſt acknowledge the ſame of the ſeparated ſoul, ſince it is no leſs joined to the body than the other parts of it.

In anſwer to this argument, we ſay, that the ſoul is indeed a part of man; but not ſuch a part as the feet, the eyes, the arms, &c. for it is only an eſſential part, as they call it, and is the principle of life to its own ſelf: but the other parts of man derive their vital motions, and their ſenſes from the ſoul. Therefore, it is not ſtrange, that the other parts, when they are disjoined from the whole man, have no ſenſe remaining in them, ſince they are ſeparated from their principle of vital ſenſe. Lactantius gives this argument another anſwer. The ſoul, ſays he, is not a part of the body, but in the body: in like manner, as what is contained in a veſſel is not part of the veſſel, no more than the goods in a houſe are part of the houſe; ſo neither is the ſoul, becauſe the body is, as it were, the veſſel and receptacle of the ſoul, therefore a part of the body. "Anima non eſt pars corporis, ſed in corpore eſt: Sicut id, quod vaſe continetur, vaſis pars non eſt; nec ea, quæ in domo ſunt, partes domus eſſe dicuntur: ita non anima pars eſt corporis, quia corpus vel vas animæ eſt, vel receptaculum." De Divin. Præm. c. 12.

Ver. 529. So Cicero Tuſcul. 1. "Noſce animum tuum, nam Corpus quidem eſt quaſi vas, aut aliquod animi receptaculum." Know thy mind, for the body is indeed as a veſſel, or certain receptacle of the mind. Thus Xenocrates in Antioch, calls the body ψυχῆς σκῆνος, the tabernacle of the ſoul. In Cratyl. ψυχῆς σῆμα, the ſepulchre of the ſoul.

Ver. 534. The ninth argument is in theſe twenty five verſes to this purpoſe. While the body and ſoul are joined together, the animal lives and is ſenſible; when the ſoul is gone, the body is inſenſible, and ſo too is the ſoul when ſeparated from the body. The mind is as the eye of the body, and who expects to ſee with an eye that is torn out? Beſides, were not the atoms of the ſoul contained in the veins and nerves, they could not be affected by thoſe motions that are the cauſe of ſenſe: for all thoſe motions require a certain ſpace, and fixed and definite bounds. But if you pretend that the ſoul, after its diſſolution from the body can be contained or held in by the air, you may as well at the ſame time, affirm likewiſe, that the air is an animal which ſeems moſt abſurd and moſt falſe. Epicurus writes thus to Herodotus. Καὶ μὴν τὰ λυομένα τῶ ὅλω ἀφρόισματος, τὰ ψυχὴ διασώῤῥαι, καὶ ἐχέμι ἔχει τὰς αὐλας δυνάμεις, ὧδε κινεῖσαι, ὡς τὰ ὧδ' αἰσθησιν κέκτηλαι. Οὐ γὰρ ἐιον τὰ νοεῖν αὐλο αἰσθανόμενον, μὴ ἐν τέῳ τῷ σοσήμαῖ ταῖς κινήσεσι ταυλαις χρώμενον, ὅταν τὰ τειγάζονλα, καὶ περιέχονλα μὴ τοιαῦλα ᾖ, ἐν οἷς νῦν ὅσα ἔχει ταυλας τὰς κινήσεις.

Ver. 536. This compariſon is not juſt. For, though the ſoul be the principle of life to the body; yet the body is not ſo to the ſoul. It is not therefore to be wondered at, that the body perceives nothing without the ſoul. But who can

doubt but that the ſoul has the power of perception without the body, ſince it is the principle of all ſenſe.

Ver. 553. This inference is too abſurd; for what neceſſity is there, that the air into which the ſoul flies at its ſeparation from the body, ſhould become an animal? Has it any of the organs or diſpoſitions that are proper for vital ſenſe? The ſoul, after it is ſeparated from the body, always retains its innate propenſity to animate the body again at the reſurrection.

Ver. 557. In theſe ten verſes, is included the tenth argument. When the ſoul, which is ſeated in the inmoſt parts of the body, as being the foundation of the whole animal, is fled away, the ruinous body putrifies, and moulders into duſt. Now, whence can proceed this total deſtruction of the body, except becauſe the ſoul that propped it up, and held all the members together, has forſaken them, and is fled away through all the pores and iſſues of the body? And the ſoul too, being thus divided into ſo many minute parts, at her going out of the animal, ſeems to be prepared and got ready for her total diſſipation.

Ver. 565. This inference which the poet draws from this argument, is altogether ridiculous, as if the ſoul exhaled through the pores and paſſages of the body, as the ſmoke of frankincenſe does through the holes of a cenſer. The ſoul is wholly incorporeal, and therefore goes unhurt and whole out of the whole body, as well as out of each pore and paſſage of it. And the body's corruption when the ſoul is gone out of it, argues not any diviſibility of the ſoul; but proceeds from the want of that vital agitation, which the body has from the ſoul only.

Ver. 567. Theſe fourteen verſes contain the eleventh argument, which is to this purpoſe: In what we commonly call a ſwoon, the ſtrength and powers of the mind and ſoul are ſhaken to ſuch a degree, that were the cauſe but a little more violent, the ſoul itſelf would be diſſolved. Since, then, the mind can be thus diſordered, even while the body hides and protects it: who can believe that ſo ſubtle a ſubſtance, when it comes to be turned out from its place of ſhelter, can reſiſt and hold good againſt the reſtleſs violence of the winds and other things that will be continually aſſaulting it.

Thus Lucretius: but we know very well, that this "Deliquium animi," as the Latins call it, this fainting of the mind, does not in the leaſt argue the mortality of the ſoul; but only a deficiency or failure in the organs of the whole body: to which organs, when they are thus obſtructed, the vital and animal ſpirits which the ſoul makes uſe of, as helps to the preſervation of life, cannot be tranſmitted.

Ver. 581. In theſe ten verſes, the poet brings his twelfth argument; and, to leave no ſtone unturned, he appeals to the dying, and aſks, Which of them ever perceived his ſoul riſing up from the extremeſt parts of his body, and then go out whole at his mouth? Or whether they do not rather perceive it dying in each part, as every ſenſe does in its proper organ? Nor is it to be doubted, ſays he, but that the dying are conſcious of the diſſolution of their ſouls; otherwiſe why do they complain? They ſhould rather rejoice to lay down the burden of the body, as a ſnake is to caſt off her ſlough, or as a ſtag to drop his ponderous and overgrown antlers.

Ver. 585. Neither Lucretius, nor any man elſe, ever experienced the truth of what he here advances: for what dying perſon ever told the ſtanders by, that he perceived what his ſoul was doing, which way it was going, or how it went out of his body, from which part of it it firſt retired, &c. For his ſaying that it goes out through the jaws is only a vulgar way of ſpeaking. And ſince the ſoul is wholly ſpiritual, it may, as we ſaid before, go out whole through the whole body, or at any part of it.

Ver. 586. This part of the argument is wretchedly weak indeed: and Lactantius, lib. 7. de Divin. Præm. cap 13. has fully anſwered it in theſe words: "Equidem nunquam vidi qui quereretur ſe morte diſſolvi: Sed Lucretius fortaſſe Epicureum aliquem viderat, etiam dum moritur, Philoſophantem, ac de ſua diſſolutione in extremo ſpiritu differentem. Quomodo ſciri poteſt utrum diſſolvi ſe ſentiat, an corpore liberari, cum in exitu lingua muteſcat? Nam dum ſentit, et loqui poteſt, nondum diſſolutus eſt: Ubi diſſolutus eſt, nec ſentire jam, nec loqui poteſt: Ita queri de diſſolutione aut nondum poteſt, aut jam non poteſt. Et enim non prius quam diſſolvatur, intelligit ſe diſſolutum iri. Quid, quod videmus pleroſque morientium non diſſolvi conquerentes, ſed enim ſe, et proficiſci, et ambulare teſtantes; idque aut geſtu ſignificant, aut, ſi adhuc poſſunt, et voce pronunciant. Unde apparet non diſſolutionem fieri, ſed ſeparationem, quæ declarat animam permanere." Indeed, I never ſaw any man who complained that he was diſſolved in death. But Lucretius perhaps had ſeen ſome Epicurean philoſophizing, even when he was dying, and reaſoning of his diſſolution at his laſt gaſp. How can it be known, whether a man perceives his ſoul to die, or to be freed from the body, ſince the tongue is ſpeechleſs in the moment of death? For ſo long as a man perceives and ſpeaks, he is not diſſolved. When he is diſſolved, he can then neither perceive nor ſpeak; therefore, either he cannot yet bemoan his diſſolution, or now he can no longer bemoan it. For how can he know he is diſſolved before he is diſſolved. Beſides, we ſee many dying perſons, not complaining of their entire diſſolution, but affirming that they are going, that they are departing, that the ſoul is going out of the body; and this they ſignify by ſigns and geſtures; or, if they are able, they pronounce it with their tongue. Whence it appears there is no diſſolution but a ſeparation of the ſoul from the body; which ſeparation evinces the permanency of the ſoul.

Ver. 589. Tertull. de Pall. Theophylact. in cap. 10 Matth. Ariſtot. Hiſt. Nat. l. 8. c. 7. et Plin. lib. viii c. 27. ſays, that ſerpents, when they perceive themſelves growing old, caſt off their ſkins, and are clothed again with new, which Virgil confirms in theſe excellent verſes:

Qualis ubi in lucem locuber, mala gramina paſtus,
Frigida ſub terrâ tumidum quem bruma tegebat;
Nunc poſitis novus exuvius, nitiduſque juventâ
Lubrica convolvit ſublato, pectore terga,
Arduus ad ſolem, et linguis micat ore triſulcis.
Æn. 2. ver. 471.

So ſhines renew'd in youth, the creſted ſnake,
Who ſlept the winter in a thorny brake;
And caſting off his ſlough when ſpring returns,
Now looks aloſt, and with new glory burns.
Reſtor'd with pois'nous herbs, his ardent ſides
Reflect the ſun; and rais'd on ſpires he rides,
High o'er the graſs he hiſſing rolls along,
And brandiſhes by fits his forky tongue. *Dryd.*

Ver. 590. Pliny, in the eighth book of his Natural Hiſtory, chap. 32. ſpeaking of deer, ſays, "Cornua mares habent, ſolique animalium omnibus annis ſtato veris tempore amittunt." The males have horns, and are the only animals that loſe them every year at a certain time in the ſpring. And Waller, deſcribing the head of a ſtag, takes notice of the ſame thing.

So we ſome antique hero's ſtrength
Learn by his launce's weight and length;
As theſe vaſt beams expreſs the beaſt
Whoſe ſhady brows alive they dreſt.
O fertile head, which ev'ry year
Could ſuch a crop of wonder bear!
Which, might it never have been caſt,
Each year's growth added to the laſt,
Theſe loſty branches had ſupply'd
The earth's bold ſon's prodigious pride:
Heav'n with theſe engines had been ſcal'd,
When mountains heap'd on mountains ſail'd.

Ver. 591. Theſe five verſes contain his thirteenth argument. He has already ſaid, that the mind is ſeated in the heart: and now he concludes from thence, that it is confined to the heart in ſuch a manner, that it cannot exiſt elſewhere. He who looks for ſouls in the air, may as reaſonably expect to find flames in water, and ice in fire: for all natural things have certain and fixed places to be born and live in.

But this argument is falſe; for birds, for example, are hatched in a neſt, and yet live out of the neſt. A nut is produced upon a tree, and a grain of corn in the ear, and yet they are kept in granaries. Then, why ſhould not the ſoul, if it were created in a certain part of the body, be able to live out of it. But as Lactantius, lib. 7. de Div. Præm. c. 12, argues admirably well, the poet contradicts his own doctrine; for book ii. ver. 964. he ſays,

——Each part returns when bodies dies;
What came from earth to earth, what from the ſky [high
Dropp'd down, aſcends again, and mounts on

which ought not to have been ſaid by him, who now aſſerts, that the ſoul dies with the body. But to uſe the very words of Lactantius, "Veritate victus eſt, et imprudenti ratio vera ſurrepſit;" he is convicted by a truth which happened to ſlip from him unawares.

Ver. 596. In theſe ten verſes, the poet brings his fourteenth argument. If you imagine, ſays he, the ſeparated ſoul to be immortal, you muſt believe it ſenſible too; and conſequently endowed with five ſenſes: but from whence can theſe ſenſes ariſe, ſince the organs of the ſenſes, the eyes, the noſtrils, the hands, the tongue, the ears, are all putrified in the abandoned body?

The anſwer to this argument is, that the ſenſes that are aſcribed to the ſoul after death: as hearing, ſeeing, &c. are not properly called ſenſes; but it is the very power and faculty of perception and underſtanding, which is called the ſenſes in each diſtinct and different ſort, and which of itſelf, for inſtance, diſcerns colours no leſs than the eye, hears ſounds no leſs than the ear, &c.

Ver. 600. He derides the fables of the ancients concerning the ſouls of men, which, as they feigned, went into hell after death, where they enjoyed all their ſenſes, as when they were alive.

Ver. 606, 607. His fifteenth argument takes up theſe thirty four verſes. The ſoul, ſays he, being diffuſed through the whole body, muſt of neceſſity be divided, if the body be cut in two by a violent and ſudden ſtroke. For example, if a limb of a ſoldier be cut off by an armed chariot, the motion of the diſſected part is a proof that the ſoul is divided likewiſe. This the poet elegantly and at large deſcribes; and then brings a ſecond inſtance in the parts of a ſerpent chopped to pieces; and urges, that it muſt be granted, either that there are ſeveral ſouls in the ſame animal, that is to ſay, in a man or a ſerpent, and that the keenneſs of the weapon, even though the blow he given at random, divides the members of the animal ſo exquiſitely, that it leaves to each ſoul its proper ſeat; which no man in his ſenſes will allow, or elſe it muſt be confeſſed, that the ſingle ſoul which is diffuſed through the whole body of the animal, is cut into many pieces, and conſequently is mortal.

To this argument we anſwer, that beſides that the Chriſtian faith teaches, that the ſoul of man is incorporeal; if the mind have choſen to itſelf its peculiar ſeat in the heart, as Lucretius pretends it has, it can never be divided, unleſs the heart be cut to pieces; but this we know to be falſe. Then as to what he inſtances in the amputated limbs of ſoldiers, it is not the ſoul that remains in them, and cauſes that palpitation; but certain warm ſpirits, that, by ſtirring up and down in the yet living nerves and muſcles, move the mangled and chopped off limbs; nor do they forſake them till they are ſeized and benumbed with cold. As to the inference he draws from ſerpents, we anſwer, that their rejected parts have life, becauſe the ſoul of animals is corporeal and mortal too.

Ver. 607. That is to ſay, the ſoul is in the whole animal, or in every part of the animal: for where the faculties of the ſoul are, there the ſoul is likewiſe; nor can thoſe faculties exiſt where the foundation and cauſe of them is not; but the ſoul is the foundation of them. And this is what made Ariſtotle ſay, that if the eyes were in the feet, the feet would ſee.

Ver. 614. Lucretius calls them "falciferos Currus," scythe-bearing chariots, alluding to the armed chariots which the ancients made use of in their armies, and which Xenophon, in book 6. of the Institution of Cyrus, describes in these words. Πολεμίσήρια καὶ σκευάσεν ἁρμαῖα τροχοῖς τε ἰσχυροῖς, ὡς μὴ ῥᾳδίως συνλῄζεσθαι, ἄξοσί τε μακροῖς. ἦν γὰρ ἀναλῄσεσθαι πάλα τὰ πολαῖα, τὸν δὲ δίφρον τοῖς ἡνιόχοις ἐπόησεν, ὥσπερ πύργον, ἐχυρῶν ξύλων ὕψος δὲ τοῦτον ἐπὶ μέσῳ τῶν ἀγκώνων ὡς δύνωνται ἡνιοχεῖσθαι οἱ ἵπποι ὑπὲρ τῶν δίφρων· τοὺς δὲ ἡνιόχους ἐθωράκισε πάνυ καλὴν τῶν ὀφθαλμῶν, περονήνας δὲ καὶ δρέπανα σιδήρεα ὡς διπήχεα πρὸς τοὺς ἄξονας ἔνεν καὶ ἔνθεν τῶν τροχῶν. καὶ ἄλλα κάλω ὑπὸ τω ἄξονι εἰς γῆν βλέπονλα, ὡς ἐμβαλλόμενον εἰς τοὺς ἐναντίους τοῖς ἅρμασιν. He took care, says he, to have warlike chariots made with very strong wheels, that they might not be easily broken, and large axle-trees, that they might not be apt to overthrow. The coachman's seat or box was made like a tower, of strong timber, and elbow-high, that they might govern the horses as they sat in their seats. The charioteers were armed from head to foot; to the axle-trees on both sides of the wheels he fastened scythes of iron, two cubits in length, and others beneath the axle, turning downwards towards the ground, as if he meant to drive over and trample down his enemies with this sort of chariots. And Vegetius de re Milit. l. 3. c. 24. says, "Quadrigas falcatas in bello Rex Antiochus et Mithridates habuerunt, quæ ut primò magnum intulere terrorem, ita postmodum fuere derisui." King Antiochus and Mithridates, in their wars, made use of chariots drawn by four horses, and armed with hooks or bills; which at first were very dreadful in an army, but at length were laughed at. Lucretius mentions them again, book v. ver. 1392. But we have a better authority for this sort of chariot, than any of the heathens can give us; 1 Sam. xiii. and Cowley, David. iv. describes them thus,

Here, with worse noise, three thousand chariots pass,
With plates of iron bound, or louder brass,
About it forks, axes, and scythes, and spears;
Whole magazines of death each chariot bears;
Where it breaks in, there a whole troop it mows,
And with lopp'd panting limbs the field bestrews:
Alike the valiant, and the cowards die;
Neither can they resist, nor can these fly.

Ver. 630 To what Lucretius here says of serpents, and which all men know to be true, I will add what many have experienced of vipers; the head of which animal will live a considerable time after it is cut off: if you prick in the mouth, it will catch fast hold of the instrument that wounds it; and if you flea the rest of the body, and take out the bowels, and then throw it into water, it has been observed to live for an hour after, and even to move with vigour.

Ver. 634. I answer, it has: For, as Aristotle says, the more ignoble animals have indistinct and unseparated organs, after the manner of plants; wherefore that part, which is analogical to the heart is extended throughout the whole body. Hence it is, that the rescinded parts live, because each enjoys its proper fountain of life.

Ver. 640. These nine verses contain the sixteenth argument. If, says he, the soul be immortal; if, as Pythagoras and Plato believed, it existed entire before the body was perfected, why does no man, Pythagoras only excepted, remember the life he led before? And if the soul, by going into the body, lose all remembrance of things past, why should not a thing that is vitiated to such a degree be subject to farther corruption, and to death?

This argument proves nothing against the immortality of the soul, but rather condemns the metempsychosis of Pythagoras: For neither do we Christians pretend that the soul pre-exists before it is infused into the body; but believe that it is created by the Almighty, at the time that it is insinuated into the body. Souls, therefore, are not from all eternity, but created eternal, and in time. But Pythagoras held, that souls are eternal, and that they pass from body to body, as well of man as of beast. Now, this doctrine of the transmigration of souls was originally an Egyptian doctrine, as Herodotus and Diodorus Siculus both affirm; but if lying Philostratus may be believed, the Egyptians had it from the Bramins. It is agreed by all, that Pythagoras first brought it into Greece, where he had a mind to be thought the first author of it. To make the people believe him, and give credit to his doctrine, he told them an impudent lie: that his soul had been in Euphorbus at the time of the Trojan war, and that in the six hundred years between that and his birth, his soul had gone through several other bodies before it came into his. He faced them down by a singular gift of remembering all the stages through which his soul had passed in its travels. "O mirum," says Lactantius, "et singularem Pythagoræ memoriam! O miseram oblivionam nostram omnium, qui nesciamus, quid ante fuerimus! sed fortasse vel errore aliquo, vel gratia sit effectum, ut ille solus lethæum gurgitem non attigerit, nec oblivionis acquam gustaverit." But let us hear Pythagoras tell his tale. First, When Euphorbus was killed by Menelaus, which was in the year before J. C. 1185, then his soul, as he said, came into Æthalides, the son of Mercury. After his death, it came into Hermotimus, then into one Pyrrhus, a fisherman of Delos, and at last to Pythagoras. This is the way that Porphyrius, p. 201, tells the story. But the Scholiast on the Electra of Sophocles says, that Pythagoras himself used to say that his soul was in Æthalides before it came into Euphorbus; and this is confirmed by Diogenes Laertius, lib. viii. who cites Heraclides for it; and he lived near the time of Pythagoras; and likewise by the Scholiast on Apoll. Argonaut. i. who reports it from Pherecydes, an intimate friend of Pythagoras. They tell their story with particulars well worth knowing, if they were true: As that Pythagoras came by this wonderful memory by the favour of Mercury, whose office it was to carry souls into hades, and who gave the soul of his own son Æthalides,

in its way thither, the privilege not to taſte of the waters of Lethe, the drinking of which makes ſouls forget their former eſtate and being, and whatever elſe has paſſed in this world. And thus, it is plain, how, as Pythagoras was wont to ſay, Euphorbus remembered that his ſoul had dwelt formerly in the body of Æthalides; Hermotimus, that his had been in both thoſe; the fiſherman, that his had inhabited thoſe three bodies; and Pythagoras, that his had been in them all. They tell us farther, how it came to paſs, that in ſix hundred years, that ſoul of his was only in the two bodies of Hermotimus and the fiſherman; for, as Diogenes Laert. lib. viii. affirms, Pythagoras himſelf uſed likewiſe to ſay, that Mercury gave the ſoul of his ſon Æthalides leave to reſt ſometimes in hades, and at other times to travel unbodied above ground; and that even the ſoul which was in him, had, after the fiſherman's death, reſted 207 years, before it entered into his body. But whether theſe particulars be true or not, the doctrine of the tranſmigration of ſouls is ſufficiently proved, if the ſoul of Pythagoras had at any time formerly been in the body of Euphorbus. And Porphyrius, p. 191, and his ſcholar Jamblichus, cap. xviii. both tells us, that Pythagoras himſelf affirmed it, nay, that he proved it to be true beyond diſpute. But theſe philoſophers wiſely took care to conceal that part of their ware which would have diſgraced all the reſt. It was the Egyptian doctrine, that ſouls paſſed out of men into beaſts, fiſh, and birds. And this too Heraclides in Laertius affirms, that Pythagoras uſed to ſay of himſelf, and that he remembered not only what men, but what animals, nay, what plants his ſoul had paſſed through; and, what was a greater gift even than that which Mercury beſtowed on Æthalides, Pythagoras took upon him to tell many others, how, and where their ſouls had lived before they came into their bodies; particularly one who was beating a dog, he deſired to forbear, becauſe, in the yelping of that cur, he heard a friend's ſoul ſpeak to him. So too Empedocles, who lived in the next age after Pythagoras, and was, for a while, the oracle of his ſect, declared of himſelf, that he had been firſt a boy, then a girl, then a bird, then a fiſh. Apollonius too, if we may give credit to Philoſtratus, had the ſame impudence; for that writer tells us, that he owned his ſoul to have been formerly in the maſter of a ſhip. He ſhowed one young man who had in him the ſoul of Palamedes; another that of Telephus, who were both killed in the time of the Trojan war; and in a tame lion, that was carried about for a ſight, he ſaid, there was the ſoul of Amaſis king of Egypt. How could ſuch fictions come into mens heads? There is more than idle fancy in them; and they plainly diſcover a pernicious deſign of the devil, to confound the two doctrines of the immortality of the ſoul, and of the reſurrection of the body; for if theſe fictions were true, there would be no difference between the ſoul of a man and the ſoul of a brute, or that of a plant; and at the reſurrection, there would be more bodies than ſouls to animate them. To tell what tricks Pythagoras uſed, to impoſe on men the belief of this no leſs abſurd than impious doctrine, would make this digreſſion too tedious; therefore, I will only add, that Cicero i. Tuſcul. obſerves, that Plato too, who taught that the univerſal ideas of things are from all eternity, and eternal, held, if not a perfect remembrance, a reminiſcency at leaſt of the actions that paſſed in the life that preceded the infuſion of the ſoul into the body. And againſt theſe doctrines of theſe two philoſophers, Lucretius chiefly directs this argument, and ſome of the following.

Ver. 649. The ſeventeenth argument, in theſe ſixteen verſes, is to this purpoſe: If the ſoul were infuſed into a perfect body, it ought to have been done in ſuch a manner, that it might be in that body like a bird in a cage; not as it now is, when it ſeems to grow, and be ſo much of a piece with it, that it cannot be ſafe and whole out of it, and thus betrays itſelf to have had a beginning, and to be liable to have an end.

If this argument be brought only againſt the Pythagoreans, we need not concern ourſelves about it; but if it be levelled againſt us, who aſſert, that immortal ſouls are infuſed into our bodies the moment they are created, it is already anſwered in our note upon the ſecond argument, ver. 428; to which we add beſides, that the ſoul is infuſed into the body, not as an aſſiſting form, as they call it, ſuch as is the pilot in a ſhip, and the coachman in a chariot; but as an informing form, and as the principle of vital motion. But its departure from the body, to which it is ſo cloſely and inly joined, without any diviſion of its parts, but whole and free from all ſtain and blemiſh of corruption, is a privilege due to its ſpirituality; for whatever is ſpiritual cannot be disjoined or divided.

Ver. 665. Theſe fifteen verſes include the eighteenth argument. Let us grant, ſays the poet, that the ſoul is, as they will have it, firſt formed, and infuſed afterwards; yet it muſt of neceſſity ſuffer change, as it is diffuſed into all the different mazes and pores of the body, its ſite and order is changed, and the whole ſubſtance divided into parts. For let any thing flow into ſo many pipes, ſo many paſſages and holes as are in the body, it muſt of neceſſity be turned and twiſted about in many manners. For example, the food we eat, while it is conveyed through the veins and other conduits of the body to every member of it, loſes its firſt form, and takes up one that is quite different. And we ought to believe, that the ſoul too undergoes a like change, and conſequently is mortal.

This argument is anſwered by what we have ſeveral times aſſerted; for ſince the ſoul is incorporeal and ſpiritual, why may it not be infuſed whole and without any diviſion of its parts, into the body, and all its members? And if, for inſtance, the whiteneſs of the milk ſpreads itſelf through the whole ſubſtance of the milk, without any diviſion of itſelf, how much rather may the ſoul diffuſe itſelf through the body? Beſides, nei-

ther does the meat that is distributed into the members of animals, die and perish; but after it is concocted by the natural heat, it is converted into the nature of the body it feeds.

Ver. 680. These twenty-nine verses includes the nineteenth argument. If the soul, says he, when it goes out of the body, leaves some particles behind, they being thus separated, argue the soul to be subject to dissolution; if it leaves none, no cause can be alleged why so many worms take life in the carcase; for to pretend that so great a number of souls flow together from without to the place from whence one departed, would be very absurd indeed; and yet it would be more absurd to say that each soul chooses for itself what seeds are most proper to make itself a body, that she may suffer all those ills from which she is exempted when out of a body; or that she enters into a body already made, since it is impossible that she can fit and fashion herself to inform each part of it.

It is scandalous to waste time in confuting these trifles; however, to solve all these arguments in a word, I say, that the human soul being incorporeal, it leaves not any remains of itself in the body, nor is the generation of worms in a dead carcase made of the corruption of the soul that animated that body, but of the corruption of that carcase only, as it likewise happens in cheese, in rotten earth, &c. Nor, lastly, are the souls of the worms infused from without, but, to use the words of Lucretius, are generated, as often as there happens to be in those carcases, or in any other putrified bodies, any seeds or atoms that are fit and proper to generate those insects.

Ver. 709. The twentieth argument is in these thirty verses, and attacks the doctrine of Pythagoras and of Plato. If these immortal souls, says he, had so often been shifted out of the body of one animal to the body of another, the natural dispositions of the animals would by little and little have been changed and altered. Thus the lion would not now be fierce, the deer not fearful, the fox not crafty; the dog would run from the stag, and the dove would pursue the hawk; beasts would be wise, and men void of reason; for the soul of the dove would often be in the hawk, and the soul of a beast inform the body of a man, and in like manner on the contrary: but if it be pretended that the nature of the soul changes according to the different natures of the bodies, and that of whatever kinds the souls are, they put on the manners that agree with the bodies into which they enter, I ask no more; for whatever can be changed is mortal, since in every change there must be a transposition, and consequently a dissolution of the parts. But if it be pretended, for example, that human souls go only into human bodies, why does that soul, which, but now, behaved itself wisely in the body of a man grown up to the years of maturity, play the fool at the rate it does when it is infused into the body of a child? Does the mind grow weak and tender in a weak and tender body? If it does, it is changed; and no man in his senses will dare affirm, that a thing so often changed is immortal.

This whole argument is bent only against the Pythagoreans, who held that souls pass from body to body, as well as of man as of beast. But what he advances, that souls change according to the passions, dispositions, and manners of the different bodies, and grow with them, is already answered in the note on ver. 429.

Ver. 717. Lucretius calls it "Canis Hyrcano de semine," a dog of the Hyrcanian breed. Hyrcania is a country of Asia, which has the Caspian sea on the east, Iberia on the west, Armenia on the south, and Albania on the north. Now, in this country there are a great quantity of panthers, leopards, and tygers, the males of which animals, they say, sometimes couple with bitches, who bring forth a very sagacious sort of dog, and these are they of which our poet here speaks.

Ver. 730. For as Cicero says in Cato, "Temeritas est florentis ætatis, prudentia senectutis:" Rashness is the effect of youth, and prudence of old age. And Aristotle teaches the same thing in Ethic vi. where he says, that though prudence be requisite in every thing, yet nothing is learned without experience and practice, therefore a child cannot be prudent, since age alone can make him so.

Ver. 735. What Lucretius means is this: They cannot deny but that the mind is tender in a tender body; for example, that the mind of a child of two or three years old is weak and infirm; but if it be true that a mind, which was strong before, becomes weak in a weak body, it follows from thence, that the mind is mortal. But the difference of the organs in the bodies answers this part of the argument.

Ver. 739. In these nine verses, is contained the twenty-first argument. Lucretius having hitherto fought this battle with his utmost strength, with all his skill and application of mind, and having besides, as he fancies, routed his adversaries, he now detaches some light-armed arguments in pursuit of the fugitives, and, in the first place, desires to know why a soul is so passionately fond of an adult body? And why it lothes the members that are grown feeble with age, and hastens to get out of them? For, if it were immortal, it would not dread the imbecillity of infancy, nor the ruins of old age.

This argument is of so little weight, that it scarce deserves an answer. For who can believe that the soul retires from the body in apprehension of being crushed to pieces, or in dread of any danger that can happen to her from the fall of her tenement of clay; she leaves it because its organs are so impaired and weakened that she can no longer perform in them the functions of life.

Ver. 748. The twenty-second argument is in these seven verses, where the poet urges, that it is ridiculous to believe that a multitude of souls are waiting at the coitions and births of animals, and contending who shall get first into the body, unless, perhaps, it is agreed among them that the first comer shall be first served.

This argument, abſurd as it is, nevertheleſs, preſſes hard upon the Pythagoreans, though it do not in the leaſt affect us, who teach and believe, that God creates the ſoul the very moment it is infuſed into a new-formed body.

Ver 755 The twenty-third argument is contained in theſe fifteen verſes, in which he obſerves, that as all other things have a fixed and certain region or place allotted them, to be born, to grow, and to live in ſo has the ſoul likewiſe, and therefore can no more exiſt out of the body than fiſh can out of the water, than a tree in the air, or than a cloud in the ſea: Nor can it be doubted in the leaſt, but that the ſoul is born, grows, lives, and exiſts in and with the whole body; for otherwiſe we ſhould feel it formed, ſometimes in the head, ſometimes in the ſhoulders, nay, in the heels, and perceive it diffuſing itſelf by little and little through the whole body.

This argument is to the ſame purpoſe as the thirteenth, and is anſwered in the note on ver. 593. The firſt thirteen verſes of it are repeated, Book v. ver. 140.

Ver. 762. Here our tranſlator has followed the emendation of Faber, which, nevertheleſs, in his Latin edition of Lucretius, he condemns, as not agreeing in the leaſt with the lection of any of the ancient copies; and therefore he is rather of opinion to reject entirely this verſe of his author,

Tandem in eodem homine, atque in eodem vaſe maneret,

than to admit it, as corrected by Faber, who makes it run thus:

Tandem in toto homine, aqua ut in toto vaſe maneret.

He owns, however, the correction to be ingenious, and that he is not better pleaſed with the conjectures of others concerning this paſſage.

Ver 770. In theſe ſix verſes. which contain the twenty-fourth argument, he ſays, that it is downright folly to believe that things, ſo different as mortal and immortal beings, can be joined together, and that a mortal thing (the body) which, when ſeparated from that immortal thing (the ſoul), is ſubject to no harms nor inconveniencies, ſhould, when it is united to that immortal thing, be liable to thoſe pains and afflictions with which men are daily oppreſſed.

If Lucretius could not comprehend how a mortal body could be joined to an immortal ſoul, how came he to find out that the void, which is incorporeal and eternal, is intermixed with created things that are corporeal and mortal? But others, and great philoſophers too, could comprehend it very well; as Ariſtotle, who aſſerted immortal ſouls in mortal bodies; and Plato, who taught that the Eternal Mind is infuſed through all the parts of this tranſitory and corruptible world: And Hermes, who, as Lactantius, lib. xii. de Divin. Pœm. witneſſes, compoſed the nature of man of ſomething mortal, and ſomething immortal, from whence is become, as it were, the horizon that joins the higheſt to the loweſt, and the earthly to the heavenly. Thus theſe men, and others too, acknowledged ſome things partly mortal, partly immortal: and indeed the extremes would otherwiſe have been without a middle, and therefore they were in the right to make ſome things mixed of mortal and immortal.

Ver. 776. The twenty-fifth argument is contained in theſe twenty-one verſes, and is to this effect: Nothing is eternal and immortal, except either by reaſon of its ſolidity, as an atom, or becauſe it is free from ſtroke, as the void, or laſtly, becauſe there is no place out of which, or from whence any bodies can come to daſh it to pieces, or into which its diſſolved or broken parts can retire, as the τὸ Πᾶν, univerſe. But the ſoul is nothing like any of thoſe three things, for it is compoſed of ſeeds, and therefore not perfectly ſolid: It is not a void, becauſe it affects the body, and in its turn is affected by it: And no man will pretend that the ſoul is the τὸ Πᾶν, univerſe; therefore it is mortal. Theſe twenty-one verſes are repeated, Book v. ver. 395.

To all the objections he brings in this argument againſt the immortality of the ſoul, we anſwer, I. That the ſoul, indeed, is not an atom, but that not an atom only is eternal. II. That the ſoul is not the void, but that not the void alone is eternal. III That indeed the ſoul is not the univerſe, but that not the univerſe only is eternal: for God is eternal and immortal, and the ſouls of men are eternal and immortal: thus, beſides the three that Lucretius mentions, there is a fourth ſort of immortal things. And Plutarch, de Nat. Deor. reaſoning according to the doctrine of Epicurus, tells us, that even he allowed four kinds of things to be free from corruption, and that under the fourth kind was included the ſoul of man.

Ver. 797. The twenty-ſixth, and laſt argument againſt the immortality of the ſoul, is contained in theſe twelve verſes. If any one pretend that the mind is either fenced from things that are contrary and deſtructive to it, or that if any ſuch things ſhould advance againſt it, they cannot reach it, or if they do reach it, they cannot hurt it, but are repelled before. This opinion is overthrown by the diſeaſes of the body, of which the mind too bears a part: to which may be added, the reſtleſs cares and anxieties of life, and the dread of puniſhments after death: but what is yet more, and worſe than all theſe, add conſcience, that inward hell: and, laſtly, add madneſs and lethargy. and thus you will be forced to confeſs, that the mind is not protected from pernicious things, but that, on the contrary, it is miſerably oppreſſed by them.

This argument is, as we ſaid before, not a proof of any defect in the ſoul, or in the mind, but argues only the weakneſs and imperfections of the body and its organs Thus Lucretius concludes his diſputation concerning the mortality of the ſoul: and to evince the inſufficiency of his arguments, and how much they fall ſhort of reaching his deſign to prove the ſoul mortal, it will not be

amiſs to take a ſhort view of them from the beginning of this book. Firſt, then, he grants the ſoul to be a ſubſtance, diſtinct from theſe viſible members, and divides it into two parts, the ſoul, properly ſo called, and the mind, which is the governing and ruling part, and takes the heart for its proper ſeat, whilſt the ſoul is diffuſed over the whole body; but theſe two are but one nature, and united, becauſe the mind can act on the ſoul, and the ſoul on the mind, and therefore both are material,

Tangere enim et tangi ſine corpore nulla poteſt res.

For nought but body can be touch'd or touch.

This ſubſtance of the ſoul is a congeries of round ſmooth atoms, and conſiſts of four parts, wind, heat, air, and a fourth nameleſs thing, which is the principle of ſenſe. This ſoul is not equal to the body, as Democritus imagined, but its parts are ſet at diſtance, and when preſſed by any external objects, meet, and jumble againſt one another, and ſo perceive. This is the deſcription of the Epicurean ſoul, and the manner of its acting; and all the arguments they propoſe againſt its immortality, endeavour likewiſe to evince it material, and that too from the mutual acting of the ſoul and body on one another.

To examine each particular, I ſhall firſt grant it material, and then conſider the validity of that conſequence; ſecondly, prove it immaterial, and ſhow that an immaterial being can act on a material, and then diſcourſe on the validity of that conſequence, which infers it to be immortal, becauſe it is immaterial.

And here I ſhall admit the diſtinction between ſoul and mind, taking one to be the principle of life, and the other of ſenſe, but cannot allow them to be one nature, becauſe of their mutual acting, unleſs the body too, on the ſame account, be but one nature with the ſoul, which Lucretius himſelf denies. This mind is ſeated in the brain, a thouſand experiments aſſuring us, that when there happens any obſtruction in the nerves, the animal feels not though you cut the part that lies below the ſtoppage, and yet the leaſt prick above it raiſes the uſual pains and convulſions. Now, ſuppoſe this mind material, and conſider, that it has been already proved, that matter is not ſelf-exiſtent, and therefore depends on another ſubſtance for its being; now I ſuppoſe any man will grant that it is as eaſy to preſerve as to make a thing, for preſervation is only a continuing that being which is already given; and therefore though the ſoul were material, yet the conſequence is weak. And thus the Stoics, though they acknowledge nothing but body, τὴν δὲ ψυχὴν γενεῖήν τε καὶ φθαρτὴν λέγουσιν, ἐκ ἐνθὺς δὲ τῷ σώματος ἀπαλλαγεῖσαν φθείρεσθαι, ἀλλ' ἐπιμένειν τινὰς χρόνους καθ' αυτὴν, τὴν μὲν τῶν σοφῶν μέχρι τῆς ἐκ πυρὸς ἀναλύσεως τῶν πάντων, τὴν δὲ τῶν ἀφρόνων πρὸς ποσοὺς τινὰς χρόνους. And affirm the ſoul to be generated and corruptible; yet it is not deſtroyed as ſoon as divided from the limbs, but remains ſome time in that ſtate; yet the ſouls of the viſcious and ignorant ſome few years, but thoſe of the wiſe and good till the general conflagration of the world.

Secondly, That the ſoul is immaterial, is evident from its operations; for when any external object preſſes on the organ, it can only move it; now, let this motion be inward, ariſing from the preſſure of the external object, or let it be an endeavour outward, proceeding from the reſiſtance of the heart, as Mr. Hobbes imagines, or elſe a little trembling of the minute parts, as the Epicureans deliver, yet what is either of theſe motions to ſenſe? For, ſtrike any piece of matter, there ariſes preſently that preſſure inward, and the endeavour outward; and yet I believe no man accounts a workman cruel for breaking a ſtone, or ſtriking a piece of timber, though, according to this opinion, he may raiſe as quick a ſenſe of pain in theſe as in a man: Nor muſt any one object the different figures and contrivances of ſtones and nerves, for thoſe only make the motion more or leſs eaſy, but cannot alter the nature of the preſſure; beſides, let us take ſeveral round little balls, and ſhake them in a bag that they may meet, ſtrike, and reflect, who can imagine that here is any perception? That theſe balls feel the motion, and know that they do ſo? And indeed the Epicureans grant what we contend for, ſince they flee to a fourth nameleſs thing, i. e. they cannot imagine any matter under any particular ſchematiſm fit to think and perceive. But grant that ſimple apprehenſion could belong to matter, yet how could it unite two things in a propoſition, and pronounce them agreeable? How, after this conjunction, conſider them again, and collect, and form a ſyllogiſm? For there is no cauſe of either of thoſe two motions, and therefore they cannot be in matter. For, ſuppoſe two things propoſed to conſideration, and let their ſimple preſſure on the organs raiſe a phantaſm, this is the only motion that can be cauſed by the objects; now, let theſe be removed, and any man will find himſelf able to conſider the nature of theſe objects, compare their properties, and view their agreement, which muſt be a diſtinct motion from the former, and this too can be done ſeveral hours, months, or years, after the firſt preſſure of the objects, and after the organs have been diſturbed with other motions, and conſequently the firſt quite loſt; and, after all this, he can join theſe two objects thus compared, with a third, and compare them again, and, after that, bring the two extremes into a concluſion, and all this by the ſtrength of his own judgment, without the help, the preſſure, or direction of any external impulſe. Beſides, the Epicureans grant they have a conception of atoms, void, and infinite, of which they could never receive any image, and conſequently no cauſe of their conception, matter being not to be moved but by material images, and thoſe too of equal bigneſs with the corpuſcles that frame the ſoul. Other reaſons may be produced from the diſproportion of the image of the object to the organ, it being impoſſible that any

thing ſhould appear bigger than the organ, if ſenſe were only the motion of it, or of ſome parts contained in it, becauſe it would be able to receive no more motion than what came from ſome part of the object of equal dimenſions to it. But I haſten to ſhow, that an immaterial being can act on a material. And here we muſt mind again, that the ſublunary matter is not ſelf-exiſtent, and therefore depends on ſomething that is ſo; now, this being cannot be matter, for all matter is diviſible, and therefore inconſiſtent with neceſſary exiſtence; now, this ſubſtance, as he created, ſo he muſt move matter, for motion is not a neceſſary mode of it, as every man's ſenſes will evince; and it is the ſame thing to create and preſerve a being, with ſuch and ſuch a mode or accident, as it is barely to create it. And this infers, that he can act on matter as much as the ſoul now does; and this action is not any thing diſtinct from his will; the ſame power that created moves it; and, that this may be eaſily conceived, every man has a ſecret witneſs in himſelf, and may be convinced from his own actions. But let us conſider a little farther, and we ſhall find motion as difficult to be conceived as this mode of action; for thoſe that define motion to be only a ſucceſſive mode of being in reſpect to place, only tell us the effect of it, when we inquire after its nature; I ſhall therefore take it for a phyſical being, and diſtinct from matter as its tranſitions out of one body into another ſufficiently evince; and any man may eaſily obſerve how full of contradictions Cartes is when he treats of this ſubject, having determined motion to be only a mode of matter. Now, all the definitions of the philoſophers prove, that we have no idea of this but from its effects, and therefore its manner of acting, of tranſition, &c. is as hard to be conceived, as the mode of action in an immaterial ſubſtance, and yet no man doubts it.

Thirdly, There is a great conteſt about brutes, ſome alluwing them perception, others aſſerting them to be nothing but machines, and as void of all ſenſe as an engine. This latter opinion is irreconcileable to their actions, and to that experience we have of their docility, and the relations of their cunning, even from thoſe mens mouths, which are great ſticklers for this fancy: and this ariſes from a common opinion, that if they grant brutes immaterial ſouls, as they muſt do if they allow them perception, the conſequence will be unavoidable, therefore they are immortal. But to ſpeak freely, I could never perceive any ſtrength in this argument; and if I had no ſtronger convictions, I could ſubſcribe to Seneca's opinion, in his epiſtle 102. "Juvabat de animæ æternitate quærere, imo meherculè credere; credebam enim facilè opinionibus magnorum virorum rem graviſſimum promittentium, magis quàm probantium." It was delightful to inquire into the eternity of the ſoul, nay even to believe it: For I eaſily gave credit to the opinions of great men, who promiſed a thing of the higheſt importance, rather than proved it. For immateriality does not infer neceſſity of exiſtence, or put the thing above the power of him that framed it; therefore immortality is a gift of the Creator, and might likewiſe have been beſtowed on matter; and thus beaſts may be allowed ſubſtances capable of perception, which may direct, and govern them, and die, and be buried in the ſame grave with their bodies. But we have ſuch great evidence for the immortality of the mind of man, both from the diſpenſations of Providence, and infallible promiſes, that I could not give a firmer aſſent, nor have a ſtronger ground for my opinion, if the proofs could be reduced to figures, and propoſed in ſquares, and triangles.

Beſides the general, he produces many particular arguments, from the different operations of the ſoul in the ſeveral ſtages of our life. He had obſerved (and who can be ignorant of it) that though both in childhood, youth, and old age, the notices of external objects are extremely clear and perfect, yet at firſt our apprehenſions and our memories are weak, our judgment and reaſon little, and very different from the accurate perception of riper years: and that decays again, and extreme old age ſlowly leads back to our ſwadling clothes and our cradles: To theſe he adds the various diſtempers that are incident to man; how ſometimes the mind is lulled into a lethargy, and then waked again into a frantic fit; and how at laſt death ſteals in upon our life, and wins inch by inch, till it becomes maſter of the whole: And hence he infers the increaſe and decay of the mind, and that it is born, and dies: Now theſe arguments cannot ſtartle any one that conſiders the immortality of the ſoul is not to be inferred from any attribute of its own ſubſtance; but the will and pleaſure of the Author of its being: and therefore did it really ſuffer all thoſe diſturbances he imagines, yet who doubts but a tormented thing may be kept in being, ſince the torment itſelf is not death: But natural philoſophy will account for theſe diſtractions, if we conſider what life is, and how the ſoul muſt depend on the body, as to its operations: If we diſtinguiſh life from ſenſe it is nothing elſe but a due motion and digeſtion of the humours; and this agrees to plants as well as ſenſibles; they are nouriſhed, grow, and live alike; and an animal dies, becauſe ſome of theſe are either loſt, or depraved, for were her habitation good and convenient, the ſoul would never leave it, ſhe has no ſuch reluctancy to matter, nor is ſo afraid of its pollutions, as the Platoniſts fancy, that ſhe ſhould be eager to be gone; but when the body fails, and is unfit for thoſe animal motions, over which it was her office to preſide, ſhe muſt retire from the lump of clay, and go to her appointed place: So that the ſoul ſuffers nothing when the limbs grow uſeleſs, as even common obſervation teſtifies; for a palſy in the arm or leg does not impair the judgment; and often when the limbs are feeble, and the body ſunk to an extremity of weakneſs, the mind is vigorous and active, and very unequal company for the decaying matter. And as for the pain and torture that accompany death, and make the tragedy more ſolemn, it is evident, that ſuppoſe the ſoul

immortal, it is impoſſible it ſhould be otherwiſe; ſo that this can be no argument for the Epicureans, which, admit the contrary ſuppoſition, can be ſo eaſily explained: And here we muſt conceive the mind as the chief part of man, a judging ſubſtance, but free from all anticipations and ideas; a plain "raſa tabula," but fit for any impreſſions from external objects, and capable to make deductions from them; in order to this, ſhe is put into a body curiouſly contrived, fitted with nerves and veins, and all neceſſary inſtruments for animal motion; upon theſe organs external objects act by preſſure, and ſo the motion is continued to the ſeat of this ſoul, where ſhe judges according to the firſt impulſe, and that judgment is called either pain or pleaſure; ſo that the action of the ſoul is ſtill uniform and the ſame; and the various paſſions ariſe only from the variety of the objects ſhe contemplates: but now becauſe ſhe has memory, and from theſe notices once received can make deductions, ſhe is capable of all thoſe affections which are properly called paſſions, as grief, joy, &c. All which are acts of reaſon, and are compatible to brutes too, according to their degree of perception: and beſides, ſince the mind makes uſe of the body in her moſt intellectual actions, as is evident from that wearineſs that is conſequent to the moſt abſtracted ſpeculations; the diſturbance ſhe receives, proceeds from the unfitneſs of the organs, but ſhe works as rationally in a madman as in a ſober, in a fool as in the moſt wiſe; becauſe ſhe acts according to the utmoſt perfection her inſtruments will permit.

But becauſe this notion of a "raſa tabula" will not agree with thoſe who are fond of ſome. I know not what, innate, ſpeculative, and practical ideas, it will be neceſſary to conſider the inſtances they produce. The firſt is that of many geometrical figures; for inſtance a chiliagon, of which we can make perfect demonſtrations, which preſuppoſe an idea of the ſubject, though we can have no image or repreſentation of it from our fancy: but in propoſing this inſtance they do not attend, that theſe properties belong to a chiliagon, becauſe it contains ſo many triangles, which is a figure obvious enough to ſenſe: The ſecond is that of a deity, upon which Cartes's whole philoſophy depends; and here he grants this to be imperfect, i. e. really none at all, becauſe not agreeable to the object, whoſe idea it pretends to be: yet this is enough to guide us in our religion, becauſe the higheſt our minds can reach: but even this we have from ſenſe; from the conſideration of the imperfections of all things, with which we are converſant, we riſe to the knowledge of an all-perfect; ſo that all the attributes we can conceive, are juſt in oppoſition to what we diſcover here; and therefore according to the different apprehenſions that men have entertained of ſuch things, ſo various have been their notions of the Deity, as is evident from the heathen world: And this makes way to diſcover, how we got all thoſe particular notions which we call the law of nature, and are ſaid to be written in our hearts: For when man was firſt created in his perfect ſtate, without any prejudice of infancy or education, he had as much knowledge as was deſigned for that order of creatures in the univerſe; the notions of all things were clearly repreſented, and good and evil appeared naked, and in their proper ſhapes: Theſe notions have been delivered down to us, and from theſe once made plain, the mind neceſſarily infers ſuch practical rules, as are called the law of nature: And this explication will give an account of the diverſity of manners and opinions amongſt men, and of the various interchanges of barbarity and civility throughout the world.

Ver. 809. But grant the ſoul to be mortal, that it was once born, and that a time will come when it muſt die, what advantage is this to us? Lucretius anſwers in theſe eleven verſes. We, who are wholly mortal, need no longer be in dread of death, nor of the puniſhments after death, at which the generality of mankind are ſo diſmayed: For as the battles, tumults, and Carthaginian wars did not moleſt us, who were not born in thoſe days; ſo too, ſince the ſoul is mortal, as well as the body, no wars, no tumults, nor any other cares, or afflictions will vex us after death. Epicurus, in Laertius, lib. 10. ſays, Συνειδέναι δὲ ἑαυτὸν ἐν τῷ νηπιάζειν μηδὲν πρὸς ἡμᾶς εἶναι τὸν θάνατον, ἐπεὶ πᾶν ἀγαθὸν, καὶ κακὸν ἐν τῇ αἰσθήσει. στέρησις δὲ ἐστὶν αἰσθήσεως ὁ θάνατος, ὅθεν γνῶσις ὀρθὴ μηδὲν εἶναι πρὸς ἡμᾶς τὸν θάνατον. Accuſtom thyſelf to conſider that death is nothing to us, becauſe all good and ill are diſcerned by ſenſe: but death is a privation of all ſenſe, whence we truly know that death is nothing to us. This opinion Cicero, lib. 1. Tuſcul. Quæſt. has included in theſe words: "Natura vero ſic ſe habet, ut quomodo initium nobis rerum omnium ortus noſter offerat, ſic exitum mors; quæ ut nihil pertinuit ad nos ante ortum, ſic nihil poſt mortem pertinebit. In quo quid poteſt eſſe mali; cum mors nec ad vivos pertineat, nec ad mortuos? alteri nulli ſunt, alteros non attingit." Such is the nature of man, that as our birth was to us a beginning of all things, ſo death will put an end to all. And as death was nothing to us before we were born, ſo neither will it be any thing to us when we are dead. What ill then can there be in death, ſince it belongs neither to the living, nor the dead. The living feel it not, dead are not.

For when our mortal frame ſhall be diſjoin'd,
The lifeleſs lump uncoupled from the mind;
From ſenſe of grief and pain we ſhall be free;
We ſhall not feel, becauſe we ſhall not be.

Dryd.

Ver. 812. The chief city of Africa, and for a long time the rival of Rome, with whom ſhe thrice contended for the empire of the world. Scipio firſt took it, and made it tributary to Rome; and afterwards Scipio Æmilianus deſtroyed it.

Ver. 819. For as Cicero ſays, "Qui ſatis viderit id quod eſt luce clarius, animo et corpore conſumpto, totoque animante deleto, et facto interitu univerſo, id animal, quod fuerit factum

esse nihil; is plane perspiciet, inter Hippocentaurum, qui nunquam fuerit, et regem Agamemnonem, qui fuit, nihil interesse: Nec pluris nunc facere M. Camillum hoc civile bellum, quam illo vivo ego fecerim Romam captam." He who sees what is clearer than the light, that if soul and body both perish, if the whole animal die and be destroyed, that which was an animal is become nothing; he too will clearly perceive, that there is no difference between a Centaur, that never was, and king Agamemnon, who once was: And that M. Camilius is no more concerned at this civil war, than when he was alive, I was concerned that Rome was taken. M. Tull. lib. i. Tuscul. Quæst.

Ver. 820. In these twenty-one verses the poet continues and says; suppose the soul could feel, when she is separated from the body, yet what would that be to us, who are not soul only, but something made up of soul and body? Nay, let us farther suppose, that we shall return to life again, and be the same we now are, that is to say, that after a certain revolution of time, the same atoms will by chance meet again, and, joining together, compose the same body we now wear; yet all this mighty bustle will be nothing to us who now are, or to us who shall be hereafter. In like manner, as while we are now living, we take no thought for the other ourselves that we formerly were, nor for the other ourselves that we shall be in time to come: for when we shall suffer death, an interrupting pause, a gaping space comes between what we are, and what we shall be; after which no remembrance will remain of the state in which we have been; as we now feel not before hand the smarts and sorrows we shall then endure. Dryden has given another turn to this passage, and renders it thus:

Nay, ev'n suppose, when we have suffer'd fate,
The soul could feel in her divided state;
What's that to us? For we are only we,
While souls and bodies in one frame agree.
Nay, though our atoms should revolve by chance,
And matter leap into the former dance;
Though time our life and motion could restore,
And make our bodies what they were before;
What gain to us would all this bustle bring?
The new-made man would be another thing.
When once an interrupting pause is made,
That individual being is decay'd:
We, who are dead and gone shall bear no part
In all the pleasures, nor shall feel the smart,
Which to that other mortal shall accrue,
Whom, of our matter, time shall mould anew,
For backward if you look, on that long space
Of ages past, and view the changing face
Of matter, tost, and variously combin'd
In sundry shapes; 'tis easy for the mind
From thence t' infer, that seeds of things have been
In the same order as they now are seen:
Which yet our dark remembrance cannot trace;
Because a pause of life, a gaping space
Has come betwixt, where memory lies dead,
And all the wand'ring motions from the sense are fled.

Ver. 828. The meaning of these three verses is; we are not solicitous concerning those, who formerly were the very and individual beings we now are; nor are we solicitous neither for them, nor do we bear any part in their affliction, who hereafter shall be moulded out of the same matter, which now composes this frame of ours. Let us suppose, for instance, that another, yet the same poet Lucretius had lived before this of ours, certainly this Lucretius was nothing troubled concerning him; and suppose farther, that there has been since, or will be hereafter, a third Lucretius; certainly our Lucretius was not in the least concerned for him neither: so that neither they who have been, nor they who will be, even though they have been, or shall be other ourselves, neither have contributed, or will contribute, to our grief or joy.

Ver. 841. In these nine verses he explains the same argument more at large; he who hereafter shall live in misfortunes, must be, when those misfortunes fall upon him: But the dead have ceased to be, and will never return from the grave. "Vestigia nulla retrorsum." Therefore the dead can in no wise be miserable.

For whose'er shall in misfortunes live,
Must be, when those misfortunes shall arrive;
And since the man who is not, feels not woe,
For death exempts him, and wards off the blow,
Which we, the living only, feel and bear,
What is there left for us in death to fear?
When once that pause of life has come between,
'Tis just the same, as we had never been.

Dryd.

Ver. 850. In these twenty-six verses he blames those who are too solicitous concerning their sepulture, and says, that anxiety proceeds from the belief of the immortality of the soul: For why, should a man, who believes he shall feel nothing after death, trouble himself about what shall become of his dead body?

And therefore, if a man bemoan his lot,
That after death his mould'ring limbs shall rot:
Or flames, or jaws of beasts devour his mass:
Know, he's an unsincere, unthinking ass:
A secret sting remains within his mind;
The fool is to his own cast offals kind;
He boasts no sense can after death remain,
Yet makes himself a part of life again;
As if some other HE could feel the pain.

Dryd.

But the poet seems in this place to allude to that trite story of Diogenes, who being asked what he would have done with his carcase after he was dead, answered, He would have it thrown away unburied: and being put in mind that the beasts, and birds of prey would then devour him, he bid them put a stick in his hand, that he might drive them away: To which it being replied, That he

would not be able to do so; because he would be deprived of motion as well as of sense: How? said he, shall I be deprived of sense? What matter then what becomes of my body?

Ver. 851. Epicurus accused Democritus of believing, that there is sense in the body after death. This we learn from Tully, in his first book of the Tuscul. Quest. and no doubt but Lucretius in this place meant to chastise that philosopher.

Ver. 870. The poet hints at the three different ways of sepulture, that were used by the ancients: Some were burnt, some buried in the earth, and some were put into stone coffins, filled up with honey; of all which you may consult Salmasius to Solinus, p. 850. But perhaps Lucretius intended to give a slight chastisement to Heraclides of Pontus, and to Democritus of whom Varro "περὶ ταφῆς; Quare Heraclides Ponticus plus sapit, qui præcepit, ut comburerent, quam Democritus, qui ut in melle servarent: quem si vulgus secutus esset, periam si centum denariis calicem Mulsi emere possimus." Heraclides, who advised to burn dead bodies, was wiser than Democritus, who would have them be kept in honey; for if his advice had been generally followed, a cup of metheglin would be worth a great deal of money. For so scrupulous a concern for their sepulture was mean, and wholly unbecoming of philosophers. Even Petronius was braver and more wise than this comes to. "Attamen fluctibus obruto non contingit sepultura: tanquam interfit perituram corpus, quæ ratio consumat, ignis, an fluctus, an mora: quicquid feceris hæc omnia eodem ventura sunt: feræ tamen corpus lacerabunt; tanquam melius ignis accipiat." But a man, whose dead body is rolled up and down in the waves, is deprived of sepulture: As if it were of any moment, by what means the body, that must perish, is consumed; whether by fire, by water, or with length of time: whatever thou dost with it, it will be the same at long run: but wild beasts will tear it to pieces? as if fire would not hurt it as much. Lucretius, therefore, justly blames this too great concern, this over-care for a senseless lump of clay, at best but the very leavings of a soul: and says,

If, while he live, this thought molest his head,
What wolf, or vulture shall devour me dead;
He wastes his days in idle grief, nor can
Distinguish 'twixt the body, and the man:
But thinks himself can still himself survive;
And, what, when dead, he feels not, feels alive.
Then he repines, that he was born to die;
Nor knows, in death there is no other he,
No living ME remains his grief to vent,
And o'er his senseless carcase to lament.
If, after death, 'tis painful to be torn
By birds, and beasts; then why not so to burn?
Or, drench'd in floods of honey to be soak'd?
Embalm'd, at once to be preserv'd and chok'd?
Or on an airy mountain's top to lie,
Expos'd to cold, and heav'n's inclemency?

Ver. 874. This was rather the ancients way of embalming than of burying their dead; as we may gather from the above-cited passage of Varro, and from Xenophon, lib. v. Ἑλληνικῶν, where he relates, that Agesipolis king of the Lacedemonians, being seized with a violent distemper, of which he died the seventh day after he was taken, was put into honey, and brought to Lacedemon, where, says he, he was buried in a royal sepulchre, καὶ ἐκεῖνος μὲν ἐν μέλιτι τελεῖς, καὶ κομισθεὶς οἴκαδε, ἔτυχε τῆς βασιλικῆς ταφῆς.

Ver. 876. Because it is commonly esteemed a great misfortune to be deprived by death of the blessings we enjoy in life, and because men are apt to bewail themselves that they must die, and leave all those joys behind them! Lucretius, in these twenty verses, derides that vain anxiety, and tells the self-tormentor,

But to be snatch'd from all thy household joys,
From thy chaste wife, and thy dear prattling boys,
Whose little arms about thy legs are cast;
And climbing for a kiss, prevent their mother's haste,
Inspiring secret pleasure through thy breast;
All these shall be no more: thy friends oppress
Thy care and courage now no more shall free:
Ah! wretch, thou cry'st: Ah! miserable me!
One woeful day sweeps children, friends, and wife,
And all the brittle blessings of my life:
Add one thing more, and all, thou say'st, is true;
Thy want and wish of them is vanish'd too.
Which, well consider'd, were a quick relief
To all thy vain imaginary grief:
For thou shalt sleep, and never wake again;
And quitting life, shalt quit thy living pain:
But we thy friends shall all those sorrows find,
Which in forgetful death thou leav'st behind:
No time shall dry our tears, nor drive thee from our mind,
The worst that can befal thee, measur'd right,
Is a sound slumber, and a long good-night.

Dryd.

Socrates, in the dialogue of Plato, inscribed Axiochus, says to the same purpose: Ἤκουσα δὲ ποτὲ τὲ τῶ Προδίκω λέγοντος, ὅτι ὁ θάνατος ὲ περὶ τὰς ζῶντας ἐστιν. ὲ περὶ τὰς μεθηλικχότας· ὅτι περὶ μὲν τὰς ζῶντας ὰκ ἐστιν. οἱ δὲ ἀποθανόντες ὰκ εἰσιν, ὅστε ὲ περὶ σὲ νῦν ἔστιν (ὲ γὰρ πάθνικας) ὅτι, εἴτι παθοις ἔσται περὶ σὲ, σὺ γὰρ ὰκ ἔση. Μάταιος ἂν ἡ λύπη περὶ τῶ μὴ ὄντος. μήτε ἐομένω περὶ Ἀξίοχον, Ἀξίοχον ὀδύρεσθαι, καὶ ὅμοιον, ὡς ἐ περὶ τῆς Σκύλλης, ἡ τῶ Κυλαύρω τὶς ὀδύροιτο, τῶν μήτε ὄντων, μήτε ὕστερον περὶ τὴν τελευτὴν ἐσομένων. Τὸ γὰρ φοβερὸν τοῖς ὄσιν ἐστιν, τοῖς δὲ ὰκ ὄσι πῶς ἂν εἴη;

Ver. 895. For as death is esteemed a perpetual sleep, so is sleep a temporary death, or at least an image of death.

Stulte, quid est somnus gelidæ nisi mortis imago?

And the general, who killed one of his soldiers, whom he found sleeping upon duty, said pleasantly enough; "Talem reliqui, qualem inveni:" I left him as I found him.

Ver 896. Weak and fooliſh are they who bewail the dead without meaſure; and they too, who repine and grieve that themſelves muſt die, but more fooliſh they, who in their feaſts and merriments,

——Would be thought the wits,
And yet diſturb their mirth with melancholy fits,
When healths go round, and kindly brimmers flow,
Till the freſh garlands on their foreheads glow.
They whine and cry; Let us make haſte to live;
Short are the joys that human life can give.
Dryd.

And thus they damp their delights with the remembrance of death, as if in the grave they were to be parched up with unquenchable thirſt, or tormented with the want of any of the enjoyments of this life.

Eternal preachers! who corrupt the draught,
And pall the god, who never thinks with thought.
Idiots with all that thought, to whom the worſt
Of death, is want of drink, and endleſs thirſt;
Or any fond deſire as vain as theſe. *Dryd.*

But Lucretius bids them call to mind, that

Ev'n in their ſleep, the body wrapt in eaſe,
Supinely lies, as in the peaceful grave,
And wanting nothing, nothing can it crave.

Why then do the fools dread a want of any thing when they are dead; ſince death, more than ſleep, ſcatters the principles of the ſoul, and more deprives men of their ſenſe. For

Were that ſound ſleep eternal, it were death;
Yet the firſt atoms then, the ſeeds of breath,
Are moving near to ſenſe; we do but ſhake
And rouſe that ſenſe, and ſtraight we are awake.
Then death to us, and death's anxiety
Is leſs than nothing, if a leſs can be;
For then our atoms which in order lay,
Are ſcatter'd from their heap, and puff'd away;
And never can return into their place,
When once the pauſe of life has left an empty ſpace. *Dryd.*

Ibid. It was the cuſtom of the ancients, as well Greeks as Latins, at their feaſts and entertainments, not only to ſtrew their rooms with flowers; but themſelves, the gueſts, and even the waiters wore garlands of flowers on their heads; and this they did, ſays Pliny, to diſpel, by the fragrancy of the flowers, the vapours and heavineſs that proceeded from too much drinking. "Crapulam et gravedines capitis, impoſitis coronis, olfactione diſcutiunt," lib. 21. Nat. Hiſt. cap. 19. Nay, even the very goblets were crowned likewiſe with garlands.

Crateras magnos ſtatuunt, et vina coronant.
Virgil.

And

Tum pater Anchiſes magnum cratera coronâ
Induit, implevitque mero, &c.

Which cannot be interpreted as ſome do the

——Κρατῆρας ἐστεφάνωσε ποτοῖο.

of Homer. They crowned bowls with drink; and bowls, ſay they, may then be ſaid to be crowned with drink, when they are filled ſo full that the liquor riſes above the brims of the bowl; and this we call a bumper, from the wine's ſwelling higher than the brims of the glaſs. But Homer may as well be conſtrued, they crowned bowls of drink, as bowls with drink. It is evident too, from ſeveral places in ſcripture, that garlands were likewiſe in great uſe among the Jews at their feaſts, eſpecially their nuptials, Iſa. lxi. 10. The Latin reads, like a bridegroom crowned with garlands, Wiſd. ii. 8. Ezek. xii. 16. Lam. v. 25. Eccleſ. xxxii. 1. &c.

Ver. 899. We find ſomething to the ſame purpoſe in Petronius, where he deſcribes the banquet of Trimalchio, who, when a ſervant, had brought in a ſilver ſkeleton, and ſet it on the table, cried out,

Heu, heu nos miſeros! quam totus homuncio nihil eſt:
Sic erimus cuncti, poſtquam nos auferet orcus:
Ergo vivamus, dum licet eſſe benè.

And the old Epicurean epigram gives the ſame advice;

Cum te mortalem noris, præſentibus exple
Deliciis animum: poſt mortem nulla voluptas.

To which I add the following lines out of Anacreon, as they are rendered by Cowley:

Crown me with roſes whilſt I live;
Now your wines and ointments give.
After death I nothing crave;
Let me alive my pleaſures have,
All are Stoics in the grave.

But St. Jerome, writing againſt Jovinianus, blames theſe inconſiderate revellers in theſe words: "Manduca, et bibe; et ſi tibi placet, cum Iſraele lude conſurgens, et canito; Manducemus et bibamus, cras enim moriemur. Monducet et bibat, qui poſt cibos expectat interitum; qui cum Epicuro dicit: Poſt mortem nihil eſt, et mora ipſa nihil eſt."

Ver. 916. That his diſputation againſt the fear of death may be the more efficacious, the poet, in theſe twenty-nine verſes, introduces nature ſpeaking, and thus ſtrengthens his arguments by the authority of the perſon that ſpeaks. If thou haſt met with croſſes and afflictions, if thy whole life has been one continued courſe and ſeries of adverſities, lay down thy burden, wretch, and learn at laſt to ſuffer eaſe. If thou haſt been proſperous, and led a life of joy and pleaſure, go away content with the bounteous bleſſings I have given thee. Expect no new. There is a viciſſitude of all things, as well as of times and ſeaſons; the ſame always ſucceed the ſame. If age has not yet weakened and impaired thy ſtrength and vigour, yet thou haſt enjoyed all the good things that I can give thee. And if thou art worn out with years, why doſt thou dread and delay to die? Let us ſuppoſe, ſays Lucretius,

——Great Nature's voice ſhould call
To thee, or me, or any of us all:
What doſt thou mean, ungrateful wretch, thou vain,
Thou mortal thing, thus idly to complain,
And ſigh, and ſob, that thou ſhalt be no more?
For, if thy life were pleaſant heretofore,
If all the bounteous bleſſings I could give,
Thou haſt enjoy'd; if thou haſt known to live,
And pleaſure not leak'd through thee like a ſieve.
Why doſt thou not give thanks, as at a plenteous feaſt, [thy reſt?
Cramm'd to the throat with life, and riſe, and take
But if my bleſſings thou haſt thrown away,
If indigeſted joys paſs'd through and would not ſtay,
Why doſt thou wiſh for more to ſquander ſtill?
If life be grown a load, a real ill,
And I would all thy cares and labours end;
Lay down thy burden, fool, and know thy friend.
To pleaſe thee, I have empty'd all my ſtore;
I can invent, and can ſupply no more;
But run the round again, the round I ran before. *Dryd.*

Ver. 925. Horace has imitated this paſſage, Sat. 1. lib. i.

Unde fit ut raro, qui ſe vixiſſe beatum
Dicat, et exacto contentus tempore vitæ
Cedat, uti convivi ſatur, reperire queamus.

Ver. 939. Menippus in Lucian aſks Chiron the reaſon why he choſe to die, when he might have been immortal? Chiron anſwered, Becauſe in life there was nothing new, but the ſame things over and over again; which continual viciſſitude had cloyed me, and created in my mind a fatiety, and even a lothing of life.

Thus though thou art not broken yet with years,
Yet ſtill the ſelf-ſame ſcene of things appears;
And would be ever, could'ſt thou ever live;
For life is ſtill but life, there's nothing new to give. *Dryd.*

Ver. 945. Hitherto nature has only gently reprimanded thoſe who are never weary of living. She now, in theſe thirty-two verſes, more ſharply rebukes thoſe who are immeaſurably greedy of life, even though it be grown a burden to them; eſpecially the aged, who are become incapable of enjoying the pleaſures of this world. As in a theatre, ſo in this life, each man has his part to play; and the old have no more right to live, than a player has to tarry on the ſtage, after he has acted his part. Be gone, ſays ſhe, decrepid fot, thou who haſt outlived content and pleaſure, and art grown covetous of pain. Thou haſt nothing more to do here; therefore, die as ſoon as thou canſt,

And leave thoſe joys, unſuiting to thy age,
To a freſh comer, and reſign the ſtage.
All things, like thee, have times to riſe and rot;
And from each other's ruin are begot:
For life is not confin'd to him or thee,
'Tis giv'n to all for uſe, to none for property. *Dryd.*

What doſt thou fear? In the fables of the poets there is not one ſyllable of truth; but the living ſuffer thoſe torments which they dread in futurity.

For all the diſmal tales that poets tell,
Are verify'd on earth, and not in hell.
Conſider former ages paſt and gone,
Whoſe circles ended long ere thine begun.
Then tell me, fool, what parts in them thou haſt?
Thus may'ſt thou judge the future by the paſt;
What horror ſee'ſt thou in that quiet ſtate?
What bugbear dreams to fright thee after fate?
No ghoſts, no goblins, that ſtill paſſage keep;
But all is there ſerene in that eternal ſleep. *Dryd.*

Ver. 957. That is, be content to leave thoſe delights of which thou haſt enjoyed thy ſhare, and art no longer able to taſte. To this purpoſe ſays Horace,

Vivere ſi rectè neſcis, decede peritis:
Luſiſti ſatis, ediſti ſatis, atq. bibiſti;
Tempus abire tibi eſt. *Lib.* ii. *Ep.* 2.

Ver. 977. Here the poet, that he may entirely deliver the minds of men from the fear of death, endeavours to perſuade, that there are no puniſhments after this life. And to this end he employs the following forty-eight verſes to explain the fables of the poets: that of Tantalus in five verſes, of Tityus in eleven verſes, of Siſyphus in ten verſes, of the daughters of Danaus in ten verſes, of the Furies, Cerberus, &c. in twelve verſes. For thoſe fables, ſays he, are meant of the living; for Tantalus is the ſuperſtitious man; Tityus, he who is a ſlave to his luſts or inordinate deſires; Siſyphus repreſents him, who in vain aims at ſovereignty, and never attains his wiſh; the daughters of Danaus are the avaricious, whoſe thirſt of riches is never ſatisfied; as for Cerberus, the Furies, &c. we are to deem them to be the executioners that inflict the puniſhments on malefactors, or rather the conſcience of the guilty, which is the greateſt of all tormentors.

Ver. 979. In theſe five verſes, he explains the fable of Tantalus, king of Phrygia, the ſon of Jupiter, by the nymph Plote, and grandfather of Agamemnon and Menelaus. He, when he treated ſome of the gods, to make trial of their divinity, ſerved up his own ſon Pelops to the table; but all the gods, except Ceres, who eat a ſhoulder, abſtained from taſting of the diſh; and to puniſh the father for his flagitious cruelty, threw him into hell, to be tormented with eternal hunger and thirſt. For he is feigned to be ſet up to the chin in the river Eridanus, and to have apples hanging about his head; but not to be admitted either to drink of the water, or eat of the apples. The mythologiſts generally interpret this fable of the avaricious, who have not the ſoul to make uſe even of their parental eſtates. Thus Horat. lib. i. Serm. Sat. 1.

Tantalus à labris ſatiens fugientia captat
Flumina. Quid rides? mutato nomine, de te
Fabula narratur, congeſtis undique ſaccis
Indormas inhians, et tanquam parcere ſacris
Cogeris, aut pictis tanquam gaudere Tabellis.

Which Cowley has thus rendered:

In a full flood ſtands Tantalus, his ſkin
Waſh'd o'er in vain, for ever dry within.
He catches at the ſtream with greedy lips,
From his touch'd mouth the wanton torrent ſlips.
You laugh? yet change the name, this fable is thy ſtory,
Thou in a flood of uſeleſs wealth doſt glory;
Which thou canſt only touch, but never taſte,
Th' abundance ſtill, and ſtill the want does laſt.

Macrobius in Somn. Scip. lib. i. cap. 10. "Antequam ſtudium Philoſophiæ circa Naturæ inquiſitionem ad tantum vigoris adoleſceret, qui per diverſas gentes auctores conſtituendis ſacris ceremoniarum fuerunt, aliud eſſe inferos negaverunt, quam ipſa corpora, quibus incluſæ animæ carcerem fœdum tenebris, horridum ſordibus, et cruore patiuntur: hoc animæ ſepulchrum, hoc Ditis concava, hoc inferos vocaverunt, et omnia, quæ illic eſſe credidit fabuloſa perſuaſio, in nobiſmetipſis, et in ipſis humanis corporibus aſſignare conati ſunt. ——Illos aiunt epulis ante ora poſitis excruciari fame, et inediâ tabeſcere, quos magis magiſque acquirendi deſiderium cogit præſentem copiam non videre: qui in affluentiâ inopes, egeſtatis mala in ubertate patiuntur; neſcientes parta reſpicere, dum egent habendis." But Lucretius repreſents the fable of Tantalus otherwiſe, and interprets it in a different manner, telling us, that

No Tantalus looks up with fearful eye,
Or dreads th' impending rock to cruſh him from on high;
But fear of chance on earth diſturbs our eaſy hours;
Or vain imagin'd wrath of vain imagin'd pow'rs.
Dryd.

Where we ſee he follows their opinion, who ſay, that a ſtone is hanging over the head of Tantalus in hell, the fall of which he perpetually dreads. Thus too Euripides in Oreſtes:

Κορυφῆς ὑπερθέλλουσα δειμαίνων πέτρον
Ἀεὶ ποτᾶται, καὶ τίνει ταυτὴν δίκην.

Ver. 984 In theſe eleven verſes, he deſcribes the puniſhment, and explains the fable of Tityus, the ſon of Jupiter, by Elara, daughter of Orchomenus. He attempted to raviſh Latona, the mother of Apollo, who killed him with his arrows, and ſent him into hell, where a vulture is continually digging into his liver, and feeding upon it; which, nevertheleſs, grows as faſt as the vulture devours it. He is feigned to have been of ſo enormous a ſize, that, when he lay down, his body covered no leſs than nine acres of ground. Thus Ovid. Metam. iv. ver. 457.

Viſcera præbebat Tityus lanianda, novemque
Jugeribus diſtentus erat.———

And Virgil, Æn. vi ver. 595.

Nec non et Tityon, Terræ omniparentis Alumnum,
Cernere erat, per tota novem cui jugera corpus
Porrigitur; roſtroque immanis vultur obnunco
Immortale jecur tundens, fœcundaque pœnis
Viſcera, rimaturque epulis, habitatque ſub alto
Pectore; nec fibris requies datur ulla renatis.

There Tityus was to ſee, who took his birth
From heav'n; his nurſing from the foodful earth,
Here his gigantic limbs, with large embrace,
Enfold nine acres of infernal ſpace;
A rav'nous vulture in his open'd ſide,
Her crooked beak and cruel talons try'd;
Still for the growing liver digg'd his breaſt;
His growing liver ſtill ſupply'd the feaſt;
Still are his entrails fruitful to their pains,
Th' immortal hunger laſts, th' immortal food remains.
Dryd.

But Lucretius teaches that this is merely a fable of the poets, and that

No Tityus, torn by vultures, lies in hell;
Nor could the lobes of his rank liver ſwell
To that prodigious maſs for their eternal meal;
Not though his monſtrous bulk had cover'd o'er
Nine ſpreading acres, or nine thouſand more;
Not though the globe of earth had been the giant's floor.

Nor in eternal torments could he lie;
Nor could his corps ſufficient food ſupply;
But he's the Tityus, who by love oppreſs'd,
Or tyrant paſſion preying on his breaſt,
And ever anxious thoughts, is robb'd of reſt.
Dryd.

And this opinion of Lucretius is confirmed by Servius, who, on the above-cited paſſage of Virgil, ſays, "Sane de his omnibus rebus mire reddidit Lucretius, et confirmat in noſtrâ eſſe vitâ omnia, quæ finguntur de Inferis. Dicit enim Tityum amorem eſſe, hoc eſt Libidinem, quæ, ſecundum Phyſicos et Medicos, in jecore eſt, ut Riſus in Splene, Iracundia in Felle," &c. And Macrobius is of the ſame opinion, when he ſays, "Vulturem jecur immortale tundentem nihil aliud intelligi voluerunt (veteres) quam tormenta conſcientiæ, obnoxiæ flagitio, viſcera interiora rimantis, et ipſa vitalia indefeſſa admiſſi ſceleris admonitione laniantis, ſemperque curas, ſi forte requieſcere tentaverint, excitantis, tanquam fibris renaſcentibus inhærendo, nec ulla ſibi miſeratione parcentes; lege hâc, qua ſe judice nemo nocens abſolvitur, nec de ſe ſuam poteſt vitare ſententiam." In Somn. Scip. lib. i. cap. 10. And with this agrees the epigram in Petronius:

Qui vultur jecur ultimum pererrat,
Et pectus trahit, intimaſque fibras,
Non eſt quem timidi vocant Poetæ,
Sed cordis mala, livor atque luxus.

Prometheus too is ſaid by ſome to ſuffer the like puniſhment.

Ver. 995. In theſe ten verſes, he explains the fable of Siſyphus, the ſon of Æolus, who, for infeſting Attica with his robberies, was ſlain by Theſeus, king of the Athenians; in whoſe honour the Greeks feigned that Siſyphus was condemned in hell to roll a ſtone to the top of a mountain, which, when with great labour he had forced it up, tumbled down again, ſo that he was always to begin his taſk anew. But Lucretius ſays,

The Siſyphus is he, whom noiſe and ſtrife
Seduce from all the ſoft retreats of life;

To vex the government, diſturb the laws;
Drunk with the fumes of popular applauſe,
He courts the giddy crowd to make him great,
And ſweats, and toils in vain to mount the ſov'-
reign ſeat;
For ſtill to aim at pow'r, and ſtill to fail,
Ever to ſtrive, and never to prevail,
What is it but in reaſon's true account,
To heave the ſtone againſt the riſing mount;
Which, urg'd and labour'd, and forc'd up with
pain,
Recoils, and rolls impetuous down, and ſmokes
along the plain. *Dryd.*

And Macrobius, in the place laſt cited, agrees with Lucretius in this opinion, and ſays, "Saxum ingens volvere inefficacibus laborioſiſque conatibus, vitam terentes, atram ſilicem lapſuram ſemper et cadenti ſimilem, illorum capitibus imminere, qui arduas poteſtates, et infauſtam ambiunt Tyrannidem, nunquam ſine timore victuri, et cogentes ſubjectum vulgus odiſſe, dum metuat, ſemper ſibi videntur exitium, quod merentur excipere."

Ver. 1005. In theſe ten verſes the poet explains the fable of the Fifty Daughters of Danaus king of the Argives, who were married to the fifty ſons of their father's brother Ægyſthus; and who, all of them, except Clytemneſtra, killed their huſbands in one night. Of them the poets fabled that they were doomed in hell to fill a leaky veſſel with water. See Macrobius in Somn. Scip. lib. i. cap. 10. and Horat. Od. 2. lib. iii. But Lucretius interprets it of the luxurious, who are never filled or ſatisfied with the bleſſings of this life; and ſays,

Then ſtill to treat thy ever-craving mind
With ev'ry bleſſing, and of ev'ry kind,
Yet never fill thy rav'ning appetite,
Though years and ſeaſons vary the delight;
Yet nothing to be ſeen of all the ſtore;
But ſtill the wolf within thee barks for more.
This is the fable's moral, which they tell,
Of fifty fooliſh virgins damn'd in hell
To leaky veſſels which the liquor ſpill,
To veſſels of their ſex which none could ever fill.
Dryd.

Ver. 1015. In theſe twelve verſes, he teaches, that there are no ſuch things as the Furies, Cerberus, nor any of thoſe puniſhments with which the guilty are ſaid to be tortured in hell; and, indeed, having taught that ſouls are mortal, it of neceſſity follows, that there are no puniſhments after death. He therefore interprets all thoſe things to be meant only of this life; and ſays that,

As for the dog, the furies, and their ſnakes,
The gloomy caverns and the burning lakes,
And all the vain infernal trumpery,
They neither are, nor were, nor e'er can be.
But here on earth the guilty have in view,
The mighty pains to mighty miſchiefs due:
Racks, priſons, poiſons, the Tarpeian rock,
Stripes, hangmen, pitch, and ſuffocating ſmoke;
And laſt, and moſt, if theſe were caſt behind,
Th' avenging horror of a conſcious mind,
Whoſe deadly fear anticipates the blow,
And ſees no end of puniſhment and woe,
But looks for more at the laſt gaſp of breath:
This makes a hell on earth, and life a death.
Dryd.

To this purpoſe, Cicero in his oration for Roſcius Amerinus, ſays admirably well. "Nolite putare, quemadmodum in Fabulis, eos, qui aliquid impiè ſceleratèque commiſerunt, agitari et perterreri Furiarum tedis ardentibus: ſua quamque fraus, ſuos terror maxime vexat, ſuum quemque ſcelus agitat, amentiaque afficit, ſuæ malæ cogitationes conſcientiaque animi terrent. Hæ ſunt impiis aſſiduæ domeſticæque Furiæ, quæ dies noctesque parentum pœnas à conſceleratiſſimis filiis repetunt." Do not fancy what the fables ſay, that men who have committed any impious or wicked action, are haunted and terrified with the flaming torches of the furies. Every man's own offences, his own terror chiefly diſturb him; every man's own wickedneſs haunts and makes him mad; his own cruel thoughts, and the conſciouſneſs of his own guilt terrify him. Theſe are to the impious thoſe aſſiduous and domeſtic furies, who day and night require and avenge the puniſhments of the parents, of their moſt flagitious ſons. And Lactantius ſays, there are three paſſions that drive men headlong into all manner of wickedneſs: anger, covetouſneſs, and luſt. Therefore, the poets ſaid there are three furies that torment the minds of men. Anger ſeeks for revenge; covetouſneſs for riches; and luſt for ſenſual delights. "Tres ſunt Affectus, qui homines in omnia facinora præcipites agunt Propterea Poetæ tres Furias eſſe dixerunt, quæ mentes hominum exagitant: ira ultionem deſiderat, cupiditas opes, libido voluptates." De vero Cultu, cap. 19.

Ibid. *The Furies*] They were three in number; the daughters of the river Acheron, and of night. The poets feigned them to have ſnakes inſtead of hair, and to be the inflictors of the torments in hell; and alſo, that they always bore flaming torches and whips in their hands. Virgil, Æneid. vi. v. 576.

Continuo fontes ultrix accincta flagello
Tiſiphone quatit inſultans, torvoſque ſiniſtrâ
Intentans angues, vocat agmina ſæva ſororum.

And ver. 605.

——Furiarum maxima juxta
Accubat——
Exurgitque facem attollens, atque intonat ore.

Straight o'er the guilty ghoſts the fury ſhakes
The ſounding whip, and brandiſhes her ſnakes;
And the pale ſinner with her ſiſters takes.
The queen of furies by their ſides is ſet:
——Her hiſſing ſnakes ſhe rears,
Toſſing her torch, and thund'ring in their ears.
Dryd.

Ibid. *Cerberus*] He is feigned by the poets to be a dog with three heads, that guards the gates of hell. Apollodorus deſcribes him with three heads, a dragon's tail, and his back ſtuck thick with ſer-

pents heads of several sorts. Hesiod, in Theogon. gives him fifty heads, Virgil, Æneid. vi. ver. 417.

Cerberus hæc ingens latratu regna trifauci
Personat, adverso recubans immanis in Antro
——Horrere videas jam colla colubris,
——tria guttura pandens.

——In his den they found
The triple porter of the Stygian sound.
Grim Cerberus, who soon began to rear
His crested snakes, and arm'd his bristling hair.
Op'ning his greedy grinning jaws he gapes
With three enormous mouths. *Dryd.*

Thus too Horace, Od. 2. lib. iii.

Cessit immanis tibi blandienti
Janitor aulæ
Cerberus; quamvis furiale centum
Muniant angues caput ejus, atque
Spiritus teter, saniesque manet
Ore trilingui.

Ver. 1018. Here our translator has changed the ancients way of punishing criminals into the more modern punishments, he takes no notice of what Lucretius calls

——Horribilis de saxo jactu, deorsum:

Which Dryden, who keeps more close, in this place, to the original, renders the Tarpeian rock, which was a precipice, from whence such as were guilty of treason against the state were thrown down. It was called Mons Tarpeius, from Tarpeia, a vestal virgin, who was buried there. This was she, who agreed with the Sabines to betray the capitol to them, provided they would give her what they wore on their left arms; which they promised to do; she meant their bracelets: but they had no sooner entered the capitol by her means, than they fell to throwing their targets upon her, which instantly pressed and smothered her to death. Horace, lib. i. sat. 6. mentions this punishment:

——————Audes
Dejicere è saxo cives; aut tradere Cadmo?

Ver 1021. Dryden, in the tragedy of Aurengezebe, has an excellent description of the tormenting terrors of a guilty mind; and which agrees very well with this passage of our author:

Severe decrees may keep our tongues in awe:
But to our thoughts what edict can give law?
Ev'n you yourself to your own breast shall tell
Your crimes, and your own conscience be your hell:
Amidst your train this unseen judge will wait;
Examine how you came by all your state;
Upbraid your impious pomp; and in your ear
Will hollow rebel! traitor! murderer!
Your ill-got pow'r, wan looks, and cares shall bring;
Known but by discontent to be a king:
Of crowds afraid, yet anxious when alone,
You'll sit, and brood your sorrows on a throne.

And Lee, in Mithridates, says finely:

My ugly guilt flies in my conscious face;
And I am vanquish'd, slain with bosom war.

Ver. 1027. In these thirty-two verses, the poet rebukes that worthless race of men, who seem to think themselves born for no other purpose, than to indulge themselves in ease and pleasure, and to waste their days in idleness: For why should such men, who are altogether useless in their generations, repine at their being subject to the same laws and necessity of fate, to which the most potent emperors, legislators, founders of cities, the greatest wits, and the most illustrious in arts and sciences, have in all times been subject, and forced to submit. Certainly their condition ought to be worse, and yet they complain of its being equal. Ancus, says he, Xerxes, and Scipio, died long ago. All the poets, and even Homer, the prince and father of them all; Democritus, nay, Epicurus himself, the best of all philosophers, is dead: Therefore.

When thoughts of death disturb thy head,
Consider, Ancus, great and good, is dead:
Ancus, thy better far, was born to die:
And thou, do'st thou bewail mortality?
Dryd.

Be gone then, whosoever thou be, and learn not to deplore the inevitableness of that destiny, which such, and so great men, especially Democritus, and Epicurus, have willingly, nay, joyfully undergone.

Ver. 1028. Ancus Martius: He was the fourth king of the Romans, and grandson of Numa by a daughter. Of him Livy. "Avitæ gloriæ memor: medium erat in eo ingenium, et Numæ et Romuli memor, cuilibet superiorum regum belli pacisque et artibus et gloria par." He was emulous of the glory of his progenitors, and seemed to have inherited a mixed temper of mind, between that of Numa and of Romulus. He was equal to any of his predecessor kings in the glory and arts both of war and peace. Virgil has not omitted to make Anchises show him to Æneas among the race of his successors:

——Quem juxta sequitur jactantior Ancus,
Nunc quoque jam nimium gaudens popularibus auris.
Æn. vi. ver. 815.

For he obtained the kingdom by the favour and voice of the people, as well as of the senators.

Ver. 1029. Lucretius took this thought from Homer, who says,

Κάτθανε καὶ Πάτροκλος, ὅπερ σέο πολλὸν ἀμείνων.

Ver. 1032. In these four verses he speaks of Xerxes, the king of the Persians, who, by laying a bridge over the Hellespont, and digging a channel round the mountain Athos, walked over the sea, and sailed upon land, as Herodotus in Polyhymn. says of him. Consider, says Lucretius,

How many monarchs, with their mighty state,
Who rul'd the world, were over-rul'd by fate?

That haughty king, who lorded o'er the main,
And whoſe ſtupendous bridge did the wild waves
reſtrain,
In vain they ſoam'd, in vain they threaten'd wreck,
While his proud legions march'd upon their back;
Him death, a greater monarch, overcame,
Nor ſpar'd his guards the more for their immortal
name.

Dryd.

Ver. 1033. "Et contempſit, aquis inſultans, murmura ponti," ſays Lucretius, alluding, in all appearance, to what the ſame Herodotus ſays of him: That hearing that his bridge over the Helleſpont was broken to pieces by a ſtorm, he commanded three hundred ſtripes to be given to the waves, and the ſea to be laſhed, and bound in chains; and that ſome of thoſe who were ordered to execute this ſentence, ſeverely chid and reproached the inſolent ſea in theſe words: "O thou ſalt and bitter water; thy lord ſends thee this greeting, and inflicts this puniſhment on thee, becauſe thou haſt baſely done an injury to him, who never gave thee any provocation. But know, that the great king Xerxes will walk over thee, in ſpite of all thou canſt do to hinder him. It is with good reaſon that no man ſacrifices to thee, ſince thou art at beſt but a bitter and deceitful ſtream." Manilius, lib. i. ver. 773.

Perfidis et victor ſtrârat qui claſſibus æquor.

Which Creech has thus paraphraſed;

Next Perſia's ſcourge, who ſtrew'd the joyful
flood
With Xerxes fleet, and check'd the growing god:
Who broke his force, when Neptune bore the
chain,
And prov'd his juſter title o'er the main.

Ver. 1036. *Scipio*] He ſpeaks of P. Cornelius Scipio Africanus Major, who in the year U.C. 543, when he was but 24 years of age, was, preferably to others, ſent into Spain, from whence he drove the Carthaginians. In the year 549 he was made conſul, and the year following ſent proconſul into Africa; where having overcome the Carthaginians, he obliged Hannibal to return out of Italy to the defence of his own country; having ſubdued Carthage, he impoſed a tribute on the Carthaginians, and made them give him hoſtages; for which he was ſurnamed Africanus: He was allowed a triumph at the end of the ſecond Punic war, in the year 553. Then he was made cenſor in the year 555, and again conſul in the year 560. He was thrice choſen prince, or preſident of the ſenate. He went legate, or lieutenant-general, in the expedition againſt Antiochus king of Syria, which was commanded in chief by his brother Lucius, who, for the victory he obtained over that king, was ſurnamed Aſiaticus. Our Scipio, being returned to Rome, was accuſed by the tribunes of the people, of having taken money of Antiochus to procure him a peace; and thinking it unworthy of a man like himſelf to be preſent, and plead in his own defence, he went to Liternum in Campania, and died there about the year 567. Though our tranſlator has omitted it, Lucretius in this place calls him *belli fulmen*, the thunderbolt of war! in which he ſhowed the way to Virgil, who, in Æn. vi. ver. 482, calls both the Scipios Major and Minor,

——Duo fulmina belli,
Scipiadas.——

And to Cicero likewiſe, who, in his oration for Cornelius Balbus, ſpeaking of others of the Scipian family, ſays: "Cum duo fulmina noſtri imperii Cn. et P. Scipiones ſubito in Hiſpania extincti occidiſſent." And Dryden, in his tranſlation of this paſſage, was careful not to omit the giving him that appellation:

The Roman chief, the Carthaginian dread,
Scipio, the thunderbolt of war is dead,
And, like a common ſlave, by fate in triumph led.

The other was the ſon of Æmilius Paulus Macedonicus, who was adopted into the Cornelian family by the ſon of Scipio Africanus Major, and called Publius Cornelius Scipio Æmilianus: He took and utterly deſtroyed Carthage, in the third and laſt Punic war, and reduced Africa into the form of a Roman province; for which he triumphed and gained the ſurname of Africanus Minor. This laſt famed for his juſtice, as well as for his great knowledge in the art of war, whence the proverb, "Scipione juſtior et militarior:" which we find in Tertullian's Apologet. chap. 2. Lucius Florus, ſpeaking of them ſays, "Fatale Africæ nomen Scipionum videbatur." See more of them in Livy, Velleius Paterculus, Oroſius, Appian. de Bello Civil. Lucius Florus, Aurelius Victor, et Eutropius.

Ver. 1040. *Homer*] Thus too Manilius, in the beginning of his ſecond book, is laviſh in the praiſe of Homer, and having mentioned the chief arguments of his poems, he concludes with a high character, and ſtyles him, "The Fountain of all Poetry:"

——Cujus ex ore profuſos
Omnis poſteritas latices in carmina duxit,
Amœnique in tenueis auſa eſt deducere rivos,
Unius fœcunda bonis.——

Which Creech thus renders:

——From whoſe abundant ſpring,
Succeeding poets draw the ſongs they ſing.
From him they take, from him adorn their
themes;
And into little channels cut his ſtreams:
Rich in his ſtore——

Ovid. Amor. lib. iii. eleg. 8, to the ſame purpoſe,

——à quo, ceu fonte perenni,
Vatum Pieriis ora rigantur aquis.

And Longinus, de Sublim. ſect. 13. ſays, that not only Steſichorus and Archilochus, but Herodotus the hiſtorian, and Plato the philoſopher, owe their

chief beauties to Homer. Lucretius therefore with good reason, speaking of the inventors of arts and sciences, says;

———Quorum avus Homerus
Sceptra potitus eadem sopitu' quiete 'st.

Upon which our translator expatiates; and this thought, "What Troy," &c. is taken from Waller. Dryden keeps closer to the original, and renders this passage thus:

The founders of invented arts are lost;
And wits, who made eternity their boast:
Where now is Homer who possess'd the throne?
Th' immortal work remains, the mortal author's gone.

Ver. 1044. *Democritus*] Of whom says Lucretius, "Sponte sua letho caput obtulit obvius ipse." Which Hermippus in Laertius explains. When Democritus was worn out with age, and seemed to be near his death, his sister was one day complaining to him, that if he should chance to die ἐν τῇ τῶν Θεσμοφορίων ἑορτῇ (festivals in honour of Ceres), she should not be able to perform her vows to that goddess: but he bid her take heart, and bring him every day some warm loaves of bread: by smelling to which he kept himself alive till that solemnity was at end: Now it lasted three days, and when they were past ἀλυτότατα τὸν βίον ποιήσαι. Diog. Laert. lib. ix. in Vit. Democ. And thus, to use the words of Dryden,

Democritus, perceiving age invade,
His body weaken'd, and his mind decay'd,
Obey'd the summons with a cheerful face;
Made haste to welcome death, and met him half the race.

Of Democritus, see more, ver. 356 of this book; and ver. 335 of book iv.

Ver. 1048. *Epicurus*] Of whom see book i. ver. 88, and the beginning of this book. Our poet here praises him, as far excelling all the other wise: and yet, says he, even he was forced to submit to death:

That stroke, ev'n Epicurus could not bar,
Though he in wit surpass'd mankind, as far
As does the mid-day sun the midnight star.
Then thou, dost thou disdain to yield thy breath,
Whose very life is little more than death?
More than one half by lazy sleep possest;
And, when awake, thy soul but nods at best,
Day-dreams and sickly thoughts revolving in thy breast.
Eternal troubles haunt thy anxious mind,
Whose cause and cure thou never hop'st to find:
But still uncertain, with thyself at strife,
Thou wander'st in the labyrinth of life.

Dryd.

Ver. 1059. The poet has taught before, that the fear of death is the fountain from whence proceeds all our uneasiness of mind. He now resumes that subject, and in these twenty-six verses, teaches, that the inconstancy and instability of men proceed from no other cause. Uneasy in town, they go into the country, but are restless there, and straight return to town; they wish for things, which, when obtained, they lothe. Men in all conditions are oppressed with a load of cares and anxieties of mind, because, wherever they go, they carry with them the fear of death, and all the uneasy wishes and desires that spring from it; but would they govern themselves by the precepts of true philosophy, that is to say, by the wise doctrine of Epicurus, they would learn that the soul is mortal, and every man would lay down the load that he feels so heavy.

Oh! if the foolish race of man, who find
A weight of cares still pressing on their mind,
Could find as well the cause of this unrest,
And all this burden lodg'd within their breast,
Sure they would change their course, not live as now,
Uncertain what to wish, or what to vow:
Uneasy both in country and in town,
They search a place to lay their burden down:
One, restless in his palace, walks abroad,
And vainly thinks to leave behind the load;
But straight returns; for he's as restless there,
And finds there's no relief in open air:
Another to his villa would retire,
And spurs as hard as if it were on fire;
No sooner enter'd at his country door,
But he begins to stretch, and yawn, and snore;
Or seeks the city which he left before.
Thus, ev'ry man o'erworks his weary will
To shun himself, and to shake off his ill,
The shaking fit returns, and hangs upon him still:
No prospect of repose, nor hope of ease;
The wretch is ignorant of his disease,
Which known, would all his fruitless troubles spare,
For he would know the world not worth his care;
Then would he search more deeply for the cause,
And study nature well, and nature's laws.
For in this moment lies not the debate,
But on our future, fix'd, eternal state;
That never-changing state which all must keep,
Whom death has doom'd to everlasting sleep.

Dryd.

Ver. 1085. Lastly, He tells us, in these fifteen verses, that it is a folly to fly from what we cannot avoid; and to be so fond of life, even though we are sure to meet with no new blessings, and that the longer we live the more afflictions we shall undergo:

Why are we then so fond of mortal life,
Beset with dangers, and maintain'd with strife?
A life, which all our care can never save,
One fate attends us, and one common grave.
Besides, we tread but a perpetual round,
We ne'er strike out, but beat the former ground,
And the same maukish joys in the same track are found.
For still we think an absent blessing best,
Which cloys, and is no blessing when possest;
A new-arising wish expells it from the breast,

The fev'riſh thirſt of life increaſes ſtill;
We call for more and more, and never have our fill:
Yet know not what to-morrow we ſhall try;
What dregs of life in the laſt draught may lie.
Dryd.

Ver. 1091. To this very purpoſe, Dryden, in the tragedy of Aurengezebe, after his inimitable manner:

When I conſider life 'tis all a cheat,
Yet, fool'd with hope, men favour the deceit;
Truſt on, and think to-morrow will repay;
To-morrow's falſer than the former day,
Lies more; and while it ſays we ſhall be bleſs'd
With ſome new joys, cuts off what we poſſeſs'd.
Strange coz'nage! None would live paſt years again,
Yet all hope comfort from what yet remain;
And from the dregs of life think to receive
What the firſt ſprightly running could not give.
I'm tir'd with waiting for this chemic gold,
Which fools us young, and beggars us when old.

Ver. 1094. Lucretius concludes this book with telling us, in theſe ſix verſes, that death is equally eternal and immortal, if it ſeize us to-day, or many ages hence: For,

Nor by the longeſt life we can attain
One moment from the length of death we gain;
For all behind belongs to his eternal reign:
When once the fates have cut the mortal thread;
The man as much to all intents is dead;
Who dies to-day, and will as long be ſo,
As he who dy'd a thouſand years ago.

ANIMADVERSION,

BY WAY OF RECAPITULATION, ON THE THIRD BOOK OF LUCRETIUS.

When Lucretius diſputes of matter and its motions, if you except only ſome of his aſſertions that are levelled againſt Providence, which of the philoſophers argues more rationally, or more pertinently to his ſubject? But when he comes to reaſon of things removed from ſenſe, of the ſoul, and its faculties, no man is more weak, none more wide from the purpoſe. Let us but conſider what a ſoul he has fabricated for himſelf: A ſubtle corporeal ſubſtance, compoſed of minute and voluble parts of wind, air, and heat, that are diffuſed through the whole body in ſuch a manner as to be ſeparated from one another by very ſmall intervals of ſpace. To theſe three he adds a fourth, I know not what nameleſs thing, extremely ſubtle, and moſt eaſy to be moved, which being ſeated in the heart, is the principle of ſenſe, and perceives the images that come from all things; and this is the perfect and conſummate ſoul of the Epicureans. Now, let us imagine a ſpider in a box, that ſhe has ſpun her web through the whole cavity of the box, and dwells herſelf in the middle of the web, then let us farther imagine, that ſome flies come into the web, and, being caught there, move the threads of it; at this motion, ſuppoſe the ſpider to be alarmed, that ſhe runs all over her web, catches the flies, and devours them: imagine all this, and you have ſo perfect a repreſentation of the Epicurean ſoul catching the εἴδωλα images, that nothing can be more like it. Are theſe diſcoveries worthy of a philoſopher?

From ver. 92 to ver. 134, he ſufficiently proves, that the ſoul is not a harmony of the whole body. From thence to ver. 161, he, to no purpoſe, joins the mind, as a maſter, to that abject ſlave, the ſoul. I confeſs, that when the mind is ſhaken by any violent fear, the ſoul is diſturbed; ſo too when the harper trembles, the harp utters not true harmony. With like ſucceſs, he goes on to ver. 178, endeavouring to evince, that the ſoul is corporeal; for he preſumes that to be certain, which he ought to prove by arguments to be ſo; and we may poſitively affirm, that there may be touch without body.

Now, ſince he has not proved the ſoul to be corporeal, why need we trouble ourſelves about what he advances to ver. 224, concerning the tenuity of it? Yet we muſt allow that the poet has evidently demonſtrated that the particles of the ſoul, granting it to be corporeal, muſt be both ſubtle and voluble; nor will we contend with him concerning the compoſition of the ſoul to ver. 309. For he may as well ſay that the ſoul is compoſed of the ſeeds of air, vapour, and heat, as of the particles of any other matter. But by adding, ver. 232, to theſe three a fourth thing, that has no name, he confeſſes, that no kind of body can be conceived or thought of, that is, or can be, the principle of ſenſe.

But he prudently commits the ſafety of this thin and ſubtle ſoul to the denſe and ſtrong body, to ver. 333: and then to ver. 355, he beſtows on the body the faculty of perception: yet what is more fooliſh? what more remote from, and even repugnant to common ſenſe? nay, what is leſs conſonant even to his own maxims and doctrine? For how can the body partake of ſenſe, ſince none of that fourth nameleſs thing helps to compoſe it? Then, to ver. 379, he diſputes ſucceſsfully againſt Democritus, at leaſt I will not contradict him, not thinking it worth the while to examine whether of their opinions is beſt, ſince both of them are abſurd. And as he but now gave the ſoul to the cuſtody of the body, ſo now to ver. 398, he interchangeably gives the guardianſhip of the body to the ſoul. And I envy neither of them their tuition. But let us examine the arguments by which he aſſaults the immortality of the ſoul itſelf.

The firſt is from ver. 407. to ver. 428. And in this he divides and diſperſes this thin and ſubtle corporeal ſubſtance, as he ſuppoſes that of the ſoul to be, and he has my leave to do ſo. Let the mind be corporeal, and though it be thick and compoſed of perplexed and intricate particles, I will allow it to be ſubject to diſſolution.

The ſecond argument, from ver. 428. to ver. 440, the third from thence to ver. 456, and the fourth from ver. 457. to ver. 469, prove nothing. For we do not in the leaſt perceive that the mind is born, grows, decays, and waxes old with the body. We perceive, indeed, that the body is born, grows and decays: but we have no experience of any increaſe or decreaſe in the mind. But, ſays he, the mind is not ſtrong in a child, and in the old it decays. And how does he prove this? Becauſe, ſays he, a child is fooliſh, and an old man doats. In like manner, place a very ſkilful workman in an engine, and let us ſuppoſe that ſome parts of that engine are too ſtiff, others too limber, ſome worn away, others clouterly, it would be fooliſh in us to expect any due and regular motions of that engine, even though that moſt ſkilful artiſt took a great deal of pains, and employed his utmoſt art in working it. Beſides, ſays he, the mind is ſuſceptible of cares and grief, and therefore muſt be ſubject to diſſolution. I ſuppoſe he means that it muſt be ſo, for I cannot at preſent think of any other reaſon for that concluſion, becauſe grief is elſewhere ſaid to be piercing, and cares devouring, "quia luctus penetrans, et curæ edaces," ſuch reaſoning is worthy of this mortal and corporeal ſoul. The ſame anſwer that ſolved the ſecond argument will ſolve the fourth.

To the three following arguments, from ver. 456. to ver. 505, let the phyſicians give an anſwer, if there be need of it. Let the legs ſtagger, the tongue faulter, and the eyes ſwim, what is all this to the ſoul? Let brawls and unmanly quarrels be the effect of drunkenneſs; what great matter is there in this either? For, though a player on the harp be ever ſo ſkilful, yet if you untune his inſtrument, if you ſcrew ſome of the ſtrings up too high, and ſlacken others too much, let him touch them ever ſo artfully, they will utter only diſcordant and unharmonious ſounds; though before they were thus diſordered and put out of tune, they made the ſweeteſt harmony. And in the epileptic diſeaſe, a foul humour diſorders and diſturbs the organs, and thence proceed thoſe boiſterous and unruly motions. But ſince the diſeaſe affects and weakens the organs only, what elſe does the phyſic relieve? The ſeventh argument, from ver. 505. to ver 524, aſſerts, that, as a man dies limb by limb, ſo the ſoul too goes away, and dies by degrees, as if the limbs could not grow cold but the ſoul muſt grow cold likewiſe. Beſides, this argument ſuppoſes the ſoul to be corporeal, and diffuſed through the whole body, which, nevertheleſs, he has not yet proved, and I dare promiſe, no man ever will.

The eighth argument, from ver. 524. to ver. 532, is of no weight: For the ſoul has not the power and faculty of underſtanding, and of reaſoning, from any exterior thing, as the ear has that of hearing, and the eye that of ſeeing; but ſhe has it in herſelf, and of herſelf, and therefore it is no wonder, nor does it follow, that though the ear, ſeparated from the body, cannot hear, nor a ſeparated eye ſee; the mind, ſeparated from the body, cannot therefore perceive, underſtand, and reaſon.

To the ninth argument, from ver. 533. to ver. 557, this anſwer may be given: In like manner, as when we ſee a ſoldier fighting with a ſword, or any other weapon, we do not ſay, that without thoſe arms he could give no wounds, for he has hands beſides to ſtrike with; ſo though the ſoul be clothed with members, as with a panoply, or complete ſuit of armour, and thus performs many functions with corporeal organs, yet we cannot pretend that when ſhe has put off, as it were, that military array, ſhe has no function either of underſtanding or perception remaining.

No man can allow any ſtrength to be in the tenth argument, from ver. 556. to ver. 567, unleſs he perceive that the ſoul is, as it were, the foundation of the whole animal, and that the body is ſeaſoned with ſoul, as with ſalt, that it may not ſtink and putrify.

The eleventh argument, from ver. 567. to ver. 581, is nothing but a ſort of quibble; for the whole ſtreſs of it conſiſts in this, that the defection of ſpirits, which we call a ſwoon, the Latins call "animi deliquium," a fainting of the mind.

The two following arguments, from ver. 581. to ver. 596, deny that the ſoul can go whole out of the body, unleſs it be expired through the jaws; nor is this in the leaſt abſurd, if the ſoul be corporeal: and they add farther, that the ſoul, fearing its future diſſolution, leaves the body unwillingly, and with regret. To this Cato anſwers in Cicero: "Quid quod ſapientiſſimus quiſque æquiſſimo animo moritur, ſtultiſſimus iniquiſſimo? Nonne vobis videtur animus is, qui plus cernit et longius, videre ſe ad meliora proficiſci? Ille autem cujus obtuſior acies, non videre? Equidem efferor ſtudio patres veſtros, quos colui et dilexi, videndi. Neque vero eos ſolum convenire aveo, ſed illos etiam de quibus audivi, et legi, et ipſe conſcripſi. Quo quidem me proficiſcentem haud ſcio quis facile retraxerit. Quod ſi quis Deus mihi largiatur; ut ex hac ætate repuereſcam, et in cunis vagiam, valde recuſem: nec vero velim, quaſi decurſo ſpatio, a calce ad carceres revocari." What is the reaſon that a wiſe man dies with a ſedate and quiet mind, and a fool with the greateſt impatience and reluctancy? Do not you think that the ſoul of the wiſe man, which ſees moſt and fartheſt, diſcovers ſhe is going to a better world? And that the ſoul of the fool is dim-ſighted, and ſees nothing of it? For my part, I burn with longing to ſee your fathers, whom I loved and honoured; nor do I deſire to meet them only, but others alſo, of whom I have heard, and read, and writ. And were I going to them, I know not who it is ſhould eaſily perſuade me back. Nay, if any god would grant me the privilege of becoming a child again, and to bawl in a cradle, I would abſolutely refuſe it for, having run my race, I would not willingly go back to the ſtarting-poſt to run it over again. In the laſt place, they affirm, that the mind, becauſe, if we may believe Epicurus, it is always ſeated in the heart of man, cannot remain ſafe and whole out of the

heart; as if birds, becauſe they are hatched in a neſt, cannot live out of it.

The fourteenth argument, from ver. 506. to ver. 606, is of the ſame piece with the others, and ſavours of vulgar ſtupidity to boot. Nor would the poet have been ſo copious in explaining the fifteenth, from ver. 606. to ver. 640, if he had rightly underſtood animal motion, and the inſtruments that ſerve to make it. To the next, from ver. 641. to ver. 649, let Plato and Pythagoras anſwer, for they only are concerned. The ſeventeenth and the eighteenth, from ver. 649. to ver. 680, ſuppoſe the corporeal ſoul to be diffuſed through the whole body, and to be annexed to all its parts, than which nothing is more falſe, nothing more abſurd. It reſides in the head, like a prince in his throne, and there it governs.

How trifling the obſervation he makes, from ver. 680. to ver. 709, is, will be obvious to every man who knows, and who has ſeen with his eyes, that worms, maggots, &c. are often bred in the earth, in plants, in cheeſe, &c. things altogether inanimate.

Let ſuch as believe the tranſmigration of ſouls ſolve the difficulties which the poet raiſes againſt them, from ver. 709. to ver. 739. And then, as to what he alleges from ver. 739. to ver. 748, I will only ſay, that the ſoul would be a fool indeed if it did not deſire a briſk and vigorous body, and fly from one that is decrepit and worn out with age. Of what he ſays, from ver. 749. to ver. 755, let them take care, if any ſuch are to be found, who think the abſurdities of Pythagoras worth a reply. And becauſe the three and twentieth argument, from ver. 755. to ver. 770 is the ſame in effect with the thirteenth, it ſhall have no other anſwer but what that has had already.

To his four and twentieth argument, from ver. 770. to ver. 776, we ſay, that the moſt excellent philoſophers hitherto have not thought it incongruous and abſurd to join together a mortal and immortal being. And in oppoſition to what he urges, from ver. 776. to ver. 797, I will eſtabliſh a fourth kind of things, viz. incorporeal, immortal ſubſtances, and Epicurus will not have the confidence to deny them an exiſtence, ſince he himſelf has beſtowed on his gods immortality, and exemption from diſſolution. Laſtly, As to his ſix and twentieth argument, which is the laſt he brings againſt the immortality of the ſoul, we do not deny but that the mind is affected with piercing grief, and vexed with devouring cares; nor but that when the body is ſeized with certain diſeaſes the mind cannot perform its due functions. But we ſtiffly deny the conſequence he draws from thence, viz. that therefore the ſoul is mortal.

I could here be more copious, and ſhow that Lucretius has to no purpoſe brought this heap of argument, ſince they are incapable of delivering us from the fear of death; for to men who abound in proſperity, and enjoy all the delights of life, what can be more calamitous than that death which is στέρησις αἰσθήσεως, a privation of ſenſe: And to propoſe to the unfortunate and miſerable ſuch a death as will utterly deſtroy them, and thus put an end at once to them and their calamities together, would be the ſame thing as to propoſe ſhipwreck to a man toſt in a violent ſtorm, that by being plunged and drowned in the waves, he may, once for all, exempt himſelf from the dangers of the raging deep. And thus behold the mighty comfort which the doctrine of Epicurus affords us! Such a relief will ever be unwelcome, and hateful to all pious and good men, and thoſe pleaſing only to the impious, whom no philoſophy ought to avail.

BOOK IV.

THE ARGUMENT.

I. Lucretius begins this fourth book, from ver. 1. to ver. 30, with the ſame compariſon he brought in the firſt book, ver. 931, to give the mind of his Memmius ſome eaſe and reſpite from the crabbedneſs of the ſubject upon which he was then diſputing; and he uſes it here again, to beſpeak as well the docility as the attention of his readers. II. He propoſes the ſubject treated of in this book, which has a manifeſt connection with the former three: For having, in the firſt and ſecond books, taught at large what the principles of things are, and what their nature, how they differ from one another in figure, how they are moved, and how they create all other things; and having, in the third book, fully explained the nature of the mind and of the ſoul, as being the chief and moſt excellent of all created bodies, he very judiciouſly, from ver. 29. to ver. 47, ſubjoins this other diſputation concerning the ſenſation of animals, as well when they are awake, as when they are ſleeping, which, to uſe the expreſſion of Lucretius, is as much as to ſay, concerning the ſenſes of the mind as well as thoſe of the body. And, to carry on this diſputation the more regularly, he begins with the images of things, and warmly inſiſts, that all ſenſation is made by them. Therefore, III. from ver. 46. to ver. 115, he teaches, that certain moſt tenuious and ſubtle images are continually flowing from the ſurfaces of all bodies, that they fly to and fro in the air, but that, nevertheleſs, they are inviſible, unleſs they be reflected upon the ſight from mirrors, or water. IV. Then, to ver. 127, he deſcribes the extreme tenuity of ſuch images, and from thence takes occaſion to confirm the doctrine he taught in the firſt book concerning the exiguity of his atoms.

V. From ver. 126. to ver. 228, he distinguishes between two kinds of images; one of those that of their own accord are bred in the clouds, which sometimes represent the images of giants, sometimes of mountains, and sometimes of huge monstrous beasts; the other, of those that fly off from the surface of things, and are, as it were, the films or membranes of them. Lucretius calls them "exuviæ rerum," and then teaches, that these "exuviæ" are continually flowing from the surface of all bodies, and that they are borne through the air with such wonderous celerity that they easily outstrip the swiftness even of the rays of the sun. VI. Forasmuch as the sight is accounted the first and chief of all the senses, he begins with it, and from ver. 227. to ver. 480, he teaches, that it proceeds from the incursion and striking of those images upon the eyes, in like manner as the other senses are caused by corpuscles that come from without to the several organs of sensation. Meanwhile, he explains all things that relate to the efficient causes of sight, and proposes several problems touching vision, of which he gives the true reasons and solutions. VII. But lest any man should take pretext, from the explication of these problems, to accuse the senses of deception or fallacy, he, at large, asserts their dignity, from ver. 479. to ver. 536, and takes occasion, by the way, to confute the sceptics, but chiefly from ver. 479. to ver. 490, and at last lays it down as an indisputable maxim, that all truth is grounded on the certainty, and on the belief of the senses. VIII. Having thus disputed of sight, he goes to work with the other senses likewise, and from ver. 535. to ver. 622, teaches, first, that voice and sound are corporeal images, which strike the ear, and are the cause of hearing. Then he explains the nature of voice, and the manner of its formation, and gives a reason why the same voice is heard by many persons at once, tells what an echo is, and what causes it. IX. From ver. 621. to ver. 722, he gives instructions concerning savour and taste, and touching odour and smell; namely, what savour and odour are, and why all do not perceive them; why the same food is sweet to some and bitter to others; why one odour is more agreeable to one than it is to another; and why the same voice strikes a terror into some, and pleases, at least does not fright others. X. From ver. 721. to ver. 832, he treats of imagination, and cogitation, which, he says, are made likewise by the same most subtle images of things presenting themselves to the mind. In the next place, he proposes and explains several problems relating to cogitation; why, for example, we seem to see, in our dreams, persons who are dead; why the images of things seem to tarry with us while we are thinking of the things whose images they are; why any man thinks on a sudden upon whatever he will; why we seem to ourselves to move in our dreams. XI. From ver. 831. to ver. 905, he teaches, that the tongue, the eyes, the nostrils, the ears, in a word, that all the organs of sensation were made before the use of them, quite contrary to what has happened in regard to all artificial things, the invention of which succeeded the foreseen want and usefulness of them. He gives the reason, likewise, why animals seek after their own meat and drink; why we move whenever we please; and tells what it is that actuates and drives forward the mass of our body. XII. From ver. 904. to ver. 1036, he treats of sleep, and of dreams; and teaches, in the first place, how sleep is caused in us, and in all other animals; then he assigns several causes of different dreams; and, falling at length upon the subject of venery, he disputes, from ver. 1029 to the end of this book, of love, of barrenness, of fruitfulness, &c. with more freedom of thought, and broadness of expression, than perhaps some will allow to be fitting. But in subjects of such nature, all philosophers have been apt to indulge themselves very much, and to assume greater liberties than it strictly becomes them to take.

I feel, I rising feel poetic heats,
And, now inspir'd, trace o'er the muses seats
Untrodden yet. 'Tis sweet to visit first [thirst:
Untouch'd and virgin streams, and quench my
I joy to crop fresh flow'rs, and get a crown
For new and rare inventions of my own:
So noble, great, and gen'rous the design,
That none of all the mighty tuneful nine
E'er grac'd a head of laurels like to mine.
For, first, I teach great things in lofty strains,
And loose men from religion's grievous chains.
Next, though my subject's dark, my verse is clear,
And sweet, with fancy flowing ev'ry where;
And this design'd: For as physicians use,
In giving children draughts of bitter juice,
To make them take it, tinge the cup with sweet,
To cheat the lip; this first they eager meet,
And then drink on, and take the bitter draught,
And so are harmlessly deceiv'd, not caught:
For, by such cheats, they get their strength, their ease,
Their vigour health, and baffle the disease.
So since our method of philosophy
Seems harsh to some; since most our maxims fly;
I thought it was the fittest way to dress
These rigid principles in verse might please;
With fancy sweet'ning them, to bribe thy mind
To read my book, and lead it on to find
The nature of the world, the rise of things;
And what vast profit too that knowledge brings.
Now, since 'tis shown what things first bodies are,
What diff'rent forms, what various shapes they bear; [whole;
And how they move; how join to make one
And what's the nature of the mind and soul;
Of what compos'd; how fate unlinks the chain,
And scatters it into its seeds again.
Next, for 'tis time, my muse declares and sings,
What those are we call images of things,
Which, like thin films, from bodies rise in streams,
Play in the air, and dance upon the beams:

By day theſe meet, and ſtrike our minds, and fright,
And ſhow pale ghoſts, and horrid ſhapes by night:
Theſe break our ſleep, theſe check our gay delight.
For ſure no airy ſouls get looſe, and fly,
From hell's dark ſhades, nor flutter in our ſky:
For what remains beyond the greedy urn,
Since ſoul and body to their ſeeds return?
A ſtream of forms from ev'ry ſurface flows,
Which may be call'd the film or ſhell of thoſe:
Becauſe they bear the ſhape, they ſhow the frame,
And figure of the bodies, whence they came.
The dulleſt may perceive, and know 'tis true;
For bodies, big enough for ſenſe to view,
Do often riſe: ſome more diffus'd and broke:
Thus fire, thus heated wood ſtill breathe forth ſmoke;
And ſome more cloſe, and join'd; when heats begin,
Some inſects ſeem to ſweat, and caſt their ſkin:
The heifers caſt the membranes of their horns,
Snakes leave their glitt'ring coats among the thorns,
A glitt'ring coat, each tree, each buſh adorns.
We ſee with pleaſure what we fled before,
We handle now the ſcales, and fear no more.
This proves that num'rous trains of images
(For why can theſe, and not more thin than theſe)
From ev'ry ſurface flow. For firſt they lie
Unchain'd, and looſe, and ready for our eye:
They ſoon will ſlip, and ſtill preſerve their frame,
Their ancient form, and tell from whence they came.
Nay more, they're thin, they on the ſurface play,
Therefore few chains to break, few ſtops to ſtay
Their courſe, or hinder when they fly away.
For it is certain, that a num'rous ſtore,
Not from the middle parts, as 'twas before
Obſerv'd, but even from the ſurface riſe,
As colours, often looſen'd, ſtrike our eyes.
Thus when pale curtains, or the deeper red
O'er all the ſpacious theatre are ſpread,
Which mighty maſts, and ſturdy pillars bear,
And the looſe curtains wanton in the air,
Whole ſtreams of colours from the top do flow,
The rays divide them in their paſſage through,
And ſtain the ſcenes, and men, and gods below:
The more theſe curtains ſpread, the pleaſing dye
Rides on the beams the more, and courts the eye:
The gaudy colour ſpreads o'er ev'ry thing,
All gay appear, each man a purple king.
Since curtains then their looſen'd colours ſpread,
Since they can paint the under ſcenes with red,
Then ev'ry thing can ſend forth images:
Thoſe fly from ſurfaces as well as theſe,
'Tis certain then that ſubtle forms do lie
And dance, and frolic in our lower ſky,
Which, ſingle, are too ſubtle for our eye.
But now the odours, vapours, and thin ſmoke,
Fly ſcatter'd and confus'd, their order broke,
Becauſe, whilſt they from outward parts do flow,
And through ſtrait winding pores, and turnings go,
They are diſorder'd in their paſſage through.
But now theſe ſubtle films of looſen'd dyes
What can diſorder, as from things they riſe,
Since each upon the utmoſt ſurface lies?
Thus forms, which glaſs, which limpid ſtreams reſtore,
Bearing that ſhape, that dye, the body wore,
Muſt be compos'd of fleeting images
That riſe from things: For why with greater eaſe
Can theſe forms riſe, than ſome more thin than theſe?
Then there are ſubtle ſhapes, like thoſe that ſtreams
Or glaſs reſtores on the returning beams;
In figure like; but airy, thin, and light,
And ſingle each, too ſubtle for our ſight:
Yet coming thick, and in a num'rous train,
Reflected from the poliſh'd ſpecular plain,
Can make us ſee; and that's the reaſon why
The forms return again, in ſhape and dye
So like the things, and pleaſe the curious eye.
Next learn how ſubtle, and how thin theſe are.
Firſt, then, ſince ſeeds of things are finer far
Than thoſe that firſt begin to diſappear.
But now to clear this, to confirm the more
The ſubtleneſs of ſeeds, explain'd before,
And add new reaſons to the former ſtore:
How many animals, whoſe middle part
The ſharpeſt eye, with all the help of art,
Can't ſee? Dull art may throw her glaſſes by:
How ſubtle then the guts, the heart, the eye?
How thin each little member of the whole?
How infinitely ſmall the ſeeds that frame the ſoul?
But more——
Opopanax, or rue, that ſtrikes the noſe
With ſtrongeſt ſmells, or others, like to thoſe,
If ſhaken, thouſand parts do fly from thence,
A thouſand ways: but weak, nor move the ſenſe.
And yet how ſubtle, if compar'd with theſe
How thin, what nothings are the images?
How vaſt the diſproportion 'twixt theſe two?
'Tis more than thought can think, than words can ſhow.
But now, beſides theſe ſubtle forms that rear
From bodies, thouſand new are fram'd in air,
Faſhion'd by chance; and theſe when borne on high,
Still change their ſhapes, and wanton in the ſky:
Then join'd in various forms, grow thick and move
Like clouds combin'd, and darken all above:
Hence prodigies; hence ſome gigantic war,
Marſhall'd in th' air, looks dreadful from afar,
And ſhadows all: Hence mountains ſeem to fly:
And ſcatter'd rocks cut thro' the wounded ſky:
Hence other clouds do frightful ſtreamers ſhow:
We ſtare, amaz'd, and wonder at below.
Next learn——
How ſoon theſe forms fly off, how ſwift they riſe:
For ſomething ſtill on ev'ry ſurface lies,
Juſt ready to depart, and ſtrike our eyes.
This, when on rare and thin compoſures toſt,
For inſtance, clouds, ſtrait enters, and is loſt.

It breaks on rocks and woods; they ne'er reſtore
The forms, the image then appears no more:
But if 'tis thrown on denſe, and ſmooth, as glaſs,
It muſt return; thoſe things it cannot paſs,
As clothes: nor break, becauſe the thing's polite;
Hence forms return from ſuch, and pleaſe the ſight:
And hence the poliſh'd glaſs, whate'er you place
Before, as ſwift as thought, returns the face:
Which proves that num'rous trains of forms aroſe,
And ſuch as the reflecting mirror ſhows,
Thin ſubtle images, all like to thoſe,
Each moment ſpring; and hence 'tis juſtly ſaid,
Their riſe is quick; theſe forms are quickly made;
As num'rous rays muſt ev'ry minute flow
From the ſun's orb, to keep all full of light below;
So num'rous images from things muſt rear,
Each minute riſe, and wander through the air:
Becauſe let haſty hands the mirror place,
This way, or that; yet ſtill we view the face,
The colour, ſhape, returning from the glaſs.
So often, when the heav'ns, ſerene and bright,
Look, gay, and clear, and ſmile with gaudy light;
A horrid cloud ſtraight hides its glorious face,
As if the ſhades of hell had left their place,
And fill'd the vaulted ſkies: ſo thick the night!
So dark the clouds appear, ſo much affright!
And yet how ſubtle, if compar'd with theſe,
How thin, what nothings are the images?
How vaſt the diſproportion 'twixt theſe two!
'Tis more than thought can think, than words can ſhow.
Now next, how faſt they move, how quick they fly,
Parting with ſwifteſt wings the yielding ſky:
How they outſtrip dull time where'er they go,
How quick, how ſwift they are in paſſing thro';
In few, but ſweeteſt numbers, muſe rehearſe:
My few ſhall far exceed more num'rous verſe.
Thus dying ſwans, tho' ſhort, yet tuneful voice,
Is more delightful than a world of noiſe.
Firſt, then; experience tells, that thin, and light,
And ſubtle things are fit for haſty flight:
Such is the ray, the vapour of the ſun;
How ſwift its race! 'Tis finiſh'd when begun:
For they are thin contextures: almoſt ſeed;
And cut the parted air with greateſt ſpeed;
No lets to ſtop, but when one part is gone,
Another flows and drives the former on:
The rays ſtill riſe in a continued ſtream,
The foll'wing laſhes on the lazy beam:
So far their reaſon holds: the airy race
Of images muſt paſs a mighty ſpace,
Each point of time: For firſt, ſome force behind
Still drives them on t' outſtrip the ling'ring wind;
Their texture is ſo thin, their frame ſo rare,
That they can freely enter any where,
And even penetrate the middle air.
Beſides; if theſe compoſures from above
So ſwiftly through the lower region move;
If in one point of time the glorious ray
Swiftly deſcends, and ſhows approaching day;
From heaven to earth can take its haſty flight,
And gild the diſtant globe with gaudy light;
If this ſo ſwift, than ſwifter thoſe that lay
On ſurfaces of things, which nought could ſtay;
No ſtops could hinder as they fly away:
They larger ſpace in that ſhort time muſt fly,
While the ſun's lazy beams creep through our ſky.
Another inſtance of their ſwiftneſs this.——
In bowls of water ſet abroad by night,
We know that ſtars do ſhed their feeble light;
So quick the glorious ray deſcends from far,
And we look downward to behold the ſtar:
Which ſhows the images, with eager haſte,
From heav'n reach diſtant earth; they move ſo faſt,
Before the ſingle preſent now is paſt.
Slow time admires, and knows not what to call
The motion, having no account ſo ſmall.
Thus then theſe images, that ſtrike our eyes,
And make us ſee, from real things muſt riſe.
Thus odours riſe from gums; a gentle breeze
From rivers flow; and from the neighb'ring ſeas
Sharp ſalts ariſe, and fret the ſhores around:
Thus all the air is fill'd with murm'ring ſound:
And whilſt we walk the ſtrand, and, pleas'd to view
The wanton waves, or ſqueeze, or mingle rue,
Or ſalt, or bitter taſtes our tongue ſurpriſe:
So certain 'tis that ſubtle parts ariſe
From all, and wander in the lower ſkies:
Theſe never ceaſe to flow, becauſe the ear,
And eyes, and noſe, ſtill ſmell, or ſee, or hear.
So feel by night, our touch will ſoon betray
The ſhape, like that the ſight beheld by day.
Thus then the cauſe, whence touch and ſight muſt riſe
Is one; the ſame affects the hands and eyes.
For, thus, if, when 'tis dark, we feel a ſquare,
The touch informs what ſhape the thing does bear;
What is it makes us ſee the like by day,
But the ſquare image riding on the ray.
Therefore theſe images are cauſe of ſight:
All would be dark without them, and all hid in night.
But now theſe images, theſe ſubtle ſtreams
Are ſcatter'd all around, on all the beams:
And therefore whereſoe'er we turn our eye,
(In that alone the pow'r of ſight does lie)
Theſe images appear, and quickly ſhow
The colour, ſhape, and tell the diſtance too.
For theſe ariſing from the object ſeen,
Drive forward all the air that lies between:
This ſtream of air unto the eyes does flow,
And gently grates the ball, and paſſes thro':
This ſhows the diſtance——
For as the ſtream of air, that paſſes by,
Is long, or ſhort; as that does ſtrike the eye,
So far, or near, the objects ſeem to lie.
All this is quickly done; at once we view
The diſtant thing, and know the diſtance too.
But more; no wonder that the eye deſcries
The things themſelves, altho' the forms that riſe,
Are ſingle; far too ſubtle for our eyes.
For winds moleſt, cold makes the members ſmart;
And yet what ſenſe perceives each ſingle part?

What ſenſe each atom of the cold and wind?
None feel the ſingle force, but all conjoin'd:
Then we perceive the ſtroke, when pains commence;
As if external force did wound the ſenſe;
In flints we preſs the utmoſt parts alone,
Yet feel not that: that is to touch unknown;
We feel the inward hardneſs of the ſtone.
Now learn; I'll ſing why each reflected face
Is ſeen, as if remov'd beyond the glaſs;
For ſo it ſeems: As when the hind'ring door
Impriſons up the longing eye no more;
But, open'd wide, permits the eager ſight,
O'er objects, plac'd without, to take its flight,
View all around, and revel with delight.
The object then by double air is ſhown;
The air, that lies within the gate, is one:
And then the gate itſelf is plac'd between,
Then th' outward air, and then the object ſeen.
Thus when the image of the glaſs does riſe,
And makes its paſſage forward to our eyes,
It drives before it all the air between;
So that is felt before the glaſs is ſeen:
And when we ſee the poliſh'd ſpecular plain;
Our form flies to it, and returns again;
Still driving on the air that lies between;
So that is felt before the face is ſeen:
And that's the cauſe, why each returning face
Seems far remov'd, and plac'd beyond the glaſs.
But more; returning forms, that reach the ſight,
Tranſpoſe the parts, and turn the left to right.
Becauſe the forms, that ſtrike the poliſh'd plain
Are not reſtor'd the ſame, unchang'd again;
But ſtriking ſtrong, are turn'd a diff'rent way.
This inſtance clears it: Take a form of clay
Not yet grown dry, and daſh it on a ſeat;
Now if the form's entire, the front retreat,
And come behind, the parts preſerve their ſite;
The right will ſeem the left, the left the right.
Beſides; returning forms do often paſs,
And fly from one into another glaſs.
Thus from one ſingle thing theſe plains reſtore
Six images, and often ten, or more.
Thus let the thing be hid i' the fartheſt cell;
Yet place the plains by art, and ſet them well,
The flitting images to all will come,
And all the thing appear in ev'ry room. [plain,
But more; the ſhapes tranſpos'd by th' former
Which paſs to others, there are turn'd again.
But convex glaſſes ſhow the bodies ſite,
Reſtoring left as left, and right as right:
Becauſe the image is reflected twice,
From glaſs to glaſs, and after ſtrikes our eyes:
Or elſe 'tis turn'd about; for that the face
Is turn'd about as it does backward paſs,
We learn ev'n from the figure of the glaſs.
But farther on: the image ſeems to wait
On all our ſteps, and imitate our gait.
For when we move and leave ſome parts o' th' glaſs,
The parts thus left no more return the face;
For nature does by ſteady laws ordain,
That when a form comes on, and turns again,
The lines make equal angles with the plain.

The ſight a fulgid object hates, and flies:
The ſun ev'n blinds the bold and prying eyes,
Becauſe the rays are ſtrong, and ſwiftly fly,
And with repeated ſtrokes diſturb the eye.
Through pure and unreſiſting air they fall,
And break the texture of the injur'd ball.
Beſides, all objects that are glaring bright,
Do hurt and burn the eye, and ſpoil the ſight;
For flames a thouſand hurtful parts contain,
Which ſtrike the tender eye, and raiſe a pain.
Beſides, whatever jaundice eyes do view,
Look pale as well as thoſe, and yellow too.
For lurid parts fly off with nimble wings,
And meet the diſtant coming forms of things;
And others lurk within the eyes, and ſeize,
And ſtain with pale the ent'ring images.
More: though our eyes are all enclos'd in night,
They ſee thoſe objects that are plac'd in light;
Becauſe, though firſt the nearer darker air
Creeps ev'n into the eyes, and ſettles there;
Straight comes with vig'rous force the ſhining ray,
Cleanſes the pores, and drives the ſhades away;
For, 'tis more ſubtle, and more ſtrong than they.
When this has cleans'd and open'd ev'ry pore,
Which the dark heavy air had ſtopp'd before,
The forms of things come in: they ſwiftly fly,
And ſtrike, and raiſe a motion in the eye.
But now, when we ourſelves are in the light,
The objects in the dark ne'er move our ſight;
Becauſe a thicker air does ſtill come on;
A darker as the former dark is gone,
And ſtops the pores; and thus no forms can riſe,
None move and find a paſſage to our eyes.
Now farther: 'tis by ſure experience found,
A ſquare when ſeen at diſtance ſeems a round;
Becauſe all angles ſeem when ſeen from far,
Obtuſe, or rather not at all appear.
For through the flitting air all forms that fly
Are ſtruck and blunted in the lower ſky,
And ſo grow weak, and never move the eye:
So all the angles hid, the things appear
All round, though each may be a perfect ſquare;
Yet not like perfect rounds, and ſeen when near.
And ſhadows ſeem to move, to turn and ſtay
As bodies do; and ſervilely obey.
Now how can air, only depriv'd of light,
(For ſhadow is no more; a ſudden night)
On all the members various motions wait,
And turn, and imitate her body's gait?
But thus it happens, when we walk by day,
Our bodies ſtop the paſſage of the ray;
But when we leave the place, they further flow,
And their warm kiſſes on the earth beſtow.
And thus the ſhadow ſeems to move, to bend.
As bodies do, and all their walk attend;
For ſtill new rays ſpring from the glorious ſun,
The former dying when their race is run:
And, therefore, earth is ſoon depriv'd of light,
And rays as ſoon come on and chaſe the night;
The negro darkneſs waſh'd becomes a white.
And yet, here's no deception of the eye,
For 'tis its office only to deſcry,
Or how, or in what place the ſhadow is;
It muſt not paſs the narrow bounds of this

But if the shadows are the same or no;
Whether they die; or as the body go,
'Tis not the office of the eye to know:
'Tis reason's office that; for that's design'd
Things nature, and philosophy to find;
Then fix not on the eye the failures of the mind.
Thus ships, though driv'n by a prosperous gale,
Seem fix'd to sailors; those seem under sail
That lie at anchor safe; and all admire,
As they row by, to see the rocks retire.
Thus stars seem fasten'd to the steady pole,
Though all with daily constant motion roll;
Yet they, when they have climb'd the tedious east,
Pass through the sky, and headlong fall to west.
And so the sun and moon seem fix'd above,
Yet sure experience tells us that they move.
And rocks in seas that proudly raise their head,
Though far disjoin'd, though royal navies spread
Their sails between; yet, if from distance shown,
They seem an island all combin'd in one.
So boys that whirl around, then cease to move,
Think all the pillars dance and roofs above:
So strong the thought, they dread the tott'ring wall,
And fear the roof will crush them with the fall.
Thus when kind nature shows her infant-day,
And the new sun peeps forth with trembling ray,
And loth or fearful to begin the race,
Looks o'er the mountains with a blushing face;
That hill o'er which the humble beams appear
Scorching with neighb'ring flames is often near,
And we might touch the sun if we were there.
When yet the real space is vastly wide
Great tracts of land, and many a swelling tide,
The distant sun and that near hill divide.
Thus little puddles that in streets do lie,
Though scarce inch deep, admit the searching eye,
To view as large a space as earth from sky.
Thus when in rapid streams my horse has stood,
And I look'd downward on the rolling flood;
Though he stood still, I thought he did divide
The headlong streams, and strive against the tide;
And all things seem'd to move on ev'ry side.
Thus courts, though equal wide, yet seem to bend,
And grow more narrow at the distant end:
The roof depress'd, the sides seem join'd in one,
The weary'd sight lost in a darksome cone.
The sun to sailors seems from sea to rise,
And set; for they see only seas and skies.
All which does seem t' oppose, and to commence
Strong proofs against the certainty of sense.
Thus ignorants, when plac'd on steady shores,
Think feeble ships are row'd with broken oars.
The rudder's shatter'd, and the planks appear,
And they are loth to trust their safety there;
Because that part which lies above the flood,
Seems firm and straight, and regular, and good,
But that below seems broke; and, turning up,
Ascends again and reaches near the top.
And when by night the clouds are whirl'd above,
The moon and glitt'ring stars do seem to move,
As driven forward by a secret force,
A diff'rent way from their own nat'ral course.
If any presses underneath his eyes,
Straight all the objects doubled seem to rise!
Two lamps appear when only one is brought,
His wealth seems doubled, and he's rich in thought;
Each man appears increas'd in form and grace,
Almost Geryon, with a double face.
And, lastly, when the eyes with sleep oppress,
And all the body lies dissolv'd in rest;
The members seem awake and vig'rous still,
Now o'er a plain, now flood, or shady hill,
They seem to move; and, ev'n in darkest night,
They think they see the sun diffuse his light.
They see him chase the frighted shades away,
And clear a passage for approaching day:
They seem to hear a voice, though all around
Deep silence stands, nor bears the weakest sound.
Ten thousand such appear; ten thousand foes
To certainty of sense, and all oppose
In vain; not sense, but judgment 'tis mistakes,
And fancy'd things for real objects takes.
He that says nothing can be known, o'erthrows
His own opinion; for he nothing knows.
So knows not that: what need of long dispute!
These maxims kill themselves, themselves confute.
But grant this might be known, and that he knew;
Yet since he has discover'd nothing true,
What mark or what criterion then can show,
Or tell what 'tis to know, or not to know?
Or how could he, what truth, what falsehood learn?
How, what was doubt, what certainty, discern?
From sense all truth and certainty infer;
In vain some strive to prove that sense can err:
For that which would convince, which would oppose
The senses, must be surer far than those.
Now, what is more to be believ'd than sense?
Is false and erring reason rais'd from thence?
Errors in parent sense can reason show?
Errors which she from sense alone can know?
And thus if sense be false, then reason too is so.
What, can the ears convince the eyes? Can those
Convince the hand, the palate, or the nose?
Tell them, whene'er they err, whene'er they miss,
And give false notions? A fond fancy this!
For each a proper use and pow'r enjoys;
A proper object ev'ry sense employs.
Thus heat and cold and other qualities
Affect the touch, while colours strike the eyes,
Odours the smell, savours the taste; but none
Invades another's right, usurps his throne,
All live at peace, contented with their own;
Therefore, from what the other senses show,
In vain we seek to prove one sense untrue;
Or from itself——
For still we must an equal credit give
To each; and all must equally believe.
'Tis truth whate'er the senses do declare;
Though reason cannot tell thee why a square
Should seem a perfect round when seen from far.
Better assign a false, than this pretence
Should overthrow the certainty of sense;
Question its truth, rather than that should fall,
On which depends our safety, life, our all.

For now, not only reaſon is o'erthrown,
Unleſs we truſt our ſenſe, but life is gone.
For how can man avoid the bad, or chooſe
What's good for life, unleſs they follow thoſe?
Therefore, thoſe pompous reaſons ſome afford
Againſt our ſenſe, are empty and abſurd.
But, laſtly, as in building, if the line
Be not exact and ſtraight, the rule decline;
Or level falſe, how vain is the deſign!
Uneven, an ill-ſhap'd, and tott'ring wall
Muſt riſe, this part muſt ſink, that part muſt fall;
Becauſe the rules were falſe, that faſhion'd all.
Thus reaſon's rules are falſe, if all commence,
And riſe from failing and from erring ſenſe.
But now my muſe, how proper objects pleaſe
The other ſenſes, ſing, 'tis told with eaſe:
Firſt then, we ſounds, and voice, and noiſes hear,
When ſeeds of ſound come in and ſtrike the ear,
All ſound is body; for with painful force
It moves the ſenſe, when with an eager courſe
It ſcrapes the jaws, and makes the ſpeaker hoarſe.
The crowding ſeeds of ſound that ſtrive to go
Through narrow nerves, grate them in paſſing through:
'Tis certain then that voice which thus can wound,
Is all material; body ev'ry ſound.
Beſides, 'tis known to talk a tedious day,
How much it weakens, what it takes away
From all the nerves; how all the powers decay;
But chiefly, if 'tis loud, and ſpoke with noiſe;
And, therefore, little bodies frame the voice,
Becauſe the ſpeaker loſes of his own,
His weakneſs tells him many parts are gone.
But more; the harſhneſs in a voice proceeds
From rough; the ſweetneſs from the ſmoother ſeeds.
Nor are the figures of the ſeeds alike,
Which from the grave and murm'ring trumpet ſtrike,
To thoſe of dying ſwans, whoſe lateſt breath
In mournful ſtrains laments approaching death.
Thus voice, when riſing from the lungs, it breaks
Through jaws and lips, and all the paſſion ſpeaks,
The tongue forms into words with curious art;
The tongue and lips do faſhion ev'ry part.
And therefore, if the ſpeaker be but near,
If diſtance fit, you may diſtinctly hear
Each word, each air; becauſe it keeps the frame
It firſt receiv'd; its figure ſtill the ſame.
But if the ſpace be great, through all the air
The ſound may fly diffus'd, and periſh there:
And therefore, though we hear a murm'ring noiſe,
No words: the air confounds and breaks the voice.
Beſides, one ſentence when pronounc'd aloud
By ſtrong-lung'd criers, fills the liſt'ning crowd,
Breaks into many, for it ſtrikes them all,
To ev'ry ſingle ear it tells the tale.
But ſome parts of the voice that miſs the ear,
Fly through the air diffus'd, and periſh there.
Some ſtrike on ſolid buildings; and reſtor'd,
Bring back again the image of the word:
This ſhows thee why, whilſt men through caves and groves,
Call their loſt friends, or mourn unhappy loves,
The pitying rocks, the groaning caves return
Their ſad complaints again, and ſeem to mourn.
This all obſerve, and I myſelf have known
Both rocks and hills return ſix words for one.
The dancing words from hill to hill rebound,
They all receive, and all reſtore the ſound.
The vulgar and the neighbours think, and tell
That there the nymphs and fauns and ſatyrs dwell;
And that their wanton ſport, their loud delight
Breaks through the quiet ſilence of the night:
There muſic's ſofteſt airs fill all the plains,
And mighty Pan delights the liſt'ning ſwains:
The goat-fac'd Pan, whoſe flocks ſecurely feed,
With long-hung lip he blows his oaten reed.
The horn'd, the half-beaſt god, when briſk and gay, [play.
With pine-leaſs crown'd, provokes the ſwains to
Ten thouſand ſuch romants the vulgar tell,
Perhaps leſt men ſhould think the gods will dwell
In towns alone, and ſcorn their plains and cell:
Or ſomewhat; for man, credulous and vain,
Delights to hear ſtrange things, delights to feign.
Nor is it ſtrange, that things which ſtill deny
An eaſy paſſage to the ſharpeſt eye, [come,
Through ſuch the ſmalleſt voice and ſound can
As when we whiſper in a well clos'd room;
Voice can paſs crooked pores; but rays reflect,
Unleſs the pores be open; all direct,
And ev'ry paſſage ſtrait as 'tis in glaſs,
Through which all ſorts of ſpecies freely paſs.
Beſides, we know voices and ſounds divide,
And ſcatter through the air on ev'ry ſide;
One breaks to many, as in darkeſt nights,
One ſhaken ſpark will make a thouſand lights.
And therefore, all the num'rous voids around
Receive the voice, and each is fill'd with ſound:
But now the viſive rays ſcarce e'er decline,
They ſtill proceed by the exacteſt line;
So ſounds can paſs where never ray can ſhine.
But yet ſuch ſounds before they reach the ear,
Grow weak, and we for words ſoft murmurs hear.
We taſte, that's ſoon explain'd, when ſavours wrung [tongue;
From meats by cruſhing teeth, immerſe the
When juices flowing from the tender meat
(The tender food oppreſs'd does ſeem to ſweat)
Bedew the palate; when they ſpread all o'er
The ſpongy tongue, and ſtand in ev'ry pore.
Theſe juices, if their ſeeds be round and ſmooth,
Tickle, ſeem ſweet and pleaſing to the mouth;
But if the ſeeds be rough as they deſcend,
They hurt the nerves, ſeem bitter and offend.
The ſavours pleaſe within the mouth alone;
For when the food's deſcended farther down,
We taſte no more, and all the pleaſure's gone.
So when 'tis in the veins, when ev'ry pore
Is fill'd, we feel not, we are pleas'd no more,
And thus it matters not what ſorts of food
Increaſe the limbs, and make the fleſh and blood,
If 'tis digeſtive, if for ſtomach good.
Now I'll explain why different ſorts of meat
Pleaſe diff'rent men. Why that which one will eat,
Another loathes. Why things yield ſweet repaſt
To one, but bitter to another taſte.

Nay more: so vast the difference is, what proves
Srong poison unto one, another loves,
And eats, and lives. Thus hemlock juice prevails,
And kills a man; but fattens goats and quails.
To know the cause of this, come search thy mind,
Some scatter'd notions must remain behind,
And look how strongly former reasons show,
That things, that bodies are compos'd and grow
From various seeds, their mixture various too.
Besides, as animals in outward size
And frame are various; seeds from whence they rise,
Have various shapes; from diff'rent shapes there springs
An equal difference in the pores of things;
So some are great, some small, and others square,
Or round, or polygons, or angular;
For as the shapes are various that compose
The frame, so are the pores; their shapes depend on those.
It follows then,——
That when one object yields a sweet repast
To one, but bitter to another taste;
He that accounts it sweet, perceives the smooth
Round parts that tickle, and that please the mouth;
But he that thinks it bitter, rough alone
And hooks does feel: the smooth glide gently down:
But those with pointed hooks as they descend,
Strike through, and lance the organ, and offend.
These rules apply'd, each single case explain:
For instance; when a man is torn with pain,
Whether from inbred gall the fever came,
Or putrid air begot the hurtful flame;
The organ's chang'd, so those which pleas'd before,
Are lothsome now, now they delight no more;
Their figures disagree with ev'ry pore.
But those do most agree, those fit the part
Which fret the injur'd nerves, and cause a smart:
For, as I said before, seeds rough and smooth
Lie hid in ev'ry thing, in honey both,
Or to offend, or to delight the mouth.
Now next for smell.——
First, then, 'tis certain streams of odours rise
From ev'ry thing; but for their diff'rent size
And figures, they do diff'rently agree
To animals. Thus honey strikes the bee;
Though far remov'd, the vulture smells the slain;
The hound with faithful nose pursues the train;
And geese, Rome's saviours once, perceive a man.
Thus beasts preserve their lives, they know their food
By smell; and fly the bad, and choose the good.
Odours are dull, and those of swiftest wings,
Not to propose the images of things,
Scarce fly so far as feeble sounds; but tos's'd
By angry winds, in flitting air are lost.
For first, the pleasing odour slowly flows
From inmost parts: for that it comes from those,
Ev'n common sense assures; for heat, or press,
Or bruise, or break the gums, the smells increase.
In parts are greater far than parts of voice,
(This makes its flight more slow and short than noise),
Because through walls it cannot freely go,
Though sounds can find an easy passage through.
And thus 'tis hard to find an object out
By smell alone, but we must trace about,
Because the odours, wand'ring in the air,
Grow dull and weak, and lose their briskness there,
Nor quickly lead us to the thing that's sought;
And therefore hounds are often at a fault.
Not only sounds and tastes, but images
And colours, diff'rent eyes offend and please.
Thus when the cocks call forth the morning light,
The fiercest lions cannot bear the fight,
Their courage sinks, and they prepare for flight,
For subtle pointed particles that lie
In cocks, sent forth, offend the lion's eye;
These pains straight force him turn his head and fly.
Yet these hurt not our eyes, they cause no pain;
For they ne'er enter, or return again
Through proper pores; and so the skin preserves
Her texture whole; they never lance the nerves.
Now farther (my delight), my muse will show
What things do move the mind, and whence they flow.
First, then, thin images fill all the air,
Thousands on ev'ry side, and wander there.
These, as they meet, in various dance will twine,
As threads of gold, or subtle spider's line:
For they are thin; for they are subtler far
Than finest things that to the sight appear.
These pass the limbs; no narrow pores controul;
They enter through, and strike the airy soul.
Hence 'tis, we think we see, and hence we dread
Centaurs and Scyllas, Cerberus' monstrous head,
And many empty shadows of the dead.
For various images fly ev'ry where; [air
Some rise from things; and some are form'd in
By chance; and some from these combin'd appear.
The image of a centaur never flew
From living centaurs; never nature knew,
Nor bred such animals. But, when by chance
An image of a man in various dance,
Did meet a horse, they both combin'd in one:
And thus all monstrous images are shown.
These airy images, extremely thin,
Pass through the limbs, and strike the soul within;
They move with ease, the soul is apt to move
And take impression from the weakest shove.
That thus 'tis done is certain:——
Because the objects still appear the same
To mind and eye, in colour and in frame;
But now the eye receives some thin refin'd
And subtle forms: so likewise must the mind;
For 'twixt these two this only diff'rence lies,
The mind sees finer objects than the eyes.
Thus often while the body lies oppress'd
With heavy sleep, the mind seems loos'd from rest;
Because those images do strike and shake
The airy soul, as when we were awake:
The stroke's so lively, that we think we view
The absent dead, and think the image true:

This cheat must be, because the sense is gone,
Bound up by sleep; for by the sense alone,
Fancy'd from real, true from false is known.
Besides, the mem'ry sleeps, and rest does seize
That ruling pow'r, and charms it into ease;
It lies unactive, dull, nor can controul
The errors of the mind, nor tell the soul [lieve,
That they are dead, whom her vain thoughts be-
From cheating images to see alive. [seem
Besides, no wonder that these forms should
To move, as often as in vig'rous dream
They seem to dance; for when the first is gone,
And straight another rises, straight comes on,
The former's site seems chang'd, 'tis quickly done.
So swift, so num'rous are the forms that rise,
So quickly come, so vast the new supplies!
A thousand weighty queries more remain,
Ten thousand more, all which we must explain,
Ten thousand more, or else our search is vain.
First, then: 'tis ask'd, why men with so much ease,
Can think on any object what they please?
For what? Are still th' obedient forms at hand,
And wait on our imperious will's command?
And straight present whate'er the will desires,
Whether 'tis heav'n, or earth, or sea, or fires,
Wars, senates, battles, fights, of pomp, and state?
Does nature these, as she commands, create?
Since fix'd in one, one constant place, the mind
Can think on various things of diff'rent kind.
And why the images, with wanton pace,
Can seem to move and dance? Why's ev'ry grace
And measure kept? Why do they clasp their arms,
And toss their legs, and show a thousand charms?
What, have these wantons skill, they thus delight
To show their fairy tricks, and dance by night?
The reason is, each part, each single now
Of running time, as reason seems to show,
Has num'rous parts; and so, in shortest space,
Ten thousand forms may fly through ev'ry place,
Diff'rent and various; here and there may rove,
So num'rous are they, and so swift they move.
But since these forms are subtle and refin'd,
They are too thin to be perceiv'd by mind;
Unless she set herself to think and pry,
Contracting close her intellectual eye.
But this not done, the fleeting images,
Unseen, unthought on, and unheeded, cease:
And when she seeks to know, contracted close,
She pries upon the thing, and therefore knows.
Thus when the curious eye designs to view
An object subtle, and refin'd, and new,
Unless contracted close she strictly pries;
In vain she strives, the object 'scapes the eyes.
Nay, ev'n in plainest things, unless the mind
Takes heed, unless she sets herself to find;
The thing no more is seen, no more belov'd,
Than if the most obscure and far remov'd.
What wonder, then, if mind the rest should lose,
And only what she strives to know she knows?
(Besides, the mind oft thinks small objects great,
And thus she leads herself into a cheat).
And often too, a form of diff'rent kind
From what it seem'd before, affects the mind,
And strikes the fancy. Thus the form that came
A man before, is chang'd; in diff'rent frame
Presents a woman now to our embrace;
Or shows some other change in age or face.
Yet 'tis not strange, that monstrous forms commence
In fancy, when soft sleep has lull'd the sense
And mem'ry, so that neither can controul
The erring thoughts; neither direct the soul.
But now avoid their gross mistake, who teach
The limbs were made for work; a use for each.
The eyes design'd to see, the tongue to talk,
The legs made strong, and knit to feet to walk;
The arms fram'd long and firm, the servile hands
To work, as health requires, or life commands;
And so of all the rest, whate'er they feign,
Whate'er they teach is nonsense all, and vain.
For proper uses were design'd for none;
But all the members fram'd, each made his own.
No light before the eye, no speech was found
Before the tongue, before the ears no sound;
In short, the working seeds each limb create
Before its use, so 'tis not fram'd for that.
We knew to fight before the help of art,
To bruise and wound before we fram'd a dart;
And nature taught us to avoid a wound,
Before the use of arms and shields was found.
Before beds were, ev'n nature threw us down
To rest: we drank before a cup was known.
These various things convenience did produce,
We thought them fit, and made them for our use.
Thus these, and thus our limbs, and senses too,
Were form'd before that any mind did know
What office 'twas that they were fit to do.
Therefore, 'tis fond to think that these began,
For proper uses made, bestow'd on man.
What wonder is't that bodies ask for meat?
That nature prompts an animal to eat?
For I have taught before, how thousand ways
Small parts fly off, and ev'ry thing decays:
But more from lab'ring animals retreat,
More inward parts fly off in breath and sweat;
And so the body wastes, and nature fails,
The strength decays, and grief and pain prevails.
And therefore, meat's requir'd, a new supply,
To fill the places of the parts that die,
Recruit the strength, allay the furious pain,
And stop each gaping nerve, each hungry vein.
The cooling drink to ev'ry part retreats,
That wants the moisture, and the num'rous heats
That burn and fire the stomach, fly before
The coming cold, and we are scorch'd no more.
Thus drinks descend, and thus they wash away
Fierce thirst. Thus meats do hunger's force allay.
And next I'll sing, why men can move, can run
Whene'er they please; what force the members on;
What move the dull unactive weight, and bear
The load about: you with attention hear.
First then, the subtle form's extremely thin,
Pass through the limbs, and strike the mind within:
That makes the will; for none pretends to do,
None strives to act but what the mind does know;
Now what the mind perceives, it only sees
By thin and very subtle images.

So when the active mind designs to move
From place to place, it gives the soul a shove;
The soul spread o'er the limbs, ('tis quickly done,
For soul and mind are join'd, and make up one)
That strikes the limbs, so all is carry'd on.
But more than this; the body then grows rare,
The pores are open, and the flitting air,
As 'tis in motion still, must enter there:
This spreads o'er all, and both these things combin'd,
Force on the limbs, as ships both oars and wind.
Nor is it strange such little parts should shove
The heavy mass of limbs, and make them move,
And turn them; for unseen and subtle gales
Drive forward heavy ships with lab'ring sails;
And yet, when these rush on with mighty force,
One hand may turn the helm and change the course:
And engines, pullies too, with ease can rear
The greatest weights, and shake them in the air.
Next, how soft sleep o'er all spreads thoughtless rest,
And frees from anxious cares the troubled breast;
In few, but sweetest numbers, muse, rehearse,
My few shall far exceed more num'rous verse.
Thus dying swans, though short, yet tuneful voice,
Is more delightful than a world of noise.
You entertain my words with willing mind,
And list'ning ears; lest what my muse design'd
Should seem absurd, impossible to be,
And truth be slighted, while the fault's in thee,
And wilful blindness will not let thee see.
When the divided soul flies part abroad,
And part oppress'd with an unusual load,
Retiring backward, closely lurks within,
Then sleep comes on, and slumbers then begin:
For then the limbs grow weak, soft rest does seize
On all the nerves, they lie dissolv'd in ease.
For since sense rises from the mind alone,
And all the sense is lost as sleep comes on:
Since heavy sleep can stop, dull rest controul
The sense, it must divide and break the soul.
Some parts must fly away, but some must keep
Their seats within; else 'twould be death, not sleep.
For then no subtle atoms of the mind,
No little substance would be left behind;
As sparks in ashes, which might well compose,
The sense restor'd as flames arise from those,
But now I'll sing what 'tis that breaks the soul,
What spreads enfeebling rest o'er all the whole;
And why the bodies lie dissolv'd in ease:
Great things! You carefully attend to these.
First, then, the surfaces of things must bear
The constant impulse of the neighb'ring air,
Still vex'd, still troubled with external blows,
And, therefore, shells, or rinds, or films enclose,
Or skin, or hair, on ev'ry body grows:
Besides, our breath when drawn in that short stay,
Grates off some inward parts, and bears away,
In its return again, its conquer'd prey.
Since, then, our limbs receive, and since they bear
These strokes within, without, and ev'ry where;
Since some creep through the pores, and strive to breed
Confusion there, and disunite the seed;
The body's strength must fail, by just degrees,
Its vigour weaken'd by enfeebling ease:
Some souls they drive away, and some they press,
Drive deeper in, and shut in close recess:
Some parts, spread o'er the limbs, no more combine.
Nor with the rest in friendly motion join:
For nature stops the passages between.
Now since the atoms diff'rent ways are tost,
And lose their usual course, their sense is lost:
And when that prop is gone, the lids must fall,
The limbs grow dull, and weakness spread o'er all.
Thus after meals we sleep, because the food,
Spread through the veins, and mingled with the blood,
Does only what the air was wont to do;
For that does press the soul, and break it too.
So, after labour, or with toil oppress'd,
Or bellies full, we take the sounder rest:
For then the atoms of the mind retreat
The farther in, and take the deeper seat:
And more fly off, more substance of the soul,
And those within to distant spaces roll
More scatter'd, and divided o'er the whole.
But more; what studies please, what most delight,
And fill mens thoughts, they dream them o'er at night.
The lawyers plead, make laws, the soldiers fight,
The merchants dream of storms, they hear them roar,
And often shipwreck'd, leap or swim to shore:
I think of nature's pow'rs, my mind pursues
Her works; and, ev'n in sleep, invokes a muse:
And other studies too, which entertain [gain.
Mens waking thoughts, they dream them o'er a-
Thus they, who with continued sport and play,
Make the dull troublesome time haste away,
The objects, though remov'd, yet leave behind
Some secret tracts, and passage through the mind,
And fit for images of the same kind:
Before their waking eyes those sports appear;
They see the wantons dance, and seem to hear
The speaking strings breathe forth the softest air.
The same companions still, the same delight,
And the same painted scenes still please the sight:
So strong is use, such custom's pow'r confess'd,
And not in thoughtful man alone, but beast:
For often sleeping racers pant and sweat,
Breathe short, as if they ran their second heat;
As if, the barrier down, with eager pace
They stretch'd, and were contending for the race:
And often hounds, when sleep has clos'd their eyes,
Will toss and tumble, and attempt to rise:
They open often, often snuff the air,
As if they press'd the footsteps of the deer;
And, sometimes wak'd, pursue their fancy'd prey,
The fancy'd deer, that seems to run away,
Till quite awak'd, the follow'd shapes decay.

And softer curs, that lie and sleep at home,
Will often rouse, and walk about the room,
And bark, as if they saw some strangers come.
But now from images, whose forms comprise
Rough principles, the frightful dreams arise:
Thus birds will start, and seek the woods by night,
Whene'er the fancy'd hawk appears in sight,
Whene'er they see his wing, or hear him fight.
But seeds that raise heroic thoughts in men,
Ev'n such are often rais'd in dreams; for then
They fight, are taken captive, and rebel;
They shout and groan, as if the victor fell:
Some strive, some weep, some sigh; and oft afraid,
Pursu'd or torn by beasts, cry out for aid:
Some talk of state affairs, and some betray
The plots their treach'rous minds had form'd by day:
Some fly from following death; and others, thrown
From lofty pinnacles, sink headlong down;
But waking, though they know themselves abus'd,
Yet are their pow'rs, their spirits so confus'd,
They lie half-dead in deep amaze, remain
Thoughtless, and scarce recover sense again.
Others, when thirsty, fancy purling streams,
Sit down, and quaff the river off in dreams.
[The youth, by Morpheus chain'd with vessels full,
Dreaming he's near some sink, or lazy pool,
A briny flood discharges from his veins,
And the rich Asian quilt and bedding stains.]
And those whose blood boils high, whom vig'rous age
Has fill'd with seed, and fir'd with lustful rage,
If pleasing dreams present a beauteous face,
How hot his blood, how eager to embrace;
Nay oft, as in the fury of the joy,
The flowing seed pollutes the am'rous boy.
[Then first our seed begins its busy rage,
When strength confirms our limbs with rip'ning age:
For other matters other things do move;
But human seed, the object which we love:
This, when prepar'd, at first does bear fresh grace
From ev'ry limb, as it the whole does trace,
To certain fibres, still it does obtain
About the procreative parts to reign:
Enrag'd the region swells; a will does breed,
Where lust directs, there to project the seed:
The mind provokes the turgid nerves to move
Tow'rds that dear idol, whence she drank her love:
For mostly all receive the wound; and there
The blood beats high, from whence our smart we bear,
And rosy streams gush on the charming foe, if near.]
Love rises then, when, from a beauteous face,
Some pleasing forms provoke us to embrace;
Those bawds to lust, when with a tickling art
They gather turgent seed from ev'ry part,
And then provoke it: Then rise fierce desires;
The lover burns with strong, but pleasing fires;
Which often are pursu'd by following care,
Distracting thoughts, and often deep despair.
Nay, though the pleasing object is remov'd,
Though we no longer view the thing belov'd,
Yet forms attend: or if we chance to hear
Her name, love enters with it at the ear.
But 'twill be wise and prudent to remove
And banish all incentives unto love:
And let thy age, thy vig'rous youth, be thrown
On all in common, not reserv'd for one:
For that breeds cares and fears; that fond disease,
Those raging pains, if nourish'd, will increase:
Unless you fancy ev'ry one you view,
Revel in love, and cure old wounds by new.
Nor do they miss the joy who love disdain,
But rather take the sweet without the pain:
Nay, they have greater sweets, while lovers arms
Shall clasp their dears, while they behold their charms.
Straight doubts arise, their careless mind's employ'd,
Which sweets must first be rifl'd, which enjoy'd:
What they desir'd they hurt, and 'midst the bliss
Raise pain; and often, with a furious kiss,
They wound the balmy lip: this they endure,
Because the joy's not perfect, 'tis not pure.
But still some sting remains, some fierce desire
To hurt whatever 'twas that rais'd the fire:
But yet the pains are few, they quickly cease;
The mix'd delight does make the hurt the less.
Perhaps they hope that she that struck, the same
Can heal; that she that rais'd, can stop the flame.
Fond fancy this in love! We ne'er give o'er;
The more we know and have, we wish the more.
'Tis true, because the meat and drink's convey'd
To proper vessels; thirst and hunger's stay'd.
But now from beauty, now from forms that please,
What comes, but thin and empty images?
Ev'n such as he enjoys, that drinks in dreams;
His thirst increases 'midst the fancy'd streams.
So love deludes poor men; their cov'tous eye,
What long, what frequent sights can satisfy?
What from the tender limbs, with wanton play,
And am'rous touch, poor lovers bring away?
Nay, ev'n in the embrace, whilst both employ
Their strength; and bodies feel the coming joy;
Though then they twine, and bill like loving doves,
Though ardent breathings fire each other's loves;
In vain! fond fools, they cannot mix their souls,
Although they seem to try, in am'rous rolls;
So strictly twin'd, till all their pow'rs decay,
And the loose airy pleasure slips away:
Then a short pause between, and then returns
The same fierce lust, the same fierce fury burns;
Whilst they both seek, whilst they both wish to have
Whate'er their wanton fancies, wanton wishes crave;
For this no cure, for this no help is found;
They waste and perish by a secret wound.
Besides, they waste their strength, their vigour kill,
And live poor slaves unto another's will;

Debts they contract apace, their money flies:
Their fame, their honour too, grows sick, and dies.
Rich shoes, and jewels, set in gold, adorn
The feet; the richest purple vests are worn.
The wealth, their fathers toil'd, and fought to gain,
Now buys a coat, a mitre, or a chain.
Great shows and sports are made, and royal feasts,
Where choicest meats and wines provoke the guests:
Where gawdy tapestry, and odours spread
O'er all the room, and crowns grace ev'ry head:
In vain: for still some bitter thought destroys
His fancy'd mirth, and poisons all his joys.
[First, guilty conscience does the mirror bring;
Then sharp remorse shoots out her angry sting;
And anxious thoughts, within themselves at strife,
Upbraid the long mis-spent luxurious life.]
Perhaps some doubtful word torments his mind,
Sinks deep, and wounds, and leaves a sting behind.
Perhaps he thinks his mistress' wanton eyes
Gloat on his friend, perhaps faint smiles he spies.
Such mischiefs happen ev'n in prosp'rous love:
But those, that cross and adverse passion prove,
Those wretched lovers met ten thousand more,
Ten thousand scarce can measure the vast store,
So obvious all, that with the strictest care
'Tis good to keep my rules, and shun the snare;
'Tis easier to avoid, than break the chain,
When once entrapp'd, or be redeem'd again;
The nets are strong, and we may strive in vain.
Yet, though securely caught, you may be free
Again, unless you are resolv'd to be
A trifling slave; and from your thoughts remove
The faults in mind and face of her you love:
For often men, quite blind by fond desire,
First think their loves great beauties, then admire;
Their pow'rful working fancy still supplies
With borrow'd shapes, and flattering disguise,
The meaner beauties great necessities.
Hence 'tis, that ugly things, in fancy'd dress,
Seem gay, look fair to lovers eyes, and please.
The black seems brown, the nasty, negligent;
Owl-ey'd, like Pallas, and my heart's content:
The little dwarf is pretty, grace all o'er;
The vast, surprising; and we must adore;
The stamm'ring lisps; the lover thinks he hears
The broken sounds breath'd forth in softest airs:
She's modest if she's dumb, and nought can say;
The fierce and prattling thing is brisk and gay;
She's thin, if hectic, and but one remove
From death; the meagre is my slender love:
The great and swelling breast like Ceres is;
The big and hanging lip, a very kiss.
Ten thousand such: But grant the sweetest face,
Grant each part lovely, grant each part a grace,
Yet others equal beauties do enjoy,
Yet we have liv'd before without this toy;
Yet she is base; yet she perfumes, to hide
Her nat'ral smell, her maids on ev'ry side
Stand off, and smile, and waggishly deride.
Nay, though a lover, when deny'd the bliss,
Stands long, and waits, and warms with soft'ning kiss
The less obdurate gate; though then he pours
His ointments on, and crowns the gates with flow'rs;
Yet, when admitted; when no longer coy,
The Miss provokes the eager fool to joy:
Then ev'ry thing offends, he fancies none;
But seeks some fit excuses to be gone:
Then he forgets the stories he design'd;
Nor tells how much her coldness vex'd his mind,
Nor sighs, and why, my dear, was you unkind?
Then grieves he gave to her that awful love,
He only vow'd to the great pow'rs above.
And this our Misses know, and strive to hide
Their faults from those (the cov'ring's decent pride)
Whom they would cheat, and bind to an amour;
Though foul behind, they look all bright before;
In vain; for thou canst understand the cheat,
Discover, know their wiles and gross deceit.
Nay, if she's free, if not designs to vex,
Nor cross thy courtship, or thy thoughts perplex,
She'll show the common failures of her sex.
[Nor always do they feign the sweets of love,
When round the panting youth their pliant limbs they move;
And cling, and heave, and moisten ev'ry kiss;
They often share, and more than share the bliss;
From ev'ry part, even to their inmost soul,
They feel the trickling joys, and run with vigour to the goal,
Stirr'd with the same impetuous desire,
Birds, beasts, and herds, and mares their males require;
Because the throbbing nature in their veins
Provokes them to assuage their kindly pains:
The lusty leap th' expecting female stands,
By mutual heat compell'd to mutual bands.
Thus dogs with lolling tongues by love are ty'd;
Nor shouting boys, nor blows, their union can divide:
At either end they strive the link to loose;
In vain; for stronger Venus holds the noose.
Which never would those wretched lovers do,
But that the common heats of love they know;
The pleasure therefore must be shar'd in common too.]
The child still bears the form, whose seed prevails,
If mother's, her's, if father's, then the male's:
But those, that show a part of either face,
Are made of seed, whose friendly pow'rs embrace; [the mass,
When neither this nor that prevails, and forms
And oft with joy indulgent father's view'd
The grandsire's image in their sons renew'd:
Because the little mass of seed remains
Entire, and whole within the father's veins,
Which from the grandsire fell: this Venus takes,
Of this a likeness in the shapes she makes;
She imitates the grandsire's voice, or hair,
His smile or some peculiar grace, and air:
For these on proper seeds depend, and rise
From proper shapes, as well as hands or eyes,

The male's, and female's ſeed agree to make
The tender young, of both the young partake;
But yet that ſex the young reſembles moſt,
That has more pow'rful ſeed, more vig'rous luſt.
Nor do the gods decree, nor thoughts employ,
Which mortal ſhall, which ſhall not get a boy,
As ſome believe; and therefore ſacrifice,
While clouds of incenſe from the altars riſe;
Make vows, and pray'rs, temples and altars build,
To pleaſe the angry gods, and beg a child:
Fond fooling this, to court the pow'rs above,
They ſit at eaſe, and never mind our love.
But male and female, though they oft embrace,
In vain endeavour to increaſe their race,
If either's ſeeds too ſubtle, thin, and fine;
Or elſe too groſs, and dull for that deſign;
For if too thin, the veſſels ne'er retain
The ſeed receiv'd; it ſtraight flows out again,
And all the kind endeavour is in vain.
But if too groſs and dull, it moves but ſlow,
And little pores refuſe to let it through:
Or it lies ſullen there, unfit to breed,
Nor kindly mixes with the female ſeed;
For all not fit with all: Thus ſome do prove
Unfruitful, after many years of love;
Though they have often prov'd the nuptial joy,
And ſtrove but all in vain to get a boy:
Yet by a ſecond huſband's apt embrace,
They quickly bear a fair and num'rous race,
And the decaying families increaſe.
They ſee their ſons grow ſtrong with youthful rage,
The joy and comfort of their feeble age.
[So much it does impart, that ſeed with ſeed
Should of the kindly mixture make the breed;
And thick with thin, and thin with thick ſhould join,
So to produce and propagate the line.
Of ſuch concernment too is drink and food,
T' incraſſate or attenuate the blood.
Of like importance is the poſture too,
In which the genial feat of love we do:
For as the females of the four-foot kind
Receive the leapings of their males behind,
So the good wives with loins uplifted high,
And leaning on their hands, the fruitful ſtroke may try:
For in that poſture they will beſt conceive;
Not when, ſupinely laid, they friſk and heave:
For active motions only break the blow,
And more of ſtrumpets than of wives they ſhow:
When anſw'ring ſtroke with ſtroke the mingled liquors flow.
Endearments eager, and too briſk a bound
Throw off the ploughſhare from the furrow'd ground:
But common harlots in conjunction heave,
Becauſe 'tis leſs their buſineſs to conceive,
Than to delight, and to provoke the deed;
A trick which honeſt wives but little need.
Nor is it from the gods, or Cupid's dart,
That many a homely woman takes the heart;
But wives, well-humour'd, dutiful and chaſte,
And clean, will hold their wand'ring huſbands faſt;
Such are the links of love, and ſuch a love will laſt.
For what remains, long habitude and uſe
Will kindneſs in domeſtic bands produce:
For cuſtom will a ſtrong impreſſion leave;
Hard bodies, which the lighteſt ſtroke receive,
In length of time will moulder and decay;
And ſtones with drops of rain are waſh'd away.

NOTES ON BOOK IV.

Ver. 1. The firſt twenty-nine verſes of this book, in which the poet invites the attention of his Memmius, or any other reader, are in Book I. v. 931. where you may conſult our notes upon them. Some blame Lucretius for this long repetition: Nor indeed have we one ſingle inſtance of the like battology in any of the ancient poets. Moreover, we may obſerve, that our tranſlator has employed the two whole verſes, which begin this book, to render only theſe four words of his author: "Avia pieridum peragro loca:" Now the muſes were called Pierides, either from Pierius, a mountain of Theſſalia, in which they are ſaid to be born of Jupiter and Mnemoſyne: or from the victory they gained over the nine daughters of Pieros the Macedonian, who had challenged the muſes to ſing with them, and being overcome, were by the ſame muſes changed into ſo many magpies. This fable is related at large by Ovid, Metamor. 5. v. 677. where, ſpeaking of them after their transformation, he ſays,

Nunc quoque in alitibus facundia priſca remanſit,
Raucaque garrulitas, ſtudiumque immane loquendi.

Ver. 19. "Deceptaque, non capiatur," ſays Lucretius. The rhetoricians call this an oxymoron; a figure frequently uſed by the Latin poets: Of the like nature is this in Terence:

At enim cave, ne priuſquam acceperis, amittas.

Thus too Ennius, wittily enough, ſpeaking of the Pergama, the caſtle of Troy, upon mount Ida:

Quæ neque Dardaniis campis potuere perire,
Nec cum capta, capi, nec cum combuſta cremari.

Which Virgil would be ſure not to omit in his Æneis; but thought it worthy of the mouth even of Juno herſelf:

———Num ſiegeis occumbere campis,
Num capti potuere capi? Num incenſa cremavit
Troja viros?——— *Æneid. 7. v. 294.*

Of this nature too is the Ἐχθρῶν ἄδορα δῶρα, in the Ajax of Sophocles: and if a man would, he might ſoon collect a pedantic heap of them from the ancient as well as modern poets.

Ver. 26. To this purpoſe Waller ſays finely,

Well-ſounding verſes are the charms we uſe,
Heroic thoughts, and virtue to infuſe:
Things of deep ſenſe we may in proſe unfold;
But they move more, in lofty numbers told.

Ver. 36. In the ſix firſt of theſe ſeventeen verſes, the poet briefly recites the ſubjects of his diſputations in the preceding books: In the firſt and ſecond, he has treated of the nature of atoms, of their properties, motions, and coalitions: in the third, of the principles of the ſoul; and has conſidered the ſoul itſelf, as well when united to the body, as when ſeparated from it; and then in the following eleven verſes, he includes the argument of this book, and ſays that he will now treat of the images, which, like films and membranes of bodies, are perpetually flowing from the ſurface of things, and preſenting their ſpecies and figures to us: If they come whole, and without mixture, we then perceive things that truly have a being: if they come maimed, inverted, or joined to one another, from thence proceed the phantaſms of Centaurs and the like monſters; and ſometimes, too, the ſpectres of the dead: for the ſoul, we know, dies with the body. And thus the poet performs the promiſe he made us, Book I. v. 163. where ſpeaking of the ſoul, he ſaid he would ſing,

What frights her waking thoughts, what cheats her eyes,
When ſleeping or diſeas'd, ſhe thinks ſhe ſpies
Thin ghoſts in various ſhapes about the bed,
And ſeems to hear the voices of the dead?

Moreover, the four firſt of theſe verſes, in the original, are repeated verbatim, from Book III. v. 31. though our interpreter, in this place, has varied in his tranſlation of them.

Ver. 37. He means the ſpecies, or forms of things, that are commonly called intentional. Democritus, and after him Epicurus, called them εἴδωλα, τύπους, and ὑμένας, idols, images, and membranes: Cicero, *imagines:* Quintillian, *figuras:* Catius, *ſpectra:* Lucretius, *effigies, imagines, ſpecies, formas, exuvias, ſpolia:* and, *quaſi membranas*, or *Cortices*, &c. "Quorum incurſu," ſays Cicero, "non modo videmus, ſed etiam cogitamus:" By whoſe incurſion, that is, by whoſe preſenting or ſhowing of themſelves to the mind, or to the ſenſe, we not only ſee, but think likewiſe.

Ver. 41, 42. Lucretius, after having copiouſly diſcourſed of the nature of the ſoul, and endeavoured to prove it mortal, goes on here, and pretends to ſolve one argument, which ſtill ſeemed to preſs his opinion, and that is drawn from the various apparitions that ſometimes preſent the images of our deceaſed friends, and make ſo lively and vigorous an impreſſion on the fancy, that we cannot but think them real, and ſomething beſide naked imagination: but becauſe he intermixes this with his diſcourſe of the ſenſes, and makes it depend on the Epicurean explication of viſion, I ſhall be obliged briefly to conſider his doctrine, and that being overthrown, diſcourſe of the ſtrength of the argument. Well then, not to trouble him about his other ſenſes, concerning viſion, he delivers this: Thin ſubtle images conſtantly riſe from the ſurfaces of all bodies, which make an impreſſion on our organs, and then the notice is communicated to the ſoul. To confute this, we need look no farther than his own principles, and conſider that he has made weight a property of matter, and an endeavour downward a neceſſary adjunct: And, therefore, all motion upward is violent, and proceeds from external preſſure or impulſe.

Now any man knows, that the ſpecies are propagated any way with equal eaſe, and we ſee as well when the object is placed below our eye, as when above it: But there is no force to make theſe images riſe, and therefore it is impoſſible they ſhould. Their own nature oppoſes the air (as all muſt grant) that lies behind the object, is unfit to give the impulſe to the ſolid parts of the upper ſurface, that on the ſide, to drive it upward: and I believe none will think theſe images are raiſed by the air that is perpendicular to the ſuperficies; and this argument more ſtrongly concludes, if we conſider his explication of diſtance, for there he requires, that theſe images ſhould drive on all the air between the object and the eye, though it often reſiſts and beats furiouſly againſt them, which cannot be done but by a conſiderable force, and a greater ſtrength than can be allowed theſe ſubtle forms, though riſing from any body, in the moſt convenient poſition, and when their weight can aſſiſt their motion: But more; if ſuch images aroſe, it muſt be granted, that the object muſt ſeem changed every minute, and it would be impoſſible to look upon a cherry for the ſpace of an hour, and ſtill perceive it bluſh with the ſame colour; becauſe every image that moves our eye, cannot be above one hundred times thinner than the ſkin of that fruit; for I believe any man will freely grant, that this ſkin ſo divided, will be too tranſparent to be perceived; or if it may ſtill be ſeen, let the diviſion proceed, and at laſt the abſurdity will preſs, and follow too faſt and too cloſely to be avoided: I ſhall not mention, that contrary winds muſt diſturb theſe images, break their looſe order, and hinder their paſſage; but only take notice, that it is impoſſible ſuch images ſhould enter at the eye, and repreſent an object as great as we perceive it: for theſe images riſing from the ſurface, muſt proceed by parallel lines; and their parts maintain as great a diſtance as the parts of the body whence they ſprung; becauſe they come from every part of

the object, and are commenſurate to it: and therefore cannot be preſſed cloſer without penetration or confuſion.

But ſuppoſe viſion might be thus explained, giant every one, like the man in Seneca, had his own image ſtill walking before him, yet imagination and thought have their peculiar difficulties.

Ver. 42. Thus the ghoſt of Anchiſes appeared to Æneas, and frighted him in his ſleep:

Me patris Anchiſæ, quoties humentibus umbris
Nox operit terras, quoties aſtra ignea ſurgunt,
Admonet in ſomnis et turbida terret imago.
Æn. 4. *v.* 361.

And Dryden calls them,

Forms without body and impaſſive air:
The ſqualid ſpectres, that in dead of night
Break our ſhort ſleep, and ſkim before our ſight.

Macrobius obſerves, that the words of this paſſage "ſimulacraque luce carentum," which we here find in Lucretius, are tranſcribed by Virgil, in Georg. 4. v. 472. where we read,

Umbre ibant tenues, ſimulacraque luce carentum.

Ver. 43. We may obſerve, that Lucretius paſſed this over very ſlightly: for Epicurus did not approve of any farther inquiry into τὰ φυσικὰ, natural things, than barely what might contribute more eaſily to deliver the minds of men from the ſlavery of religion. The words of this paſſage, in the original, are,

——ne forte animas Acheronte reamur
Effugere, aut umbras inter vivos volitare.

Where the word Acheron, the name of one of the rivers of hell, is taken for hell itſelf: for the ancient Greeks held, that there were five rivers in the infernal abodes; namely Acheron, Cocytus, Styx, Phlegethon or Pyriphlegethon, and Lethe: Now theſe names were taken from ſeveral fountains and rivers in Greece, which by reaſon of their noxious natures and qualities, were feigned to be in hell likewiſe. There were two rivers called by the name of Acheron; one in Elis, a maritime country in the weſt of Peloponneſus, and this river flows into Alpheus, near the place where ſtood a famous temple dedicated to Pluto and to Proſerpine, as we find in Strabo, lib. viii. The other in Theſprotia, a country of Epirus, and flows out of the lake Acheruſia to the town of Cithyrus, according to the ſame Strabo, lib. viii. and Pauſanias in Atices. Cocythus, as the ſame Pauſanias tells us, was a river of the ſame country, not far from Acheron, and whoſe waters were extremely bitter. Styx was a fountain of Arcadia, that ſprung out of a high rock, near the city Nonacres, and fell into the river Crathis: its waters were ſo venomous, that whoever but taſted of them died immediately: This we learn from Pauſanias in Arcadicis. And Pliny, lib. xxxi. cap. 2. ſays, that they not only killed thoſe that drunk of them, but produced likewiſe poiſonous fiſh. This was the river which the gods held in ſo great veneration, that they were wont to ſwear by it; and if they violated their oath, they were deprived of their divinity, and interdicted the uſe of nectar for a hundred years: Hence Virgil Æn. vi. v. 323.

——vides Stygiamque paludem,
Dii cujus jurare timent, et fallere numen.

And Heſiod in Theog. tells us, that this honour came to be granted to this river, becauſe her daughters Victoria, Vis Robur, and Zelus, had aſſiſted the gods againſt the Titans. There were ſeveral rivers called by the name of Lethe, or, as Caſaubon would rather have it, "fluvius Lethes," the river of Lethe, or oblivion, in the genitive caſe, or elſe "Lethæus fluvius," the Lethæan river. One in Portugal, according to Strabo and Mela, and now called Lima, another in Africa, about the Syrtis Major, and not far from the city Berenice, according to Lucan: a third in Bœotia, near the town Libadia, according to Pauſanias in Bœoticis: and Strabo, lib. xiv. reckons up many other rivers of the ſame name. To Phlegethon, or Pyriphlegethon, there is not, that I know of, any particular place aſſigned, except the hot fountains about Avernus, as Strabo reports out of Homer. Now every one of theſe names ſignifies ſomething mournful and diſaſtrous: Acheron is derived from ἄχος, ſorrow, and ῥέω, I flow: Cocytus from κωκύω, I lament: Styx from στυγέω, I purſue with haſte: Phlegethon, or Pyriphlegethon, from πῦρ, fire, and φλέγω, I burn: Lethe from λήθη, oblivion, becauſe to drink of its waters, cauſes a forgetfulneſs of all things. All which is finely deſcribed by our Engliſh Homer, in his Paradiſe Loſt, Book II. where he calls them,

——th' infernal rivers that diſgorge
Into the burning lake their baleful ſtreams:
Abhorred Styx, the flood of deadly hate;
Sad Acheron, of ſorrow black and deep;
Cocytus, nam'd of lamentation loud,
Heard on the rueful ſtream, fierce Phlegethon,
Whoſe waves of torrent fire inflame with rage.
Far off from theſe a ſlow and ſilent ſtream,
Lethe, the river of oblivion, rolls
Her wat'ry labyrinth; whereof who drinks,
Forthwith his former ſtate and being forgets,
Forgets both joy and grief, pleaſure and pain.

Virgil, beſides theſe, places likewiſe Eridanus, the Po, in the Elyſian fields:

Plurimus Eridani per ſylvam volvitur amnis.
Æneid. vi. *v.* 659.

Ver. 47. In theſe twenty-four verſes, he firſt aſſerts, that theſe images, which are as it were the films and membranes of things, are continually flying off from the ſurfaces of them; and then he proves this aſſertion thus: The very eyes teſtify that many things emit bodies out of themſelves; ſome rare and ſubtle, as ſmoke from wood, and heat from fire; others more denſe and cloſely joined: Thus graſhoppers and ſnakes drop their ſkins; then who can doubt but that tenuious and ſubtle images fly off from the ſurfaces of things,

ſince they they caſt off forms that are more ſolid and condenſed, eſpecially ſince there are minute corpuſcles placed in the ſurface, or outmoſt front of things, that can eaſily diſengage themſelves and fly away. Epicurus, in Laertius, ſays, theſe images come, ἀπὸ τῆς σωμάτων ἐπιπολῆς, from the ſurface of bodies. And again: καὶ μὲν καὶ τύποι ὁμοιοσχήμοιες τοῖς στερεμνίοις εἴσι λεπότητιν ἀπίχοντες μακρὰν τῶν φαινομένων, τὴν δὲ τὰς τύπας εἴδωλα προσαγορεύομεν, Laert. lib. x.

Ver. 57. The words in the original are,

Et vituli cum membranas de corpore ſummo
Naſcentes mittunt.

The new-born calves drop the pellicules in which they are wrapped up. How well our tranſlator has here followed the ſenſe of his author, the reader is left to judge.

Ver. 58. See the note on ver. 590 Book III.

Ver. 60. This and the following verſe are not ſo much as hinted at in Lucretius.

Ver. 67. This is the image of their form; for form according to Epicurus, is that which continually remains in the ſurface of the body, while the image, as a ſpoil, is continually flying away. For this we have the teſtimony of Empiricus, who ſays, Epicurus taught that ſome colour, for example, always inheres in a ſolid body, but that ſomething gets looſe from it, and this is its image.

Ver. 71. In theſe nineteen verſes, he confirms what he aſſumed in the preceding argument, and proves it by an example, which demonſtrates, that colours get looſe, and are reflected from the ſurfaces of things, in ſuch a manner as argues likewiſe the direption and getting off of images. For the curtains, ſays he, that are hung up in a theatre, reflect their colours on all the decorations of the ſtage, and on the ſpectators,

Ver. 75. That tapeſtry hangings were hung up over the Roman theatres to ſhade the ſpectators from the rays of the ſun, we learn from many of the ancients. Virgil, Georg. III. v. 24.

Vel ſcena ut verſis diſcedat frontibus, utque
Purpurea intexti tollunt aulæa Britanni.

Now theſe hangings were called "Aulæa, ab aulâ Attali," from the court or palace of Attalus, the wealthy king of Pergamus, who, having no children, made the commonwealth of Rome his heir. He firſt found out the art of inweaving and embroidering with gold; and to this invention, the Babylonians added ſeveral colours, as we learn from Pliny, lib. viii. cap. 58. Hence The Attalic and Babylonian garments and hangings were in great eſteem among the ancients, Sil. Ital. lib. 14.

Læta Tyrus, quæque Attalicis variata per artem
Aulæis ſcribuntur acu——

They were likewiſe called "peripet aſmata," from περιπιτάζειν, "ab extendendo," by reaſon of the largeneſs of them. Lucretius, in this place, calls them, "vel magnis intenta theatris," and the colours he gives them are the *luteus*, *ruſſus* and *ferruginus*. The colour which the ancients called *luteus*, was a yellow colour, and had its name from the herb *lutea*, willow-herb, or looſeſtriſe, which helped to dye it. This is the colour of the yolk of an egg, and of the flower, which the Latins called *caltha*, in Engliſh turn-ſole, or ſun-flower, to which Virgil therefore gives the epithet luteola:

Mollia luteola pingit vaccinia calthâ.

Eclog. ii.

The brides uſed to dreſs themſelves in this colour, Plin. l. xxi. cap. 8. "Lutei video honorem antiquiſſimum in nuptialibus flammeis totum fœminis conceſſum." Hence Catullus gives that colour to the ſock of Hymen the god of marriage:

Huc veni niveo gerens
Luteum pede ſoccum.

Thus Seneca, in Hipp. of Hercules, marrying as a woman:

Crura diſtincto religavit auro,
Luteo plantas cohibente ſocco.

The colour they called *ruſſus* was a deep red, or fleſh colour. Catull. in Egnat.

Quod quiſque minxit, hoc ſibi ſolet manè
Dentes atque ruſſam provocare gingivam.

The colour *ferruginus*, of which our tranſlator makes no mention, is not the colour of ruſty iron, as ſome will have it to be, but of ſmooth and poliſhed iron, after it has been heated in the fire, and is grown cold again, as the buckles we wear in mourning. This is not what we call the bright brown, as the London edition of the Dauphin's Virgil, on the eighteenth verſe of the ſecond eclogue erroneouſly interprets it, but rather a violet colour, and ſeems to be a mixture of red, black, and cerulean, whence it is frequently uſed for thoſe three colours. For red, Æn. xi. v. 772.

——Ferrugine clarus et oſtro.

For black, Æn. vi. v. 303, ſpeaking of Charon.

Et ferrugineâ ſubvectat corpora cymbâ.

And Georg. i. ver. 467, of an eclipſe of the ſun,

Cum caput obſcurâ nitidum ferrugine tinxit.

For cerulean in Plautus. Mil. Glor. 4. 43.

Facito ut venias huc ornatu naucleriaco; cauſiam
Habeas ferrugineam, culturam ad oculos lineam:
Palliolum habeas ferrugineum: nam is color thalaſſicus.

That is to ſay, cerulean, or the colour of the water of the ſea.

Ver. 81. He means the images of the gods that were in the theatres; for games and plays were a part of the Pagan religion.

Ver. 82. What Lucretius here ſays, and his tranſlator means, is this, the more the walls of the theatre are darkened, ſo that no place be open on

the ſides to let in the light, the more, &c. The words in the original are,

Et quantò circùm magè ſunt incluſa theatri,
Mœnia, tam magis hæc intús perfuſa lepore
Omnia conrident conrepta luce diei.

Ver. 90. In theſe three verſes, he concludes from what he has hitherto been arguing, and from what he has proved, that there are ſuch things as the images of which he is ſpeaking.

Ver. 93. He has already taught, ver. 66, that theſe images

——Still preſerve their frame,
Their ancient form, and ſhow from whence they came.

And now, in theſe eight verſes, he ſhews that he did not teach that without cauſe; for the reaſon why they retain the ſame form is, becauſe they fly away from the ſurfaces of bodies, from which every individual part of the images gets away with equal facility, and thoſe parts are not conveyed from thence through any mazes or involutions, as odour, ſmoke, vapour, and other things of the like nature are, becauſe they flow from the interior parts of bodies; and for that reaſon fly away confuſed and diſperſed.

Ver. 101. Laſtly, he proves, in theſe fourteen verſes, that there are ſuch things as theſe images, which get looſe, and fly away from the ſurfaces of bodies; and that the images that we ſee in mirrors, in water, or in any ſmooth and poliſhed body, are exactly like the things whoſe images they are; therefore thoſe forms muſt neceſſarily be compoſed of the images that flow from the ſubſtances of the things themſelves; for no other reaſon of that ſo exact ſimilitude can be given, but that the very utmoſt film, which before adhered to the whole thing, is ſeparated from it, as it were a membrane, and ſtrikes into the glaſs or water. And you ought to take notice, that the image of each thing that is ſeen in the glaſs, or in water, is not ſingle and one only, but many; which, nevertheleſs, by being reflected to the eyes by a continual and never-ceaſing reverbation, ſeem not to be many, but only one image. Experience indeed ſhows that the images are tranſmitted into the glaſs from the very bodies whoſe images they are; ſince when thoſe bodies are preſent the images ſtrike into the glaſs; but if any thing interpoſe, their progreſs into the glaſs is intercepted: beſides, if the bodies move, they move in like manner; if the bodies are inverted, they too are inverted: if the bodies depart, the images go away; and when the bodies are abſent, there remain no images at all.

Ver 115, 116. Having hitherto proved the exiſtence of theſe images, and being now going to explain their properties, he firſt teaches, in theſe twelve verſes, that the moſt extreme tenuity, even ſuch as can ſcarce be conceived, muſt be allowed them. To comprehend this aright, imagine, that the images are nothing elſe but the moſt ſubtle contextures of atoms in the nature of pellicles. And how prodigious is the ſubtleneſs of atoms, ſince innumerable myriads of them are neceſſary to compact the ſmalleſt animal, a mite, for example, or even the leaſt member of it? Hence we may gather, that if an image conſiſt of ſuch atoms as do not cohere and ſtick together, κατὰ βαθὸς, "ſecundum profunditatem," which is Epicurus's own expreſſion, it muſt be more ſubtle and thin by many myriads of myriads, than the thickneſs of one ſingle mite, or of any particle of it. Epicurus himſelf ſays, ὅτι τὰ εἴδωλα ταῖς λεπτότησιν ἀναπερβλήτως νίκηται, ὥδεν ἀνθρωπείου ὁράματος φαινομένων. And Lucretius is of the ſame opinion with him. That images are nothing elſe than, ἀποῤῥοίας, effluviums or emanations of the moſt ſubtle and tenuious contextures of the outmoſt atoms, that are continually flowing from bodies into the ambient ſpace; in which Epicurus follows the opinion chiefly of Plato and Empedocles, who held images to be certain, material, or ſubſtantial effluviums. But Ariſtotle taught that they are mere accidents, that have no ſubſtance whatever; but that, nevertheleſs, they are produced from viſible bodies, and that, paſſing through the air, they affect the ſenſe of ſight, and are reflected from mirrors, and other things of like nature. But others of the learned are of opinion, that images are nothing but light, either directed from lucid bodies, or reflected from others, and ſtriking upon the eye. But as to the opinion of Epicurus and Lucretius, there is this difficulty: How it is poſſible, ſince ſo many particles are continually flowing from the ſurface of things, that every viſible body ſhould not be at length quite waſted and conſumed away? St. Auguſtin, in Epiſt. lvi. to Dioſc. ſtarts the ſame queſtion. To which this anſwer may be given, that thoſe viſible things may be repaired by other corpuſcles that are continually flowing to them, ſo that as much as they loſe of their ſubſtance by the particles that flow from them to other things, ſo much may, on the other hand, come to them from elſewhere, and repair that loſs. Nor is it to be feared, what ſome allege, that the thing itſelf would in this caſe change its figure, ſince the particles that come to it are of the ſame figure with thoſe that go from it. It may farther be anſwered, that images are ſo very ſubtle that nothing perceptible can appear to be wanting on the ſurface of things, though theſe images do flow from them. And this Lucretius himſelf explains in the following argument.

Ver. 116. In theſe two verſes, our interpreter but obſcurely, if at all, expreſſes the ſenſe of his author, who inſtances, in the principles of which all things are made, and by way of ſimilitude, endeavours to prove, that theſe images are of a moſt tenuious nature. For, ſays he, they conſiſt of atoms which are inviſible to our ſight and more minute than all thoſe things that the eyes can ſcarce, nay, not at all perceive: it is therefore no wonder that our ſenſes cannot perceive the images of things, while flowing from the bodies they glide through the air, unleſs they are reflected from the ſmoothneſs of mirrors, or of any other ſmooth and poliſhed bodies, ſince they cannot perceive even the atoms of which they are

compoſed. And thus, ſince they are imperceptible to the ſight, they muſt of neceſſity be of a very tenuious nature.

Ver. 127. In theſe eight verſes, the poet argues to this effect: Since ſo great a quantity of little bodies exhales from theſe ſtrong ſmelling herbs, as to fill with odour all the ambient neighbouring air, it cannot be expreſſed how ſmall each part is that comes off from the ſurface; and conſequently, ſince an image conſiſts only of thoſe particles that fly away from the ſurface of bodies, and have analogy with the ſenſorium of the ſight, it ſurpaſſes all belief how ſubtle and tenuious an image muſt be, eſpecially ſince, in a great length of time, nothing can be perceived to be exhaled or worn away. Certainly the ſubtleneſs of an odoriferous ſteam or vapour is altogether wonderful, and conſequently ſo too muſt be that of the particles of which ſuch vapours conſiſt; of thoſe, for example, that exhale from an apple for ſeveral months together; and yet the apple cannot be perceived to be waſted or diminiſhed. Conſider, beſides, how thick that vapour is in reſpect of an image, and you will eaſily believe, that if all the images which flow from a body, for the ſpace of many years together, were compacted into one, they would not make ſo great a maſs as that of a vapour which flows out in a moment of time.

The juice of the herb *panax*, or *panacea*, ſo called ἀπὸ τῦ πανταὰκᾶν, from healing all diſeaſes. See Pliny, lib. xxv. cap. 3. and Columel. lib. xi. cap. 3. We call it in Engliſh, all-heal. The other herbs which Lucretius here mentions, are,

——Abſynthia tetra,
Abrotonique graves, et triſtia centaurea.

Abſynthium is the herb wormwood, of which there are ſeveral ſorts: I. *Seriphium*, or *marinum*, ſea wormwood, which produces the ſeed that we commonly uſe againſt worms in the belly. II. *Sanconicum*, French wormwood, almoſt like the former in its tender and jagged leaves, but its colour is whiter, and its ſmell not ſo rank. III. *Ponticum*, or *Romanum*, which has a leſs leaf, and ſweeter odour; and is by ſome called wormwood-gentle. See Pliny, lib. xxvii. cap. 7. IV. *Lacifolium*, our common wormwood. *Abrotonum* is the herb we call ſouthern-wood: and of this too there are ſeveral ſorts: I. *Abrotonum mas*, the ſouthern-wood, or ſmall ſouthern-wood, which grows in the fields. II. *Abrotonum fœmina*, ſhe or great ſouthern-wood, which grows in the woods, and upon mountains. III. *Abrotonum ſiculum*, which is a kind of ſmall ſouthern-wood, and has a very ſweet ſmell. It is probable this laſt is the ſort Lucretius ſpeaks of. Of *centaurea*, *centaury*, ſee Book ii. ver. 384.

Ver. 135. Having explained this uſual and general manner of the generation of the images, which Epicurus calls ἀποῤῥοὰς, and ὠποῤῥοίας, becauſe they are made by a continual direption and avolation of tenuious, as it were, membranes, from the ſurface of bodies; he now, in theſe twelve verſes, explains another ſort of images, which the ſame Epicurus calls σύστασεις, becauſe they are, as it were, certain conglutinations and coagmentations that are formed in the air of their own accord, as ſo many clouds, and do not indeed flow from the things which they repreſent. Diodorus Siculus, lib. iii. relates, that in the regions of Africa, that lie beyond the Syrtes and Cyrene, prodigious ſpectres are often formed of their own accord: περὶ γὰρ τίνας καίρους καὶ μάλιϛα καϑὰ τὰς ἡρεμίας, Συϛάσεις ὁρᾶνϑαι καϑὰ τὸν ἀέρα παντοίων ζώων ἰδίας ἰμφαίνυσας τυπῶν δὲ αἱ μὲν ἠρεμᾶσιν, αἱ δὲ κίνησιν λαμβάνυσι, καὶ ποτὲ μὲν ὑποφευγυσι. ποτὲ δὲ διώκυσι. Sometimes, and even when the weather is calm, there are ſeen in the air certain compoſitions or coagmentations, repreſenting the figures of all ſorts of animals; ſome of theſe are quite without motion, and ſome are moved; ſometimes they fly the purſuers, and then again purſue thoſe that fly. Diodorus, who was himſelf an Epicurean, makes uſe of Epicurus's own term, Συστάσεις. The like too is confirmed by Pomponius Mela, to happen in that part of Mauritania that lies behind mount Atlas. Pliny alſo ſays, that ſomething of the ſame nature is frequently ſeen in the countries of Scythia, that lie within Imaus. And what Kircherus publiſhed, not long ago, of the Morgana, or amazing prodigy, that was ſeen at Rhegium, now Rezzo, in Italy, is very well known. In ſhort, in moſt countries many ſee ſuch ſpectres and images, or at leaſt think they ſee them.

Ver. 141. Of theſe battles in the air, of which, by the way, Lucretius makes no mention, Milton gives us this deſcription:

As when, to warn proud cities, war appears,
Wag'd in the troubled ſky, and armies ruſh
To battle in the clouds; before each van
Prick forth the airy knights, and couch their ſpears,
Till thickeſt legions cloſe; with feats of arms
From either ſide of heav'n the welkin burns.

Moreover, Faber believes this paſſage of Lucretius to be ſhadowed from the clouds of Ariſtophanes.

Ver. 147. In theſe eighteen verſes, he proves, by an argument drawn from a mirror, that images are every moment emitted from things in a perpetual, ceaſeleſs flow. Bring a mirror, and the image of any thing that is placed before it immediately appears, which would not be, unleſs the image of that thing flowed from the very body of it, and were reflected from that mirror. If it be aſked, why other things do not reverberate images, he anſwers, becauſe ſome other things are rare, and the images pierce through them; others, either porous or rough, and that theſe cut and diſſipate the images: but let them ſtrike on a poliſhed and flat body, like a looking-glaſs, and they are reflected to the eyes in an inſtant of time. Epicurus himſelf in Laertius, ſays, ἡ γένεσις τῶν εἰδώλων ἅμα τῷ νοήματι συμβαίνει, τὸ γὰρ ῥεῦσις ἀπὸ τῆς σωμάτων ἐκπυπολῆς συνεχὴς συμβαίνει, σώζεται

τὴν ἐπὶ τῇ σκεμμένῃ θέσιν, καὶ τάξιν τὴν ἀτόμων ἐπὶ πολὺν χρόνον, εἰτὲ ἑνίοτε συγχεομένην ὑπάρχει.

Ver. 156. That is to ſay, the ſmoothneſs of the mirror preſerves the image. And here it will not be improper to obſerve, that all men agree that two things are chiefly requiſite in the nature of mirrors: Smoothneſs, which never is without ſplendour or ſhining, and denſity of body: Nor can one of theſe ſuffice without the other; for if the body be ſmooth and ſhining, but of ſuch a nature that the image may paſs through it, it will not be a mirror, nor reſtore the images. Hence it is evident, that Plato in Timæus is miſtaken, where he does not require denſity as neceſſary in a mirror, but only ſplendour and ſmoothneſs. Now there are two opinions concerning the cauſe of the reflection that is made by mirrors. Some hold, that the images of the bodies placed againſt mirrors are ſeen in them, not becauſe the images which we ſee are in the glaſs, but becauſe the ſight of the eyes, being darted upon the mirror in a ſtraight line, is reflected upon itſelf from the mirror in another ſtraight line. This was the opinion of the Pythagoreans, and is ſtill of the mathematicians. But others, of whom Epicurus ſeems to have been the firſt, will have the images to be tranſmitted from the bodies into the glaſs, or any other ſmooth and denſe body, and to be actually in it; and that they are ſeen in the ſame manner, and for the ſame reaſon that all other things are, and are ſeen. But we ſhall have occaſion to ſay more of this by and by, when the poet comes to argue particularly of mirrors.

Ver. 163. For Lucretius believes with Epicurus and Plato, that the image we regard in a mirror is not one conſtant, fixed, certain, and ſame thing, but image after image, ſtill ſucceeding in the place of each other in an inſtant of time, and without any interval or interruption.

Ver. 165. In theſe ſeven verſes he illuſtrates, and confirms the perpetual and never-ceaſing flux of images, that all things may be full of light, rays muſt be continually emitted from the ſun. For the ſame reaſon, images likewiſe muſt be perpetually flying away from things; for which way ſoever you turn the mirror, the images of the oppoſite things appear; nor do they ever diſappear ſo long as thoſe things keep their places.

To confirm yet more this argument of Lucretius, we may add to the inſtance he brings of the beams of the ſun two other examples: I. The flame of a candle neither is, nor appears to be always one and the ſame flame, but only by reaſon of the never-ceaſing ſubſtitution of like and equivalent little flames. II. A river is one and the ſame river, only becauſe of the equivalence of the waters that are inceſſantly ſucceeding and driving one another away. Hence it is, that the parts of an image that proceed from hollow parts, are more ſlowly caſt upon the mirror, and reflected more ſlowly likewiſe upon the eyes, than the parts that are gibbous and jut out. And, therefore, though the image be ſeen imprinted on a flat thing, yet it makes an impreſſion of a hollow or round thing on the eye. But Macrobius, lib. vii. Saturn. 14. endeavours to overthrow this opinion of Epicurus.

Ver. 172. Theſe ten verſes contain another argument, but of leſs weight than the former.—We ſee the ſerene unclouded ſky often overcaſt on a ſudden with thick and darkening clouds. But theſe clouds riſe up from the earth, or from the ſea; they are thick and heavy bodies: what then can ſtop thin and light images?

Ver. 180. This and the following verſes are repeated from above, ver. 125. as they are likewiſe in the original.

Ver. 182. In theſe eight verſes, Lucretius tells us, that he is going to diſpute of the ſwiftneſs of theſe images; and that indeed there will be no need of a long diſputation, ſince mirrors demonſtrate that images move with the greateſt celerity that the mind of man can conceive.

Ver. 188. Theſe two verſes in the original run thus:

Parvus ut eſt cycni melior canor; ille gruum quam
Clamor in ætheriis diſperſus nubibus auſtri.

And we find them almoſt word for word in Antipater, in Errin. lib. iii. Epigram.

Λωΐτιρος κύκνου μικρὸς θρῖος, ἢ, πολεῶν,
Κράγμος ἐν ἠεριαῖς κιδνάμενος νιφέλαις.

To what is already ſaid of the ſinging of ſwans, Book II. ver. 479. and Book III. ver. 5. I will here add, that the ancient poets gave to one another the title of ſwans. Virgil. Ecl. ix. ver. 27.

Vare, tuum nomen———
Cantantes ſublime ferens ad ſidera cycni.

i. e. "Poetæ," according to Servius and all the annotators. Thus too Horace, Od. ii. lib. iv. ver. 25.

Multa dircæum levat aura cycnum.

that is, Pindar the Theban poet. Nor was it the poets only who believed the ſinging of ſwans, for even Cicero tells us, that ſwans are ſacred to Apollo, becauſe they ſeem to have from him the gift of divination, inaſmuch as foreſeeing the good there is in death, they die ſinging, and with joy: "Cycni Apollini dicati ſunt, quod ab eo habere divinationem videantur; qui prævidentes quid in morte ſit boni, cum cantu et voluptate moriuntur." Tuſcul. 2. 73. Nevertheleſs, their ſinging is a mere fiction; and, indeed, both living and dying, they are mute, or at beſt make only a harſh unpleaſing ſound: Therefore it is the more ſurpriſing, that there is ſuch agreement of opinion among the Greeks and Latins concerning the melodious ſinging of ſwans. Nazianzenus, Orat. 34. believes their ſinging to be only this, that when they ſpread and clap their wings, the wind gets in, and whiſtles between their feathers. Of the cranes here mentioned by Lucretius, our tranſlator takes no notice. The Latins called them *grues*, from the crunkling noiſe they make. They have a very long neck and beak, and are very common about the river Strymon in Macedonia,

on the confines of Thrace. They are ſaid to foreſee the ſtormy weather, nay even a ſhower of rain, and to fly from it in great numbers together. Hence Virgil Georg. i. ver. 374.

——Aut illum (ſcil. imbrem) ſurgentem vallibus imis
Aeriæ fugere grues.——————

And for this reaſon Milton gives them the epithet, prudent: when ſpeaking of birds, he ſays:

Part looſely wing the region, part more wiſe,
In common, rang'd in figure, wedge their way.
Intelligent of ſeaſons, and ſet forth
Their airy caravan, high over ſeas.
Flying, and over lands, eaſing their wings
With mutual flight: ſo ſteers the prudent crane
Her annual voyage borne on winds; the air
Floats as they paſs, fann'd with unnumber'd plumes.

Theſe are the birds that are ſaid to make war with the Pigmies; a people of Ethiopia, who inhabit the fens of the Nile, and exceed not three ſpans in ſtature, as Pliny witneſſes. Of their wars with the cranes Juvenal pleaſantly enough,

Ad ſubitas thracum volucres, nubemque ſonoram;
Pygmæus parvis currit bellator in armis:
Mox impar hoſti, raptuſque per aëra curvis
Unguibus à fæva fertur grue.——————
Sat. xiii. *ver.* 168.

Which our Creech has thus rendered,

When cranes invade, his little ſword and ſhield
The Pigmy takes, and ſtraight attends the field:
The fight's ſoon o'er; the cranes deſcend, and bear
The ſprawling warriors through the liquid air.

Ver. 190. In theſe ſeventeen verſes, he explains the ſwiftneſs of images, by making a compariſon between their motion and that of the rays of the ſun, which reach from heaven to earth in an imperceptible ſpace of time. But from whence proceeds this velocity of the ſun-beams? They are ſmall and ſubtle bodies: They are eaſily emitted from the body of the ſun: They are inceſſantly in purſuit of one another, and therefore the following urges on the foregoing ray; and the interjacent air can be no hindrance to bodies of ſo thin a texture. If theſe are the reaſons that the rays of the ſun move ſo ſwiftly, the ſame reaſons likewiſe will evince the extreme celerity of images.

Ver. 193. This is taken from Cowley. See the note, Book ii. ver. 141.

Ver. 204. That is, their ſubtle nature; for an image, though it be corporeal, has not any dimenſion of profundity, but is all ſurface; as Epicurus ſays in Laertius, lib. 10.

Ver. 207. In the laſt argument, he proved that images move as ſwiftly as the rays of the ſun; but now, in theſe eleven verſes, he makes them much ſwifter: for, ſays he, the images are more ſubtle; and what conduces very much to their celerity, they flow from the ſurface of things, and eaſily diſengage and ſet themſelves free: but heat and light are emitted from the inward parts of the ſun.

Ver. 216. This and the following verſe are repeated from Book ii. ver. 156. as well in the original as here.

Ver. 218. In theſe ten verſes he calls experience to his aſſiſtance. All ſight is made by images: now, ſet a mirror, or a bowel of water abroad in a clear night, and the images of all the ſtars will be reflected from the mirror or the water, and meet the eyes in a moment of time. Judge then, how ſwift muſt be the paſſage of thoſe images.

Ver. 219. Faber, in his note on this place, ſays, that it is more ſurpriſing to conſider, how many different ſpecies of itſelf water reflects all around, by its trembling motion; which Virgil deſcribes in the following verſes:

Sicut aquæ tremulum labris ubi lumen ahenis,
Sole repercuſſum, aut radiantis imagine Lunæ,
Omnia pervolitat latè loca jamque ſub auras
Erigitur, ſummique fert laquearia tecti.
Æn. viii. *ver.* 22.

Which Dryden thus tranſlates:

So when the ſun by day, or moon by night,
Strike on the poliſh'd glaſs their trembling light;
The glitt'ring ſpecies here and there divide,
And caſt their dubious beams from ſide to ſide:
Now on the walls, now on the pavement play,
And to the ceiling flaſh the glaring day.

Ver. 226. This and the following verſe our tranſlator has tranſcribed out of the firſt book of Cowley's Davideis.

Ver. 228. But this flux or ſtreaming of the images into the eyes, muſt be granted, ſays the poet in theſe thirteen verſes, becauſe certain effluviums from other things inſinuate themſelves into all the other ſenſes. Epicurus too made uſe of the ſame argument, as Macrobius witneſſes Lib. vii. Saturn. 14. in theſe words: "In propatulo eſt quod decepit Epicurum: à vero enim lapſus eſt aliorum quatuor ſenſuum ſecutus exemplum: Quia in audiendo guſtando, et odorando, atque tangendo nihil è nobis emittimus, ſed extrinſecus accipimus quod ſenſum moveat: Quippe et vox ad aures ultro venit, et auræ in nares influunt, et palato ingeritur quod gignit ſaporem, et corpori noſtro applicantur tactu ſentienda. Hinc putavit et ex oculis noſtris nihil foras proficiſci, ſed imagines rerum ultro in oculis meare." It is manifeſt what deceived Epicurus: for he was led into his error by following the example of the four other ſenſes. And becauſe, in hearing, ſmelling, taſting, and touching, we emit nothing out of ourſelves, but receive from without what moves and affects the ſenſe. Thus ſounds come to the ears of their own accord, and odours flow into the noſtrils. Thus the taſte is produced by things that are received into the mouth; and whatever we perceive by touch is applied to the body. Hence he believed, that nothing goes out from the eyes, neither; but that the images of things come of their own accord into the eyes.

Ver. 241. Theſe ten verſes contain another argument. When we handle any thing in the dark, for example, a body that is quadrangular, how do we know it to be a ſquare, but by its quadrangular figure? And if we place the ſame body before our eyes in the light, how do we then know it to be a ſquare, but by its quadrangular image?

Ver. 249. In theſe two verſes Lucretius concludes, that images alone are the cauſe of ſight: this too was the opinion of Epicurus, who held, that viſion is cauſed by images that perpetually flow from things, and ſtrike our eyes; and that this was his opinion, is affirmed by Aulus Gellius, in theſe words: "Epicurus autem affluere ſemper ex corporibus ſimulacra quædam corporum ipſorum, eaque ſeſe in oculos inferre, atque ita fieri ſenſum videndi putat" Noct. Attic. lib. v. c. 16. Epicurus believed, that from all bodies ſome images of theſe bodies are perpetually flowing; that they convey themſelves into the eyes; and that thus is produced the ſenſe of ſight. And Macrobius, lib. vii. Sat. c. 14. ſays the ſame thing. "Cenſet Epicurus ab omnibus corporibus jugi fluore quædam ſimulacra manare, nec unquam tantulam moram intervenire, quin ultro ferantur inani figurâ cohærentes corporum Exuviæ quarum receptacula in noſtris ſunt oculis, et ideo ad deputatam ſibi à naturâ ſedem proprii ſenſus recurrunt." Epicurus believed that certain images are perpetually flowing from all bodies, and that without the leaſt interval of time, the exuviæ of bodies, compoſed of mere empty figures, are of their own accord conveyed to our eyes, which are their proper receptacles; and that therefore they are continually haſtening to the proper ſeat of ſenſe that nature has aſſigned them. Epicurus himſelf in Laertius, teaches, that theſe images ἐπεισιέναι. And in Plutarch we find εἰδώλων εἴσκρισις, the inſinuation of images, and in Cicero εἰδώλων ἐμβάσεις.

Thus we ſee what was the opinion of Epicurus concerning the cauſe of ſight. But Plato held, that ſeeing is produced from the conjunction and affinity of two fires or lights; of one that goes out of our eyes, and of another that flows from the ſun, or from the light. But the main diſpute formerly was, whether viſion be performed by the emiſſion or reception of the rays of light. The mathematicians were perſuaded, that certain rays that ſtream from the eyes, and reach to the object ſeen, enlighten and render it viſible or apparent to the ſight, and conſequently are the cauſe of that ſenſe. And this belief they grounded on obſervations, that would by no means juſtify their opinion; for they had taken notice that ſeveral animals which can ſee by night, as cats, owls, &c have eyes that ſparkle in the dark; and from thence they inferred, that the light which is obſerved to be in their eyes, when it is night, is the cauſe they ſee, when other creatures, whoſe eyes are not ſo radiant, have no ſight at all. But this opinion has been long ſince exploded: and Ariſtotle retorted very well, that viſion cannot be performed by emiſſion of the rays; becauſe in that caſe it would follow, that we ſhould have as clear a ſight of things, and diſcern them as diſtinctly in the dark as by day: That philoſopher, therefore, lib. ii. De Anim. teaches, that ſight is not made by the emiſſion of rays from the eyes, but from the function and act of the objects that come within the reach of ſight, being often repeated, and coming into the eyes. The Stoics held, that rays come forth from within, even to the ſurface of the eyes, and drive the air to the thing ſeen, in ſuch a manner, as to make as it were a cone, the point of which is in the ſurface of the eye, and the baſis in the thing itſelf that is ſeen: and they explain this their opinion by the following example. As when the hand feels any thing with a ſtick, it perceives by the ſtreſs, and according to the degree of reſiſtance it meets with, whatever the ſtick touches, that is to ſay, whether it be hard, ſoft, ſmooth, rough, dirt, ſtone, wood, cloth, &c. So the eye perceives every thing by the protended air; ſuppoſe a white, black, yellow, deformed, beautiful, &c. object. Moſt of the followers of Ariſtotle, how differently ſoever they interpret his opinion in this matter, uſe this very compariſon, but place the colour as the hand, the light of perſpicuity as the ſtick, and the eye as the thing touched. But the Stoics ſuppoſe the eye to be as the hand, the air as the ſtick, and the object ſeen as the object touched. Pythagoras and his followers believe, that the ſenſe of ſeeing is cauſed by the reflection of the ſight; when the rays that ſtream and extend themſelves from the eyes to the thing ſeen, are ſo reflected from it to the eyes, that they do, as it were, bring word back what ſort of thing it is. Empedocles, though he admitted an effluence from things into the eyes, yet he believed at the ſame time, that ſome fiery ſpirits are emitted from the eyes to the objects; and would have the eyes to be as it were a lantern. And theſe were the chief opinions concerning the cauſe of ſight. But the now uncontroverted opinion is, that ſight is formed by reception of the rays, and that the eye emits not any light to enlighten objects; but that viſion proceeds from the immiſſion of the rays of light into the humours of the eye; and is formed by the rays proceeding from various points of a viſible object; inſomuch, that all the rays from one point of an object, are ſo inflected in the tunicles and humours of the eye, that they join again into one point at its bottom, and there paint the diſtinct idea of the object: but to ſhow how it there cauſes ſight would be too long a digreſſion in this place.

Ver. 251. In theſe ſix verſes, the poet farther teaches, that the images that are continually flowing from the ſurface of things, are preſent in all places, and ſtanding all around us, ſo that nothing hinders us to ſee on their part, if we but turn our eyes, that are deſigned for no other uſe than to ſee them. Epicurus himſelf writes to the ſame purpoſe, in the epiſtle to Herodotus: Δεῖ δὲ καὶ νομίζειν ἐπεισίου[ς] τινὸς ἀπὸ τοῦ ἔξωθεν τὰς μορφὰς ὁρᾶν ἡμᾶς, καὶ διανοεῖσθαι· ἢ γὰρ ἐν ἀποσφραγίσαι[ς] τὰ ἴζοντ τὴν ἑαυ[τῶν φύσιν τοῦ τῆς χρώματο[ς], καὶ τῆς μορφῆς, διὰ τοῦ ἀέρος τοῦ με[ταξὺ ἡμῶν τῆς κατεῖνων ἕδρας διὰ τῶν ἀκ[τίνων, ἢ οἷον δήπο[τε ῥευμάτ[ων ἀφ' ἡμῶν πρὸς ἐκεῖνα πε[ραγινομένων· ἤτοι, ὡς τύπων τινῶν ἐπεισιόν[των ἡμῖν ἀπὸ

τῶν τραχμάλων ὁμοχροώντε καὶ ὁμοιομόρφων κατὰ τὸ ἐνάεμπτον μέγεθος εἰς τὴν ὄψιν ἢ τὴν διάνοιαν, ὡκέως τὸν φορὰν χωμένων.

Ver. 256. These are the very words Epicurus himself makes use of; and Lucretius after him believed, that an image is as it were a shadow or type, which coming from the thing itself, brings with it the figure and colour of it; and which striking upon the eyes, exhibits and imprints in them the same figure and colour. Thus Epicurus seems to have meant that impression and representation of the image, which, by reason of the smoothness of the eye, appears in the surface of it; and which may be seen in the pupil of any man's eye, if we look narrowly upon it. And this seems to have been the opinion of Democritus, as we find in Aristotle, lib. de Sens. et Sens. cap 2. where Democritus saying τὸ ὁρᾶν εἶναι ἔμφασιν, that seeing is an apparition, Aristotle blames him for it; and objects that that apparition is caused only, ὅτι τὸ ὄμμα λεῖον, because the eye is smooth and glossy. Moreover, Lucretius himself, as we have seen in the third book, condemns their opinion, who, contrary to the doctrine of Epicurus, believe that the mind and soul see from within through the eyes as through a window; and asserts, that it is not the mind, nor the soul, but the eyes themselves that see, because they are endowed with soul, as well as all the other parts of the body. See book iii. ver. 130. et seq.

Ver. 257. There are many problems, and those too very curious, concerning vision. Some of these Lucretius proposes and explains. 1. It is certain that we not only see the colours and figures of things, but understand, at the same time, how far the objects seen are distant from us: but how can the images that flow from the surface of things, be the cause of this? The poet answers in these ten verses. The image, striving to get to the eyes, drives forward all the air before it; now, this stream of air is longer or shorter, as the object is more or less distant. But the longer or shorter that stream of air is, which, produced by the image, strikes the eye, so much longer or shorter the interval of space between the object and the eye must be allowed to be. But Lucretius and Epicurus are mistaken in this; for the distance is not known by the eye, but by the superior faculty, the intellect, which compares and judges between the eye and the thing seen.

We may judge of the distance of an object by the disposition of the "axis visionis:" for the soul, always attending to the various and different perceptions, easily determines the length of the "axis opticus," by the force it imparts to the fibres of the retina: insomuch that the colour of the object being first known, for the impressions vary according to the difference of the colours, it is easily judged, that the body is more or less distant. Thus, though a black body causes not so great an impression as a white; yet, if we look at a black ten yards from us, and at a white twenty, though the impression of this last be much the stronger, yet we judge the former to be the nearest to us, because the soul first discerns between, and knows the difference of those colours: and we know for certain, that men, who have been long accustomed to judge of distances, are not so subject to mistake in that affair, as others who have had no experience therein; and the reason of this is, because their souls have formed a more perfect idea of the length of the optic axis, by means of the force it imparts. The particular disposition of the eye conduces likewise very much to the forming a right judgment of the distance of objects: for we widen our eye when we are to regard an object distant from us; and lengthen it when we look at one that is very near us: and, therefore, in all probable appearance, the eye is proportionably and gradually changed, as we view a nearer or more distant object. For example, if I look at an object very near me, my eye is lengthened by the contraction of the oblique surrounding muscles: but if the same object be carried by degrees farther off from me, those muscles are gradually relaxed, proportionably as the object removes; and, at length, the right muscles begin to widen the eye, the object drawing farther from it: this any man may observe to be true, when he looks at a bird, for instance, first rising very near him, and then flying from him by degrees, till at length it arrive at a great distance from him. Some attribute this appearance to the knowledge of the conjunction of the two "axes visionis," which may indeed be some help towards the distinguishing the distance of objects; and this is the reason why we cannot so well judge of the distance of an object, when we regard it only with one eye, as when we look on it with both. Moreover, the farther distant an object is from us, the more subject we are to be deceived in our judgment of its distance, as any man will readily conceive.

Ver. 267. In these twelve verses is contained the second problem. Why, since the objects themselves are seen, the images that strike the eyes one by one, and are the cause of our seeing them, can be seen themselves? To this Lucretius answers, after his usual manner, by bringing like instances 1. We feel not the single parts of wind or of cold: but of all the wind, or all the cold, we are very sensible. 2. When we touch with our fingers the surface, or outmost colour of a stone, we feel not that surface and outmost colour; but only the interior hardness of the stone. Now, suppose the images to be as the single parts of the wind and cold, and the objects themselves to be as the whole wind and cold, and this difficulty is easily solved. In like manner, suppose the stone to be as the object, and the surface and outmost colour of it as the image. Thus atoms, the wind, and images are invisible themselves, though visible things are made of them, and though by their means other things are seen.

Ver. 277. He means what Lucretius here calls "Summum colorem," the utmost colour. For even by the doctrine of Lucretius, colour cannot be touched.

Ver. 279. Third problem. Why the images of things reflected from the surface of a glass mirror, are not seen in that surface, but as it were

within, or beyond it? The reaſon of this the poet gives us in theſe twenty-one verſes. The eye knows the diſtance of the thing ſeen, by means of the air that is driven by the image to the eye. Now, when two airs are driven, the interval muſt of neceſſity be more extended, and even doubled. But the image of the glaſs (for we ſee the glaſs itſelf as well as the thing, whoſe image is reflected) protrudes one air, and the image reflected another. And this is the reaſon why the image appears to be not in the ſurface of the glaſs, but as if it were within and beyond it. He alſo illuſtrates this explication, by bringing an example of things that are ſeen in a ſtraight line, and at a diſtance from a place within a building: in which caſe the images drive the air forward, as well through the ſpace without doors to the very threſhold, as through the ſpace within doors from the threſhold to the very eye. This reaſon, though it ſeems probable, is nevertheleſs not true; for as I ſaid before, it belongs not to the eyes, but to the ſuperior faculty, to diſcern and judge of diſtance.

Lucretius here affords us an opportunity to give a ſhort account of the looking-glaſſes that are moſt common among us, and of which there are three ſorts: viz. The plain, the concave, and the convex. The ſurface of the plain is an exact level, and theſe are the moſt general, and eſteemed the beſt, becauſe they reflect the object exactly the ſame, in ſite, diſtance, and magnitude, as it is repreſented to them. But the other two ſorts, the concave and the convex, return the objects differing now in ſite, now in diſtance, now in magnitude, according to the ſite of the objects, and as the eye receives the reflection. Plain glaſſes, as I ſaid before, cauſe no alteration either in the ſite, diſtance, or magnitude of the objects they repreſent. The reaſon of which is, becauſe, being ſmooth and level, they give no other modifications to the rays, but only that of ſimple reflection, according as they fall on it. Firſt, As to the ſite, it will be repreſented the ſame as it is out of the glaſs: that is to ſay, in the ſame line of attitude: and the object ſeems ſo much beyond the glaſs as it is on this ſide, becauſe the rays reflected from the glaſs, run the ſame lines, and make the ſame impreſſion on the retina, as they would do if the object were really on that ſide where it is repreſented: for the ſite of an object is diſtinguiſhed by the impulſe of the rays from a determinate region. Secondly, In regard to the diſtance, the object is repreſented as far beyond the glaſs as it is on this ſide of it, becauſe the impreſſion of the rays is altogether as ſtrong after as before the reflection. For a clearer idea of this, ſee the note on ver. 257. where we have treated of the manner how to judge the true diſtance of an object from the eye. Thirdly, We ſee the magnitude of an object exactly the ſame as it really is, becauſe the line of reflection from the glaſs being exactly equal with that of incidence from the object, the rays from the remoter points of the object will be as far diſtant from each other then, as they would be if the very object itſelf were really in the place where it is only repreſented. Nor, indeed, can we err in the magnitude, ſo long as we are right in our judgment concerning the diſtance of the object.

But before I cloſe this note, I muſt not forget to obſerve, that our tranſlator has omitted the three laſt verſes of this argument, which in Lucretius runs thus:

Quare etiam atque etiam minime mirarier eſt par
Illis, quæ reddunt ſpeculorum ex æquore viſum.
Aeribus binis, quoniam res confit utroque.

Lambinus abſolutely rejects this; and Creech, in his Latin edition ſays, that he ſees no cauſe why he need ever be aſhamed of, or revoke that cenſure: becauſe the verſes are altogether uſeleſs, and have nothing to do in this place: and for that reaſon I have avoided to give them in this tranſlation.

Ver. 290. Not the image that is emitted from the object placed before the glaſs, and that ſtrikes into the glaſs; but the image that flows from the glaſs itſelf: for all things emit images, even mirrors themſelves.

Ver. 299. For the image appears as far beyond the glaſs, as the object of which it is the image is diſtant from the glaſs.

Ver. 300. It is repugnant to the foregoing opinion of Epicurus, that the image in the glaſs ſhould be turned towards the perſon whoſe image it is, and look back upon him. For, ſince the image flows from us, and goes ſtraight forward, it ought, as it goes away, to ſhow us its hinder parts, ſo that the right may anſwer to the right, and the left to the left. In like manner, as a player, when his maſk is taken off, regards that part of it which he wore next him, that is to ſay, not the face, but the hollow behind it. To this purpoſe Macrobius, who, by this argument, endeavours to overthrow the opinion of Epicurus, that the images of things come into our eyes of their own accord. His words, ſpeaking of that belief, are theſe: "Cujus opinioni repugnat, quod in ſpeculis imago adverſa contemplatorem ſuum reſpicit: cum debeat, ſiquidem à nobis orta recto meatu proficiſcitur, poſteram ſui partem, cum diſcedit, oſtendere, ut læva lævam, dextera dexteram reſpiciat: Nam et hiſtrio perſonam ſibi detractum ex eâ parte videt, quâ induit; ſcilicet non faciem, ſed poſteriorem cavernam." Saturnal. lib. vii. cap. 14. This, therefore, is the fourth problem: and to ſolve the difficulty of it, Lucretius defends his opinion by the example which his adverſaries allege to weaken it. Take, ſays he, a form or maſk made of clay, not hardened; but while it is yet moiſt, and daſh it againſt a beam or pillar, ſo as to invert it backwards, that the face may fill up the hollow; and you will then ſee that brought to paſs in the maſk, which you are now aſtoniſhed to ſee in the mirror. And, therefore, you ought not to doubt in the leaſt, but that images, being, as they are, very tenuious ſubſtances, may, by daſhing againſt the glaſs, be inverted backwards in like manner. For an image has no depth, nor profundity whatever. This ſolution of this problem agrees not ill, but is almoſt the

ſame with what Plato delivers in his Timæus, where he ſays, that in mirrors the right appears to be the left, becauſe the contrary parts of the mirror are regarded by the contrary parts of the ſight, as it happens in all things that are applied to, or placed againſt one another; as if, for inſtance, any man were placed in the room of the looking-glaſs, and had his face turned towards us; for in that caſe his right would be oppoſite our left; and ſo on the contrary. But the mathematicians in Euclid, Θεωρ. 19. explains this matter otherwiſe, and demonſtrate their opinions by ſeveral arguments. I. They teach, that the angle of reflection is alike, and equal to that angle which is made by the line of incidence into the glaſs from the point of the object ſeen: whence there will always be a reflection to the part that is oppoſite to that part of the glaſs upon which the line of incidence that is produced from the point of the things ſeen, happens to ſtrike. II. They teach, that the images which are ſeen in glaſſes, are contained in the very ſhorteſt lines poſſible: therefore, when the right part of the thing ſeen anſwers, and is oppoſite to the left line of reflection rather than to the right, and ſo on the contrary; it cauſes the line of reflection which is moſt on the right, to fall on the right part of the image, and in like manner on the contrary: For which reaſon the left part of the object ſeen is oppoſed to the right part of the image; and on the contrary, the right to the left. III. They teach, that the image of the thing ſeen, and the very thing ſeen, are to one another in the nature of the two gladiators, who are contending face to face: for the right eye of the one anſwers to the left eye of the other. But obſerve, that this happens only in plain and convex glaſſes, for it is otherwiſe in the concave, in which the right parts anſwer to the right, and the left to the left: Of which Plato and Euclid give the reaſon, which is too long to be here inſerted, though we ſhall have occaſion to ſay ſomething concerning concave glaſſes, below in the note on ver. 320.

Ver. 305. "Cretea Perſona:" for the maſks, which the actors wore at Rome, were made of chalk, or of potters clay. Therefore, "cerea perſona," as ſome copies read it, is rejected. Lambinus is fond of "Creſſa," or "Cretea Perſona," pretending they were made of plaſter that came from the iſland Crete, now called Candy, and ſituate in the Ægean Sea. All the old copies that Heinſius ſaw, read "cretea;" and in the Catalects of Petronius we find,

Dum ſumit creteam faciem Sertoria, cretam
Perdidit illa ſimul, perdidit et faciem.

which ſufficiently proves they were made of chalk, or ſomething of that nature: and renders the opinion of Lambinus liable to ſuſpicion.

Ver. 306. "Allidat pilæve trabive." Pila ſignifies a column or pillar, which the Greeks call πίλη. Apuleius 3. Metamorph. "Pila media quæ ſtabuli trabes ſuſtinebat. Feſtus, Pila, quæ parietem ſuſtentat, ab opponendo dicitur." Budæus likewiſe ſays, that the "pilæ lapidæ" in buildings, are pillars or ſtructures of hewn ſtone, which are as the thighs of edifices; "quaſi quædam ædificiorum femora." Pila ſignifies the moles that are built in water, ſuch as are at this day to be ſeen at Geneva. Virg. Æn. ix. ver. 710.

Qualis in Euboico Baiarum littore quondam
Saxea pila cadit, &c.

See likewiſe Vitruvius. lib. v.

Ver. 310. In theſe ten verſes is contained the fifth problem, which he propoſes and ſolves. Why the ſame image is reflected from mirror to mirror, and ſeen in ſeveral at once, inſomuch that five or ſix images are reflected; or that the ſame image may be repreſented five or ſix times by as many glaſſes; the left part of which image will be inverted to the right, and the right to the left alternately? For whatever things are in the remoteſt parts of a building, the image of them may, by the means of ſeveral looking glaſſes, rightly and duly placed, be, as it were, brought out and conveyed through windings and turnings into any part of the houſe. Nay, it may be ſo ordered, that you may ſee your own back. For, take two plain glaſſes, and place one of them behind you in a ſhelving poſture, ſo that it may neither lie flat upon the ground, nor ſtand directly upright: Hang the other over your head in ſuch a manner, that it may be directly oppoſite to our eyes, and in a bending poſture likewiſe: you muſt of neceſſity ſee your own back in the glaſs that hangs up. Of which Lucretius gives this reaſon; becauſe the image of the thing that ſtrikes upon the glaſs, being returned from that glaſs, is reflected upon, and received into the oppoſite glaſs. But though all this be certain, yet it may be inquired, whether it be the ſame image that is multiplied ſo often; or whether a-new exuvies do not fly from off every image, as at firſt, the firſt image flew off from the body? Lucretius anſwers, That each image flies away from the object, and that the departure of the firſt is ſupplied by the coming of a ſecond, in a perpetual and never-ceaſing flux; for the image behind impels the image before; and thus they run in a ſucceſſive courſe, and urge on their predeceſſor images; inſomuch that the very image, which we this moment ſee in the laſt glaſs, was but juſt now in the firſt; and that a new ſucceeds in the room of that which went laſt away; and thus a perpetual ſucceſſion of images is made from glaſs to glaſs. This I take to be the ſenſe of Lucretius in this paſſage, which Creech has rendered but obſcurely and imperfectly.

Ver. 318, 319. Theſe two verſes run thus in the original:

Uſque adeo è ſpeculo in ſpeculum tralucet imago
Et cùm læva data eſt, ſit rurſum ut dextera fiat;
Inde retrorſum reddit ſe, et convertit eodem.

The meaning of which is, when the image is tranſferred from one glaſs to another glaſs, it changes its left part into its right; but when it is again reflected from the ſecond glaſs into the third, it reſumes the ſame order and ſite it had in the firſt glaſs; and will continue to change in like manner, as it paſſes into the other following glaſſes.

Ver. 320. In these seven verses is contained problem sixth. Why in those glasses, whose plains or faces are, as if they were several glasses opposed to one another to the right and left, the site of the image reflected is returned, so that the right part of the image answers to the right of the object, or thing seen, and the left in like manner to the left? The answer is: Because the plains or faces of that glass supply the place of glasses placed apart from one another, and are the cause that as in them the image is reflected from glass to glass, so it is reflected in these upon the same glass: and this indeed happens in concave glasses; of which, for that reason, Lucretius seems here to speak. And thus Gassendus himself interprets this passage: But Lambinus is of opinion, that the poet is speaking of many glasses joined together in the convex figure of a pillar. Now, we generally reckon seven sorts of glasses that restore the image after the same usual manner. I. The plain. II. The pillared convex. III. The pillared concave. IV. The convex made in the shape of a pyramid. V. The concave made likewise in the figure of a pyramid. VI. The globous convex. VII. The globous concave. By what means the reflection is made from plain glasses the poet has taught already: but seems to have omitted the reason of the several sorts of reflection from all the other glasses; for in these seven verses he seems to speak only of convex and concave glasses, though some think that even here he argues only of the other.

Ver. 327. In these seven verses is contained problem seventh, viz. Why our images that are seen in the glass, seem to move forward or backward, &c. as we ourselves do, and to imitate our actions? Of this he gives the following reason: Because, from whatever part of the glass we retire, and withdraw ourselves, the image cannot, from that moment, be reflected from that part: for all the images that are emitted from bodies, are reflected by equal and like angles. This, therefore, is appositely and truly ascribed to the variations of the image in the parts of the glass; which variations are caused by the several motions of the object; and these being different, the reflection likewise on the eye, and consequently the image, must differ in like manner. For, as the mathematicians truly assert, it is not the same image that remains seen; but when all the points, that is to say, all the parts of the object seen, are reflected, now from these, now from other parts, a new image is made of the whole object. Whence it follows, that, when the thing seen is moved, the image must of necessity seem to move likewise; since the parts of the thing seen continually answer to the parts of the image. And yet the image is not actually moved, but a new one is rather produced by the mutation of the sight of the object seen; but this happens by reason of the continual reflection of the parts of the image, which is made in the utmost cesure of the glass. Hence it is evident, that if, whilst you are looking on your own image in a glass, there be others, who, either from the right, left, above or below you, regard the same image of your own person, they will each of them see it in different places of the glass, and none of them in the place where you do; insomuch, that you cannot take any of their places, but you will see the image in another place than it was in before; from whence it is farther evident, that it is not only one image of yourself that you see in the glass, but innumerable images: and those too mutually mixing together in such a manner, that in the very place where you see your own nose, another may be so placed as to see your chin, another your forehead, a third your eye, a fourth your mouth, &c. and, nevertheless, not one of them sees any thing but one simple and distinct image.

Ver. 334. Hitherto of mirrors. He now proposes the eighth problem: Why glaring objects hurt the eyes, and why the sun even causes blindness? Of which, in these ten verses, he gives this reason: Because a splendid object sends forth many seeds of fire that burn the eyes; or is a sensible too strong for the organ of sense; and spoils, and renders it useless for this reason: because, by loosening its texture, it so perverts and destroys its due temper and commensuration, that it renders it incapable of receiving any longer any other sensibles. Aristotle, lib. iii. de Anim. says, it is common to all the senses, that if the things that fall under the sphere of their perception be too excessive, and surpass their due measure, they destroy the senses themselves. Thus, too much noise makes men deaf, too much splendour blind; and in like manner of the rest. For each sense is a certain proportion, and all proportion is destroyed by whatever is too much: for example, if the strings of an instrument be screwed too high, all the symphony is ruined.

Ver. 335. It is said of Democritus, that he made himself blind by staring on the glare of a brazen buckler that he placed in the sun; and this he did, that the view of external objects might no longer divert his mind from meditation. Laberius in Gellius, lib. x. c. 17.

Democritus Abderites, physicus philosophus,
Clypeum constituit contra exortum Hyperionis,
Oculos ut possit effodere splendore æreo:
Ita radiis solis aciem effodit luminis.

Ver. 344. These six verses contain the ninth problem: Why all objects appear pale and lucid to those who have the jaundice? Because, says Lucretius, many lurid seeds flow from the icterical person, and stain the images as they come to him; at least, which is more probable, they dye those that are entering into his eyes.

"Quæcunque tuentur Arquati," That is, says Nonius, persons whose eyes are stained with the likeness of the colours, "Arqui, quem poetæ Irim vocant," of the bow, which the poets call Iris, the rainbow: For the ancient Latins writ *arquus*, not *arcus*. Lucretius, lib. vi. ver. 525.

Tum color in nigris existit nubis arqui.

This disease, the yellow jaundice, was likewise called *ictcros*, and *morbus regius*. It was called

Icterus from the Greek, Ἴκτερος, a kite, becauſe the eyes of thoſe who labour under that diſeaſe, ſeem in colour like the eyes of a kite; *regius morbus*, as Ovid obſerves,

Molliter excelſu quoniam curetur in aulâ.

Arquatus, as I hinted before, becauſe their eyes are dyed with ſeveral colours, like the rainbow. It was alſo heretofore called "Aurigo, à colore auri," from the colour of gold, which the bile, diffuſed through the body, reſembles: and perſons, troubled with the diſeaſe, are called *aurigino ſi*. Sipontin.

Ver. 346 Lurid is yellowiſh colour, drawing towards a blue.

Ver. 350. The tenth problem is in theſe ſeventeen verſes. Why, when we are in the dark, we can ſee objects that are in light: though when we are in the light we cannot ſee objects that are in the dark? This, ſays he, is cauſed by the protruſion of the different air; for when the lucid air follows the dark, it purges and cleanſes the pores of the eye, and makes room for the images of things to enter. For the bright and lucid air is more ſubtle than the duſky; at leaſt, it has more ſtrength, and is much eaſier to move. But when the dark air follows the bright, the paſſages of the eye are ſo cloſed and choked up by that dull and heavy air, that it becomes incapable to receive the images of things that offer themſelves to it.

This was the opinion of Lucretius; but Ariſtotle and the mathematicians explain this matter in a few words: They ſay, that nothing can be ſeen of itſelf but, and that there are no other objects of ſight than light and colour; therefore, whatever is ſeen, is ſeen by the help and means of thoſe two things. Now the ſenſe of ſeeing is made by contact, that is to ſay, by the form or image of the object ſeen coming to the eyes. But the things that are in the dark cannot ſend their images to the eyes, for want of light and colour, by which they no ſooner come to be enlightened, than they inſtantly emit their forms. Therefore, when we ourſelves are in the dark, we may well ſee objects that are in the light, but not on the contrary.

Ver. 367. In theſe ten verſes is contained the eleventh problem: Why things that are ſquare ſeem round if beheld at diſtance? Square towers, for example, ſeem round, if we regard them from afar: the reaſon of which is, ſays Lucretius, becauſe the image of a ſquare tower, as it flies to us, is often ſtruck by the air in its paſſage, by which means its angles are worn off, at leaſt are ſo blunted, that when it comes to us, it ſtrikes our eyes under a round or circular figure; yet that roundneſs is not ſo diſtinct and perfect, as if the object itſelf were round, and ſeen at a little diſtance.

Ver. 368. What I am here going to obſerve concerning the ſight, holds good likewiſe as to all the other ſenſes. When a ſquare tower is ſeen from afar, and appears round, we muſt diſtinguiſh between theſe two things: Firſt, That it ſeems round; and, ſecond, that it is reputed and believed to be ſo. For that it appears round is moſt true; but that it is believed to be round, becauſe it ſeems to be ſo, is falſe. Now the firſt belongs to the ſight, or to the eye, which receives the appearance, repreſentation or image, as Lucretius and Empiricus term it, of the object ſeen: the other belongs to the mind, or intellectual faculty, which forms a judgment from that appearance. For the eye only reports as I may ſay, to the underſtanding, the object it has ſeen therefore it neither deceives, nor is deceived, but repreſents the thing as it received it; but it is the office of the mind to judge, whether the thing be, or be not ſuch, as it appears to the eye and ſight; ſo that the mind only deceives or is deceived, or neither deceives nor is deceived, in the judgment it makes. But Lucretius will argue more at large of theſe things hereafter, ver. 394 and 490 &c. where he ſays, that the ſenſes are true and certain, and that their deception proceeds from the judgment of the mind. Petronius very pertinently to this purpoſe, and elegantly too, ſays,

Fallunt nos oculi, vagique ſenſus
Oppreſſâ ratione mentiuntur:
Nam turris, prope quæ quadrata ſurgit,
Attritis procul angulis rotatur.

And Macrobius Saturnal. lib. vii. cap. 14. "Hâc (ratione) ceſſante viſus inefficax eſt; adeo ut quod remus in aquâ fractus videtur, vel quod turris eminus viſa, cum ſit anguloſa, rotunda exiſtimatur, faciat rationis negligentia; quæ, ſi ſe intenderit, agnoſcit in turre angulos, et in remo integritatem; et omnia illa diſcernit, quæ academicis damnandorum ſenſuum occaſionem dederunt: Cum ſenſus unus inter certiſſimas res habendus ſit, comitante ratione."

But it may be inquired, how and by what means the mind judges and diſcerns betwixt the different figures of objects: The anſwer to this is, That the figures of objects may be known, partly from their different colours, partly from their different reflections, and wholly from the knowledge of the divers parts of an object, its diſtance, and magnitude. Yet ſome give another reaſon, and ſay, that we know the figures of bodies from the particular impreſſions they make on the eye: For the rays that proceed from all the parts of an object, paint all its parts on the retina, in the fibres of which they cauſe an impreſſion, in the ſame order in which they received their reflection: inſomuch that we know ſuch a body to be ſquare, becauſe its image, formed by the impreſſion of the rays on the retina, is ſquare: For the rays from all the points of a ſquare body, are collected by the humours, and form a quadrangular or ſquare impreſſion. The ſame may be conceived of all other figures of objects.

Ver. 377. In theſe ſeventeen verſes is contained the twelfth problem. Why the ſhadow of our body, no leſs than the image of it in the glaſs, ſeems to walk with us, and imitates our poſtures? The thing itſelf is notorious, but the reaſon of it not ſo plain. Lucretius ſays it is this, becauſe ſhade is only air deprived of light by ſome denſe

body interposing between any place and the sun, and when this happens, that place is in some measure darkened and deprived of light; and therefore, as that dense body is moved, as it bows itself down, or raises itself up, the shadow too must of necessity vary its figure; because several figures of the air are deprived of light, in as many several manners as the body moves upright, bending forward, backward, &c. Dryden seems to have borrowed from this passage of Lucretius, that excellent description of shadows, which we find in a copy of verses of his to Sir Godfrey Kneller.

Shadows are but privations of the light;
Yet when we walk, they shoot before our sight;
With us approach, retire, arise, and fall;
Nothing themselves, and yet expressing all.

Ver. 389. This and the following verse run thus in the original:

Semper enim nova se radiorum lumina fundunt,
Primaque dispereunt, quasi in ignem lana trahatur.

Our translator takes no notice of the last words "quasi in ignem lana trahatur," and indeed they are variously explained. The poet illustrates, and teaches by an example, in what manner new rays are continually flowing from the sun's orb; and how they supply the place of the former that vanish away; viz. as it were like wool drawn through a flame; for then the wool that is first drawn would be consumed by the fire; whilst other wool is in the mean time drawing through it. Thus Lambinus, on the authority of several copies reads, and then interprets this passage; and Fayus approves of his interpretation. But Scaliger, in his observations on Catullus, corrects this lection, and reads *carmine* for *in ignem*: "quasi carmine lana trahatur;" taking *carmen* for the instrument used in the wool-manufacture, and which is likewise called *pecten*, in English a card. From whence *carminare* signifies the same as *pectinare*. "Varro de ling. Latin. Carminari lana tum dicitur, cùm caret eo, quod in eâ hæret." And Pliny, lib. ix. cap 38. & lib. xix. cap. 1. uses the same word. In which sense we may interpret the meaning of Lucretius in this manner: That new beams flow from the sun as fast as the first vanish, as from a heap of wool new threads are drawn in the card, so that when the first are drawn and taken away, new ones may still be drawing in the same card. But this interpretation seems not so natural as the former. Faber retains the first reading, and observes it to be a Greek proverb, ξαίνειν εἰς ὕδωρ, and that it is used by Plato and Lucian, when they speak of a useless piece of work, and that never can be ended. "Dicitur de re inutili, ἀνύτῳ, et quæ absolvi non possit." Creech in his Latin edition adheres to this interpretation; and says, it agrees very well with the meaning of the poet, and expresses properly enough that perpetual destruction of the rays of the sun. Nardius, for *in ignem*, reads *margine*, and others *imagine* erroneously, and without reason.

Ver. 393. *Nigras umbras*, the black shadows. A shadow seems black, because, as I said before, it is nothing but air deprived of light, or a privation of light; but light is white and clear, therefore shadow is black and dark.

Ver. 394. Having finished his disputation concerning sight and vision, he takes occasion from the two last problems, to assert and defend the certainty of the senses, which not those problems only, but several others that he enumerates as examples, to verse 489, seem to weaken and contradict. Now he insists that the senses are infallible, because they receive the images of things, just as they are brought to them. They understand not the nature of things, nor do they judge or determine any thing concerning it. Therefore there is no fallacy in them, but all errors proceed from the judgment of the mind. For example; though we may be deceived in seeing light or shade, yet that deception is not the fault of the eyes, but of the mind. For the office of the eyes is only to see the light and the shade; but it belongs not to them to determine what light and shade are, but to the mind; therefore, notwithstanding that a shadow seems to move, though it do not move, it being only a privation of light; yet our eyes are not deceived, for they see what it is their business to see; they see the shadows now in one place, now in another. Cicero, lib. iv. Arcad. Quæst. ascribes certainty to the senses, provided they be found and strong, and that all things be removed that might be any obstacle to them. And Lactantius, lib. de Opificio Dei, cap. 9. is of the same opinion.

Ver. 404. In these four verses, Lucretius brings his first example to confirm his assertion, that neither the eyes, nor any of the other senses, are either false or fallacious, but that they are true and certain: as also, that the mind only deceives, and is deceived, in judging of things amiss, and otherwise than they are. For it is not the office of the eyes, to judge whether the ship be moved, or not, but of the mind only: from whence it follows, that not the eyes, but the judgment only errs, and is mistaken.

Ver. 407. Thus too Virg. Æneid. iii. ver. 72.

Provehimur portu, terræque urbesque recedunt.

Which Sir R. Blackmore seems to have imitated,

They spoom'd away before the shoving wind,
And left retreating towns and cliffs behind.

Ver. 408. In these six verses is contained example second, of the stars, the sun, and the moon, which seem to us to stand still, though they are whirled about in a perpetual and swift motion. Whence the poet argues, that the eyes are not deceived, because they see the sun, the moon, and the stars, in the places where they are; but that the mind errs in not discerning those to be several places, and imagining all those places, in which the sun, moon, and stars are, to be one and the same place.

The ſteady Pole.] The end or point of the axle-tree, on which aſtronomers imagined the heavens to be turned. There are two of them; one in the north, noted by a ſtar, called *polus arcticus*, the north pole; the other in the ſouth, but inviſible to us, called *polus antarcticus*, the ſouth pole.

Ver. 414. Theſe four verſes contain Example III. in which the poet brings an inſtance of mountains, ſtanding at ſome diſtance from one another in the midſt of the ſea; which nevertheleſs, when ſeen from afar, ſeem contiguous, and ſo like a continent, that they appear like one huge mountain only, or like one vaſt iſland: In which the eyes are not deceived neither, it being not their office to judge of the diſtance of objects: but the mind alone deceives, who imagines there is no ſpace between the mountains, becauſe there appears none.

Ver. 418. In theſe four verſes, he propoſes Example IV. When boys, ſays he, turn themſelves often around, or are turned about by others, a giddineſs enſues, and the walls and ceilings of the houſes ſeem to them to move round, and be whirled about, even though they themſelves ſtand ſtill, and have ceaſed to run round. In which the eyes are not deceived, but the mind itſelf, which ſuppoſes, that the ſenſorium, in which the agitation continues, receives the images of things that ſtand ſtill in the ſame manner, as it would receive the image of a thing in motion, if itſelf were at reſt. The reaſon of this is, becauſe the ſpirits that belong to the ſight, being ſhaken and diſturbed by the whirling motion of the body that runs round, fly about in a circular motion likewiſe, and ceaſe not to move ſo ſoon as the body ſtands ſtill; in like manner as a wheel that has been turned about with violence, ceaſes not its motion ſo ſoon as the moving hand is retired, but whirls ſeveral rounds afterwards.

Ver. 422. In theſe ten verſes he brings Example V. of the ſun, that ſeems to riſe very near to mountains, though between the ſun and thoſe mountains there be an immenſe interval of ſpace. For when the ſun is ſeen to riſe over mountains, he ſeems almoſt to touch them with his fires, and yet thoſe mountains are ſcarce two thouſand bow ſhot diſtant from us: nay, perhaps not five-hundred caſts of a dart. The reaſon is, becauſe the eye does not perceive the diſtance of objects, and therefore we ſuppoſe there is no diſtance at all. "Rubrum tremulis Jubar ignibus," ſays Lucretius, "Varro de ling." Latin. lib. 5. ſays, that the ſtar which appears before ſun-riſing is called Jubar, "quia in ſummo habet diffuſum lumen, ut leo in capite jubar:" And Feſtus: "Jubar ſtella quam Græci φωσφόρον, id eſt, Luciferum appellant, quod ſplendor ejus diffunditur in modum jubæ leonis." And Servius on this verſe of Virgil,

It portis jubare exorto delecta juventus.

Æn. 4. *v.* 130.

ſays, "Jubare exorto, i. e. orto Lucifero Nam proprie Luciſer Jubar dicitur, quod jubar lucis effundat." Lambinus too follows theſe ancients; and others take Jubar in this place to ſignify the ſplendor or light, that foreruns the riſing ſun, that is to ſay Aurora, or the morning itſelf: which laſt opinion is not without reaſon, ſince Jubar is ſometimes taken for the brightneſs or ſplendor of any thing whatever: Statius Thebaid. ix. v. 895. "Et pictum gemmis galeæ jubar." Yet notwithſtanding all theſe authorities, Creech in his Latin edition of Lucretius ſays, that nothing is more certain, than that Jubar here ſignifies the ſun: "Nihil certius quam unam eandemque rem in hoc verſu jubar," and verſe 408. "Solem appellari." Creech. in loc.

Ver. 432. In theſe three verſes he produces Example VI. and alleges, that even in the ſhalloweſt waters is ſeen no leſs a ſpace, than the diſtance between heaven and earth. For if any one looks down into water, not above an inch deep, he will ſeem to ſee the ſky in it, lying as much below the earth as the ſky is diſtant from it. The reaſon of which is, becauſe the eye always ſees the object on the ſide from which the ray comes laſt of all directly to it; and therefore ſees the ſky, or the ſun and ſtars, in the place where the water is: and that by means of the ray, which, being between the water and the ſky, or the ſun and ſtars, is directly joined with that, which is between the eye and the water. In which caſe the mind itſelf, perceiving nothing between the directed and the reflected image, judges that the ſky, or the ſun and ſtars are really in that place, and tranſfers to beneath, all the ſpace and diſtance that is above. And hence it is not the error of the eye, but of the mind.

Ver. 435. In theſe five verſes is contained Example VII. of a man on horſeback, ſtanding ſtill in the midſt of a river, and looking down upon the water: for then ſome force ſeems to carry the body of the horſe, even though he ſtand ſtill, up againſt the ſtream: And on which ſide ſoever he caſts his eyes, all things ſeem to flow and move in the ſame manner. In which not the eye, but the mind is miſtaken; for, whereas the eye obſerves the waves ſucceeding one another in time, the mind apprehends beſides, that they ſucceed one another in place; and thus judges one and the ſame place, to be as many places behind, as waves on that part have beat againſt the horſe.

Ver. 440. What our tranſlator here calls courts, Lucretius calls *porticus*. Now the moſt wealthy among the ancient Romans had ſtately walks both for fair and rainy weather: The firſt were in the ſhade of trees, and ſometimes planted with box or roſemary, as Pliny witneſſes in an epiſtle to Gallus. The ſecond were under magnificent roofs, ſupported from one end to the other on pillars of an equal height, and placed at equal diſtances: The roof too was of an equal height, and the ſide-walls exactly alike, nor was the portico broader in any one place than in another. We may judge of the length of them from Juvenal, Sat. iv. v. 5. where, ſpeaking of the luxurious Criſpinus, he ſays,

Quid refert igitur quantis jumenta fatiget
Porticibus?——

And Sat. vii. ver. 178.

Balnea ſexcentis, et pluris porticus, in quâ
Geſtetor Dominus, quoties pluit.——

Whence we may gather, that in theſe porticos they were ſometimes carried in their coaches, for ſo we may call them, for the likeneſs of the uſe of them, and ſometimes in their chairs on mens ſhoulders: Beſides, that they ſometimes walked on foot in them, either for their health or pleaſure, is certain beyond all diſpute: and for theſe ſeveral reaſons theſe places were called *geſtationis*, *Viridaria*, *deambulationes*, and *porticus*. In theſe walks they uſed ſometimes to walk, or be carried a certain number of paces, as Plutarch reports of Cicero in his life. And this cuſtom appears from the following ancient inſcription which we find in Pignorius, de Servis, p 141. and by which they knew when they had been carried, or had walked a mile.

IN HOC
POMARIO
GESTATIONIS
PER CIRCUITUM
ITUMETREDITUM
QUINQUIENS
EFFICIT PASSUS
MILLE.

Theſe large places of recreation, theſe covered walks, were but ſuitable to their other magnificence: For their houſes were for largeneſs like cities, as Seneca witneſſes, Epiſt. 90. and 114. ſo that, according to the ſeveral ſeaſons of the year, they ſometimes uſed one part of their houſe, ſometimes another. In theſe were their "Cœnationes, Veſtibula, Atria, Periſtylia, Bibliothecæ, Pinacothecæ, Baſilicæ," and ſuch ſtructures, according to the ſtate of public works. But to return to Lucretius, who in theſe four verſes brings Example VIII. of ſuch a porticus, as is above deſcribed: and ſays, that if we look into ſuch a building at one end, eſpecially ſtanding at ſome diſtance from it, it will ſeem ſo to contract itſelf by degrees from the roof, the pavement, and on either ſide, that the proſpect will end in a ſharp point or cone. Of which the mathematicians give this reaſon: becauſe thoſe parts of parallel lines that are fartheſt removed from the ſight, ſeem almoſt to meet at the end: which they demonſtrate in this manner: In the firſt place, parallel lines muſt of neceſſity take up the ſame ſpace and extent of ground. Let us ſuppoſe two parallel lines of a hundred feet long, to be ten feet diſtant from one another: Let ten traverſe lines be made from one parallel to the other: Theſe ten lines will be all alike, and each of them ten feet long: Let the eye be placed exactly on a level with that part of the ground or plain, where the firſt traverſe line is drawn; the ſecond line (I do not reckon that firſt which is next the eye) will ſeem longer than the third, the third than the fourth, the fourth than the fifth, the fifth than the ſixth, the ſixth than the ſeventh, the ſeventh than the eighth, and the eighth than the ninth: ſo that the tenth or laſt will ſeem ſhorter than the others, becauſe it is the moſt remote from the eye: The reaſon of which is: becauſe the farther any magnitude is from us, the leſs it makes the angle that falls under the ſight: And, on the contrary, the nearer any magnitude is to us, the bigger it makes that angle. Hence it comes to paſs, that the moſt remote and topmoſt part of the portico may ſeem to end in a very little cone, and even to touch the ground or ſurface of the earth, and that the fartheſt parts of the two ſide walls ſeem to touch one another.

Ver. 443. For when the roof ſeems to deſcend, the floor to riſe up, and the ſides to meet together, the proſpect muſt neceſſarily end in a ſharp angle or point.

Ver. 444. In theſe four verſes, he brings Example IX. and ſays, that to men at ſea the ſun ſeems to riſe out of the water, and at his ſetting, to be plunged again into the waves. But this is a deception likewiſe of the mind, which, becauſe the eyes ſee nothing that intervenes between the ſun and the ſea, erroneouſly ſuppoſes that nothing does intervene between them. Virgil deſcribes finely the ſun riſing out of the ſea;

Poſtera vix ſummos ſpargebat lumine montes
Orta dies, cum primùm alto ſe gurgite tollunt
Solis equi, lucemque elatis narribus efflant.
Æn. 12. ver. 113.

Thus as finely rendered by our Engliſh Maro,

The morn, enſuing from the mountain's height,
Had ſcarcely ſpread the ſkies with roſy light;
Th' ethereal courſers, bounding from the ſea,
From out their flaming noſtrils breath'd the day.
Dryd.

Ver. 448. Theſe eight verſes contain Example X. of oars, which in the ſea appear bent and broken: for that part of the oar, which in rowing is dipt in the water ſeems crooked or broken; but the part above the water is ſtraight. Now, this too is an error of the mind, who does not obſerve, that the part of the oar, which is beneath the water, is ſeen by refracted rays, and does not appear to the eyes in the place and ſite, in which it indeed is, but beyond the ſurface of the water, from whence the rays tend directly into the eyes. Of which the mathematicians give us this reaſon: In ſeeing every thing, either the viſual rays from the eyes ſtrike upon the object ſeen, or are reflected back upon the eyes, or elſe they are broken: They ſtrike or fall upon the object ſeen, when we ſee, for example, a horſe, or any other body; or when we ſee colour in a body not denſe, but ſmooth: They are reflected when we ſee, for example, a mirror, or any other body both denſe and ſmooth: But they are broken when we ſee any thing through pellucid bodies; for example, through air and water, or through air and glaſs: Now the oars in a veſſel ſeem broken becauſe they are ſeen in this laſt manner, that is to ſay, through two tranſparent bodies; i. e.

through air and water; one of which is more tranſparent than the other; that is to ſay, the air than the water; but water is more denſe than air: and this is the reaſon that the rays, projected from the eyes upon the oars, that are plunged in water, are broken; for when we ſee that part of the oar that is dipt in the water, we ſee it not directly, but obliquely; nor do we indeed ſee it in the water, which is a denſer body than the air, but only its ſhadow or image; becauſe the line from the thing ſeen is not reflected in a ſtraight line to the eye, but is broken on the ſurface of the water. Hence it is, that the eye ſees not the thing in the due place, but in another: nay, ſees not the thing itſelf, which is ſtraight; but the ſhadow of it, which is bent and crooked.

Ver. 449. "Clauda navigia," ſays Lucretius: where the epithet *clauda* ſeems ſo properly applied, that I wiſh our interpreter had retained it in its natural ſignification. For let us ſuppoſe the oars to be the feet and legs of the veſſels, by the help of which they walk through the water; and when theſe oars are broken, the veſſels may well be ſaid to be lame and crippled. The two firſt verſes of this paſſage in Lucretius run thus:

At maris ignaris in portu clauda videntur
Navigia, apluſtris fractis, obnitier undis.

In which Creech, in his Latin edition, has made an excellent emendation. For *in portu*, he reads *in ponto*; and indeed how can a ſhip in harbour be ſaid to ſtruggle with the waves? Had he been aware of this when he tranſlated this paſſage, he would not have placed his ignorants upon the ſhores, becauſe they could hardly diſcern, from ſuch a diſtance, whether the oars of a veſſel at ſea ſeem broken or not: and he might have ſpared the next verſe ſave one, And they are loth, &c. for which he has no authority from his author; who, by *maris ignaris*, means men unaccuſtomed to the ſea, raw ſeamen.

Ver. 456. In theſe four verſes is contained Example XI. of the ſtars, which by night ſeem to fly by the clouds, and to be hurried in a contrary motion: in which not the eye but the mind itſelf is deceived: For while the eye beholds the clouds, and perceives them in different places, the mind itſelf believes them unmoved from their place; and while the ſight remains fixed upon them, the mind ſuppoſes, that it is not they that move along the ſky, but the ſtars that fly over, and paſs by them.

Ver. 460. Theſe ſix verſes contain Example XII. concerning things that appear double, by reaſon of the pupil of the eyes being ever ſo little diſtorted; ſo that, for inſtance, we ſeem to ſee two candles for one, two faces of one man, for one face, &c. In which the mind itſelf is deceived, not conſidering that the eyes, in that diſtorted ſite, do not regard the objects ſeen with their uſual and conjoined, but with unwonted and ſeparated rays: and for that reaſon we perceive the object ſeen to be double. As if, for example, in like manner, we touch one round ball with the middle and forefinger tranſpoſed, we ſhall ſeem to feel two balls. Ariſtotle, Problem, ſect. 3. giving the reaſon of this example, ſays, That the ſame thing happens, as does to men drunk, who ſee two for one: For the principle of ſight is moved in ſuch a manner, that both eyes ſee not alike: There is this only difference, that the motion in men who are drunk, is made inwardly: but another reaſon may be given of it: When one of the eyes is preſſed by the hand, the ſight is bent and crooked, and the nerves are moved up and down, and diſtorted this way and that; and hence it is that the objects are doubled. But Cicero in Lucullus, ſays: "Timagoras Epicureus negat ſibi unquam, cum oculos torſiſſet, duas ex lucernâ flamulas eſſe viſas: Opinionis enim eſt mendacium, non oculorum." Timagoras the Epicurean, denies, that when he diſtorted his eyes, he ever ſaw two flames from one candle; for it is a lie of the opinion, not of the eyes.

Ver. 463. I am ſorry it is neceſſary to acquaint the reader, that Creech has put this poor thought in the mouth of his author.

Ver. 465. "Et duplicis hominum facies," ſays Lucretius. Geryon was a king of Spain, and ſaid to have three bodies; therefore the word almoſt was requiſite. See the note, Book V. ver. 30.

Ver. 466. In theſe ten verſes, the poet brings his thirteenth and laſt example, concerning thoſe things that we ſeem to ſee in our dreams, as if we were awake. For ſometimes when we are ſound aſleep, we ſeem to ſee the ſun, the light, the ſky, the ſea, rivers, mountains, fields, &c. And all theſe things appear ſometimes to move and change their places. Nay, we ſeem to hear ſounds, and to ſpeak, when all is in the deepeſt ſilence. This happens becauſe the mind raſhly and erroneouſly interpoſes her judgment concerning theſe things, and ſuppoſes they are indeed as they really appear to be. The like happens alſo in deliriums, in folly, and in madneſs. Thus Pentheus ſeemed to ſee two ſuns, two Thebes, and the furies too, as well as Oreſtes. Virgil. Æn. iv. ver. 469.

Eumenidum veluti demens videt agmina Pentheus
Et ſolem geminum, et duplices ſe oſtendere Thebas:
Aut Agamemnonius ſcenis agitatus Oreſtes,
Armatum facibus matrem, et ſerpentibus atris
Cum fugit, ultriciſque ſedent in limine Diræ.

But we ſhall have occaſion to ſpeak more at large of dreams towards the end of this book.

Ver. 476. It is certain we are deceived in things, in which the ſenſes are employed, but how does that argue the ſenſes themſelves to be fallible? The poet, in theſe four verſes, ſhows the unreaſonableneſs of this pretence; the ſenſes receive the images of things, juſt as they are preſented to them: they know not the nature of them, nor do they judge or determine in the leaſt concerning them: therefore there is no error on their part; but all miſtakes proceed from the judgment of the mind. The ſenſes repreſent and make their report; according to which their reaſon judges, but often raſhly, and inconſiderate-

ly. Epicurus himself writes to the same purpose to Herodotus; Καὶ πᾶσα μὲν φαντασία εἴτε διάνοια, ἅτις αἴσθησει καταλαμβανομένη ὑ μὲν τοι διαλαμβανομένη, ἐστὶν ἀληθὴς τὸ δὲ ψεῦδος, καὶ τὸ δὲ διήμαρτημένον ἐν τῷ προσδοξαζομενω αἰεί ἐστιν ἔκλῦε τὴν κίνησιν ἣ ἡμῖν αὐτοῖς συνημμένην μέν τινι φαντασικῇ ἐπιβολῇ, διάληψιν δὲ ἔχεισαν, καθ' ἣν τὸ ψεῦδος γίνεσθαι, &c. Besides, we may gather the opinion of Epicurus concerning the certainty of the senses, from several of the ancients: Cicero in Lucullus says: "Eo rem dimittit Epicurus, si unus è sensibus semel in vitâ mentitus sit, nulli unquam esse credendum:" Epicurus went so far as to say, That if any one of the senses had but once mistaken, no credit ought ever to be given to any of them. And in the first book, de Finibus: "Judicia rerum in sensibus ponis [Epicurus] quibus si semel aliquid falsi pro vero probatum est; sublatum esse omne judicium veri et falsi putat." Empiricus explains this opinion of Epicurus to this purpose. They are mistaken, who say, that some of the images are true, some false; inasmuch as they cannot distinguish that opinion from certainty: For, as to what relates to Orestes, when he seemed to himself to see the furies, the sense itself, that was moved by the images, was true: for the images were really present: But the mind was deceived in believing them to be real furies. Thus Tertullian, lib. de Animâ, cap. 17. says, "Epicurei constantius parem omnibus atque perpetuam defendunt veritatem, sed aliâ viâ: non enim sensum mentire, sed opinatum; sensum enim pati, non opinari." Thus Gregor. Nyssenus, lib. iv. de Phil. c. 3. speaking of the sight, after he has mentioned those examples of the oars that seem broken in the water, and of a square tower that appears round, adds: "neque est hic error visûs sed mentis: nam ille videt et renunciat quidem: verum mens ad ea quæ exhibentur non attendit:" Nor is this an error of the sight, but of the mind; for the sight indeed sees, and makes its report, but the mind does not give due attention to the things that are represented to her. You may consult farther Empr. adv. Logic. but above all Macrob. Saturn. lib. vii. c. 14. where he argues admirably well of all these matters. Our translator has omitted the two last verses of this passage, which run thus in the original:

Nam nihil egregius, quam res secernere apertas
A dubiis, animus quas ab se protinus abdit.

The meaning of which seems to be this: For nothing is more excellent, than to distinguish things that are clear and plain from such as are doubtful, which the mind immediately hides from herself, that is, from her own knowledge. However, several of the interpreters, as Lambinus, Faber, and some others, absolutely reject them, as foolish and unworthy of Lucretius. But Creech, in his Latin edition, blames their severity, and says, that some copies, and that truly too, read "Nam nihil ægrius est," &c. and that, if instead of *abdit*, we read *addit*, the sense will be plain and easy. He goes on, that the poet has taught, ver. 467, "non addere opinatus animi," not to add the judgment of the mind: For we are deceived in all those examples which he but now enumerated; and that too, even though we were forewarned of it: For it is indeed difficult not to add the opinion and assent of the mind to things imparted to us by the senses.

Ver. 478. "Opinatus animi," the opinion of the mind, of which Epicurus, writing to Herodotus, gives this definition, κίνησις ἐν ἡμῖν αὐτοῖς συνημμένη ἐμέν τινι φαντασικῇ ἐπιβολῇ διάληψιν δὲ ἔχουσα

Ver. 480. In these ten verses, the poet takes occasion to fall upon the modern academics, of whom Arcesilas was author, and introduced, says Lactantius, an incoherent kind of philosophy: for something must of necessity be known, otherwise it could not be known that nothing can be known: For if you know nothing at all, then how can you know that nothing can be known? But if it be known that nothing can be known, then it is false to say that nothing can be known. "Arcesilas introduxit genus philosophiæ ἀσύστατον, quod Latinè instabile sive inconstans possumus dicere. Ut enim nihil sciendum sit, aliquid scire necesse est. Nam si omnino nihil scias, idipsum nihil sciri posse tolletur. Itaque qui velut sententiæ loco pronunciat, nihil sciri, tanquam perceptum profitetur et cognitum: ergo aliquid sciri potest." Lactantius, lib. iii. de falsâ sapientiâ, cap. 6. And for this reason Metrodorus of Chios, in the Lucullus of Cicero, says, "Nego scire nos, sciamus ne aliquid an nihil sciamus; ne id ipsum q idem nescire, aut scire nos nec omnino sitne aliquid, an nihil sit:" I deny that we know whether we know any thing, or know nothing; nay, that we either know, or not know even this, whether any thing be, or nothing be. But such men cannot be disputed with who know not what is true, what false, what certain, what doubtful, nor what it is to know, or not to know; and who glory in their ignorance. But Lucretius overthrows this sophism at first attack; for, says he, if you know for certain that nothing can be known, you know at least that you know nothing. Socrates, whom the ancient academics followed, was more wary, and said only: This one thing I know, that I know nothing.

Ver. 482. This may perhaps in some measure express the implied meaning of Lucretius, though the words of the text be very different:

Hunc igitur contra mittam contendere causam,
Qui capite ipse suo instituit vestigia retro.

All the copies acknowledge these two verses: But Lambinus suspects them not to be genuine, and at length reads,

Hunc igitur contra quidnam contendere curem?

Faber, however, is of another opinion, and says, this passage is very plain and elegant. They who walk on their hands, with their head prone to the earth, as most mountebank's boys do, can go no otherwise than backwards; which you may easily apply to explain the meaning of Lucretius. Thus Faber. Let us then apply it to that purpose, and

let his meaning be this. There is no disputing with a man who perverts all things, as it is certain the new academics did.

Ver. 490. In these twenty-five verses, he attacks the ancient academics, and establishes the senses as the sole arbitrators and judges of truth. For, says he, whatever can correct and confute what is false, must of necessity be the criterion of truth: And this is done by the senses only. But what can correct and confute the senses? Can reason? Reason itself entirely depends upon the senses: Shall one sense convince and confute another? This can never be; for each sense has its proper objects: nor does it care, or know what the other senses do: Shall the same sense then correct itself: Impossible: For we must alway give equal, or no credit at all to the senses. Therefore we ought to believe the senses infallible, and to trust only to what they represent and lay before us. Now the ancient academics held the mind to be the sole arbiter and judge of all things; but that the senses are dull and heavy, and cannot thoroughly perceive the things that are subject to them; for some are so small, as not to be visible to the eye, others so swift, as never to seem the same, nor like what they were before. But Epicurus taught, Κριτήρια ἀληθείας εἶναι τὰς αἰσθήσεις, ἐὰν εἶναι δυνάμενον αὐτὰς διελέγξαι· That the senses are the criterions of truth, and that it is not possible to confute them.

But he that would establish a criterion, is certain to have the sceptic for his enemy; and, what is more uncomfortable, to be unable to confute him. He is an animal incapable of conviction; his folly may be exposed; but to endeavour to bring him to sense and reason is as wild a design,

——ut siquis asellum
In campum doceat parentem currere frœnis.

As would be his who went to train an ass
T' obey the bridle, and to run a race.

Pyrrho would venture on a precipice in spite of his senses; and though the more sober are careful of their lives, yet they are as proof against convictions; a perverse sort of creatures, born to contradict, and instructed in all the studied methods of foolery. Scepticism, according to their own definition, is, δύναμις ἀνθιθετικὴ φαινομένων καὶ νοουμένων· its effect is freedom from assent, and its end serenity. The principle of the sect is, πανὶ λόγῳ λόγον ἴσον ἀντικεῖσθαι, yet this is not proposed as a dogma, for that is an assent, τινὶ πράγματι τῶν καθ' ὑπόληψιν ζητουμένων· nor is it laid down as so in itself, and a real truth, but only in appearance; and therefore Empiricus prefaces his discourse with these words: προείπων ὅτι περὶ ἀδήλων τῶν λεχθησομένων διαλαμβάνεται ὡς ἔτυχε ἐχόντως πάντως· Καθάπερ λέγω. And yet they follow their natural appetite for their preservation, seek the good and profitable, and fly the bad and hurtful according to appearance: for they do not deny but that they may be warm and cool, and are capable of pain and pleasure; yet none, like a dogmatist, affirms it is as ὑπάρχον, but τὸ ἑαυτῷ φαινόμενον καὶ πάθος ἀπαγγέλλει τὸ ἑαυτῷ δοξάζως. The law of their country is the rule of just and right, and the custom of the nation determines their religion.

This is the face of a sceptic, as it is drawn by his own hand; and since we find him condemned to diffidence, there are some reasons sure of this unsettledness, this ἐποχὴ and some propose ten, others fifteen, and others increase the number; but one will comprehend them all, and that is enough to ruin every science in the world. It is taken from the variety of opinions about the same thing; for there can be no appeal for a decision, because he that would judge acts by the same faculties that those do, that are at strife, and so he that loses the cause will be still dissatisfied: And to invert Seneca, "Citius inter horologia quam philosophos convenit," clocks will agree sooner than philosophers. This difference rises from the various tempers of mens bodies, the dispositions of their organs, and situation of the object: Thus melancholy and sanguine take different notices from the same impression, young and old, sick and healthy, drunk and sober, do not agree; nor is it enough to answer, that some of these are indisposed, whilst the others are in order; for, since that change is nothing but an alteration of the humours, they demand a reason why such and such a disposition should be more capable of receiving impresses from objects that are agreeable to the nature of the things than another: Besides, they observe, that the complexions of animals are various, and the texture of their organs different; so that there cannot be the same refractions in their eyes, the same windings in their ears, and therefore not the same notices from the same objects: And, indeed, did the sceptics proceed no farther than sensible qualities, we must acknowledge them to be very happy in the discovery; for it is certain, that those are phantasms alone; and they that think honey sweet, and they that think it bitter, have equally true representations of the object, because the little parts of honey act upon both their organs, according to their figure.

Hence they proceed to deny all first principles, and so are put beyond all possibility of conviction; for still demanding proof after proof, they must reel on to eternity without satisfaction: But this is too long a journey, and too fruitless a trouble to pursue, and so we must take our leaves of these contradicting animals, who have no other reason to deny the clear light of science, but because some mens eyes are too weak to look steady upon it.

Ver. 495. Thus too Epicurus in Laertius, Πᾶς γὰρ λόγος ἀπὸ τῶν αἰσθήσεων ἤρτηται, πᾶσα δὲ αἴσθησις ἄλογος ἐστὶν· For all reason depends upon the senses; but every sense is void of reason.

Ver. 499. Epicurus in Laertius says, Οὔτε ἡ ὁμοιογενὴς αἴσθησις ὁμοιογενῆ διελέγξαι δύναται διὰ τὴν ἴσην ἐνέργειαν, οὔτε ἡ ἀνομοιογενὴς τὴν ἀνομοιογενῆ, ἃ γὰρ τῶν αὐτῶν κριτικαί. For it is not possible that a sense of the same kind should confute a sense of the like kind with itself, because of the

equality of their ſtrength and power: Neither can one of an unlike kind confute another of an unlike kind Becauſe the ſenſes of a different kind have not the power nor means to judge of them.

Ver. 515. But ſince we are often deceived by the ſenſes; for example, a ſquare tower, ſeen at a great diſtance, ſeems round, what are we to do? Lucretius anſwers, in theſe twelve verſes, that it is better to have nothing to do with thoſe problems, nor concern ourſelves about them: Or to aſſign any cauſe of them, rather than diſtruſt the certainty of the ſenſes, on which our ſafety, our all, our life depends: For without the ſenſes we could not chooſe nor diſcern good things from bad, nor healthful from hurtful: Nay, nor avoid precipices, flames, or other things of the like nature. But here the poet chiefly laſhes the ſceptics, of whoſe founder, Pyrrho, Diogenes Laertius ſays, Μηδὲν ἐκβρατόμενος, μηδὲν φυλαττόμενος ἦν, ἅπαντα ὑφιστάμενος, ἀμάξας, εἰ τύχοι, καὶ κρημνὺς, καὶ κύνας, καὶ ὅσα τοιαῦτα, μειδὲν ταῖς αἰσθήσεσιν ἐπιρέπων.

Ver. 528. In theſe eight verſes, he concludes this long diſputation concerning ſight. We examine all things, ſays he, by the truth of the ſenſes, and therefore if they are erroneous, farewell to all certainty and knowledge. Nor ſhould we err leſs than a carpenter, who works by a falſe rule, line, and level.

Ver. 536. Hitherto he has been arguing of ſight and of images Now; to ver. 621. he treats of ſound, and of hearing, which certainly, next to ſight, deſerves the preference before any of the other ſenſes; ſince the ear, the inſtrument of hearing, is the entrance or inlet of voice and ſound, and conſequently of knowledge and diſcipline. Firſt, therefore, in theſe eleven verſes, he teaches what hearing is. Now we hear, ſays he, when any ſound reaches the ears, and, by means of its body, moves and affects that ſenſe, which is appointed to perceive it. But now it is manifeſt, that even voice is a body, becauſe it ſcrapes and rakes the jaws, makes them rough, and hurts them: Therefore it muſt of neceſſity touch them: And whatever touches, or is touched, is a body. This is his firſt argument. Epicurus, writing to Herodotus, ſays, Ἀλλὰ μὴν καὶ τὸ ἀκούειν γίνεσθαι ῥεύματός τινος φερομένου ἀπὸ τοῦ φωνοῦντος, ἢ ἠχοῦντος, ἢ ψοφοῦντος, ἢ ὅπως δήποτε ἀκουστικοῦ πάθους παρασκευάζοντος. And in Plutarch de Placitis Philoſoph. lib. iv. cap. 19. he teaches to the ſame purpoſe, that voice or ſound is a flux emitted from things either ſpeaking, ſounding, or making a noiſe by any means, or in any manner whatſoever; and that that flux conſiſts of minute fragments figured alike; or, as he teaches in Laertius, this effluxion is like little drops of water, and that, therefore, it is no wonder that the ſame voice or ſound ſtrikes the ears of ſeveral perſons at once, becauſe the ſounds or voices they receive are exactly like little drops of water that reſemble one another.

But not Epicurus only held the voice to be a body, for the Stoics too were of the ſame opinion, and held every thing to be a body that either acts or ſuffers: Now the voice both acts and ſuffers: It acts when it ſtrikes the ears, and the air that is in the head, and imprints hearing, as the ſeal marks the wax: It ſuffers, when falling upon ſmooth and ſolid places, it is reflected and repelled. But Pythagoras and Plato held voice and ſound to be incorporeal: For, ſay they, every ſtroke of the air is not a voice; for the wagging of a finger ſtrikes the air, and yet makes neither voice nor ſound. Therefore they took voice and ſound abſtractedly, as they call it, for the figure only in the ſurface of the air, which is evidently incorporeal, becauſe it is void of all profundity. Plato in A. Gellius, lib. v. cap. 15. defines ſound and voice, an air and ſtrong percuſſion of the air. Ariſtotle too ſeems to incline to the ſame opinion; for he defines ſound to be a local motion of ſome bodies, and the medium which is applied to the organ of hearing. This definition ſome of his followers have endeavoured to interpret otherwiſe than the words will bear, and imagine ſound to be different from local motion. And theſe are the chief opinions of the ancients concerning ſound, which is the undoubted object of hearing, and generally believed to conſiſt in, and to be cauſed by a tremulous motion of the air, vibrated and forced on by a motion produced in other bodies; which motion of the air muſt neceſſarily be made in an undulatory manner, that being the ſole motion the air is capable of receiving: For, ſince all places are replete and filled with air, no particle of air can receive any motion, without immediately imparting that motion to its adjoining particle, and that again to the next, and ſo on ſucceſſively: And this motion muſt be granted, unleſs we could ſuppoſe that the particles of air were able to penetrate into one another, which is the greateſt abſurdity imagioable: Now that this undulation of the particles of air is cauſed by the motion of bodies, is evident, becauſe of themſelves they tend to reſt.

Moreover, ſound may be taken in two different acceptations: I. For the ſenſation we have when ſonorous bodies make their impreſſion on our organs. II. We may conſider it as a power peculiar to ſonorous bodies, of producing in us this ſenſation. If we underſtand it in the firſt ſignification, experience will be our beſt inſtructor, and explain it beſt to us: But we may obſerve, that all are not alike moved and affected with the ſame ſounds; and that one hears perfectly what another cannot, or at leaſt does but faintly perceive. If we conſider ſound in the ſecond meaning, that is to ſay, as a power peculiar for example, to a bell, a cannon, or the like, of exciting in us the ſenſation of hearing, we ſhall find it comprehended under the deſcription given above. Beſides, that all ſound is produced by motion, reaſon and experience both evince: For ſound conſiſts in that, the exiſtence of which being granted, ſound exiſts, and without whoſe exiſtence ſound can have no being: Now, grant a motion of the air, ſound exiſts; but without that motion there can be no ſound: For daily experience teaches, that motion alone is capable of cauſing ſound, and by the ſame experience we are as cer-

tain, that where there is no motion there is no ſound: for we may eaſily obſerve a ſound cauſed by many bodies, that have received no other modification than that of motion; as if a man, for inſtance, moves the inſide of his ear, he inſtantly perceives a ſound; beſides, hold a hat in your hand, near a bell that is ringing, you will perceive the motion the bell gives the ambient air, by the motion of the hat, which motion ceaſes when the bell ceaſes to ring. And many other experiments are produced of the like nature.

Sound, therefore, is cauſed by motion. Let us now conſider how, and by what means, it affects our organs, and cauſes in us the ſenſation of hearing. I. When ſolid bodies are ſtruck againſt one another, they cauſe a ſound, by ſtirring up a trembling motion in the air, which is moved around the ſurface in manner of an orb: For the air being forced from that ſide the bodies move on, drives naturally to another, where it meets leſs reſiſtance; but it finds leſs reſiſtance on that ſide the bodies come from, therefore it goes that way; and there it ſtill receives more motion from the air that ruſhes in on all ſides to fill the void ſpaces which the bodies left: And therefore the air is moved in an orbicular or vortigenous motion. II. From this motion of the air, next the ſurface of the agitated bodies, the air is vibrated by its undulatory motion, as far as the moving force, the *vis movens* carries it. III. This agitated air, meeting with an ear in its paſſage, inſinuates itſelf into the *meatus auditorius*, auditory duct or channel, and impels the *tympanum*, or drum of the ear; which being thus moved, moves the innate air, and the three little bones that are in the cavity of the drum (called the hammer, the anvil, and the ſtirrup; in Latin, "maleolus, incus, ſtapes"), and they the auditory nerve. IV. This nerve being compreſſed, excites a reflux of the ſpirits contained in it; and theſe moving the fibres of the brain, do, by that motion, give the ſoul occaſion to perceive ſounds, and to judge of them. And this is the general belief of the nature of ſound, of its manner of formation, and how it moves and affects our organs, and cauſes in us the ſenſe of hearing.

Ver. 547. Theſe ſeven verſes contain the ſecond argument, which is taken from experience. Let a man ſpeak loud, and with great earneſtneſs, he becomes faint and weary: Who then can doubt but that voice is material, ſince it diſcompoſes the body, and even takes away ſome part of it?

Ver. 554. Theſe ſix verſes contain his third argument, which he has taken from the pleaſure, or the pain with which we are affected by ſounds, as they are either grateful or diſpleaſing: Now Epicurus held, that the little bodies which enter into the ear, and affect the organ of it, are of different figures; and that the ſweetneſs and harſhneſs of ſounds proceeds only from the ſmoothneſs or roughneſs of theſe corpuſcles, which, as they enter into the organ, either touch it gently, or rudely grate and ſcrape it, according to their different configurations, either of roughneſs or ſmoothneſs.

This was the opinion of Epicurus: but indeed the wondrous variety of ſounds proceeds from the great diverſity of ſonorous objects. The higher the ſtrings of an inſtrument are ſcrewed up, they cauſe the ſharper ſound; and, on the contrary, the more they are relaxed, the flatter. The reaſon of which is, becauſe the more the ſtrings are extended, the ſhorter the interruptions will be between each ſtroke, and they ſtrike the air the more ſuddenly, and with greater violence. Thus an acute ſound is cauſed by the quick and uninterrupted motion of the air, continually imparting its vibrations to the organ of the ear. A flat or dull ſound is made when the ear is not ſo frequently impelled, or receives but ſlow impreſſions from the vibrations of the air: whence it follows, that the more or leſs equal the vibrations are, the more or leſs pleaſant will the ſounds from thence reſulting be; for if the vibrations of the air be equal, the impreſſions they make on the organ will be all alike; and conſequently the reflux of the ſpirits to the brain will be ſo too, from whence always proceeds a grateful ſenſation and harmony: but if the motion of the air be uneven and ill-timed, it cauſes, for the contrary reaſon, a harſh ſound, and an ungrateful ſenſation. Beſides, a ſound from a rough ſurface is harſh and unpleaſing, becauſe the air does not come at the ſame time from all the parts of the object, and therefore excites a grating impreſſion by its reiterated and unequal impulſes: and ſo much for the harſhneſs and ſoftneſs of ſounds. To which I add, that the more or leſs violent the force of the impelled air happens to be, the ſound will proportionably be more or leſs loud, by reaſon of the ſtronger or weaker impreſſion of the vibrated air on our organs of hearing.

Ver. 557. This and the two following verſes run thus in the original:

Cum tuba depreſſo graviter ſub murmure mugit,
Et reboant raucum retrocita cornua bombum:
Vallibus et cycni gelidis orti ex Heliconis
Cum liquidam tollunt lugubri voce querelam.

Which verſes have not a little puzzled the interpreters. Some in the ſecond of them, read *barbara* inſtead of *cornua*; but Lambinus is for expunging it altogether: Upon which Faber ſays, that if Lucretius were living, he would appeal to ſome other judge; for that interpreter, as well as many others, did not comprehend the meaning of *retrocita barbara*, or *cornua*: but I, continues he, think I can prove it to be a muſical inſtrument, firſt invented in Syria, which the French call Sacbute, or Saquebout (in Engliſh Sackbut), from the old French words *Saquer*, which ſignifies to draw, and *bouter*, to beat. They who are acquainted with that inſtrument, will readily underſtand why Lucretius calls it *retrocita*: thus far Faber. Yet Voſſius on theſe verſes of Catullus, "de Nupt. Pelei et Thetid."

Multaque rauciſonos efflabant cornua bombos,
Barbaraque horribili ſtridebant cornua cantu.

takes occaſion to cite this verſe of Lucretius; and

says, that the common lection *retrocita* is foolish and erroneous; and he reads

Et reboat raucum Berecynthia barbara bombum:

Then he interprets "Berecynthia barbara," to be the Phrygian pipe, αὐλὸς Βερεκύνθιος, as Hesychius has it in βερεκύνθιαι, &c. In other copies nevertheless it is read.

Et reflexa retro dant cornua barbara bombum:

This, at least, is certain, that the *tuba* was straight; the *buccina* crooked; like the French post-horn that is made of brass, and by them called *Une cornette*; and that the *cornu* was a very bugle-horn. See Vegetius, lib. iii. c. 5. The next verse Vallibus, &c. has yet a greater variety of reading. Some copies have,

Vallibus et valida ne tortis ex Heliconis,

Which, whoever understands, says Faber, I will hold him to be an Œdipus, or a Tiresias. In others it is read,

Et gelida cycni nece torti ex antro Heliconis.

In others,

Vallibus et cycni nece torti ex Heliconis.

In others,

Vallibus et cycni nece detorti ex Heliconis.

Lambinus,

Vallibus et cycni gelidis orti ex Heliconis.

All which several readings are condemned, for reasons too tedious to repeat. Faber corrects Lambine's reading; and in the place of *orti* substitutes *corti* for *coorti*. Lastly, Vossius, on the before cited passage of Cattullus, reads it thus,

Et validis, cycni torrentibus ex Heliconis.

For several streams, as well as the river Helicon, flowed from the mountain of that name. Creech having summed up all these various readings, gives sentence as follows: In a word, "nece torti," or "nece detorti." must be absolutely rejected; for the meaning of those words, if they have any, is contained in the following verse; but follow Faber or Vossius, no matter which of the two. Helicon, a mountain of Bœotia, sacred to the muses, had its name, according to Plutarch, de Nomin. Fluvior. et Mont. from Helicon, brother of, Cythæron, a sordid, covetous wretch, who, having killed his own father, a miserably poor old man, precipitated himself from the mountain; dragging his brother Helicon, because he had nourished his father, down with him. Thus Plutarch: but Casaubon, on the prologue to Persius, judges, that this mountain had its name from the Hebrew word, Halike, i. e. "ambulatio," because the ancients used to take their walks, and to confer and discourse there of natural and divine matters: and Athenæus, l. 14. Deipnosoph. reports, on the authority of Amphion Thespiensis, that there was a college on that hill, instituted for all musical exercises, in which the young men in those days were carefully instructed. But Bocharus conjectures the name to be derived from the Arabic, Halic, or Halics, which, in that tongue, signifies, a high mountain: for such it is described to be by Strabo, lib. viii. & ix. Of the singing of swans before their death. See book ii. ver. 479. Book iii. ver. 5. and above, ver 188.

Ver. 560. In these four verses, he teaches, that the tongue forms and articulates this corporeal voice; and thence proceed words: he says, indeed, that the palate and the lips help the tongue in making the illisions Nor ought we to look on this as a very contemptible opinion; since we find in Plutarch de Plac. Philos. lib. 4. cap. 20. that both Plato and Aristotle approve of it, by asserting τὸ σχῆμα, that the figure which is in the air and in the surface of it, does, by a certain stroke, καλὰ ποιὰν πλῆξιν, become a voice. And Aristotle, second problem, 33. et 52. yet more plainly asks the reason why the voice, since it is a certain figurated air, that in its motion for the most part loses its figure, does nevertheless preserve it safe and unchanged, when it is reverberated from any solid body? Cicero, in the second book of the Nature of the Gods, says, "Deinde in ore sita lingua est, finita dentibus: ea vocem immoderatè profusam fingit, et terminat: Sonosque vocis distinctos et pressos efficit, cum et ad dentes et ad alias partes pellit oris. Itaque Plectro similem linguam nostri solent dicere, chordarum dentes, nares cornibus iis, quæ ad nervos resonant in cantibus." The tongue is placed in the mouth, and circumscribed by the teeth: this tongue fashions and proportions the voice immoderately uttered, and renders the sounds of it distinct and articulate, while it strikes against the teeth, and against the other parts of the mouth. Therefore, some have compared the tongue to the bow of a musical instrument, the teeth to the strings, and the nostrils to those pipes that sound in consort with the strings.

Most, if not all animals, have the faculty of causing a sound, or a trembling motion in the air, by modifying it whilst it is breathing from the lungs: and from the difference of these modifications proceed all the several sounds observable in animals. Thus the lion roars, the dog barks, the sheep bleats, the ox bellows, &c. But among all animals, man alone has the faculty of articulating his words, and of modifying each breath of air, in such a manner as is necessary for the forming an intelligible language, by which he communicates his thoughts to others of his own species. Moreover, the voice of animals is nothing but a sound, caused like other sounds, by the undulatory motion of the air; for the air, by the falling of the lungs, and by the contraction of the diaphragm, being expelled from the place it was in, does, by driving forward the external air, put it into motion; and, therefore, even when we but fetch our breath, we cause some sort of noise, which grows louder, the greater is the expiration, or the inspiration. Now, voice is only sound articulated, and this articulation is caused by the air's being more peculiarly modified in speech than in other sounds. And the tongue is the chief instrument in this modification; which, nevertheless, the tongue alone could not perform, without

the assistance of the motion of the lips, and of the whole mouth; insomuch that the tongue is moved sometimes upwards to the palate of the mouth, sometimes downwards, other times another way, and others another, according as the letters, syllables, and other accidents of the word to be articulated, require. For one motion of the air necessarily causes one certain sound; and one certain sound causes one certain perception. And this assertion is so infallible, that many people born deaf, have learnt to speak, by being made to observe the motions of the mouth and tongue, and by knowing the motions for such words, to know when they were uttered.

The several distinctions of one voice from another proceed, either from the various structure of the subservient parts, according as they are more or less relaxed or firm, and from their particular formation and configuration, in regard to the proportion they bear to one another. Besides, there is a certain motion of the parts that cause the voice: which motion is peculiar and natural to each of us, even from our infancy, from whence proceeds a difference in voices: sometimes too, certain affectations that may be observed in several persons, alter the natural sound of the voice, for some have an affected way of speaking through the nose, others in the throat, &c. Lastly, The voice is higher or lower, louder or softer, according as the contraction or extension of the lungs and of the diaphragm are more or less strong or weak: for a violent expulsion of the air causes a violent motion of it, and by consequence a great or loud sound; and, in like manner, on the contrary: and this is the reason why such as have a quicker and livelier spring in those parts, have a stronger voice than others.

Ver. 564. He subjoins several problems; the first in these eight verses. The voice, by going far, grows weak; and though it was distinct, when first uttered, it becomes confused; because the small parts, or little voices of which it was composed, are disordered by the air, and lose the form and figure which they had received from the tongue and lips. And hence the voice comes to be either distinct or confused.

Ver. 572. In these four verses, he teaches the reason, why if but one man speaks, the ears of many who are present hear the voice. You are to know, says he, that there is one whole, or rather general voice, which, being pronounced from the mouth, divides itself into innumerable little voices, which are wholly like one another. Thus when the voice is uttered by the speaker, the formation of the bodies that burst out of the mouth, is compressed, broken, and as it were, ground to pieces in such a manner, that it divides and goes away into minute parts, or little voices, altogether alike, and of a like figure, which instantly leap abroad, and diffuse themselves through the air or ambient space, and still preserve that likeness, till they reach the ears of all that are within hearing. And thus the same voice is at once heard by many, even as all drink of the same water who drink out of the same river. This, too, was the opinion of Democritus, as Plutarch witnesses, lib. iv. de Placitis Philosoph. cap. 20.

Ver. 576. In these twenty-seven verses, he says, that all the little voices that reach the ears are heard; the others are diffused through the air, and vanish away. Some strike on very porous bodies, which afford them a passage through: some on very rough, where they are broken and dispersed And others striking upon solid, and in some measure smooth bodies, are reverberated from them, and thus are the cause that the same voice is heard again: and this is an echo. Hence, too, proceed, says he, those sounds by night, which the superstitious impute to rural deities.

Ver. 579. An echo, which is only a restoring, rejection, or repercussion of the voice, which is made in smooth, tortuous, and hollow places; as in valleys, caves, and walls, especially in old vaulted buildings. Hence Virgil, Georg. iv. ver. 50.

——Aut ubi concava pulsu
Saxa sonant, vocisque offensa resultat Imago.

And Horace to Aug. l. 1. Od. 12.

——Cujus recinet jocosa
Nomen Imago,
Aut in umbrosis Heliconis oris,
Aut super Pindo, gelidove in Hæmo.

We have an admirable description of an echo translated by Mr. Addison, from the third book of Ovid's Metamorph. where see the fable at length.

Echo in others words her silence breaks;
Speechless herself, but when another speaks,
She can't begin, but waits for the rebound,
To catch the voice and to return the sound.
Hence 'tis she prattles in a fainter tone,
With mimic sounds, and speeches, not her own.

Ver. 585. An echo is formed by the reverberation of the vibrated air when it meets with a smooth and solid body. For the air, as well as other mediums, must glance and reflect from objects if it cannot pass through them. Thus it changes its first determination, and is variously reflected, according to the various situation of the object upon which it strikes. Therefore if the object be situated opposite to the place from whence the sound proceeded, the sound will be heard twice in that place; because, being carried from the centre to the circumference, the trepidations of the air meeting the solid body, must be restored and sent back, according to the rules of reflection, which it must of necessity observe: and for this reason, if the object from whence it is reverberated, stands directly opposite to the moved air, that air will be reflected again to the centre. But if the object stand sideways, the echo will not be again heard in the place where it was first formed; because the air will, in that case, receive a side reflection, and consequently glance another way. But the reason why the same sound is several times reflected, is, because there sometimes happens to be several places disposed among themselves in such a manner, and at such distances,

one beyond the other, that the circular undulations of the air in different places, and at different diſtances, meeting with bodies ſolid and impenetrable, the ſame ſound will be often rebounded, according to the number and ſite of the objects; inſomuch, that after we have received the ſound reflected from the neareſt, we receive it returned likewiſe from thoſe that are more remote from us: and this ſometimes happens when the places are oppoſite to one another, and reflect the voice by turns. Of this nature there was one formerly at Athens, which, as Pauſanias witneſſes, returned the voice ſeven times, whence the place itſelf was called Ἐπτάφωνος. And not long ago at Charenton, a village near Paris, in a ruinous building, and without any roof, where the monaſtery of the Carmelites now ſtands, it was obſerved that the ſame ſyllable pronounced at either end of it, was returned no leſs than ſeventeen times; and when pronounced in the middle, as often from each end: nay more it would return a very ſtrong voice, no leſs than ſix and twenty times, the reflected ſound ſtill growing weaker, before it quite ceaſed to be heard. This was more wonderful than what Plutarch relates of the pyramids of Egypt, where the voice was returned four or five times; or of the Portico at Olympia, where it was reflected ſeven. There are ſome who write, that in the great hall of the palace at Pavia, the image of the voice is repeated thirteen times. Moreover, you may obſerve, that no echo will be made, or at leaſt not perceived, if you ſtand too near the reflecting body. The reaſon of which is, becauſe the voice pronounced, and the image of it that is reſtored, enter into the ears of both of them at the ſame time: and in this caſe it only happens, if the repercuſſion be made from hollow and vaulted bodies, that a certain confuſed and humming ſound follows after the voice, becauſe many reflections of it are reiterated one upon another. Such is the ſound of a bell when it firſt ceaſes to ring. But if you ſtand at a good diſtance from the reflecting body, you will diſtinctly hear the reflection of the voice; and the nearer you ſtand (but ſtill at ſuch a diſtance, that the reflected voice may be diſcerned from the pronounced), the fewer ſyllables you will diſtinctly hear returned: and the farther you are off, the more you will hear: becauſe the interval of time between the ceſſation of the ſpeaker, and the perception of the reflected voice, is leſs in the firſt caſe, and greater in the laſt. Hence, it is no wonder that an entire hexameter verſe is ſometimes returned: but then the voice muſt be very ſtrong, that it may be able, from a great diſtance, to reach the reflecting body, and to return from it. It has been ſometimes obſerved, that more notes of a trumpet have been diſtinctly returned, than would have been neceſſary ſyllables, to compoſe an hexameter verſe, if a human voice could have been pronounced from that inſtrument. But the reaſon we hear only the latter part of the ſound echoed, may be becauſe the air that was moved by the firſt part of the ſound, arriving firſt at the ſolid body, is firſt reflected from it, ſo that in its reflection, it muſt meet with the air that was put in motion by the latter part of the ſound; and conſequently, not being ſtrong enough to reſiſt its motion, muſt communicate its own to it. And for this reaſon, beſides the echo of the end of the ſound is as loud as, nay, ſometimes louder than when it was firſt formed; becauſe it has a double force, i. e. its own, and that with which it was repelled by the forerunning circles.

Ver. 589, Nympha, as it were νέα φαίνυσα, and the word ſignified as well a bride, or new married woman, as thoſe female deities, who, according to Pauſanias, were not held to be immortal, but to live extremely long, almoſt an innumerable ſucceſſion of years. The poets gave them ſeveral names: I. The Naiades, or Naides, from ναίειν, to flow, who preſided over fountains and rivers. II. The Nereides, who were daughters of Nereus and Doris: and were ſet over the waters of the ſea. III. The Oreades nymphs, or goddeſſes of the mountains, from ὄρος, a mountain. IV. The nymphs of the woods, who were called Dryades, from δρῦς, a tree, or rather an oak. V. The Hamadryades, who preſided over each tree, from ἅμα, together with, and δρῦς, a tree, becauſe they fell and died with their trees. VI. The Napeæ, the nymphs of the groves, gardens, valleys, and pleaſant abodes, ſo called from νάπη, a grove. VII. The Limoniades, or nymphs of the meadows, from λειμών, a meadow. And, VIII. Limniades, the nymphs of the ponds, and ſtanding waters, from λίμνη, a pond.

Theſe were a ſort of rural gods, ſo called from Faunus, king of Italy, the father of king Latinus; and who, for having been the firſt who introduced agriculture into his country, was recorded in the number of their gods: though others ſay, they had their name *a fando*, from ſpeaking, becauſe in woody places they were wont to ſpeak and converſe with men. An inſtance of which they allege in the voice that was heard from out the woods, during the battle between the Etrurians and the Romans, for the reſtoration of the Tarquins, and which bid the Romans take heart. Now the peaſants, to make theſe gods of theirs more terrible, gave them horns on their heads, hoofs inſtead of feet, prick-ears, and the ſhape of a goat.

The ſatyrs were believed to be gods of the woods; like the ſylvans and fauns, with a human head, but horned; with the feet of a goat, their bodies all hairy, and to delight in the coverts of woods. They were part of the train of Bacchus, and notorious for their laſciviouſneſs. Horat. lib. ii. Od. 19.

Bacchum in remotis carmina rupibus
Vidi docentem (crediti poſteri),
Nymphaſque diſcentes, et aures
Capripedum ſatyrorum acutus.

Plutarch, in the life of Sylla, relates, that a ſatyr was brought to Sylla. And St. Jerome, in the life of Paul the Hermit, ſays, that St. Anthony had ſeen one of them likewiſe: And that another was ſeen by all the people of Alexandria in the

days of Conſtantine. He ſays, beſides, that there are indeed in Ethiopia, a ſort of quadrupedal animals, with the feet of goats, but a human ſhape of body, except only that they have horns on their heads; and that when he aſked them what they were, they anſwered, that they were men doomed to wear thoſe bodies, as a puniſhment for the crimes of which they had been guilty. But others reckon them among ſpectres, and the monſters of nature, and believe the whole race of ſatyrs to be merely fabulous. They were called *ſatyri*, as Ælian ſays, ἀπὸ τῦ σιτήρειναι, which ſignifies, to have a mouth like a dog when he grins. Caſaubon derives it from the Doric word, σατεῖν, to be merry; and others from σάθη, "quod ſignificat membrum virile, quia ad libidinem proni ſunt ſatyri."

Ver. 593, 594. Thus the goatherd in Theocritus:

Οὐ Σίμις, ὦ ποιμὰν. τὸ μεσαμβρινὸν, ὦ Σίμις ἄμμιν
Συρίσδειν, τὸν Πᾶνα δεδοίκαμες· ἢ γὰρ ἀπ' ἄγας
Τανίνα κεμμακὼς ἀμπαύεται' ἐντ. γε πικρὸς;
Καὶ οἱ ἀεὶ δριμεῖα χολὰ ποτὶ ῥινὶ κάθηται.

Pan was the chief of the rural gods, and preſided chiefly over paſtoral affairs; therefore ſaid to be the god of the ſhepherds. "Pan curat oves oviumque magiſtros." *Virg.* He was repreſented with a garland of pine leaves on his head, upon which there grew a goodly pair of horns, and his feet were like thoſe of goats: In one hand he bears a pipe made of ſeven reeds, joined together with wax, of which he was the firſt inventor. Virg. Eclog. ii. ver. 32.

Pan primus calames cerâ conjungere plures
Inſtituit————

In the other a ſhepherd's crook: He was believed to delight in ſolitary places, and to frequent chiefly near the ſea, whence the Greeks call him, ἁλίπλαγκλας· And he was thought to be in love with Echo. Whether he was ſon of Mercury or not, is uncertain: but the name of Pan, Πὰν, all, was given him, according to Homer in Hymn. Becauſe, when he was but newly born, he touched the harp ſo artfully, that he delighted all the gods with the harmony; but, according to others, becauſe he repreſented the whole nature of things. By his horns, the beams of the ſun, and horns of the moon, by his jolly red face, the air, by his goats feet, the ſolidity of the earth, by his briſtly hair, the trees of the earth, and the beaſts, &c.

Ver. 595. The pipe, which the ancients called *fiſtula*, was made of ſeven unequal reeds joined together with wax; (Theocritus, Idyl. viii. mentions one made of nine) that it might imitate ſo many different notes of the voice. Virg. Ecl. ii. ver. 36.

Eſt mihi diſparibus ſeptem compacta cicutis
Fiſtula.————

Now the reeds, that were joined together, decreaſed in this proportion; at the top, where they received the breath, they were all of the ſame height; but at the bottom, where the breath went out, they were all gradually one ſhorter than the other. Scaliger, on the verſe of Virgil above cited, will have the *cicuta* to be hemlock, the venomous plant, with the juice of which the Athenians were wont to puniſh criminals with death, and ſays, that of the hollow ſtalk of it they made their inſtruments of wind muſic. Servius, but without authority, ſays, the pipe was made of the joints of any reed or ſtalk whatever. But the muſical inſtruments of the ſhepherds, were firſt made of the ſtalks of oats or wheat, compacted together with wax; next of reeds, and joints of box made hollow; then of the legs of cranes, of the horns of animals, of metals, &c. Whence the words, "avena, ſtipula, calamus, arundo, fiſtula, buxus, tibia, cornu, æs," &c. were uſed for muſical inſtruments.

Ver. 598. *Genus agricolûm.*] The peaſants, who were wont to boaſt of their converſation with the gods. "Jactant miracula dictis." *Lucret.*

Ver. 603. Since, therefore, we receive the ſounds of the voice, expreſſed and formed by him that ſpeaks, even as we do the images that flow from the ſurface of things, how comes it to paſs that we hear him whom we cannot ſee? Why are things pervious to ſounds, and not to images? This Lucretius anſwers in theſe nineteen verſes. The voices or ſounds, ſays he, that are formed in ſpeaking, paſs whole and unhurt through the oblique paſſages, and tortuous pores and holes of bodies, by which the images, as he taught before, are broken. Or rather, goes he on, the reaſon of it is, becauſe the voice divides itſelf, and leaps abroad into little voices, which diffuſe and ſcatter themſelves on all ſides round, upwards, downwards, forwards, backwards, to the right, to the left, in ſhort, in all manner of obliquities, as many little ſparkles leap abroad from one ſhaken ſpark; and thus they light into the ears that are all around, and not only into thoſe that are placed in a direct line from the ſpeaker. But no ſuch thing can happen to the images. Yet the voice itſelf, by penetrating through ſuch mazes and windings, becomes weak, indiſtinct, and breaks into murmurs.

Ver. 607. Here our tranſlator ſeems to me to have miſtaken the ſenſe of his author, who ſays,

————Vox per flexa foramina rerum
Incolumis tranſire poteſt, ſimulacra renutant.

that is to ſay, voice or ſound, that ſtrikes the ears, can paſs whole and uncharged through the crooked and tortuous pores of bodies; but *ſimulacra renutant*, the images of things that ſtrike the eyes cannot. This is conſonant to the doctrine of Lucretius, who poſitively aſſerts that we ſee by the incurſion of images into the eyes, not by the emiſſion of rays from them. Nor, indeed, will the word *ſimulacra* bear that interpretation; and yet, he renders it again, ver. 617. viſive rays; erroneouſly in both places, and even contrary to the doctrine, as well as expreſs words of his author.

Ver. 609. This inſtance is not true; for in the firſt place, there are oblique pores or paſſages in glaſs, by which the images of things are refring-

ed, becauſe the things ſeen do not appear to be in their places; and even when the refraction is made, the images ceaſe not nevertheleſs to tend directly into the eye: Beſides, the whole or entire image does not fly through the glaſs; for of the rays that conſtitute the image, they only paſs through, that happen to fall into the pores or void ſpaces of the glaſs: but the others, that chance to light upon the ſolid parts of the glaſs, are reflected. In this, therefore, conſiſts not the difference between an image and a voice.

Ver. 622. The problems, relating to the taſte, are not in greater number, nor more difficult to explain, than thoſe that concern the ſight and hearing: For we taſte, ſays the poet, when the juice that is ſqueezed out of ſapid bodies, like water out of a ſponge, penetrates the palate and the tongue. Which juice, if it conſiſt of ſeeds figured in ſuch a manner, that when they are poured upon the organ of the taſte, and enter into the pores of it, they exactly fit thoſe little pores, and thus gently tickle, and pleaſingly affect the organ, ſeems ſweet: But if the figuration of the ſeeds be ſuch, that when they come to enter into the little pores of the organ, they bear no due proportion and commenſuration with them, they then prick, hurt, tear, offend, and roughly move and affect the organ; and then the juice ſeems not ſweet to the taſte, but either bitter, ſalt, acid, ſour, harſh, biting, &c. Epicurus took this opinion, as well as many others, from Democritus, who gave to every ſort of taſte or ſavour, its particular figure: as may be ſeen in Theophraſtus de cauſis Plant. lib. vi. cap. 2. in theſe words: Ἀκμόκριος δὲ χῆμα περιηλεὲς ἐικάπω γλυκὺν μὲν τὸν στρόγγυλον, δὲ ἐυμεγέθη ποιεῖ, Στρυφνὸν δὲ τὸν μεγαλόχημον, Τραχὺν δὲ τὸν πολυγώνιον καὶ ἀπεριφερῆ· Δριμὺν δὲ τὸν περιφερῆ, δὲ λεπτὸν, καὶ γωνοειδῆ, δὲ καμπύλον· Ἁλμυρὸν δὲ τὸν γωνοειδῆ, δὲ σκόλιον, δὲ ἰσοσκελῆ· πικρὸν δὲ τὸν περιφερῆ, καὶ λεῖαν ἔχοντα σκολιότητα, μέγεθος δὲ μικρόν· Αὐσηρὸν δὲ τὸν λεπτὸν, καὶ στρόγγυλον, δὲ μικρόν.

Ver. 632. For this reaſon Nigrinus, in Lucian, makes a ſcoff at thoſe who were too curious in the ſauces of their meat; and accuſed them of giving themſelves a great deal of trouble, for the ſake only of a very ſhort and tranſient pleaſure; ſince the throat, through which the meat ſliding down, would move them with any delight, is not above four inches in length: Nor did they find any pleaſure in dreſſing the meat, nor could they, after it was ſwallowed; but only in that inſtant of time, while the meat is paſſing through the throat. This made the voluptuous Polixenus aſk of the gods to make his neck like a crane's, that he might receive the greater pleaſure in eating, by the longer ſtay of the food in the jaws and throat.

Ver. 637. To this, and the two following verſes, we may join what Epicurus writes to Menœceus in theſe words: Τὸ συνεθίζειν ἓν ἐν ταῖς ἀπλαῖς, καὶ ἃ πολυτέλεισι διαίταις καὶ ὑγιείας ἐστὶ συμπληρωτικὸν, καὶ πρὸς ἀναγκαίας τῇ βιῷ χρήσεις ἕοικνον ποιεῖ τὸν ἄνθρωπον.

Ver. 640. In theſe forty-two verſes the poet explains the reaſon, why the ſame meat is not only pleaſant, but healthful alſo to one: and not only nauſeous, but hurtful to another. The organ of the taſte is different in ſome men, and in ſome animals, from what it is in others; either in its texture, or configuration of the atoms; or of the ſpaces that intervene between them: even as the other parts of men or animals are different, eſpecially the outward. But the different paſſages or pores muſt neceſſarily admit, and receive different corpuſcles of juice: and every thing, out of which juice is ſqueezed, contains ſeeds of different figures: and the corpuſcles of all juices, by reaſon of their various figuration, do not agree with, and fit the organs of all animals. Hence it is, that what is nouriſhment to one animal, is poiſon to another; and what is grateful to this, is diſtaſteful to that. Nay, when by age, or by reaſon of any diſeaſe, the temper, or the frame of the organ is changed, the ſame thing ſeems to have changed its taſte, even though nothing be changed in it. Thus a man in a fever thinks thoſe things bitter, which a man in health takes to be ſweet; becauſe the texture of the organ being altered, thoſe corpuſcles, that ſuited it before, are no longer fit for it; and therefore tear and hurt the organ.

Ver. 645. Of this aſſertion our tranſlator has omitted an inſtance, which Lucretius expreſſes in theſe words:

Eſt utique, ut ſerpens hominis contracta ſalivâ
Diſperit, at ſeſe mandendo conficit ipſa.

And that ſerpents cannot ſuffer, but fly from the ſpittle of a man, we have the authority of Pliny, lib. vii cap. 2. who there ſays, "Et tamen omnibus hominibus contra ſerpentes ineſt venenum: feruntque eas ictum ſalivæ, tanquam aquæ ferventis contactum, fugere." But that it makes them ſo furious, as to eat their own bodies, we have only the authority of Lucretius, that I know of: And Faber ſays, it is commonly reported, and believed by many; but that, having often made the experiment of it, he could never find it to be true.

Ver. 646. *Veratrum*, in the original, ſignifies the plant which the Greeks call hellebore, as Pliny witneſſes, lib. v. c. 14. where he ſays, there are two ſorts of hellebore, one white which the Latins call *veratrum album*, white hellebore; the other black, by ſome called *polyrhizon*, by others, *entomon*, and by others *melampodium*, either from Melampos, a ſhepherd, the ſon of Amythaon, and who was the firſt that diſcovered the virtues of that plant, by which he cured of madneſs the daughters of Prœtus, king of the Argives, having firſt obſerved that goats uſed to purge themſelves with it; or from its black root; the root of a plant may, not very improperly, be called the foot of it; whence the Latins call it, *veratrum nigrum*, black hellebore; Mart. will have it to be called ſo, becauſe it is *verè atrum*, truly black: Scaliger derives it, *à verare*, to ſpeak the truth, or to foretel, "quod eo purgarentur veratores et veratrices, qui pro inſanis habebantur." The fame Pliny, lib. x cap. 12. ſays, that the taking of either of them is dangerous to men: though both

of them fatten goats and quails; which is again confirmed by Lucretius, lib. v. ver. 897.

Quippe videre licet pinguescere sæpe cicutâ
Barbigeras pecudes, homini quæ est acre venenum.

Where we see the word, *cicuta*, is taken for hellebore: In which sense too Horat. lib. ii. epist. 2. ver. 53.

Quæ poterant unquam satis expurgare cicutæ.

And Avicenna calls the herb, *cicuta*, black hellebore: whence it is probable, that our hemlock is neither the *veratrum* nor the *cicuta* of the ancients. Therefore, instead of hemlock-juice, we may read hellebore.

Ver. 657. For the different formations of the intervals of the pores answer to the various figurations of the atoms, of which they are composed: so that as some atoms are trigonical, others quadrangular, others polygonical, &c. in like manner, some of the intervals of the pores are trigonical, others quadrangular, others polygonical, &c.

Ver. 661. The meaning is: since what is sweet to some, is bitter to others, it is credible, and so far true, that the most sleek and smoothest atoms, which are in the meat and drink, that affect the tongue and palate with sweetness, do, as they enter into the pores, sooth and tickle them: And, that, on the contrary, the rough atoms exasperate the tongue and palate of those, to whom the meat is bitter; but that the same meat is sweet to some, and bitter to others, proceeds from the disturbed or altered contexture of the atoms.

Ver. 670. In these twelve verses, he confirms the foregoing doctrine by an example. He has taught, that the bitterness of the same meat and drink to some, and the sweetness of it to others, proceed from the perturbation of the atoms in the bodies of animals: which perturbation or commutation is caused in sick persons by the predominating bile, or some other cause, be it this or that, no matter. But then the whole body is disturbed and disordered; the fire and position of the atoms is changed; whence those, that before produced a sensation of sweetness in the taste, now produce a bitterness, by reason of the change that is made in their site and order; and so on the contrary.

Ver. 682. Having finished his disputation of taste and savours, he now enters upon the subject of smell and odours. And first, in these ten verses, he teaches, that as images flow as sound is emitted, and as savoury juices are squeezed out of things, so odours are breathed from things likewise. Now, the variety and dissimilitude of the figures (see Book ii. ver. 398.) which do not move and affect the organs of all animals alike, are the cause that all animals do not equally perceive these odours that are continually exhaled and sent from bodies. Thus bees smell from far the odour of honey; vultures of dead bodies; dogs of wild beasts; and geese of a man. And yet these odours affect very weakly, or not at all, the nostrils of human kind. Epicurus, writing to Herodotus, delivers the same doctrine in these words, ἡ ὀσμὴ ἐκ ἂν ποτε πάθος ἐδὲν ἐργάζεται, εἰ μὴ ὄγκοι τινὲς ἦσαν ἀπὸ τῶ πράγματος ἀποφερόμενοι σύμμειροι πρὸς τὸ τῶτο τὸ αἰσθητήριον κινῆν, οἱ μὲν τοῖσι τεταραγμένως, καὶ ἀλλοτρίως, οἱ δὲ τοῖσι ἀταράχως καὶ οἰκείως ἔχοντες. Thus both Epicurus and Lucretius ascribe the sole cause why some odours are grateful to some men, or to some of the other animals, and nauseous to others, to the various figurations and contextures of the organs that compose the sensorium of smell. Plutarch, too, is of the same opinion, lib. i. adverse. Color. where he makes mention of two women, Berenice and another Spartan, who had an equal aversion, one of them for the smell of butter, the other for that of ointment.

Ver. 686. All creatures have an innate fondness for things with which they support their life: and nature has bestowed on each of them an instinct and sagacity, to go in search of, and readily to find their nourishment. Thus the bee, more easily than other animals, discovers the hordes of honey, that her fellow-bees have gathered and laid up for their support, and so eager is she in pursuit of it, that she avoids no danger to come at it. This is excellently described by Virg. Georg. iv. ver. 203.

Sæpe etiam duris errando in cotibus alas
Attrivêre, ultroque animam sub fasce dederê,
Tantus amor florum, et generandi gloria mellis.

Thus rendered by Dryden:

Oft on the rocks their tender wings they tear,
And sink beneath the burden which they bear,
Such rage of honey in their bosom beats,
And such a zeal they have for flow'ry sweets.

Ver. 687. Pliny, lib. x. cap. 46. says, that vultures fly three days before to the place where dead bodies are to be, as if they perceived long before the odour of the carcases. Thus Plutus in Trucul. "Jam quasi vulturii triduo prius prædivinabant, quo die esuriturî essent." In which they are both mistaken; for the vultures do not assemble themselves together to the places where any great slaughters are to be made by any natural and prophetic instinct; and, in all appearance, this tradition took rise from their having been observed to follow and keep with marching armies; not as foreseeing the day of battle, but because in the march of an army, there are always some men, some horses, and other beasts that drop here and there by the way. Job says the same thing of the eagle, chap. ix. ver. 30. And where the slain are, there is she. The vultures, from their devouring of dead bodies, were called τάφοι ἔμψυχοι, living sepulchres.

Ver. 688. This is neither better nor worse than a downright barbarism. We say not the train of a stag, but the trail, to trail the stag, &c. This our huntsmen know. Mr. Addison has given us so fine a description of a hound in pursuit of a deer, that it well deserves to be transcribed.

So the staunch hound the trembling deer pursues,
And smells his footsteps in the tainted dews;

The tedious track unrav'ling by degrees:
But when the ſcent comes warm in ev'ry breeze,
Fir'd at the near approach, he ſhoots away
On his full ſtretch, and bears upon his prey.

Ver. 689, 690. In the year, U. C. 364. when the Gauls, under their leader Brennus had beaten the Romans at the river Allia, taken the city of Rome, and laid ſiege to the capitol, as they were one night climbing up the precipices in order to ſcale the walls, ſome geeſe, that were conſecrated to Juno, and which, for that reaſon, they had ſpared during the famine they had ſuffered in the ſiege, fell a gaggling, and waked the ſoldiers, who, under Marcus Manlius, repulſed the Gauls: and theſe laſt, after a ſiege of ſeven months, were at length forced to buy their peace with a great weight of gold, and were all ſlain, or driven out of the city by M. Camillus, who was afterwards dictator. For this ſervice which the geeſe had rendered the republic, the cenſors ordered them to be nouriſhed at the public expence. This is atteſted by Pliny, lib. x. in theſe words: "Eſt et anſeris vigil cura Capitolio teſtata defenſo, per id temporis canum ſilentio proditis rebus: Quamobrem cibaria anſerum Cenſores imprimis locant." Cicero takes notice of this ſtory in his oration for Roſcius Amœrinus. And T. Liv. lib. v. in theſe words: "Galli nocte fubluſtri tanto ſilentio in ſummum evaſêre, ut non cuſtodes ſolum fallerent, ſed ne canes quidem, ſollicitum animal ad nocturnes ſtrepitus, excitarent: anſeres non fefellêre," &c.

Ver. 690. In theſe two verſes, the poet teaches, that odour is of a twofold advantage to man, and to the other animals: For, I. We diſcern by their odours, the aliments that are fit and proper for us. II. By the ſame means of odour, we avoid thoſe that are hurtful to us. But were this generally true, poiſon would not have made the havoc that it has done in the world.

Ver. 692. In theſe eighteen verſes, he treats of the motion of odours, and affirms, that it moves more ſlowly through the air than ſound, that it is more eaſily divided and diſſipated, and that it is not diffuſed and ſpread ſo far: the reaſon of which is, becauſe it flows from the moſt inward parts of an odorous body, or from the loweſt profundity of the ſubject (for odorous bodies, the more they are bruiſed, broken, &c. ſmell the more), and alſo becauſe the principles of which it is compoſed, are larger than the principles of ſound: ſince thoſe paſſages, through which ſound penetrates, are too narrow for odours, and will not allow them a way. And, therefore, odour muſt neceſſarily move more ſlow, and be more eaſily diſſipated by the air it meets in its paſſage. And this too is the reaſon why, though we can eaſily judge from what part a ſound comes to us, we cannot, with like facility, diſtinguiſh on what ſide of us the body is that diffuſes an odour.

Plato, in his Timæus, teaches, that odours are ſmoke and miſt: that that part of odours which is changed from air into water, becomes miſt; but that which is changed from water into air, turns into ſmoke: whence he argues, that odour is more rare than water; but more denſe than air. One proof of which is, that if any one ſtops his noſtrils, he will, together with his breath, draw in air, but not odour. Ariſtotle, lib. ii. de Anim. teaches, that the power and quality of odour is hot; and that the power and faculty of ſmelling is placed in hot and dry. Hence it is not ſtrange, that cold and froſt render odours dull and ſpiritleſs. And he farther teaches, that, for that reaſon, odours contribute nothing to the nouriſhment of the body, nor ever excite an appetite of eating and drinking, but rather create a lothing of food: but that ſweet odours are conducive to health, becauſe they temper and dry the brain, which, of itſelf, and from the vapours of our food and nouriſhment, is moiſt and humid.

Ver. 710. It is not in the leaſt to be doubted, but that the ſame taſte, and the ſame ſmell is pleaſing to ſome, and ungrateful to others. Now Lucretius, in theſe twelve verſes, teaches, that even the very images of things make different impreſſions on the eyes of the beholders. The lion himſelf is terrified at the ſight of a cock (for Lucretius does not mean what ſome interpreters make him ſay, that it is the crowing of the cock that terrifies that wild animal), becauſe the image of the cock is compoſed of ſeeds that pierce into, and wound the eyes of the lion, ſo that he is not able to fix his ſight againſt them. Plin. Nat. Hiſt. lib. viii. cap. 18 ſays, that it is the comb of a cock that chiefly frights the lion.

Ver. 712. It is certain that cocks generally crow at certain hours of the night, chiefly between midnight and break of day. Dryden ſays,

More certain was the crowing of this cock,
To number hours, than is an abbey clock;
And ſooner than the mattin-bell was rung,
He clapp'd his wings upon his rooſt, and ſung.

The naturaliſts aſſign ſeveral reaſons of this, but none that are convincing: the ſafeſt is to ſay, that the cock, like other animals, has certain times of ſleeping and waking; and that when he is waked, either of himſelf, or by the crow of another, or by the noiſe of any thing, he fixes himſelf that he may not drop off his perch, claps his wings, and falls a crowing, which is natural and familiar to him, as well at certain hours of the night, as often likewiſe of the day. Shakſpeare calls this animal,

——— The trumpet of the morn,
Who with his loſty and ſhrill ſounding throat,
Awakes the God of day. [*Hamlet.*

And Milton,

——— The creſted cock, whoſe clarion ſounds
The ſilent hours. ———

And the Romans, who began their natural day of twenty-four hours at midnight, named and diſtinguiſhed ſome parts of it by the crowing of the cock. The firſt part they called, "Media nox," which, as Cenſorinus calls it, was indeed "Principium et Poſtremum Dici Romani:" the ſecond, "de mediâ nocte:" the third, "Gallicinium," when the cocks began to crow: the fourth, "Conicinium," when they left off crowing: the fifth,

"ante lucem;" the fixth, "diluculum:" the feventh, "mane," &c. But in this computation there is but one cock-crowing mentioned in all; but Juvenal mentions different times of it, Sat. ix. ver. 106.

Quod tamen ad cantum Galli facit ille fecundi.

And, indeed, experience teaches us, that the cocks naturally crow at three particular times in the night efpecially: of which three feafons, one is about an hour before day, as our old Tuffer obferves in his Poetical Hufbandry, page 123. where he particularly diftinguifhes the feveral feafons of the cock's crowing in the night, in thefe old faſhioned verfes:

Cock croweth at midnight tinres few above fix,
With pauſe to his fellow to anſwer betwixt:
At three a clock thicker, and then as you know,
Like all into mattins, near day they do crow.
At midnight, at three, and an hour yet day,
They utter their language as well as they may.

Ver. 722. Thus he has concluded his diſputation concerning the fenſes: but fince, when the fenſes are aſleep, we imagine many things, imagination is a fubject not unworthy a philofopher to treat of: He, therefore, to ver. 829. explains what imagination is, and the cauſe of it. And firſt, in thefe twenty-fix verſes, he aſſerts, that many moſt fubtle images, fome flowing from bodies, others formed in the air of their own accord, and others differently mixed of different things, are wandering up and down on all fides in the air: That thefe images penetrate into the mind; and, gently moving it, are the cauſe of imagination. Hence we think we fee Centaurs, Scyllas, and other monſtrous things that never had a being; and likewiſe the ghoſts and ſhadows of the dead. Cicero, in the fifteenth book of his Epiſtles, ad Familiar, writing to Caſſius, who had newly embraced the Epicurean doctrine, tells him, "Fit neſcio quid, ut coram, adeſſe videaris, cum ſcribo aliquid ad te, neque id καὶ εἰδώλων φαντασίας, ut dicunt amici tui novi, qui putant etiam τὰς διανοητικὰς φαντασίας, ſpectris Catianis excitari.

Ver. 730. Fully, examining this opinion, ſays, "Tota res, Velleï, nugatoria eſt." This whole affair, "Velleius," is a trifle: and adds farther, "Quid eſt quod minus probari poteſt, quam omnium in me incidere imagines, Homeri, Archilochi, Romuli, Numæ, Pythagoræ, Platonis, nec eâ formâ quâ illi fuerint? quomodo ergo illi?" What is there that can leſs be proved, than that the images of all men offer themſelves to me, of Homer, Archilochus, Romulus, Numa, Pythagoras, Plato, and yet not in the form in which they were? How then was it they? Let us conſider our dreams, where the powers of fancy and imagination are moſt obſervable. Theſe our poet explains, by entering images which paſs through the body, and ſtrike the ſoul. How deficient this is, any one may be ſatisfied from his own obſervation; for that will tell him that he dreams of things at a vaſt diſtance, and not thought on for ſome months. What then? Can the image paſs through thoſe large tracts of air whole and undiſturbed? Are they not as thin a ſubſtance as the Epicurean ſoul, and as eaſily diſſolved? Can they enter the pores of the body, and ſtill preſerve their order, and the mind be accounted mortal for the ſame way of paſſage, and this be uſed as an argument againſt its infuſion? Strange power of prejudice! that can blind the ſharpeſt eyes, make them dull and unfit to be moved by theſe thick and almoſt palpable errors: but, perchance, there is no image of an abſurdity, and therefore we muſt excuſe the Epicurean: Beſide, ſome things are preſented to our imaginations, of which there can be no image; a harp ſeems to ſound, when it lies ſilent in the caſe, when there is no briſk vibration of the ſtrings to impel the ambient air, and create a ſound; for ſound does not conſiſt of parts that fly from the body (as Lucretius imagines); it is only an agitation of the rigid parts of the air, as a thouſand experiments can evince; but two may ſuffice. One is taken from common obſervation. For, touch the ſounding wire of virginals at one end, and the noiſe ceaſes, though the touch cannot hinder the flux of atoms from any part but that which it immediately preſſes. The other is known to all who have heard, that a bell will not ſound in the exhauſted receiver, though the parts might there fly off with greater eaſe, they being not troubled with any ambient reſiſting air.

Ver. 732. That is to ſay, in our dreams we ſee with the mind, and when awake, we believe the viſion true: Yet never any Centaur, Scylla, Cerberus, or any monſter of the like nature, had a being: But the images of ſuch things come and ſhow themſelves to our minds, from the ſeveral images of ſeveral things joined in one image.

Ver. 733. The Centaurs were feigned to be monſters with a human face, and the body of a horſe. They were indeed, as ſome ſay, people of Theſſalia, that inhabited the mountain Pelion, and the firſt that fought on horſeback; which gave riſe to the fable. Hence they were called *ſemiferi* and *bimembres*; and *nubigenæ*, cloud-begotten, becauſe they were begot by Ixion on a cloud. See more of them, Book V. ver. 930.

Scylla was feigned to be a monſter, whoſe upper parts reſembled a woman, and her lower a company of dogs. Now Scylla was the daughter of Phorcus, with whom Glaucus fell in love: and, being deſpiſed by her, he applied himſelf to the witch Circe, to procure a ſpell to make her love him. But Circe, who was herſelf in love with Glaucus, and enraged that he preferred Scylla before her, infected a fountain in which Scylla uſed to bathe, with poiſon of ſo noxious a nature, that Scylla, going into it, inſtantly found all the lower parts of her body transformed into the mouths of barking dogs: Scared at this deformity, ſhe immediately threw herſelf into the neighbouring ſea, on the oppoſite coaſt, of which they likewiſe feigned Charybdis to be changed into a rock. And there are now two dangerous whirlpools in the Sicilian ſea, called by the name of theſe two fabulous monſters. See Book i. ver. 740. But

there was another Scylla, daughter of Nisus, king of Megara, who betrayed her father, having first cut off his fatal hair to his enemy Minos, with whom she was in love: and was changed into a heron. And Virgil says, that it was she who was transformed into this monster.

Quid loquar? aut Scyllam Nisi, quam fama secuta est,
Candida succinctam latrantibus inguina monstris,
Dulichias vexâsse rates, et gurgite in alto,
Ah timidos nautas canibus lacerâsse marinis.
Eclog. vi.

But many accuses Virgil of confounding the two fables, and for giving to the Scylla of Nisus what belongs to the Scylla of Phorcus, and read, "quid loquar? aut Scyllam Nisi, aut quam," &c. But Cerdanus justifies the common reading, by the example and authority of Ovid, who, Amor. lib. iii. Eleg. xii. ver. 18. gives dogs likewise to the Scylla of Nisus:

Per nos, Scylla patri cano furata capillos,
Pube promit rabidos inguinibusque canes.

And of Propertius, L. iv. El. iv. v. 4.

Quid mirum in patrios Scyllam fæviisse capillos,
Candidaque in fœvos inguina versa canes?

This too was feigned to be a monstrous dog with three heads, who guarded the gates of hell; from whence Hercules is said to have dragged him, having first bound him in chains. See Book III. ver. 1015.

Ver. 736. The poet here mentions three sorts of images. I. Those that fly from real things: Such are the images of a man, of a lion, of a horse, of a house, in a word, of all things that strike our eyes, and are the cause of sight. II. Those which of their own accord are bred in the air and clouds: as the images of giants, mountains, huge beasts, and the like, which sometimes appear to us in the clouds. III. Those that are composed of the conjoined figures of these images: And such are the images of Centaurs, Scyllas, Cerberus's, and the like. Of the two first sorts he has already treated at large in the beginning of this book, and is going to treat of the third.

Ver. 740. Here the poet teaches how the third sort of image is made, that is to say, those that are composed of several images of things, joined in one image. For never Centaurs, Chimæras, or monsters of like nature lived, or had a being. But the image of a Centaur is made partly of the image of a man, partly of the image of a horse. The image of a Chimæra is made of the image partly of a man, partly of a goat, partly of a lion. And in like manner of all other monsters.

Ver. 748. In these seven verses, he proves, that imagination is caused by images; because a lion, for example, which we think we see, is exactly like a lion that we see with our eyes: And as sight is made by images, so too is imagination, which is equal to sight, and differs from it in this only, that the mind sees objects that are invisible to the eye. Though our translator has in this passage fully enough expressed the doctrine of Lucretius, yet he has omitted the example the poet brings to illustrate his argument: Let us fancy, says he, that we see a lion rather than any other animal. Certainly a lion is not seen by the eyes any otherwise than by his image: But cogitation is made in the same manner as sight is: Therefore cogitation is made by the appulsion of an image, which image, nevertheless, is indeed of a more tenuious nature, by reason of the more tenuious nature of the mind.

Ver. 755. In these fifteen verses, he observes, that the images of the dead seldom offer themselves to men who are awake, but generally to those who sleep: The reason of which, he tells us, is, because the images that are continually wandering to and fro in all places, rush with such violence upon the sleeper, that, penetrating into his very mind, they shake and disturb it to such a degree, as begets in it an imagination of the very things whose images they are. And the reason why we believe persons long since dead to be actually present with us, is, because the senses, by which alone we distinguish between true and false, being lulled and stupified in sleep, cannot perform their functions: Besides, the memory too is stupified, and we do not at that time even recollect that the person who seems to be present with us is dead.

Ver. 770. But these images which appear to us in our sleep, run, leap, and dance up and down; of which the poet, in these ten verses, gives this reason: Because, since we continue some time in the same imagination, it is not all that while the same image that is before our mind; but many images that offer themselves successively, image after image, in a never-ceasing and continual flow. Now, if all these images remain in the same posture, the thing we imagine with ourselves to see will seem without motion, but if the posture of the images vary, it must of necessity seem to move.

Ver. 775. This and the following verse are rendered from three verses, which some copies have, but the interpreters generally reject them. They are these:

Tanta est mobilitas, et rerum copia tanta,
Tantaque sensibili quovis est tempore in uno
Copia particularum, ut possit suppeditare.

Creech has omitted them in the text of his Latin edition, but says, nevertheless, that a probable meaning, and such a one too as is very proper to this passage, may be drawn from them. The first of them, "Tanta est," &c. is a little below in the original, ver. 800. and in this translation, ver. 802.

Ver. 788. From hence to ver. 831, the poet proposes and explains some difficulties that may be started against this doctrine of thinking, by the means of images. The first difficulty is contained in ten verses, to this effect. Since the mind perceives by images, how comes it to pass that we can think on any object we please? For it seems ridiculous to pretend that the images ob-

ſerve our will, and are always ready at hand to obey it. The ſecond is in ſix verſes, to this purpoſe. Since the images ſeem to move with gracefulneſs, and even to obſerve time and meaſure in their motions, are we to believe that they have learned to dance? A thought truly worthy of a philoſopher! To theſe two objections, Lucretius anſwers, in twenty-four verſes, that what we take to be one ſingle moment of time, is indeed many moments; ſo that the images being, as they are extremely ſubject to motion, a multitude of them preſent themſelves to us every moment, and among them the image of the thing, of which we pleaſe to think. Beſides, though all kinds of images are continually at hand, yet they being moſt tenuious and ſubtle, the mind cannot perceive them, unleſs ſhe watch with great diligence, and endeavour to do ſo: for ſubtle things will eſcape unheeded from a negligent mind, even as they do from a careleſs and unwatchful eye. Thus Cicero Tuſcul. Quæſt. lib. i. ſays admirably well, "Itaque ſæpè aut cogitatione, aut aliquâ vi morbi impediti, apertis atque integris oculis et auribus, nec videmus, nec audimus." But the ſame author derides and confutes this opinion of Epicurus concerning images, and the cauſe of thinking by their appulſion, Epiſt. lib. ad Caſſ. Epiſt. xv. De Natur. Deor. lib i. And de Divinat. lib ii.

Ver. 804. It being demanded, why any man could think on what he pleaſed? The anſwer is, That images are conſtantly at hand, but being very thin and ſubtle, they cannot be perceived, unleſs the mind endeavours, which, though preſſed by all the difficulties propoſed concerning images, yet may receive a farther examination. For, firſt, the mind muſt think on the object before this endeavour, elſe why ſhould ſhe ſtrive, why apply herſelf particularly to that? And that this argument is ſtrong againſt the Epicureans, is evident from that queſtion which Lucretius propoſeth in his fifth book, about the beginning of ideas in his deities, which I have already reflected on. But more: This endeavour of the mind is a motion, nothing being to be admitted in the Epicurean hypotheſis but what may be explained by matter variouſly figured and agitated: Now Epicurus hath ſettled but three kinds of motion, καῖὰ ῥάθμην, καῖὰ παῤέγκλισιν, and καῖὰ πληγήν, by weight, by declination, and by ſtroke; and the two latter neceſſarily ſuppoſe the former, and therefore if that καῖὰ ῥάθμην, by weight, cannot belong to the ſoul, it is abſurd to conclude this endeavour to be either of the latter: And here it muſt be conſidered, that the Epicurean ſoul is material, and therefore weight is a property of all its parts, which will neceſſitate this ſoul to ſubſide in all the veſſels of the body, as low as poſſible; and therefore it cannot actually enjoy this motion, and conſequently no endeavour.

Here I might be copious (for it is an eaſy taſk) in laying open the weakneſs of the arguments, by which he endeavours to prove, that our limbs were not made and deſigned for proper offices and employments; it would be an endleſs trouble to purſue him through all the abſurdities which lie in his opinions concerning ſleep, and ſpontaneous motion: for every man hath his own conſtant experience to confute them, and therefore, as Lactantius thinks a loud laughter the only ſuitable reply to the former, let the others be contented with the ſame anſwer, nor hinder me in the proſecution of the propoſed argument.

And here it muſt be confeſſed, that a thouſand of theſe ſtories are the genuine productions of fear and fancy: Melancholy and inadvertency have not been unfruitful; and we owe many of them to ſuperſtition, intereſt, and deſign: But to believe all counterfeit, becauſe ſome are ſo, is unreaſonable, and ſhows a perverſeneſs as faulty as the greateſt credulity. For when ſuch are atteſted by multitudes of excellent men, free from all vanity, deſign, or ſuperſtition, who had the teſtimony of their ſenſes for their aſſurance, and would not believe it till after curious ſearch and trial; we muſt aſſent, or ſink below ſcepticiſm itſelf: for Pyrrho would fly a threatening dog, and make his excuſe, χαλεπὸν, μὲν ὅλον τὸν ἀνθρωπον ἐκδῦναι· It is hard to put off the whole man. And that there are ſuch ſtories delivered, with all the marks of credibility, I appeal to the Collection of Mr. Glanvil. Let any one look on that which is recorded by the learned Dr. Gale, in his notes upon the fifth chapter of the third ſection of Jamblichus de Myſteriis, and then I ſhall give him leave to uſe his atoms and his motion to the greateſt advantage, but for ever deſpair of an explication. The ſtory ſpeaks thus in Engliſh:

'In Lambeth lives one Francis Culham, an honeſt 'man, and of good credit; this man lay in a 'very ſad condition four years and five months: 'The firſt ſymptom was unuſual drowſineſs, and 'a numbneſs for three days, which forced him 'to take his bed: In the firſt month, he took 'little or no meat or drink; the ſecond, he faſted 'ten days, and often afterward five or ſeven, 'He fed on raw and boiled meat with equal 'greedineſs; never moved himſelf in the bed, 'and waked conſtantly for the firſt years, at leaſt 'never cloſed his eyes, but kept them fixed and 'ſteady. He made no articulate ſound, nor took 'any notice of his wife and children, nor ſeemed 'to feel the knives and lances of the chirurgeons. 'At laſt, given over by all, he thus unexpectedly 'recovered: In the Whitſun. week, 1675, he 'ſeemed to be wakened out of a very ſound 'ſleep, and (as he relates it) his heart and bowels 'grew warm, and his breaſt freed from that 'weight which before oppreſt it, and he heard a 'voice which bid him go to prayers, and then he 'ſhould be well. Paper and ink being brought, 'with a trembling hand, he writ theſe words: "I deſire that prayers be made for me." Two 'miniſters came, and when they had ſufficiently 'examined the matter, and found it free from 'all cheat, they began thoſe prayers which the 'Engliſh liturgy appoints for the ſick, and when 'they were come to "Glory be to the Fa-"ther," &c. the ſick man ſpake with a loud voice, "Glory be to God on high." And in two days 'time, his feet, hands, and other limbs, were

'perfectly reſtored; but he could not remember 'any thing that was done to him during all the 'four years. And this relation I aſſert to be very 'true.' Now, though ſuch as theſe do not directly prove the immortality of the ſoul, yet they ſufficiently take off all pretenſions of the Epicureans againſt it; ſince they evidently prove, that there are ſome ſubtle unſeen ſubſtances permanent and durable, and conſequently immaterial; for they cannot imagine that any material ſubſtance, thinner than ſmoke or air, can be leſs ſubject to diſſolution than thoſe, though they contradict themſelves, and grant the eternal bodies of their deities to be ſuch.

Ver. 820. Theſe two verſes our tranſlator has omitted. They run thus in the original:

Deinde deopinamur de ſignis maxima parvis:
Ac nos in fraudem induimus, fruſtramur et ipſi.

In theſe two verſes the poet adds a third difficulty, concerning the diſtraction or abſence of the mind: for often, even when we are awake, we lead ourſelves into errors and deceptions: as when we conceive a ſmall object to be a great one. Thus Ariſtotle lib. de Inſomn. ſays: That we are eaſily deceived in matters relating to the ſenſes, eſpecially when our mind is any ways moved and diſturbed: as men in love have always in their mind, and ſeem to ſee the likeneſs of the object of their flame: Thus cowards fancy to themſelves that the enemy is coming to attack them, &c. Of which Cæſar gives us an inſtance in his Commentaries, de Bello Gall. lib. i. where he relates of one Conſidius, a man otherwiſe very expert and knowing in military affairs, that being ſent to get intelligence of the motions of the enemy, he was ſtruck with ſuch a terror, that when he came back, he reported he had ſeen things that he never ſaw.

Ver. 822. A fourth difficulty, if it be another from the former, is contained in theſe ten verſes. Why the ſame image appears to us in our ſleep, in different kinds and forms: for example, now a male, now a female, now young, now old, &c. But he anſwers, That we ought not to admire at this, ſince a man who ſleeps is deprived of the uſe of his external ſenſes, nay, even of his memory; inſomuch that he forgets the greateſt part of his dreams.

Ver. 832. To the foregoing diſputation, he ſubjoins, in theſe twenty-ſeven verſes, another of Epicurus's opinions: viz. The eyes were not made to ſee, nor the ears to hear, nor the tongue to ſpeak, nor the feet to walk, &c. becauſe theſe members were prior to ſeeing, hearing, ſpeaking, walking, &c. For Epicurus taught, that the members of our body were not made deſignedly for proper uſes, but being made by chance, the uſe that firſt offered itſelf, was laid hold of by each member: For if any thing was made for a certain future uſe, that uſe muſt have been known before; or ſomething muſt have pre-exiſted, that ſignified, that ſuch a uſe would be convenient or neceſſary: For example, if there had not been a previous uſe of fighting, ſleeping and quenching the thirſt, armour, beds, cups had never been thought of. Thus the eye could not be made for the ſake of ſeeing, ſince nothing had been ſeen before there was an eye to ſee with, nor was it known what ſight was to be; nor the ear for the ſake of hearing, ſince nothing had been heard, and it was unknown what hearing was to be. And in like manner of the other members of the body.

This was the opinion of the Epicureans concerning the members of the bodies of animals. And certainly if there be any thing in the Phyſics of Epicurus, that can be ſaid to be moſt improbable, not to uſe a harſher term, it is what Lucretius in this place aſſerts. But why was Epicurus of this opinion? The reaſon is as evident as the opinion is extravagant: becauſe he ſaw that otherwiſe he muſt have allowed a Providence, which is not more viſible in any thing than in the wonderful mechaniſm of the parts of a human body. But all the ancient philoſophers were not of this wild opinion; and Ariſtotle blames Anaxagoras for this belief, when at the ſame time he owned, that man was the moſt prudent of all animals, becauſe of all of them, he alone had hands: ſince his hands were evidently given him, that he might uſe them. The Stoics too were of a contrary opinion; witneſs Cicero, lib. 3. de Finibus, where we find theſe words: "Jam membrorum, id eſt, partium corporis alia videntur propter uſum à naturâ eſſe donata, ut manus, crura, pedes, et ea, quæ ſunt intus in corpore, quorum utilitas quanta ſit à medicis diſputatur; alia autem nullam ob utilitatem, quaſi ad quemdam ornatum, ut cauda pavoni, plumæ verſicolorus columbis, viris mammæ atque Barba." Of the members, that is, of the parts of the body, ſome ſeem to be given us by nature for uſe, as the hands, the legs, the feet, and thoſe that are within the body, of which how great is the utility the phyſicians are ſtill in diſpute: Others for no ſervice, but rather for ornament as the tail to the peacock, the changeable feathers to pigeons, and the nipples and beard to man. Galen proves by a long diſcourſe, and many examples in his excellent treatiſe, De uſu Partium, that every animal, without the help of any teacher, preconceives the faculties of his own ſoul, and to what uſe to put the parts of his body; as for example, the harp taught not the muſician, nor a pair of tongs the ſmith to make them. And Lactantius too confutes this doctrine of Epicurus, in his book De Opificio Dei, cap. vi. where he argues in theſe words: "Quid ais, Epicure? Non ſunt ad videndum oculi nati? Cur igitur vident? Poſtea, inquit, uſus eorum apparuit. Videndi ergo cauſâ nati ſunt; ſiquidem nihil poſſunt aliud quam videre: Item membra cætera cujus rei cauſâ nata ſint, ipſe uſus oſtendit: Qui utique nullo modo poſſet exiſtere, niſi eſſent membra omnia tam ordinatè ac providenter effecta, ut uſum poſſent habere. Quid enim ſi dicas, aves non ad volandum eſſe natas, neque feras ad fæviendum, neque piſces ad natandum, neque hominis ad ſapiendum, cum appareat ei naturæ officioque ſervire animantes, ad quod eſt quæque generata. Sed videlicit qui ſum-

mam veritates amsit, semper erret necesse est. Si enim non Providentiâ, sed fortuitis Atomorum concursionibus nascuntur omnia, cur nunquam fortuito accidit, sic coire illa principia, ut efficerent animal ejusmodi, quod naribus potius audiret, oderetur oculis, auribus cerneret?" &c.

Ver. 842. This has been the constant reading of all the former editions, and therefore I would not alter it in this: Lucretius says,

Non fuit ante videre oculorum lumina nata.

where I take *videre* to mean not the light by which we see, but the use of seeing: which is better expressed by, No sight before the eye, than by, No light, &c.

Ver. 852. "Ex usa quæ sunt vitâque repertâ," says Lucretius: upon which Faber observes, that the word *vita* is used in the same sense as the Greeks use τὸν βίον, not ζωὴν that is to say, for experience, and παράξεσι τῶν ἐν τῷ βίῳ. which the word convenience does not fully express. Manilius, lib. i. v. 61.

Per varios usus, artem experientia fecit,
Exemplo monstrante viam.

Ver. 859. If any one start any difficulty concerning hunger and thirst, Lucretius fully solves it in these eighteen verses. Many bodies, says he, exhale and flow from all things; but most of all from animals, many through the pores of the body, many through the mouth: now these parts being withdrawn, and gone away, the rest cleave not so close and firm together, and therefore the whole body must, of necessity, be the weaker. To fill up these intervals and empty spaces, we take in meat and drink, which repair the decays of the body, and make it whole again: and thus it recovers its strength. Drink too serves to refresh us, and cools that heat, which, for want of it, would dry too much, and parch up all the inward parts of the body.

Hunger and thirst are by many ranked among the number of senses: and indeed it cannot easily be conceived, how a sensible appetite can be incited and stirred up to a desire unless some object be presented to it, on which it may settle and fix its desire: And in this case, it will be hard to deny, that they are senses as well as appetites: For certainly if hunger and thirst induce a desire of meat and drink, they doubtless suppose beforehand a sense of the want of them: And thus, when we have once conceived a sense of those things, and reflected on the good they will do us, we are necessarily induced to a desire of having them, in order to remove the troublesome sensation, that the want of them has brought upon us.

Ver. 869. This and the five next verses are so excellent, that I cannot but bespeak the readers particular attention. Where can hunger with his wide-gaping jaws be more properly lodged, than in the almost parched up veins? And what can be more aptly expressed, than that panting and inert-winded thirst is washed from the body by the infusion of moisture? Thus Lucretius believes that thirst is caused by hot vapours that kindle a flame in the bowels, and all philosophers agree that thirst is an appetite of cold and moisture.

Ver. 877. In these twenty-eight verses, he briefly inquires into the cause of the voluntary motion of animals, which he explains in this manner. Certain seeds, by which the will to move may be stirred up in the mind, strike the mind: This causes the mind to will; and that she may execute what she wills, she rouses up the soul that is annexed to her, and diffused through the whole body, (see Book II. v. 249.) And hence the whole frame is moved and thrust forward: But because the soul, that thin and subtle substance, may seem insufficient to move so great a weight, he tell us, that the air from without comes to her assistance; and entering into the pores of the body, as it is rarefied by motion (for bodies exercised with motion, become rare), helps to drive on the burden: And thus the body is moved and shoved forward by the soul labouring within, and by the air that enters from without, even as a ship is driven with sails and oars: These indeed seem to be but weak instruments: but so too is a gentle gale that drives the stoutest vessel before it; and weak too is the hand that governs the rudder, yet it twists the ship about, and makes it change its course, even in its full career: Thus too there are small engines that will heave up mighty weights.

Ver. 883. In like manner, Book II. v. 249. he taught, that the will is the principle of motion,

In animals the will moves first, and thence
The motions spread to the circumference,
And vig'rous action through the limbs dispense.

And ver. 258. That the beginning of all motion is within the heart,

———All motions rise within the heart,
Beginning by the will, then run through ev'ry part.

Thus too Aristotle, lib. v. de Animal. asserts, that the will and the mind are the two causes of motion.

Ver. 892. The body of animals, who are exercised with motion, grows rare. See the reason, ver. 863.

Ver. 895. *Both these things*, &c.] i. e. The will to move, and the air that enters into the rarefied body: which is as much as to say, the first cause of motion, and the cause that advances and helps on that motion. For the poet says, that not only an internal but an external cause likewise contributes to animal motion.

Ver. 896. "Lucret. Ut navis velis ventoque." But Creech has followed the judicious conjecture of Gassendus, who thinks it ought to be read, "remis ventoque;" For sails and wind are in effect but one and the same thing.

Ver. 899. But because it may seem strange, that the minute corpuscles of images should move the whole body, he confirms the truth of his assertion, by an example. Now Aristotle, Mechan. cap. 7. gives the reason, why the higher the sail-

yard is, the ship sails the faster, even with the same sheet, and the same wind. But to comprehend the reason of it aright, it will do well to know in the first place, why a lever will move a weight of so great a burden as we daily see it does. A lever is a bar of iron, or of wood, a little crooked at one end: The Greeks call it *μοχλος*, the Latins, *vectis*, and the crooked end *rostrum*: from whence perhaps comes our rostle, by which name it is known in some places, though it be generally called a lever. Vitruvius, lib. 8. cap. 10. teaches, That if we put the *rostrum* of a lever under a weight, which a multitude of hands cannot move; if but one man weigh down, or depress the handle, or other end of the lever, it will easily lift up the burden: The reason of which is, because the foremost part, or *rostrum* of the lever, which is shorter from that pression, that is in the place of the centre, undergoes and bears the burdens; and because the head or handle of the lever, being farther distant from that pression or centre, does, when it is weighed and pressed downward, make a motion of circination, as they call it; and by that motion causes the pression by a few hands to heave up a weight of the greatest burden. For always, by how much more the hindmost part of the lever, that is to say, the part from the centre to the lever's handle, which is weighed down by the mover, is longer than the foremost, that is to say, than that part, which, from the centre, belongs to the *rostrum* of the lever; so much the more easily will the burden be moved.

This being premised, it is easy to understand why a sail, swelled with wind, makes a vessel move very swiftly, though the sail-yard be not far distant from the top of the mast: For the mast is, as the lever; the foot or bottom of the mast supplies the place of the pression or rowler; and the wind which fills the sail, is as the mover. Therefore the farther distant the sail-yard is from the foot of the mast, the faster the ship will be driven: For the line, that is farthest removed from the centre draws the largest circle: and the larger each circle is, the swifter it is moved.

Ver. 902. Of this Vitruvius, lib. viii. cap. 10. and Aristotle 6. Mechan. gives this reason: Because the rudder supplies the place of the lever; the ship, of the burden, the pilot, of the mover, and the hinges on, and to which the rudder hangs and is fastened, the place of the pression or roller.

Ver. 905. Lucretius having made his animal perform all the operations of the senses, puts him to bed; yet leaves him not even there, but considers him while he is asleep; and disputes of sleep to ver. 970. and from thence to ver. 1031. of dreams. In the first place he tells us, that sleep is caused by the soul's being grown so weary and feeble, that she can no longer support the limbs (for the soul is the foundation of the body); and thence proceeds a weakness of the joints, and a remission of the senses. Now the reason why the soul is thus oppressed, is evident: For the body is incessantly weakened by the external air, and by that which it inspires and draws in: for that air does not only brush and rake the surface of the body, but entering into the pores and passages, is admitted and received into the inmost parts, and strikes and grates them likewise: This causes a disjunction or separation, of the first bodies, and the dissolution of the soul itself of necessity follows that separation, insomuch, that part of it is thrown out, part, to use the words of Pliny, recedes into the middle, and the remaining part, that is overmuch disjoined, is dispersed and scattered through the members: And from hence we may understand, why a most profound sleep ensues after labour and eating: For food chokes up and stuffs the passages through which the soul ought to move freely: and thence proceeds a greater dissipation, or a greater consipation of the soul: And by weariness and lassitude the body grows weaker, and that weakness produces the same effects as repletion. Ὑπνος δε γίνεται πεπαμένων των τῆν ψυχῆς μερῶν, των καῖ ὅλης τῆν σύγκρισιν παρεσταμένων, ἢ ἐγκατοχρέων, ἢ διαφορεμένων, ἥτε καὶ συχνοτέρων τινῶν τοῖς ἐσταμένοις, τὰ μὲν ἐξωθέντων, τὰ δὲ συνηγμένων. Epicurus ad Herodotum.

Ovid. Metam. 11. v. 625.

Somne quies rerum, placidissime somne Deorum,
Pax animi, quem cura fugit, qui corda diurnis
Fessa ministeriis mulces, reparasque labori.

—O sacred rest!
Sweet pleasing sleep! of all the powers the best!
O peace of mind, repairer of decay,
Whose balms renew the limbs to labours of the day;
Care shuns thy soft approach, and sullen flies away.

Dryd.

And Shakespeare deserves to be here remembered,

Sleep, that locks up the senses from their care:
The death of each day's life: tir'd nature's bath!
Balm of hurt minds! Great nature's second course,
And her best nurse: Chief nourisher in life's feast:
Death's counterfeit!

And Sir. W. Davenant in Gondibert.

———The weary world's best med'cine, sleep!
Sleep shuts those wounds where injur'd lovers weep,
And flies th' oppressors to relieve th' oppress'd.
Sleep loves the cottage, and from court abstains;
It stills the seamen, though the storm be high;
Frees the griev'd captive in his closest chains,
Stops want's loud mouth, and blinds the treacherous spy.

Ver. 907. These four verses we have had already in this book, v. 186. See there the notes upon them.

Ver. 916. First in these sixteen verses he teaches, that sleep is caused in us, when by reason of the power of the soul's being impaired and weakened, the members of the body are, in a manner, loosened and dissolved. Our senses, says he, are

locked up, and hindered by ſleep from performing their functions: But our ſenſes proceed from the operation of the ſoul: Therefore it neceſſarily follows, that when the animal is aſleep, his ſoul muſt partly be gone out of him, partly be retired into the inmoſt receſſes of the body, and partly be diſperſed through the members. But he will not allow, that when the animal ſleeps, the ſoul is entirely retreated from the body; for unleſs ſome part of it remained alive, neither the animal, nor his ſenſes could awake, or revive again after his ſleep. This he illuſtrates by an example: For as fire, buried in aſhes, is not wholly extinguiſhed; ſo neither is the whole ſoul extinct in a ſleeping animal.

Ver. 918. Ariſtotle almoſt to the ſame purpoſe, in his book de Somn. where he ſays, that ſleep is a coition of heat in the inmoſt parts of the body, and a natural compreſſion of it, by the circumfuſion of its contrary, cold; becauſe the humidity of the exhalation repels and drives the heat into the interior region of the body.

Ver. 932. In theſe four verſes, he ſays, that he will now tell what cauſes this change and alteration of the ſoul: How it is poſſible that ſhe can be divided in ſuch a manner as to be ejected partly out of the body, as to retire partly into the inmoſt parts of it, and as to be partly diſperſed through the members, and to languiſh and become dull and ſtupified together with the whole body.

Ver. 936. In theſe twenty-three verſes, he explains the cauſes of the body's growing weary, and falling into ſlumber. He begins by the air, as well that which externally ſtrikes the body on all ſides, as that which is drawn in and breathed by animals in their reſpiration. For the firſt muſt neceſſarily very often ſtrike the utmoſt parts of bodies, which it always ſurrounds: and the air that is inſpired or drawn into the body muſt likewiſe ſtrike the interior parts of it: Now theſe twofold ſtrokes are the cauſe that diſturbs the ſites and orders of the atoms, and of the enſuing weakneſs of the whole body and ſoul: For part of the ſoul is forced out of the body, part of it retreats inwardly, and part of it is diſperſed through the limbs; ſo that its parts being thus diſjoined and diſunited, it can no longer perform its due functions: And, therefore, the motions of ſenſe being changed, the ſenſe too goes away. And thus what was the body's prop and ſupport being abſent, the body muſt neceſſarily grow weak and fall.

Ver. 939. That is, that things may be ſafe and the better protected from the injuries of the air, they are covered with ſkins, barks, &c. Cicero, lib. ii. de Nat. Deor. purſues this yet farther: "Animantium," ſays he, "aliæ coriis tectæ ſunt, aliæ villis veſtitæ, aliæ ſpinis hirſutæ: plumâ alias, alias ſquamâ videmus obductus," &c. Some animals are covered with hides, ſome clothed with hair, and ſome are horrid with briſtles: We ſee others wrapt up in feathers, others in ſcales, others in ſhells, &c. Thus Pliny, lib. vii. in Proœm. "Ante omnia unum animantium cunctorum alienis velat opibus: Cæteris vero tegumenta tribuit, teſtas, cortices, coria, ſpinas, villos, ſetas, pilos, plumam, pennas, ſquamas, vellera, &c.

Ver. 951. Thus Pliny, lib. xi. cap. ult. ſays, "Somnum eſſe animi in ſeſe medium receſſum."

Ver. 957. Milton, in Paradiſe Loſt:

——The timely dew of ſleep
Now falling, with ſoft ſlumb'rer weight, inclines
My eyelids——

And again:

Then gentle ſleep with ſoft oppreſſion ſeiz'd
My drowſed ſenſe.——

Ver. 959. In theſe eleven verſes, the poet gives a reaſon why we are moſt inclined to ſleep, and ſleep moſt ſoundly after eating or labour. Becauſe, ſays he, the aliment, as it diſtributes itſelf through the body, affects it in the ſame manner as the two ſorts of air mentioned in the foregoing argument: Nay, the ſtrokes it gives are the greater, becauſe its body is more firm and ſolid than that of air. And we ſleep the ſounder after labour, becauſe more atoms being agitated and put into motion by the hard labour of the wearied body, they mutually diſturb and diſorder one another: And thence it proceeds, that the ſoul retires farther into the interior parts; that a greater part of it is thrown out; and that the particles of the ſoul that remain within, are the more ſeparated, and the farther diſjoined from one another. Ariſtotle, lib. de Somn. et expergef. ſays to the ſame purpoſe, that the humid vapours of meat and drink aſcend, and are borne upwards; that when they are mounted as high as they can go, they then, becauſe they are heavy and corporeal, fall down again; and drag along with them, and detrude into the interior parts, the native vital heat, which of its own accord is borne upwards; by which means ſleep is produced: And, therefore, after meat ſleep is generally the moſt profound. Likewiſe after labour, becauſe labour diſſolves, and in a manner corrupts the body. But that which wears off from a waſting body, is as meat undigeſted. Thus Ariſtotle: But our phyſicians give us another reaſon: They tell us, that we are diſpoſed to ſleep after we have eaten, becauſe the ventricle being then full, the blood has not ſo free and open a paſſage down the aorta, which, ſince it lies behind the ſtomach, muſt therefore be compreſſed by it, when it is filled and turgid with aliments: Thus this repletion of the ventricle hinders the blood from deſcending in the ſame quantity as it did before when the ſtomach was empty: Nay, on the contrary, it forces it to aſcend in greater plenty toward the head, which, for this reaſon, ſeems more ſtuffed after a plentiful meal than it was before, and the face too grows redder and hotter, as do likewiſe the hands: And this any man may diſcern by experience in his own perſon: Now, the blood thus ruſhing to the head, compreſſes the glands of the brain, and hinders the free ſeparation of the animal ſpirits by them: To this we may add the

mixture of the thick chyle with the blood; which mixture intricates the volatile parts of it, that otherwiſe would be ſecerned by the glands of the brains. We are inclined to ſleep after hard labour, walking, and the like; for this reaſon: There is a certain quantity of ſpirits neceſſary for every muſcular motion; now all motion diſſipates the ſpirits, and conſequently the more violent the motion is, the greater will be the diſſipation; and this diſſipation muſt of neceſſity produce a relaxation of the parts and members of the body: Among the reſt, of the brain, which then, according to ſome, ſubſides, and thus hinders animal ſecretion. For the ſame reaſon too, we are ſleepy after having been long awake; as alſo, becauſe the brain being relaxed for want of ſpirits, which, keeping the fibres turgid, are the cauſe of all the ſtiffneſs and ſtraitneſs of the body, the dull and heavy ſerum inundates in the brain.

Sleep, therefore, is a thing which the frailty of human nature makes neceſſary: and ſince all our motions and actions depend on parts that are ſo eaſily diſſipated as the ſpirits are, it is of abſolute neceſſity that we allow ſome time to recruit, by ſleeping, what we loſe by being awake. Thus ſleep may properly be defined, a certain ſeriation of the external ſenſes, that is to ſay, a total ceſſation of all ſenſation and voluntary motion, proceeding from a defect of, or an impaired and diminiſhed motion in the animal ſpirits, not from any fault in the blood, or in the brain: Or otherwiſe: Sleep is a ſuſpenſion of action, and an impotence in which the ſoul is in a manner disjoined from the body, at leaſt ſo far as not to perceive or know any thing that paſſes in it: And thus the cauſe of ſleep muſt be the defect or fault of that part by which the ſoul is united to the body, i. e. of the animal ſpirits, which, by their motion to the brain, excite in the ſoul the perception of all ſuch things as occaſioned their reflux to the brain: For the operations of the exterior ſenſes are performed when we are awake, and in this manner: The nerves of the organs of ſenſation being extended and turgid with ſpirits, that are tranſmitted to them from the brain, are ſtruck by the ſpecies of things; then the ſpirits themſelves, by a certain reſilition towards the brain, make an impreſſion on the faculty that reſides within it: Whence it follows, that unleſs the interior faculty be moved, and perceive, there can be no ſenſation. This being granted, it neceſſarily follows, that the ſeriation of the exterior ſenſes, of which we were ſpeaking, therefore happens, becauſe the orifices of the nerves grow weak and flag; and by that means are ſtopped up: And thus the nerves being no longer turgid by the afflux of the ſpirits, but rather relaxed, the members begin to fail, the ſpirits no longer reſult towards the brain, nor can propagate or carry on to the interior faculty the ſtrokes they receive from exterior objects. But theſe things require a longer diſputation than this interpretation will permit.

Ver. 970. Here the poet begins to treat of dreams. Now Epicurus, as was ſaid before, was of opinion, that the minds of ſleeping animals are ſtruck and moved by external and adventitious images, and that theſe are the cauſes of dreams. And the reaſon, ſays Lucretius, why we chiefly dream of thoſe things about which we are moſtly taken up and buſied in the day, notwithſtanding that images of all kinds are conſtantly at hand, is, becauſe the paſſages through which the images had ſo often entered, are not cloſed up, and therefore more eaſily receive and admit the images that belong to the actions in which we have been employed, than thoſe that appertain to other things. And not only the dreams of men, but of other animals, may be explained in this manner. Nor is it to be wondered at, that ſome dreams fright us more than others; for they whoſe images are compoſed of rough ſeeds, that rudely grate and wound the mind upon which they ſtrike, muſt of neceſſity be the moſt frightful. This is the account Lucretius gives of the cauſe of dreams in general; and he enumerates ſeveral dreams that are moſt uſual to men, and aſcribes the chief cauſe of them to the various deſires, employments, and diverſions with which they have been taken up and buſied when they were awake, and in which their thoughts were principally employed. Ariſtotle ſays, that dreams are the relics of thoſe things which the ſenſes, when awake, perceive; and that, ſince the objects of our waking ſenſes do not immediately vaniſh, as ſoon as the ſenſes ceaſe to be affected with them, but remain ſome ſmall time, and at leaſt leave behind them a ſtrong impreſſion on our thoughts, it is nothing ſtrange that the images of thoſe things which, when we were awake, we either did or ſpoke of, or thought of, ſhould offer themſelves to us when we are aſleep: Macrobius, in Somn. Scip. lib. i. cap. iii. enumerates five ſeveral ſorts of dreams which the ancients had obſerved, and diſtinguiſhed by as many ſeveral names. The Greeks called them, ὄνειρος, ὅραμα, χρηματισμὸς, ἐνύπνιον, and φάντασμα. The Latins, "Somnium, viſio, oraculum, inſomnium," and "viſus," which laſt is the word Cicero always uſes when he has occaſion to expreſs the φάντασμα of the Greeks. It would be too tedious to give an account of each of them, and of the ſuperſtitious credulity of the ancients concerning dreams: We therefore refer the reader to Macrobius, in the place above cited; where he will abundantly find wherewith to ſatisfy his curioſity. Chaucer, in his tale of the Cock and the Fox, gives us a phyſical reaſon of dreams: We will be obliged to Dryden for his thoughts, which, as he has tranſlated them into modern words, are as follows:

——All dreams
Are from repletion and complexion bred,
From riſing fumes of undigeſted food,
And noxious humours that infect the blood:
When choler overflows, then dreams are bred
Of flames, and all the families of red:
Red dragons, and red beaſts, in ſleep we view;
For humours are diſtinguiſh'd by their hue.
From hence we dream of war, and warlike things,
And waſps, and hornets, with their double ſtings,

Choler adust congeals our blood with fear;
Then black bulls tofs us, and black devils tear.
In sanguine airy dreams aloft we bound:
With rheums oppress'd, we sink in rivers drown'd:
The dominating humour makes the dream.

And the same author, in another part of the same poem, sums up the whole affair of dreams in a few lines, which are likewise thus rendered by Dryden:

Dreams are but interludes which fancy makes;
When monarch reason sleeps, this mimic wakes;
Compounds a medley of disjointed things,
A court of coblers, and a mob of kings.
Light fumes are merry; grosser fumes are sad;
Both are the reasonable soul run mad:
And many monstrous things in dreams we see,
That never were, nor are, nor e'er can be.
Sometimes we but rehearse a former play:
The night restores our actions done by day,
As hounds in sleep will open for their prey.
Sometimes forgotten things, long cast behind,
Rush forward to the brain, and come to mind:
The nurses legends are for truth receiv'd,
And the man dreams but what the boy believ'd:
In short, the farce of dreams is of a piece;
Chimæras all, and more absurd, or less.

Ver. 979. The meaning is, that they who go to see plays for some days together, are apt to dream of them at night, and in their dreams fancy they see the actors, hear them repeating their parts, and the music playing; as also that they see the audience and the decorations of the stage. This is the sense of Lucretius, which I the rather take notice of, because the words sport and play, in the first line of this paragraph, express but ill the comedies and tragedies of which the poet is speaking.

Ver. 1005. Here the poet begins to treat of frightful dreams, and teaches, that they are caused by images that flow from things which are composed of rough seeds.

Ver. 1007. The words of the text are,

At variæ fugiunt volucres, pennisque repentè
Sollicitant divûm nocturno tempore lucos, &c.

In which we may observe a scoff even worthy of Lucretius: Lucus, a grove, is thus described by the Scholiast upon Homer: *τὰς τόπος συνδένδρος ὕδωρ ἔχων, καὶ θεὸς ἀφιερώμενος.* Every place planted with trees, having water, and consecrated to the gods. Now Lucretius impiously insinuates, that the gods cannot protect their inmate birds from the image of a hawk.

Ver. 1012. Dreams of this nature, which are of the sort the ancients called *insomnia*, are elegantly described by Petronius, in these verses:

Somnia quæ mentes ludunt, volitantibus umbris,
Non delubra Deûm, nec ab æthere numina mittunt,
Sed sibi quisque facit. Nam quum prostrata sopore
Urget membra quies, et mens sine pondere ludit,
Quicquid luce fuit, tenebris agit: oppida bello
Qui quatit, et flammis miserandas sævit in urbes,
Tela videt, versasque acies, et funera regum,
Atque exundantes perfuso sanguine campos, &c.

To which I add these two excellent verses of the author of the Dispensary, in a description of night:

The slumb'ring chiefs of painted triumphs dream,
While groves and streams are the soft virgin's theme.

Ver. 1026, 1027. These four verses are omitted by Creech.

He was, according to some, the son, according to others, the servant of Somnus, the god of sleep, and father of dreams. Morpheus was so called, because his province was to imitate *τὰς μόρφας*, the looks and forms of men. He is described by Ovid, Metam. xi. ver. 364, where, speaking of Somnus the god of sleep, he says, that

Excitat artificem, simulatoremque figuræ
Morphea. Non illo jussus solertior alter
Exprimit incessus, vultumque, modumque loquendi:
Adjicit et vestes, et consuetissima cuique
Verba: sed hic solos homines imitatur——

Thus rendered by Dryden:

——Somnus, the drowsy god,
Excited Morpheus from the sleepy crowd:
Morpheus, of all his num'rous train, express'd
The shape of man, and imitated best:
The walk, the words, the gestures could supply,
The habit mimic, and the mien bely:
Plays well, but all his action is confin'd,
Extending not beyond our human kind.

But Mr. Rowe, in his Ulysses, extends his power much farther, nay, even makes him a god, but, I think, without authority: However, the passage is well worth the transcribing:

Still, when the golden sun withdraws his beams,
And drowsy night invades the weary world,
Forth flies the god of dreams, fantastic Morpheus:
Ten thousand mimic fancies fleet around him,
Subtle as air, and various in their natures:
Each has ten thousand thousand diff'rent forms,
In which they dance, confus'd, before the sleeper;
While the vain god laughs to behold what pain
Imaginary evils give mankind.

This Morpheus had two brothers, or fellow-servants, Phobetor or Icelos, and Phantasus, who likewise had their peculiar offices allotted them: This too we learn from Ovid, in the place above cited. I omit the original, and will give it only as translated by Dryden:

Another birds, and beasts, and dragons apes,
And dreadful images, and monster-shapes:
This demon, Icelos, in heav'n's high hall,
The gods have nam'd, but men Phobetor call:
A third is Phantasus, whose actions roll
On meaner thoughts, and things devoid of soul:
Earth, fruits, and flow'rs, he represents in dreams,
And solid rocks unmov'd, and running streams.

According to this distinction of their several offices, this last, Phantasus, would, if the translator of these verses had thought fit, have been more proper to represent his sink, or lazy pool.

Ver. 1027. "Lacum ac dolia curta." For it was the custom at Rome, to set tubs, or earthen pots, in the corners of the streets, for the passengers to make water in. This we learn from C. Titius, who lived in the same age with Lucilius, and who, in an oration he made in behalf of the Fannian law, has this passage, as we find it cited by Macrobius, Saturnal. lib. ii. cap. 12. "Inde ad comitium vadunt, ut litem suam faciant: dum eunt, nulla est in angiporto amphora, quam non impleant, quippe qui vesicam plenam vini habeant." Faber says, positively, that these vessels were not of wood, but of earth, and made by the potters; yet *dolium*, I think, always signifies a wooden vessel.

Ver. 1029. "Babylonica magnifico splendore." Babylon was a city of Asia, and the making of hangings, carpets, &c. with figures, and of divers colours, was first invented there, and from thence they were called *Babylonica*. Plin. lib. viii. cap. 48. "Colores diversos picturæ intertexere Babylon maxime celebravit, et nomen imposuit." See above, ver. 25. Plautus in Sticho.

Tum Babylonica peristromata consutaque tepetia
Advexit minimum bonæ rei.

And in Pseud. he calls them,

Alexandria belluata conchyliata peristromata.

Martial lib. viii. Epig. xxviii.

Non ego prætulerim Babylonica picta superbè
Texta Semiramiâ quæ variantur acu.

For Semiramis reigned at Babylon. And Cowley, David. iii.

The room with golden tap'stry glitter'd bright,
At once to please, and to confound the sight.
Th' excellent work of Babylonian hands.

But purple coverlets or counterpoints seem to have been anciently most in use, especially among great persons. Homer, Il. ix.

Εἶσιν δ' ἐν κλισμοῖσι τάπησί τε πορφυρέοισι.

And Virgil, Georg. ii. ver. 506.

——Et sarrano indormiat ostro.

That is, Tyrian purple. Thus too Stat. Thebaid. i.

——Pars ostro tenues, auroque sonantes
Emunire toros.——

And Plato the comedian, in Athen. ii. says, they lie ἐν κλίναις ἐλεφαντόποσι καὶ ῥώμασι πορφυροβάπτοις, &c.

Ver. 1030. Some accuse Lucretius of immodesty in this passage; but I, says Creech, discover a great deal of art. For he would never have treated of dreams of this nature, unless the explication of them had been absolutely necessary, in order to the natural introduction and connection of the subsequent disputation of lust, and of love.

Ver. 1034. "Quasi transactis omnibus rebus," says Lucretius; that is, τὴν Ἀφροδίτην τελέσαντες, as I, says Faber, know an excellent author, who is very skilful in these matters, expresses himself. But Theocritus expresses it otherwise,

Ἐπράχθη τὰ μέγιστα. Idyl. ii.

Ver. 1036. Here Creech has omitted fourteen verses of his author, which these fifteen supply. In them the poet gives us a lively image of all manner of concupiscence, and explains the whole affair of lustful love, as well in regard to the mind as to the body. Beautiful images, saye he, move the mind; the mind brings the seed from all the members of the body into the genitals, which parts swell to an erection, and after that the action is consummated.

Ver. 1039. Lucretius says,

Ex homine humanum semen ciet una hominis
vis:

Creech interprets the last words, "una hominis vis," to mean either the image of a beautiful body moving the mind, or the mind itself bringing the seed from all the parts of the body.

Ver. 1040. Lucretius,

Quod simulatque suis ejectum sedibus exit,
Per membra, atque artus decedit corpore toto
In loca, &c.

Upon which Faber observes, that the word *toto* is not used without reason, but means an entire body, that has not lost any of its members; for it often happens, that mutilated parents get mutilated children; which is confirmed by many indisputable examples: therefore the seed comes from all the members. It is certain too that Tertullian was of the same opinion, when he said, that in the fury of the act, when the seed is ejected, something seems to go out even from the very soul. "Denique, ut adhuc verecundia magis periculiter quam probatione, in illo ipso ultimo voluptatis æstu, quo genitale virus expellitur, nonne aliquid de animâ quoque sentimus exire." Tertull. de Animâ. All this is true, says Creech; but Lucretius meant something else, which others may better conjecture than I express.

Ver. 1048. This and the two following verses run thus in the original?

Namque omnes plerumque cadunt in vulnus, et
illam
Emicat in partem sanguis, unde icimur ictu:
Et, si comminus est, hostem ruber occupat humor.

These verses, Lambinus, Faber, &c. expunge; yet they seem to carry a meaning very proper to the matter in hand, and not to be unworthy of Lucretius. Lambinus confesses, that he could not see any connection between them and the foregoing verses, and therefore was for rejecting them: And this is the point I am going to examine. The verses that precede them, run thus:

Inritata tument loca femin-, sitque voluntas
Ejicere id, quo se contendit dira libido;

Idque petit corpus mens, unde 'ſt ſaucia amore:
Namque omnes, &c.

Which I thus interpret: Thoſe parts being enraged by the ſeed, ſwell; and thence ariſes a deſire of ejecting the ſeed on that part to which the raging luſt is ſtriving to attain: and the mind tends to that body from which ſhe received her wound of love. "Namque omnes," &c. For all men, for the moſt part, fall upon their wound; and the blood guſhes with violence towards the part from whence we are wounded; and if the murderer be near us, the red liquor will ſpout upon him. What follows, makes the connection appear yet more plain:

Sic igitur veneris qui telis accipit ictum,
Unde feritur, eo tendit.———

That is to ſay, in like manner, he who is wounded by the darts of Venus, tends to the place from whence he was ſtruck. But Nardius gives another interpretation to the laſt of theſe verſes, and ſays, the poet ſpeaks of a dead body that bleeds afreſh if the murderer approach it; of which I the rather diſapprove, becauſe even he himſelf will not allow the fact to be true; but that the wounded fall upon the ſide on which they are wounded, is not only confirmed by experience, but a natural reaſon may be given, why, in all probability, it cannot be otherwiſe: for all things bend, and incline to fall on the ſide on which is their imbecility, and whatever is ſupported by a certain force, when that force comes to be impaired, from whatever cauſe it happens to be ſo, muſt of neceſſity incline to the ſide on which is its weakneſs; and when the weak part gives way, it drags along with it into ruin the parts that are annexed to it, and which, together with it, make the whole. This we may obſerve daily of buildings, and of cripples. Now, the wounded part muſt grow weak, not ſo much by reaſon of the diſſolution of its contexture, as becauſe of the loſs of blood and animal ſpirits, which Hippocrates himſelf, lib. de Aliment. allows to be the cauſes of ſtrength; therefore wounded animals muſt naturally fall on the ſide on which they receive their wound. "Coruit in vulnus," ſays Virgil of Pallas, whom Turnus ſlew. Æn. x. ver 488. And this I preſume ſufficient to juſtify the retaining theſe verſes, notwithſtanding the cenſure of thoſe learned interpreters who have abſolutely rejected them, ſince it proves them to have a viſible and natural connection, not only with what went before, but likewiſe with what follows, which Dryden has thus rendered:

So likewiſe he who feels the fiery dart
Of ſtrong deſire transfix his am'rous heart;
Whether ſome beauteous boy's alluring face,
Or lovelier maid, with unreſiſted grace,
From her each part the winged arrow ſends,
And whence he firſt was ſtruck, he thither tends:
Reſtleſs he ruams, impatient to be freed,
And eager to inject the ſprightly ſeed.

For, ſtung with inward rage, he flings around,
And ſtrives t' avenge the ſmart on that which gave the wound.

Ver. 1057. Some copies read *frigida*, others *fervida cura:* Creech, in this place, takes notice of neither. Faber is abſolutely for *fervida*, and ſays, every man will approve that reading, who can truly ſay from his heart, "Nunc ſcio quid ſit amor——." The care that is cauſed by love, is hot, it glows, it burns: μαλερὸν βέλος, πυρόεν]α βέλεμνα, πυρὶ πάν]α βίε]απ]αι. Creech alſo, in his Latin edition, is of the ſame opinion, and ſays, he too will approve of it, who obſerves, that Lucretius is explaining the riſe and increaſe, or progreſs of love: Firſt, A drop of it diſtills upon the heart, thence proceeds a vehement deſire, which is nouriſhed by the images that are continually preſenting themſelves to the wounded lover, inſomuch, that though the object of his flame be abſent, yet her name is always ſounding in his ears. But Dryden ſeems to approve of *frigida cura*, as we may judge by his tranſlation of this paſſage:

For fierce deſire does all his mind employ,
And ardent love aſſures approaching joy.
Such is the nature of that pleaſing ſmart,
Whoſe burning drops diſtil upon the heart:
The fever of the ſoul ſhot from the fair,
And the cold ague of ſucceeding care.
If abſent, her idea ſtill appears,
And her ſweet name is chiming in your ears.

Ver. 1063. In all the Latin authors, ſays Faber, numerous as they are, there is not, in my opinion, any thing that equally ought, or deſerves to be read, as the following verſes. And yet there have been ſome men heretofore, and at this day many of the ſame ſort are to be found, who ſtrenuouſly contend, that they ought, if poſſible, to be concealed from the eyes of mankind, as abounding with manifeſt abominable impurities. Hard fate of our poet! whoſe ſo uſeful counſels, whoſe ſo ſalutary advices have been thus ill received, and met with ſo improſperous ſucceſs: For though he cry out with all his might,

Sirenas, hilarem navigantium pœnam,
Blandaſque mortes, gaudiumque crudele,
Effugete, ô miſeri, tortumque ab littore funem
Rumpite;———

Though he prove, by many arguments, that luſt incontinence, and debauchery, are the directeſt roads that lead to inevitable ruin and perdition, and that we ought therefore to have in abomination, and to avoid and fly from, more than we would from the jaws of devouring ſerpents and wild beaſts, thoſe infamous proſtitutes, who lead by the noſe their inconſiderate admirers: though he ſhows, that eſtates, reputation, and the health and welfare, both of the mind and body, are ruined that way, notwithſtanding all this, I ſay, there are ſome ſo ſuperciliouſly tender of their own and other's modeſty, as to exclaim againſt, and as to give us warning to avoid theſe obſcene expreſ-

ſions, theſe bawdy verſes, that are not fit to be read, nor worthy to be remembered. I, for my part, confeſs, that I diſcover in this diſputation nothing of impurity, nothing obſcene, nothing unfit to be read, or unworthy to remember: and if any thing of ſuch nature appear to others, the reader is in fault, not the poet. If nothing of this kind may be read, phyſicians muſt leave off to ſtudy nature, and anatomies muſt no longer be expoſed to view. At leaſt, this I think I may affirm for a truth not to be controverted, that, if what Lucretius has here written muſt be deemed impure and obſcene, yet expreſſions, far more impure and obſcene, may be found in a certain book which no man will dare to blame. I know it will be objected, that that holy writer, whom it is no matter to name in this place, handled that ſubject, even though it be of a moſt filthy nature, ſo plainly, and with ſuch open broadneſs, that he might, by the perſpicuous turpitude of the deſcription, create the greater abhorrence of that vice, and render it the more deteſtable. I own it; nor was I ever of another opinion. But to what end, or in what deſign did Lucretius write in this manner? Was it that he might inſtruct in the art of playing the bawd, and thus make his fortune by the vileſt commerce? Other poets have, indeed, in many ages, followed that trade, and found their account by it; and perhaps too ſome do ſo at this day: But the integrity of his life, the ſeverity of his manners, and the many moſt ſalutary precepts that are ſcattered here and there throughout this whole poem, leave us no room to ſuſpect any ſuch baſe deſign in Lucretius. Let us ſee at one view the wholeſome advice he gives us in the affair of love.

Sed fugitare decet ſimulacra et pabula amoris,
Abſterrere ſibi, atque aliò convertere mentem,
Nam certa et pura eſt ſanis magis inde voluptas,
Quam miſeris: Etenim potiundi tempore in ipſo
Fluctuat incertis erroribus ardor amantûm;
Nec reperire malum id poſſunt quæ machina vincat.
Uſque adeo incerti tabeſcunt vulnere cæco.
Adde quod abſumunt vires, pereuntque labore:
Adde quod alterius ſub nutu degitur ætas.
Labitur interea res, et vademonia fiunt;
Languent officio, atque ægrotat fama vacillans.
Si neſcis, etiam medio de fonte leporum
Surgit amari aliquid, quod in ipſis floribus angat:
Aut quod conſcius ipſe animus ſe forte remordet,
Deſidioſè agere ætatem, luſtriſque perire;
Aut quod in ambiguo verbum jaculata reliquit,
Quod cupido affixum cordi viveſcit ut ignis:
Uti ſit, ut melius multo vigilare ſit ante,
Quâ docui ratione, cavereque ne inlaqueeris.

Of which the Engliſh reader will not be diſpleaſed to ſee Dryden's interpretation.

But ſtrive thoſe pleaſing phantoms to remove,
And ſhun th' aërial images of love,
That feed the flame———
For on one object 'tis not ſafe to ſtay;
Force then the tide of thought ſome other way:
For purer joys in purer health abound,
And leſs affect the ſickly than the ſound.
When love its utmoſt vigour does employ,
Ev'n then 'tis but a reſtleſs wand'ring joy.
All ways they try, ſucceſsleſs all they prove,
To cure the ſecret ſore of ling'ring love.
Beſides———
They waſte their ſtrength in the venereal ſtriſe,
And to a woman's will enſlave their life.
Th' eſtate runs out, and mortgages are made;
All offices of friendſhip are decay'd;
Their fortune ruin'd, and their fame betray'd;
And in the fountain where the ſweets are fought,
Some bitter bubbles up, and poiſons all the draught.
For guilty conſcience does the mirror bring,
And ſharp remorſe ſhoots out her angry ſting:
And various thoughts within themſelves at ſtrife,
Upbraid the long miſ-ſpent luxurious life.
Perhaps the fickle fair one proves unkind,
Or drops a doubtful word that pains his mind,
And leaves a rankling jealouſy behind.
Therefore, far better is it to prevent,
Than flatter the diſeaſe, and late repent:
Becauſe to ſhun th' allurement is not hard
To minds reſolv'd, forewarn'd, and well prepar'd:
But wondrous difficult, when once beſet,
To ſtruggle through the ſtreights, and break th' involving net. *Dryd.*

Is this the language of a man, who intended to corrupt his readers, or rather of one who deſigned uſefully to inſtruct and adviſe them: Thus Faber, concerning the poet's intention in this diſcourſe of love. Creech, too, ſubſcribes to his opinion, and adds, that the poet has in this place been as careful of his diction, and that it is at leaſt as pure and correct as in any other part of the whole poem; and ſo plain and ſignificant likewiſe, as not to need an interpreter.

Ver. 1065. Dryden has rendered this paſſage otherwiſe; and, indeed, more cloſe to the ſenſe of Lucretius than our tranſlator.

———When one moleſts thy mind,
Diſcharge thy loins on all the leaky kind:
For that's a wiſer way than to reſtrain
Within thy ſwelling nerves that horde of pain:
For every hour ſome deadlier ſymptom ſhows,
And by delay the gathering venom grows,
When kindly applications are not us'd:
The ſcorpion love muſt on the wound be bruis'd;
On that one object 'tis not ſafe to ſtay,
But force the tide of thought ſome other way:
The ſquander'd ſpirits prodigally throw,
And in the common glebe of nature ſow.

Ver. 1075. Dryden.

Nor knows the lover in that wild exceſs,
With hands or eyes, what firſt he would poſſeſs;
But ſtrains at all, and faſt'ning where he ſtrains,
Too cloſely preſſes with his frantic pains.
With biting kiſſes hurts the twining fair;
Which ſhows his joys imperfect, inſincere;
For, ſtung with inward rage, he flings around,
And ſtrives t' avenge the ſmart on that which gave the wound.

Ver. 1078. Dryden, in All for Love:

But when I have you faſt, and all my own,
With broken murmurs, and tumultuous ſighs,
I'll ſay you were unkind, and puniſh you,
And mark you red with many an eager kiſs.

Ver. 1087 Dryden.

For ardent hope ſtill flatters anxious grief,
And ſends him to his foe to ſeek relief:
Which ſtill the nature of the thing denies,
For love, and love alone, of all our joys,
By full poſſeſſion does but fan the fire;
The more we ſtill enjoy, the more we ſtill deſire.

And, to the ſame purpoſe, in the Tragedy of All for Love, he ſays finely,

There's no ſatiety of love in thee!
Enjoy'd thou ſtill art new: perpetual ſpring
Is in thy arms: the ripen'd fruit but falls,
And bloſſoms riſe to fill its empty place,
And I grow rich by giving.

And in Amphitryo.

Your fruits of love are like eternal ſpring
In happy climes, where ſome are in the bud,
Some green, and ripening ſome, while others fall.

Ver. 1089 Here the poet teaches how the appetites of hunger and thirſt come to be ſatisfied, though that of love can never be ſo. Meat and drink, ſays he, go down into the ſtomach, where they fill certain places, whoſe emptineſs excited the deſire of them. And

Hence thirſt and hunger may be ſatisfy'd:
But this repletion is to love deny'd.
Form, feature, colour, whatſoe'er delight
Provokes the lover's endleſs appetite,
Theſe fill no ſpace, nor can we thence remove
With lips, or hands, or all our inſtruments of love.
In our deluded graſp we nothing find,
But thin aërial ſhapes that fleet before the mind.
As he, who in a dream with drought is curs'd,
And finds no real drink to quench his thirſt,
Runs to imagin'd lakes his heat to ſteep;
And vainly ſwills, and labours in his ſleep:
So love with phantoms cheats our longing eyes,
Which hourly ſeeing never ſatisfies:
Our hands pull nothing from the parts they ſtrain,
But wander o'er the lovely limbs in vain.

Ver. 1099. Dryden.

And when the youthful pair more cloſely join,
When hands in hands they lock, and thighs in thighs they twine:
Juſt in the raging foam of full deſire,
When both preſs on, both murmur, both expire:
They gripe, they ſqueeze, their humid tongues they dart,
As each would force their way to t'other's heart.
In vain: they only cruize about the coaſt;
For bodies cannot pierce, and be in bodies loſt:
As ſure they ſtrive to be, when both engage
In that tumultuous momentary rage.
So tangled in the nets of love they lie,
Till man diſſolves in that exceſs of joy:
Then when the gather'd bag has burſt its way,
And ebbing tides the ſlacken'd nerves betray,
A pauſe enſues; and nature nods a while,
Till with recruited rage new ſpirits boil,
And then the ſelf-ſame violence returns:
With flames renew'd, th' erected furnace burns:
Again they in each other would be loſt,
But ſtill by adamantine bars are croſt.
All ways they try, ſucceſsleſs all they prove,
To cure the ſecret ſore of ling'ring love.

Ver. 1113. Here the poet enumerates the many inconveniences that are the inſeparable attendants of love; which, at beſt, is a wretched ſlavery obnoxious to ſuſpicions, and fantaſtical ſurmiſes: In a word, an uneaſy paſſion, which all but downright madmen will avoid.

They waſte their ſtrength, &c.] This is moſt certainly true, if we may give credit to ſome phyſicians, mentioned by Dr. Brown in his Pſeudodox. Epidemic. lib. iii c. 9. and who, though they agree in the generally received opinion, that the ſeed is only a more perfect concoction and preparation of the blood; yet aſſert that it receives ſo great a quantity of ſpirits by that preparation, that to loſe but one drachm of it weakens a man as much as the loſs of ſixty ounces of blood. And hence perſons addicted to venery are generally pale: whence Juvenal, Sat. i. ver. 41.

Accipiat ſanè mercedem ſanguinis, et ſic
Palleat, ut nudis preſſit qui calcibus anguem.

Where *ſanguis* is taken for the ſeed itſelf; and in that ſenſe too, Plautus likewiſe uſes it. "Apage à me iſtas ſorores, quæ hominum ſorbent ſanguinem."

Ver. 1117, 1118. "Lucret. Pulchra in pedibus Sicyonia rident." Sicyon was a city of Peloponneſus, whoſe inhabitants are often repreſented by Cicero to be very effeminate; and lib. i. de Oratore, he particularly mentions their ſhoes. "Si mihi calceos Sicyonis attuliſſet, non uterer, quamvis eſſent habiles, et apti ad pedes, quia non eſſent viriles." Athenæus, lib. iv. and Lucian in Rhetore, mention them likewiſe. See alſo Julius Pollux.

Ver. 1118. Lucret.

———Teriturque Thalaſſina veſtis
Aſſiduè, et Veneris ſudorem exercita potat,

Which Dryden has rendered more fully than our tranſlator,

And the blue coat that with embroidery ſhines,
Is drunk with ſweat of their o'erlabour'd loins.

Moreover, the colour which the Romans called Thalaſſinus, was a Cerulean, and had a caſt of green. See above, ver. 75.

Ver. 1119. Lucretius.

Et benè parta patrum fiunt anademata, mitræ,
Interdum in pallam, ac Melitenſia, Ceaque vertunt.

The *anadema* was an ornament that women wore on their heads, made of ribbands, and almoſt like a coronet. The *mitra* was a cap which women likewiſe wore; it was ſet with pearls, and tied

under their chin with ribbands and chains. Virg. Æn. iv. ver. 216.

Mœoniâ mentum mitra crinemque madentem
Subnexus.————

Melitenſia and *Cea*, were garments ſo called from the iſlands Melita and Cea, whence they were brought. Melita lay in the African Sea, between Sicily and Africa. Heſychius Μελίτεια ἱμάτια τίνα διάφορα ἐκ Μελίτης τῆς νήσου. Cicero in 2 cont. Verr. often mentions the Melitenſian garments: And in 4 cont. Verr. he ſays, that Melita, the town where Verres was born, "Textrinum per biennium ad muliebrem veſtem conficiendam fuiſſe." And of all the artiſans of Melita Diodorus Siculus chiefly commends τὰς ὑθόνια ποικίλας τῇ τέχνῃ λεπτοῖς τῇ μαλακότητι διαφερούσας. Cea was an iſland in the Ægean Sea of which Pliny, lib. iv. cap. 9. ſays, "Ex hâc profectam delicatiorem fœminis veſtem auctor eſt Varro. Propert." lib. i. Eleg. 2.

Et tenues Ceâ veſte movere ſinus:

Ver. 1123. The cuſtom of the ancients, both Greeks and Latins, to adorn their heads with chaplets of flowers, and to anoint themſelves with fragrant ointments, when they ſet down to drink and be merry, is frequently mentioned in the authors of theſe days. See Book iii. ver. 896. It is thought by ſome, that this cuſtom came originally from the Hebrews: They ground their conjecture on Ezekial, chap. xxiii. where Samaria and Jeruſalem are deſcribed under the metaphor of whores: Incenſe and oil are mentioned ver. 41.; and in ver. 42. it is ſaid, that their lovers put beautiful ornaments on their heads: Which Fortunatus Scacchus, in his Myrothecium, lib. i. cap. 26. underſtands in this ſenſe of garlands of flowers, and of ointments: Moreover, they arrived at length to an exceſs of curioſity in regard to their ointments, that was indeed wonderful: For Athenæus, lib. xv. cap. 11. reports out of an old poet, that they grew ſo nice as to require ſeveral ſorts of ointments for one ſingle unction, namely, Egyptian for the feet and thighs, Phœnician for the cheeks and breaſts, Syſimbrian for the arms, Amaracine for the eyebrows and hair, and Serpylline for the neck and knees; but, above all the reſt, we may obſerve, that the ancients made uſe of one ſort of oil, or ointment, of great value and ſingular excellency: it was called *oleum ſuſinum*, and made of lilies, which, in the Phrygian tongue, are called *σύσα*, but chiefly of that ſort of lily which the Greeks call *χείνον*. and to which, it is believed, alluſion is made, Cantic. iv. ver. 13. where the church ſays of Chriſt, his lips are like lilies; which would ſeem a ſtrange compariſon, according to the common acceptation of that flower; I mean, if we ſhould underſtand in that place the white lily; eſpecially ſince the beauty of the lips conſiſts in being red: And therefore our Saviour, deſcribing his ſpouſe the church, according to that notion of a beautiful lip, ſays, "Thy lips are like a thread of ſcarlet," Cantic. iv. 3. Wherefore we may conclude, that there were ſeveral ſorts of lilies: And Pliny deſcribes the lily that is called *χείνον*, to be of a ruddy colour: "Eſt et rubens lilium quod Græci *χείνον* vocant," ſays the author in his Natural Hiſt. lib. xxi. cap. 5. and which, as Athenæus, lib. ii. cap. 2. ſays was the ſame with *σύσας*. And of this ſort of lily was made that admirable *oleum ſuſinum*, mentioned by the ſame Pliny, lib. xiii. cap. 1. Scacchus, in the book before cited, chap. xxvii. takes this to be the ſame oil which the prophet calls the oil of gladneſs; but that critic might better have called it the figure of this, which, as he himſelf ſays, ſignifies the high grace of the hypoſtatical union. Beſides, what is ſomewhat ſtrange, we may obſerve that the learned Cordus makes no mention of this *oleum ſuſinum* in his Diſpenſatorium, though p. 301 of that book he deſcribes the *olenum lilinum*: But it is evident that he means only the oil of the white lily.

Ver. 1125. The original of this paſſage deſerves to be tranſcribed.

Nequicquam: quoniam medio de fonte leporum
Surgit amari aliquid, quod in ipſis floribus angat.

where, by "in ipſis floribus," the poet means, ſays Creech, then chiefly when love reaches to lovers his vaſt delight: when he gives them to drink of his nectar: Dryden has tranſlated it finely:

In vain:————
For in the fountain where the ſweets are ſought,
Some bitter bubbles up, and poiſons all the draught.

The two next verſes of Lucretius, our tranſlator has taken no notice of. They are theſe:

Aut quòd conſcius ipſe animus ſe forte remordet;
Deſidioſe agere ætatem, luſtriſque perire:

But I have inſerted them, as tranſlated by Dryden in four verſes.

Ver. 1135. This Lucretius calls "amor proprius:" which is, ſays Faber, when a man is ſo well beloved by the perſon on whom he has fixed his paſſion, that ſhe forſakes all company for his: To which the poet oppoſes, the love which he calls "amor adverſus," that is to ſay, diſaſtrous love, in which a man meets with many croſſes, and above all, with a miſtreſs that neglects and ſcorns him.

Ver. 1144. But the wretch is already caught, and lies ſtruggling in the ſnare: Who will deliver and ſet him free? This our poet pretends to do in the following fifty-two verſes.

Ver. 1154. In this place, Creech has omitted the three next verſes of his author, which are theſe:

Atque alios alii inrident, veneremque ſuadent
Ut placent quoniam fœdo adflictantur amore:
Nec ſua reſpiciunt miſeri mala maxima ſæpe.

Lambinus is for having them expunged, yet Faber will not give his conſent: On the contrary, he ſays, they are truly Lucretian, and carry a very good ſenſe; then he explains them as fol-

lows: Some lovers perſuade their friend, who is in love with a deformed dowdy, to appeaſe Venus, and render her propitious to him in his amours, becauſe it is ſhe has ſent him ſo ugly a miſtreſs: Meanwhile they themſelves are in love with others, who are leſs lovely and leſs beautiful. Dryden too has omitted them: And, indeed, allowing of the interpretation that Faber has given them, I cannot well ſee what they have to do in this place. Creech, in his Latin notes, has tranſcribed Faber's opinion, but ſays nothing of his own; however, having printed the interpretation of them in a different character, I am apt to believe he rather inclined to the opinion of Lambinus.

Ver. 1156. Lucret. Cæſia *γαλλαδίων*. "Cæſii occuli," are the blueiſh gray eyes, ſuch as cats have; or rather, ſuch as owls, which have a reddiſh caſt. Theſe animals can ſee by night, and their eyes generally look very fierce. Now ſuch eyes were never eſteemed; and therefore the lover called his miſtreſs, who had ſuch eyes, a little Pallas. Pallas was the goddeſs of wiſdom, and Homer often calls her *γλαυκῶπις*, which ſignifies, having eyes that ſparkle, or that are of a fiery redneſs, like the eyes of a lion.

Ver. 1157. *Χαρίτωνα*, one of the graces, who were three in number, Aglaia, Thalia, and Euphroſyne the daughters of Jupiter and Auronoe, or of Jupiter and Eurynome. They are ſaid to be very beautiful, extremely witty, and always gay and merry.

Ver. 1159. "Balba, loqui non quit," *τραυλίζει*. If any ſtammer to that degree that ſhe cannot ſpeak, they ſay ſhe liſps; for liſping is but a ſlight imperfection in ſpeaking, in compariſon of ſtammering: The firſt faulters only in the pronunciation of a letter, and chiefly of *r*, as *aulola* for *aurora*: And Ariſtophanes, and Plutarch, tell us, Alcibiades had ſuch an impediment. But he that ſtammers often murders whole ſyllables: Moreover, the laſt part of this verſe, and all the next, is an addition to Lucretius.

Ver. 1163. "*Radim* vero eſt, jam mortua tuſſi:" Becauſe a cough, when it is become a habit, or at leaſt continues for ſome time, waſtes the body, and brings it, as we ſay, to nothing but ſkin and bone; therefore, that they might extenuate this fault, they called the conſumptive girls *ῥαδίνας*, thin or ſlender. Theocritus too ſays of the Cypariſſians, that they are *ῥαδίναι*, which the Scholiaſt interprets, *ἰσχνάκεις, λίχνας*, which ſignify likewiſe thin and ſlender. Ovid had this expreſſion of Lucretius in his mind, when he ſaid,

Sit gracilis, macie quæ modo viva fuâ eſt.

And this of Lucilius is ſomething like it: "Vix vivo homine ac monogrammo."

Ver. 1165. Ceres, the goddeſs of corn, of whom ſee Book ii. ver. 516, and Book v. ver. 16. She was always painted with large ſwelling breaſts, and therefore the epithet *τρόφος*, well fed, is commonly given her. "Ceres eſt ipſa ab Iaccho," ſays Lucretius: which expreſſion Arnobius, lib. iii. "contra gentes," thus explains: "Ceres ab Iaccho, id eſt, Ceres *ἡ τοῦ Ἰάκχου*," that is to ſay, Ceres, whom Iacchus or Bacchus loved. For Bacchus was called Iacchus, from *ἰαχὴ*, a clamour, becauſe of the bawling drunken women that were in his train. But let us ſee how Dryden has rendered this paſſage:

For thus the bedlam train of lovers uſe
T' inhance the value, and the faults excuſe:
And therefore 'tis no wonder if we ſee
They doat on dowdies and deformity:
Ev'n what they cannot praiſe, they will not blame,
But veil with ſome extenuating name:
The ſallow ſkin is for the ſwarthy put,
And love can make a flattern of a ſlut:
If cat-ey'd, then a Pallas is their love:
If freckled, ſhe's a party-colour'd dove:
If little, then ſhe's life and ſoul all o'er;
An Amazon, the large two-handed whore:
She ſtammers? Oh what grace in liſping lies!
If ſhe ſays nothing, to be ſure ſhe's wiſe:
If ſhrill, and with a voice to drown a choir,
Sharp-witted ſhe muſt be, and full of fire:
The lean conſumptive wench, with coughs decay'd,
Is call'd a pretty, tight, and ſlender maid:
Th' o'ergrown, a goodly Ceres expreſs'd,
A bed-fellow for Bacchus at the leaſt:
Flat-noſe the name of ſatyr never miſſes;
And hanging blubber lips but pout for kiſſes.

Where, among many other things well worth taking notice of, we may obſerve, the laſt verſe ſave one, "Flat-noſe," &c. which Creech has totally omitted: "Simula, *σιλανὴ*, ac Satyra 'ſt." *Lucret.* For the Sileni and the Satyrs, who were the companions of Bacchus, were generally painted with flat noſes. The Sileni were the oldeſt, and maſters of the Satyrs, as we learn from Pauſanias in Attic. See Caſaubon, lib. de Satyricâ, &c. See alſo above, ver. 589. Moreover, Cowley ſeems to have had this paſſage of Lucretius in his mind, when he ſaid,

Colour or ſhape; good limbs or face;
Goodneſs or wit in all I find;
In motion, or in ſpeech a grace;
If all fail, yet 'tis womankind:
If tall, the name of proper ſlays;
If fair, ſhe's pleaſant as the light;
If low, her prettineſs does pleaſe;
If black, what lover loves not night:
The fat with plenty fills my heart;
The lean with love makes me too ſo;
If ſtrait, her body's Cupid's dart
To me; if crooked, 'tis his bow.

Ver. 1171. This in nowiſe expreſſes the thought of Lucretius, who ſays,

Nemque eadem facit, et ſcimus facere omnia, turpi.

Dryden much more to the purpoſe,

She does no more in that for which you woe,
Than homelier women full as well can do.

Ver. 1184. This is not in Lucretius, nor do I think he would have said it. Neither has our translator any authority for ver. 1190. I take such thoughts to be unworthy of his author.

Ver. 1193. Lucretius.

Et si bello animo 'st, et non odiosa viciſſim,
Prætermittet te humanis conſedere rebus.

Which Faber thus explains: And unleſs ſhe be downright moroſe and untoward, you will eaſily be able to diſcover her failings and defects: Nay, ſhe will not ſo much as endeavour to conceal them from you, hoping you will not be offended at them, ſince they are not peculiar to one woman only, but common to the whole ſex.

For common ſenſe brings all their cheats to view,
And the falſe light diſcovers by the true:
Which a wiſe harlot knows, and hopes to find
A pardon for defects, that run through all the kind. *Dryd.*

Ver. 1196. Here Creech had ſkipped over ſeventeen verſes of Lucretius, which are ſupplied by theſe nineteen verſes taken from Dryden. The poet ſuppoſes he has ſaid enough to create in his readers a lothing of thoſe common harlots, who proſtitute themſelves only for gain, and who do all they can to hinder conception. And, therefore, being now going to ſhow how it comes to paſs that children are ſometimes like their fathers, ſometimes like their mothers, and ſometimes like both their parents; nay, that they ſometimes too reſemble their grandfathers, and more remote progenitors; he premiſes theſe nineteen verſes, in which he teaches, that ſome women do it with all their heart, for the ſake of the pleaſure, of which they are no leſs ſenſible than the males: For, that the joys of coition are common to both ſexes, the copulations of brute animals abundantly evince.

Ver. 1202. Thus too Virg. Georg. iii. ver. 242.

Omne adeo genus in terris hominumque ferarumque;
Et genus æquoreum, pecudes, pictæque volucres,
In furias, ignemque ruunt: Amor omnibus idem.

Thus ev'ry creature, and of ev'ry kind,
The ſecret joys of ſweet coition find;
Not only man's imperial race, but they
That wing the liquid air, or ſkim the ſea,
Or haunt the deſart, ruſh into the flame:
For love is lord of all, and is in all the ſame.
Dryd.

Ver. 1215. In theſe nineteen verſes Lucretius teaches, that if, when the ſeed of both parents mixes and incorporates into one maſs, the ſeed of the male prevails, the child, whether male or female, will reſemble the father; and, on the contrary, that if the ſeed of the female prevail, the child, be it of either ſex, will reſemble the mother. And from this prevailing power of the ſeed, it moſt frequently happens, that the child reſembles but one of its parents. But if there be an equal mixture of the ſeed of both parents, and neither of them prevail, in that caſe the child's figure and features too are mingled; inſomuch, that that common offspring may ſeem to favour, either neither of them both, becauſe it derives not its all from any one of them; or elſe it may ſeem to reſemble both of them, becauſe it has borrowed a part from each. But the reaſon, why children ſometimes reſemble their grandfathers, or any other of their more remote anceſtors, is becauſe the ſeed conſiſts, and is compoſed, of many moleculæ, or very minute particles, which not being always all of them diſſolved into atoms, neither in the firſt generation or deſcent next to them, nor in the other next to that, come afterwards in one of the ſucceeding generations, to diſcover themſelves in ſuch a manner, that what they might have done in the next, or firſt generation, they do only in one that is more remote. Lactantius, lib. de Opificio Dei. cap. 12. ſeems to be of the ſame opinion, and tells us beſides, that the reaſon why the ſeed of the male ſometimes prevails, and ſometimes that of the female, is, becauſe there is a greater quantity, ſometimes of the ſeed of one of them, ſometimes of that of the other: By which means the prevailing ſeed comes in a manner to ſurround and ſhut up the other. His words are as follows: "Similitudines autem in corporibus filiorum ſic fieri putant. [Varro ſcilicet et Ariſtoteles] cum ſemina inter ſe permixta coaleſcunt, ſi virile ſuperaverit, patri ſimilem provenire, ſeu marem, ſeu fœminam. Si muliebre prævaluerit, progeniem cujuſque ſexus ad imaginem reſpondere maternam. Id autem prævalet è duobus, quo idfuerit uberius: alterum enim quodammodo amplectitur ac includit. Hinc plerumque fieri ſolet, ut unius tantum lineamenta prætendant. Si vero æqua fueris ex pari ſemente permixtio, figuras quoque miſceri, ut ſoboles illa communis aut neutrum referre videatur, quia totum ex altero non habet; aut utrumque, quia partem de ſingulis mutuata eſt. Nam in corporibus animalium videmus, aut confundi parentum colores, ac fieri tertium neutri generantium ſimilem: aut utriuſque ſic exprimi, ut diſcoloribus membris per omne corpus concors mixtura varietur." All which is ſo exactly the doctrine of Lucretius, that Dryden's tranſlation of this paſſage of the poet ſhall ſerve to explain the ſenſe of that father.

Now when the woman's more prevailing juice
Sucks in the man's, the mixture will produce
The mother's likeneſs; when the man's prevails,
His own reſemblance in the ſeed he ſeals.
But when we ſee the new begotten race
Reflect the features of each parent's face,
Then of the father's and the mother's blood,
The juſtly temper'd ſeed is underſtood:
When both conſpire, with equal ardour bent,
From ev'ry limb the due proportion ſent,
When neither party foils, when neither's foil'd,
This gives the blendid features of the child.
Sometimes the boy the grandſire's image bears;
Sometimes the more remote progenitor he ſhares;
Becauſe the genial atoms of the ſeed
Lie long conceal'd, e'er they exert the breed:

And, after ſundry ages paſt, produce
The tardy likeneſs of the latent juice.
Hence families ſuch diff'rent figures take,
And repreſent their anceſtors in face and hair, and make.
Becauſe of the ſame ſeed, the voice, and hair,
And ſhape, and face, and other members are;
And the ſame antic mould the likeneſs does prepare.
Thus oft the father's likeneſs does prevail
In females, and the mother's in the male.
For, ſince the ſeed is of a double kind,
From that whence we the moſt reſemblance find,
We muſt conclude the ſtrongeſt tincture ſent,
And that was in conception prevalent.

Macrobius, Saturnal. lib. vii. cap. 16. defines the ſeed of all animals in theſe words: "Semen generatio eſt ad ejus ex quo et ſimilitudinem pergens.

Ver. 1230. The words in Lucretius are,

Et muliebre oritur patrio de ſemine ſæculum,
Maternoque mares exiſtunt corpore creti.

It is not ſo great a paradox, ſays the poet, that the child ſhould chiefly reſemble in face, hair, voice, &c. either its father or its mother, according as the ſeed of either moſt prevails; as it is, that a child of the female ſex ſhould ſpring from the ſeed of the father, and a male child from that of the mother: However, he aſcribes this effect to the ſame cauſe, viz. to the prevalence of the ſeed. But Lactantius, in the place above cited, gives another reaſon of it: and after having deſcribed the interior parts of the womb, and ſaid, that the right part is the male, and the left the female, he continues, that if the ſeed of the male happen to fall into the left part of the womb, then indeed a male child is begot; but becauſe it is conceived in the female part of the womb, it will have ſomething more womaniſh than the manly comelineſs requires; as a beautiful face, too fair a complexion, a weak ſhrill voice, &c. In like manner, if the ſeed of the female flow into the right part of the womb, then indeed a female child is begot; but becauſe it is conceived in the male part, it will have ſomething manly in it, more than properly belongs to the female ſex; as ſtrong limbs, a ſwarthy complexion, a robuſt voice, &c. But if the male ſeed happens to lodge in the right, and the female in the left, then the fruit of either is brought forth as it ought to be; inſomuch that the female offspring will have all the tenderneſs and beauty that are natural to their ſex, and the male all the manlineſs and ſtrength both of body and mind. "Diſpares quoque naturæ hoc modo fieri putantur: cum forte in lævam uteri partem maſculinæ ſtirpis ſemen inciderit, marem quidem gigni opinatio eſt: ſed quia ſit in fœmininá parte conceptus, aliquid in ſe habere fœmineum, ſuprà quam virile decus patiatur: vel formam inſignem, vel nimium candorem, vel corporis lævitatem, vel artus delicatos, vel ſtaturam brevem, vel vocem gracilem, vel animum imbecillum, vel ex his plura. Item ſi in dextram partem ſemen fœminini ſexûs influxerit, fœminam quidem procreari: ſed quoniam in maſculinâ parte concepta ſit, habere in ſe aliquid virilitatis, ultrà quam ſexus ratio permittat: aut valida membra, aut immoderatam longitudinem aut ſuſcum colorem, aut hiſpidam faciem, aut vultum indecorum, aut vocem robuſtam, aut animum audacem, aut ex his plura. Si vero maſculinum in dexterum, fœminam in ſiniſtram pervenerit, utroſque fœtus rectè provenire, ut et fœminis per omnia naturæ ſuæ decus conſtet et maribus, tam mente, quam corpore, robur virile ſervetur. Lact. de Opif. Dei, cap. 12.

Ver. 1234. The poet being now going to diſpute of the cauſes of barrenneſs, he firſt in theſe eight verſes, according to his uſual cuſtom, falls foul upon the gods, and tells us, it is to no purpoſe to make ſupplications to them to give us children: becauſe they never curſe with barrenneſs, either the man or the woman. Nor does it deſerve our admiration, that he excludes the gods from concerning themſelves with the nuptial bed, ſince according to the doctrine of Epicurus, he places them in the intermundia, the ſpaces between his many worlds, where they indulge themſelves in uninterrupted repoſe, and have no manner of concern for the affairs here below: It is in vain, therefore, to importune them with prayers, to fly to their oracles, or to have recourſe to magic numbers: as if we believed that

————The vain decrees of pow'rs above
Deny production to the act of love;
Or hinder fathers of that happy name,
Or with a barren womb the matron ſhame;
As many think, who ſtain with victim's blood
The mournful altars, and with incenſe load,
To bleſs the ſhow'ry ſeed with future life,
And to impregnate the well-labour'd wife.

Ver. 1242. The cauſes of ſterility, which Lucretius in theſe twenty-ſix verſes aſcribes to the temperament and quality of the ſeeed, are true, and related as modeſtly as the nature of the ſubject would permit. He tells us,

That barrenneſs of ſexes will proceed
Either from too condens'd, or wat'ry ſeed:
The wat'ry juice too ſoon diſſolves away,
And in the parts projected, will not ſtay.
The too condens'd, unfoul'd, unwieldy maſs,
Drops ſhort, nor carries to the deſtin'd place,
Nor pierces to the parts; nor though injected home,
Will mingle with the kindly moiſture of the womb:

Then he tells us, that this undue quality and difference of the ſeed is the reaſon why ſome women, who are barren to a firſt huſband, have children by a ſecond; and on the contrary, why ſome men, who had no children by a firſt wife, when they are married to another, come to have many:

For nuptials are unlike in their ſucceſs:
Some men with fruitful ſeed ſome women bleſs:
And from ſome men ſome women fruitful are,
Juſt as their conſtitutions join or jar;

And many ſeeming barren wives have been,
Who, after match'd with more prolific men,
Have fill'd a family with prattling boys:
And many, not ſupply'd at home with joys,
Have found a friend abroad to eaſe their ſmart,
And to perform the ſapleſs huſband's part.

Ver. 1266. In theſe two verſes he tells us, that what we eat and drink is of great moment, either to promote or hinder barrenneſs: becauſe ſome ſorts of food produce ſeed, while others diminiſh and waſte it. And to this opinion of the poet our phyſicians ſubſcribe.

Ver. 1268. The cauſe of ſterility, alleged in theſe ſeventeen verſes, from the wanton motions of females in the act of generation, can neither be accuſed of abſurdity, nor of chaſtity. Whoever would ſee this paſſage of our poet explained at large, may conſult Donatus, ad Eunuchum Terentii, Act v. Sc. 1. Martial. lib. 1. Epig. 68. et Schioppius ad Priapeia, Ep. 18.

Ver. 1285. Laſtly; ſince love is cauſed by images; and ſince the images, that flow from beautiful perſons, chiefly excite that paſſion, how comes it to paſs that ſome men doat on dowdies and deformity? Take care how you ſay that this comes from above; for the proverb lies: No marriages are made in heaven, nor do the gods any more concern themſelves about them, than men who have been long ſince dead. No, but it is good nature, eaſineſs of temper, modeſty, and cleanlineſs, that renders homely women charming; and ſometimes too a long acquaintance and familiarity beget love. Epicurus to Herodotus: *ἡ συνουσία ἄνης μὲν ἀδιάπλε, ἀγαπητὸν δὲ, εἰ τὲ μὴ ἔβλαψε.*

Cupid, the god of love, ſo called *à cupiendo.* Some feign two of them; one honeſt, the other baſe. The honeſt was born of Jupiter and Venus; but ſome aſſign Mercury for his father; the baſe was the ſon of Erebus and Nox. Cupid is painted blind, and armed with two darts or arrows, one tipped with gold, the other with lead: that cauſes love, and this drives it away. Ovid Metam. i. ver. 568.

Eque ſagittiferâ promſit duo tela pharetrâ
Diverſorum operum: fugat hoc, facit illud amorem: [cutâ;
Quod facit, auratum eſt, et cuſpide fulget a-
Quod fugat, obtuſum eſt, et habet ſub arundine plumbum.

Dryden, from the Knight's Tale of Chaucer, deſcribing the Temple of Venus, ſays of Cupid,

Hard by his mother ſtood an infant love;
With wings diſplay'd; his eyes were banded o'er;
His hands a bow, his back a quiver bore,
Supply'd with arrows bright and keen, a deadly ſtore.

Ver. 1293. See the note on book i. ver. 363. And thus Lucretius concludes his diſcourſe concerning the nature of love; ſome whole paſſages of which I have purpoſely avoided to explain: not for the reaſon which ſome perhaps may imagine; but rather, becauſe I take the ſubject itſelf to be of ſuch a nature, that ſcarce the dulleſt capacity needs an interpreter to underſtand it.

ANIMADVERSION,

BY WAY OF RECAPITULATION, ON THE FOURTH BOOK OF LUCRETIUS.

In this book are contained but very few aſſertions that a philoſopher will approve of: For within the whole extent of philoſophy, there is not a weaker, or more trifling opinion than that of Epicurus concerning images: For let it be granted, That ſuch ſubtle *exúviæ*, or minute membranes are continually getting looſe, and flying off from the ſurface of things, yet, when they fly to and fro on all ſides, they muſt of neceſſity mutually break and tear one another, till at length they will be ſo mixed and blended together, that we ſhould not be able to ſee or imagine any thing, but Centaurs, Scyllas, and ſuch like monſters.

Nevertheleſs we muſt confeſs, that Lucretius has to ver. 480. diſputed of theſe ſpectres and images with great ſharpneſs of wit, and elegancy of ſtyle, and that he has adorned the fable with all the embelliſhments of art.

From thence to ver. 556. the poet treats the ſceptics with the ſcorn, ſeverity, and indignation, which they juſtly merit: for thoſe animals ought to be contemned and ſuppreſſed: Nor would I blame his great indulgence for the ſenſes, had he not allotted them a more extenſive authority than they are well able to execute: I acknowledge the ſenſes not to be fallacious; but am I therefore to meaſure and determine the magnitude of the ſun, moon, and ſtars, by my eyes? This opinion, to ſay no worſe of it, ſavours too much of ruſticity.

What Lucretius urges to ver. 722. that ſound, ſavour, and odour are corporeal, and that all ſenſation is made and performed by bodies, none will offer to deny, except ſuch only as are ſeduced into error by the qualities and other unwarrantable opinions of brain ſick Ariſtotle.

In the next place, as to what he aſſerts to ver. 832. concerning imagination, why need we give our opinion, ſince there are no ſuch things as images? And his fooliſh aſſertion to ver. 859. which teaches, That our ſeveral members, which are ſo artfully, and with ſo great wiſdom compoſed, and compacted together, were not made to the end we might uſe them; but that when they were already made, they laid hold of that office and function, which firſt offered and preſented itſelf to each of them, deſerves no other anſwer, than a moſt profound laughter and deriſion.

We may bear with what he advances to ver. 877. concerning hunger and thirſt: but from thence to ver. 905. in which is contained the Epicurean doctrine of the motion of animals, we

discover nothing but what is weak and foolish. And since sleep, according to Lucretius, is occasioned by a dispersion of the soul, why do not we, who are endowed with a soul that is immortal, wake eternally? All that he says of dreams, to ver. 1036. is downright trifling. We have given our thoughts of the rest of this book in the note on v. 1063.

PREFACE TO THE SECOND VOLUME.

Having in the preface to the first volume given the public so full and ample an account of my design in publishing these notes and animadversions on this English translation of Lucretius, as likewise of the helps I made use of, and of the method I have observed in this undertaking, which I take to be the chief business of a Prefacer, I shall not long detain my reader by way of introduction to this second volume, that contains only the two last books of my author; who, having in these two books treated of a great variety of noble subjects, has afforded me a just occasion of swelling this volume to almost an equal number of sheets with the former, though computing the number of verses, it contains but little more than one third of the whole poem of Lucretius: The length, however, if I may judge of the readers satisfaction in the perusal, by my own in the compiling, will not, I hope, seem tedious to him; and I flatter myself, that I shall not weary and grow irksome to those whom it has been my principal study and design at once to instruct and divert.

When the subject of which my author was treating was naturally crabbed and abstruse, as in the two first books, in which he disputes chiefly of the nature and properties of his atoms; I thought it not convenient to dwell too long upon it; but endeavoured only to render it plain and intelligible with as much brevity as the province of an interpreter, which I had undertaken, would allow: But when he came to treat of things, which I judged would be more entertaining, as of the origin of the world; of the motion of the heavens; of the sun, moon, and stars; of the first men, and of their manners and way of life; of the first institution of kings, magistrates and laws; of the first invention of arts and sciences; of the things we call meteors, as thunder, lightning, whirlwinds, earthquakes, &c. Of the causes of rain, wind, hail, snow, and frost; of the flames that are ejected from the bowels of Mount Ætna; of the annual increase of the river Nile; of the Averni; of certain miraculous fountains; of the loadstone; and of the cause and origin of plagues and diseases; of all which, as well as of many other subjects of the like nature, Lucretius has disputed in these two last books; when he came, I say, to treat of these matters, he afforded me a wider field to enlarge and expatiate upon; and I have laid hold of the opportunity he gave me, to illustrate all those several subjects, with the opinions of all the most celebrated, as well ancient, as modern philosophers, concerning them: In which I presume I shall not be deemed to have transgressed the bounds, which were formerly prescribed to an interpreter, who, as Ammonius allows, "Neque benevolentia ductus conari debet, quæ perperàm dicuntur consentanea facere, eaque veluti a tripode excipere, neque rectè prodita pravo sensu per odium carpere sed eorum esse incorruptus judex, atque auctores sensum aperire imprimis, illiusque placita interpretari; tum quod alii, et ipse sentiat afferre." Besides, I cannot apprehend, but that it will be acceptable to the public to see at one view the different opinions of the learned men in all ages, on the above subjects; and this is what I have endeavoured to oblige my readers with in the following sheets.

I will conclude this preface with a few lines in my own vindication, and then take my leave.

I foresee that I have rendered myself liable to be carped at, and that I shall be censured by some critics, on account of some particular words, and certain ways of expression, which I have constantly observed and made use of through the whole course of this work; contrary to the generally received custom and practice of many, nay, perhaps of most of our present writers.

I need not be told, that, in matter of speech, when custom has once prevailed, we are absolutely obliged to submit to whatever it has imposed upon us; and that it is not lawful, on any pretence whatsoever, to resist the laws of that sovereign, I had almost said tyrant of languages.

Cui pendet arbitrium est et jus norma loquendi.
Horat.

But on the other hand, in language, as in most things else, there is a good custom and a bad; the good ought to be the standard of propriety and correctness of speech; and the bad ought carefully to be avoided, as the corrupter of it: so that the main difficulty lies in discerning rightly between them: But how this may be done is not our present business to inquire.

Dr. Swift, in his letter to the Lord High Treasurer, with good reason complains, that our language is extremely imperfect, that its daily improvements are by no means in proportion to its daily corruptions, and that the pretenders to polish and refine it have chiefly multiplied abuses and absurdities; and so far he is certainly in the

right: but I cannot agree with him when he goes on, and says, That in many instances it offends against every part of grammar. He seems to impute to the language itself the faults of our uncorrect writers. All languages, but more especially the modern, and ours amongst the rest, have certain idioms and properties of speech peculiar to each of them, in which nevertheless they offend against the general rules of grammar. Of this so many instances might be given, that it is needless to give any.

Modern and living languages are not to be fixed by the standard, nor ascertained by the maxims and rules of the ancient and the dead; and their chief beauties consist in frequent emancipations from the servile laws of ancient grammar. A man may write ungrammatically, and yet write very good English; according to this excellent saying of Quintillian, "Aliud est grammaticè, aliud Latinè loqui."

I now return to what gave occasion to these reflections, and, among several other instances that my readers may observe, will mention only one or two, in which I have varied from some other writers of these days. Phenomenon is a word that has been introduced into our language: Necessity brought it in to avoid a circumlocution: For it is originally Greek, and signifies an appearance in the heaven, or in the air. Now, some instead of phenomenon, leaving out the two final letters, make it phenomen, and say in the plural, phenomens; both which I take to be altogether absurd: Others who write phenomenon in the singular number, when they have occasion to use it in the plural, say phenomena, which, in my opinion, is contrary to the analogy of our language; and others again, in the same number, phenomena's, which I almost dare pronounce to be a monster in speech: For my own part, whenever I have been obliged to use it in the plural, I have not stuck to say, phenomenons, rather than the phenomena, as it is the original; and this I am sure is more conformable to the analogy of our language, in which the difference between the singular and the plural number, even in the words borrowed from the learned languages, consists not in any variation of the final syllable, but in the addition of the letter *s* to the singular number. Thus, in the following words, idea, anathema, chimera, compendium, epithalamium, which, together with many other, we have taken from the learned languages, and naturalized in our own, we say not in the plural, ideæ, anathemata, chimeræ, compendia, epithalamia, even though we have retained their original terminations in the singular, but ideas, anathemas, chimeras, compendiums, epithalamiums. Besides, since there is no method yet proposed, nor any rules yet agreed upon, and settled among us, for the ascertaining and fixing our language for ever, why has not every man an equal share of liberty, not only to introduce and set up a new word, if there be occasion for it, but even to use one that is already introduced, in a different manner from the rest of his contemporary writers, especially since they themselves use it differently from one another? "Licuit, semperque licebit." This, I hope, is sufficient to excuse, if not to justify, my having used the word phenomenons in the plural number; at least it will make it appear to be an error, not of ignorance, but of judgment, and which I declare myself always ready to recant and rectify, whenever I can be better informed, and convinced by good reasons that I am in the wrong.

Again: nothing is more frequent with our present writers than the following way of expression: They greedily embrace that doctrine, be it never so erroneous. This example is taken from one of our most celebrated authors for correctness of style: nevertheless I take the word never in that place to be a barbarism in speech: It ought to be ever; be it ever so erroneous: This way of expression is an idiom of our language; partly elliptic, partly a transposition of the words; which, when placed in due order, and without any word understood, will run as follows: How erroneous soever it be. I have not room in this place to undertake the disquisition of this doubt, nor to give my reasons at large, why, whenever I have had occasion to make use of the like expression, I have differed from most of our other writers, and employed the word ever, rather than never: But this, together with some hundreds of observations, relating to our native language, and which I have been many years digesting in my thoughts, I intend to publish in a short time, as an essay towards the correcting, improving, and ascertaining of it, under this title, Remarks upon the English Tongue.

BOOK V.

THE ARGUMENT.

The beginning of this book, to ver. 60. contains, I. The praise of Epicurus, who, because he was the first that instructed mortal men in the art of true wisdom, the poet says, ought deservedly to be reckoned among the number of the gods, rather than either Ceres, or Bacchus, or Hercules, whose inventions were less beneficial to human life, than that true and wise philosophy, which Epicurus taught. II. From ver. 59. to ver. 100. he proposes the argument of this book, and shows the connection between these subjects he is now going to handle, and those of which he has already disputed.

in the four preceding books; and being now about to treat of the firſt riſe, and future diſſolution of the world, he teaches, III. That the earth, the ſea, the heavens, the ſtars, the ſun and the moon, are mortal; and that they are not animated, nor endowed with a divine body, nor are parts of God himſelf, as the Stoic philoſophers believed them to be: then he aſſerts, that neither the heavens, as the general opinion is, nor indeed any part or parts of the world, are the manſions or abodes of the gods. IV. From ver. 99. to ver. 266. That none may believe that the world was made by the gods, and is therefore immortal; he heaps up ſeveral reaſons, drawn as well from the nature of the gods, as from the defectiveneſs and ill contrivance of this vaſt frame of the univerſe, by which he endeavours to prove, that it was not the workmanſhip of a Deity. V. From ver. 265. to ver. 461. he argues, that the four elements, earth, water, air, and fire, of which the world conſiſts, are, nevertheleſs, generated and mortal; and, conſequently, that the world itſelf once had a beginning, and will have an end. And he confirms and proves, by ſeveral other arguments, that this univerſal frame has not exiſted from all eternity, nor will be immortal, and remain undiſſolved to all futurity. VI. From ver. 460. to ver. 551. he treats of the firſt beginning of the world, and of each of the different parts that compoſe the whole, and aſſigns them their proper and reſpective ſeats and places, according as they are more or leſs heavy or light. VII. From ver. 550. to ver. 655. he propoſes many difficulties concerning the motions of the heavens and of the planets; but determines nothing for certain: then he teaches, why the whole frame of the earth, which is a heavy body, hangs in the air, without being ſupported by any foundation: And, at length, takes the dimenſions of the ſun, the moon, and the ſtars, and pronounces them neither bigger nor leſs than they ſeem to us to be. VIII. From ver. 654. to ver. 824 he gives ſeveral reaſons of the ſummer and winter ſolſtices: tells what cauſes night: why Aurora, or the morning, precedes the ſun: why the nights and days mutually overcome and chaſe away each other by turns: why the moon changes her face and figure; and why the ſun and moon are ſometimes eclipſed IX. From ver. 823. to ver. 894. he deſcends from the heavens, and deſcribes the firſt riſe of herbs, trees, birds, beaſts, and man; and tells the order in which each kind of things was produced out of the earth, one after another: to wit, firſt the graſs, then the trees, next the birds, then beaſts, and laſt of all man. X. From ver. 890. to ver. 979. he grants, That monſters, certain maimed and imperfect animals, were born in the beginning of the world; but aſſerts, that nature gave them not the power to propagate their kinds: Hence he takes occaſion to deride and explode all Chimeras, Centaurs, Scyllas, and the other fabulous and monſtrous productions, which the poets feign that nature brings forth; and aſſerts, that there never were, nor could be any ſuch prodigies of nature, neither at the beginning of the world, nor at any time ſince to this day; and alſo, that no ſuch things can be produced hereafter. XI. From ver. 978. to ver. 1156. the poet deſcribes the ſtrength of the firſt men, their robuſt conſtitution of body, their poorneſs of living, their food, wit, manners, houſes, and marriages. XII. From ver. 1155. to 1223. he teaches, That, after fire was thrown down upon earth by lightning, men began to be more civilized; and, having invented how to dreſs meat, fared more deliciouſly than before. That they then firſt eſtabliſhed ſocieties, entered into leagues and alliances, ſhared the land among themſelves, and choſe kings to govern them who were either the moſt ſtrong, the moſt beautiful, or the moſt witty among them; and were elected for one or more of theſe three reaſons: but that at length, gold being found out, the richer commanded the poorer; and, envy ſpringing up among them, a ſedition aroſe, the kings were depoſed, republics inſtituted, and laws eſtabliſhed, to ſecure every one in his property. XIII. From ver. 1232. to ver. 1326 he treats of the fear of the gods, and of the firſt riſe of religion; which he aſcribes merely to ignorance of the Divine Nature, and of natural cauſes. XIV. From ver. 1325. to the end of the book, he teaches how the ſeveral metals, gold, ſilver, braſs, iron, and lead, came firſt to be diſcovered; mentions the firſt arts of war, and the weapons then uſed; and concludes with the invention and progreſs of ſpinning, weaving, agriculture, ſailing, muſic, poetry, and other arts.

What verſe can ſoar on ſo ſublime a wing,
As reaches his deſerts? What muſe can ſing
As he requires? What poet now can raiſe
A ſtately monument of laſting praiſe,
Great as his vaſt deſerts, who firſt did ſhow
Theſe uſeful truths; who taught us firſt to know
Nature's great pow'rs? 'Tis more than man can do!
For, if we view the mighty things he ſhow'd,
His uſeful truths proclaim, he was a god!
He was a god who firſt reform'd our ſouls,
And led us by philoſophy and rules
From cares, and fears, and melancholy night,
To joy, to peace, to eaſe, and ſhow'd us light.
For now, compare what other gods beſtow:
Kind Bacchus firſt the pleaſing vine did ſhow;
And Ceres corn; and taught us how to plough.
Yet men might ſtill have liv'd without theſe two,
They might have liv'd as other nations do.
But what content could man, what pleaſure find,
What joy in life, while paſſions vex'd the mind?
Therefore, that man is more a god than theſe,
That man who ſhow'd us how to live at eaſe;
That man who taught the world delight and peace.
His uſeful benefits are rais'd above
Alcides acts, the greateſt ſon of Jove!
For, tell me how the fierce Nemæan roar [boar,
Could fright us now? How could th' Arcadian
The Cretan bull, the plague of Lerne's lakes,
The pois'nous hydra with her num'rous ſnakes?
How could Geryon's force, or triple face?
How Diomed's fi'ry horſe, thoſe plagues of Thrace?

How could the birds that o'er th' Arcadian plains
With crooked talons tore th' affrighted swains,
Offend us here? Whom had the serpent struck,
Mighty in bulk, and terrible in look,
That, arm'd with scales, and in a dreadful fold,
Twin'd round the tree, and watch'd the growing gold?
Remov'd as far as the Atlantic shore,
Deserts untrod by us and by the Moor.
Those others too that fell and rais'd his fame,
That gave him this diffus'd and lasting name,
And made him rise a god from Oeta's flame:
Had they still liv'd, what mischief had they done?
Whom had they torn? Whom frighted? Surely none:
For now, ev'n now, vast troops of monsters fill
Each thick and darksome wood, and shady hill.
Yet who complains, yet who their jaws endure?
For men may shun their dens, and live secure.
But had not his philosophy began,
(What had not man endur'd, ungrateful man?)
And cleans'd our souls, what civil wars, what cares
Would fierce ambition raise, what pungent fears?
How pride, lust, envy, sloth, would vex the mind?
Therefore, the man who thus reform'd our souls,
That slew the monsters, not by arms, but rules,
Shall we, ungrateful we, not think a God?
Especially since he divinely show'd
What life the gods must live; and found the cause
And rise of things, and taught us nature's laws.
His steps I trace; and prove, as things begun,
By the same laws, and nature they live on,
And fail at last, loose all their vital ties;
But chiefly, that the soul is horn, and dies:
And that those shadows which in dreams appear,
And forms of friends, and perish'd heroes bear,
Are but loose shapes, by fancy wrought in air.
Now I must teach, the world, as years prevail,
Must die; this noble frame must sink and fail;
And how at first 'twas form'd; what curious blows [compose:
Made seed, earth, seas, sun, heav'n, and stars
What living creatures did, what never rose.
How leagues, and how society began;
What civiliz'd the savage creature, man. [above,
Whence sprang that mighty dread of pow'rs
That reverence, that awful fear and love,
Which first religious duties did engage;
And now secures their holy things from rage.
How tow'rds both poles the sun's fix'd journey bends,
And how the year his crooked walk attends:
By what just steps the wand'ring lights advance;
And what eternal measures guide the dance;
Lest some should think their rounds they freely
Scatt'ring their servile fires on things below, [go,
On fruits and animals, to make them grow.
Or that some god does whirl the circling sun,
And fiercely lash the fiery horses on:
For ev'n those few exalted souls, that know
The god, must live at ease, not look below,
Free from all meddling cares, from hate and love;
If they admire, and view the world above,
And wonder how these glorious beings move,
They are entrapp'd, they bind their slavish chain,
And sink to their religious fears again;
And then the world with heav'nly tyrants fill,
Whose force is as unbounded as their will.
Deluded ignorants! who ne'er did see
By reason's light, what can, what cannot be:
How ev'ry thing must yield to fatal force;
What steady bounds confine their nat'ral course.
But now to prove all this; first cast an eye,
And look on all below, on all on high,
The solid earth, the seas, and arched sky,
One fatal hour (dear youth) must ruin all;
This glorious frame, that stood so long, must fall.
I know that this seems strange, and hard to prove,
(Strong harden'd prejudice will scarce remove)
And so are all things new and unconfin'd
To sense, nor which through that can reach the mind,
Whose notice, eye, nor hand, those only ways,
Where science enters, to the soul conveys.
And yet I'll sing: perchance the following fall
Will prove my words, and show 'tis reason all.
Perhaps thou soon shalt see the sinking world
With strong convulsions to confusion hurl'd;
When ev'ry rebel atom breaks the chain,
And all to prim'tive night return again.
But chance avert it! rather let reas'n show [true.
The world may fall, than sense should prove it
But now before I teach these truths, more sure
And certain oracles, and far more pure [ears;
Than what from trembling Pythia reach'd our
I'll first propose some cure against thy fears;
Lest superstition prompt thee to believe,
That sun and moon, that seas and earth must live;
Are gods eternal, and above the rage
And pow'rful envy of devouring age:
And, therefore, they whose impious reasons try
(More bold than those fond fools that storm'd the sky)
To prove the world is mortal, and may die,
That orbs can fall, the sun forsake his light,
And bury'd lie, like meaner things, in night,
Calling that mortal which is all-divine,
Must needs be damn'd for their profane design.
For these are so unlike the gods, the frame
So much unworthy of that glorious name,
That neither lives, nor is in animal;
That neither feels; dull things, and senseless all.
For life and sense, the mind and soul refuse
To join with all; their bodies must be fit for use.
As heav'n does bear no trees; no stars below;
As stones no blood, and fish no mountains know;
But each has proper place to rise and grow:
So neither souls can rise without the blood,
And nerves, and veins, and bones; for grant they could,
Then through each single part, as arms, or head,
'Twould first be fram'd, thence o'er the other
As water into vessels pour'd will fall [spread;
First to one part, then rise and cover all.
But since 'tis certain that a proper place
Is settled for the life, and the increase
Of mind and soul; 'tis folly to believe
That they can rise without fit limbs, or live;

Or be in flitting air, or chilling seas,
Or earth, or scorching flames. Fond fancies these!
Therefore, they are not gods, their sense divine;
For they are made unfit for that design,
Since none with minds in vital union join.
Nor must we think these are the blest abodes,
The quiet mansions of the happy gods,
Their substance is so thin, so much refin'd,
Unknown to sense, nay, scarce perceiv'd by mind.
Now since their substance can't be touch'd by man,
They cannot touch those other things that can;
For whatsoe'er is touch'd, that must be touch'd again.
Therefore, the mansions of those happy pow'rs
Must all be far unlike, distinct from ours;
Of subtle natures, suitable to their own:
All which, by long discourse, I'll prove anon.
But now, to say this spacious world began,
By bounteous Heav'n contriv'd to pleasure man;
And, therefore, this vast frame they toil'd to raise,
And fit for us, should meet with equal praise;
Or be esteem'd eternal, all secure
From ruin, or the teeth of time endure;
And that 'tis impious to design to prove
What was contriv'd by the wise pow'rs above,
And fix'd eternal for the man they love.
That this can die, that this to fate can bow,
And with bold reason strive to overthrow,
And make that mortal they design'd not so.
'Tis fond: For what could man return again?
What profit to the gods for all their pain,
That they should work for him? Why break their rest,
In which they liv'd before, secure and blest?
What coming joy, what pleasure could they view,
To leave their former life, and seek a new?
For they delight in new, whose former state
Was made unhappy by some treach'rous fate:
But why should they, who liv'd in perfect ease,
Who ne'er saw any thing but what did please,
Be tickled thus with love of novelties?
Perhaps they lay obscure, and hid in night,
Till things began, and day produc'd the light.
Besides, what harm, had the sun idly ran,
Nor warm'd the mud, nor kindled it to man,
What harm to us, if we had ne'er began?
True: those that are in being once, should strive
As long as pleasure will invite to live;
But they, who ne'er had tasted joys, nor seen
What hurt to them, suppose they ne'er had been?
Besides: whence had the gods their notice, whence their mind,
Those fit ideas of the human kind?
What image of the work they then design'd?
How did they understand the pow'r of seed?
That they, by change of order, things could breed;
Unless kind nature's pow'rs at first did show
A model of the frame, and taught them how to know?
For seeds of bodies from eternal strove, [move,
And us'd by stroke, or their own weight to
All sorts of union try'd, all sorts of blows,
To see if any way would things compose:
And so, no wonder they at least were hurl'd
Into the decent order of this world;
And still such motions, still such ways pursue,
As may supply decaying things by new.
For were I ignorant how beings rise,
How things begin; yet reasons from the skies,
From ev'ry thing deduc'd, will plainly prove,
This world ne'er fram'd by the wise power's above;
So foolish the design, contriv'd so ill!
For first; those tracts of air what creatures fill?
Why beasts in ev'ry grove, and shady hill?
Vast pools take part, and the impetuous tide,
Whole spreading waves the distant shores divide;
Two parts in three the torrid zone does burn,
Or frigid chill, and all to deserts turn.
And all the other fields, what would they breed,
If let alone, but briars, thorns, and weed?
These are their proper fruits, this nature would,
Did not laborious mortals toil for food;
And tear, and plough, and force them to be good.
Did not they turn the clods with crooked share,
By frequent torments forcing them to bear;
No tender fruits, none of their own accord
Would rise to feed proud man, their fancy'd lord.
Nay, often too, when man with pains and toil,
Has plough'd, and overcome th' unwilling soil;
When flow'rs put forth, and budding branches shoot,
Look gay, and promise the much long'd-for fruit,
The scorching sun, with his two busy beams,
Burns up, or clouds destroy the fruits with streams.
Or chill'd by too much snow they soon decay,
Or storms blow them and all our hopes away.
But farther; why should parent nature breed
Such hurtful animals? why cherish, feed
Destructive beasts? Why should such monsters grow,
Did the kind gods dispose of things below?
Why plagues to all the seasons of the year belong?
And why should hasty death destroy the young?
A man, when first he leaves his prim'tive night,
Breaks from his mother's womb to view the light:
Like a poor carcase, tumbled by the flood,
He falls all naked and besmear'd with blood,
An infant, weak, and destitute of food.
With tender cries the pitying air he fills;
A fit presage for all his coming ills:
While beasts are born, and grow with greater ease;
No need of sounding rattles them to please;
No need of tattling nurses busy care
They want no change of garments, but can wear
The same at any season of the year.
They need no arms, no garrison, or town,
No stately castles to defend their own,
Nature supplies their wants; whate'er they crave
She gives them, and preserves the life she gave.
But now, since air, and water, earth, and fire
Are bodies all produc'd, and all expire;
Since these are such, these that compose this frame,
The nature of the whole must be the same:
For those, whose parts the strokes of fate controul,
Of those are made, and die, so must the whole.
Now, since the members of the world we view,
Are chang'd, consum'd, and all produc'd anew;
It follows then, for which our proofs contend,
That this vast frame began, and so must end.

But leſt you think I poorly beg the cauſe;
And that it diſagrees with nature's laws,
That water, air, that earth. and fire ſhould ceaſe,
And fail; that they can die, and can increaſe;
Conſider; earth when parch'd with buſy beams,
And trodden much, flies up in duſky ſtreams:
And little clouds of thick'ning duſt ariſe,
Diſpers'd by winds through all the lower ſkies:
And gentle rivers too, with wanton play,
That kiſs their rocky banks, and glide away,
Take ſomewhat ſtill from the ungentle ſtone,
Soften the parts, and make them like their own.
And by what thing another's fed, and grows,
That thing ſome portion of its own muſt loſe.
Now, ſince all ſpring from earth, and ſince we call,
And juſtly too, the earth, the ſource of all;
Since all, when cruel death diſſolves, return
To earth again, and ſhe's both womb and urn:
The earth is chang'd, ſome parts muſt ſometimes ceaſe,
And ſometimes new come on, and ſhe increaſe.
Beſides, that ſeas and rivers waſte and die,
And ſtill increaſe by conſtant new ſupply,
What need of proofs? This ſtreams themſelves do ſhow,
And in ſoft murmurs bubble as they flow.
But leſt the maſs of water prove too great,
The ſun drinks ſome to quench his nat'ral heat:
And ſome the winds bruſh off; with wanton play,
They dip their wings, and bear ſome parts away.
Some paſſes through the earth, diffus'd all o'er,
And leaves its ſalt behind in every pore;
For all returns, through narrow channels ſpread,
And joins where'er the fountain ſhows her head;
And thence ſweet ſtreams in fair meanders play,
And through the valleys cut their liquid way;
And herbs, and flow'rs on ev'ry ſide beſtow,
The fields all ſmile with flow'rs where'er they flow.
But more; the air, through all the mighty frame,
Is chang'd each hour, we breathe not twice the ſame;
Becauſe, as all things waſte, the parts muſt fly
To the vaſt ſea of air; they mount on high,
And ſoftly wander in the lower ſky.
Now, did not this the waſting things repair,
All had been long ago diſſolv'd, all air.
Therefore, ſince all things waſte their vital chain
Diſſolv'd; how can the frame of air remain?
It riſes from, and makes up things again
Beſides, the ſun, that conſtant ſpring of light,
Still cuts the heav'ns with ſtreams of ſhining white;
And the decaying old with new ſupplies:
For ev'ry portion of the beam that flies,
Is but ſhort-liv'd, it juſt appears, and dies.
And thus 'tis prov'd.———
For, when an envious cloud ſtops up the ſtream,
The conſtant ſtream of light, and breaks the beam,
The lower part is loſt, and diſmal ſhade
O'erſpreads the earth where'er the cloud's convey'd.
Therefore, there muſt be conſtant ſtreams of rays,
Since ev'ry portion of the beam decays:
Nor ſhould we ſee, but all lie blind in night,
Unleſs new ſtreams flow'd from the ſpring of light.

So from our lights, our meaner fires below,
Our lamps, or brighter torches, ſtreams do flow,
And drives away the night: they ſtill ſupply
New flames, as ſwiftly as the former die,
New beams ſtill tremble in the lower ſky.
No ſpace is free, but a continu'd ray
Still keeps a conſtant, though a feeble day;
So faſt, ev'n hydra-like, the fruitful fires
Beget a new beam as the old expires.
So ſun and moon, with many a num'rous birth,
Bring forth new rays, and ſend them down to earth,
Which die as faſt: leſt ſome fond fools believe,
That theſe are free from fate, that theſe muſt live.
Ev'n ſtrongeſt towns and rocks, all feel the rage
Of pow'rful time: ev'n temples waſte by age:
Nor can the gods themſelves prolong their date,
Change nature's laws, or get reprieve from fate:
Ev'n tombs grow old, and waſte, by years o'erthrown,
Mens graves before, but now become their own.
How oft the hardeſt rock diſſolves, nor bears
The ſtrength but of a few, though pow'rful years!
Now if that rock, for infinite ages paſt,
Stood ſtill ſecure, if it was free from waſte;
Why ſhould it fail, why now diſſolve at laſt?
Laſtly, look round, view that vaſt tract of ſky,
In whoſe embrace our earth and waters lie.
Whence all things riſe, to which they all return,
As ſome diſcourſe; the ſame both womb and urn.
'Tis ſurely mortal all: for that which breeds
That which gives birth to other things, or feeds,
Muſt loſe ſome parts; and when theſe things do ceaſe,
It gets ſome new again, and muſt increaſe.
But grant the world eternal, grant it knew
No infancy; and grant it never new;
Why then no wars our poets ſongs employ,
Before the ſiege of Thebes, or that of Troy?
Why former heroes fell without a name?
Why not their battles told by laſting fame?
But 'tis as I declare; and thoughtful man,
Not long ago, and all the world began:
And, therefore, arts that lay but rude before,
Are poliſh'd now, we how increaſe the ſtore,
We perfect all the old, and find out more.
Shipping's improv'd; we add new oars and wings;
And muſic now is found, and ſpeaking ſtrings.
Theſe truths, this riſe of things we lately know;
Great Epicurus liv'd not long ago:
By my aſſiſtance young philoſophy
In Latin words now firſt begins to cry.
But if you think ſucceſſive worlds, the ſame
They now appear, but earthquakes ſhook the frame,
Or fire deſtroy'd, or floods ſwept all away;
Grant only this, and you the cauſe betray:
This ſtrongly proves the world will once decay:
For what can ſicken thus, can waſte and fall,
And periſh all, if ſtronger ſtrokes prevail.
For thus, ſince we can feel the ſame diſeaſe,
Same harms that other per'ſhing things do ſeize,
We think that we ſhall die as well as theſe.
Beſides, whate'er's immortal, muſt be ſo,
Becauſe 'tis ſolid 'bove the pow'r of blow;

Whoſe parts no wedge divides, which know no [pore :
And ſuch are ſeeds as I explain'd before :
Or elſe becauſe, like empty ſpace, 'tis ſuch
As is ſecure from ſtroke, and free from touch !
Or elſe, becauſe it can admit no bound,
'Tis infinite, and knows no place beyond,
To which the ſeeds may ſink. This makes the all
Eternal; there's no place where ſeeds may fall,
And breed confuſion here. No ſpace does lie
Without the whole to which the parts may fly,
And leave the mighty all to waſte and die.
But now the world's not ſolid, ev'ry maſs
Contains between the ſeeds ſome empty ſpace :
Nor is't like void; for thouſand things, if hurl'd
With mighty force, can ſtrike and break the world.
Seeds ruſhing on, may bear ſome parts away,
Like vi'lent ſtreams, and ſo the world decay.
Beſides, there's ſpace beyond, to which the tie
Of union loos'd, the ſcatter'd parts may fly :
Therefore, theſe heav'ns and earth can waſte and die;
And, therefore, once began; for what can fail,
And waſte : o'er what the ſtrokes of fate prevail,
Muſt be unable to endure the rage
Of infinite paſt time, and pow'r of age.

But, laſtly; ſince th' elements at jars,
Still fight, are ſtill engag'd in civil wars,
Cannot their battles ceaſe, their wars be done,
And all the other parts ſubmit to one ?
The fire prevail, and with deſtructive beams
Dry ſeas, the thirſty ſun drink up the ſtreams ?
Which now he ſeems to try, but all in vain;
For rivers ſtill bring new ſupplies amain;
So faſt, ſo great, as if deſign'd to raiſe
A flood, and o'er the centre ſpread the ſeas :
But that's in vain; the waters ſtill decay,
The winds bruſh off and bear ſome parts away;
The ſun drinks ſome; the ſtars take ſome for food,
And ſeem to threaten more a drought than flood.
Thus they ſtill fight, with equal force maintain
The war; now conquer, and now yield again.

Yet fire, as ſtories go, did once prevail,
And once the water too was ſpread o'er all.
The fire prevail'd, when the ſun's furious horſe,
Diſdaining Phaëton's young feeble force,
Ran through the ſky in an unuſual courſe;
And, falling near the earth, burnt all below,
Till angry Jove did dreadful thunder throw,
And quench'd the hot-brain'd fiery youth in Po.
But Phœbus gather'd up the ſcatter'd ray,
And brought to heav'n again the falling day.
The horſes too that ran through heav'n's wide plain,
He caught, and harneſs'd to the coach again.
They ever ſince, in due obedience, drew
The flaming car. This Greece reports as true,
Yet 'tis abſurd : but all may yield to flame,
If great ſupplies of rapid matters came
From the vaſt maſs : for then thoſe ſeeds muſt fail,
And ſink again, or fire muſt ruin all. [ſtand

Seas once prevail'd, nor could the towns with-
The raging waves : they ſpread o'er all the land.
But when the num'rous ſeeds, the mighty maſs
Supply'd, were turn'd from this into another place,
The water ceas'd, and the continual rain :
And rivers ran within their banks again.

Now I will ſing, how moving ſeeds were hurl'd,
How toſs'd to order, how they fram'd the world :
How ſun and moon began; what ſteady force
Mark'd out their walk; what makes them keep their courſe :
For ſure unthinking ſeeds did ne'er diſpoſe
Themſelves by counſel, nor their order choſe :
Nor any compacts made, how each ſhould move,
But from eternal, through the vacuum ſtrove,
By their own weight, or by eternal blows,
All motions try'd, to find the beſt of thoſe,
All unions too : if, by their various play,
They could compoſe new beings any way :
Thus long they whirl'd, moſt ſorts of motion paſt,
Moſt ſorts of union too, they join'd at laſt
In ſuch convenient order, whence began
The ſea, the heav'n, and earth, and beaſts, and man :
But yet no glitt'ring ſun, no twinkling ſtar,
No heav'n, no roaring ſea, no earth, no air,
Nor any thing like theſe did then appear,
But a vaſt heap; and from this mighty maſs
Each part retir'd, and took its proper place :
Agreeing ſeeds combin'd; each atom ran,
And ſought his like, and ſo the frame began :
From diſagreeing ſeeds the world did riſe,
Becauſe their various motion, weight, and ſize,
And figure, would not let them all combine,
And lie together : nor friendly motions join :
Thus ſkies, and thus the ſun firſt rais'd his head,
Thus ſtars, thus ſeas o'er proper places ſpread.

For firſt the earthly parts, a heavy maſs,
And cloſely twin'd, poſſeſs'd the middle place.
Now as theſe heavy parts combin'd more cloſe,
Deſcending ſtill, they vex'd with conſtant blows
The lurking parts of ſea, of ſtars, and ſkies,
And ſun; and ſqueez'd them out, and made them riſe;
Becauſe thoſe ſeeds are ſubtle, more refin'd,
And round, and ſmooth, and of a leſſer kind
Than thoſe of earth; and ſo can freely paſs
The ſubtle pores of the deſcending maſs.
And thus the parts of heav'n did firſt retire,
And bore up with them num'rous ſeeds of fire :
As when the ſun begins his early race,
And views the joyful earth with bluſhing face,
And quaffs the pearly dews, ſpread o'er the graſs;
From earth he draws ſome miſts with buſy beams,
From wand'ring waters ſome, and running [high,
Theſe thin, theſe ſubtle miſts, when rais'd on
And join'd above, ſpread clouds o'er all the ſky :
Juſt ſo the parts of heav'n did upward move,
The ſubtle ether, thus combin'd above :
And vaſtly wide, and ſpread o'er ev'ry place,
Contains the reſt within her kind embrace :
Thus heav'n : then roſe the moon, and ſtars, and ſun :
Which through the ſky with conſtant motions run :
Becauſe their ſeeds were all too light to lie
In earth, nor light enough to riſe on high,
And paſs the utmoſt limits of the ſky;

But, plac'd between them both, the midſt controul,
Certain, but moving portions of the whole:
Juſt as in man, ſome parts refuſe to ceaſe
From motion, ſome ſtill lie diſſolv'd in eaſe.
Theſe things retir'd, the heavier parts of clay
Sunk farther down, and made an eaſy way
For flowing ſtreams, and cavern's for the ſea.
And as by conſtant blows, the vig'rous ſun
Did ſtrike the upper parts, and preſs them down,
More moiſture roſe; and then did ſtreams increaſe:
More parts were ſtill ſqueez'd out, and ſwell'd the ſeas:
More ether then, of air more parts did riſe,
And borne on high, there thicken'd into ſkies.
The mountains rais'd their heads; the humble field
Sunk low; the ſtubborn ſtones refus'd to yield;
The rocks did proudly ſtill their height maintain,
Nor could all ſink into an equal plain.
Thus earth at firſt was fram'd; and thus did fall
The loweſt, as the ſediment of all.
Thence ſeas, thence air, thence ether, ev'ry maſs,
Diſtinct from others, took its proper place;
All fluids and all differently light,
And therefore reach'd the leſs, or greater height.
Then liquid ether did the fartheſt rear,
And lies on ſofteſt beds of yielding air:
But yet its parts ne'er mix, whilſt winds did blow,
And rapid ſtorms diſturb all here below,
They undiſturb'd move round the ſteady pole;
And ſun, and ſtars, with conſtant motion roll:
For that by conſtant turns the ſky may move,
The conſtant motions of the waters prove.
This thing the mighty maſs, the ocean ſhows;
For that, at ſettled hours, ſtill ebbs and flows.
Now learn what moves the ſtars, what mighty force
Does drive them on; what laws confine their courſe.
Firſt, If the orb is mov'd, and whirls, and draws
The ſun about; then this may be the cauſe:
Vaſt tracts of air the diſtant ſkies do bound,
And with a cloſe embrace encircle round;
The upper part of that drives down the ſkies
From eaſt to weſt; the under makes them riſe;
And ſo the whirl's perform'd. Thus oft a flood
Turns round a wheel, and whirls the weighty wood.
Or elſe the orbs may lie at reſt above,
Steady and fix'd, and only ſtars may move;
Becauſe the fires, confin'd to little ſpace,
Grow fierce and wild, and ſeek a larger place,
And thus through the vaſt heav'n begin their race.
Or elſe external air, or ſubtle wind
May whirl them round: Or they may move to find
Their nouriſhment; and run where food invites,
And kindly calls their greedy appetites.
For true, what ſingle force makes ſtars to riſe
And ſet; what governs theſe our ſingle ſkies
Is hard to tell:——
And therefore I, how ſtars may move, propoſe
A thouſand ways, and numerous as thoſe:
And what may whirl the ſun, and pale-fac'd moon,
In all the worlds; but cannot fix on one,
Although but one rules here; but which that is
'Tis hard to point; it may be that or this.
And that the heavy parts ſhould end their race,
And reſt: and earth poſſeſs the middle place,
Its weight decay'd; that pow'r did weaker grow,
Becauſe convenient things were plac'd below,
That roſe with it, to which 'tis cloſely join'd,
By nat'ral ties, and ſtrongeſt bands confin'd:
And thus it ſoftly reſts, and, hanging there,
Grows light, nor preſſes down the lower air.
Juſt as in man, the neck the head ſuſtains,
The feet the whole; yet not one part complains
Of preſſing weight; neither is vex'd with pains.
Yet other weights impos'd we ſtraight perceive,
Though lighter far, contract our limbs and grieve.
[Such vaſt import from ſim'lar parts does ſpring,
When one is aptly join'd t' another thing.]
So earth was faſhion'd in its proper place:
Not made, then thruſt into the ſtrange embrace
Of diff'rent air, but with the world began;
A certain part of it, as limbs of man.
Beſides, the ſhaking earth does often move
The upper air, diſturbing all above;
Which could not be, unleſs the ſtrongeſt tie
Did cloſely join the earth, the air, and ſky.
Thin ſubtle ſouls 'cauſe cloſely join'd, do prop
The mighty weight of limbs, and bear it up.
What raiſe the limbs in leaping, what controul,
And guide their motion, but the ſubtle ſoul?
Which ſhows the weighty force of things refin'd,
When ty'd to others of a groſſer kind;
As air to earth, to our groſs limbs the mind.
But farther on, the ſun and moon do bear
No greater heats, nor figures than appear;
Becauſe that ſpace, through which the rays can fly,
The heat can reach our touch, the light our eye:
Can leſſen nothing, nor contract the frame,
Nor make the fire appear a milder flame:
Now ſince the vig'rous rays do freely flow
As far as us, and viſit all below!
Their fires and figures are the ſame they ſhow:
Nor greater all, nor leſs.——
——And thus the moon,
Whether with borrow'd rays, or with her own,
She view the world, carries no larger ſize,
No fiercer flames than thoſe that ſtrike our eyes.
For objects far remov'd, at diſtance ſeen,
When too much hind'ring air is plac'd between,
No certain figure ſhow: no eye can trace
Each line, each figure of the diſtant face:
But ſince the moon preſents a certain ſize,
A certain ſhape, and figure, to our eyes,
'Tis plain that it appears as great as 'tis.
But farther on, ſince all our flames below,
At diſtance ſeen, do various ſizes ſhow:
Now lower ſink, now raiſe their lofty head,
And now contracted ſeem, now farther ſpread:
We may conclude the ſtars, when ſeen from far,
Or ſomewhat greater than the figures are,
Or ſomewhat, though but little, leſs appear.

But more, no wonder that such vast supplies,
Such streams of rays from this small sun should rise,
As cherish all with heat, and fill the skies.
For we may fancy this the spring of fire,
To which the vapours of the world retire;
There gather into streams, and thence they fall,
As from the fountain's head, and spread o'er all.
Thus have we seen a little fountain yield
Vast spreading streams, and flow o'er all the field.
Or else the sun might kindle neighb'ring air,
And raise surprising heat and fervour there.
Perchance the air is of convenient frame,
And may be kindled by a little flame;
As oft in straw and corn fierce flames prevail,
From one poor falling spark, and spread o'er all.
Or else the sun has secret stores of heat,
Dark, and unshining stores, but vastly great;
And these increase the warmth, these move the sense,
And these united, make the heat intense. [bends,
How tow'rds both poles the sun's fix'd journey
And how the year his crooked walk attends,
Why from the summer's height he soon declines,
And falls to visit the cold winter signs,
And then returns. And why the nimble moon
Does drive her chariot faster than the sun;
And in one month through all the zodiac go,
While the grave sun's a year in walking through.
For this a thousand reasons may be shown;
But yet 'tis hard, nor safe, to fix on one.
For first, Democritus has found the cause
Perhaps, and rightly settled nature's laws;
For thus he says: Great orbs are whirl'd above,
And by that whirl the lower circles move;
And so the distant orbs that lie below,
Far from this spring of motion, move but slow,
Because the pow'r still lessens. Thus the sun
Is far outstripp'd by nimble stars, that run
In higher rounds; much more the lower moon.
Now since she's plac'd so low, since weak the force,
She cannot have an equal nimble course
With stars; so these may overtake the moon,
And pass beyond her oft'ner than the sun.
Thus she may seem to move, her walk appear
Through all the signs, 'cause they return to her.
Besides, by turns a constant stream of air,
At fix'd and certain seasons of the year, [decline,
Might rush from either part, and make the sun
And fall from summer to the winter sign;
Or drive it up again, and bring the rays
And heat to us, and show us longer days.
And thus the moon, thus other stars may rise,
And sink again into the winter skies.
Driv'n by these two constant streams of air.——
For clouds in storms two diff'rent ways do move,
The lower opposite to those above.
What wonder then the sun with vig'rous beams,
And stars are driven by two constant streams?
And day may end, and tumble down the west,
And sleepy night fly slowly up the east;
Because the sun having now perform'd his round,
And reach'd with weary flames the utmost bound
Of finite heav'n, he there puts out the ray,
Weary'd and blunted all the tedious day
By hind'ring air, and thus the flames decay.
Or else that constant force might make it move
Below the earth, which whirl'd it round above.
And so the constant morning still may rise,
And with pale fires look through the lower skies;
Because the sun rolls round with constant ray,
And, rising upwards, shows approaching day;
Or else because the fires, dissolv'd at night,
There join again, and scatter vig'rous light.
Thus when the morning sun begins to rise,
Its flames lie scatter'd o'er the eastern skies,
Then gather to a ball: And this we view
From Ida's top; this fame reports as true.
Nor is it strange that common seeds of fire
Should to the eastern quarter still retire,
Still ev'ry day return, and make a sun;
Because a thousand other things are done
At set, and constant times, and then alone.
Thus trees, at certain times, thus shrubs do shoot
At certain times, and bud, and bear their fruit.
Thus teeth in boys begin, and thus they fall;
Thus beards in youth; at certain seasons all:
Thus thunder, snow, and storms, and winds appear
At fix'd and certain seasons of the year.
As things first happen'd, they continue on;
The course that chance first gave them, still they run.
The days may longer grow, and vig'rous light
Unwillingly give place to drowsy night;
And sometimes sleepy night may longer stay,
And slowly wake before approaching day:
Because the sun might walk the constant rounds
In crooked paths, and in uneven bounds;
Nor into equal parts the globe divide,
Now longer here, and now on th' other side,
Until it comes, and warms with neighb'ring rays
The line, and measures equal nights and days,
The line lies just between the north and south,
And leaves an equal distance unto both,
Because the zodiac is oblique,——
Through which the sun his yearly walk does go,
And views obliquely all the world below;
Thus teach astronomers; and this confess'd
A fair opinion: probable at least.
Or else the air is thick, and stops the ray,
Nor gives the sun a free and easy way.
And this prolongs the tedious winter night,
The darkness slowly yields to ling'ring light.
Or else at certain seasons of the year,
The flames meet slowly in the eastern air,
And frame the sun, and make the day appear.
But more: the moon may shine with borrow'd rays,
Her various light increasing with the day's,
As she the farther from the sun retires,
And with full face receives his scorching fires:
When full, oppos'd, she, climbing up the east,
Views him below fall headlong down the west.
And so her light decrease as she goes on
Through diff'rent signs, approaching near the sun.
And thus the phases are explain'd by all
That think her shape is round, the moon a ball,

And place her circling orb below the reſt;
A fair opinion, probable at leaſt.
Though proper light the moon's pale face ſhould fill,
Yet it might ſhow the diff'rent phaſes ſtill:
Becauſe, as that bright body rolls above,
Another dark, unſeen, thick thing might move
Beneath, and ſtop the rays, divert the ſtreams
Of falling light, and turn away the beams.
Or elſe, it like a ball, half dark, half bright,
Roll'd round its axle, may affect the ſight
With diff'rent phaſes, and ſhow various light.
Now turn that half, which the full light adorns,
A quarter now, now dwindle into horns.
And this the latter Babylonian ſect
Aſſerts, and the Chaldean ſchemes reject:
As if it could not either way be done,
But powerful reaſons fix'd our choice on one.
But why the moons a monthly round purſue?
Why one ſo long, not ev'ry day a new?
Why are they fram'd, endure, and always ceaſe
At this ſet time? The cauſe is told with eaſe;
Since other things at certain times appear,
And only then: Thus ſeaſons of the year.
Firſt, Spring, and Venus' kindeſt pow'rs inſpire
Soft wiſhes, melting thoughts, and gay deſire;
And warm Favonius fans th' amorous fire;
Then mother Flora, to prepare the way,
Makes all the field look glorious, green, and gay;
And freely ſcatters with a bounteous hand
Her ſweeteſt, faireſt flowers o'er the land:
Next heat, and duſty Harveſt take the place,
And ſoft Eteſia's fan the ſun-burnt face.
Then ſweaty Autumn treads the noble vine,
And flowing bunches give immortal wine.
Next roars the ſtrong-lung'd ſouthern blaſt, and brings
The infant thunder on his dreadful wings.
Then cold purſues, the north ſeverely blows,
And drives before it chilling froſts, and ſnows.
And next deep Winter creeps, gray, wrinkled, old,
His teeth all ſhatter, limbs all ſhake with cold:
Therefore no wonder ſure the moon ſhould riſe
At certain times, and that again ſhe dies
At certain times; ſince thouſand things are ſhown
At fix'd and conſtant times, and then alone.
Eclipſes may be ſolv'd a thouſand ways;
For if the moon can ſtop deſcending rays
By thruſting her dark ſelf between, and ſo
Bring ſudden ſhade, and night on all below;
Then give me reaſons why there cannot be
Another thing, too dark for us to ſee,
And fit to ſtop the rays as well as ſhe?
Or, why the circling ſun, in paſſing by
Some venomous places of the neighbouring ſky,
May not grow ſick, and pale, and almoſt die?
Thoſe paſt, grow well, regain his former light?
Thus ſometimes make us day, and ſometimes night.
And whilſt the moons their monthly courſes run,
Within the reach of earth's dark ſhadowing cone,
If then revengeful earth can ſtop the light,
If ſhe can hide the ſick'ning moon in night;
Why cannot other things divert the ſtreams,
The falling ſtreams of light, and ſtop the beams?
Or if the moon ſhines with a nat'ral ray,
As through infectious air ſhe cuts her way,
Why may not ſhe grow ſick, her flames decay?
Since I've the motions taught of ſtars above,
How ſun, and moon, and by what cauſe they move;
And how, eclips'd, they loſe their gaudy light,
And ſpread o'er all an unexpected night,
As if they wink'd, and then with open eyes
View'd all again, and clear'd the lower ſkies.
Now let's deſcend again to new-born earth,
And find to what ſhe gave the ſooneſt birth:
What ſort of beings, which of all the kinds
She firſt durſt venture to the faithleſs winds.
She, firſt of all, green herbs, and flow'rs did yield,
And ſpread a gawdy green o'er all the field.
And next the tree, with ſpreading branches, ſhoots,
But cloſely fix'd, and bound with ſteady roots.
As briſtles, hairs, and plumes are firſt deſign'd
O'er limbs of beaſts, and o'er the winged kind;
So new-born earth with herbs and trees began,
And then by various ways bore beaſt and man:
For Heav'n, 'tis certain, did not faſhion all;
Then let the various creatures downwards fall:
Nor ſeas produce an earthly animal.
And therefore parent earth does juſtly bear
The name of mother, ſince all roſe from her.
She now bears animals, when ſoft'ning dew
Deſcends; when ſun ſends heat, ſhe bears a thouſand new.
Then who can wonder now, that then ſhe bore
Far ſtronger, bulky animals, and more,
When both were young, when both in nature's pride;
A luſty bridegroom he, and ſhe a buxom bride?
Firſt, of all animals, in teeming ſpring,
The feather'd kind peep'd forth, and clapp'd their wing:
As even now our tender inſects ſtrive
To break their bags, get forth, and eat and live.
Next beaſts, and thoughtful man receiv'd their birth;
For then much vital heat in mother earth,
Much moiſture lay: And where fit place was found,
There wombs were form'd, and faſten'd to the ground:
In theſe, the yet imperfect embryos lay,
Through theſe, when grown mature, they forc'd their way,
Broke forth from night, and ſaw the cheerful day:
Then nature faſhion'd for the infant's uſe
Small breaſts in earth, and fill'd with milky juice:
Such as in womens breaſts ſhe now provides
For future infants: thither nature guides
The chiefeſt parts of food, and there they meet
Fit ferment, there they grow both white and ſweet:
Earth gave the infants food; thin miſts were ſpread
For clothes; the graſſy meadows gave a bed.
The earth, when new, produc'd no raging cold,
No heats, nor ſtorms: Theſe grew, as ſhe grew old.
Therefore our parent earth deſerves to bear
The name of mother, ſince all roſe from her.

Thus for a certain time mankind ſhe bore,
And beaſts, that ſhake the wood with dreadful roar,
And various kinds of birds; and as they flew,
The ſun, with curious ſkill, the figures drew
On all their plumes: he well the art might know
He us'd to paint the ſame on his fair bow.
But weary'd now, and tir'd by length of time,
The earth grows old, and weak, as women paſt their prime.
Time changes all; and as with ſwifteſt wings
He paſſes forward on, he quickly brings
A diff'rent face, a diff'rent ſight of things:
And nature alters: this grows weak, this ſtrong,
This dies, this newly made, is firm and young:
Thus alt'ring age leads on the world to fate;
The earth is diff'rent from her former ſtate;
And what in former times with eaſe ſhe bore,
Grown feeble now, and weak, ſhe bears no more,
And now does that ſhe could not do before.
Beſides, the earth produc'd a num'rous train
Of monſters: Thoſe her labour wrought in vain:
Some without hands, or feet, or mouth, or eyes;
Some ſhapeleſs lumps, nature's abſurdities;
Dull, moveleſs things, and deſtitute of food,
Which could not fly the bad, nor chooſe the good.
A thouſand ſuch in vain aroſe from earth;
For nature, frighted at the ugly birth,
Their ſtrength, and life to narrow bounds confin'd;
Deny'd them food, or to increaſe their kind:
For that one pow'r a thouſand things requires;
Almoſt as many as its own deſires:
There muſt be food, and ſeed, and organs fit
For flowing ſeed, whilſt all the happy night
The body lies diſſolv'd in ſoft delight;
That male and female may their pow'rs employ,
They muſt have organs fit for mutual joy.
But more: theſe years muſt num'rous kinds deface;
They could not all preſerve their feeble race:
For thoſe we ſee remain, and bear their young,
Craft, ſtrength, or ſwiftneſs, has preſerv'd ſo long.
Many their profit, and their uſe commends;
Thoſe ſpecies man preſerves, kind man defends.
Wild beaſts, and lions race, their native rage
Preſerves ſecure through all devouring age.
Swiftneſs preſerves the deer, and craft the fox,
The vig'lant, faithful dog, the horſe, the ox,
We men defend; we keep the tender flocks.
They ſhun wild beaſts, they fly the dreadful wood;
They ſeek for peace, and much, and eaſy food;
Gotten without their toil: and this we give
For the vaſt profits we from them receive.
But thoſe to whom their nature gave no force,
No courage, ſtrength, nor ſwiftneſs to the courſe;
Whom neither profit could, nor uſe commend,
Thoſe man refus'd to feed, or to defend:
Thus, doom'd by chance, they liv'd an eaſy prey
To all, and thus their kinds did ſoon decay.
But never centaurs; theſe were never known;
That two ſuch natures ſhould combine in one,
Such diſagreeing pow'rs; abſurd and vain!
Plain nonſenſe! Theſe are creatures of the brain:
A fool knows this: For horſes oft enjoy
Full growth at three years old; not ſo a boy;
He ſcarce forgets his teat, and oft at reſt,
As dreams preſent, he ſeeks his nurſe's breaſt:
Then, when the horſe grows old, his limbs decay,
And looſen'd life begins to fly away:
The boy grows ſtrong, he feels the pride of growth,
A ſturdy, vig'rous, gay, and bearded youth:
Leſt you ſhould think ſuch monſters apt to grow,
A thoughtful man above, a horſe below.
Or Scyllas, whom a num'rous train entwines
Of half ſea-dogs, and barks above their lions:
Or ſuch that live, nor grow an equal time,
And which at equal years not reach their prime;
Whom equal years not fill with youthful rage,
Nor loſe their ſtrength again at equal age:
Whom neither the ſame kinds of beauty fire,
Nor raiſe ſoft thoughts, gay wiſhes, warm deſire;
Or thoſe that ſeek and live by diff'rent food:
Thus hemlock kills a man, for goats 'tis good.
Beſides, ſince flames will ſcorch the lion's breaſt,
And burn as well as any other beaſt;
How could chimeras riſe, or how contain
Three kinds; a lion's head, a ſerpent's train,
A goat, the middle of the fancy'd frame,
And ſtill with ſcorching noſtrils breathing flame?
Then he who thinks that new-made heav'n and earth
Did give to ſuch prodigious monſters birth,
Yet brings no cauſe to prove the fancy true,
But ſtill relies on the poor ſhift, 'twas new;
May fancy too that ſtreams enrich'd the ſeas,
With golden waves, that jewels grew on trees:
That man of ſuch vaſt force and limbs did riſe,
That he could ſtride the ocean, whirl the ſkies;
Or any thing mad fancy can deviſe.
For though much feed lay hid when thoughtful man
And all the various kinds of beaſts began;
Yet nothing proves, that things of diff'rent kind,
That diſagreeing natures ſhould be join'd;
Since now the graſs and trees, and all that grows
And ſprings from earth, are never join'd like thoſe;
But each ariſing from its proper cauſe
Remains diſtinct, and follows nature's laws.
Then man was hard, as hard as parent-ſtones;
And built on bigger, and on firmer bones.
The nerves that join'd their limbs were firm and ſtrong;
Their life was healthy, and their age was long:
Returning years ſtill ſaw them in their prime:
They weary'd even the wings of meas'ring time:
No colds, nor heats, no ſtrong diſeaſes wait,
And tell ſad news of coming haſty fate;
Nature not yet grew weak, nor yet began
To ſhrink into an inch, the larger ſpan
Like beaſts they lay in ev'ry wood and cave,
Gath'ring the eaſy food that nature gave:
No impious ploughman yet had learn'd to tear
His parent's bowels with his crooked ſhare;
None planted fruitful trees, none dreſs'd the vine,
None prun'd decaying boughs, none preſs'd the wine;
Contented they with the poor eaſy ſtore,
That ſun and earth beſtow'd, they wiſh'd no more:
Soft acorns were their firſt and chieſeſt food,
And thoſe red apples that adorn the wood.

And make pale winter bluſh; ſuch nature bore,
More num'rous then, beſides a thouſand more,
Which all ſupply'd poor man with ample ſtore.
When thirſty, then did purling ſtreams invite
To ſatisfy their eager appetite:
As now in murmurs loud the headlong floods,
Invite the thirſty creatures of the woods:
And then by night they took their reſt in caves,
Where little ſtreams roll on with ſilent waves:
They bubble through the ſtones, and ſoftly creep,
As fearful to diſturb the nymphs that ſleep:
The moſs, ſpread o'er the marbles, ſeems to weep.
Whilſt other ſtreams no narrow bounds contain,
They break ſuch banks, and ſpread o'er all the plain.
They knew no uſe of fire to dreſs their food;
No clothes, but wander'd naked in the wood:
They liv'd to ſhady groves and caves confin'd,
Mere ſhelter from the cold, the heat, and wind.
No fix'd ſociety, no ſteady laws;
No public good was ſought, no common cauſe,
But all at war, each rang'd and ſought his food,
By nature taught to ſeek his private good.
Then to renew frail man's decaying race,
Or mutual luſt did prompt them to embrace;
Or elſe the greater vigour of the male,
Or ſome few treach'rous preſents did prevail;
Some acorns, apples ſome, ſome pears beſtow;
The thing the ſame, the price was leſs than now.
Then ſtrong, and ſwift, they did the beaſts purſue;
Their arms were ſtones and clubs; and ſome they ſlew.
And ſome they fled: from thoſe they fear'd to fight
They ran, and ow'd their ſafety to their flight.
When drowſy night came on, they naked lay,
Spread o'er the ground like bears, and rough as they:
Their ſleep was ſound, they wak'd not all the night,
Nor wander'd here and there whilſt ſhades affright,
Nor view'd the eaſt with longing eyes for light:
But all diſſolv'd in ſweeteſt ſlumbers lay,
Till the bright ſun aroſe and broke the day.
For ſince they had beheld, e'er ſince their birth,
The day and night by turns ſpread o'er the earth;
They never fear'd the ſun ſhould loſe his light,
And all lie bury'd in eternal night.
The moſt they dreaded was the furious beaſt;
For he, in dead of night did oft moleſt,
And lengthen into death their ſlumb'ring reſt.
Sometimes they left their caves by night and fled,
Rous'd from their ſofteſt ſleep, all pale, half dead,
While boars and lions came, and ſeiz'd their bed.
Yet fewer dy'd than now: for ſingly then
Each caught within the limits of his den,
While the beaſt tore the living, trembling food,
And revell'd in full draughts of reeking blood,
With dreadful cries he fill'd each wood and cave,
To ſee his limbs go down a living grave
Others that 'ſcap'd with life, but wounded, groan'd,
Holding their hands on the corrupting wound,
While trembling echoes did reſtore the ſound.
Not ſkill'd in herbs, and now grown deſperate,
With horrid cries they call'd on ling'ring fate,
Till worms increas'd; and eating through the clay,
Made paſſage for the foul to fly away.
But then no armies fell at once, no plain
Grew red, no rivers ſwell'd with thouſands ſlain:
None plough'd the floods, none ſhipwreck'd made their graves
In ſeas, none drank cold death among the waves,
But oft the furious ocean rag'd in vain:
No miſchief done, the waves grew mild again:
No ſhips were found, nor could the treach'rous ſmile
Of ſmooth-fac'd waves tempt one poor man to toil.
Then want, now ſurfeits bring a haſty death;
Our bellies ſwell ſo much they ſtop our breath.
Then pois'nous herbs, when pluck'd by chance, did kill.
Now poiſon's grown an art, improv'd by ſkill.
But when they built their huts, when fire began,
And ſkins of murder'd beaſts gave clothes to man:
When one to one confin'd in chaſte embrace,
Enjoy'd ſweet love, and ſaw a num'rous race:
Then man grew ſoft, the temper of his mind
Was chang'd from rough to mild, from fierce to kind;
For, us'd to fire, his limbs refus'd to bear
The piercing ſharpneſs of the open air;
And luſt enfeebled him; beſides the child,
Soften'd by parent's love, grew tame and mild.
Then neighbours, by degrees familiar grown,
Made leagues and bonds, and each ſecur'd his own:
And then by ſigns and broken words agreed,
That they would keep, preſerve, defend and feed
Defenceleſs infants, and the women too,
As nat'ral pity prompted them to do.
Though this fix'd not an univerſal peace,
Yet many kept their faith, and liv'd at eaſe;
Or elſe, almoſt as ſoon as it began,
The race had fall'n, this age ne'er ſeen a man.
Kind nature pow'r of framing ſounds affords
To man, and then convenience taught us words:
As infants now, for want of words, deviſe
Expreſſive ſigns; they ſpeak with hands and eyes;
Their ſpeaking hand the want of words ſupplies.
All know their pow'rs; they are by nature ſhown:
Thus tender calves with naked front will run,
And fiercely puſh before their horns are grown.
Young lions ſhow their teeth, prepare their paws;
The bears young cubs unſheath their crooked claws,
While yet their nails are young, and ſoft their jaws.
The birds ſtraight uſe their wings, on them rely;
And ſoon as dangers preſs, they ſtrive to fly.
Beſides, that one the names of things contriv'd,
And that from him their knowledge all deriv'd,
'Tis fond to think: for how could that man tell
The names of things, or liſp a ſyllable,
And not another man do ſo as well?
Nay more: if others us'd not words as ſoon.
How was their uſe, and how the profit known?
Or how could he inſtruct another's mind?
How make them underſtand what was deſign'd?
For his being ſingle, neither force nor wit,
Could conquer many men, nor they ſubmit
To learn his words and practiſe what was fit.

How he perſuade thoſe ſo unfit to hear?
Or how could ſavage they with patience bear
Strange ſounds and words ſtill rattling in their ear.
But now, ſince organs fit, ſince voice and tongue,
By nature's gift beſtow'd, to man belong,
What wonder is it then that man ſhould frame,
And give each diff'rent thing a diff'rent name?
Since beaſts themſelves do make a diff'rent noiſe,
Oppreſs'd by pains and fears, or fill'd with joys
This plain example ſhows: when dogs begin
To bend their backs, and ſhow their teeth, and grin,
When hollow murmurs ſhow deep rage within;
Their voice is diff'rent when they bark aloud,
And with ſtrong roarings fright the trembling crowd;
Or when they lick their whelps with tender tongue,
Or when they play, and wanton with their young,
Now ſeem to bite, but never chop their jaws,
Now ſpurning, but with tender fearful claws;
Then flatt'ring, ſoft and tender is their voice,
Far diff'rent from that grating, howling noiſe,
They make when ſhut alone, or creeping low,
Whine, as they ſtrive to ſhun the coming blow.
The horſe with diff'rent noiſes fills the air,
When hot and young, he neighs upon his mare,
Rous'd by ſtrong love: or when by fierce alarms,
He ſports, and bears his rider on to arms.
Thus birds, as hawks, or thoſe that cut the flood,
Make diff'rent noiſes as they eat their food;
Or when they fiercely fight; or when purſue
The trembling prey: each paſſion has a new.
Sometimes at change of air they change their voice; [noiſe,
Thus daws, and om'nous crows, with various
Affright the farmers, and fill all the plain,
Now calling for rough winds, and now for rain.
Therefore, ſince beaſts and birds, though dumb, commence
As various voices as their various ſenſe;
How eaſy was it then for man to frame,
And give each diff'rent thing a diff'rent name?
Now for the riſe of fire: ſwift thunder thrown
From broken ſulph'rous clouds, firſt brought it down.
For many things take fire when lightning flies,
And ſulph'rous vapours fill the lower ſkies:
And trees, when ſhaken by a ſouthern blaſt,
Grow warm, then hot, and ſo take fire at laſt;
Their branches mingling with a rude embrace,
Burſt into flames ——
And thus our fires might riſe from either cauſe.
The ſun firſt taught them to prepare their meat;
Becauſe they had obſerv'd his quick'ning heat,
Spread o'er the hills and ev'ry ſhady wood,
Ripen'd the fruits, and made them fit for food.
Hence various methods they did ſtill purſue,
And chang'd their former life to take a new.
The wiſer and the wittier left the field;
And towns for ſafety did begin to build;
By nature, kings.——
Then cattle too was ſhar'd, and ſteady bounds
Mark'd out to ev'ry man his proper grounds:
Each had his proper ſhare, each what was fit,
According to his beauty, ſtrength, or wit:
For beauty then and ſtrength had moſt command;
Thoſe had the greateſt ſhare in beaſts and land;
But when once gold was found, the pow'rful ore
Saw light, and men gap'd after glitt'ring ſtore;
Then wit and beauty were eſteem'd no more.
But wealth enjoy'd their honour, ſeiz'd their place,
The wiſe and beauteous bow to fortune's aſs.
But if men would live up to reaſon's rules,
They would not ſcrape and cringe to wealthy fools.
For 'tis the greateſt wealth to live content
With little: ſuch the greateſt joy reſent:
And bounteous fortune ſtill affords ſupply,
Sufficient for a thrifty luxury.
But wealth and pow'r men often ſtrive to gain,
As that could bring them eaſe; or make a chain
To fix unſteady fortune: all in vain!
For often when they climb the tedious way,
And now in reach of top where honours lay;
Quick ſtrokes from envy or from thunder thrown,
Tumble the bold, aſpiring wretches down.
They find a grave, who ſtrove to reach a crown.
And thus 'tis better, than proud ſceptres ſway,
To live a quiet ſubject and obey.
Theſe former kings now murder'd, they o'erthrown,
The glory of the ſceptre and the crown
Decreas'd: The diadem, that ſign of ſtate,
Now wept in drops of blood the wearer's fate;
Spurn'd by the common feet: who fear'd no more:
'Tis ſweet to ſpurn the things we fear'd before.
Thus monarchy was loſt.——
That ſun once ſet, a thouſand little ſtars
Gave a dim light to jealouſies and wars:
While each among the many ſought the throne,
And thought no head, like his, deſerv'd the crown.
This made them ſeek for laws, this led their choice
To rulers: pow'r was giv'n by public voice:
For men, worn out, and tir'd by conſtant ſtrife,
At laſt began to wiſh an eaſy life;
And ſo ſubmitted of their own accord
To rigid laws, and their elected lord.
For when each ſingle man, led on by rage,
Grew bloody in revenge, and ſtrove t' engage
His enemy, 'twas an unpleaſant age.
Hence men grew weary of continual wars,
Which ſour'd the ſweet of life with conſtant fears;
Becauſe diffuſive wrong can ſpread o'er all;
No ſtate ſecure; nay, oft the wrongs recoil,
With double force on the contrivers fall.
Nor can thoſe men expect to live at eaſe,
Who violate the common bond of peace.
Though now they lie conceal'd from man and God,
They ſtill muſt fear 'twill ſome time come abroad;
Since ſome diſeas'd, and ſome by night betray
The wicked actions they have done by day;
Though hid in night; ſcarce hell ſo deep as they.

Now ſing, my muſe, for that's my next design,
Why all do bow to ſomewhat as divine?
Why ev'ry nation has its proper ſhrine?
Why all do temples build, why altars raiſe?
And why all ſacrifice on ſacred days?
How this diffus'd, this laſting fame was ſpread
Of powr's above? Whence came that awful dread,
That parent of religion through the rout,
Which forces them to bow, and grow devout?
This is an eaſy taſk: For new-born man,
Juſt ſprung from earth, when firſt this frame began,
Divine and glorious forms deſcending came,
And ſtruck his mind by day, by night the ſame:
But then increas'd, their working fancies ſhow'd
Great limbs and ſtrength, and fit to make a god:
And theſe they thought had ſenſe, becauſe they ſhook
As fancy told, their limbs, and proudly ſpoke;
Their words were all majeſtic, as their look.
Eternal too, becauſe a new ſupply,
A conſtant ſtream, where'er they turn'd their eye,
Of forms came in, and ſhow'd the deity.
Nor could they think ſuch mighty things could fail,
Or pow'rful blows on ſo much ſtrength prevail.
And happy too, becauſe no fear deſtroys,
Nor dread of ſullen death corrupts their joys.
Beſides, in dreams they often ſeem'd to do
A thouſand various things, and wonders ſhow:
Yet never weary they, but vig'rous ſtill;
Their ſtrength as much unbounded as their will.
Beſides, they ſaw the heav'ns in order roll
Their various motions round the ſteady pole:
The ſeaſons of the year by conſtant laws
Run round, but knowing not the nat'ral cauſe:
They therefore thought, that gods muſt rule above,
Poor ſhift! and all at their devotion move.
In heav'n they plac'd their ſeat, their ſtately throne,
For there the ſun, the ſtars, and various moon,
And day, and night, their conſtant courſes run:
And hail, and rain, and, through a broken cloud,
Swift lightning flies, and thunder roars aloud.
Unhappy man, who taught, the gods engage
In theſe; that they are ſubject unto rage:
A curſe to theirs, to ours, and future age!
What grief they brought themſelves, to us what fears?
To poor poſterity what ſighs, what tears?
Alas! what piety? Alas! 'Tis none,
To bend all cover'd to a ſenſeleſs ſtone,
Lie proſtrate, or to viſit ev'ry ſhrine,
Or, with ſpread arms, invoke the pow'rs divine
Before their temples, while the altar flows
With blood of beaſts, and we make vows on vows.
But ſure 'tis piety to view the whole,
And ſearch all nature with a quiet ſoul.
For when we view the heav'ns, and how the ſun,
And moon, and ſtars their conſtant courſes run;
Then doubts, that lay oppreſs'd with other cares,
Begin to raiſe their head, and bring new fears.
We doubt: What, are there gods, that rule above,
At whoſe direction the bright ſtars do move?
For ignorance in cauſes troubles man;
And hence we doubt, if e'er the world began,
If e'er ſhall end: how long the orbs ſhall roll;
How long the ſtars run round their ſteady pole;
Or if preſerv'd by gods, can ſtand the rage,
And pow'rful envy of devouring age.
What mind's unſhaken and what ſoul not aw'd,
And who not thinks the angry gods abroad,
Whoſe limbs not ſhrink, when dreadful thunder hurl'd
From broken clouds, ſhakes the affrighted world?
What, do not cities, do not nations fear,
And think their diſmal diſſolution near?
Why, do not tyrants then, and mighty lords,
Recal their wicked deeds, and boaſting words,
And fear, that now revenge is ſurely come?
Do they not tremble at approaching doom?
Beſides, when winds grow high, when ſtorms increaſe,
And ſcatter warlike navies through the ſeas;
When men, for battle arm'd, muſt now engage
A ſtronger foe, and fight the water's rage;
Does not the trembling gen'ral proſtrate fall,
And beg a calm o' th' gods, or proſp'rous gale?
In vain: the ſtorms drive on; no off'ring ſaves:
All, ſhipwreck'd, drink cold death among the waves:
And hence we fancy unſeen pow'rs in things
Whoſe force and will ſuch ſtrange confuſion brings,
And ſpurns, and overthrows our greateſt kings.
Beſides, when earthquakes ſhake this mighty ball,
And tott'ring cities fall, or ſeem to fall;
What then if men, defenceleſs men, deſpiſe
Their own weak ſelves, and look with anxious eyes
For preſent help, and pity from the ſkies?
What wonder, if they think ſome pow'rs controul,
And gods, with mighty force, do rule the whole?
But farther; pow'rful gold firſt rais'd his head,
And braſs, and ſilver, and ignoble lead,
When ſhady woods, on lofty mountains grown,
Felt ſcorching fires; whether from thunder thrown,
Or elſe by man's deſign the flames aroſe,
Who burnt the neighb'ring woods to fright their foes:
Or elſe, delighted all with fruitful grounds,
They ſought more meadows, and enlarg'd their bounds:
Or, greedy to increaſe their ſtore of food,
And take the beaſts, they fir'd the ſhelt'ring wood:
For thus men hunted, whilſt no nets were found,
Nor foreſts trembled at the barking hound;
Whatever 'twas that gave theſe flames their birth,
Which burnt the tow'ring trees, and ſcorch'd the earth,
Hot ſtreams of ſilver, gold, and lead, and braſs,
As nature gave a hollow proper place,
Deſcended down, and form'd a glitt'ring maſs.

This when unhappy mortals chanc'd to spy,
And the gay colour pleas'd their childish eye;
They dug the certain cause of misery.
And then observing, that it show'd the frame,
And figure of the hollow whence it came; [ceive
They thought, these, melted, would with ease re-
Whatever shapes the artist pleas'd to give:
Or drawn to breadth, or take the keenest edge;
And so the hook be fram'd, or subtle wedge,
Or other instruments, all apt, and good
To cut, or cleave, or scrape, or hollow wood;
But gold they try'd in vain; the metal broke,
Or the soft edge was turn'd at ev'ry stroke:
This they contemn'd, the blunted gold despis'd,
And feeble silver; brass alone was priz'd.
But now the feeble, and the useless ore
Gets all the honour: Brass is priz'd no more.
Thus time does change the dignity of things:
For some he bears away with swiftest wings,
And hurls into contempt; brings others forth,
And gets them new, and still preserves their worth.
Whilst cruelty was not improv'd by art,
And rage not furnish'd yet with sword nor dart;
With fists, or boughs, or stones, the warriors fought;
These were the only weapons nature taught:
But when flames burnt the trees, and scorch'd the ground,
Then brass appear'd, and iron fit to wound.
Brass first was us'd, because the softer ore,
And earth's cold veins contain'd a greater store:
Thus brass did plough, and brazen trumpets sound,
Their weapons brass, and brass gave ev'ry wound:
Thus arm'd, they strait invade their neighbours field,
And take his beasts: to arm'd the naked yield:
At last, they, melting down the rigid mass,
Made iron swords, and then despis'd the brass.
They then beg.n to plough with iron shares,
And iron weapons only serv'd in wars.
Thus men first learn'd to ride a single horse:
And whilst their steady left hands rul'd the course,
Their stronger right hands fought: before they knew,
Or brought to wars, a chariot drawn by two:
Then four were join'd, and then the armed cars,
And castled elephants were brought to wars;
The Moors first taught them to endure the blows,
And break the ranks, and order of the foes.
Thus rage invented still new arms for fight;
New dreadful weapons still, and fit to fright;
Some train'd the furious bull, and some the boar;
Before the Parthian ranks did lions roar,
With armed guides sent out to scour the plain,
And fright their foes: but these designs were vain:
Because when hot in fight they fiercely fall
On either side, and, common foes to all,
Confus'dly enemies, or friends engage,
Shaking their dreadful heads, and fir'd with rage:
The horses, frighted with the dreadful roar,
Ran o'er the plain, and would obey no more:
The beasts leap'd on their friends, and tore their face,
Or seiz'd behind, and with a rude embrace,
They bore their wond'ring frighted friends to ground;
Whilst teeth and cruel paws did doubly wound.
The bulls grew wild, and with destructive force
They toss'd, or trod the men, or gor'd the horse:
Whole ranks and troops fell by the furious boar;
Their arms, yet whole, blush'd with their master's gore:
For though the horses turn'd, though oft did rear,
And stand aloft, and paw'd the yielding air;
Yet all in vain they strove to shun the wound,
Their nerves all cut, they struck the shaking ground:
Thus what seem'd tame at home, grew wild again,
And fierce, when scouring o'er the warlike plain:
Their rage was fir'd by tumult, wounds, and noise,
Refus'd to hear their former master's voice.
But fled, much mischief done, as furious bulls,
When the weak axe descends, nor breaks their skulls;
They start, and fright the priest, and bell'wing loud,
Run frantic round, and gore the pious crowd.
'Tis safer far to say that this was done
In some of all the worlds, than fix on one:
Yet I can scarce believe but that they knew,
Before their sad experience prov'd it true,
The ills of these; but that the weaker side
The various methods of confusion try'd,
Nor hoping to subdue, but bring fierce woes
And grief, and pain upon the stronger foes.
But more: The garments, by the ancients worn,
Were few'd with tender twigs, or pinn'd with thorn,
Before they learn'd to weave: the wheel, the round;
Whilst rigid iron lay within the ground,
Were all unknown; those things did first begin
When that appear'd; and men learn'd first to spin:
Because the wits of men are finer far,
And fitter to invent than womens are;
Till laugh'd and jeer'd at by the ruder swains,
They taught the women, and manur'd the plains,
And harden'd all their limbs with rougher pains.
Nature first taught them how to plant and sow,
For they observ'd that falling seeds did grow;
They saw them fix'd, and bound to steady roots,
Then rise, and spread, and promise noble fruits:
Then some began to graft, and till the field,
And found the trees a better burden yield,
When dress'd with care, and in a richer soil;
The fruits increas'd, and did reward their toil:
They forc'd the cumb'ring wood to narrow bounds,
Enlarging still their corn, and pasture grounds:
The tyrant wood, that all the plains did fill,
Was now confin'd unto the barren hill:

And left the vales to olive, corn, and vine,
Through which ſmooth ſtreams in fair meanders twine;
Now kiſs the tender roots with wanton play,
Now flow again, enriching all their way;
Such beauteous pride did all the vallies ſhow,
So taking pretty as our gardens now,
Where fruitful trees in decent order grow.
Through all the woods they heard the charming noiſe
Of chirping birds; and try'd to frame their voice,
And imitate: The birds inſtructed man,
And taught them ſongs, before their art began:
And while ſoft ev'ning gales blew o'er the plains,
And ſhook the ſounding reeds, they taught the ſwains:
And thus the pipe was fram'd, and tuneful reed;
And whilſt the tender flocks ſecurely feed,
The harmleſs ſhepherds tun'd the pipes to love,
And Amaryllis ſounds in ev'ry grove.
Thus time, and thus ſagacious men produce
A thouſand things, or for delight, or uſe.
Theſe charm'd the ſwains, and theſe were wont to pleaſe
When feaſts were done; for then all ſeek for eaſe:
Then underneath a loving myrtle's ſhade,
Cloſe by a purling ſtream ſupinely laid,
When ſpring with gaudy flow'rs the earth has ſpread,
And ſweeteſt roſes grow around their head;
Envy'd by wealth and pow'r, with ſmall expence,
They oft enjoy'd the vaſt delight of ſenſe:
Then laughing, merry jeſts, and country play,
And tales began; as, once upon a day!
Then pleaſant ſongs they ſung, and wanton grown,
Each pluck'd and bound his flow'rs, and made a crown,
And with uneven ſteps they danc'd around;
Their heavy leaps ſtill ſhook the trembling ground:
While all the idle crowd that flock'd to view,
Laugh much, becauſe the tricks ſeem ſtrange and new:
And thus they paſs'd the day in gay delight;
And watch'd and fed their tender flocks by night.
No need of ſleep: that want the ſongs ſupply:
The noiſe chas'd Morpheus from their willing eye.
Theſe now our wantons uſe; with toil and pain,
They learn to dance in meaſure: all in vain:
For theſe can reap no joy, no more content,
Than what thoſe earth-born ſwains did firſt reſent.
For while we know no better, but poſſeſs
A preſent good, it does extremely pleaſe;
The later good our various thoughts employs;
And we contemn the guſt of former joys.
Thus man deſpis'd their ancient eaſy food,
Their acorns, and their apples of the wood:
When clothes were found, and other cov'rings ſpread,
They ſcorn'd their ſkins of beaſts, and graſſy
The ſkins of beaſts; which ſure the firſt that found,
Not long enjoy'd, but by a treach'rous wound
He fell: ſo highly then, the now deſpis'd,
Contemn'd, neglected ſkins of beaſts were priz'd.
Thus men did fight for ſkins: Theſe rais'd their cares;
But gold and purple now are cauſe of wars:
The fault is ours; for they could only find
Thoſe ſkins, as clothes againſt the cold and wind:
But now what harm, if none go proudly dreſt
In cloth of gold, or an embroider'd veſt:
Since meaner garments yield as much defence
'Gainſt wind and cold, as much preſerve the ſenſe.
Then wretched man's endeavours are in vain;
They fruitleſsly conſume their years in pain,
Not knowing how to uſe, or how to meaſure
Their boundleſs wiſh, nor height of real pleaſure:
This drives them on into a ſea of cares,
And the deſtructive rage, and ſtorms of wars.
The ſun, ſtill running round his yearly race,
Show'd all the ſeaſons turn'd by conſtant cauſe:
By certain order rul'd, and ſteady laws:
Some liv'd in caſtles then, ſome built a town,
And land divided, each enjoy'd his own;
Then mighty ſhips, driv'n by the labring wind,
Flew o'er the ſeas, and diſtant nations join'd
Whilſt leagues and bonds the neighb'ring towns combin'd:
Then letters found; and the poetic rage
Firſt told the noble actions of the age:
But all beyond lies hid in diſmal night,
And only ſeen by ſearching reaſon's light.
Thus ſhips, thus clothes, thus wine, and oil began;
And towns, the comforts and ſupport of man;
But better'd all, to due perfection brought
By ſearching wits, from long experience taught.
Thus time, and thus ſagacious men produce
A thouſand things, or for delight, or uſe;
For one thing known does vig'rous light impart
For farther ſearch, and leads to height or art.

NOTES ON BOOK V.

LUCRETIUS begins this book with the praiſe of Epicurus, and not only makes him equal to the gods, but even proclaims him a god; becauſe, ſays he, his divine diſcoveries have been more beneficial to mankind, than the inventions of Ceres, or of Bacchus, or than the many glorious

exploits of Hercules: since men might have lived happily enough without them. But true wisdom, which Epicurus first discovered and taught, is of the greatest utility to mankind, because it chases away all uneasiness from the mind, and instructs us aright in the nature of all things, and concerning the immortal gods.

Ver. 10. Lactantius, lib iii. cap. 14. "de falsâ sapientiâ:" and many others, pretend from this expression of Lucretius, that he did not mean Epicurus, but one of the more ancient philosophers, as Pythagoras, or Socrates, or Thales, or some other of the seven sages: But they are evidently mistaken, as appears by verse sixty of this book, where he says,

Cujus ego ingressus vestigia——

His steps I trace——

And Cicero certainly had his thoughts on this passage, when in Tuscul. 4. he says: "Quæ quidem cogitans soleo sæpe mirari nonnullorum insolentium philosophorum, qui Naturæ cognitionem admirantur, ejusque inventori et principi gratias exultantes agunt, eumque venerantur ut Deum; liberatos enim se per eos dicunt gravissimis Dominis." When I reflect on these things, I often wonder at the insolence of some philosophers who admire the knowledge of nature, and give thanks with transport of mind to the inventor and first author of natural philosophy: owning that he has delivered them from most tyrannous lords. Thus our grateful poet confesses to whom he owes his knowledge in the Nature of Things: And indeed, if Epicurus did deliver the minds of men from cares, and fears, and superstition, he justly deserved to be revered preferably to any of the heathen gods. The words of this passage run thus in the original,

Qui primus vitæ rationem invenit eam, quæ
Nunc appellatur sapientia——

For wisdom was the name which the Epicureans, who were a sort of men not burdened with too much modesty, gave only to their own philosophy. Horat. lib. i. Od. 33.

Parcus Deorum cultor, et infrequens
Insanientis dum sapientiæ
Consultos erro——

But the other philosophers were content to call their doctrine by the name of the love of wisdom: for so the word philosophy signifies.

Ver. 15. The son of Jupiter and Semele: He is said to have been the first that planted vines, and made wine of the grapes: For which reason the poets made him the god of wine: He travelled over the whole earth, conquered the Indies, and was the first who triumphed, which he did, riding upon an elephant. The chief badges and emblems of his power were tygers and the thyrsus: The tygers were harnassed to his car; and thus he was wont to be carried about. Virg. Æneid. vi. v. 804.

Nec qui pampineis victor juga flectit habenis,
Liber, agens celso Nisæ de vertici tigres.

Nor Bacchus, turning from his Indian war,
By tygers drawn, triumphant in his car,
From Nisa's top descending to the plains,
With curling vines around his purple reins.

The thyrsus, was a spear or javelin, wrapped about with vine-branches and ivy; whose point ended in the shape of a cone: Bacchus, and the mad drunken women, his companions, who were called Bacchæ, always carried a thyrsus in their hands: Moreover, Lucretius in this place, calls Bacchus by the name of Liber:

Namque Ceres fertur fruges, Liberque liquoris
Vitigeni laticem mortalibus instituisse.

Virg. Georg. i. v. 5.

——Vos, O clarissima mundi
Lumina, labentem cœlo quæ ducitis annum,
Liber et alma Ceres; vestro si munere tellus
Chaoniam pingui glandem mutavit aristâ,
Poculaque inventis Acheloïa miscuit uvis.

Upon which the interpreters say, that the poet calls Liber and Ceres the lights of the world, either because they were esteemed to be the inventors of, and to preside over the harvest and the vintage, which are the chief parts or seasons of the year, and the chief ornaments of the world, since they supply mankind with meat and drink: or because by them he means the sun and moon. And indeed Prætextaus, in Macrobius Saturnal. lib. i. cap. 18. evidently proves, that not only Liber and Dionysius, which is another of the names of Bacchus; but that Jupiter, and Mars, and Mercury, and Hercules too, were the sun; who was called Liber, says he, "quòd liberè vagetur." He adds, likewise, that Ceres was the moon, and that some derive her name "à creando," because she conduces very much to the production of things. Bacchus was called Liber, either because he made free, and restored to liberty the country of Bœotia, where he was born, as we learn from Plut. in Quæst. Cent. or because wine delivers the mind from cares, inspires with courage, and occasions a liberty or freeness of speech. Thus Horace, Carm. lib. iii. Od. 21. speaking to a cask of wine:

Tu lene tormentum ingenio ad moves
Plerumque duro: tu sapientium
Curas, et arcanum jocoso
Consilium retegis Lyæo.
Tu spem reducis mentibus anxiis,
Viresque: et addis cornua pauperi,
Post te neque iratos trementi
Regum apices, neque militum arma.

Of Bacchus see more, Book ii. v. 616. and Book iv. v. 1165.

Ver. 16. *Ceres.*] She was daughter of Saturn and Ops, and mother of Proserpine. She was believed to be the first that sowed corn, and found out the art of using it. Virgil, Georgic i. v. 147.

Prima Ceres ferro mortales vertere terram
Instituit.———

For which reason they made her the goddess of corn; and hence too, as Varro, Cicero, and Arnobius, witness, she was called Ceres, as it were Geres, because, to use the very words of Arnobius, lib. iii. "Salutarium seminum fruges gerat." See more, Book II. v. 616. and Book IV. v. 1165.

Ver. 18. Diodorus Siculus, Book III., says, That the inhabitants on the coast of the Gulf of Arabia, and of the countries of Troglodytia and South Ethiopia, know not the use of corn or wine; but that some of them live upon fish and snails, others upon roots, others upon the leaves, seeds, and fruits of trees, and others upon locusts. Mela witnesses, that the Troglodytes live in dens, and feed upon serpents: some of which, says Pliny, Nat. Hist. lib. xxxi. cap. 2. are twenty cubits in length. And Faber, in his note on this passage of our author, says, that scarce the sixth part of mankind do yet know what wheat is. Therefore we may well, says Lucretius, live without corn and wine, but not without wisdom: "Sapientia enim," says Cicero, lib. i. de Fin., "est una quæ mœstitiam pellat ex animis, quæ nos exhorrescere metu non sinat, quâ præceptrici in tranquillitate vivi potest, omnium cupiditatum ardore restincto:" For wisdom only it is that drives away sorrow and uneasiness from the mind, that suffers us not to stand aghast with fear; and by whose advice we may extinguish the flame of all inordinate desires, and lives in tranquillity, and exempt from all manner of passion.

Ver. 19. Lucretius:

At bene non poterat sine puro pectore vivi.

Where by *puro pectore* the poet means a mind undisturbed by ignorance, and not obnoxious to errors; a heart sincere, and free from all anxiety: for, as Horace says,

Sincerum est nisi vas, quod cunque infundis, acescit.

In like manner, without sincerity of heart and purity of mind, it is impossible to lead a happy life, or to pass our days in tranquillity: And Cicero teaches us, that the only way to acquire this purity of mind is by the help of wisdom, which, by delivering us from all terrors and desires, and from the temerity of all false opinions, is the surest guide to pleasure. "Mentem autem puram ut habeas, adhibenda est sapientia, quæ, et terroribus cupiditatibusque detractis, et omnium falsarum opinionum temeritate direptâ, certissimam se nobis ducem præbeat ad voluptatem," 1. de Fin.

Ver. 24. In these twenty-four verses the poet enumerates some of the labours of Hercules, which, he tells us, fall as far short of the discoveries of wisdom, made by Epicurus, as the soul is more excellent than the body: For Hercules did indeed deliver men from monsters, that were destructive to the body; but Epicurus, who first instructed men in the art of wisdom, delivered their minds from all vain anxieties, and restless desires: He chased from our souls the terrors at which we were startled and stood aghast, and dispated the darkness of errors which clouded the happiness of life.

Ver. 25. Hercules: he was called Alcides from his grandfather Alcæus, who was father of Amphitryo of Thebes: For Hercules was the son of Jupiter, by Alcmena the wife of Amphitryo. Now, before either Hercules or Eurystheus, king of Mycenæ, were born, Juno, who knew that the fates had decreed, that whether of them came into the world last, should serve the other, contrived the matter so, that Hercules was born after Eurystheus, who, at her instigation, commanded Hercules to go upon many dangerous exploits; but he proved successful in all of them, therefore was called Hercules, from Ἥρα, Juno, and κλέος, glory, because she was the cause of all his renown, though sore against her will. Virgil. Æn. 8. v. 291.

———ut duros mille labores
Rege sub Eurystheo, fatis Junonis iniquæ
Pertulerit.———

Ver. 26. That is the Nemæan lion. "Nemæus magnus hiatus leonis," says Lucretius. This is the fifth of the labours of Hercules, according to the order in which the chief of them, which are thirty-four in number, are enumerated. Now there haunted in the Nemæan wood, near Cicone, a city of Achaia, in the country of Peloponnesus, a vast and terrible lion, that did a world of mischief: Hercules not being able to kill him, either with his club or with his darts, laid hold of him, and tore him to pieces with his nails; then took his skin, which neither stone nor iron could penetrate, and wore it on his shoulders, as a badge of honour. Diod. Sicul. lib. iii. Plaut in Pers. Virg. Æn. 8. This gave occasion to the institution of the Nemæan games, which were celebrated every third year, in honour of Hercules. But some, particularly Statius, will have this solemnity to have been first instituted to celebrate the funeral of Opheltes, son of Lycurgus, and who was killed by an adder.

Ver. 27. This was his seventh labour; for Lucretius does not observe the order, and mentions only the chief of them. He speaks here of the dreadful boar that haunted upon the mountain Erymanthus in Arcadia, and laid waste all the country round. Hercules took him, and carried him to Eurystheus, king of Mycenæ.

Ver. 28. This was his ninth labour. A bull that infested the country about Crete: Hercules brought him alive likewise to Eurystheus. Some say this bull was sent into Crete by Neptune, whom Minos, king of Crete, had offended: others, that it was the same bull which brought Europa, the mother of Minos, into Crete; and others, that it was the bull, for love of which, Pasiphae, the wife of Minos, run mad.

Ibid. This was his third labour. It was a serpent that lived both upon land and in the water, and was called Hydra, from ὕδωρ, water. It kept

for the moſt part in the lake Lerna, between Mycenæ and Argos; and was dreadful for having ſeven heads; and Virgil ſays, fifty, if, as many believe, it be the ſame Hydra that Æneas ſaw when he deſcended into hell;

Quinquaginta atris immanis hiatibus Hydra
Sævior intus habet ſedem.—— *Æn.* vi. *ver.* 576.

and others an hundred; and no ſooner was one of them cut off, than two ſprouted out in its place; but Hercules killed him at length, by ſearing the wounds as faſt as he cut off each of his heads.

Ver. 30. This was the ſixteenth labour of Hercules. Geryon was a king of Spain, ſaid to have three bodies, either becauſe he governed three iſlands of Spain, the Greater and Leſſer Baleares, now called Majorca and Minorca; and Ebuſus, now Ivica: or becauſe he and his two brothers, who were united in the ſtricteſt ties of friendſhip, were all ſlain by Hercules, who took away their herds of cattle, and brought them into Italy. Pauſan. lib. i. and Diodor. lib. 4. Virg. Æn. 8. ver. 201.

—— Nam maximus ultor,
Tergemini nece Geryonis, ſpoliiſque ſuperbus,
Alcides aderat; Tauroſque hac victor agebat
Ingentes; vallemque boves amnemque tenebant.

Ver. 31. This was the ſixth labour. Diomedes was a king of Thrace, who, to make his horſes the more fierce and wild, fed them, as the above-cited Diodorus ſays, not with oats and barley, but with human fleſh. Hercules took him, and gave him to his own horſes to eat.

Ver. 32. This was the eighth labour. Theſe birds were called Stymphalides, from Stymphalus, the name of a town, mountain, and lake, in Arcadia, where theſe birds haunted: they were of the ſize of cranes; in ſhape, like the bird called Ibis, which we generally interpret a ſnipe; and had beaks ſo hard, that they would enter into iron: Theſe Hercules killed with his darts, as Pauſanias and Catullus teſtify; but Diodorus Siculus, lib. 4. ſays, he frighted them out of the country with a great braſs rattle.

Ver. 34. The fourteenth labour. Heſperus, the brother of Atlas, had three daughters, Ægle, Arethuſa, and Heſperethuſa, who are ſaid to have had gardens planted with trees that bore golden fruit. Theſe gardens were guarded by a vigilant dragon, whom Hercules ſlew by the command of Euryſtheus, and took away the apples. Beſides the dragon, Virgil adds a prieſteſs, and a temple, perhaps of Venus, to whom the apples were conſecrated.

Hinc mihi Maſſylæ gentis monſtrata ſacerdos,
Heſperidum templi cuſtos, epulaſque draconi
Quæ dabat, et ſacros ſervabat in arbore ramos.
Æneid. iv. *ver.* 483.

And the ſame poet, according to the common opinion, deſcribes the ſituation of the gardens to be in the Mauritania Tingitana now the kingdoms of Fez and Morocco, about the town of Lixa, in the extremeſt weſtern part of Africa: According to ſome, they were in the continent; according to others, in an iſland. Others place theſe gardens of the Heſperides in the quite oppoſite parts of Africa, that is to ſay, in the very eaſt of Africa, and on the eaſtern ſhore of the Syrtes Major, near Cyrenaica: but this error is fully confuted by Salmaſius to Solinus. Moreover, ſome will have it, that the apples of theſe gardens were only ſheep, whoſe fleeces are very valuable, and which the Greeks call μῆλα, as well as they do *mala*, apples. Others believe them to have been what we call citrons or lemons, and that Hercules firſt brought them from thence into Greece. They likewiſe believe the gardens to have been the Fortunate Iſlands, now the Canaries, which lie below Lixus indeed, but very near to Mount Atlas, and not far from the ſhore. Laſtly, Others will have them to be the iſlands which the ancients called Heſperides and Gorgades, or Gorgones, now the iſlands of Cape Verd: but theſe lie more to the ſouth, at a great diſtance from Atlas, towards the mouths of the river Niger, and at leaſt an hundred and fifty leagues diſtant from them. And theſe laſt believe the dragon to be the tortuous ſea that divided the gardens from the continent. Milton, deſcribing the garden of Eden, gives it trees,

——Whoſe fruit, burniſh'd with golden rind,
Hung amiable: Heſperian fables true;
If true, here only, and of delicious taſte.

Ver. 38. The weſt of Mauritania, which is waſhed by the Atlantic Ocean, ſo called from Mount Atlas, which, under ſeveral names, extends itſelf even to Egypt; and dividing all Africa into north and ſouth, that is to ſay, Mauritania from the Inner Libya, ends in the Weſtern Ocean. For which reaſon, the ancient poets comprehended all the people that lay to the ſouth of Atlas, under the name of Ethiopians, and diſtinguiſhed them by Oriental and Occidental. The Spaniards call all this extent of mountains, *Montes Claros* Atlas, brother of Prometheus, ſon of Japetus, and king of Mauritania, being admoniſhed by Themis, that he was in danger of being killed by a certain ſon of Jupiter, would, for that reaſon, receive no ſtranger into his houſe: and having denied the rights of hoſpitality to Perſeus, the ſon of Jupiter by Danae, daughter of Acriſius, king of the Argives, this Perſeus, by ſhowing him Meduſa's head, changed him into this mountain, which bears his name. This fable is related at large by Ovid. Metam. iv. ver. 621. et ſeq. Now Atlas was very ſkilful in aſtrology, which gave occaſion to the fiction of ſupporting heaven on his ſhoulders. And Virgil deſcribes the mountain as ſtill retaining the figure of a man, Æneid iv. ver. 246. where ſpeaking of Mercury, he ſays,

—— Jamque volans apicem et latera ardua cernit
Atlantis duri, cœlum qui vertice ſuſtit
Atlantis, cinctum aſſidue cui nubibus atris
Piniferum caput et vento pulſatur et imbri:
Nix humeros infuſa tegit: tum flumina mento
Præcipitant ſenis, et glacie riget horrida barba.

Thus tranſlated by Dryden.

——And flying thence he ſpies
Atlas, whoſe brawny back ſupports the ſkies:
Atlas, whoſe head, with piny foreſts crown'd,
Is beaten by the winds, with foggy vapours bound.
Snows hide his ſhoulders; from beneath his chin
The founts of rolling ſtreams their race begin:
A beard of ice on his large breaſt depends.

Ver. 39.

Quo neque noſter adit quiſquam, nec barbarus audet. *Lucret.*

i. e. Whither none of us Romans go, nor any foreigners dare to go: For the ancients, as well Greeks as Latins, called all that were not of their own country barbarians. But I think our tranſlator can hardly juſtify this expreſſion, untrod by the Moor, ſince the Moors are the people that inhabit the country of which Lucretius is ſpeaking. Be that as it will, Cicero aſſerts for certain, that even in his days, there was no ſailing practiſed any farther than from the mouths of the Euxine Sea, to the Columns of Hercules: i. e. than Abayle, now Ceuta, on the African coaſt, and Calpe, now Gibraltar, on the coaſt of Spain. For Hercules, after he had laid waſte the garden of the Heſperides, fixed two pillars on the mountains Abayle and Calpe, as the bounds of his travels: which two mountains were before contiguous; but he is ſaid to have parted them, and by that means letting in the ocean, to have opened the ſea of Cadiz, now called the Straits of Gibraltar.

Ver. 40. For many other notable exploits are recorded of Hercules. He killed Buſyris, the ſon of Neptune and Libya, an Egyptian tyrant, of ſuch incredible ſtrength, that he could draw an ox about at his pleaſure; and who, as well as Diomedes of Thrace, fed his horſes with human fleſh. And Antæus, the ſon of Neptune and Terra, a giant ſixty-four cubits high; who, as often as he was faint or weary, if he but touched the earth, recovered his full ſtrength again. And Augeas the king of Elis, who refuſed to give him what he had agreed for cleanſing his ſtables of the filth they had gathered in thirty years. And Eryx, the ſon of Venus, with whom he fought at the Cæſtus, or Hurl-bats: beſides, he ſlew ſeveral of the centaurs, &c. and was of ſignal ſervice to the gods, in their wars with the giants, who durſt attack their heaven; for the earth had pronounced an oracle, at Phlægra, a town in Thrace, and the place of the battle, that the giants could not be deſtroyed, without the help of two heroes or demigods: Upon which the gods made choice of Hercules and Bacchus; and by their aſſiſtance got the victory: Thus Apollodorus. And hence we ſee the vainneſs of the fables, in teaching that the ſame Hercules who flouriſhed about the age of Theſeus and Euryſtheus, was already among the gods in the time of the giants war.

Ver. 42. Lucretius ſays nothing of the death of Hercules, nor his riſing a god from Oeta's flame; but ſince our tranſlator has thought fit to take notice of it, it will not be improper for us to explain it. Deianira, growing jealous of her huſband Hercules, who, ſhe heard, was fallen in love with Iole, ſent him a garment that had been dipped in the poiſonous blood of the Centaur Neſſus; and which, ſhe had been informed, had a virtue to make any one that wore it in love with her. Hercules had no ſooner put it on, than all his limbs began to burn to that degree, by the force of the poiſonous dye, that unable to reſiſt the violence of the torment, he tore up trees by the roots, and built himſelf a pile upon the mountain Oeta in Theſſaly, then having ſet fire to it, threw himſelf into the flames: and being thus purged from all the filth he had contracted here below, he was believed to go directly to heaven; and thus, as Creech ſays,

——He roſe a god from Oeta's flame.

Milton, in Paradiſe Loſt, B. ii.

As when Alcides, from Œchalia crown'd
With conqueſt, felt the envenom'd robe, and tore,
Through pain, up by the roots Theſſalian pines,
And Lichas from the top of Oeta threw
Into th' Euboic ſea, &c.

Ver. 55. Epicurus, in his writings, treated not only of phyſics, but ethics likewiſe. The firſt by the care of Laertius have eſcaped, moſt of them, from the rage of time: but of his ethics, the little that remains, is in his three epiſtles to Herodotus, Mœnecæus and Pythocles.

Ver. 57. Faber ſays, that Lucretius here ſpeaks of the treatiſe that Epicurus compoſed περὶ ἁγιότητος, of holineſs.

Ver. 60. In theſe forty verſes the poet gives us the argument of this book, in which he will endeavour to prove, that the world had once a beginning, and will one day have an end. Then he will deſcribe the riſe of the world, and of animals; will teach what animals were actually produced; and what the vainneſs of the poets, and the ſuperſtition of the generality of men have feigned and believed. He will tell how names come to be given to things, and how mutual ſociety aroſe from ſpeech; and whence firſt proceeded religion, and the fear of the gods. Laſtly, He will explain the motion of the heavens, the courſes and revolutions of the ſun, the moon, and other planets and ſtars, and will demonſtrate, that they are whirled about by the force of nature only, without the help or aſſiſtance of Providence: For unleſs he can make out ſuch a motion of the heavens, and prove it to be merely natural, he owns he ſhall not be able to take away all belief of Providence: For, as he obſerves in the firſt book, ver. 84.

Long time man lay oppreſs'd with ſlaviſh fear;
Religion's tyranny did domineer:
And, being plac'd in heaven, look'd proudly down,
And frighted abject ſpirits with her frown.

Ver. 64. Which the ignorant vulgar miſtake for ſouls ſeparated from the body; but Epicurus has ſhown them their error, by proving that the ſoul dies with the body. See Gaſerellus, in his Collection, de Taliſmannis.

Ver. 70. The atoms, which Lucretius held with Epicurus to be the principles of all things.

Ver. 71. He means chimæras, ſcyllas, centaurs, hermaphrodites, &c.

Ver. 77. Lucret.

Fana, lacus, lucos, aras, ſimulacraque divûm.

The temples, lakes, groves, altars, and images of the gods.

Ver. 81. Lucretius ſays, " natura gubernans," and means what he calls afterwards, " fortuna gubernans," ver. 108, which our tranſlator there calls chance: And indeed Lucretius means nothing elſe in this place. Pliny, it is true, calls nature the parent and maker of all things. And Seneca, lib. iv. de Benef. makes her the god by whom all things are made and governed. " Quid enim," ſays he, " aliud eſt natura, quam Deus, et divina ratio toti mundo ac partibus inſerta?" But Lucretius was of another opinion, and makes her other than God, and means in effect nothing more by ruling nature, than the power and motion of the atoms, that fortuitouſly and without deſign huddled and joined themſelves together into this frame of the world.

The motions of the planets may well be compared to a dance, from the regular meaſures of them.

Ver. 85. Epicurus himſelf to Herodotus: Τὴ ἡ θεία δύναμις πρὸς ταῦτα μὴ προσαγέσθω, ἀλλὰ ἀλειτούργητο, διὰ παντὸς εἰσθω, καὶ ἐν τῇ πάσῃ μακαριότητι ὡς ἐ μὴ τοῦτο προαχθήσεται, ἅπασα περὶ τῶν μετεώρων αἰτιολογία μάταια ἔσται.

Ver 86. The horſes of the ſun are ſaid to be four in number: Pyroeïs, ſo called from πῦρ, fire; Eous, from ἠως, the morning; Æthon, from αἴθω, I burn, or I heat; and Phlegon, from φλέγω, I burn. Lucretius mentions them not, but owes this verſe to his tranſlator.

Ver. 87. This and the twelve following verſes are repeated in Book vi. ver. 51. and ſeq. And in Book i. ver. 78. and Book ii. ver. 606, he teaches almoſt the ſame doctrine.

Ver. 90. Horace, the Epicurean, manifeſtly drew from this fountain, when he ſaid:

Nil admirari prope res eſt una, numici,
Solaque quæ poſſit facere et ſervare beatum:
Hunc ſolem, et ſtellas, et decedentia certis
Tempora momentis, ſunt qui formidine nullâ
Imbuti ſpectent.——

Explain that paſſage of Horace by this of Lucretius, and you will be more in the right than the other interpreters. Moreover, this is exactly the doctrine of Socrates; and therefore this ſaying, The things that are above us are nothing to us, which is commonly aſcribed to Socrates by others, is by Tertullian aſcribed to Epicurus: " Sed Epicurus qui dixerat, quæ ſuper nos nihil ad nos, cum et ipſe cœlum aſpicere deſiderat, ſolis orbem pedalem apprehendit," &c. lib. ii. ad Nationes.

Ver. 94. In the ſecond book, he calls them, " Dominos ſuperbos," proud, imperious lords. And Velleius, in Cicero, lib. i. de Nat. Deor. ſays the ſame thing: " Dum Deum rerum auctorem facitis, impoſuiſtis in cervicibus noſtris Dominum ſempiternum, quem dies et noctes timerimus. Quis enim non timeat omnia providentem, et cogitantem, et animadvertentem, et omnia ad ſe pertinere putantem, curioſum et plenum negotii Deum?" By making God the author of all things, you ſet over us an eternal Lord, of whom we muſt day and night ſtand in awe. For who cannot but dread a God, who overſees all, provides for all, thinks of all, takes notice of all, and believes that all belongs to him, in ſhort, a meddling, inquiſitive, and never idle God?

Ver. 100. In theſe nineteen verſes, he at length falls upon his ſubject; which, he ſays, is a noble one indeed, but intricate, and to which he ſhall find it difficult to gain belief; for men do not eaſily give credit to what they are unwilling to believe; and who would willingly regard the ruin of the world, of which he cannot be a witneſs without his own deſtruction? The poet himſelf ſeems to commiſerate ſo great a misfortune:

——— tria talia, texta
Una dies dabit exitio—— ver. 95.

Which he did certainly dread, when he ſaid,

Quod procul à nobis flectat fortuna gubernans.
Ver. 108

All-ruling chance, avert it far from us.

Moreover, upon the words of Lucretius cited above, " Tria, talia," &c. Faber obſerves, that Ovid pays him a compliment in his own coin:

Carmina ſublimis tunc ſunt peritura Lucretî
Exitio terras cum dabit una dies.

Ver. 104. This is denied by Ariſtotle, lib. i. de Cœlo, and by Plato in Timæus, though they diſagree in the manner of it: For Plato ſays the world had a beginning, and that God created it; but denies it will ever have an end; not that it is immortal in its own nature, but becauſe it would be unworthy of the wiſdom of God, whoſe workmanſhip it is, to diſſolve ſo glorious a frame, or to ſuffer it to be diſſolved! But Ariſtotle holds, that whatever has had a beginning, may, and will have an end; but that the heavens never were created, and will never be diſſolved: Nor ought Ariſtotle alone to boaſt that he aſſerted a world uncreated and eternal, for before him Xenophanes, Parmenides, Meliſſus, Philolaus, Occllus, Ariſtæus, the Chaldeans, and others, taught the ſame doctrine. In like manner, not Epicurus alone of all the ancient philoſophers gave the world a beginning, for Empedocles, Heraclitus, Anaximander, Anaximenes, Anaxagoras, Archelaus, Diogenes, Leucippus, Democritus, the Brachmans, the Egyptians, and others, were of the ſame opinion, to which Pliny too ſubſcribes, in theſe words: " Numen eſſe mundum credi par eſt, æternum, immenſum: neque genitum, neque interiturum unquam." Nat. Hiſt. lib. ii. cap. 1. Thus Epicurus agreed with us, that the world had a beginning; but he erred in teaching that God was not the creator of it: And we know for certain, that, " in princi-

pio creavit Deus cœlum et terram." And both Epicurus, and the other philoſophers with him, were miſtaken, when they taught, that the world was not created out of nothing, but made of a pre-exiſting matter. Lucan, in Pharſal. lib. i. ver. 73. deſcribes the future diſſolution of the world, in the following verſes:

——Sic cum, compage ſolutâ,
Sæcula tot mundi ſuprema coegerit hora,
Antiquum repetens iterum chaos, omnia miſtis
Sydera ſyderibus concurrent; ignea pontum
Aſtra petent; tellus extendere littora nolet,
Excutietque fretum: fratri contraria Phœbe
Ibit, et obliquum bigas agitare per orbem
Indignata diem poſcet ſibi: totaque diſcors
Machina divulſi turbabit fœdera mundi.

Which May has not amiſs interpreted in the following verſes:

So when this knot of nature is diſſolv'd,
And the world's ages in one hour involv'd
In their old chaos; ſeas with ſkies ſhall join,
And ſtars, with ſtars confounded, loſe their ſhine.
The earth no longer ſhall extend its ſhore,
To keep the ocean out: the moon no more
Follow the ſun; but, ſcorning her old way,
Croſs him, and claim the guidance of the day:
The falling world's now jarring frame, no peace,
No league ſhall hold, &c.

Ver. 109. For all men give moſt credit to thoſe things which they ſee or touch, and ſight is the chief inlet of knowledge: Therefore, Milton, complaining of his being blind, ſays finely,

——Thus with the year
Seaſons return, but not to me returns
Day, or the ſweet approach of ev'n and morn,
Or ſight of vernal bloom, or ſummer's roſe,
Or flocks, or herds, or human face divine:
But cloud inſtead, and ever-during dark
Surround me, from the cheerful ways of man
Cut off, and for the book of knowledge fair
Preſented with an univerſal blank
Of nature's works, to me expung'd and raz'd;
And wiſdom at one entrance quite ſhut out.

Ver. 119. But becauſe the folly of the Stoics, the ignorance of others, and the ſuperſtition of the generality of men had oppoſed many objections to this opinion, Lucretius removes them all, and firſt, in thirty-nine verſes, confutes the Stoics, who held, that the ſun, the ſea, the earth, in ſhort, the univerſe, being animated by a ſpirit infuſed through the whole, is God. Thus Manilius, lib. i. ver. 238.

Hoc opus immenſi conſtructum corpore mundi,
Membraque naturæ diverſâ condita formâ
Aeris, atque ignis, terræ, pelagique jacentis
Vis animæ divina regit, ſacroq. meatu
Conſpirat Deus, et tacitâ ratione gubernat.

Which Creech thus renders:

To this vaſt frame in which four parts conſpire,
Of diff'rent form, air, water, earth, and fire,
United God, the world's almighty ſoul,
By ſecret methods, rules and guides the whole;
By unſeen paſſes he himſelf conveys
Through all the maſs, and ev'ry part obeys.

But theſe men the poet deſpiſes, and treats them and their fooliſh doctrine with the utmoſt contempt and indignation.

Ver. 121. See the note upon ver. 758, Book i. from whence this and the foregoing verſe are repeated. And to what is there ſaid on them, I will here add ſome farther particulars concerning the oracle of Apollo, who was called Pythius, from his killing the python, a huge ſerpent, which had its name ἀπὸ τῆν πυθεῖν, becauſe he was engendered of the putrefaction of the earth, and ſprung from the filth that the flood of Deucalion had left behind it. Ovid Metam. i. ver. 438.

——Te quoque, maxime Python,
Tum genuit; populiſque novis, incognite ſerpens,
Terror eras: tantum ſpatii de monte tenebas:
Hunc Deus arciteneus,——
Mille gravem telis, exhauſtâ pene pharetrâ,
Perdidit, effuſo per vulnera nigra veneno.

Now the perſon, or propheteſs, who, inſtead of Apollo, pronounced the oracle, and gave anſwer to thoſe that came to conſult the god, was a maid, and the firſt that performed it was Phenomoë, the daughter of Apollo. The oracle was delivered from a place in the temple, called the Adytum, which was the moſt ſecret and retired part of it, and into which none but the propheteſs was permitted to enter; and, according to the deſcription Strabo gives of it, it was a deep and crooked cave, with a mouth or entrance, but indifferently large, and out of which the anſwer of the god was thought to aſcend, and inſpire the propheteſs. Over the mouth of this cave ſtood the tripod, upon which, when the propheteſs got up, ſhe was immediately tranſported with a ſpirit of divination, and then gave the anſwer, ſometimes in proſe, ſometimes in verſe. Du Choul, in his treatiſe de la Religion des anciens Romains, gives us the form of the tripod, with a crow ſitting on it, as a bird ſacred to Apollo, and with a harp and laurel at the feet of it. To which we may add, that in Conſtantine's oration, ad Sacrorum Cœtum, in Euſebius there is mention made, cap. xviii. of a ſerpent alſo twining about the tripod, and of a diadem with which the propheteſs was adorned. Lee, in the tragedy of Mithridates, deſcribes the agony of the Pythian, when, inſpired by the god, ſhe was about to pronounce the oracle.

——At Delphi, when the glorious fury
Kindles the blood of the prophetic maid,
The bounded Deity does ſhoot her out,
Draws ev'ry nerve, thin as a ſpider's thread,
And bears the ſkin out like expanded gold.

And Dryden, in Œdipus, makes the old Tireſias ſay,

Now the god ſhakes me! he comes! he comes!
——I feel him now

Like a ſtrong ſpirit, charm'd into a tree,
That leaps, and moves the wood without a wind:
The rouſed god, as all this while he lay
Entomb'd alive, ſtarts, and dilates himſelf:
He ſtruggles, and he tears my aged trunk
With holy fury; my old arteries burſt;
My rival'd ſkin,——
Like parchment, crackles at the hallow'd fire:
I ſhall be young again, &c.

To both of whom Virgil ſhowed the way, in his deſcription of the convulſive rage of the Cumæan Sybil. Æneid. vi.

Ver. 124. Pythagoras, Plato, Triſmegiſtus, and many others of the ancient philoſophers, imagined the world to be endowed with a rational ſoul, and to partake of the nature of the God that made it. They were induced to this belief, by conſidering the admirable order and connection of all the parts of the univerſe, which, they were perſuaded, could not be ſuſtained but by a ſoul intrinſically informing, ordering, diſpoſing, and connecting them. This ſoul Plato, indeed, did not believe to be God himſelf, but the work of the ſupreme God; but Pythagoras and Thales, as we learn from Minutius Felix, aſſerted it to be God himſelf: To this opinion the Hermetic philoſophers ſeem likewiſe to ſubſcribe, and explain it in this manner: They tell us, that the Divine Spirit, which produced the world out of the firſt water, being infuſed, as by a continual inſpiration, into all the works of nature, and largely diffuſed through them, by a certain ſecret and continual act, moving the whole, and every individual part of it, according to its kind, is the ſoul of the world. Plato, and the old academics, as we find their opinion delivered by Cicero, in Acad. Queſt. lib. i. ſay thus of it: The ſeveral parts of the world, and all things contained in them, are kept together by a ſenſitive nature, which is endowed likewiſe with perfect reaſon: It is alſo ſempiternal; becauſe there is nothing more ſtrong, by the power or force of which it can be diſſolved. And this nature is the power which is called the ſoul of the world. Plutarch, de Placitis Philoſoph. lib. iv. cap. i. teaches, that Heraclitus affirmed the ſoul of the world to be an exhalation of the humid parts of it. Varro, on the contrary, would have it to be fire, but means, perhaps, the ſame thing with Chalcidius in the Timæus, where he calls Veſta the ſoul of the univerſal body; or with Pliny, who aſſerts the ſun to be the ſoul of this world: "Hunc mundi totius eſſe animam, ac plane mentem, hunc principale naturæ regimen, ac numen credere decet," ſays he, lib. ii. cap. 6. But the Stoics went yet farther, and held, that every one of the celeſtial bodies that have motion, is to be eſteemed in the number of the gods; and this opinion they grounded on the conſtancy they had obſerved in the revolutions of the heavens, and in the courſes of the ſtars, whence they concluded their motion to be voluntary, and, conſequently, that they are gods. Thus the Stoic Lucilius, in Cicero, ſays, "Hanc igitur in ſtellis conſtantiam, hanc tantam in tam variis caſibus, in æternitate convenientiam temporum, non poſſum intelligere, ſine mente ratione, conſilio: Quæ cum in ſyderibus eſſe videamus, non poſſumus ea ipſa in deorum numero non ponere." De Natur. Deor. lib. iii. And a little higher, he ſays, "Reſtat ut motus aſtrorum ſit voluntarius: quæ qui videat, non indocte ſolum, verum etiam impie faciet, ſi deos eſſe neget." But Lactantius retorts their very argument upon theſe philoſophers, and ſays, that the conſtant and fixed revolutions and courſes of the celeſtial bodies, are an evident argument that they are not gods; for, if they were, they would not be determined to, nor preſcribed any certain motions, but, like animals upon earth, whoſe will is free, would move wherever they liſt. "Quid, quod argumentum illud, quo colligunt univerſa cœleſtia deos eſſe, in contrarium valet? Nam ſi deos eſſe idcirco opinatur, quia certos et rationabiles curſus habent, errant: ex hoc enim apparet deos non eſſe, quod exorbitare illis, à præſtitutis itineribus non licet. Cæterum ſi dii eſſent, huc atque illuc paſſim ſine ullâ neceſſitate ferrentur, ſicunt animantes in terrâ; quorum quia liberæ ſunt voluntates, huc atque illuc vegantur, ut libuit; et quò quemque mens duxerit, eò fertur." De Orig. Error. cap. 5. Now the reaſon why Lucretius laſhes the authors of theſe opinions, and treats them with ſo much ſcorn and indignation, is, becauſe their belief of the ſoul of the world, preſſes hard his impious hypotheſis, concerning the Divine Providence: For, releaſe but the ſoul from that union, which theſe philoſophers have thus fooliſhly aſſigned, and then to hold a ſoul of the world, and an all-ruling Providence will be all one and the ſame thing.

Ver. 128. The giants, who fought againſt the gods at Phlegra, and attempted to ſcale heaven, by heaping one on another the hills of that country, and of Theſſalia. Virgil, Georg. iii. ver. 281. See likewiſe the note on Book i. ver. 243. To which I add, that Phlegra was ſo called ἀπὸ τῦ φλέγεσθαι, to burn, perhaps, becauſe of the giants being deſtroyed there chiefly by lightning; or, as others, from baths of hot water that ariſe thereabouts. Euſtathius ſays, it was likewiſe called *Pallene*; and that the wickedneſs of the inhabitants gave occaſion to the fable of the giant's fight. Now, what Lucretius here ſays, is this: Leſt you ſhould think that all thoſe, who by their arguments endeavour to prove the world to be mortal, equally deſerve to be puniſhed for their impiety, as were the impious giants of old, who, in their way, did likewiſe all they could to deſtroy heaven, and durſt to wage war with the gods. Whoever deſires to be fully inſtructed concerning giants, may conſult the learned Caſſarion, who has treated of them at large. I will only add, that the ancient heathens drew the occaſion of this, and of many of their other fables, from the Moſaical hiſtory, which they wretchedly profaned and depraved by their childiſh fictions: And that too the rather, if it be true what Bouldue, a French capuchin, in a treatiſe printed not long ago, and intituled, De Eccleſiâ ante legem,

tells us, in lib. i. cap. 9. that the names Raphaim, Emim, Zuzin, and others, as he says, commonly in scripture taken for giants, ought not to be expounded in that sense. Then he affirms, that the title of giant was anciently a name of honour, by which they distinguished such persons as in those days were restorers of piety; and that the assemblies of giants, were colleges of instruction, in that age of the world. Thus he endeavours to prove, that Nimrod was, in that sense, a giant, a man instructed by God himself; and this he would make good out of Methodius. But these assertions of his, and the curious proofs he alleges from their Hebrew titles, are new and daring flights of fancy.

Ver. 130. That the heavens are immutable and incorruptible, nay, even immaterial, and consequently no ways obnoxious to the catastrophe which Lucretius here asserts has always been the vulgar opinion, as well as the belief of Aristotle, Xenophanes, Averroes, Cicero, and indeed of most of the philosophers. And though experience itself of the visible mutations that sometimes happen in them, for example, the new star that appeared in Cassiopeia, in 1573, and vanished the year following, are abundantly sufficient to convince them, by natural reason, of the erroneousness of that opinion; yet some men are so given up, even to the most reprobate sense of Aristotle, that not the Divine Authority itself can draw them from it, as in this point particularly, Suarez, and many others, are so far from believing the heavens to be corruptible and mutable; that they will allow them to be changed only accidentally, as they call it, and not substantially, at the last day: Upon which Maldon, on St. Matthew says very well, that he had rather believe Christ, who affirms it, than Aristotle, who denies it.

Ver. 134. In these twenty-four verses, he says, that it is so far from being true, that what he is about to teach of the future dissolution of the world, will derogate from the power and divinity of the immortal gods, that, on the contrary, it will evince their dignity, and the excellence of their nature, because it will help us to distinguish between what is endowed with a divine body, and what is not: for what can be more disrespectful and injurious to the gods, than to declare aloud that the heavens, the earth, the sea, the sun, the moon, and the stars, are endowed with their immortality, eternity, and divine understanding, as they most manifestly do who hold them to be immortal? Especially, since they are incapable even of being animated with the breath of life: For a soul can no more be in them, than a tree in the air, a cloud in the sea, or a fish upon dry ground. And as every thing has a proper place assigned it, to be produced and live in, so neither can the soul be produced or exist without a body. This opinion is both impious and repugnant to true reason; but since we have already fully answered, in the third book, all the Epicurean objections against the immortality of the soul, we will not trouble our reader with the repetition of them. Besides, the drift of Lucretius is, to prove, that heaven, earth, sea, &c. are mortal, and consequently will be dissolved, and perish.

Ver. 136. *Neither.*] None, not one of them: we generally say neither of them, when we speak but of two.

Ver. 140. You will find this and the following eleven verses, Book iii. ver. 755.

Ver. 144. This and the four following verses are rejected by Faber, who imagines, they were by mistake brought to this place, together with the five preceding verses, from the third book, where we find them all together; but his supposition is without reason; for they seem to be a part of this argument, and as much to the purpose as the other verses of it. For, says the poet, if even in our bodies, which are composed of veins, nerves, blood, &c. there be certain and appointed places, where the mind and soul are born, and exist apart by themselves, it is in vain for any one to pretend that there is a mind and a soul in the heavens, the earth, the sea, and other bodies that have no organs whatever.

Ver. 156. To this purpose, Velleius, in Cicero, lib. i. De Nat. Deor. says, "Qui mundum ipsum animantem sapientemque esse dixerunt, nullo modo animi naturam intelligentes viderunt, in quam naturam cadere possit." They who said that the world is an animal, and endowed with understanding, did not in the least know the nature of the mind, nor into what nature it can be infused.

Ver. 158. Since the gods are immortal and eternal, they must of necessity have abodes that are so too; therefore, all men place the gods in the heavens, which, for that reason, say they, can never be destroyed. To this the poet answers, in these eleven verses, that this is only the invention of poets, or of the ignorant vulgar: For the nature of the gods is too subtle to touch such thick bodies as the heavens; and therefore we must not believe them to be the mansions of the gods. Nay, says he, no part of the universe is, or can be their abodes; for whatever has an abode, or is in any place, both touches and is touched, for place, and the thing placed, as they call them, are bodies; and body can both touch and be touched; but the gods neither touch nor are touched. They are not touched, because their nature is so subtle that it is wholly imperceptible to our senses, and therefore we ought to believe, that their abodes are answerable to their nature and far different from ours, that is, from those that are commonly assigned to the gods; that is to say, that they are of so subtle a nature as renders them wholly imperceptible likewise to our senses. But all the parts of the world are perceivable to our senses, therefore none of them can be the abode of the gods. And since the gods are not touched, it necessarily follows, that they do not touch:

Tangere enim non quit, quod tangi non licet ipsum. *Lucr.*

For nothing can touch but what may be touched

again. Therefore you must look out for some other mansions for the gods than those you have hitherto assigned them.

Nardius takes occasion, from this argument, to prove, that Lucretius contradicts his own doctrine, and that even, according to his own assertions, there can be no gods. He argues to this purpose: If the gods, says he, of Lucretius are no where, then Lucretius has no gods; for they must certainly be nothing at all; or they must be the void: This is evident from his own principles; for Book i. ver. 550, he says,

Two sorts of beings reason's eye descry'd,
And prov'd before their diff'rence vastly wide:
Body and void, which never could agree
In any one essential property;
For body, as 'tis matter, is from place
Distinct; and void from body, as 'tis space.

Therefore, whatever is, is either place, or a thing placed.

——And to afford a place,
Is the peculiar gift of empty space.
Book i. ver. 490.

Thus, if the gods are not bodies, they are empty space, and altogether nothing, as was said before. That they are not bodies, Lucretius himself cannot deny: What can neither touch, nor be touched, is not body: The gods of Lucretius neither are touched, nor touch; therefore they are not bodies; for nothing but body can be touched or touch. He has confirmed the minor proposition in this argument:

Now since their substance can't be touch'd by man,
They cannot touch these other things that can;
For whatsoe'er is touch'd, that must be touch'd again.

The supine idleness and inaction of his gods, made him aware how he placed them among bodies. And Book i. ver. 486, he says,

——Whatever is, a pow'r must own,
Or fit to act, or to be acted on;
Or be a place, in which such things are done;
Now body only suffers, and acts——

And yet he allows them a body, but so subtle as not to fall under the perception of sense. Perhaps he will say, with Epicurus, that his gods have not a body, but as it were a body: And thus he will set up a third nature, in contradiction of his own doctrine, when he taught, that

A third diff'rent nature in vain is sought,
And ne'er can be found out by sense or thought.
Book i. ver. 491.

Certainly he will not pretend that his gods are conjuncts, or events of concrete bodies. What then can they be, but a mere fiction, an empty word to sooth the credulous ears of unthinking men? And since he is contriving some most tenuious abode for them, what can be more tenuious than the void, which is wholly destitute of body? But he is officiously about to invent something more subtle, and not unlike their own nature, that is to say, nothing.

Ver. 167. The same difference of tenuity as there is between us and the gods, there ought to be likewise between their abodes and ours: and thus, by suitable to their own, he means, that the seats and mansions of the gods, consist of the same principles as the gods themselves.

Ver. 169. But, say they, the gods made this world, and decreed it to be eternal. To which Lucretius answers in thirty-two verses. Did they make it for their own sake, or out of love to man? Whoever says for their own, may as well pretend, that to be adored and worshipped by men is of advantage, and adds to the happy state of a god, who is entirely blessed, and wants nothing: And if any one say for the sake of man, let him tell me what trouble it would have been to us if we never had had a being, not to have a being?

To make good his assertion in this place, Lucretius chiefly labours to prove, that the gods did not make the world for the benefit of man. Therefore, says he, there is no reason why any of us should, as in gratitude for so great a favour, extol this mighty work, believe it eternal, and that it will be immortal: For of what advantage could our acknowledgements be to the gods, that that consideration only should induce them to make the world for the sake of us, or for our benefit? Besides, what new thing was there to allure the gods, who enjoy the most perfect tranquillity, to change, either for their own sake or ours, their former life of happy and uninterrupted repose, and to take upon themselves the care of man, and of all created beings, they, who, till then, lived in undisturbed delights and happiness? Farther, what could it have been the worse for us, if we had never been created? For he, who has once tasted the sweets of life, with good reason desires to live on: but they who never had a being, how can they be in love with the pleasures of living? Moreover, how could the gods fabricate the world for the sake of man: of man, I say, of whom they had no previous notice, no model to work by? For nothing can be made without an idea. And whence had the gods first their idea of creating the world? Whence had they their innate notices of the world, by which they might see in their mind what they purposed and resolved to make? For since the world was to be created of atoms, the gods could by no other means come to the knowledge of the power of those atoms, nor of what they would be able to effect by the change of their sites, orders, and positions; unless nature, by creating the world from the fortuitous coalition of atoms, had afforded them a specimen of it, and unless they had experimented by the very rise of things, how great was the efficacy of the atoms. Thus, so far is it from being true, that the gods make this world for the sake of man, that indeed they had no hand in the creation of it, but by the guidance of nature, it was made by a fortuitous concourse of atoms.

Thus Lucretius begins his impiety anew, and

endeavours to raiſe a duſt, and blind mens underſtandings. And, to ſecure his former opinion, pretends objections intermixed with ſcoffs, againſt all thoſe, who, upon ſober principles, and a ſtrict ſearch into the order and diſpoſition of things, were forced to confeſs this frame to be the contrivance of ſome intelligent Being, and the product of wiſdom itſelf. And here, agreeable to the Epicurean principles, he ſuppoſes intereſt to be the cauſe of all good nature, and the only ſpring of action, and then peremptorily demands what ſuitable returns man could make the gods for all their labour, or what additional happineſs they could receive? Where he makes another wild ſuppoſition, which will never be granted, viz. That to create or diſpoſe, is toil and trouble to Omnipotence, for ſuch I have proved every eternal and ſelf-exiſtent to be. Now, let us look a little on the immoderate praiſes he beſtows on his Epicurus, and aſk him, what rewards could poſterity give him for his philoſophy, how could he receive any benefit from their praiſes and commendations? What then, was his god Epicurus a fool, who loſt his own eaſe, oppoſed himſelf to ſo many philoſophers, and laboured to write almoſt infinite volumes, when he had no motive to engage himſelf in all this trouble? No, Lucretius highly eſteems him for the benefits he beſtowed on mankind; and thus anſwers himſelf, whilſt he allows ſingle benevolence to be a ſtrong motive to action: And this is allowed by general conſent, he being hated, who looks only on his own intereſt, and makes that the meaſure of all his deſigns. And that the Deity is benevolent in the higheſt degree, is as evident as that it is a perfection to be ſo; for it is already proved, that infinite perfection is a neceſſary conſequence of ſelf-exiſtence. But when he endeavours to prove, that to be is no good to man: what but laughter can be returned to ſuch an idle oppoſition of common ſenſe? For if to be continued in being is ſo great a good, and ſo deſirable, as all mens wiſhes and endeavours ſufficiently evince, then ſurely to beſtow that being, is at leaſt an equal bleſſing. And to anſwer his impudent queſtion, How the Deity could have his knowledge? It is ſufficient to return, That his method of knowing is not to be meaſured by ours, that he is Omniſcient, that being a perfection, needs not any external impulſe from images.

Ver. 185. Cicero, lib. ii. de Nat. Deor. ſpeaks to the ſame purpoſe in theſe words: "Quid autem erat, quod concupiſceret Deus mundum ſignis et luminibus, tanquam Ædilis, ornare? Si, ut Deus ipſe melius habitaret, antea, videlicet tempore infinito, in tenebris, tanquam in gurguſtio habitaverat? Poſt autem, varietate ne eum delectari putamus, quod cœlum et terras exornatas videmus? Quæ iſta poteſt eſſe oblectatio Deo? quæ ſi eſſet, non eâ tam diu carere potuiſſet." Why was it that God was ſo deſirous to adorn this world with luminaries and conſtellations, like the gawdy coſſack of a herald? Was it that he might live himſelf the better? And had he lived till then, that is to ſay, an infinite ſpace of time, in the dark, as in a cabin? Or do we imagine, that at length he took delight in novelties, and, therefore, clothed the heavens and the earth in all that glorious array in which we now behold them? What delight can that be to God? Were it any, he would not have been ſo long without it.

Ver. 201. The notice, or knowledge of all things, proceeds from the images of things that offer themſelves to the mind. Beſides, the gods do nothing inconſiderately; but foreſee whatever they reſolve to do. Now, no images of things could come into the Divine Mind, ſince the things themſelves did not yet exiſt. It is idle, therefore, to pretend, that the gods created the heavens, the earth, the animals, and all things. This argument is contained in fifteen verſes.

Ver. 208. In theſe eight verſes, the poet delivers the opinion of Epicurus concerning the creation of the world, which he denied to be the work of the gods; but taught, that all things are effected by nature, or rather by chance and fortune, that is, by a fortuitous concourſe of atoms: For he would not allow fortune or chance to be any thing, that, of itſelf, tempered and diſpoſed the atoms to work theſe effects we now behold, but that the atoms themſelves are that very chance: foraſmuch, as without any premeditation, they meet, and mutually cleave to one another; and thus make all concrete things, juſt as it happens, without any preconceived deſign. And thus, as Dryden finely expreſſes this opinion of Epicurus,

The various atoms interfering dance
Leap'd into form, the noble work of chance.

Lucretius, too, explains it in the ſame words, as here, book i. ver. 1021. and in this book, ver. 470. he repeats theſe verſes again.

Ver. 216. To prove the world not to have been made by the gods, the poet, in theſe thirty-four verſes, brings ſome arguments from the ill-contrived frame, diſpoſition, and make of it. The work of an all-wiſe artiſt, ſays he, ought to be perfect in all points; not like the earth with mountains, woods, lakes, &c. hideous and dreadful to behold. Some parts of it ſhould not be chilled with perpetual froſt, nor others parched with continual heat: it ſhould produce fruits of all ſorts, rather than thorns, briars, and other uſeleſs, nay, noxious plants. It ſhould be diſturbed with no ſtorms nor tempeſts: It ſhould breed no wild beaſts, nor other animals that are dangerous and deſtructive to man: nor ſhould various diſeaſes attend the various ſeaſons of the year, and ſhorten our days: but all things ſhould have been made pleaſant and beautiful, accommodated only to the eaſe and pleaſure of man: and thus it would indeed have been a work worthy of a wiſe and bounteous God.

Thus our preſumptuous and daring poet takes upon him to find fault with the contrivance itſelf, and, like that proud king of Arragon, could, no doubt, have mended the deſign. And here, though it is unreaſonable to demand a particular cauſe and motive for every contrivance, ſince we are not of the cabinet-council of Nature, nor aſſiſted at her project, yet his exceptions (no doubt the

beſt his labouring wit could invent) are ſo weak, ſo often anſwered, and ſo eaſily (on principles grounded on certain hiſtory, and infallible record) to be accounted for, that there is no need to frame a particular anſwer, nor reaſon to fear, that any, the meaneſt reader, can ever be ſurpriſed with ſuch trifles.

Ver. 221. In theſe ſix verſes is contained his firſt argument, in which he proves, that far the greateſt part of the earth is uſeleſs to man; forasmuch as it conſiſts partly of mountains, woods, and rocks; and that the ſea and vaſt lakes take up another part of it: as alſo becauſe a third portion of it is uninhabitable by reaſon of the violent heat of the ſun; and a fourth on account of its being extremely cold: that is to ſay, under the torrid zone, and under the two frigid zones. How then can it be pretended, that this earth, which abounds with ſo many defects and inconveniencies, was created by the gods for the ſake of man?

Ibid. Lucretius.

—— Quantum cœli tegit impetus ingens,
Inde avidam partem montes, &c.

Which our tranſlator has not rightly, or at leaſt, has doubtfully rendered. For what Lucretius ſays is this: That as much of the world as the heavens ſurround or cover, by which he means the orb of the earth, is partly taken up by mountains, &c. and therefore is of no uſe to man. But Creech ſeems to make him complain, that no creatures are produced in the air, as well as in the water, and on dry ground. His miſtake proceeded from not enough conſidering what the poet means by "Cœli impetus ingens;" the violent whirl of the heavens. Cicero, de Naturâ Deorum, lib. ii. "Cùm autem impetum cœli admirabili cum celeritate moveri, vertique videamus," &c.

Ver. 226. The aſtronomers divided the heavens, according to latitude, into five parts, each of which the Greeks called Ζώνη, and the Latins *Cingulum*, *Faſcia*, *Plaga*. Cicero calls the zones, *Macula*, and *Oræ*; the zone, that is in the midſt, between the two tropics, beyond which the ſun never paſſes, is called the torrid zone. Polybius divides this zone into two, parted by the equator; but in this opinion he is not followed by any. The two zones that are extended, the one from the right of the torrid zone, towards the actic or north pole, and the other from the left of the torrid zone, towards the antarctic or ſouth pole, are called the temperate zones. The other two, included within the polar circles, are called the frigid zones. Thales is believed to have been the inventor of them; but Poſſidonius, as cited by Strabo, aſcribes the invention, though without reaſon, to Parmenides. Theſe zones are deſcribed by Virgil, Georg. i. ver. 233.

Quinque tenent cœlum Zonæ: quarum una coruſco
Semper ſole rubens, et torrida ſemper ab igni:
Quam circùm extremæ dextrâ lævaque trahuntur,
Cerulea glacie concretæ, atque imbribus atris.
Has inter mediamque, duæ mortalibus ægris
Munere conceſſe Divûm.——

Five girdles bind the ſkies: the torrid zone
Glows with the paſſing and repaſſing ſun.
Far on the right and left, th' extremes of heav'n,
To froſts and ſnows, and bitter blaſts are given.
Betwixt the midſt and theſe, the gods aſſign'd
Two habitable ſeats for human kind. *Dryden.*

And the ſame aſtronomers likewiſe aſſigned five zones on earth, to anſwer to thoſe of the heavens: and of theſe Ovid takes notice, Metam. i. ver. 45.

Utque duæ dextrâ cœlum, totidumque ſiniſtrâ
Parte ſecant Zonæ, quinta eſt ardentior illis:
Sic onus inciuſum numero diſtinxit eodem
Cura Dei; totidemque plagæ tellure premuntur:
Quarum quæ media eſt, non eſt habitabilis æſtu;
Nix tegit alta duas: totidem inter utramque locavit,
Temperiem dedit, miſtâ cum frigore flammâ.

Which the ſame Dryden thus interprets:

And as five zones th' ethereal region bind,
Five correſpondent are to earth aſſign'd.
The ſun, with rays directly darting down,
Fires all beneath, and fries the middle zone.
The two beneath the diſtant poles complain
Of endleſs winter, and perpetual rain.
Betwixt th' extremes two happier climates hold
The temper that partakes of heat and cold.

Nor was it amiſs obſerved by theſe aſtronomers, that the parts of the earth anſwered to the oppoſite parts of the heavens, and partake of their qualities: though ſo great has been the wiſdom of God in attempering all things, that even directly beneath the ſun, and where the heats are moſt violent, both men and cattle may live a pleaſant and eaſy life: but of this the ancients were ignorant.

Ver. 227. In theſe nine verſes is contained his ſecond argument, in which he obſerves, that the other parts of the earth that are cultivated, will not produce the fruits, unleſs the ground be tilled by men with great toil and labour: but if the earth were created by the gods, for the ſervice of man, why does it not bear them fruits of its own accord?

Ver. 236. Theſe eight verſes contain the third argument, and ſay, that even when we expect to reap the fruits of our labours in the tillage of the earth, we are often deceived in our hopes, either by rains or droughts, by ſtorms, blights, &c. which is finely expreſſed by Sir R. Blackmore:

The verdant walks their charming aſpect loſe,
And ſhrivell'd fruit drops from the wither'd boughs:
Flow'rs in their virgin bluſhes ſmother'd die,
And round the trees their ſcatter'd beauties lie.
Infection taints the air; ſick nature fades;
And ſudden autumn all the fields invades;
So when the plains their flow'ry pomp diſplay,
Soothi'd by the ſpring's ſweet breath and cheering ray;
If Boreas then, deſigning envious war,
Muſters his ſwift-wing'd legions in the air;

And, bent on ſure deſtruction, marches forth
With the cold forces of the ſnowy north.
Th' op'ning buds, and ſprouting herbs, and all
The tender firſt-born of the ſpring muſt fall;
The blighted trees their blooming honours ſhed,
And on their blaſted hopes the mournful gard'-
ners tread.

Ver. 244. In theſe ſix verſes is contained the fourth argument, in which the poet obſerves, that noxious animals are produced and fed, as well on dry ground as in the ſea: that the ſeaſons of the year bring diſeaſes; that untimely death ſnatches many away: To which evils they ought not to be ſubject, if all things were created for their ſake.

Ver. 250. In theſe ſixteen verſes he brings his fifth argument. If the gods, ſays he, had made the world, the condition of man would have been better than that of other animals; yet we plainly ſee it is much worſe: and, to weigh the matter aright, nature ſeems a kind parent to them, and a croſs ſtep-mother to us. Why, ſays Epicurus, in Lactantius, lib. iii. cap. 5. did God make man whom he loved, obnoxious to ſo many evils? Why did he make him frail and mortal? "Cur ergo Deus omnibus malis hominem, quem diligebat, objecit? Cur mortalem, fragilemque conſtituit?" Man, indeed, comes into the world naked, helpleſs, and unarmed: but nature has given him the advantage of hands, which are called the organ of organs. Beſides, let us ſuppoſe that a great eſtate were given gratuitouſly, and for no previous conſideration, to a man that were lame, mutilated, infirm and diſeaſed, would it not be unjuſt to call the donor to account for the infirmity of the object of his liberality, and to blame him that he gave no more?

Ver. 255. Pliny, lib. vii. ſpeaking of the imbecility of human nature, ſays, "Hominem tantùm nudum, et in nudâ humo natali die objecit ad vagitus ſtatim et ploratus, nullumque tot animalium pronius ad lachrymas, atque has protinus vitæ principio." Nature produces man only naked, nor of the great number of animals is any more prone to tears, and that too in the very moment of his birth. But let us hear Dryden's tranſlation of this paſſage.

Thus, like a ſailor by the tempeſt hurl'd
Aſhore, the babe is ſhipwreck'd on the world:
Naked he lies, and ready to expire,
Helpleſs of all that human wants require:
Expos'd upon unhoſpitable earth,
From the firſt moment of his hapleſs birth;
Straight with foreboding cries he fills the room,
Too ſure preſages of his future doom.
But flocks and herds, and every ſavage beaſt,
By more indulgent nature are increas'd:
They want no rattles for their froward mood,
No nurſe to reconcile them to their food
With broken words; nor winter blaſts they fear,
Nor change their habits with the changing year:
Nor for their ſafety citadels prepare,
Nor forge the wicked inſtruments of war.
Unlabour'd earth her bounteous treaſure grants,
And nature's laviſh hands ſupply their common
wants.

Ver. 258. Martial. lib. xiv. Epig. 54.

Si quis plorator collo tibi vernula pendet,
Hæc quatiat tenerâ garrula ſiſtra manu.

Hence we may obſerve, that the rattles which our nurſes uſe to quiet their froward children, are not of modern date; eſpecially if the *crepitaculam*, which is the word our poet here uſes, be the ſame with the *ſiſtrum*, that the Egyptians uſed in the ſervice of the goddeſs Iſis, as, by the deſcription Apuleius, Metam. lib. xi. gives of it, it ſeems to be: "Dexterâ quidem ferebat," ſays he, "æreum crepitaculum, cujus per anguſtam laminam in modum baltei recurvatam, trajectæ mediæ paucæ virgulæ criſpante brachio tergeminos jactus reddebant anguſtum ſonorem." And the figure of Iſis, holding a *ſiſtrum* in her hand, which Hieronymus Boſſius, de Siſtro, p. 22. gives us, from ſome ancient coins of Adrian, repreſents it to be very much of the ſame form with our common rattles.

Ver. 266. Having ſolved the objections which the weakneſs of the Stoics, and the ſuperſtition of the vulgar had raiſed againſt his opinion: he now, in theſe ten verſes argues to this purpoſe. The nature of the whole is the ſame with that of its parts; and ſince we ſee that the parts of the world, the earth, ſea, air, and fire, are continually changed, ſometimes diminiſhed, ſometimes renewed, it muſt be confeſſed, that the whole maſs is equally and alike mortal.

Ver. 268 *This frame.*] i. e. Of the earth, which is compoſed of the four elements, that are called by Manilius, lib. i. ver. 137 "Quatuor mundi artus;" the four limbs or members of the world; as they are likewiſe by Lucretius, ver 272. of this book.

Ver. 276. Here the poet demonſtrates at large, in ſeventy three verſes, that the chief parts, and largeſt members of the world, earth, water, air, and fire, are produced, and die. And firſt, in theſe twenty verſes he begins with the earth: many of whoſe particles, ſays he, are borne aloft, and compoſe the air: the rivers waſh off many more, and roll them into the ſea. Then, in ſixteen verſes, he ſays, that new water is produced every day; but part of it is changed into air by the force of the ſun: and in the ſubterranean paſſages, another part of it condenſes, and puts on the form of earth. Then in ten verſes he ſays, that no man will pretend, that the air which receives all the particles that are continually flowing to it from all things, and that repairs and renews all thoſe things, is eternal and immortal. And laſtly, in twenty-ſeven verſes, he aſſerts, that we ought to conclude the like alſo of fire, ſince the rays of the ſun, who is the ſole fountain and ſource of all light and fire, flow out from his orb and periſh every moment. And, therefore, we muſt be forced to allow, that the ſun himſelf is repaired, as we ſupply a lamp with oil to keep the flame alive.

Ver. 280. Here the poet proves, I That the earth waſtes away, and is renewed: for, ſays he,

the sun, by continually shining upon it, bakes and dries it up: it wears with being trampled on: the force of the winds blows some of it into the air: rains dissolve it: rivers wash it away: it is wasted by its own productions, and again renewed by them. For, as the earth is the great mother of all things, so too she is their common sepulchre. The earth therefore decays, and is renewed.

Ver 284. Our translator is not so much obliged to his author for this thought, as to Cowley, who, in the first book of his Davideis, says,

——— The stream, with wanton play,
Kisses the smiling banks and glides away.

Ver. 296. In these sixteen verses the poet proves, 2dly, That the water wastes away, and is again repaired: for the sea, the rivers, and the fountains are continually supplied with new waters; and the reason why the sea does not overflow, is, because the winds brushing over the surface of its waves, take away some part of its flood and because the heat of the sun commonly licks up its waters. Besides, some parts of the waters of the sea dives beneath into the pores and channels of the earth, where, leaving behind its bitterness and salt, it gropes out its blind passage to a second birth; and starting up in fountains, creeps from them into rivers, and from the rivers works its way, and returns again into the sea, gliding backwards and forwards with a never ceasing course

Ver. 305. Lucretius himself gives the reason of this, book ii. ver. 451.

For when salt streams through winding caverns pass,
They rise up sweet, and bubble o'er the grass;
Because those pungent parts they roll'd before,
Now stay behind, and lodge in every pore.

Ver. 308. Mæander is a great river of the Lesser Asia, flowing from the fountain Aulocrene, in the Greater Phrygia. It divides Caria from Ionia; and, at the city Heraclea, falls into the Myrtoan sea, which is a part of the Ægean, and now called Mare di Mandria. This river is now the Madre, and flows in so many windings, that it often seems to run back toward its head. Ovid. Metam. lib. ix. ver. 449.

Hic tibi, dum sequitur patriæ curvaminaripæ,
Filia Mæandri, toties redeuntis eodem,
Cognita Cyanëe, &c.——

Whence, not only all turnings and windings are metaphorically called meanders: but likewise all crafty and wily counsels: in which last sense, Cicero in Piso, uses the word meander; and Prudentius, in the hymn, ante Somn.

O tortuose serpens,
Qui mille per Mæandros,
Fraudesque flexuosas,
Agitas quieta corda.

Dion Prusæus says, that this river makes no less than six hundred windings towards the spring where first it rises. Thus,

Its wanton tide in wreathing volumes flows,
Still forming reedy islands as it goes:
And in meanders to the neighb'ring main,
The liquid serpent draws its silver train.
Sir Richard Blackmore.

Moreover, the four verses that conclude this argument, are paraphrastically rendered; and the two last of them seem to be imitated from these of Cowley:

Th' innocent stream, as it in silence goes,
Fresh honours, and a sudden spring bestows,
On both its banks to ev'ry tree and flow'r.

Ver. 312. In these ten verses, he proves, 3dly, Of the air, that it sometimes wastes, and then again increases: for the air is changed every moment: because, whatever flows from bodies, is carried into the vast tract of air. But minute corpuscles are continually flowing from all things, and are conveyed into the air, where they fly to and fro without ceasing. Now, unless the air constantly restored these corpuscles to the bodies from whence they came, all things would by this time have been wasted to nothing, and totally destroyed. Therefore, bodies are perpetually changed into air, and the air returns again into bodies.

Ver. 315. This seems a bold metaphor; and yet has the authority of Lucretius; "Aeris in magnum fertur Mare:" and he of Ennius, who, in Festus, says, "Crassa pulvis oritur; omne pervolat cœli Fretum." And our Cowley not only calls the air a trackless ocean; but the sea the low sky: for which, he tells us, he has the authority of the scripture itself: Genes. i ver. 6. "Let there be a firmament in the midst of the waters, and let it divide the waters from the waters." The passage of Cowley, of which I am speaking, is in that incomparable Pindaric ode, which he calls the Muse; and the rather deserves to be transcribed, because he reclaims the authority of our poet, to justify one part of his allegory:

Where never fish did fly,
And with short silver wings cut the low liquid sky,
Where bird with painted oars did ne'er
Row through the trackless ocean of the air, &c.

Ver. 322. In these twenty-seven verses he proves, 4thly, That fire perishes, and is again renewed: Of this he brings an instance of the sun, whose first light, says he, totally perishes, and a new light is created in its place: This truth we know by experience, as often as any mist interposes between the sun's orb and us. He farther teaches, that the like happens in our lamps and candles, in lightning, in the moon, and in the other planets; of all which the first light dies, and a new light is continually substituted in its room: Therefore light, in which there is always some fire, dies, and is renewed in all luminous bodies, and consequently the fire itself must perish, and be renewed likewise. And, indeed, as to our lights, which are supplied and fed with something fat and humid, as oil, no man disputes but that they are continually changed. But Aristotle, lib. ii. Meteor. denies that the light of the sun is like

our terreſtrial lights; and will have it to be always one and the ſame, as being never fed with humidity; for otherwiſe a new ſun would riſe every day, and be daily new, which is both falſe and abſurd. Lucretius, indeed, in this place, does not pretend to ſay, that the ſun or the ſtars are of a fiery nature, or that they are fire; but is ſatisfied that light, which always contains ſome fire, periſhes and is renewed daily. He will prove by and by, whether the ſun be fire or not; and according to the doctrine of Epicurus, will teach, that the celeſtial bodies, that is to ſay, the ſtars, are either fire, or conſiſt of fire; which he has likewiſe often inſinuated elſewhere.

Ver. 328. Sir Richard Blackmore, deſcribing a ſtorm:

A ſudden ſtorm did from the ſouth ariſe,
And horrid black begun to hang the ſkies:
Low-bellying clouds ſoon intercept the light,
And o'er the ſailors ſpread a noon-day night.

Ver. 343. See the note on verſe twenty-eight of this book.

Ver. 349. In theſe eleven verſes he confirms the preceding arguments. The things that ſeem moſt ſolid, feel the ſtrength of time, and moulder away. Who does not every day ſee towers, temples, and the images of the gods falling to decay, and dropping to the ground? The deities themſelves cannot ſupport them. Even rocks crumble with age, and come tumbling piecemeal down from the mountains. Who then will pretend, that things which are unable to reſiſt the injuries of a finite time, have exiſted from all eternity?

Ver. 351. For ſome are of opinion, that the ancients believed, that not only man and all created things, as well animate as inanimate beings, but that even the gods themſelves were ſubject to fate. And the words of Lucretius, in this place, are,

Nec ſanctum numen fati protollere fines
Poſſe, neque adverſus naturæ fœdera niti.

But if the decrees of fate were unalterable, how came Venus to fear, that the mind of Jupiter would change, in regard to the Trojans? Virgil, Æn. i. ver 241.

———Quæ te, genitor, ſententia vertit?
Hoc equidem occaſum Trojæ, triteſque ruinas
Solabar, fatis contraria fata rependens.

Fate therefore ſeems to have been nothing elſe, than an immutable ſeries of things and events, exiſting in the mind, or in the decrees of Jupiter, and which, for that reaſon, he alone knew, and alone revealed to the gods by his own mouth, and to men by oracles. Thus the fortune-telling harpy, Æn. iii. ver 251.

Quæ Phœbo pater omnipotens, mihi Phœbus Apollo
Prædixit.——

To which I add, that the ancients did indeed hold fate to be unalterable; and unavoidable; "Fata viam invenient:" but in ſuch a manner nevertheleſs, that they believed, I. That the event of fate, though it could not be wholly prevented, might nevertheleſs be ſomewhat retarded: Thus Juno, Æn. vii. ver. 315.

Non dabitur, eſto, regnis prohibere Latinis:
At trahere, atque moras tantis licet addere rebus.

II. That the event often depended on certain conditions, which being eluded, fate was eluded likewiſe. III. That the declaration of any fate whatever, whether by Jupiter himſelf, or by the oracles, might be ambiguous: whence it happened, that the gods, as well as men, often ſtruggled againſt adverſe fates. And this it was that Venus feared, that Jupiter had not ſpoken ſincerely of the future happineſs of Æneas; becauſe, if he had, ſhe knew that it was unalterable, and muſt of neceſſity happen. For as Dryden, in Palemon and Arcite, ſays after Chaucer,

The pow'r that miniſters to God's decrees,
And executes on earth what he forſees,
Call'd providence, or chance, or fatal ſway,
Comes with reſiſtleſs force, and finds, or makes its way.

Ver. 353. Juvenal, Satyr. x. ver. 142. to the ſame purpoſe, ſays,

———Patriam tamen obruit olim
Gloria paucorum, et laudis titulique cupido
Hæſuri in ſaxis cinerum cuſtodibus, ad quæ
Diſcutienda valent ſterilis mala robora ficûs:
Quandoquidem data ſunt ipſis quoque fata ſepulchris.

Which Dryden has finely paraphraſed:

Yet this mad chaſe of fame, by few purſu'd,
Has drawn deſtruction on the multitude:
This avarice of praiſe in times to come,
Theſe long inſcriptions crowded on the tomb,
Should ſome wild fig-tree take her native bent,
And heave below the gawdy monument,
Would crack the marble titles and diſperſe
The characters of all the lying verſe:
For ſepulchres themſelves muſt crumbling fall
In time's abyſs, the common grave of all.

Moreover, that the graves of men ſhould come to be their own graves, is a thought added to Lucretius by his tranſlator.

Ver. 360. In theſe eight verſes he confutes thoſe who hold that all things proceed from ether, or heaven, and are reſolved again into heaven, and yet aſſert, that heaven itſelf is immortal and eternal. For whatever is changed into other things, and is repaired and renewed by thoſe things, when they are diſſolved, muſt be born, and mortal.

Ver. 363. He means the poets, who feigned that Cœlus was the moſt ancient of all the gods, and that he married his ſiſter Terra, the earth, whence he was believed to be the father of all things.

Ver. 368. In theſe ſeventeen verſes, he aſſerts, that the world is new becauſe the moſt ancient of all hiſtories reach not farther than the Theban, or Trojan wars; and certainly, if the world, far from being eternal, were much older than we know it to be, we ſhould have had ſome records

of a much older date: and farther, becáuſe all the arts are but of late invention, ſince mention is made of the f unders of all of them. And if the world had had no beginning, all arts, but eſpecially thoſe uſeful to life, would have exiſted from all time. Macrobius, on the dream of Scipio, book ii. chap. 10. argues to the ſame purpoſe, in theſe words: "Quis non hinc exiſtimet mundum quandoque cœpiſſe, nec longam retro huges ætatem, cum abhinc ultra retro duo annorum millia de excellenti rerum geſtarum memoriâ ne Græca quidem extat hiſtoria? Nam ſupra ninum, à quo Semiramis ſecundum quoſdam creditur procreata, nihil præclarum in libris relatam eſt: Si enim ab initio, imo ante initium fuit mundus, ut phil ſophi volunt, cur per innumerabilium ſeriem ſæculorum, non fuerat cultus, quo nunc utimur, inventus? Non literarum uſus, quo ſolo memoriæ fulcitur æternitas? Cur denique multarum rerum experientia ad aliquas gentes recenti ætate pervenit? Ut ecce; Galli vitem, vel cultum olæ, Roma jam adoleſcente, didicerunt: aliæ verò gentes adhuc multa neſciunt, quæ nobis inventa placuerunt. Hæc omnia videntur æternitati rerum repugnare, dum opinari nos faſciunt, certo mundi principio paulatim ſingula quæque cœpiſſe." Who can believe but that the world had a beginning, and that not too long ago, ſince, of what happened above two thouſand years paſt, we have no hiſtory, not even of any great actions: For before Ninus, who, according to ſome, was father of Semiramis, nothing memorable is recorded in our books. And if the world was from the beginning, or, as philoſophers ſay, before the beginning, why, during a ſucceſſion of innumerable ages, was not the method and way of life which we now follow invented? Why not even the uſe of letters, which alone ſecures and eternizes the memory of things? And why have ſome nations had but a late knowledge of many things? For inſtance, the Gauls, who knew not to till the vine, nor the olive, till Rome was in her age of adoleſcency. And other nations are ſtill ignorant of many arts and inventions, that have long been in uſe, and of great advantage to us. All which ſeems to contradict the eternity of things, and gives us great ground to believe, that all things began by degrees, after the world had its beginning.

Ver. 371. Which, ſays Macrobius, was before the ſiege of Troy. However, it could be but a little time before, becauſe it is certain, that ſome leaders were at the deſtruction of Troy, whoſe fathers had been at the ſiege of Thebes. *Faber.* There were ſeveral cities called by the name of Thebes, but Lucretius ſpeaks of that in Bœotia, which, as Iſidorus ſays, was built by Cadmus, and of the war between the two brothers, Etocles and Polynices, the ſons of Œdipus, by his own mother Jocaſta. Of the Trojan war, ſee book i. ver. 519.

Ver. 372. Horace ſeems to give the reaſon of this, when he ſays, that in the ages in which thoſe heroes lived, there wanted poets to record their fame:

Vixere fortes ante Agamemnona
Multi: ſed omnes illacrymabiles
Urgentur, ignotique longâ
Nocte; carent quia vate ſacro.

And therefore Cowley excellently well ſays:

Not winds to voyagers at ſea,
Nor ſhow'rs to earth more neceſſary be,
Than verſe to virtue, which can do
The midwife's office; and the nurſe's too:
It feeds it ſtrongly, and it clothes it gay;
And when it dies, with comely pride
Embalms it, and erects a pyramid,
That never will decay,
Till heaven itſelf ſhall melt away,
And nought behind it ſtay.

And Dryden in like manner:

For ev'n when death diſſolves our mortal frame,
The ſoul returns to heaven, from whence it came;
Earth keeps the body; verſe preſerves the fame.

Ver. 374. It is not ſtrange that arts are new, that they are but lately improved and refined, that is to ſay, ſailing, poetry, muſic, &c. ſince the world itſelf is but of late ſtanding, and was not from eternity, as the Stoics and Ariſtotle erroneouſly believed.

Ver. 383. Lucretius has ſeveral times already been telling us this of himſelf; but more particularly, book i. ver. 933. and at the beginning of the fourth book.

Ver. 385. To theſe arguments ſome philoſophers give this anſwer. The ſame arts flouriſhed heretofore that do now; but ſometimes fire deſtroyed mankind, ſometimes deluges ſwept them away, or earthquakes ſwallowed them up; and hence thoſe arts ſeem to be new. The poet retorts this anſwer upon them, in theſe ten verſes, and ſays that no man of ſound judgment will pretend that the world, whoſe parts are ſometimes conſumed by fire, ſometimes overwhelmed with waters, and ſometimes ſhaken and ſwallowed up by earthquakes, can be eternal. For the reaſon why we believe a man to be mortal, is, becauſe he is ſubject to, and attacked by thoſe diſeaſes, which having ſeized upon others with greater violence, have ſwept them away But Ariſtotle, on the contrary, ſays that there is no fear of the world's being diſſolved; nay more, that the deluges and conflagrations of the earth conduce to the ſafety of the whole univerſe; for he held the world to be eternal; which doctrine of his is not only repugnant to the Chriſtian faith, but likewiſe to the opinion of almoſt all the philoſophers.

Ver. 387. The poet alludes to the known ſtories of Phaëthon, who is fabled to have ſet the world on fire; and of the flood, that happened in the days of Deucalion. The firſt of them may be ſeen at large in Ovid. Meram. lib. ii. and the other in the ſame author, lib. i. See likewiſe below, ver. 440. and ver. 455.

Ver. 395. In theſe twenty-one verſes he brings the ſame argument againſt the immortality of the

world, which, book iii. ver. 776. he brought againſt the immortality of the ſoul; conſult the notes upon that place. Nothing, ſays he, is eternal, or immortal, except bodies perfectly ſolid, as the atoms; except the void, and the τὸ πᾶν, univerſe. But the world is not a body perfectly ſolid; nor is it void or empty ſpace; nor ſince there are infinite worlds, can it be pretended, that it is the univerſe.

Ver. 406. As if, for the diſſolution of any thing, it were requiſite, that it ſhould go from place to place, or that bodies ſhould come from ſome exterior place, and ſtrike it with ſo great violence, as to diſſolve the thing itſelf.

Ver. 416. In theſe five verſes he draws, from the arguments he has brought already, this concluſion; that ſince the world will have an end, it had a beginning; and has not exiſted from all eternity; for what is mortal, muſt of neceſſity have been born.

To make this diſputation of our author more eaſy to be underſtood, it will not be improper to obſerve, that there are two ſorts of eternity; from the preſent time backwards, and from the preſent forwards; which the ſchoolmen call "æternitas à parte ante, and æternitas à parte poſt." Theſe two make up the whole circle of eternity, which the preſent now cuts as a diameter. Bœotius de Conſolat. Philoſoph. lib. v. defines eternity, "interminabilis vitæ tota ſimul et perfecta poſſeſſio." The whole and perfect poſſeſſion at once, of a being with beginning or ending. And this definition is followed by Thomas Aquinas, and all the ſchoolmen, who therefore call eternity *nunc ſtans*, a ſtanding now, to diſtinguiſh it from that now, which is a difference of time, and always flowing.

Ver. 421. In theſe forty verſes he brings another argument from the continual fighting of the elements, which are the four chief parts of the world: For, ſays he, ſince fire engages with water, and ſometimes the flame, ſometimes the flood prevails, what ſhould hinder, but that this contention will at laſt end in the deſtruction of the whole world: And that great conflagrations and deluges have happened, the ſtories of Phaëthon and Deucalion ſufficiently evince: for then the earth was deſtroyed by fire, and overwhelmed with water; and though the poets fooliſhly fable, that the fire, and the deluge, broke out and ceaſed at the intervention of the gods, yet they were indeed only the effects of natural cauſes.

Ver. 435. Milton deſcribes admirably well this fighting of the elements, and perhaps took the hint from Lucretius.

For hot, cold, moiſt, and dry, four champions fierce,
Strive here for maſt'ry; and to battle bring
Their embryon atoms: They around the flag
Of each his faction, in their ſeveral clans,
Light-arm'd, or heavy, ſharp, ſmooth, ſwift, or ſlow,
Swarm populous; unnumber'd as the ſands
Of Barca, or Cyrene's torrid ſoil,
Levy'd to ſide with warring winds and poiſe
Their lighter wings. To whom theſe moſt adhere,
He rules a moment, &c.

Which a late author has happily imitated:

The heavier ſeeds ruſh on in num'rous ſwarms,
And cruſh their lighter foes with pond'rous arms:
The lighter ſtrait command with equal pride,
And on mad whirlwinds in wild triumph ride:
None long ſubmits to a ſuperior pow'r;
Each yields, and, in his turn, is conqueror.

Ver. 440. *Phaëthon.*] He was the ſon of Clymene and Sol, the ſun: And with much importunity obtained of his father, to drive his chariot for one day; but not being able to guide the horſes, they went out of the road of their daily courſe, and ſet fire to the world. Jupiter ſtruck him with his thunder, and he fell into the river Eridanus. The fable is related at large by Ovid. Metam. 2. Plato, in his Timæus, explains the meaning of this fable, in words to this effect: What is commonly reported among us, ſays he, that in times long ſince paſt, Phaëthon, the ſon of Sol, having obtained permiſſion to drive his father's chariot, and miſtaking the right road, ſet fire to the earth, and that he was ſtruck down, and killed with lightning, is ſaid only figuratively, or by way of fable; but ſignifies the mutation or decay, as well of earthly things, as of thoſe that are in the heavens, and are moved with the heavens: As alſo that deſtruction, which in a long interval of time, is made of all bodies that are on the earth, by the violent aſſaults of the element of fire. And thus too Ariſtotle, lib. 4. de Mundo.

Ver. 444. *Po.*] The Greeks called it Ἠριδανὸς, the Latins, *Padus*, now the *Po*, a river of Italy, that riſes in the Alps, at the foot of the mountain Veſulus, now Monte Viſo, and dividing the Ciſalpine Gaul, which is now a part of Italy, into the Tranſpaduan and Ciſpaduan Gauls, diſgorges itſelf, at ſeveral mouths, in the Hadriatick ſea. Virgil calls it the king of rivers, becauſe it is the largeſt river of Italy. Georg. i. v. 481.

Proluit inſano contorquens vortice ſylvas
Fluviorum rex Eridanus———

And G. 4. v. 372, he deſcribes it at the ſpring from whence it flows:

Et gemina auratus taurino cornua vultu
Eridanus: quo non alius per pinguia culta
In mare purpureum violentior influit amnis.

There Po firſt iſſues from his dark abodes,
And awful in his cradle, rules the floods:
Two golden horns on his large front he wears,
And his grim face a bull's reſemblance bears:
With rapid courſe he ſeeks the ſacred main,
And fattens, as he runs, the fruitful plain.

Ver. 445 Of Phœbus, ſee B. I. v. 816.

Ver. 447. The horſes of the ſun, of which we have ſpoken above, v. 86.

Ver. 451 What Lucretius here says, is this: The old Greek poets report this for truth, though indeed it is but an idle fiction: Not but that it is possible that fire may destroy all things, if an immense quantity of corpuscles, of a fiery matter, were brought down upon the earth, out of the infinite space: for in that case, unless the power and force of that igneous matter be weakened, repressed and kept under by some means or another, all things will be burnt, and perish with too much heat.

Ver. 455 Here the poet alludes to the fabulous flood of Deucalion, which, no doubt took its rise from the true flood of Noah, related in the Mosaical history, of which it cannot be questioned, but some copies were got among the heathens; and as they drew the occasion of many of their fables from those sacred writings, so too they wretchedly profaned them by their foolish fictions: but none has suffered more in passing through their hands, than this flood of Noah: which having furnished matter of speculation to many of our Christian philosophers, who have puzzled their brains to give a rational and intelligible account of it; I presume it will not be taken amiss, that I here make a short digression, to give our translator's opinion concerning that deluge: He observes, in the first place, that the author of the theory of the earth, pleads for a universal flood, it being inconsistent with the demonstrated nature of a fluid, that water should stand up in heaps, fifteen cubits above the tops of the highest mountains: This, says Creech, I am willing to admit, though there is no reason why Omnipotence might not be immediately concerned in it; since the author of the theory himself confesses, that the forty days rain cannot, according to his hypothesis be explained by any natural cause that he can discover. In the next place, that author compares the height of the mountains, and the depth of the sea; and having, as to both, made allowable suppositions, though the course of the largest river, even the Nile itself, will not prove its head to be above three feet higher than its mouth, he infers that eight oceans will be little enough to make an universal deluge: The waters above the firmament are exploded, the rain would afford but the hundredth part of such a mass of water, unless the showers were continual, and over the face of the whole earth, and the drops came down ninety times faster than usually they do: Though a man would be apt to think from the expressions in Genesis, "The windows of heaven were opened," that there was something very extraordinary in this rain, and that all those required conditions were observed. The caverns of the earth, if they threw out all the water they contained, would afford but little, in comparison of the great store that was required: And if the whole middle region of the air had been condensed, still there had not been enough; because air, being turned into water, fills only the hundredth part of the space which it formerly possessed. Though all the other ways by which some have endeavoured to explain the flood, were demonstrably insufficient, yet this last, which gives an account of it from so natural and easy a cause of the condensation of the air, deserved to be considered a little more: But it is the art of a disputer, to touch that least which presses most on the opinion he would advance. For it being allowed that air, by natural causes, may be changed into water; and a vacuum being explained, it necessarily follows, that as much air as rises fifteen cubits higher than the tops of the mountains, is sufficient to make such a deluge, as is described to have been in Noah's time: Because where there is no vacuum, there can be no contraction into a less space: and every particle of matter, whatever form or schematism it puts on, must, in all conditions, be equally extended, and therefore take up the same room. But suppose a vacuum, or, as it happens in our imperfect condensations, that a hundred cubical feet of air would make but one foot of water; yet sure the region is large enough to make amends for this disproportion. Now, since nature is sufficient for condensation, and since its powers may be considerably invigorated for the execution of the Almighty's wrath why must it be thought so difficult to explain a deluge! And why should an excellent wit waste itself in fashioning a new world, only to bring that about, which the old one would permit easily to be done? It is above the province of philosophy to make a world: let that be supposed to have been formed as it is revealed; it is enough for us to search by what laws it is preserved; and a system, erected on this foundation, will be agreeable both to reason and religion. It is above the province of philosophy likewise, to assign a natural cause of a supernatural effect: But the prying minds of some men will, with their short-lined plummets, be sounding into the unfathomable depths of the divine dispensations: How much better they, who, firmly believing that there was such a flood as that of Noah, described to us in holy writ, ascribe it merely to Omnipotence?

Commanded by whose breath, th' obsequious main
Stood still, and gather'd up its flowing train:
Th' Almighty did the sea divide,
And, as he rends the hills, he split the tide:
Benumb'd with fear, the waves erected stood,
O'er-looking all the distant flood:
Mountains of craggy billows did arise,
And rocks of stiffen'd waters reach'd the skies;
Remoter waves came rolling on to see
The strange transforming mystery:
But they approaching near,
Where the high crystal ridges did appear,
Felt the divine contagion's force;
Mov'd slothfully awhile, and then quite stopt their course.

Sir R. Blackmore.

Ver. 461. In these twenty-nine verses the poet, being about to explain how the world began, excludes the gods and Providence from having any hand in it; and ascribes the whole work to matter, from whence proceeded chaos

a rude and undigeſted heap of particles, which being driven to and fro, at length came together, like with like, and thence aroſe the heaven, the earth, the ſun, the ſtars, and whatever elſe this world contains. This doctrine of Epicurus is delivered by Plutarch, de Placit. Philoſoph. lib. 1 c. 4. in theſe words: 'Ο τοίνυν κόσμος συνέστη περικεκλασμένων ἐχημάτων ἐχημαλισμένος τὸν τρόπον τῶτον, τῶν Ἀτόμων σωμάτων, ἀπρονοήτοιν, καὶ τυχαίαν ἔχόντων κίνησιν, συνεχῶς τε, καὶ τάχιστα κινεμένων ἐις τὸ αὐτὸ πολλὰ σώματα συνηθροίσθη, καὶ διὰ τῶτο ποικιλίαν ἴχονία καὶ σχημάτων καὶ μεγεθῶν.

Ver. 477. Macrobius, Saturnal. lib. vi. cap. 2. compares this paſſage of Lucretius with the following verſes of Virgil, in Silenus, v. 31.

Namque canebat uti magnum per inane coacta
Semine, terrarumque, animæque, mariſque fuiſſent,
Et liquidi ſimul ignis: ut his exordia primis
Omnia, et ipſe tener mundi concreverit orbis.
Tum durare ſolum, et diſcludere Nerea Ponto
Cœperit, et rerum paullatim ſumere formas:
Jamque novum ut terræ ſtupeant lucеſcere ſolem;
Altius atque cadant ſubmotis nubibus imbres:
Incipiant ſylvæ cum primum ſurgere, cumque
Rara per ignotos errent animalia montes.

Which is thus interpreted by Dryden:

He ſung the ſecret ſeeds of nature's frame:
How ſeas, and earth, and air, and active flame,
Fell through the mighty void; and in their fall
Were blindly gather'd in this goodly ball!
The tender ſoil, then ſtiff'ning by degrees,
Shut from the bounded earth the bounding ſeas:
Then earth and ocean various forms diſcloſe,
And a new ſun to the new world aroſe:
And miſts, condens'd to clouds, obſcure the ſky;
And clouds, diſſolv'd, the thirſty ground ſupply:
The riſing trees the lofty mountains grace;
The lofty mountains feed the ſavage race,
Yet few, and ſtrangers in the unpeopled place.

Ver. 480. The poet here teaches, that ſo long as the atoms were jumbled confuſedly one among another, neither earth, nor heaven, nor ſtars, had yet a being: But when the chief parts of the world began to disjoin, and get clear from each other, then the heaven ſhone with ſplendour, the dry ground appeared, the waters were gathered into one, &c. Thus Lucretius will have all things to have begun by little and little, not only by reaſon of the ſundry impediments of the concourſe of the atoms, but alſo becauſe of their different figures: Whence, ſays he, it is evident, that the world has not exiſted from all eternity. He is now going to diſpute, ſeparately, of the firſt riſe of each part of it.

Ver. 490, 491. In theſe thirty-two verſes, he diſcourſes of the riſe of the earth, of the heaven, and of the ſun, moon, and ſtars. And ſince the confuſed and unfaſhioned maſs of matter muſt have been brought into order by motion, and ſince all motion proceeds from weight, the poet is in the right to inquire what the heavieſt atoms muſt do. Now Epicurus believed, that the atoms, being embroiled, and confuſed in a heap together, did, by their innate motion, roll and tumble up and down, among one another, till at length all the more denſe atoms jumbled towards the middle, and all the more rare, being extruded and ſqueezed away by the thicker, flew towards the circumference. Moreover, that of theſe thicker atoms the body of the earth was compacted, and that it contained within its bulk ſome ſeeds of water, which had not been able to diſentangle themſelves, and get away, at the ſame time with the others: But that ſome of thoſe that had diſentangled themſelves, did, by reaſon of their various degrees of tenuity, retire to ſeveral diſtances; thus ſome of them ſtopt not far from the maſs of earth, and made the air; that others mounted yet more aloft, and compoſed the ſky; and that the fiery corpuſcles, that were extruded with the reſt, getting clear of all of them, combined into thoſe bodies that ſhine in the ſky, and are called ſtars. Laſtly, That the leſſer, round, ſmooth corpuſcles were ſo determined, limited, and confined to that motion towards the circumference, that was made by eliſion, or by expreſſion from the more denſe corpuſcles, that, foraſmuch as they went not out of the maſs by parallel ways, they did, in the very progreſſion, variouſly encounter one another, and mutually repelled the violence they received; which violence at length ceaſing, thoſe that were got fartheſt, or moſt remote from the centre, became entangled with one another, and mutually compreſſing each other, and holding faſt together, did, by that means, create a certain ſpecies of the walls of the world: And whatever corpuſcles came to them there, were turned back, and repreſſed from them in ſuch a manner, that ſtill new ſupplies coming up, the whole ethereal or celeſtial region was aptly made and fabricated by them. This perhaps will be better underſtood by the compariſon Lucretius himſelf uſes to explain it, when he ſhows that this might very well happen, in like manner as when vapours and exhalations ſteam out of the earth and water, and being carried aloft, are there condenſed, and grow into one body of clouds, ſo as to make, as it were, a ceiling, under which the air, that remains viſible to us, is contained. See Plutarch de Placit. Philoſoph. lib. 1. c. 4.

Ver. 491. Though Epicurus and Lucretius placed the earth in the midſt of the world, yet they denied the earth to have any centre, or middle place, as we have ſeen, Book i. ver. 1071, & ſeqq. Thus too Manilius, ſpeaking of the earth, lib. 1. ver. 167. places it in the midſt of the univerſe:

Imaque de cunctis mediam tenet undique ſedem;
Idcircòque manet ſtabilis, quia totus ab illâ
Tantundem refugit mundus, fecitque cadendo
Undique, ne caderet: medium totius et imum
eſt:
Ictaque contractis conſiſtunt corpora plagis,
Et concurrendo prohibent in longius ire.

Loweſt of all, and in the midſt it lies,
Compaſs'd by ſeas, and cover'd by the ſkies:
The place does fix it; for, ſtill riſing higher,
The other el'ments equally retire,
And that, by falling, ſtops its farther fall,
And hangs the midſt and loweſt of them all:
Its parts to no one point preſs jointly down,
And meet, and ſtop each other from moving on.
Creech.

See the note on Book ii. ver. 562.

Ver. 502. Dryden, in one of his deſcriptions of the morning, has expreſſed this thought of Lucretius:

——The ſun aroſe, with beams ſo bright,
That all th' horizon laugh'd to ſee the joyous ſight:
He, with his tepid rays, the roſe renews,
And licks the dropping leaves, and dries the dews.
Palam. et Arc.

Ver. 513. Having made the earth, as the foundation of the whole world, and the ſky the walls of it, as he himſelf calls it, he, in theſe nine verſes, places the ſun and moon, which are of a middle nature, between the ſky and the air, as being compoſed of principles lighter than thoſe of the air, and heavier than thoſe of the ſky, in the very confines of the air and ſky, where, he tells us, they are in perpetual motion, as the lungs and hearts in animals. He takes no notice of the other planets or ſtars, though his tranſlator does. But let us hear the beſt of poets, and a Chriſtian philoſopher, deſcribing this part of the creation. He ſpeaks in the perſon of an angel:

——I ſaw the riſing birth
Of nature from the unapparent deep;
I ſaw, when, at God's word, this formleſs maſs,
The world's material mould, came to a heap:
Confuſion heard his voice, and wild uproar
Stood rul'd: ſtood vaſt infinitude confin'd;
Till, at his ſecond bidding, darkneſs fled,
Light ſhone, and order from diſorder ſprung:
Swift to their ſev'ral quarters haſted then
The cumbrous elements, earth, flood, air, fire;
And the ethereal quinteſſence of heaven
Flew upward, ſpirited with various forms,
That roll'd orbicular, and turn'd to ſtars:
Each had his place appointed, each his courſe.
Thus God the heav'ns created, thus the earth,
Matter unform'd and void: darkneſs profound
Cover'd th' abyſs: but on the wat'ry calm
His brooding wings the ſpirit of God outſpread,
And vital virtue infus'd, and vital warmth
Throughout the fluid maſs; but downwards purg'd
The black, tartareous, cold, infernal drugs,
Adverſe to life, then founded, then conglob'd
Like things to like; the reſt to ſeveral place
Diſparted, and between ſpun out the air;
And earth, ſelf-balanc'd, on her centre hung.
Milton.

Ver. 522, 523. But the work is not yet perfect: we have hitherto neither fire, air, nor water. He tells us, therefore, in theſe fifteen verſes, firſt, That that feculent maſs, that ſunk together to the bottom, being preſſed on all ſides by the beams of the ſun, and the heat of the ſky, contracted itſelf: Thence exhaled the ſea like ſweat; but the lighter particles, mounting higher, compoſed the elements of fire and air. In the next place, that ſome of the particles of this maſs being more hard and ſtiff than the others, they did not all ſubſide alike, and hence the hollow places to receive the ſea, and the channels for the rivers; and hence too the level of the plains, and the turgidneſs of the mountains:

——The mountains huge appear
Emergent, and their broad bare backs upheave
Into the clouds; their tops aſcend the ſky:
So high as heav'd the tumid hills, ſo low
Down ſunk a hollow bottom, broad and deep,
Capacious bed of waters; thither they
Haſted with glad precipitance, up roll'd,
As globes on duſt, conglobing from the dry;
Part riſe in cryſtal walls, or ridge direct;
——As armies, at the call
Of trumpet,——
Troop to their ſtandard; ſo the wat'ry throng,
Wave rolling after wave, where way they found;
If ſteep, with torrent rapture, if through plain,
Soft ebbing: nor withſtood them rock or hill;
But they, or under ground, or circuit wide,
With ſerpent error wand'ring found their way,
And on the waſhy ooze deep channels wore,
Within whoſe banks the rivers now——
Stream, and perpetual draw their humid train.
Milton.

Ver. 523. Lucret.

Succidit et falſo ſuffudit gurgite foſſas.

Plutarch. de Placit. Philoſoph. lib. iii. καθ' αὑτὸ τὸ ὕδωρ ἐπιφὰν ἐκοίλανε τὰς ὑποκειμένας τόπους. And the ſame author, lib. i. cap. 4. de Placit. Philoſoph. expreſſes this opinion of Lucretius more at large: Of thoſe bodies, ſays he, which ſunk down, and ſettled below, was made the earth; that part of it which was moſt ſubtle, and of a thinner form and conſiſtence, gathered round together, and engendered the element of water, which, being of a liquid and flowing nature, ran downwards to hollow places, that lay low, and were capable to receive and hold it.

Ver. 529. The firmament, the celeſtial ſpheres, the heavens. They were called ether, ἀπὸ τοῦ ἀεὶ θέειν, from their being in perpetual motion.

Ver. 537. That he may the better explain the motions of the ſtars, he previouſly teaches, in theſe fourteen verſes, that the moſt reſplendent and liquid ether, having mounted higher than the inconſtant and turbulent air, is wholly undiſturbed by any manner of ſtorms, and rolls in a conſtant and like motion; which motion of the ether is not in the leaſt incredible, ſince the Euxine ſea does the like, and is continually flowing into the Propontic, without changing its courſe.

"Lucr. inde ether igniſer ipſe." For the ancients believed the ſtars to be either very fire, or

of a fiery nature, and therefore called the ether *ignifer*, fire-bearing; as they did likewiſe *ſignifer*, or *ſtellifer*, that bears the ſigns, or ſtars. Or elſe the poet, in this place, deſcribes the region of elementary virtue, which lies next under the heaven, as Manilius ſings, in theſe excellent verſes:

Ignis in ætherëas volucer ſe ſuſtulit auras,
Summaque complexus ſtellantis culmina cœli,
Flammarum vallo naturæ mœnia fecit.
Lib. i. *ver.* 144.

Upward the flame on active pinions fled,
To heav'n's high arch it rais'd its ſhining head;
There ſtopp'd, as weary grown, and round the frame,
For nature's bulwark rais'd a wall of flame.
Creech.

Ver. 545. The point of the axle-tree, on which aſtronomers imagine the heaven to be turned. There are two poles, the north pole, known by a ſtar called *polus arcticus*, and the ſouth, called *antarcticus*, which is inviſible to us. The word pole, comes from πολεῖν, to turn. They are likewiſe called *cardines cæli*, the hinges of the heaven; becauſe it being hung upon them, like a door on its hinges, is rolled and turned about.

Ver. 547. Here our tranſlator has miſtaken the ſenſe of his author, who ſpeaks not of the flux and reflux of the ocean, but of the courſe of the Euxine ſea. For how can that motion of the ocean be alleged as a parallel inſtance to confirm the one, regular, and conſtant motion of the ſpheres? The words in the original, are as follows:

Nam modicè fluere, atque uno poſſe ethera niſu,
Significat ponti mare, certo quod fluit æſtu,
Unum labendi conſervans uſque tenorem.

Now, what led our tranſlator into his error, was, in all appearance, his having followed the reading of this paſſage in the firſt edition of Lambinus, in which we read *magnum*, inſtead of *ponti*: "Significat magnum mare," &c. but that critic corrected it in his ſubſequent editions, and reads, "ponti mare." Fayus, however, retains the other lection, and ridiculouſly pretends to juſtify it: But certainly, whatever that interpreter alleges to the contrary, the conſtant courſe of the celeſtial circles, is better proved by the conſtant motion of the Euxine ſea into the Boſphorus of Thrace, thence into the Propontis, the Helleſpont, &c. without any reflux, than by the ebbing and flowing of the ocean. This is ſo obvious, that to aſſert the contrary, as Fayus does, ſeems next to an abſurdity.

Ver. 551. Lucretius, when he diſputes of the heavens, of the motions of the ſpheres, and of thoſe things which the Greeks call μετέωρα, meteors, never affirms any thing for certain: This was the conſtant cuſtom of the Epicureans, who thought they diſcharged admirably well the part of natural philoſophers, if they aſſigned only any poſſible cauſes of the celeſtial motions. Our poet does the like in theſe twenty-eight verſes. If, ſays he, the whole orb be moved, then there may be two airs, one that may preſs from above, and drive it down to the weſt; and another, that may be ſaid to bear and lift it up from beneath. If the orb be motionleſs, then ſome rapid particles of the ſky, ſtruggling to get into the empty ſpace, and not able to force their way, and break through the ſtrong walls of the world, are whirled about, and drag the ſtars with them; or ſome external air ruſhes in, and turns them about; or, laſtly, The ſtars move forward of themſelves, in ſearch of proper food to keep alive their fires.

Cleanthus, in Cicero de Naturâ Deorum, lib. ii. alleging reaſons to evince the belief of a Deity, urges, for the laſt and moſt weighty, "æquabilitatem motûs et converſionis," &c. The equability of the motion and converſion of the heavens, ſun, moon, and ſtars; and their diſtinction in variety, beauty, and order. The very ſight of which, ſays he, ſufficiently declares them not to be fortuitous or caſual. For what can be more evidently perſpicuous, when we behold and contemplate the heavens, than that there is a God, by whoſe excellent providence they are governed? Thus Cicero, who, from the bare ſuggeſtion of nature, diſcovered the truth of what our obdurate poet, by arguments drawn from the contemplation of nature, endeavours to diſprove.

OF THE FIXED STARS.

Lucretius, treating in this place of the ſtars, and their motions, affords us an opportunity to ſay ſomething of thoſe glorious and ſplendid bodies: The aſtronomers diſtinguiſh them into two ſorts, the fixed ſtars and the erratic, which laſt are likewiſe called the planets: Of theſe we will give a ſhort account by and by, when our author comes to treat of the ſun, moon, &c. and will here confine our inquiries only to the firſt ſort, which are called the fixed ſtars, becauſe they always obſerve, at leaſt to us they ſeem to do ſo, the ſame invariable diſtance from one another, and from the ecliptic: Hence the ſphere, in which they are believed to be placed, is termed, ἀπλάνη, *inerrans*, becauſe of the inviolable order obſerved in their intervals or diſtances from one another. The chief things to be conſidered of them, not as they are reduced into ſigns and conſtellations, with which we ſhall not meddle, but ſhall take notice of them only as they are diſtinct and ſeveral mundane bodies, diſſeminated and diſperſed through the immenſe ſpace of the ethereal region, which we call heaven. The chief things, I ſay, that deſerve our obſervation, are,

I. Their ſubſtance, concerning which the ancients differ in opinion: Zoroaſter held them to be of a fiery ſubſtance, and ſo too did the Stoics: The Egyptian philoſophers, as Diogenes, Laertius, in Procem. has recorded their opinion, believed, τὰς ἀστέρας πῦρ εἶναι, καὶ τῇ τούτων κράσει τὰ ἐπίγεια γίνεσθαι, that the ſtars are fire, and that by their contemperation all things are produced on the earth. In Orpheus, the ſun, moon, and ſtars, are called, Ἡφαίστοιο μέλη, the members of Vulcan. Thales held the ſtars to be both of an earthy and

fiery ſubſtance. Empedocles maintained them to be fiery, and to conſiſt of that very fire which the ether contained in itſelf, and ſtruck out at its firſt ſecretion. The opinion of Anaxagoras deſerves to be mentioned, for no other reaſon, than becauſe it is extravagantly ridiculous; for he affirmed, that the ambient ether, being of a fiery nature, does by the impetuous ſwiftneſs of its motion, whiſk up ſtones from the earth, and that they being ſet on fire, become ſtars, and are carried from eaſt to weſt. Diogenes would have them to be of the nature of pumice ſtones ſet on fire, and that they are as the breathing holes, and noſtrils of the world, by which it draws in its breath. Xenophanes, that they are clouds ſet on fire in the manner of coals, and that they are extinguiſhed by day, and at night rekindled. Heraclides and the Pythagoreans believed each ſtar to be a particular world by itſelf, exiſting in the infinite ethereal ſpace, and containing an earth, an air, and a ſky; and this opinion is found in the works of Orpheus: For his followers affirmed the ſtars to be ſo many diſtinct and individual worlds. Plato held them to conſiſt chiefly of a fiery nature, but ſuch as to admit the mixture of other elements, as it were, in the nature of a cement to compact and hold them together. Ariſtotle and his followers, aſſert them to be of the ſame ſubſtance with the heavens, but only more condenſed; and that they are ſimple bodies, without the mixture of any elements. Pliny, and many others, believe them to be compoſed of the ſame nature as exhalations or vapours, and conſequently to conſiſt of a ſubſtance partly aqueous, partly aërial. Of all theſe opinions, the moſt probable is, that the ſtars are fiery bodies. This was the ſentiment of the ancient Chriſtian church, which, in Hymn. Feria ſecunda ad Veſper. of which Hymn, St. Ambroſe is ſaid to be the author, ſings as follows:

Immenſe cœli conditor,
Qui mixta ne confunderent
Aquæ fluenta dividens,
Cœlum dediſti limitem,
Firmans locum cœleſtibus,
Simulque terræ rivulis,
Ut unda flammas temperet;
Terræ ſolum nec diſſipent, &c.

Where we find the reaſon why the waters are placed above the heavens, viz. to reſtrain and temper the exceſſive fervour of the ſun and ſtars. And again, in Hymn. Fer. quarta ad Veſper. the ſame church ſings:

Cœli Deus ſanctiſſime,
Qui lucidum centrum poli
Candore pingis igneo.

And of the ſame opinion are moſt of the fathers, not only of the Latin, but of the Greek church likewiſe. Cyrillus, Hieroſolym. Cæſareus, Theodoretus, D. Chryſoſtom, Gregor. Nyſſen Procopius, and Anaſtaſius Sinaita, all of them poſitively aſſert the ſtars to be of a fiery nature; and with them agree Tertullian, St. Ambroſe, St. Auguſtine, Arnobius, Lactantius, Anſelmus, Alcuinus, Beda, &c. Beſides, many of the eminent modern philoſophers and aſtronomers concur in the ſame opinion. Induced, therefore, by all theſe authorities, we may reaſonably conclude, that the ſtars are compound, not ſimple bodies, that they are compoſed of elementary matter, formed into fiery globes; that they conſiſt of ſolid and liquid, as this terraqueous globe of ours; and conſequently, that they are ſubject to alteration and corruption.

II. Their light; whether it be innate, and the gift of the Almighty at their creation; or mutuatitious, and borrowed from the ſun; which laſt is the opinion of Metrodorus, in Plutarch, de Placit. Philoſoph. lib. ii. cap. 17. and with him agree many of the modern, both philoſophers and aſtronomers, and it is the belief of ſome at this day. The firſt opinion, however, ſeems to be the moſt probable; and Macrobius, in Somn. Scip. lib. i. cap. 19. aſſerts the truth of it, in theſe words: "Omnes ſtellas (ſcil. fixas) lumine lucere ſuo, quod illæ ſupra ſolem in ipſo puriſſimo æthere ſunt; in quo omne quicquid eſt, lux naturalis et ſua eſt." And this agrees with what we ſaid before touching their fiery nature: For there can be no fire without light. And, indeed, it ſeems highly improbable, that the ſun can illuminate the fixed ſtars, ſince, as Bulialdus, in Aſtronom. Philolaic. lib. i. cap. 11. obſerves, the ſun's diameter, if it could be beheld from Saturn only, would appear too little, and afford too weak a light ſufficiently to illuſtrate even that planet, much leſs, therefore, can it impart its light to the fixed ſtars, that are removed to ſo great a diſtance beyond it. For this reaſon, ſome believe each of the fixed ſtars to be the head and chief part of a diſtinct mundane ſyſtem; as the ſun is the head and chief part of our viſible ſyſtem: And, as the ſun has ſeveral planets, conſtituted and carried about him, ſo likewiſe every one of the fixed ſtars has other mundane bodies, like planets diſpoſed and moving around them; though they are inviſible to us, by reaſon of their great diſtance from our earth. And, according to this opinion, Galilæo, Dialog. iii. Syſtem. Cofmic. makes no ſcruple to aſſert, that each of the fixed ſtars is a ſun, exactly of the ſame nature with, and perfectly reſembling this of ours; that it ſerves beſides to illuminate the innumerable other planetary and lunary bodies, within their reſpective ſyſtems; and, conſequently, is endowed with innate and original light. Several other of our modern aſtronomers are of the ſame opinion; among them Ricciolus, who, Almageſt. nov. lib. vi. cap. 2. has theſe words: "Mihi longe probabilior horum (ſcil. Bruni, Galilæi, Renati des Cartes, et Reithæi) opinio videtar, quia magis convenit opificis numinis majeſtati, ut non unia cam ſtellarum à ſe ipſa lucentem, ſed plures inſtar ſolis accenderet: Nec alium ſui luminis fontem agnoſcerent, quam omnium luminum patrem Deum."

III. Their colour; which viſibly differs according to the variety of their light, as it is blended

and attempered by the different conſtitution of the matter, or ſubſtance, of which they are compoſed: for ſome appear to be of a ruddy, others of a leaden hue; ſome of a gold colour, others of a ſilver white, others pallid, &c. whence ſome have pretended to form a judgment of their ſeveral natures, and accordingly have ranged them under the ſeveral planets, of whoſe qualities they imagined them chiefly to partake; having regard to the proportion of reſemblance they bear in their colours to thoſe of the planets.

IV. Their ſcintillation; which particularly diſtinguiſhes them from the planets, which have no ſuch vibration, or twinkling of light; as generally is obſerved, more or leſs in all the fixed ſtars, at one time more than at another; and moſt when the wind is eaſterly, as Schickardus in Aſtroſcop. obſerves. Ariſtotle aſcribes the cauſe of their ſcintillation to their remoteneſs from our ſight; which remoteneſs is the reaſon that our eyes reach them but weakly, and with a trembling laſſitude. To this opinion, Pontanus, in Uraniâ, lib. ii. aſſents, when he ſays,

Scilicet alta illis regio, ſedeſque repoſtæ,
Quo poſtquam advenit deceſſo lumine viſus,
Deceſſus tremit ipſe, tamen tremere ipſa videntur.

But this reaſon is not convincing; ſince, if it were true, the planets, Jupiter, and Saturn, ſhould, by reaſon of their great diſtance, in ſome meaſure affect our ſight with ſuch a trembling or ſcintillation; and this we know they never do, even in their greateſt altitude. Others aſcribe the cauſe to refraction, and imagine this ſcintillation to ariſe from the unequal ſurface of the fluctuating air, or medium through which the ſight paſſes; in like manner, as ſtones in the bottom of a river ſeem to have a tremulous kind of motion, which, nevertheleſs, is only the curled and uneven undulation of the ſurface of the water. But if this reaſon were true, we ſhould not only in the fixed ſtars, but in the planets, nay, even in the moon, diſcover ſuch a ſcintillation. Gaſſendus, with more probability, conceives it to proceed from their native and primigenial light, which, like that of the ſun, ſparkles, and ejaculates ſuch quick darting rays, that our infirmer ſight cannot look on them without trembling: To this we may add their impetuous and whirling motion about their own axis, by which there is cauſed a more ſudden and quicker variation in thoſe fulgid objects than the eye can purſue. But Sheinerus, in his Mathematical Diſquiſitions, poſitively diſſents from this opinion. The ſcintillation of the ſtars, ſays he, is not their proper revolution or convolution, not any interior exeſtuating commotion; no tremulous revibrating of the ſun-beams, proceeding from their firſt or ſecond motions; no unquiet or unequal ejaculation of their proper rays; no trembling of the wearied ſight; not any, nor all of theſe, but only the interciſion of their ſeveral ſpecies falling upon the eye; which interciſion is cauſed by the unquiet intercurſation of vapours variouſly affected. Hevelius, though he allow of their circumgyration about their own axis, yet he admits it only as an aſſiſting, not as the ſole cauſe of their ſcintillation; which he imputes rather to a conſtant evibration of lucid matter, or a continual expiration of fiery vapours from thoſe celeſtial bodies; even, ſays he, as we perceive thoſe fulgurations and ebullitions in the body of the ſun, which, the groſſer they are, and in the greater plenty they are ejected, ſo much the greater and more viſible ſcintillation they cauſe. Theſe are the ſeveral opinions concerning the ſcintillation of the ſtars.

V. Their number; which, according to the computation of Ptolemy, including only thoſe that are moſt remarkable and viſible, and as they are reduced to the ſix commonly received degrees of magnitude, amounts to only 1022. And Pliny, lib. ii. cap. 4. reckons them to be 1600. But if we reflect on the number of all the ſtars in the firmament, as we regard them by the help of a teleſcope, which diſcovers many more than the bare eye can do, we may affirm them to exceed the number of human calculation. Jordano Bruno ſays their number is infinite. Ricciolus, ſpeaking of the number of the ſtars, argues thus: That if the conſtellation of Orion take up in the heavens the ſpace of 500 ſquare degrees, as by experience we know it does, and if every ſquare ſpace, whoſe ſide is but two degrees, contains no leſs than 500 ſtars, as Galilæo, by the aſſiſtance of a teleſcope, obſerved that it does, there will be found in the whole conſtellation of Orion, at leaſt 62,500 ſtars, though the bare eye cannot diſcover in the whole above 63. According to which proportion, if the reſt of the conſtellations were examined, and if the difference of the number of ſtars, that appear by the teleſcope, over and above thoſe diſcerned by the bare eye, were computed, it would amount to above 1000000 ſtars, beſide thoſe in the Milky Way. Nay, ſays Ricciolus, Almageſt. Nov. tom. i. lib. 6. p. 413. if any man ſhould reckon them above 2000000, the number would not ſeem to me improbable, "Mihi quidem nihil inopinabile finxerit." Some of the rabbins of the Jews will not allow the whole number of ſtars to amount to above 12000: but the Cabaliſts admit of no leſs than 29000 myriads, which number Schickardus believes too exorbitant; and imagines, that the whole extent of the heavens is not capable of receiving above 26712 myriads, even though they were placed contiguous to one another; but as to this particular of the number of the ſtars, we ought to agree with Schottus, who, in Preluſ. in Firmament. Itiner. Ecſtatic. Kircheri, in Schol. 1. ſays, That it is an arrogance indeed intolerable, to believe that our ſight, how ſtrengthened and aſſiſted ſoever by the help of teleſcopes, can diſcover all the ſtars in the expanſe of heaven; and an extreme piece of folly, to pretend to include them within the bounds of any definite number; that being the work of the Almighty only, who alone numbers the multitude of the ſtars, and calls them all by their names.

VI. Their figure, which is apparently ſpherical or round: and yet Plutarch de Placit. Philoſoph. lib. ii. cap. 14 relates the different opinions of the ancients, even as to this particular. Cleanther

held them to be pyramidical, and that they end in a ſharp cone. Anaximenes would have them to be like ſtuds or nails fixed in the chryſtalline firmament, like jewels in a ring. Others imagined them to be flat, and, as it were, fiery and lucid plates, as ſo many flat pictures, not of any thickneſs or profundity. Scheinerus, and Antonius Maria de Reitha, will have them to be of divers figures or faces, of a poly-angular ſhape; and ſuch indeed the larger ſort of teleſcopes repreſent them. Kepler, in Epit. Aſtronom. p. 498. deſcribes them like ſo many lucid points or ſparkles, caſting forth on all ſides their rays of light: inſomuch, that we are to take their figure to be only phyſically ſpherical, not mathematically ſo: for, though in the firſt acceptation, they may be ſaid to be round bodies; yet, according to the later, their ſurface may be found to be uneven, and to conſiſt of many angles or ſides.

VII. Their magnitude, of which divers calculations have been made by many eminent aſtronomers, but to no purpoſe: for ſo great a diverſity of opinions has ariſen from them, partly, becauſe authors cannot agree as to the diſtances of the ſtars from the earth, which is the ſuppoſed centre of the world; and partly, becauſe of the different eſtimates of their apparent diameters, that have been made by the eye, by Tycho Brahe, and other more ancient aſtronomers; and by teleſcopes by the moderns: inſomuch, that we ought ingenuouſly to acknowledge with Schickardus, that, "veras illarum magnitudines vere ignoramus," we are indeed ignorant of their true magnitude.

VIII. Their place and diſtance from the earth, or rather from the ſun, which is a queſtion ſo hard to reſolve, that Pliny long ago pronounced it to be no leſs than a piece of madneſs to inquire into it: and Ricciolus, Almageſt. Nov. lib. vi. cap. 7. treating of this ſubject, has thought fit, in the front of his diſcourſe, to lay it down as an undeniable truth, that men cannot, by any certain and evident obſervation, come to the true knowledge of the parallax and diſtance of the fixed ſtars. For it is not known, whether the ſtars are all in the ſame ſpherical ſurface, equally diſtant from the centre of the world; or whether they are placed at unequal diſtances, that is to ſay, ſome higher, ſome lower, as the old Stoics held them to be, ſuppoſing the difference of their luſtre, and of their apparent magnitude, to proceed from the diverſity of their ſituation, according as they are more or leſs diſtant from our ſight. Thus Manilius, giving the reaſon why ſome of the ſtars in Orion appear more obſcure than the others, ſays,

Non quod clara minus, ſed quod magis alta recedunt.

And this hypotheſis has ſo great an appearance of truth, that the learned aſtronomers, Tycho Brahe, Galilæo, and Kepler, readily embrace it. And thus we may reaſonably ſuppoſe, that their diſtances are as various as thoſe of the planets, and that it is ſcarce poſſible to diſcover their true diſtance, becauſe our ſhort and feeble ſight, being unable to diſtinguiſh their various intervals, judges them to be all placed in the ſame concave ſpherical ſurface.

IX. Their proper motion, which is two-fold: Firſt, That of circumrotation about their own centre, around which they are whirled with wonderful celerity; which, as we ſaid before, is in part the reaſon of their ſcintillation: and this motion is called "motus vertiginis." Secondly, Their motion of revolution, from weſt to eaſt: "ſecundum ductum Eclipticæ," in which they are obſerved to move ſo very ſlowly, that they run not through one degree in the ecliptic ſooner than in the ſpace of ſeventy-one years, nineteen days, and twelve hours, within a trifle: and they complete not the whole circle of 360 degrees, in leſs than 25,579 years, which is the "Annus magnus Platonicus;" though the ancients computed it to amount to 36,000 years: And this great Platonic year, which conſiſts of 25,579 ſydereal years, is equal to 25,580 equinoctial years. And thus I have given a ſhort account of the moſt remarkable obſervations touching the fixed ſtars.

Ver. 571. The ſkies and ſtars that we ſee move continually; and he calls them ſingle, becauſe the Epicureans held a multitude of worlds to be in the all, or univerſe, and all of them like this of ours, or even of a greater extent.

Ver. 579. But ſince Lucretius ſo often mentions the great weight of the earth, it may well be inquired, why it hangs without motion in the air, and does not rather preſs downwards, and fall precipitately into the infinite void? To this the poet anſwers in theſe ſeventeen verſes, that though it have ſo happened that the air only is circumfuſed around the earth, yet becauſe both air and earth are bound by natural and kindred ties, and from their very beginning are parts of the ſame whole, the earth is no burden to the air; but having, in a manner, laid aſide all its weight and compreſſion, it only ſticks faſt, and cleaves naturally to it. But it would not be ſo, if this earth had been brought out of another world; for, in that caſe, it would preſs heavy upon this air with its weight; even as our bodies feel a little weight that is not a part of them, though neither the head nor the other members are burdenſome to one another, becauſe they are mutually congenial, and bound to one another by a general and common band. Epicurus to Herodotus, ſays, τὴν γῆν τῷ ἀέρι ἐποχεῖσθαι, ὡς συγγενῆ. See the note on book ii. ver. 562.

Ver. 584. Ariſtotle will not allow that the earth is therefore ſuſpended in the middle of the air, becauſe it is congenial, and, as it were, of a piece with it, as Epicurus believed; but ſays the reaſon is, becauſe it is the heavieſt of all the elements. And Plato, in Phædon, will have the equability of the earth itſelf, to be the cauſe of its ſtation in the middle of the univerſe: According to whoſe opinion, Ovid. Metam. i. ver. 12. ſays,

Et circumfuſo pendebat in aëre tellus
Ponderibus librata ſuis.——

And our Milton in like manner:

The earth, ſelf-balanc'd, on her centre hung.

Ver. 592. This and the following verſe we have inſerted to fill up a lacuna, which Creech having totally omitted this verſe of his author,

Uſque adeo magni refert cui quæ adjaceat res,

had left in all the former editions of this book.

Ver. 598. In theſe four verſes, he brings another argument of the connection of the earth and air: becauſe, ſays he, the thunder that cauſes violent motions in the air, makes the earth tremble, which it could not do, but that they are of a piece. Here our tranſlator ſeems to have imperfectly rendered the ſenſe of his author, whoſe words are;

Prætereâ grandi Tonitru concuſſa repentè
Terra, ſupra quæ ſe ſunt, concutit omnia motu,
Quod facere haud ullâ poſſet ratione, niſi eſſet
Partibus ærïis mundi cœloque revincta.

i. e. Beſides, the earth, whenever it is ſhaken on a ſudden, by a violent thunder, makes every thing that is upon it ſhake and tremble, which it could by no means do, unleſs, &c. Compare this with Creech's tranſlation, and ſee his error.

Ver. 602. But becauſe it may ſeem wonderful that ſo ſubtle a body as the air, ſhould ſupport a maſs ſo vaſtly thick as the earth; he adds in theſe ſeven verſes, that the ſoul, which is a moſt ſubtle ſubſtance, ſuſtains our ponderous body; nay, not only that, but even lifts it up, and makes it leap from the ground.

Ver. 664. Where we muſt underſtand the word things; an elipſis too frequently uſed by Creech, though hardly allowable in our language, which hates all grammatical figures, and loves to ſpeak plain. What, without a ſubſtantive, is always in the ſingular number: What raiſes, what controuls. "Sed hoc obiter."

Ver. 609. Epicurus, in the tenth book of Laertius, ſpeaking of the magnitude of the ſun and ſtars, ſays, that in as much as it relates to us to judge of it, their magnitude is the ſame that it appears to be: and that as to the thing itſelf, it is ſomewhat bigger, or ſomewhat leſs, or elſe exactly the ſame that it ſeems: inſomuch that our eyes lie very little, if they do at all. The poet, in theſe twenty-ſeven verſes, aſſerts the ſame thing, and endeavours to prove his aſſertion by an argument taken from ſenſe. As we retire from any fire, ſo long as we are within ſuch a diſtance of it, that we can perceive its light and heat, the fire ſeems no leſs than it does when we are near it: but we feel the heat, and perceive the light of the ſun: therefore, the ſun is of the ſame magnitude it ſeems to be. Then he adds of the moon, that we diſtinctly ſee the outmoſt verge and face of it: and yet we ſhould ſee it but confuſedly, if it were ſo far off that its diſtance took away any of its magnitude. Laſtly, He ſays of the ſtars, that they are not much larger, nor much leſs, but rather juſt as big as they ſeem: for even the fires that we ſee here below at a diſtance from one another, either by day or by night, preſent to our eyes the like variety of ſizes. Epicurus writes the ſame doctrine to Pythocles.

Thus, neither Epicurus nor Lucretius after him, affirmed any thing for certain concerning the magnitude of the ſun, moon, and ſtars: And indeed ſo many, and ſo various are the opinions both of the ancients and moderns, of this matter, that it is impoſſible to ground any probable belief upon them. However, I will give ſome of their opinions, but rather for curioſity than inſtruction. I. Heraclitus held the ſun to be a foot broad: II. Anaxagoras, many times as big as the country of Peloponneſus. III. Animaxander, as big as the earth. IV. Empedocles, a vaſt maſs of fire, even bigger than the moon. V. Archelaus, the biggeſt of all the celeſtial lights. VI. Plato, never to be conceived nor found out. VII. Cicero, immenſe. VIII. The Ægyptians, and after them Macrobius, eight times as big as the earth. IX. Others, whoſe opinion Cicero, Tatius, and Philoponus mention, but conceal their names, above eighteen times as big as the earth. X. Eratoſthenes, ſeven and twenty times as big as the earth. XI. Cleomedes, near three hundred times as big as the earth. XII. Ariſtarchus, above two hundred and fifty-four times as big as the earth. XIII. Hipparchus, a thouſand and fifty times as big as the earth. XIV. Plutarch ſays there were ſome who held the ſun to be a thouſand ſeven hundred and twenty-eight times as big as the earth. XV. Poſſidonius, fifty-nine thouſand three hundred and nineteen times as big as the earth. What certainty then can be grounded on ſo many different opinions? And Archimedes owned, it was next to impoſſible to take the diameter of the ſun, becauſe neither the ſight, nor the hands, nor the organs, by which the obſervation is perceived, are ſufficient to demonſtrate it exactly; and therefore no credit ought to be given to them. This makes Lactantius ſay, "Dementiam eſſe diſquirire, aut ſcire velle, Sol utrumque tantus, quantus videtur, an multis partibus major ſit quam omnis hæc terra." That it is a folly to inquire, or be deſirous to know, whether the ſun be as big as he ſeems to be, or many times higger than the whole earth. And the ſame uncertainty there is likewiſe concerning the magnitude of the moon, and of the other planets and ſtars.

But the more modern, both philoſophers and aſtronomers, though their opinions be indeed various, as to the magnitude of this glorious luminary, yet having grounded them on more probable methods of obſervation, have at leaſt come nearer the truth than the ancients, and not left us ſo much in the dark, nor in ſo great uncertainty concerning it. It is moſt certain, that we form a right judgment of the magnitude of an object, by the diſtance of one part of it from another, and by the diſtance of the whole from us: for the diſtance of it being firſt conſidered, we find that the rays from all parts of the object cauſe an impreſſion on the retina in the extremities of more or leſs diſtant fibres. Therefore, the farther diſtant thoſe extremities, ſo impreſſed are from each other, the greater we judge the object to be; and in like manner on the contrary: inſomuch, that it is firſt neceſſary to know the diſtance of an object, be-

fore we can attain to the true knowledge of its magnitude: And, therefore, whenever we are miſtaken in the diſtance, we muſt neceſſarily be deceived in the magnitude likewiſe: and conſequently, as often as we judge an object to be farther from us than it really is, we imagine it to be bigger than it is; becauſe, the farther diſtant an object is, the leſs will be the ſpace between the incident points of the rays that make the impreſſion on the retina: And on the contrary, as often as we judge the object to be nearer us than indeed it is, we fancy it to be leſs than really it is, becauſe the ſpace between the points of the rays, &c. is larger. Hence we ſee the reaſon why it is ſo difficult to come by the true knowledge of the ſun's magnitude: for the diſtance of the ſun from the equator is ſo hard to be diſcovered, that, if we may believe Pliny, to endeavour to find it out, "penè dementis otii eſt," is an employment fit for none but madmen. Ricciolus likewiſe confeſſes, that the ſublimity of the ſun has exceeded and baffled hitherto the ſearch and inveſtigation of all aſtronomers. However, he himſelf ſays, in Almageſt. lib. iii. cap. 11. That the true magnitude of the ſun may be known from its true ſemi-diameter; for that being doubled, gives its true diameter, whence its other ſpecies of magnitude are derived, according to the rule of proportion. This method has been obſerved by many of the moſt learned and judicious aſtronomers, whoſe opinion concerning the ſun's magnitude, may be ſeen at one view in the following table.

The true Magnitude of the Sun compared with the Earth.

The Sun's	True diameter.	Circumference.	Area of its greateſt circle.	Conve ſuperficies.	Solidity.

OF THE SUN.

This glorious luminary is in Hebrew called *Chamah*, or *Shemaſh*, from his heat, or *Adon Schemez*, i. e. Dominus Sol. By the Phœnicians, *Baal Shemaim*, i. e. Dominus Cœli. In Chaldee, *Shemſo*. In Arabic, *El Shemo*. By the Greeks, Ἥλιος and φοῖβος, quaſi φῶς τῦ βίυ, i. e. lux vitæ, whence the Latin *Phœbus*, called likewiſe *Titan*, *Apollo*, *Cor Cœli*, *Oculus Jovis*, and Ὄμμα Ἀιθέρος, i. e. oculus ætheris. The Egyptians called the ſun, *Potiris*, which in their language ſignifies the Holy God; and *Oſyris*, from his vital and kindly heat: as, on the contrary, *Typhon*, and *Seth*, from his violent and deſtructive fervour; and by them called likewiſe *Horus*. By the Perſians *Mithra*, i. e. Dominus or Dyneſta. By the ancient Arabs, *Urotalt*, i. e. Lucis Deus; and *Duſares*, or *Dai-Uſar*, i. e. Deus perluſtrans, as Sebedius de Diis German. interprets thoſe names. By the Syrians, according to Macrobius, the ſun was called *Adad*, or, as Scaliger and Selden would rather have it, *Abad*, or *Elhad*, i. e. Unus: or as Pontanus in his notes on Macrobius, *Badad*, i. e. Solus Unicus. Heraclitus, as Macrobius in Somn. Scip. lib. i, cap. 20. calls the ſun the fountain of all celeſtial light and heat. Moſt of the ancients, as Democritus, Metrodorus, Pythagoras, Plato, &c. and of the moderns likewiſe, as Kepler, Schcinerus, Rheitæ, Bullialdus, Kircher, Ricciolus, &c. imagine the ſun to be a real fiery body, conſiſting of true proper elementary fire, partly liquid, partly ſolid; the liquid is as it were an ocean of light, and moves with flaming billows and fiery ebullitions. This is manifeſt to thoſe who regard that moſt glorious luminary by the help of a teleſcope. The ſolid parts are like the land in our terraqueous globe, divided into continents, iſlands, mountains, and rocks, as if it were to reſtrain the vehement motion of the exeſtuating ſolar ocean, and by the frequent alliſions to repel, diſſipate and break the impetuous force of it; to the end it may with greater efficacy impart its all-productive virtue to the bodies on which it beſtows light and influence.

It is likewiſe probable, that within the ſolar globe, as in this earth of ours, there are vaſt caverns and receptacles of fire, that break out of the ſun's ignivomous mountains, in like manner as ſubterranean fires are ejected out of the mountains Ætna, Hecla, and Veſuvius. Beſides, the ſolid parts of the ſun, within whoſe bowels is contained the fluid and liquid fire, like metal in a furnace, are thoroughly ignified, in the ſame manner as the bricks of the roofs and ſides of furnaces are made red hot, and look of the ſame colour as the fiery maſs of melted matter within them.

It is farther ſuppoſed, that the ſolid parts of the ſun conſiſt of a matter abeſtinous and incombuſtible, and far better able to reſiſt the voracity of fire than this earth of ours. Nay, ſuppoſing that ſome parts of the ſun here and there ſhould be conſumed, and whole mountains be levelled and waſted, yet there is no neceſſity from thence, that the globe of the ſun ſhould be totally deſtroyed, no more than is this earth by the frequent accidents of ſuch kinds of ruins and decays. Moreover, the ſplendour, as well of the fluid, as ſolid fire of the ſolar globe, is evidently far more bright than our fire or flame here below: the end for which it was made neceſſarily requiring it ſhould be ſo; ſince it may reaſonably be conjectured to be created for the fountain of light, if not of the whole world, at leaſt of the planetary ſyſtem.

It is likewiſe obſerved, that as well this liquid ſea of fire, as that which breaks out of the caverns and mountains, conſtantly exhales ſuliginous vapours, not black and ſooty, like the ſmoke of our fire, but bright and clear; and that theſe exhalations, condenſing in the ambient æther, do in a manner overcaſt the ſun, as clouds overſhadow the earth. From all which, and from the evidence of frequent obſervations, lately made by the help of the teleſcope, is manifeſt, the miſtake of Ariſtotle and his followers, who imagine the ſun to be an unalterable ſubſtance; whereas, indeed, he is ſubject to divers changes and alterations; which not only the generation and production, but the diſſolution and corruption likewiſe of ſeveral phenomenons in the body of the ſun, altogether unknown to the ancients, clearly demonſtrate. Among which the moſt remarkable are thoſe, which late aſtronomers call the *Maculæ ſolares*, and the *Faculæ ſolares*.

The *Maculæ*, or ſpots, are, they tell us, certain cloudy obſcurities appearing upon the diſk of the ſun; and ſuppoſed by ſome to be a fuliginous obſcure matter or exhalation, ſometimes cloſely compacted into one, ſometimes diſperſed and diſſipated into ſeveral parcels, and iſſuing from its fervent fiery body, by force of its extreme heat. But whether they are in the ſun itſelf, or ſome ſpace diſtant from it, is not certain. However, it is from ſeveral obſervations moſt probable, that they are in the very body of the ſun, or at leaſt not far from the ſurface of it. They are very irregular in their ſhapes and figures, as well in regard to their form as ſize; and ſome of them are more durable than others. And thoſe that have the longeſt duration, are held to be the ſolid parts of the ſun; and it is believed that the reaſon why they diſcover themſelves in various figures, and of different magnitudes, is becauſe of the vertiginous motion of the ſun about his own axle, repreſenting them to our ſight in divers ſituations.

The *Faculæ ſolares* are held to be partly maſſy globes of fire, that burſt out of the ignivomous ſolar mountains; and which, by reaſon of their brightneſs, ſhine amidſt the maculæ, or fuliginous cloudy vapours, and ſometimes diſappear in a ſhort ſpace of time, ſometimes continue long viſible; and partly effervencies of the exeſtuating ſolar ocean; which, by reaſon of the exceſſive innate fervour of the globe of the ſun, boils up into mighty waves, like ſo many mountains of light, that ſcatter and diſperſe the darker maculæ, and diſcover, as it were a fiery ocean, fluctuating and agitated with flaming billows of exceſſive ſplen-

dour. But Scheinerus in disquisit Mathem. defines them thus: "Faculæ sunt areolæ in sole lucidores reliquo ejusdem corpore," i. e. The faculæ are certain small plats, or quarters in the sun, brighter than the rest of his body. Galilæo in Letter iii. delle Macchie Solari, describes them as follows: In the face of the sun, says he, there appear certain marks, brighter than the rest, and which observe the same motion as the maculæ: Nor can it be doubted but that they are inherent in the very body of the sun; because it is not credible, that there can be any substance more refulgent than that of the sun itself.

Lastly, This observation of the sun's spots and lights has given occasion to astronomers to remark, that the sun, besides his motion of revolution, diurnal and annual, according to the hypothesis of the immobility of the earth, has likewise a motion from east to west about his own axle; which conversion is finished, according to some, in the space of twenty-seven days, or thereabouts: according to Kepler and others, in twenty-four hours; but others assign it a much more wonderful celerity, particularly Otto de Guerrick, who affirms the vertiginous course of the sun to be completed in a moments space. All which considered, together with what we said before of the sun's magnitude, we may well say with Lucretius:

Nam licet hinc mundi patefactum totius unum
Largifluum fontem, scatere, atque erumpere flumen
Ex omni mundo, quâ sic elementa vaporis
Undique conveniunt, et sic congestus eorum
Confluit, ex uno capite hic ut profluat ardor.

And conclude with the same poet, That it is no wonder the sun dispenses so much light and heat to the earth.

As to the figure of the sun, Epicurus affirmed nothing for certain concerning that neither, but only said, that the various opinions of several men, of the different figure of the sun, might for any thing he knew to the contrary, be all of them true. Meanwhile it is certain that the opinions differed concerning the figure of the sun likewise: For, I. The Pythagoreans, Platonics, Peripatetics, and Stoics, held the sun to be globous. II. Anaximenes believed it to be flat, and broad like a leaf, or plate of iron, or other metal. III. Others to be in shape like a dish or platter. IV. Heraclitus would have the sun crooked, and bending like the keel of a boat. They gave likewise the same different figures to the moon and stars. The figure of the sun is now universally held to be globous.

Ver. 619. Some hold the moon to have no light but what she borrows from the sun; but others will have her shine with no light but her own. Lucretius does not decide this controversy, but only propose each opinion. It is most probable, and generally believed, however, that the moon borrows her light from the sun. This opinion is grounded on the opacity of that planet, which indeed proves the moon to be altogether deprived of any innate or proper light of her own. And this opacity is demonstrably proved; because in her total eclipses, she wholly loses her lustre; which, on the contrary, if she had any of her own, would rather, in the greatest darkness, become more visible and conspicuous; whence it is rationally concluded, that all the light she has, is from the sun, and that the moon, as she is an opacous, so too she is a dense body, fitted, and apt to receive and reflect the light of the sun. Macrobius giving the reason, why the moon, when she shines, does not impart any warmth, as well as the sun, but only reflects the light like a looking-glass, ascribes it to her having no light of her own, as the sun has, but only a mutuatitious light, and borrowed from the sun; which her being placed beneath the sun, evidently evinces. His words are these: "Lunam, quæ luce propriâ caret, et de sole mutuatur, necesse est fonti luminis sui esse subjectam. Hæc enim ratio facit lunam non habere lumen proprium, cæteras omnes stellas lucere suo, quod illæ supra solem locatæ, in ipso purissimo æthero sunt, in quo omne, quicquid est, lux naturalis et sua est.——Luna vero, quia sola ipsa sub sole est, et caducorum jam regioni luce suâ carenti proxima, lucem nisi de superposito sole, cui resplendet, habere non potuit.——Luna speculi instar, lumen, quo illustratur emittit; et fit acceptæ luci penetrabilis adeo, ut eam de se rursus emittat, nullum tamen ad nos perferentem sensum caloris, quia lucis radius, cum ad nos de origine suâ, id est, de sole pervenit, naturam secum ignis, de quo nascitur, devehit; cum vero in lunæ corpus insunditur, et inde respendet, solam refundit claritudinem, non calorem; nam et speculum, cum splendorem de se vi oppositi eminus ignis emittit, solam ignis similitudinem carentem sensu caloris ostendit," &c. In Somn. Scip. lib. i. cap. 19. and Cicero, lib. ii. de Naturâ Deor. is of the same opinion. And Festus, in voce Mulus, observes, that the moon is said to be drawn by mules, in regard to her borrowed light; because, as mules are not generated out of their own kind, but of a horse, so the moon is said to shine, not with her own, but *notho lumine*, as Lucretius in this place, and after him Catullus, expresses it, with a bastard light, which she derives from the sun. And Milton, speaking of the sun, calls him

——Great palace of all light!
To him, as to their fountain, others stars
Repairing, in their golden urns draw light;
And hence the morning planet gilds her horns.
——Less bright the moon,
His mirror: with full face borrowing her light
From him, &c.

Ver 629. In these seven verses, he speaks of the magnitude of the other stars and planets; of which we have already spoken at large, ver. 551.

Ver. 636. But it seems almost impossible, that so much heat and light, as are diffused through the whole sky, immense as it is, should flow from so small a body as the sun, if it be no bigger than it appears to be. To satisfy this difficulty, Lu-

cretius teaches, in nine verſes, that we may imagine the ſun to be as the perpetual ſource of light and heat; becauſe the ſeeds of light and heat continually flow from all parts of the univerſe into the body of the ſun, as into a great fountain; ſo that we feel and perceive the heat and light, not of the ſun only, but of the whole world. To which he adds, in ten verſes, that perhaps the air, near the ſun, is ſet a-fire by his beams; and that many fiery particles, inviſible to us, are hovering about his orb; and thence may proceed ſo great a profuſion of light and heat. Thus Lucretius, in a thing ſo doubtful, dares pronounce nothing for certain.

Ver. 652. The original has, *cæcis fervoribus*, that is to ſay, inviſible to us: For as Paſſeratius notes, *cæcus* ſignifies not only what does not ſee, but alſo whatever is not ſeen. "Cæcum non tantum quod non videt, ſed etiam quicquid non videtur." In Propert. lib. ii. Eleg. 27.

Ver. 655. In order to explain the annual courſe of the ſun, and the monthly courſe of the moon, through the twelve ſigns of the zodiac, he firſt propoſes, in twenty-five verſes, the opinion of Democritus, who taught, that the lower ſpheres are rolled and whirled around by the higheſt orb, called the *primum mobile*, either ſwifter or more ſlow, according to the diſtance of each ſphere from that higheſt orb. Thus the ſun moves ſwifter than the moon; becauſe the ſun is higher, and therefore the ſigns more ſeldom overtake, and paſs by him, than they do by her. Nor is it then ſtrange, that the moon runs through all the ſigns in one month, which the ſun goes through but in twelve;

The two firſt of theſe verſes are tranſcribed, word for word, from Cowley, David. i. p. 19. of the folio edition. The original runs thus:

Nec ratio ſolis ſimplex, nec certa pateſcit,
Quo pacto æſtivis è partibus Ægocerotis,
Brumales adeat flexus, atque indè revertens
Canceris ad metas vertit ſe ad ſolſtitiales.

Which our tranſlator has rendered in the two verſes, that follow theſe of Cowley.

The ſouth and north pole, which are two points about which the heavens are rolled; ſo called from στρέφω, I turn, whence the Latins called them *vertices*. The north pole is always viſible to us, and to the French, Italians, &c. The ſouth is never ſeen by us, but by thoſe whom we call Antipodes. See above, ver. 545.

Ver. 656. Cowley calls the walk of the ſun crooked, by reaſon of the obliquity of the zodiac, through which he makes his annual revolution. See the note on ver. 661.

Ver. 658. The ſigns, in matter of aſtrology, are aſteriſms, or configurations of fixed ſtars: which are imaginary forms, deviſed by aſtrologers, the better to comprehend and diſtinguiſh thoſe ſtars from one another. Thus one aſteriſm is called the Bear, another the Dragon, &c. to the number of forty-eight in all, according to the ancient aſtrologers; beſides a few lately invented by the diſcoverers of the ſouth pole. It is not agreed who firſt reduced the ſtars into aſteriſms, or conſtellations; nor is it an eaſy taſk to reconcile the different morphoſes or figures in the ſeveral ſpheres of the Chaldeans, Perſians, Egyptians, Greeks, Arabians, Indians, Chineſes, and Tartars; of whoſe opinions in this matter, the various difference may be ſeen in the deſcription of Abu Maſher, commonly called Albumazar, in Aben Ezra de Decanis Signorum, publiſhed by Scaliger, in his notes on Manilius; of all which Salmaſius, in Præfat. ad Diatrib. de Antiq. Aſtrolog. believes thoſe of the Greeks, which are moſt commonly uſed amongſt us, to be of lateſt date. As to the names of the ſtars, it is ſcarce doubted, but that Adam firſt impoſed them; though all thoſe appellations, except ſome few preſerved in ſcripture are ſince utterly loſt. Yet moſt of the names we now uſe, are above two thouſand years ſtanding, as appears by Heſiod and Homer. They were not, however, all named at one and the ſame time; for ſome are of late denomination, particularly that which Conon, Antinous, and others call Coma Berenices. Some report Aſtræus to be the firſt who gave names to the ſtars; whom for that reaſon

————Fama parentem
Tradidit Aſtrorum————

As Aratus ſays in Germanicus; and others aſcribe it to Mercury. To give the ſeveral names of the ſigns and conſtellations, would engage me in too tedious a taſk; I will therefore confine myſelf to the two Lucretius here mentions, which are Ægoceros and Cancer.

Ægoceros, by the Greeks, called Αἰγόκερως, from αἴξ, a goat, and κέρας, a horn, and Αἰγίκερως by the Latins Capricornus; Hircus Æquoris, by Aſclepiadius, and Vomanus, Pelagi Procella, by Vitalis: and thus Horace,

————Tyrannus
Heſperiæ Capricornus undæ.

The poets fabled, that Ægoceros was born of the goat Amalthea, and placed by Jupiter among the ſtars, in memory of that god's having been nouriſhed with the ſame milk. Some ſay that this was made a conſtellation in honour of Ægipan, the ſon of Jupiter by the Olenian goat; but others, with more reaſon, that Ægipan was foſter-brother to Jupiter, and ſon of Æga, the wife of Pan, from whence he had his name. And Baſſus in Germanic. from the authority of Epimenides, writes, that Ægipan aſſiſted Jupiter in his wars againſt the Titans, and helped him to put on his armour; for which reaſon he was honoured with this celeſtial dignity: he was repreſented half goat, half fiſh, the reaſon of which, ſays the Scholiaſt on Aratus, was, becauſe having found on the ſea ſhore, the ſhell of a murex or purple-fiſh, he wound it as if it had been a horn, and ſo ſtruck a panic fear into the Titans, whence he came to be figured with a tail like a ſea monſter. The ſun entering into this ſign, makes the winter ſolſtice. Cancer, by the Greeks called Καρκῖνος, a Crab, is ſaid to have been killed by Hercules for biting him by

the foot, when he encountered the ſerpent Hydra, and to have been made a conſtellation at the entreaty of Juno. This ſign is in that part of the heaven, which the ſun reaches about the middle of June, and then makes our greateſt heats, longeſt days, and ſummer ſolſtice. Moreover, theſe two ſigns, Cancer and Capricornus, are celebrated by the Chaldaic, Pythagorean, and Platonic philoſophers, the firſt of them for being the gate by which ſouls deſcend into human bodies; the laſt for being that by which they re-aſcend into heaven, whence they call Cancer, *Porta hominum*, and Capricornus, *Porta deorum*. Macrobius in Somn. Scip. lib. i. cap. 12. ſays, that the natural philoſophers called theſe two ſigns, *Portas Solis*, the gates of the ſun; and then having given the reaſon of it, he adds: "Per has partas animæ de cœlo in terras meare, et de terris in cœlum remeare creduntur; ideo hominum una, altera deorum vocatur: hominum Cancer, quia per hunc in inferiora deſcenſus eſt. Capricornus Deorum, quia per illum animæ in propriæ immortalitatis ſedem, et in Deorum numerum revertuntur." See likewiſe, Cœl. Rhodig. Antiq. Lect. lib. xv. cap. 23. and Kircher in Œdip. Ægypt. tom. ii. p. 535.

Ver. 660. Homer and Ovid make the moon to be drawn in a chariot by two horſes, one black, the other white; of which Baſſus in Germanic. gives this reaſon, becauſe, ſays he, ſhe ſometimes is ſeen by day, as well as in the night. Others will have her to be drawn by oxen; and therefore Nonnus in Dionyſ. lib. xii. calls her.

——Βοῶν ἐλαείρα Σελήνη.

Of both which we have expreſs repreſentations in the Roman coins; and particularly in thoſe of the empreſs Julia Domna. See Triſtan. in his Commentar. tom. ii. p. 129. She is likewiſe ſaid to be drawn by mules, of which we have ſpoken above, ver. 619. Claudian, lib. iii. de laudibus Stiliconis, makes her to be drawn by ſtags in regard of the ſwiftneſs of her motion; and ſo too ſhe is repreſented in ſeveral conſular and imperial coins, that may be ſeen in Urſinus, Golzius, and Gorlæus.

Ver. 661. 662. The zodiac is called by Ptolomy Κύκλος τῶν Ζωδίων, the circle of animals, becauſe it is divided into twelve ſigns, all of which reſemble, either men or ſome other living creatures, that are deſcribed and marked in the zodiac at equal diſtances from one another. By the Latins it is called *ſignifer*, and by the Greeks Σημειοφόρος. It is deſcribed to be a circle, or rather a zone, obliquely paſſing from eaſt to weſt, by the equinoctial and ſolſtitial points, and parted in the midſt by the ecliptic, which divides it into two parts, the one northern, the other ſouthern, both which are terminated by the circumferences of two imaginary circles, leſs than one of the great circles, and is far diſtant from the ecliptic, as is the greateſt latitude of any planet from thence. The invention of this circle is by ſome aſcribed to Pythagoras, by others to Œnepides the Chian, and by others to Anaximander the Mileſian. See Plutarch. de Placit. Philoſoph. and Pliny, lib. ii. cap. 8. Manilius, lib. i. ver. 675. ſpeaking of the zodiac, ſays,

Nec viſus aciemque fugit, tantumque notari
Mente poteſt, ſicut cernuntur mente priores;
Sed nitet ingenti ſtellatus baltheus orbe,
Inſignemque facit cælato lumine mundum.

Which Creech renders as follows:

It is not hid, nor is it hard to find,
Like others, open only to the mind:
For like a belt, with ſtuds of ſtars, the ſkies
It girds, and graces; and invites the eyes.

And Scaliger, in his note on that paſſage, farther obſerves, that it has this in common with the Galaxy or Milky Way, that both of them are not, like all the other circles of the ſphere, λόγῳ θεωρηθῆναι, perceivable only to reaſon, but that they are both of them viſible to the ſight likewiſe, which none of the others are. Yet Manilius ſeems to ſpeak poetically, making the zodiac a viſible circle, becauſe the twelve ſigns moving in it are viſible; but properly ſpeaking, as it is taken for a faſcia or zone only, it is no otherwiſe perceptible than by reaſon; and therefore Geminus in Iſagog, rightly ſays, that of all the circles in the heavens, only the *Via Lactea*, is perceivable by ſenſe, the others being no otherwiſe diſcernible than by the eye of reaſon. Moreover, concerning the zodiac, there are theſe five things that chiefly deſerve to be known. I. It is divided into 360 parts or degrees; each ſign into 30 degrees; one of which degrees, or thereabouts, the ſun makes or completes every day, by his primary or own proper motion, proceeding or going forward from the weſt to eaſt; and thus in about the ſpace of a year he runs through the twelve ſigns; meanwhile by his ſecondary or common motion, which the Latins calls *raptus*, a whirl, proceeding from eaſt to weſt, he makes the compaſs of the whole earth in the ſpace of four and twenty hours. II. The order and names of the ſigns are contained in theſe verſes:

Sunt Aries, Taurus, Gemini, Cancer, Leo, Virgo,
Libraque, Scorpius, Arcitenens, Caper, Amphora,
Piſces.

Which being moſt of them animals, the circle was from thence called Zodiac, from the Greek word ζῴδιον, which ſignifies an animal, as we hinted before. III. Aries anſwers to the month of March, about the tenth of which month the ſun is ſaid to enter into that ſign, and to run through all of it by about the tenth of April, at which time he enters into Taurus: and in like manner of all the reſt. IV. It is called oblique, becauſe it is not at an equal diſtance from each pole: but being carried croſs the torrid zone, it reaches both the tropics, and twice divides the circle of the equator. In the firſt degree of Cancer it touches the north tropic, which is thence called the tropic of Cancer: It touches the ſouth tropic in the firſt degree of Capricorn, whence that tropic has the name of the tropic of Capricorn. It cuts the equator in the firſt degree of Aries, and in the firſt degree

of Libra. V. When the ſun comes to the tropic of Cancer, about the tenth of June, then is our height of ſummer, or ſummer ſolſtice: when about the tenth of December, he reaches the tropic of Capricorn, then is our depth of winter, or the winter ſolſtice. Theſe tropics have their name from τρέπω, I turn, becauſe when the ſun has reached to either of them, he turns his courſe back again towards the other. Moreover, when the ſun reaches to the ſection of Aries, which he does about the tenth of March, then is the vernal equinox; when he comes to the ſection of Libra, about the twelfth of September, then is the autumnal equinox.

Ver. 662. To the ſame purpoſe Cowley:

——The ſelf ſame ſun
At once does flow and ſwiftly run:
Swiftly his daily journey goes,
But treads his annual with a ſtatelier pace;
And does three hundred rounds incloſe
Within one yearly circles ſpace,
At once with double courſe in the ſame ſphere,
He runs the day and walks the year.

Ver. 665. Of him ſee Book III. ver. 356. and ver. 1044. and Book IV. ver. 335.

Ver. 680. In theſe thirteen verſes he introduces two ſeveral airs, waiting on the ſun and moon: by one of which they are ſhoved down from Cancer to Capricorn; and by the other heaved up again from Capricorn to Cancer, and this at fixed and certain times: And that it may not ſeem incredible, he bids us look on the different racks of clouds, which ſeveral winds drives ſeveral ways.

Beſides theſe and the foregoing opinions, there was a third which Cicero, lib. iii. de Nat. Deor. aſcribes to Cleanthes, who, as if the ſun followed his food, would have the humidity that ariſes from the earth and from the ſea to be the cauſe of the ſummer and winter ſolſtices. For the words of Cicero are theſe. "Quid enim? Non eiſdem vobis placit omnem ignem paſtu indegere, nec permanere ullo modo poſſe niſi alatur? Ali autem Solem, Lunam, et reliqua Aſtra, aquis alia dulcibus, alia marinis? eamque cauſam Cleanthes affert, cur ſe ſol referat, nec longius progrediatur ſolſtitiali orbe, itemq; brumali, nè longius diſcedat á cibo?" For are not you of opinion that all fire requires food, and can in no wiſe ſubſiſt, unleſs it be nouriſhed? Nay, that the ſun, the moon, and other ſtars are fed, ſome with freſh, others with ſea water? And does not Cleanthes allege, that the cauſe of the ſun's returning from the ſummer and winter ſolſtice, and his going no farther is, that he may not ſtraggle too far away from his meat?

Ver. 686. This and the following verſe run thus in the original;

Et ratione pari lunam ſtellaſque putandum 'ſt,
Quæ volvunt magnos in magnis orbibus annos,
Aëribus poſſe alternis à partibus ire.

Where we may obſerve, that our interpreter has totally omitted the ſecond of thoſe verſes, in which the poet ſeems to allude to the periods of the ſtars, and the revolutions of Saturn, Jupiter, and Mars.

Ver. 689. This many, nevertheleſs, deny, though it be certain, ſays Faber, that there is ſcarce any tempeſt of thunder and lightning, but this happens.

Ver. 693. In theſe nine verſes he tells us that night ſucceeds the day, either becauſe the ſun, being fatigued with the length of his journey (for the ſetting ſun ſeems faint and weary), is extinguiſhed: Or elſe becauſe he is whirled with the ſame force beneath the earth by night, as above the earth by day. Epicurus in the epiſtle to Pythocles contends, that the riſing and ſetting of the ſun may be made, κατ' ἐμφάνειαν τὲ ὑπὲρ γῆς, καὶ πάλιν ἐπικρύψιν, or κατ' ἄναψιν, τὲ καὶ σβέσιν.

Ver. 702. In theſe twenty-three verſes he teaches, that the ſplendor, which we call the morning, and which before the riſing of the ſun adorns the heavens, is occaſioned becauſe the ſun, returning from weſt to eaſt, pours forth his rays before he appears himſelf: or elſe it happens, becauſe the ſeeds of fire, that were diſperſed abroad in his journey the day before, flow together in the eaſtern ſky, and illuſtrate the earth with a fainty and glimmering light, before they have formed and kindled up anew the globe of the ſun: And if this conſtancy of the ſeeds flowing together to one place ſeem incredible, let it be conſidered, that no leſs a conſtancy may be obſerved in ſeveral other things. Thus plants ſhoot forth their buds at a fixed and certain ſeaſon of the year: Thus children breed their teeth at a certain age, &c.

This laſt opinion, ridiculous as it is, was nevertheleſs embraced by Epicurus and his followers: who as Cleomedes. lib. ii. c. 1. witneſſes, held that a new ſun aroſe daily, and was daily extinguiſhed; and Servius upon the firſt Georgic, ſays, they did not pretend, that the ſun continued his courſe through the other hemiſphere: but that the orb of a new ſun was always made in the eaſt; or at leaſt, that the old ſun was repaired and lighted up anew. For Epicurus did not ſo much hold the quotidian creation of a new ſun, as the daily renovation of the old: To which opinion Horace, in Carmine Seculari, ſeems to allude,

Alme Sol, curru nitido diem qui
Promis et celas, aliuſque et idem
Naſceris.——

And Gaſſendus explains this opinion of Epicurus in theſe words: Since the ocean compaſſes the earth, the ſun may be extinguiſhed by its waters in the weſt, and return all along through the waves by the north into the eaſt, and riſe from thence rekindled. Thus Gaſſendus; by which nevertheleſs he but little mends the matter. Epicurus however was not the author of this ridiculous opinion: For Xenophanes the Colophonian held, that the moon and ſtars were certain clouds ſet on fire, and that they were extinguiſhed every day and rekindled at night: and that on the con-

trary, the sun was extinguished every night, and rekindled every morning; or to express it in the words of Minutius Fœlix, "Congregatis ignium semenibus solis alios atque alios semper splendere." Of the same opinion likewise was Heraclitus, whose saying was ἥλιος νέος ἐφ' ἡμέρᾳ ἕκαστος· whence the proverb in Plato, "Heracliteo sole citius extingui." And from them Epicurus received by succession, "Hæreditatem stultitiæ," as Lactantius calls it, this inheritance of folly. And yet Pomponius Mela, de situ Orbis, lib. v. cap. 6. relates, that the rising sun, when beheld from mount Ida, looks different from what it does when regarded from any other place in the whole earth: For, says he, soon after midnight, many small bodies of fire are seen dispersed and scattered in the east: and as the day comes on, they are seen to join by degrees closer and closer together, till being collected into fewer bodies, all of them, from the first to the last, are kindled into flames; and these flames, joining into one, contract themselves into a round figure, and come to be a vast globe of fire, that seems annexed to the earth; then it decreases by degrees, but still continuing its globous form; and the more it lessens, it grows the more bright and fulgid: at length it dispersés the shades of night, and being made a sun, rises with the day. "Orientum solem Idæus aliter quam in aliis terris solet, aspicit. Ostentantur namque ex summo vertice ejus spectantibus penè à mediâ nocte sparsi ignes passim micare, & ut lux appropinquat, ita coire et se conjunjere videntur, donec magis magisque collecti, paucioris deinde, ex unâ ad postrèmam flammâ ardeant: et cum diei clara lux, et incendio similis affulsit, cogit se, ac rotundat, et fit ingens globus: diu is quoque grandis, et terris annexus apparet: deinde paulatim decrescens: et quantum decrescit, eo clarior; fugat noviss̃emè noctem, et cum die, jam sol factus, attollitur. Pompon. Mela, lib. v. de situ orbis, cap. 6." This too is confirmed by Diodorus Siculus, whose account of this matter we will give below, v. 711.

Ver. 708. Lucret.

——Roseam Matuto per oras
Ætheris auroram defert, et lumina pandit.

Matuta, as Cicero tells us, was the goddess Ino, whom the Greeks called Leucothea, and the Latins, Matuta; the daughter of Caducus. "Ino dea dicitur, quæ Leucothea à Græcis, à nobis Matuta dicitur; cum sit Caduci filia." De Nat. Deor. Lib. iii. And Milton,

To resalute the world with sacred light
Leucothea wak'd, and with fresh dews embalm'd
The earth: and now the smiling morn begins
Her rosy progress.——

Ver. 711. There are two mountains of this name: one in Crete, the other in Phrygia, which last in one chain of mountains runs through the whole country of Troas: The northern part of it reaches to the shore of the Propontic; the west to the Hellespont, the south to the gulf of Adramyttium in the Ægean sea, and the east look over the place where stood the city of Troy: and in this part of it Paris gave his judgment of the three goddesses. This was the highest part of all the mountain, and that of which Lucretius speaks: Strabo calls the top of it Gargarus. Of the sunrising, beheld from this mountain Diodorus Siculus, lib. xvii. p. 491. Gives the following account.

"Ἴδιον δέ τι τὸ παράδοξον συμβαίνει γίνεσθαι περὶ τοῦτο τὸ ὄρος, καθὰ καὶ τὴν τῶ Κυνὸς ἐπιτολὴν ἐκ ἄκρας τῆς κορυφῆς διὰ τὴν ὑπεμίαν τῶ περιέχοντος Ἀέρος ὑπερτείνη γίνεσθαι τὴν ἄκραν τῆς τῶν ἀνέμων πνοῆς· ὁρᾶσθαι δὲ τὸν ἥλιον ἔτι ταις νυκτὸς οὔσης ἕναλλόμενα τὰς ἀκτῖνας ὡς ἐν κυκλίδι χρώμασι τετραμμένον· ἀλλὰ τὴν φλόγα καθὰ πολλὰς τόπους ἔχουσαν διεσπαρμένην, ὕστερον δοκεῖν πυρὰ πλείω διηγάνειν τῶ τῆς γῆς ὁρίζοντος. Μετ' ὀλίγον δὲ συνάγεσθαι πάντα πρὸς ἓν μέγεθος, ἕως ἂν γένηται τρίπλεθρον διάστημα, καὶ τότε τῆς ἡμέρας ἐπιλαβούσης, τὸ φαινόμενον τῶ ἡλίου μέγεθος πληρωθὲν τὴν τῆς ἡμέρας διάθεσιν καλασκευάζει. which is as much as to say: A singular and wonderful thing happens in this mountain: For, about the rising of the Dog-star, there is so great a calmness of the circumfused air on the top of the mountain, that the highest part of it is above the least breath of wind: and even while it is yet night, the sun is seen to rise, not in a globous and circular figure, but in a flame dispersed here and there in such a manner, that many fires seem to touch the horizon; but all of them in a short space of time contract themselves into one magnitude, which takes up the space of about three hundred feet, and at length the day appearing, the complete magnitude of the sun appears likewise, and shines with its accustomed daily light.

Ver. 725. It has always been accounted a wonderful thing that the days and nights lengthen and shorten so regularly in the course of the year, that the alternate changes of the length and shortness of both of them are exactly varied by turns both in summer and winter. Of this the poet assigns three causes: I. It may happen, says he, because the sun makes his rounds above and below the earth more swiftly at some times than at others, inasmuch as the ways or places through which he travels are longer or shorter. This is contained in seventeen verses, in which he likewise describes the unequal segments of the diurnal and nocturnal circles in the oblique position of the sphere; but from this rule he excepts the equator, which in every obliquity is divided from the horizon into two equal parts; and this is the reason that the sun, being twice within the year placed in the equator, makes two equinoxes in all countries whatever. II. Then he adds, in four verses, another reason, and says, that there may perhaps be certain places in the sky where the sun finds more or less resistance, and this may retard or hasten his course. III. He says it may happen, because those fires that either compose or kindle the sun, may, at certain seasons of the year, assemble and meet more slowly in the eastern sky than they do at others.

The first of these is the true and genuine reason; for the inequality of the days and nights

proceeds from the oblique position and cite of the zodiac; whence it comes to pass, that they who have a perpetual equinox, that is to say, those that live under the equator, never have the least inequality, but a constant equality of days and nights, because they inhabit under a straight and direct sphere; but those that live towards either of the poles have their days and nights longer or shorter according as they are more remote from the pole, or nearer advanced to it. But such as live in the most oblique sphere, that is to say, under either of the poles, have six months of continual light, and by turns as many of continual night and darkness; therefore it is no wonder what Pliny, lib. iv. cap. 12. says of them, that they, "ferere matutinis, meridie metere, occidente sole fœtus arborum decerpere, noctibus in specus condi," &c. sow in the morning, reap at noon, gather the fruits of the trees at sunset, hide themselves in caverns at night, &c. And thus we know,

Quid tantum oceano properent se tingere soles
Hyberni: vel quæ tardis mora noctibus obstet.
Virg. Georg. ii. ver. 481.

What drives the chariot on of winter's light,
And stops the lazy waggon of the night.

As Cowley expresses it.

Ver. 733. In this and the following six verses, Lucretius describes the equinoctial circle, which, by the Greeks is called, *ἰσημερινὸς*, by the Latins, "æquidialis, æquinoctialis, æquator," and "cingulum mundi," and by mariners it is commonly called the *line*. It is one of the greatest circles of the sphere; its poles are the same with the poles of the world; from either of which it is equally distant, and divides the celestial globe into the northern and southern hemisphere. Christoph. Clavius in Sacrobosc. describes it by an imaginary line, drawn from the centre of the world, and extended to the first point, either of Aries or Libra, and thence carried about by the diurnal revolution of the *primum mobile*. Of this equinoctial circle, these things chiefly deserve to be observed: I. That it parts as well the terrestrial as the celestial globe, and is divided into 360 degrees, as every other greater or lesser circle is, because of the easy division of this number into a moiety, a third, a fourth, fifth, sixth, or eighth; its sixth, for example, being sixty, which number admits of many more divisions without any fractions. II. The sun, being posited in the equinoctial, makes the days and nights even, and then the equinoctial divides the sphere into the northern and southern hemispheres, whose poles are the poles of the world. III. Fifteen degrees of this circle rise hourly on one part, and as many set every hour on the other; so that one degree of it rises every four minutes of an hour. For which reason the equinoctial is said to be the measure of the *primum mobile*. IV. This circle shows the equinoctial points, which happen twice every year; 1. About the eleventh of March, when the sun enters into the first degree of Aries; 2. About the thirteenth of September, when he enters into the first degree of Libra. V. It divides the zodiac into two moieties, the southern and the northern, and thence the signs are distinguished into those of the north and south. VI. It is the measure of time, and shows what declination the stars, or the parts of the ecliptic have, either northern or southern. VII. Lastly, In this circle are observed the ascensions and descensions of the zodiacal signs.

Ver. 735. That is, between the north and south poles; Lucretius says, "Medio cursu flatus aquilonis et austri," which are indeed two winds, the first of which blows from the north, the last from the south, and which are commonly taken by poets for the north and south points, or poles of the world.

Ver. 736. Lucr. "Distinet æquato cœlum discrimine metas:" where by *metas* he means the two tropics of Cancer and Capricorn, which are the utmost bounds of the sun's revolution, and which he never passes. They were called tropics from the Greek word *τροπὴ*, which signifies conversion, or turning, because the sun, when he comes at those circles, turns back again towards the equator, nor ever goes beyond those bounds, either to the north or south: Hence the Egyptians, as Clemens Alexandrinus, lib. v. Stromat. observes, hieroglyphically described the tropics under the figure of two dogs, as if they were guards deputed by nature to keep in and restrain the sun from running beyond his bounds. The first among the Greeks who found out these tropics is said to be Thales, the Milesian; who likewise wrote a particular treatise of them, as Eudemus in Laërtius witnesses. The tropic of Cancer is called *τροπικὸς θερινὸς*, i. e. "Tropicus æstivus," from the heat of summer, which we in this northern hemisphere enjoy, when the sun is nearest to that circle, which is thus described: A smaller circle, parallel to the equator, whose distance from thence is equal to the sun's greatest declination, or the obliquity of the zodiac, which it touches in the first point of Cancer. Its office, on one side, is to terminate the torrid zone, and, on the other, the northern temperate zone, and to make the summer solstice and longest day northward, and the winter solstice or shortest day southward. The tropic of Capricorn is likewise described; a smaller circle, parallel to the equator, whose distance from thence is equal to the sun's greatest declination, and touches the ecliptic in the first point of Capricorn; on one side, bounding the torrid southern zone, on the other, the southern temperate zone, making the winter solstice or shortest day northward, and the summer solstice, and the longest day southward. Moreover, the solstices were so called, because the days do then increase and shorten so very slowly, that they can scarce be perceived to do either, insomuch that "quasi sistatur sol." The reason of which cannot be better given, than in the words of Julius Scaliger, in Problemat. Gellian. "Is circulus, quem sol quotidie signat, non est circulus, sed magis quædam spira. Neque enim

revolutionis finis eodem committitur, unde initium habuerat: Major enim distantia est à puncto, unde digressus est, ad punctum, ad quem horæ viginti quatuor eum perduxere; ubi propior fit iis signis, quæ propius ad æquinoctium accedunt, propter obliquitatem. Itaque cum tendit ad solstitia, propter lineæ prope rectitudinem, vix variat; inde solstitia dicta:" Which is as much as to say: That circle which the sun describes by his daily motion, is not properly a circle, but rather a spiral line: For the end of its revolution does not terminate in the point, whence it began. For its distance from the point, from whence the sun set forward, to that to which he arrives by his daily course of twenty-four hours, is greater when he approaches nearest to those signs that are next the equinoctial, by reason of the obliquity of his course: But when he draws near to the solstitial points, there appears scarce any variation of his course, because the line is then almost straight and direct; whence it is called the solstice. Moreover, Macrobius, lib. i. cap. 21. tells us, that the Egyptians represented the statute of the sun with his head shaved on one side, and having long hair on the other, to intimate, by the first, the time of the winter solstice, "cum velut abrasis incrementis, angustâ manente extantiâ, ad minimum diei sol pervenerit spatium;" by the latter, his summer solstice, or his full grown splendour, to which he arrives by degrees, emerging again from those straits and dens which were his abode in the winter tropic, into the summer hemisphere: "ex quibus latebris vel augustiis rursus emergens, ad æstivum hemisphærium tanquam enascens in augmenta porrigitur:" as the same author expresses it in the place above cited. See above, ver. 658.

Ver. 737. Of this, see above, ver. 661.

Ver. 742. These four verses contain a second cause or reason of the increase and decrease of the days and nights: But this is indeed a weak argument; for how can the air's being more or less thick make the sun rise later or sooner?

Ver. 746. In these three verses, he alleges a third reason, which is of equal force with the last; as if the days or nights were longer or shorter, because the seeds of light flow, and meet together, sometimes sooner, sometimes later, to repair the decayed splendour of the sun. But by subjoining this third cause, the poet seems to observe, what is likewise generally taken notice of, that not only the day and the night, but that the morning and the evening twilight are sometimes shorter than they are at others: For, in an oblique sphere, the duration, as well of the twilight before sun-rising, as of the twilight after sun-set, is unequal throughout the year, being longer in the summer, and shorter in the winter; because, since the twilight either begins in the morning, or ends in the evening, when the sun is eighteen degrees, perpendicularly taken, below the horizon, the bows of the compass, or circuit of the sun, who, with those degrees either rises in the morning, or goes down in the evening, are larger in summer, and less in winter. Besides, this inequality is the greater the more distant we are from the equator. And yet we may not believe that the evening twilight is longest about the summer solstice and shortest about the winter; for indeed it is rather somewhat shortest of all before the vernal, and after the autumnal equinoxes. But it might seem tedious to pursue these matters farther.

Ver. 749. Here the poet inquires into the causes, why the moon changes herself into so many shapes: For as Ovid Metam. xv. ver. 196. says,

Nec par, aut eadem nocturnæ forma Dianæ
Esse potest unquam; semperque hodierna sequente,
Si crescit, minor est; major, si contrahit orbem.

Which Dryden thus translates,

Not equal light th' unequal moon adorns,
Or in her waxing, or her waning horns:
For ev'ry day she wanes, her face is less,
But gath'ring into globe, she fattens at increase.
Dryden.

Now Lucretius tells us, in these twelve verses, that if she receive her light from the sun, if she be a globous body, and lastly, if she make her rounds below the sun, then they explain aright her various and manifold phases, who say, that the moon changes her face according to the different light she receives from the sun, as she approaches nearer to him, or retires farther from him. This too is the opinion of almost all the mathematicians, and of all the poets, especially of Manilius, lib. ii. ver. 96.

Tu quoque fraternis reddis sic oribus ora,
Atque iterum ex iisdem repetis, quantumque reliquit,
Aut dedit ille, refers; et sydus sydere constas.

Which Creech thus renders:

For as the moon in deepest darkness mourns,
Then rays receives, and points her borrow'd horns;
Then turns her face, and with a smile invites,
The full effusions of her brother's lights.

Ver. 755. For when the moon is at full, she goes, as it were, backwards under the earth towards the sun, and comes up to him: whence it is that she decreases by degrees, till being in conjunction with him, she become invisible to us.

Ver. 756. He means that part of the heavens which is concealed from us beneath the earth.

Ver. 757. The different changes or variations of the moon, which the ancient Greeks called φάσεις, and from them the Latins, *phases*, or *apparitiones*. The names of these phases or appearances, especially of the four chief and most remarkable are these. The first, reckoning her changes as she increases, is Μηνοειδής, i. e. *corniculata*, horned, or having horns: The new moon, which happens when she is about sixty degrees distant from the sun. This phasis is by the Turks and Arabs called *Nalla*, a horse shoe, because the moon then resembles the figure of one. The second, Διχόμηνος,

i. e. *bisecta*, or *dimidiata*, the half moon, when she is ninety degrees distant from the sun. The third, Ἀμφίκυρτος, i. e. *gibbosa*, or *dimidio orbe major*; which happens at 120 degrees distant from the sun; and the fourth and last, Πανσέληνος, i. e. *Totilunis*, when full, and in opposition to the sun, or at the distance of 180 degrees: and from this last, in a contrary order, are reckoned her decreasing changes. And these several phases she inviolably observes; nor are they the work of chance, as our poet would impiously insinuate, but the act and order of Divine Providence; as even another poet, though a heathen too, saw very well.

Nec lunam certos excedere luminis orbes;
Sed servare modum, quo crescat, quove recedat;
Nec cadere in terram pendentia sydera cœlo,
Sed dimensa suis consumere tempora signis;
Non Casûs opus est, magni sed Numinis ordo.

Thus rendered by Creech:

That light, by just degrees, the moon adorns;
First shows, then bends, then fills her borrow'd horns;
And that the stars in constant order roll,
Hang there, nor fall, and leave the liquid pole;
'Tis not from chance: the motion speaks aloud
The wise and steady conduct of a god.

To which I add this of Statius, Sylv. lib. iii.

Servit et astrorum velox chorus, et vaga servit
Luna, nec injussæ toties redit orbita lucis.

And of Macrobius in Somn. Scip. lib. i. cap. 6. "Similibus dispensationibus Hebdomadum, Luna sui luminis vices sempiternâ lege variando disponit."

And since we are upon the subject of this planet, I cannot but take notice of an opinion, which is at this day asserted and maintained by several, as well philosophers as astronomers: viz. That the moon is inhabited. This belief they ground on the appearance of mountains, valleys, woods, lakes, seas, and rivers, which, by the help of the telescope, they discover in the orb of that planet. The ancients, as Cicero witnesses, embraced this opinion long ago: "Habitari," says he, "ait Xenophanes in Lunâ, eamque esse terram multarum urbium et montium. Academ. Quæst. lib. iv. The interpreter of Aratus: ἔνδαι δὲ ἔσ' αὐτῆς ὄικασι ἄλλὰ σοφαμὲς τὸ καὶ ὅσα ὑπὸ γῆς. And Plutarch De Placitis Philosoph. lib. ii. cap. 50. reports, That the Pythagoreans affirm the moon to be another earth, inhabited in all its parts, even as this earth of ours: and peopled with living creatures fifteen times larger than those with us: these inhabitants the ancients called Antichthones, because they believed them to dwell in an earth quite opposite to this of ours. And that author, in his treatise, "De facie in orbe Lunæ," says, That there are caverns in the moon, called "Penetralia Hecates;" and that the upper parts of that planet, which always regard the heavens, are the Elysian fields: That it is likewise inhabited by Genii, who not always make their abode there, but sometimes descend to earth, to punish or awe mankind. Achilles Tatius in Isagog. reports also the like of the moon's being inhabited: so too does Macrobius in Somn. Scip. lib. i. cap. xi. in these words: "Lunam ætheream terram Physici vocaverunt, et habitatores ejus Lunares Populos nuncuparunt: quod ita esse pluribus argumentis, quæ nunc longum est enumerare, docuerunt." See more to this purpose in Kepler's "Astronomia optica," and particularly in a posthumous treatise of his, intituled, "Somnium, sive de lunari Astrologiâ." Now, why should this opinion seem extravagant, if it be admitted, that the moon enjoys as favourable an aspect from the sun, as this earth of ours, though the days and nights there be answerable to our half months, in regard it is screened with hills and mountains, under which lie deep shades and valleys, with hollow caves and recesses, of equal benefit against the extremities of heat and cold: and being watered besides with great lakes and rivers, and consequently supplied by nature with all things necessary for the support of life? How then can it reasonably be thought, that nature has conferred all those advantages and benefits for no use and end; and that the moon is made for no other purpose, and serves only to reflect to us the light of the sun? See more in Isaac Vossius in his learned treatise, "de Naturâ et Propriet. Lucis," cap. xix.

After all, it is not agreed what kind of creatures these lunary inhabitants are: however, Kepler seems somewhat positive as to this point also. "Concludendum videtur," says he in his notes, "ad appendic. Selenograph. in Lunâ creaturas esse viventes, rationis, ad ordinata facienda, capaces." He affirms the same thing of the other planets, nay even of the sun itself; concerning which, in the epilogue to his fifth book, he breaks out into this expression: "Vel sensus ipsi exclamant, ignea hic habitare corpora, mentium simplicium capacia, verèque solem esse πυρὸς νοερῦ si non regem, at saltem regiam." Nor is this so strange as what some assert, who maintain the moon to be the paradise in which our first parents were created, and from whence, for their transgression, they were expelled, and driven down to this earth of ours. This Hieronymus Vitalis, in "Lexic. Mathemat. in voce Paradisus," endeavours to evince, as well from reason, as from the authorities of several of the fathers and schoolmen. He says indeed, that this is new and unheard-of, but not therefore to be accounted foolish and absurd: "Fateor," says he, "id novum, singulare, et hactenus inauditum, at non per hoc temerarium, atque intolerabile dixeris:" Then he urges in these express words; "modo partâ tantâ rerum notitiâ, lunæ facie Telescopio penitissimè observatâ, veterum dictis expensis, locis super hanc terram investigatis, Paradisum in Lunæ superficie collocari, ratio ipsa compellit." The reader may be farther satisfied as to this matter in that author; but it is time for us to return to Lucretius.

Ver. 761. In these six verses, he assigns another reason, and says, that if the moon do shine with unborrowed light, then we must imagine that another body, which is opacous and totally dark,

always moves with the moon, and obſtructs and turns away her beams.

This is ſaid to be the opinion of Anaximander; who, nevertheleſs, believed nothing like it: for, though he did perhaps ſay, that the moon ἴδιον ἔχει φῶς· had her own light. Plut. de Placit. Philoſoph. lib ii. cap. 26 & 28. (ἐφάσκειν τὴ σελήνην ψευδοειδῆ, τὸ ἀπὸ ἥλιε φωτίζεσθαι. Laërtius), yet he never ſo much as dreamed of any other body that moved about with her, and hindered and obſtructed her light.

Ver. 762. See the note above ver. 757.

Ver. 767. In theſe twenty-nine verſes, he propoſes their opinion, who held the one half of the moon's orb to be light, the other half dark. Now, ſays he, if you imagine this opinion to be true, imagine likewiſe ſuch an orb to be turned round on its axle or centre, and it will preſent the different phaſes we behold in the moon.

This was the opinion of Beroſus, a famous aſtronomer in the days of Antiochus Soter, as alſo of the Babylonians, who defended this doctrine againſt a ſect of the Chaldean aſtronomers, who, as Diodorus Siculus, lib. ii. witneſſes, agreed with the Greeks, that the moon ſhines with light that is not her own: but the Babylonians held one half of the moon's globe to be luminous, the other dark. And that both the Chaldeans and Babylonians too were very ſkilful in aſtrology, we have the teſtimonies of Diodor. lib i. de Divin. Pliny lib. vii cap. 56. and many others: Nay, Manilius, lib. i. ver. 38. teaches, That aſtrology was given by the gods to the kings of the Chaldeans: for it was God, ſays he,

Qui ſua diſpoſuit per tempora, cognita ut eſſent
Omnibus, et mundi facies, cœlumque ſupernum,
Naturæque dedit vires, ſe quæ ipſa recluſit,
Regales animos primum dignata movere,
Qui domuêre feras gentes Orienta ſub imo,
Quas fecat Euphrates, in quas et Nilus inundat.

At whoſe command the ſtars in order met,
Who times appointed when to riſe and ſet;
That Heav'n's great ſecrets might lie hid no more,
And man, inſtructed, gratefully adore:
Nature diſclos'd herſelf, and from her ſprings
Pure ſtreams deriv'd, o'erflow'd the minds of kings;
Kings next to Heav'n, who o'er the eaſt did ſway,
Where ſwift Euphrates cuts his rapid way;
Where Nile o'erflows, and whence the whirl reſtores
The day to us, and, paſſing, burns the Moors.
Creech.

Ver. 772. This and the following verſe run thus in the original.

Ut Babylonica Chaldæûm doctrina refutans
Aſtrologorum artem contra convincere tendit.

Upon which paſſage, if Faber's note be true, our tranſlator ſeems to be miſtaken in the ſenſe of his author: For that interpreter there ſays, that by "Babylonica Chaldæorum ars," our poet here means only thoſe Chaldæans, who followed the hypotheſis of Beroſus againſt the vulgar aſtrology. What it was, ſays he, Plutarch teaches, "de Placitis Philoſophorum," lib. ii. where he aſſerts, that an eclipſe of the moon is cauſed κάλα τὴν περὶ ἡμᾶς ἐπιστροφὴν τῦ ἀπυρωῦς μέρυς, i e. by her turning towards us that part of her orb which is not fiery. Then he ſubjoins, that the Chaldeans in this place, is the name of a particular ſect, not of the whole people, as might be proved out of Herodotus. To which I add this of Laërtius, πεφὶ δὲ Βαβυλωνίοις, ἢ Ἀσσυρίοις Χαλδαῖοι, Γυμνοσο φίσας παρὰ Ἰνδοῖς And with this agrees Cicero, lib. ii. de Divinat.

OF THE ORIGINAL AND PROGRESS OF ASTRONOMY AMONG THE ANCIENTS.

ASTRONOMY had its name ἀπὸ τῦ νόμυ τῶν ἄστρων, becauſe it teaches the laws and rules of the motions of the ſtars: but the words aſtronomy and aſtrology, were anciently promiſcuouſly uſed one for the other: for what Plato calls aſtronomy, Ariſtotle, and others, call aſtrology. Thus Salmaſius in Plin. Exercitat. tom. i. p. 6. ſays, That among the Greeks, Thales is ſaid firſt ἀστρολογῆσαι, to aſtrologize, though he never treated of the judiciary art. In like manner, Pherecydes was called an aſtrologer, though he was only an aſtronomer: and the nautical aſtrology of Phocus the Samian, which ſome aſcribe to Thales, treats only of the aſtronomical ſcience. Manilius, on the contrary, calls his poem *Aſtronomicon*, though all of it, except the firſt book, treat of judiciary aſtrology. But, in after ages, this ſynonymy was diſcontinued: for when the apoteleſmatic part, which, from the ſite and aſpect of the fixed ſtars and planets, teaches to divine their influences, as to the production of future events, came to get footing in Greece, where, anciently, only the meteorologic part of it, which teaches the motion of the ſtars, was known, they diſtinguiſhed them, and gave to the firſt the name of aſtrology, and called the laſt aſtronomy; which is properly underſtood, and deſcribed to be, *The Science*, which contemplates the motion, diſtance, colour, light, order, place, magnitude, and the like adjuncts of the fixed ſtars, and of the planets, without any reſpect to the judiciary part.

And as this ſcience itſelf, ſo the profeſſors of it too, were, in like manner, doubly diſtinguiſhed. Plato, in Epinomide, uſes the words Ἀστρονομικὸς, and Ἀστρονόμοι, in different ſenſes. He underſtands, by the firſt of them, thoſe who apply themſelves to diſcover the riſing and ſetting of the ſtars, in order to prognoſticate concerning the ſeaſons of the year, and the temperature of the air. By the laſt of them, he means thoſe who particularly confine their ſtudies to the theory of the planets.

The original of aſtronomy, ſays Gaſſendus, proceeded from admiration; "Originem ipſi ipſa fecit admiratio. Introduct. Aſtronom." For our forefathers, aſtoniſhed at the ſplendour, variety and multitude of thoſe glorious bodies, and obſerving their conſtant and regular motions, applied themſelves to the ſtudy of this ſcience, and tranſferred their admiration into obſervations, which,

in proceſs of time, they marked down in tables or parapegmas, for the inſtruction of poſterity: and for this reaſon, Ricciolus, in his preface to the firſt tome of the New Almageſt, affirms aſtronomy to be almoſt coeval with the ſtars themſelves: And that, together with other arts divinely infuſed, it was reduced into experiment and practice by Adam himſelf, who, according to Suidas, was the parent and author of all arts and doctrines; πάντα, ſays he, πάντα ἐυρήματα καὶ διδάγματα. Beſides, that Adam particularly inſtructed Seth in this aſtral ſcience, and that too by writing, is the opinion of all the Jewiſh and Arabian doctors, and among them, particularly Gelaldinus Arabs, cited by Kircher in Obeliſc. Pamphil. p. 5. if he be the author of the book, which goes under the title of "Liber Creationis;" of which ſome are in doubt, even though it be commented upon as ſuch, by Rabbi Abraham, and Rabbi Joſeph Ben Uziel. But, however that be, Joſephus, in the eleventh book of the Jewiſh Antiquities, writes, that Seth having been inſtructed in aſtronomy by Adam, and knowing that the world was twice to be deſtroyed, once by water, and once by fire, reduced this art to an epitome, and for the information and benefit of poſterity, engraved it on two pillrrs, one of brick, the other of ſtone; the firſt to preſerve it from the fire, the ſecond from the deluge; which laſt pillar he affirms to have been remaining in his days at a place called Syrias or Seirath, which If. Voſſius, lib. i. de Ætate Mundi, ſuppoſes to be the land that borders on Mount Ephraim, not far from Jericho.

Seth, the ſon of Adam, having thus engraved on two pillars, the theory of this celeſtial ſcience, which he had received from his father; and aſtronomy being thus brought into the world, the ſucceeding patriarchs, who, by reaſon of their longevity, had the opportunity of obſerving many aſtral revolutions, cultivated and improved it; Nay, ſome of the Jewiſh doctors, particularly Rabbi Iſaac Aberbenel in Diſſertat. de Longævitate prim. Patr. goes ſo far as to affirm, that the lives of the patriarchs were, by the Divine Providence, miraculouſly prolonged for no other end, than that they might apply themſelves to the ſtudy of this celeſtial ſcience; in which the moſt celebrated for his knowledge is Enoch, whoſe books on that ſubject are ſaid to be extant to this day in the territories of the queen of Sheba, as Voſſius de Scientiis Mathemat. affirms; at leaſt they are ſeveral times cited by Tertullian and Origin.

It is not certainly known to what degree of improvement this ſcience was brought before the flood; but from the teſtimony of Origin, citing the above-mentioned books of Enoch, it appears, that the ſtars were then reduced into aſteriſms, under peculiar and diſtinct denominations, concerning which that patriarch, who was the ſeventh from Adam, writ many ſecret and myſterious things. Beſides, it is evident from ſcripture itſelf, that the year was then, as it is now, computed by twelve revolutions of the moon, to one of the ſun's through the zodiac; for it is ſaid expreſsly in Geneſis, that Noah entered into the ark the ſeventeenth day of the ſecond month, and went out of it the twenty-ſeventh day of the ſecond month of the year following: In the ſame book likewiſe expreſs mention is made of the ſeventh and tenth months: From whence we may with good reaſon infer, that the patriarchs had then the knowledge of the courſes of the ſun and moon, with their periods, and, in all probability, of the other planets alſo.

After the flood, when mankind came to be ſcattered over the face of the whole earth, aſtronomy began to be ſtudied by ſeveral nations, who, no doubt, had their firſt knowledge of it from Noah and his poſterity; and hence aroſe the conteſt for the honour of its invention. But ſince it cannot be denied, that mankind diſperſed themſelves out of Aſia into Afric, Europe, and other parts of the world, the Aſiatics may juſtly claim to themſelves the glory of it; and among them chiefly the Babylonians, Chaldeans, and Bactrians; of whom the moſt renowned for their ſkill in this ſcience are Evahdnes, Belus, Zoroaſter, and Otanes; as alſo Cidenas, Naburianus, Sudinus, and Seleucus the Chaldean.

From the Aſſyrians and Chaldeans it came to the Egyptians, being brought thither by Abraham the patriarch, as Euſebius, lib. ix. Præparat. Evangel. proves from the authority of Joſephus, Eupolemus, Artapanus, and others, as they are cited by Alexander Polyhiſtor. But Eupolemus ſeems to infer that Abraham, before his deſcent into Egypt, taught it to the Phœnicians. Others however ſay, that Mercury firſt taught the Egyptians Aſtronomy, and indeed all other arts and ſciences. This is poſitively aſſerted, not only by Samblichus, but by Plato in Phœdrus, where he calls him πατὴρ γραμμάτων, and by Cicero, lib. iii. Divinat. Vide etiam Lactantium, lib. i. cap. 6. There are others who attribute the honour of it to the Egyptians before the Chaldeans, who, ſay they, were even themſelves firſt inſtructed in it by the Egyptians. To make good which aſſertion they produce the teſtimonies of Diodorus Siculus, Biblioth. lib. i. and of Hyginus Fabul. 271. the firſt of whom ſays, that Babylon was a colony of the Egyptians, founded by Belus of Libya, who inſtituted there a college of prieſts, to the end they might contemplate the ſtars in the ſame manner as thoſe of Egypt. The laſt, that one Evahdnes is ſaid to have come from beyond the ſeas into Chaldæa, and there to have taught aſtronomy.

But if this ſcience were known to the Egyptians, before it was to the Babylonians and Chaldeans, how comes it to paſs, that the Egyptian obſervations are ſo much later than thoſe of the Babylonians? For we ſcarce find any of the Egyptian to precede the death of Alexander the Great; than which even thoſe of the Greeks are earlier; but the Babylonian obſervations were manifeſtly made almoſt two thouſand years before that time. And Cicero, lib. i. de Divinat. aſcribes it firſt to the Aſſyrians: The Aſſyrians, "ut ab ultimis auctoritatem repetam," ſays he, by reaſon of the plainneſs and large extent of

their country, which afforded them on all ſides a clear and open view of heaven, obſerved the courſe and motion of the ſtars. And having framed a due calculation of their revolutions, they from thence made predictions of future events. And amongſt the Aſſyrians, the Chaldeans "(non ex artis, ſed ex gentis vocabulo nominati)" arrived to ſuch a perfection of ſkill, that they could foretel what ſhould happen to any one, and under what fate they were born; which art the Egyptians learned of them many ages ago. Thus Cicero.

There are others nevertheleſs who deny this honour both to the Chaldeans and Egyptians, aſſigning the invention of aſtronomy to the Ethiopians; of this opinion is Lucian, περὶ Ἀστρολογίας. But this aſſertion ſeems of little weight, it being contrary to the general ſtream of tradition, even long before Lucian's time.

The Africans too pretend to the invention of aſtronomy; and among them particularly the Mauritanians, who are ſaid to have been inſtructed in that ſcience by their king Atlas, the ſon of Libya.

Ariſtotle aſcribes the invention of it, wholly to the Babylonians and the Egyptians: Αἰγύπτιοι, καὶ Βαβυλώνιοι, παρ' ὧν πολλὰς πίσεις ἔχομεν περὶ ἑκάστων τῶν ἄστρων. And how the Egyptians came to be ſkilful in that ſcience, Ptolomy, who was himſelf of Egypt, gives us this reaſon ὅτι μάλλον συνοικοῦνται τοῖς Διὸς μοις, καὶ τῷ τῷ Ἑρμῇ. And why? διότερ διανοητικοί τε καὶ συνετοὶ καὶ ὅλως ἱκανοὶ περὶ τὰ μαθήματα. Of the Babylonians he ſays, ὅτι τῇ παρ' ἐκείνοις καὶ τῷ τῷ Ἑρμῇ συνοικοῦνται, διὸ καὶ παρ' αὐτοῖς τὸ μαθηματικὸν καὶ παρατετηρημένον τῶν ἀστέρων συνέστηται.

Thus from the ſeveral nations before-mentioned, aſtronomy ſeems to have been anciently divided into three different and chief ſects, that is to ſay, the Aſſyrian, under which is comprehended the Babylonian and the Chaldaic, the Egyptian, and the Mauritanian or Atlantic; of which laſt nevertheleſs the Romans made no account; for among them were enumerated only theſe three ſects, the Chaldaic, Egyptian, and Grecian. Now Eudoxus is ſaid to have been the firſt, who from the Egyptians brought aſtronomy to his countrymen the Greeks; and Beroſus to have brought into Greece the ſcience of Genethlialogy from his countrymen the Chaldeans. Vitruvius, lib. ix. cap. 7. "Eorum autem inventiones, quas ſcriptis reliquerunt, qua ſolertiâ, quibuſque acuminibus, et quam magni fuerint, qui ab ipſâ Chaldæorum natione profluxerunt, oſtendunt: Primuſque Beroſus in inſulâ, et civitate Coâ confedit, ibique aperuit diſciplinam." And Pliny ſays, that the Athenians publicly erected a ſtatue with a golden tongue to Beroſus, for his divine predictions. After him Antipater and Achinapolus were reputed famous Genethliologiſts. Of natural cauſes and effects, Thales, Anaxagoras, Pythagoras, Xenophantus, and Democritus are eſteemed the moſt eminent obſervers. After them, following their inventions, and obſerving beſides the riſe and ſetting of the ſtars, and the ſeaſons of the year, Eudæmon, Calliſthus, Melo, Philippus, Hipparchus, Aratus, &c. left to poſterity their aſtrological prognoſtics, in their tables, which are called Parapegmas; of which ſee Geminus and Theon in Arati Phænom. Thus though it be certain, that the Greeks derived their knowledge in aſtronomy from the Chaldeans and Egyptians, yet ſo great was their preſumption, as confidently to affirm, that the invention of it was due to them, particularly to the Rhodians, from whom they pretend that the Egyptians received it, as Diodorus Siculus reports in the ſtory of the Heliadæ. And, laſtly, others of them aſcribe its original to their poet Orpheus; but thoſe opinions favour too much of the fable, and therefore we may rather ſubſcribe to their belief, who hold, that Thales the Mileſian firſt brought aſtronomy into Greece, having derived his knowledge in that ſcience from the Egyptians.

After Thales, it was improved by Anaximander, Anaximenes, Anaxagoras, Democritus, Empedocles, Euctemon, Meton, Eudoxus, and others of the Athenian School, till the time that Alexander the Great founded the city of Alexandria in Egypt. After which the Ptolemies, his ſucceſſors, having erected there an academy for all manner of ſtudies, the Grecian aſtronomy made its retreat thither; and flouriſhed under thoſe princes in equal glory with the Egyptian. And from thence we hear of the famous names of Antolychus, Calipus, Timochares, Ariſtyllus, Eratoſthenes, Conon, Hipparchus, Soſigenes, Theon the elder, Ptolomy, Paulus the Alexandrian, Theon the younger, furnamed likewiſe the Alexandrian, and his daughter, the excellent, but unfortunate, Hypatia.

It was long before aſtronomy was introduced into Italy, or had any profeſſors among the Romans; for though Dion Pruſæus in Orat. 49. affirm, that the Pythagoreans inſtructed the Italians in that ſcience, and that in all probability the doctrine of Philolaus, Timæus, Archytas, and others, the fame of whoſe learning had invited even Plato himſelf to make a voyage into Italy, could not have been concealed from the curious and ingenious Romans; yet that martial people, who were more addicted to arms than arts, entertained but late and ſlowly too, theſe ſpeculative ſtudies: Nor to paſs by the rude ſketches of Numa Pompilius, does the Roman hiſtory mention any perſons as conſiderably knowing in aſtronomy, before Cauis Sulpicius Gallus, who was legate to Æmilius Paulus, in the war againſt Perſes, king of Macedon, and who firſt among them publiſhed a treatiſe of eclipſes. After him, we read that Lucius Taruntius, Nigidius Figulus, Varro, and Cicero, applied themſelves to the ſtudy of aſtronomy; but to none of the Romans is that ſcience ſo much indebted, as to their great dictator C. Julius Cæſar, who, as Lucan witneſſes,

——Media inter prælia ſemper
Stellarum, cælique plagis, ſuperiſque vacabat.

And who aſſiſted by the Egyptian Soſigenes, re-

duced the Roman year to the courſe of the ſun, which we yet retain; and writ a treatiſe of the ſtars in the Greek tongue. From him the mathematical arts, and particularly aſtronomy, began to flouriſh among the Romans: and after his example, Auguſtus Cæſar, who was his nephew and ſucceſſor, encouraged the ſtudy of it.

Let this ſuffice as a brief indication of the firſt riſe and authors of aſtronomy, and of the promoters of it among the ancients. It would perhaps be too tedious to continue the progreſs of it down to theſe times, and to ſhow when, how, and by whom it has been improved, and brought to that degree of perfection to which it is now arrived.

Ver. 774. Here we ſee that though Lucretius, after Epicurus, believed the firſt opinion to be the moſt probable, yet he does not condemn the latter. And thus too Epicurus in Laërtius, lib. x. ſays, that though one reaſon may ſeem better than any of the other, for the ſolution of any problem whatever, yet we ought not therefore immediately to condemn all the reſt that may be given, if they have any appearance of truth, even though but one of them can be true.

Ver. 776. In theſe twenty-ſeven verſes he propoſes the opinion of Epicurus, who held that the moon is created and dies daily, in a certain form and figure. In like manner, as he held the ſun to be daily extinguiſhed in the weſt, and created again in the eaſt. And that this may be, ſays he, ſeveral other things demonſtrate: For thus, at certain and inviolable times, the ſeaſons of the year follow one another; the ſpring precedes the ſummer,—the ſummer the autumn,—the autumn the winter,—the winter the ſpring, &c. Ovid. Metam. xv. ver. 196. deſcribes in like manner the conſtant ſucceſſion of the four ſeaſons of the year, and compares them to the four ages of man's life. I omit the original for brevities ſake, and will only give Dryden's tranſlation of it to illuſtrate this paſſage of Lucretius:

Perceiv'ſt thou not the proceſs of the year;
How the four ſeaſons in four forms appear,
Reſembling human life in ev'ry ſhape they wear?
Spring firſt, like infancy, ſhoots out her head;
With milky juice requiring to be fed,
Helpleſs, though freſh; and wanting to be led.
The green ſtem grows in ſtature and in ſize,
But only feeds with hope the farmer's eyes:
Then laughs the childiſh year, with flowrets crown'd,
And laviſhly perfumes the fields around;
But no ſubſtantial nouriſhment receives;
Infirm the ſtalks, unſolid are the leaves.
Proceeding onward, whence the year began,
The ſummer grows adult, and ripens into man:
This ſeaſon, as in men, is moſt replete
With kindly moiſture, and prolific heat.
Autumn ſucceeds; a ſober, tepid age,
Not froze with fear, nor boiling into rage;
More than mature, and tending to decay,
When our brown locks repine to mix with odious gray.
Laſt winter ſweeps along with tardy pace,
Sour is his front, and furrow'd is his face:
His ſcalp if not diſhonour'd quite of hair,
The ragged fleece is thin; and thin is worſe than bare.

Ver. 782. For Venus, the goddeſs of generation accompanies the vernal ſeaſon; as Lucretius himſelf elegantly ſings at the beginning of the firſt book; which Dryden has no leſs elegantly rendered in theſe verſes.

Delight of human kind, and gods above:
Parent of Rome: propitious queen of love:
Whoſe vital pow'r, air, earth, and ſea ſupplies,
And breeds whate'er is born beneath the rolling ſkies:
For ev'ry kind by thy prolific might,
Springs, and beholds the regions of the light:
Thee, goddeſs, thee the clouds and tempeſts fear;
And at thy pleaſing preſence diſappear:
For thee the land in fragrant flow'rs is dreſs'd;
For thee the ocean ſmiles, and ſmooths her wavy breaſt,
And heav'n itſelf with more ſerene and purer light is bleſs'd.
For when the riſing ſpring adorns the mead,
And a new ſcene of nature ſtands diſplay'd;
When teeming buds, and cheerful greens appear,
And weſtern gales unlock the lazy year;
The joyous birds thy welcome firſt expreſs,
Whoſe native ſongs thy genial fire confeſs:
Then ſavage beaſts bound o'er their flighted food,
Struck with thy darts, and tempt the raging flood:
All nature is thy gift; earth, air, and ſea,
Of all that breathes the various progeny,
Stung with delight is goaded on by thee.
O'er barren mountains, o'er the flow'ry plain,
The leafy foreſt, and the liquid main,
Extends thy uncontrol'd and boundleſs reign.
Through all the living regions thou doſt move,
And ſcatter'ſt, where thou go'ſt, the kindly ſeeds of love.

See book i. ver. 1.

Moreover, our tranſlator has repeated this and the two following verſes from book i. ver. 19. though his author have not.

Ver. 784. The weſt wind of which, book 1. ver. 21. Lucretius here calls it zephyrus: which is likewiſe a wind that blows from the equinoctial weſt, contrary to the wind called *ſubſolanus*, which blows from the equinoctial eaſt. It was ſo called from ζωηφόρος, that brings life; becauſe, when it blows, all things bud and ſhoot forth. This wind was feigned to be the forerunner of Venus, becauſe it blows chiefly in the ſpring, with which ſeaſon Venus is ſaid to be moſt delighted.

Ver. 785. "Lactantius de falſâ Religione, lib. i." calls her Faula; for which Voſſius there reads Flaura; ſhe was, as Verrius in the ſame author ſays, *Scortum Herculis*, the Harlot of Hercules: but according to others, ſhe was a Roman dame, who, by her lewd practices having heaped up a

great deal of money, bequeathed her eſtate when ſhe died, to the commonwealth of Rome. This is certain, that the ſenate made her the goddeſs of flowers, gardens, and meadows: "ut pudendæ rei quædam dignitas haberetur," as Lactantius in the place above-cited tells us: they inſtituted likewiſe feſtivals in her honour, called Floralia, which is confirmed by Ovid, lib. v. Faſtorum:

Convenêre patres, et ſi benè florat annus,
Numinibus veſtris annua feſta vovent,

And the ſame poet acquaints us, that theſe ſolemnities were performed towards the latter end of April:

Incipis Aprili, tranſis in tempora Maii;
Alter te fugiens, cum venit, alter, abit.

Theſe feſtivals therefore were inſtituted, "ut fruges cum arboribus, aut vitibus benè proſperêque floreſcerent," ſays Lactantius in the ſame place. And in theſe Floralia, vile, impudent ſtrumpets were wont to dance naked in the ſtreets to the ſound of trumpets; to which cuſtom Juvenal alludes, ſat. vi. ver, 249.

——————Digniſſima prorſus
Florali matrona tubâ,——————

Ver. 790. The Eteſias are winds that blow conſtantly for about eleven days together in the heat of ſummer, and chiefly after the riſe of the dog-ſtar. Hence they are called Eteſia, which is as much as to ſay, annual, from the Greek word ἔτος, a year. Thus Pliny, lib. xxxvii. cap. 18. Strabo calls them *ſubſolani* of which ſee above ver. 784. others weſt winds, and others eaſt, and Lucretius in this place makes them north winds: "Eteſia flabra aquilonum." See more book vi. ver. 718.

Ver. 792. "Lucr. Graditur ſimul Evius Evan." Bacchus was called Evius and Even, from the word ἰὺω, which the mad Bacchæ or Bachides uſed in their orgies: Ovid. lib. iv. Metam. ver. 15.

Nyctheliuſque Eleleuſque Parens, et Jacchus et Evan.

Ver. 793. Lucretius.

Altitonans Vulturnus, et Auſter fulmine pollens'

Vulturnus, of which Creech takes no notice, is the ſouth-eaſt wind, ſays Agell. lib. 2. cap. 22. Auſter is the ſouth wind, and generally blows in autumn.

Ver. 803. In theſe twenty-one verſes he treats of the eclipſes of the ſun and moon: the ſun, ſays he, is eclipſed, when the moon, or any opacous body, below his globe, interpoſes between that and the earth, and thus intercepts his beams, and hinders thoſe rays of light from coming forward to the earth. The moon is eclipſed, when ſhe happens to be in the ſhadow of the earth, or any other opacous body, that is interpoſed between her orb, and the ſun: beſides; why may not both the ſun and the moon grow faint and ſicken, nay, as it were, fall into a ſwoon, when they chance to go through any places of the heavens, that are infectious to them, and deſtructive of their fires and light? This laſt was the opinion of Xenophanes.

Ver. 816. Lucretius.

Menſtrua dum rigidas coni perlabitur umbras.

That is to ſay, while the moon, in her monthly courſe, paſſes by the rigid ſhadow of the earth; which ſhadow is of a conic figure. But ſome interpret *coni* to be meant of the earth itſelf, as if it were κωνοειδὴς, ſhaped like a cone, becauſe Ariſtotle, lib. 2. Meteor. ſays, That the earth is ſhaped like a timbrel, and that the lines drawn from its centre make two cones: but the poet means the lunar eclipſe is made, by reaſon of the ſhadow of the earth, that ſtretches out in the ſhape of a cone.

Ver. 818. The ancient heathens were of opinion, that witches, by muttering ſome charms in verſe, cauſed the eclipſes of the moon; which they conceived to be, when the moon, the goddeſs of the earth, was brought down from her ſphere by the virtue of thoſe incantations: They believed likewiſe, that in theſe eclipſes, ſhe ſickened and laboured as in an agony, and ſuffered a kind of death: Of this belief were even Stechorus and Pindar, as Pliny relates, lib. 2. cap. 12. Milton, though not of the ſame opinion, yet deſcribes this fooliſh belief,

Not uglier follow the night-hag, when call'd
In ſecret riding through the air ſhe comes,
Lur'd with the ſmell of infant blood to dance
With Lapland witches, while the lab'ring moon
Eclipſes at their charms.——

And Lee in the tragedy of Œdipus, ſpeakng of the moon in eclipſe,

——The ſilver moon is all o'er blood:
A ſettling crimſon ſtains her beauteous face:
Sound there, ſound all our inſtruments of war;
Clarions, and trumpets, ſilver, braſs, and ir'n,
And beat a thouſand drums to help her labour.

The vain heathens farther believed, That the moon being by theſe inchantments brought down from heaven, they were at thoſe times in danger of loſing that celeſtial light: and therefore they made a great noiſe by beating of braſs veſſels, by ringing of bells, ſounding of trumpets, whooping, hallowing, and the like to drown the witches mutterings, that the moon not hearing them, they might be rendered ineffectual, and ſhe ſuffer no hurt. Thus Medea in Ovid boaſts that ſhe could draw down the moon from heaven:

Te quoque, Luna, traho, quam Temeſæa labores
Æra tuos minuant——————

Metam. 7. ver. 207.

And Tibullus.

Cantus et è curru lunam diducere tentat,
Et Fecerant, ſi non æra repulſa ſonent.

And Statius. 6. Theb.

——Attonitis quoties divellitur aſtris
Solis opaca ſoror, procul auxiliantia gentes
Æra crepant.———

And Seneca in Hippolytus.

Et nuper rebuit, nullaque lucidis
Nubes ſordidior vultubus obſtitit:
At nos ſolliciti lumine turbido,
Tractam Theſſalicis carminibus rati,
Tinnitus dedimus———

And Livy, Decad. 7. 3. ſpeaks of it, as of an ordinary cuſtom, in theſe words: "Qualis in defectu Lunæ ſilenti nocte fieri ſolet, edidit clamorem." And Juvenal ſays pleaſantly enough of a loud ſcolding woman, that ſhe alone was able to relieve the moon out of an eclipſe:

——Jam nemo tubas atque æra fatiget,
Una laboranti poterit ſuccurrere Lunæ.
Sat. 6. ver. 422.

And this abſurd ſuperſtition was ſo grounded in the Pagans, that after many of them were become Chriſtians, it was not quite rooted out: not even in St. Ambroſe's time, whoſe reprehenſion of this piece of Paganiſm is cited by Turnebus in Adverſar. And Maximus likewiſe blames it in a *homily de defectu lunæ*. And Bonincontrius, who lived yet ſeveral ages later, affirms, That he himſelf had ſeen this abſurd cuſtom practiſed upon the like occaſion, by his own countrymen, the Italians. The Turks continue it to this day, as Scaliger affirms: And Plutarch in the life of Æmilius reports, That the Romans, beſides their beating of brazen veſſels, ſounding of trumpets, &c. were wont to reach up flaming links and torches towards heaven, to reſupply, and kindle again the light of the moon, which they believed by charms to be extinguiſhed. Delrius in Senec. Tragœd. ſays, he has read that the Indians are wont with tears and lamentations to bewail this effect or deliquium of the moon, believing the ſun had then whipt her till ſhe bled, to which they impute the cauſe of her dark and ſanguine colour. In Commentar. ad Hippolyt. pag. 195. Vide etiam Turnebum in Adverſar. lib. xxii. cap. 23 and 24. And Pincierus in Parerg. Otii Marpurg. lib. ii. cap. 37. Of this ſuppoſed fainting of the moon Wowerus alſo makes mention in his Pægnion de Umbrâ, cap. 8. towards the end. But we may farther obſerve, that the Arabians believed the moon to be in the like agony, when ſhe eclipſed the ſun, as appears by a cuſtom they obſerved at their new-moon. For keeping holy the day of their neomenia, or new-moon, and believing it unlucky to have the moon ſuffer any hurt on that day, they were wont, becauſe ſhe might on that day eclipſe the ſun, the ſolar eclipſe happening when the moon is new, to defer the celebration of their neomenia till the next day: or at leaſt for ſixteen hours, till the ſun was paſt the eclipſe. And hence it is that the aſtronomers diſtinguiſh the neomenia of the Arabians, into the cœleſtis, which was the firſt and natural time; and the civilis, which was not the true time, but the day following, and on which they celebrated their neomenia to avoid the ill luck, and improſperous accidents, which their ſuperſtition made them apprehend. See Nicolaus Mulerius in his Diatribe de Anno Arabico, in the explication of the Arabian Epocha, or the Hegyra. Ubbo Emmius has inſerted it in his chronology between the fourth and fifth books.

Ver. 824. Having explained after his manner the motions of the ſun, moon, and ſtars, he deſcends from heaven to his native element, and in theſe ten verſes tells us that he is going to deſcribe the riſe and origin of things from the earth, the common parent of all.

Ver. 834. Lucretius deſcribes the riſe of things from the new-formed earth in ſo lively a manner, that he ſeems even to have been preſent at their birth. And firſt, in theſe twenty-one verſes he tells us that the earth firſt produced the graſs, herbs, and flowers, then the trees, then the leſs perfect, and laſt the moſt excellent animals. For, ſays he, ſince we ſee that even now, when the whole world is decayed, and worn out to a great degree, ſhe ſtill produces mice, frogs, and other the like ignoble animals, what may we not reaſonably believe of her, when both herſelf and her huſband Æther, were in their blooming age?

Here we may take notice that the order which Lucretius obſerves in the creation of things, differs very little from that, for which we have a better authority than his: But let us here a Chriſtian poet deſcribe the ſame thing.

——Then the earth,
Deſart, and bare, unſightly, unadorn'd,
Brought forth the tender graſs, whoſe verdure clad
Her univerſal face with pleaſant green.
Then herbs of ev'ry leaf, that ſudden flow'r'd,
Op'ning their various colours, and made gay
Her boſom ſmelling ſweet: And theſe ſcarce blown,
Forth flouriſh'd thick the cluſt'ring vine, forth crept
The ſmelling gourd, upſtood the corny reed
Embattl'd in her field, and th' humble ſhrub,
And buſh, with frizzled hair implicit: Laſt,
Roſe as in dance the ſtately trees, and ſpread
Their branches hung with copius fruit, or gem'd
Their bloſſoms: With high woods the hills were crown'd,
With tufts the valleys, and each fountain-ſide,
With borders long the rivers.———

Ver. 847. Here the poet proves by a ſimilitude, that all animals did in the beginning proceed from the humidity of the earth, warmed and impregnated by the heat of the ſun, in like manner as we now ſee worms and inſects generated.

Ver. 849. Lucretius foreſeeing that it might be objected, that perfect and adult animals do not burſt out of the earth, intimates in this place, that the ſun is now grown a diſabled lover, and the earth paſt her teeming time: and thus their vigour being exhauſted, they cannot now pro-

duce horſes, lions, &c, nor any of thoſe large animals, which they did in the beginning of the world when they were both in the prime and flower of their age.

Ver. 853, 854. In theſe nineteen verſes, he ſays, That firſt of all animals, and that too in the ſpring, for that was the moſt proper ſeaſon, the birds were hatched from eggs, which, as Milton expreſſes it,

Burſting with kindly rapture, forth diſclos'd
Their callow young: but feather'd ſoon, and fledge,
They ſum'd their pens, and ſoaring th' air ſublime,
With clang deſpis'd the ground:——

For, ſays our poet, they had growth and ſtrength ſufficient to go in ſearch of their food: Then from certain little bags or bladders, which he calls wombs, and that ſtuck to the earth, the other animals and men themſelves burſt forth: while for their nouriſhment a proper liquor, very like milk, flowed from the veins of mother earth into their infant mouths: For we ought to believe, that the earth, when ſhe brought forth her young, had milk no leſs than mothers has now a-days, when they bring forth their children. Thus the earth ſupplied them with food, the temperature of the air was ſuch that they needed no garments, and the meadows, thick with graſs, afforded them eaſy beds.

This firſt manner of the origin of things Lucretius explains according to the opinion of Anaximander, and of ſome others of the ancient philoſophers, as we ſee in the firſt book of Diodorus Siculus, near the beginning, where he ſays, That the earth firſt ſtiffen'd and grew together, when the circumfuſed fire of the ſun had enlightened and warmed it all around: Then, when by reaſon of its being thus heated, the outmoſt ſurface of it was in a manner fermented, ſome humidities ſwelled in many places, and in them there grew certain ſlimy ſtinking ſubſtances, involved in tenuious membranes: the like to which may be ſeen to this day in fens and marſhes, where the waters ſtagnate, when after cold weather, the air grows hot on a ſudden, and is not changed by degrees: Now thoſe humid things which we mentioned before, being animated by the heat, received nouriſhment in the night by the miſts that fell from above: but in the day were conſolidated and hardened by the heat. Laſtly, When they that grew in the wombs of the earth, had attained their due growth, the membranes being burſt and broken to pieces, diſcloſed the forms and ſhapes of all kinds of animals: And ſuch of theſe as had the greateſt ſhare of heat, went to the higher places, and became birds: but ſuch of theſe as had retained the earthly ſolidity, were reckoned in the rank of reptiles, and other terreſtrial animals: and thoſe that participated moſt of the nature of man, ran together to the places, where human kind aſſembled, and which was called the place of their birth. Thus far Diodorus.

Ver. 854 It is queſtioned by ſome, whether birds, which are generally called *genus aëreum*, and in the ſacred ſcripture itſelf, *volatilia cæli*, may be properly reckoned among terreſtrial animals. Ovid, in his diſtribution of animals at the creation, ſeems not to allow them to be ſo.

Aſtra tenent cœleſte ſolum, formæque Deorum,
Ceſſerunt nitidis habitandæ piſcibus undæ.
Terra feras cepit, volucres agitabilis Aër.
Metam. I. *ver* 73.

Cicero obſerves the like diſpoſition in the ſecond book of the nature of the gods, and in Timæus: ſo too does Ariſtotle, as he is cited by Plutarch in 5. de Placit. Philoſoph. To theſe may be added the belief of the ancient Greeks, and which they had from the Egyptians, that birds were produced before the earth itſelf was formed, to which Ariſtophanes in Avibus alludes. But Manillius more truly places them upon earth: ſpeaking of which he ſays,

Hanc circum variæ gentes hominum atque ferarum,
Beriæque colunt volucres.——
Lib. I. *ver.* 236.

Apuleius agrees with Manilius, and ends the controverſy in theſe words: "Si ſedulo animadvertas, ipſæ quoque aves, terreſtre animal, non aërium, perhibeantur: ſemper enim illis victus omnis in terrâ; ibidem pabulum, ibidem cubile, tantumque aëra proximum terræ volando verberant: iterum cum illis feſſa ſunt remigia alarum, terra ceu portus eſt." That is, if you weigh the matter aright, birds may be truly affirmed to be rather a terreſtrial than an aërial animal, for they have all their food from the earth; there they feed, and there they reſt: when on wing, they indeed fan the air that is next the earth; but when their wings grow weary, the earth is their reſting place. But as to this queſtion, ſee Hieron. Magius, lib. i. Miſcellan. cap. ult. Jacobus Cruteus Syllog. iii. and Kircher in his Iter. Ecſtatic. ii. Dialog. ii. cap. 5. I will only add, that another difficulty, not much unlike the former, if either of them deſerve to be called ſo, has puzzled the brains of Ariſtotle, Theophraſtus, and moſt of the ancient Peripatetics, to wit, which were firſt created, birds or eggs, ſince neither an egg can be produced without a bird, nor a bird without an egg; for ſo Cenſorinus propoſes the queſtion, "Aveſne ante, an ova generata ſint, cùm et ovum ſine ave, et avis ſine ovo gigni non poſſit?" de Die Natali, cap. 14. Diſarius in Macrobius Saturnal. lib. vii. cap. 16. ſums up the arguments on both ſides, and gives the deciſion, of which the reader may there be informed.

Ver. 857. Milton's deſcription of the firſt beaſts riſing out of the ground at their creation, is ſo lively and ſublime, that it well deſerves to be tranſcribed by way of illuſtration, to this paſſage of our poet.

——The earth obey'd, and, ſtraight
Op'ning her fertile womb, teem'd at a birth
Innum'rous living creatures, perfect forms,
Limb'd, and full grown: out of the ground up roſe,

As from his lair, the wild beaſt where he wons
In foreſt wild, in thicket, brake, or den:
Among the trees, in pairs they roſe, they walk'd:
The cattle in the fields and meadows green:
Thoſe rare and ſolitary, theſe in flocks
Paſt'ring at once, and in broad herds up ſprung
The graſſy clods now calv'd; now half appear'd
The tawny lion, pawing to get free
His hinder parts; then ſprings; as broke from bonds,
And rampant ſhakes his brinded mane; the ounce,
The libbard, and the tyger, as the mole
Riſing, the crumbled earth about them threw
In hillocks: the ſwift ſtag from under ground
Bore up his branching head: ſcarce from his mold
Behemoth, biggeſt born of earth, upheav'd
His vaſtneſs: fleec'd the flocks, and bleating roſe,
As plants: ambiguous between ſea and land,
The river horſe, and ſcaly crocodile, &c.
Paradiſe Loſt, B. 7.

Lucretius in this place ſpeaks not after the opinion of Epicurus only, but partly too of the Stoics, who, as Lactantius witneſſes, believed, "Hommes in omnibus terris & agris tanquam fungos eſſe generatos:" That men were born, like muſhrooms in every field: and partly after the opinion of Animaxander, who, though he held that men, and all the other animals were produced of the water, yet as Plutarch de Plac. Phil. lib. v. cap. 19. ſays, he taught, that they were contained in thorny bags, and ſhut up in them, till the age of puberty, and then burſting from thoſe priſons, they came out men and women, already able to nouriſh themſelves: And, laſtly, partly after the opinion of Archelaus, who in Lactantius, lib. ii. teaches, "homines ortos è terrâ, quæ limum ſimilem lacti ad eſcam eliquaverit," that men were born of the earth, which for their nouriſhment oozed out a ſlime like milk. Others had yet other opinions concerning the original of mankind: Juvenal, Sat. 6. v. 11.

Quippe aliter tunc orbe novo, cœloque recenti
Vivebant homines, qui rupto robore nati,
Compoſitique luto, nullos habuêre parentes.

In which paſſage that poet hints at two other ways of the creation of man: the one from trees, the other from the earth. As to the firſt Britannicus ſays, "Quum primâ illâ ætate in ſpeluncis ſylviſque more ferarum, habitarent, quumque ex arboribus vetuſtate cavatis, tanquam ex domicilio exirent, putabantur ex arboribus eſſe nati." Then alleging this verſe of Virgil, Æneid. 8. 315.

Genſque virum truncis, & duro robore nati,

he ſhows in thoſe words the probable cauſe of the fiction: that as they dwelt in woods, ſo they ſeemed to be born of the trees: but ſurely he forgets himſelf a little, when he ſays "ex arboribus vetuſtate cavatis," having but juſt before ſaid, "primâ illâ ætate," for how then could the trees have had time to decay and grow hollow? yet Autumnus commits the ſame overſight. The ſecond way, mentioned by Juvenal of man's original, gives juſt grounds to believe, that though many of the more learned among the Heathens had read the hiſtory of Moſes, yet that they either deſpiſed, or corrupted, or oppoſed the inſtruction: witneſs Julian the apoſtate, who in a fragment of an epiſtle publiſhed with his other works by Petavius, page 534. &c. ſeqq. delivers it as the theology of the ancient Heathens, that mankind increaſed not from two perſons, as Moſes taught, but that when Jupiter created the world, drops of ſacred blood fell down, out of which aroſe mankind, ὡς ὁτε Ζεὺς ἐκύσμει τὰ πάντα, σάμενων αἵματος ἱερᾷ πιφασῶν, ἐξ ὧν πε τὸ τῶν ἀνθρώπων βλαστήσεις γένος· impiouſly urging, that otherwiſe the world could not have been ſo ſoon increaſed, though women, as he lewdly adds, had been as fruitful as ſwine. But what wonder is it, that men had ſo mean an opinion of their own original, who believed but little better of their gods? Witneſs Varro, who in his fragments, "Antiquitatum rerum divinarum," blaming their fabulous theology, "Mythicon genus Theologiæ," ſays, in this we find, That one god is born out of the head, another out of the thigh, a third from drops of blood: "In hoc enim eſt, ut Deus alius ex capite, alius ex femore, altus ex guttis ſanguinis natus." Nor were ſome of the ancient philoſophers leſs ridiculous in their opinions, concerning the reparation of mankind: To inſtance only in one: Every one knows, that there are in the joints of the fingers little bones, commonly called ſeed-bones: one of which, about half as big as a pea, is placed in the firſt joint of the thumb: This the Arabians call Abadara, as Bartholinus obſerves in his Anatomical Inſtitutions, lib. iv. cap. ult. Now ſome of the wiſe ancients fooliſhly held, that out of that bone, as out of ſeed, mankind ſhould at laſt be propagated anew. You may find likewiſe other opinions concerning man's original, in the learned Cenſorinus de Die natali, cap. iv. where he treats at large of this matter. And if you think it worth your while to ſee this fabulous riſe of the world confuted, you may find it well done by Firmianus, lib. ii. cap. 12.

Ver. 860. Lactantius, lib. ii. de Origine Error, cap. 11, and 12, cites this verſe of Lucretius, and makes this remark upon it. "Aiunt certis converſionibus cœli: et. aſtrorum motibus maturitatem quandam extitiſſe animalium ſerendorum: itaque terram novam ſemen genitale retinentem folliculos ex ſe quoſdam in uterorum ſimilitudinem protuliſſe, de quibus Lucretius, lib. v.

Creſcebant uteri, terræ radicibus apti,

eoſque, cum maturâſſent, naturâ cogente, ruptos animalia cætera profudiſſe: Deinde terram ipſam humore quodam, qui eſſet lacti ſimilis, exuberâſſe, eoque alimento animantes eſſe nutritos." Thus too Cicero, lib. i. de Leg. et Cenſorinus de die Natali, cap. 2. where he tells us beſides, that Democritus too was of the ſame opinion.

Lucret. "Terræ radicibus apti:" i. e. affixed and ſticking in the earth, by their roots.

Ver. 872. But how could theſe infant animals bear the inclemencies of the ſeaſons, the parching heat, and the chilling cold: nay, how could they live, or

even be born, when the ſun had baked the earth, or the cold frozen it up? To this Lucretius anſwers in theſe ten verſes. That in the beginning of the world there was neither winter nor ſummer; but that the whole year was one calm and conſtant ſpring. And certainly the earth is juſtly ſtyled a mother by all the foregoing ages, ſince ſhe firſt brought forth birds, beaſts, and then man, as the maſter-piece of all her productions.

Ver. 878. This part of this, and the three following verſes are added, with how much reaſon let the reader judge, by our interpreter to his author, who only ſays,

Aëriaſque ſimul volucres variantibu' formis.

Ver. 882. But why does ſhe produce none of theſe things now? To this he anſwers in twelve verſes, that the circumſtance of time is changed: and the earth is now paſt her teeming age. And what wonder is it, that the world, being now grown cold and diſabled, being ſometimes tormented with too much heat, ſometimes perſecuted with too much cold, and fallen into the other inconveniences of long life, is at length grown fruitleſs and barren? Diodorus Siculus, lib. i. ſays, That the earth being continually baked by the heat of the ſun, grew daily more and more conſtipated and bound up; inſomuch that ſhe could not at length produce any more of the larger kind of animals, which were then generated by the mutual commixtion of animals of the ſame ſpecies: To which Lucretius ſeems here to allude.

Ver. 884. To this purpoſe, Ovid. Metam. lib. xv. ver. 235, ſays finely:

Tempus edax rerum, tuque, invidioſa vetuſtas,
Omnia deſtruitis: vitiataque dentibus ævi
Paulatim lentâ conſumitis omnia morte.

Thus rendered by Dryden.

Thy teeth, devouring time! thine, envious age!
On things below ſtill exerciſe your rage:
With venom'd grinders you corrupt your meat;
And then, at ling'ring meals, the morſels eat.

Ver. 894. The poet here tells us in thirty-eight verſes, That ſince animals were at firſt fortuitouſly born, it is reaſonable to believe, that in the beginning of the world, there were innumerable other animals produced of wonderful kinds and ſizes: but that they did not continue long, becauſe they were imperfect, and wanted the means of receiving their food, and the power of copulation, and engendering their kinds. For all the animals now remaining are preſerved, either by their own power and induſtry, or by the care of men: Thus the lion is preſerved by his ſtrength, the fox by his craft, the ſtag by his ſwiftneſs, &c. And thoſe that are uſeful to man, as dogs, cattle, horſes, &c. he takes care of and defends. But why ſhould we nouriſh imperfect animals, and ſuch as would be of no uſe to us? Creech has omitted one verſe in this argument, where the original has

Androgynum inter utrum, nec utrumque, et utrinque remotum:

And indeed it is generally held to be ſpurious: But whoever inſerted it, ſeems to have had an eye on the Androgynos in the banquet of Plato. Heinſius on the Phœnix of Claudian reads it thus:

Androgynen inter neutra, atque ab utroque remotam.

Androgynus is derived from the Greek words, ἀνηρ, a man, and γυνὴ, a woman, and ſignifies a perſon who has both ſexes, the male and female: of which ſort the poets fabled Hermaphroditus, the ſon of Venus and Mercury to be: Cicero, lib. de Divin. calls an hermaphrodite, "fatale quoddam monſtrum;" a certain fatal monſter.

Ver. 932. He now teaches in forty-ſeven verſes, that nature, though ſhe had neither ſkill nor experience, never brought forth ſuch monſtrous animals, as thoſe, for which the poets have moſt notoriouſly belied her. And firſt, ſays he, in fourteen verſes, Theſſalia never knew a Centaur: nor can a man and a horſe be conjoined in one body: their different duration of life, their food, their manners, all forbid it. We may ſay the like of Scyllas, and other monſters of the ſame nature: And they who believe the exiſtence of a Chimæra, do not conſider that the entrails of a lion, or any other animal may be roaſted, and conſumed by fire. Whoever therefore holds, that miraculous and monſtrous animals could be produced by the earth, while ſhe was yet young, may likewiſe believe the rivers of milk and gold, and the other idle fictions of the poets: but let him reflect too, that even at this day many ſeeds of herbs and trees are contained in the bowels of the earth, as were formerly the principles of all things: yet trees of ſeveral ſorts never ſpring out of the earth in one tree, nor different herbs from the root of the ſame plant.

Centaurs.] Monſters, whoſe upper part was like a man, and their lower like a horſe: The poets feign them to be begot by Ixion upon a cloud: thence Virgil calls them Nubigenæ, cloud-begotten. They were indeed people of Theſſaly, who lived near the mountain Pelion, and were called Centaurs, from κεντέω, I ſpur, becauſe they were the firſt who rid horſes with ſpurs, and who fought on horſeback. Plin. lib. 7. cap. 56. Now when the ignorant country-people in Theſſalia ſaw men firſt a horſeback, they imagined them and the horſes to be all of a piece, and this gave riſe to the fable. See B. iv. v. 733. Diodorus, lib 5. Ariſtotle, 2. Phyſ. 8. de Hiſt. Animal et de generat. Anim. 4. et 5. cap. 3. deny and condemn all monſtrous mixtures of this nature. And Ovid himſelf, that great patron of all manner of fables, even though he has given a relation of a battle between the Lapithæ and the Centaurs, yet upon better thoughts ſeems to renounce that credulity: when in Triſt. lib. 4. Eleg. 7. he ſays,

——— Credam prius ora Meduſæ
Gorgonis anguineis cincta fuiſſe comis,
Eſſe canes utero ſub Virginis: eſſe Chimæram,
A truce quæ flammis ſeparet angue leam:
Quadrupedeſque homines cum pectore pectora junctos;
Tergeminumque virum, tergeminumque canem:
Sphyngaque et Harpyias, ſerpentipedeſque Gigantes:
Centimanumque Gygen, ſemibovemque virum.

Where he seems to deny not only centaurs, but also all manner of monsters. Yet Empedocles held that there were such creatures as centaurs; and Claudius Cæsar likewise, witness Pliny, who writes, "Hippocentaurum in Thessaliâ natum eodem die interiisse; et nos principatu ejus allatum illi ex Ægypto in melle vidimus." A Hippocentaur was born in Thessalia, and died the same day: and I myself saw it, when by his command it was brought to him in honey out of Egypt. Voluterranus says, that he had seen a half dog: and others other monsters, of which Lycosthenes has made a collection in his book de Prodig. & Ostent. Sometimes women have brought forth frogs, serpents, stones, and the like, that had been generated in their womb. Such productions are indeed preternatural, and the effects of disease; but not therefore to be deemed impossible, or reckoned among the number of things that cannot be. Whether the forming faculty submits and gives way to the mother's imagination, is not our business in this place to inquire, no more than it is to decide this question: whether from the execrable and unnatural copulation of a man with a brute beast, an animal of a mixed and dubious nature may not be generated. Herodotus writes, that in his days a certain woman used publicly to couple with a goat: And Pliny, lib. 7. cap. 3. witnesses, that Alcippe brought forth an elephant: and that another, in the beginning of the Marsian war, was delivered of a serpent. And the same author in the place abovecited, mentions several other monstrous births.

Ver. 935. The Schoolmen call centaurs, and the like imaginary creatures, *entia rationis;* but they are rather *entia imaginationis:* fantastic creatures, that have no existence but in the imagination.

Ver. 946. *Scyllas.*] There were two of this name; one the daughter of Nisus, the other of Glaucus, says Faber, and Creech after him, but they seem to be both mistaken, for she was daughter of Phorcus, with whom Glaucus was in love. The Scylla of Nisus is said to have been changed into the monster of that name, whom we have described, book. i. ver. 740. and book iv. ver. 738. But Ovid Metam. lib. 8. ver. 148. says she was changed into a bird.

——— At aura cadentem
Sustinuisse levis, ne tangeret æquora, visa est:
Pluma fuit: plumis in avem mutata vocatur
Ciris, et à tonso est hoc nomen adepta capillo.

Milton in the second book of Paradise Lost, describing Sin, whom he makes the portereſs of hell-gate, had certainly an eye on this fabulous monster: his words are these:

She seem'd a woman to the waist, and fair,
But ended foul in many a scaly fold,
Voluminous and vast; a serpent arm'd
With mortal sting: about her middle round
A cry of hell-hounds never ceasing bark'd
With wide Cerberian mouths full loud, and rung
A hideous peal: yet, when they list, would creep
If ought disturbed their noise, into her womb,
And kennel there; yet there still bark'd, and howl'd,
Within unseen: Far less abhorr'd than her,
Vex'd Scylla, bathing in the sea, that parts
Calabria from the hoarse Trinacrian shore, &c.

Ver. 955. In like manner the poet, book iv. ver. 646. speaking of the plant which he there calls veratrum, and which our translator there calls hemlock, as he does here the plant which his author calls cicuta,

——Thus hemlock-juice prevails,
And kills a man, but fattens goats and quails.

See the note on that passage.

Ver. 958. *Chimæras.*] This ignivomous monster, that had the head of a lion, the breast of a goat, and the tail of a serpent, the poet himself sufficiently explains: and no doubt he took the description from Homer,

Πρόσθε λεὼν, καὶ ὄπισθε δράκων.

See more in the note on ver. 660. book ii. To which I here add, that Bellerophontus, the son of Glaucus, king of Epire, is therefore said to have killed this monster, riding on the sea-horse Pegasus, whom Neptune had lent him, because he rendered habitable a mountain of the same name in Lycia; whose top, which was wont to throw out flames, was full of lions, the foot of it stored with serpents, and the side of it proper for the pasturage of goats. Ctesias in Pliny says, that the fire of that mountain kindles with water, and is extinguished with earth, or with hay.

Ver. 968. Lucretius, book i. v. 239. has taught, why Nature could not at the beginning create men of so vast a size,

That while they wade through seas, and swelling tides,
Th' aspiring waves should hardly touch their sides:
Why not so strong, that they with ease might tear
The hardest rocks, and throw them through the air?
But because things on certain seeds depend
For their beginning, &c.

Ver. 979. Here the poet describes at large the state of man, in the beginning of the world, their manners and way of life: And first in twenty-three verses he teaches, that the first men were stronger in body than men now are, by reason of the innate hardness they had inherited and contracted from their stubborn mother the earth: whence they were less subject to diseases, and much longer lived; but no man tilled the ground, for all appeased their hunger with acorns, wildings, and other fruits like those. Next he tells us in four verses, that the springs and rivers invited them by their murmurs to come and quench their thirst: Then in eleven verses, that they had no clothes, nor houses, but that shrubs, and woods, and caves sheltered them from storms and cold: And in ten verses, that they had no laws, no societies; but lived by spoil and rapine; making use of the women in

common, whom they either forced to submit to their desires by strength and violence, or gained their consent by flattery and presents, such as acorns, pears, and apples.

Lucretius does no where say, that the first men owed their origin to stones; and our translator seems rather to allude to the fabulous reparation of mankind after the deluge, from the stones, which, by command of Themis, Deucalion and Pyrrha threw behind them: Of which Ovid, Metam. lib. i. ver. 435.

Inde genus durum sumus, experiensque laborum,
Et documenta damus, quâ simus origine nati.

Ver. 991. This passage of our author, Ovid seems to imitate in his description of the Golden Age:

Ipsa quoque immunis, rastroque intacta, nec ullis
Saucia vomeribus, per se dabat omnia tellus:
Contentique cibis, nullo cogente creatis,
Arbuteos fœtus, montanaque fraga legebant
Cornaque, & in duris hærentia mora rubetis:
Et quæ deciderant patulâ Jovis arbore glandes.

The teeming earth, yet guiltless of the plough,
And unprovok'd did fruitful stores allow:
Content with food, which Nature freely bred,
On wildings, and on strawberries they fed;
Cornels and bramble-berries gave the rest;
And falling acorns furish'd out a feast.

Dryden.

Ver. 995. Macrobius, lib. vi. Sat. cap. 1. observes, that Virgil has imitated this passage of Lucretius, when describing his happy countryman, he says,

Quos rami fructus, quos ipsa volentia rura
Sponte tulere suâ, carpsit.——

Georg. ii. *ver.* 500.

He feeds on fruits, which, of their own accord,
The willing ground, and laden trees afford.

Dryden.

Ver. 997. For the chief food of the first men was acorns: Whence Virgil, Georg. i. ver. 147.

Prima Ceres ferro mortales vertere terram
Instituit: cum jam glandes atque arbuta sacræ
Deficerent silvæ, & victum Dodona negaret.

Where, though the poet says, that the woods failed them, and no longer afforded them acorns, yet it is more probable, that they contemned the use of acorns, when they had discovered the art of sowing corn: Thus Juvenal, speaking in the person of the old Marsians and others, Sat. xiv. ver. 180.

——Panem quæramus aratro,
Qui satis est mensis; laudant hoc numina ruris,
Quorum ope et auxilio, gratæ post munus aristæ
Contingunt homines veteris fastidia quercûs.

Ver. 998. Lucret.

——Quæ nunc hiberno tempore cernis
Arbuta Pœniceo fieri matura colore.

Arbutum is the fruit of the tree called arbutus, the arbute-tree, a plant frequent enough in Italy; it has the leaves like those of a bay-tree, but growing very thin, and bears a fruit as big as a middling plum, red like a cherry, or rather strawberry, because of its roughness, Pliny, lib. xv. cap. 24. calls the fruit of this tree, "Poma inhonora," apples of no value: and indeed though they have a certain sweetness, they are sour withal, and unpleasant to the taste, as well as hurtful to the head and stomach. The ancients delighted much in the shade of this tree. Horat. "Nunc viridi membra sub arbuto stratus." Pliny calls the fruit of this tree "unedines, because, says he, we cannot eat above one of them, by reason of their asperity and sourness. But he is mistaken in making the unedo and the arbutum to be one and the same thing: The first of them is the fruit of the epimelis, which some interpret to be a sort of medlar-tree. But the arbutum of the Latins, and which the Greeks call Memæcylon, is the fruit of the tree, which the Latins know by the name of Arbutus, and the Greeks by that of comarus. Thus Galen, lib. ii. Aliment. plainly distinguishes between the unedo and the arbutum, ascribing the first to the epimelis, the later to the comarus, or arbutus. Thus Dalecampus in lib. prim. Plin. argues that author of error.

Ver. 1008. Oldham,

Hard by, a stream did with such softness creep,
As 't were by its own murmurs hush'd asleep.

And the author of Hudibras,

Close by a softly murm'ring stream,
Where lovers us'd to loll and dream.

Ver. 1009. The nymphs were fabled to dwell in caves and dens. Of them see book iv. ver. 589.

Ver. 1014. Lucret.

——Neque uti
Pellibus, & corpus spoliis vestire ferarum:

For, as the poet will teach by and by, the first coverings men wore, were the skins of wild beasts they killed in hunting.

Ver. 1026. This observation is the translator's, not his author's, who, I believe, would scarce have said so. The presents Lucretius mentions, were of the greatest value in those days: therefore the price was not less than now.

Ver. 1027. These robust unpolished mortals spent all their time in hunting wild beasts, whom they pursued with stones, clubs, and such like weapons; And when they were either weary of killing them, or that night came on, they rolled themselves up in leaves and grass, and slept contented, and with a quiet mind; for they did not dread, what the Stoics foolishly believed of them, when night had involved the world in shade, that night and day would never return, because they had observed that vicissitude from the first beginning of day and night: This is contained in fifteen verses. In the thirty-one verses following, the poet goes on: But, says he, this life of theirs was vexed

with ſome inquietudes: the wild beaſts ſurpriſed them, when they were ſleeping; and then a ſudden death was their portion, or a tedious and painful life, by means of their feſtering wounds; for they knew not yet the healing virtue of ſimples: Famine killed many, and more the venomous herbs they ignorantly fed on. But that none may think, that all mankind was, by ſo many ills and miſchiefs as befel them, involved in one common ruin, and totally deſtroyed; let it be conſidered, that the wild beaſts devoured them only one by one, and that few died by poiſonous herbs, or for want of food, in compariſon of the many thouſands that fall in a day in our armies: Beſides, what numbers are now ſwallowed up in the ſea; how many die by poiſon, how many by intemperance and luxury?

Ver. 1036. Manilius is of another opinion, lib. i. ver. 66. where, ſpeaking of the firſt inventors of arts, he ſays:

Nam rudis enté illos, nullo diſcrimine vita
In ſpeciem converſa operum ratione carebat,
Et ſtupefacta novo pendebat lumine mundi:
Tum velut amiſſis mœrens, tum læta renatis
Sideribus, varioſque dies, incertaque noctis
Tempora, nec ſimiles umbras jam ſole regreſſo,
Jam propiore, ſuis poterat diſcernere cauſis.

Before that time life was an artleſs ſtate,
Of reaſon void, and thoughtleſs in debate:
Nature lay hid in deepeſt night below;
None knew her wonders, and none car'd to know:
Upward men look'd, they ſaw the circling light,
Pleas'd with the fires, and wonder'd at the ſight:
The ſun, when night came on, withdrawn they griev'd,
As dead; and joy'd next morn when he reviv'd:
But why the nights grew long or ſhort; the day
Is chang'd, and the ſhades vary with the ray,
Shorter at his approach, and longer grown
At his remove, the cauſes were unknown.
Creech.

And with Manilius agrees Statius, Thebaid iv. where, ſpeaking of the primitive Arcadians, he ſays:

Hi lucis ſtupuiſſe vices, noctiſque feruntur
Nubila, & occiduum longè Titana ſecuti
Deſperâſſe diem.——

And Dracontius in Hexaemër.

Nec lucem remeare putat terrena propago;
Aſt ubi purpureum ſurgentem ex æquore cernunt
Luciferum, vibrare jubar, flammaſque ciere,
Et reducem ſuper aſtra diem de ſole rubentem;
Mox revocata fovent heſterna in gaudia mentes,
Temporis & requiem noſcentes luce diurnâ
Cœperunt ſperare diem, ridere tenebras.

And the learned Selden, de Diis Syris, Syntagm. 2. confirms their opinions, and believes the original of the feſtivals, which the ancients inſtituted in honour of Adonis, to have ſprung from no other ground. His words are theſe: "Non aliud cogitârunt; qui primum has nænias inſtituerunt, quam ſolis acceſſum & receſſum: Quem ut amiſſum nunc lugebant, & renatum lætis excipiebant auſpiciis. Ita rudiores olim, & qui ſimpliciorem vitam degebant, prius quam ab Aſtronomis leges ſiderum didicerant."

Ver. 1053. Lucret.

Viva videns vivo ſepeliri viſcera buſto:

Upon which Faber obſerves, that Dionyſius Longinus blames an expreſſion like this, in Georgias Leontinus, who calls vulturs, the living ſepulchres of men, ζώσας ἐμψύχους τάφους. However, he excuſes Lucretius, though he condemns not the cenſure of Longinus: For, ſays he, Georgias was a rhetorician, in whoſe art ſuch deſcriptions ought never to find place, though in poetry they have much of the ſublime.

Ver. 1056. This verſe is the tranſlator's, not the poet's.

Ver. 1057. Lucret.

Expertes opis, ignaros, quid vulnera vellent.

i. e. They knew not yet the art of medicine, and were ignorant of the remedies, requiſite to heal their wounds.

Ver. 1059. This and the following verſe run thus in the original.

Donicùm eos vitâ privârunt vermina ſæva.

Feſtus ſays, that "vermina" ſignifies the wringing of the guts, when we feel a pain, as if worms were gnawing them: The Greeks call it σκῶλες. But perhaps "vermina" may here ſignify very worms, that might be engendered in their rankling and corrupting wounds; if ſo, our tranſlator is ſo far in the right; but how well their making a paſſage for the ſoul to fly away, agrees with the doctrine of Epicurus, the reader need not be informed.

Ver. 1061. They had yet no wars; but were wholly ignorant of the cruel arts of deſtroying one another; And as Ovid ſays, Metam. i. ver. 97.

Nondum præcipites cingebant oppida foſſæ:
Non tuba directi, non æris cornua flexi,
Non galeæ, non enſis, erant: ſine militis uſu
Mollia ſecuræ peragebant otia gentes.

No walls were yet, nor fence, nor moat, nor mound;
Nor drum was heard, nor trumpet's angry ſound:
Nor ſwords were forg'd: But, void of care and crime,
The ſoft creation ſlept away their time.

Ver. 1063. Thus too Ovid, Metam. i. ver 94

Nondum cæſa ſuis, peregrinum ut viſeret orbem,
Montibus, in liquidas pinus deſcenderat undas:
Nullaque mortales, præter ſua littora nôrant.

The mountain trees in diſtant proſpect pleaſe,
Ere yet the pine deſcended to the ſeas;
Ere ſails were ſpread new oceans to explore,
And happy mortals, unconcern'd for more,
Confin'd their wiſhes to their native ſhore.

And Manilius, lib. i. ver. 76.

Immotusque novos pontus subduxerat orbes :
Nec vitam pelago, nec ventis credere vota
Audebant, sed quisque satis se nosse putabat.

——— None resign'd
Their lives to seas, or wishes to the wind;
Confin'd their search; they knew themselves alone,
And thought that only worthy to be known.

Ver. 1068. For, as Seneca in Medea says,

Audax nimium qui freta primus
Rate tam fragili perfida rupit;
Terrasque suas post terga videre,
Animam levibus credidit austris, &c.

Which the tragedian took from Horace, Od. i. 3.

Illi robur et æs triplex
Circa pectus erat, qui fragilem truci
Commisit pelago ratem
Primus; nec timuit præcipitem Africum, &c.

Thus rendered by Dryden,

Sure he who first the passage try'd,
In harden'd oak his heart did hide,
And ribs of iron arm'd his side:
Or his at least, in hollow wood,
Who tempted first the briny flood:
Nor fear'd the winds contending roar,
Nor billows beating on the shore;
Nor Hyades, portending rain,
Nor all the tyrants of the main;
What form of death could him affright,
Who, unconcern'd, with stedfast sight,
Could view the surges, mountain steep,
And monsters, rolling in the deep?
Could through the ranks of ruin go,
With storms above, and rocks below?
In vain did Nature's wise command
Divide the waters from the land,
If daring ships, and men profane
Invade th' inviolable main;
Th' eternal fences overleap,
And pass at will the boundless deep.
No toil, no hardships can restrain
Ambitious man, inur'd to pain;
The more confin'd, the more he tries,
And at forbidden quarry flies.

Ver. 1069. "Penuria cibi:" want of food. The next verse is a thought of our translator's, not of his author's.

Ver. 1073. We have hitherto seen only men, who were wild and savage, who wandered in the woods, and lived by spoil and rapine: but others now enter upon the stage, who are mild, gentle, and studious of civil life. For by this time, says the poet, in ver. 20. that temperature and calmness of the air which reigned when the world was in its infancy, remained no longer; but sometimes piercing cold, and sometimes scorching heat, together with storms and tempests, persecuted mankind. Those hardships and inconveniencies weakened them by degrees, and forced them to the contrivance of building themselves huts and houses, to shelter their bodies from the inclemencies of the seasons. They dwelt in these new abodes, one man confined to one woman, and were blessed with a numerous offspring, whose infant smiling innocence softened the rigid fourness of their parent's temper, and changed their innate sullen roughness into calmness and affability. After this, having found out the use of fire, they became so tender, that, unable to endure any longer their primitive nakedness, they made themselves clothes of the skins of beasts; and grew so civilized in time, that they entered into friendships and societies, insomuch that they who were desirous to be safe themselves, found it their best way to abstain from doing injuries to others. Thus concord preserved mankind.

Ver. 1074. Diodorus Siculus, lib. i. says, that the poets feigned Hercules to be clothed with the skins of beasts, and that he is painted too in that garb, to put posterity in mind of this ancient way of dress of our first fathers.

Ver. 1081. Lucret.

——— Puerique parentum
Blanditiis facilè ingenium fregère superbum.

i. e. the children, by their harmless innocent smiles, easily softened the roughness of their parent's temper. This passage can have no other interpretation, though Creech makes it say quite the contrary.

Ver. 1083. They who endeavour to disgrace religion, usually represent it as a trick of state, and as a politic invention to keep the credulous in awe, which, however absurd and frivolous, yet is a strong argument against the Atheist, who cannot declare his opinions, unless he be a rebel, and a disturber of the commonwealth. The cause of God, and his Cæsar are the same, and no affront can be offered to one but it reflects on both; and that the Epicurean principles are pernicious to societies, is evident from the account they give of the rise of them. First, then, we must imagine men springing out of the earth, as from the teeth of Cadmus his dragon ("fratres fungorum, et tuberum," as Bias called the Athenians, who counted it a great glory to be Αὐτόχθονες), and like those too fierce and cruel; but being softened by natural decay, and length of time, grew mild; and weary of continual wars, made leagues and combinations for mutual defence and security; and invested some person with power to overlook each man's actions, and to punish or reward those that broke or kept their promises. Now, if societies began thus, it is evident that they are founded on interest alone, and therefore self-preservation is the only thing that obliges subjects to duty; and when they are strong enough to live without the protection of their prince, all the bonds to obedience are cancelled, and mutiny and rebellion will necessarily break forth; for we all know how ambitious every man is of rule, how passionately he desires it, and how eagerly he follows it, though ten thousand difficulties attend the pur-

ſuit. What if he break his promiſe, recal his former conſent, and act againſt the law that was founded on it? Why need he be concerned, if he has got the longeſt ſword, and is above the fear of puniſhment? Will not a proſpect of a certain profit lead him on to villany? And why ſhould his conſcience ſtartle at wickedneſs that is attended with pleaſure? Since all the Epicurean virtues are nothing but fear and intereſt, and the former is removed, and the latter invites. It is true, as Lucretius ſays, ſtrange diſcoveries have been made, and Plutarch gives us very memorable inſtances. Plots have been defeated, but as many proved ſucceſsful: and how weak that ſingle pretence, how inſufficient to ſecure government, is evident from the daily plots and contrivances, murders, and treaſons that diſturb us; though all the terrors of religion join with theſe fears, and endeavour to ſuppreſs them. And, therefore, theſe opinions are dangerous, and deſtructive of ſocieties, and, as Origen ſays of his purgatory fires, ὐκ ἀκίνδυνον τὴν τῶν τοιούτων σκῆνειαν πιστεῦσαι γραφῇ, ἅτε τῶν πολλῶν ὲ χρηζόντων πλείονος διδασκαλίας παρὰ τὴν περὶ τῆς καλὰ τῶν ἀμαρτανόντων κολάσεως ἐς γὰρ τὰ ὑπρίκεινα αὐτῆς ὲ χρήσιμον ἀναβαίνειν διὰ τῆς τὲ μόγις φόβῳ αἰωνίᾳ κολάσεως κὰν συγκλονῆας ἐπὶ πόσον τῆς κακίας, καὶ τῶν ἀπ' αὐτῆς ἁμαρτανόντων χύσιν. Others, though pretending to better principles than thoſe of Epicurus, yet are altogether as faulty in ſtating the riſe of power, and more abſurd: for his opinion is agreeable to his other poſitions, but theirs contradict the creation they aſſert, and the providence they allow; I mean thoſe that declare the people to be the ſpring and fountain of power, and that from their conſent all the authority of the government is derived. Sure theſe men never conſidered the relation betwixt God and his creatures; and what an abſolute dominion he has over thoſe to whom he firſt gave, and ſtill continues, being. But let us look on man under that circumſtance, and then how naked, how diveſted of all power will he appear? How unable to diſpoſe of himſelf, and ſubmit to the laws of his fellow free agent? Unleſs he endeavours, as much as is poſſible, to diſown the right of the Deity, and turns rebel againſt the authority of his being. For how can any one ſubmit himſelf to another, without the expreſs permiſſion of him that has abſolute dominion over him? And where is that permiſſion? Is it founded on reaſon or ſcripture? Does benevolence, or ſelf-preſervation, the two propoſed motives to ſociety, ſpeak any ſuch thing? And does not ſcripture expreſsly oppoſe this opinion? Well then, all power deſcends from above; it is the gift of that being to whom it principally belongs, and ἐκ τε Διὸς βασιλῆες, kings are from God, is true, both in the account of the ſober heathen, and good Chriſtian: and, therefore, every king that ever was, or is, whether he obtain the crown by ſucceſſion, or election (except the Jewiſh), muſt be acknowledged abſolute. Liberty and property of the ſubjects depend on his will, and his pleaſure is law; for none can confine or limit that power which God beſtows, but himſelf: and, therefore, to preſcribe laws to the governor, to chooſe or refuſe him on certain conditions, is to invade the prerogative of Heaven, and rebel againſt the Almighty. Thus when God deſigned to limit the power of the Jewiſh monarchy, he preſcribes laws himſelf; but ſince he hath not fixed any to other princes, every king, as ſuch (for I do not reſpect their particular grants to the people, which they are bound to obſerve), is abſolute.

To free this from all exception, it muſt be conſidered, that the diſcourſe is concerning the origin of power, which is now ſettled in ſome perſons, and by which communities are governed. The Epicureans act very agreeably to their impious principles, when they make fear and diſtruſt the only motives to agreement, and the pacts which the ſcattered multitude agreed to be the foundation of the power of the prince; it being impoſſible for them, who had excluded Providence, to find any other original. But this opinion, as delivered by them, depending upon their other abſurd and impious philoſophy, muſt be weak and irrational; yet ſtill this notion is embraced, though not upon the ſame motives; faction and ambition propagate that error, which was nothing elſe but innocent ignorance in the ancients. They conſidered man as ſingle, unable to live with ſecurity or comfort, becauſe his fellows, either out of pride, luſt, or covetouſneſs, would endeavour to rob him of his enjoyments, and his life too, if it hindered them in the proſecution of their wiſhes; thus they ſaw a neceſſity of government, and becauſe it proceeded from man's natural imperfections, they thought him, that by his wiſdom, or his ſtrength, was moſt fitted for the defence and preſervation of others, to be as it were a lord by nature, and born a ſovereign. Thus Plutarch, ὁ πρῶτος καὶ κυριώταλος νόμος τῷ σώζεσθαι δεομένῳ τὸν σώζειν δυνάμενον ἄρχονία καλὰ φύσιν ἀποδίδωσι. It is the firſt and moſt fundamental law, that he that is able to protect, is a king by nature to him that needs protection. Thus hiſtorians make the election of the firſt kings to be for their ſtrength, their wiſdom, or their beauty: and Ariſtotle peremptorily determines, that the barbarians are ſlaves by nature to the Greeks. This was innocent enough in them, but how can we be excuſed, who have ſuch perfect knowledge of a creation, who hear Wiſdom proclaim, that by her kings reign, who made it an article in Edward the VIth's time, and now every day in our public prayers confeſs, that God is the only ruler of princes? From whence it is neceſſarily inferred, that he only beſtows the power, for if it came from the multitude, what is more evident, than that they could make what conditions they pleaſed, ſubject them to a high court of juſtice, and call them to account, if they act contrary to their pleaſure? It being certain, and confirmed by common practice, that he that voluntarily parts from his right, may do it on what terms he thinks fit: Now, if it be certain (and demonſtration proves it) that God is the alone giver of powers, if the prince be, as Plutarch and Menander ſay, ὑπὸ

ἔμψυχος Θεὸς, a living image of the Deity, if, as Pliny, "qui vice Dei erga hominum genus fungeretur," and every king, whether elective or successive, rules by the same authority, as it is certain they do, because both have power, and the people can give them none; then what is more certain, than that all kings, which way soever they are enthroned, before they have made any grants to their people, are absolute? And that their pleasure is law, for otherwise there could be none, that liberty and property depend upon their will.

Nam propriæ telluris herum neq. me, neq. illum,
Nec quenquàm statuit natura.———

Nor does nature provide more privileges for one than another. And if the principles are true, and the inference naturally follows, as it does, because the people, that cannot bestow the power, have no right to make conditions for its exercise, and set limits how far it shall extend, and make such and such agreements for the admission of the prince; what harm is there in this innocent truth? For we discourse only of kings as they first are, without any reference to such and such particular communities, where they have been pleased to limit themselves; to grant privileges to their subjects, and settle property, and confirmed all this with oaths, and engaged their royal word, and promise before God and man for their performance. . . . . .

I suppose it is granted on all hands, that the king is supreme, that upon any pretence whatsoever it is treason to resist; and so there can be no fear of punishment, no tie upon the king but his own conscience; "sufficit quod Deum expectet ultorem;" yet though the law cannot punish, it can direct: though it is not a master, it is a guide, and such a one, as, because of his oath, he is bound to follow: For though the people cannot, he can limit himself; for being a rational creature, and intrusted with power, without any particular rules for the guidance of it; his reason is to be his director, and, therefore, according to the tempers and particular humours of the people, he may make laws, settle maxims of government, and oblige himself to make those his measures, because his reason assures him, that this is the best method for the preservation of the society, the maintenance of peace, and obtaining those ends, for which he was intrusted with this power.

And since princes must die, and government being necessary, succession is equally so; and therefore it may seem that every prince, owing his power only to the same original from which the first derived it, is at liberty to confirm such and such privileges and immunities, which his predecessors have granted; yet upon a serious view of the premised reason, no such consequence will follow; for since the predecessors have found these laws agreeable to the tempers of the people, and the only way to preserve the peace, it is evident that those are rational, and since he is to use his power, according to right reason, there is an antecedent obligation on him to assent to those laws; and make those the measures of his government; unless some extraordinary case intervenes, which requires an alteration of those laws, and then that method of abrogating old, and making new ones is to be followed, which constant experience hath found rational. And since a prince cannot be bound by any ties but those of conscience, this opinion leaves all the obligations possible upon him.

Ver. 1093. But it may reasonably be asked, how leagues could be made, and societies established among men who perhaps indeed could think, but had not yet learnt to utter their thoughts? To this Lucretius answers, that the first men were conscious to themselves of their own powers and natural faculties; and that they uttered several sounds, as each object that they saw, or as any thing that they felt, caused in them either fear, joy, pain, grief, pleasure, &c. For nature herself compelled them to this; and therefore horses, dogs, birds, in short all animals that have breath, do the like: And thus man too at first stammered only imperfect and inarticulate sounds. But no commerce was yet established, they had no mutual communication with one another: Nor indeed could any such thing be, till names were given to things: Every man therefore perceived, that it would be useful to himself and others, to agree upon a certain name for each thing. Thus all, who were entered into one society, agreed among themselves upon the same names of things: And thus the usefulness of things by names, gave occasion for the invention of words. But for any to pretend, that one man gave names to all things, is wretchedly absurd and foolish. This disputation Lucretius has in sixty-three verses.

Scaliger, in the first book of his Poetic. chap. I. observes, That as all our actions, so speech too is to be considered under three different heads: I. As absolutely necessary: II. As useful: III. As delightful. The first kind was that which served as a necessary means of intercourse between man and man, barely to understand one another's meaning: And such we may imagine to have been that manner of speech, which Lactantius de vero Cultu cap. 10. mentions, and which men, according to the opinion of some of the ancients, used in the beginning of the world; when, as some believed, they only gesticulated their thoughts, and spoke their meaning by signs and nods. After which, as the same author says, and before him Diodorus Siculus, lib. I. they made essays of language, by imposing distinct nominal notes, or names upon several things, and thus by degrees they made a kind of speech. Thus too Horat. lib. I. Serm. 3.

Quum prorepserunt primis animalia terris,
Mutum & turpe pecus,——
Donec verba, quibus voces sensusque notarent,
Nominaque invenêre.——

The second sort of speech, says Scaliger, was a little more refined and polished, by being adapted and made fit for use and convenience; and by

applying, as it were, certain dimenſions, preſcriptions, and lineaments to the firſt rude ſketch of language; whence proceeded a certain law and rule of ſpeaking: The third ſort was yet more polite, there having been added to the former the ornament of elegancy, as its dreſs and apparel. Thus Scaliger, of ſpeech in general.

Ver. 1106. Here Lucretius ſeems to fall foul upon the chronologer of the Holy Scripture, by denying that names were given to things by the firſt man: but thoſe writings were perhaps unknown to our poet, and he chiefly diſputes againſt the opinions of Pythagoras and Plato; man, ſays Iamblicus de ſect. Pythagor. was created the moſt wiſe and knowing of all animals, capable to conſider things, and to acquire knowledge from them; becauſe God had imprinted and beſtowed upon him the plenitude of all reaſon, in which are contained all the ſeveral ſpecies of things, and the ſignifications of all their names, and of all words: Plato in Cratylus will not allow, that any one gave names to things, but that they received their names from the wiſeſt and moſt learned of men, whom he calls ὀνομαστὰργους, and ὀνομαθέτας, the makers and impoſers of names, in the giving of which, ſays he, the higheſt wiſdom manifeſtly appears; and Crœtylus adds, that no man could do it, but they, who reflecting on the nature of things, were able to judge of them, and to accommodate, and give to each thing a name, ſuitable to, and expreſſive of, its nature; Lucretius was aware of this, and therefore inquires in theſe four verſes, How this great knowledge came to be in the firſt nomenclator, and denied to the reſt of mankind: how ſhould one man, ſays he, be able to give names to things, and not another? The anſwer is ready; though it will appear of no weight to Lucretius, who will not believe the creation of one man only from whom all the reſt have deſcended; nor, that when names were firſt given to things, there was yet but one man in the world: and why might not that firſt parent of mankind, whom God had infuſed with knowledge, ("Creavit Deus ſcientiam in animo, ſenſu implevit eum, & mala & bono oſtendit illi, addiditq. diſciplinam." Eccleſ. cap. 17.) Why might he not, I ſay, being thus inſtructed, impoſe names on things? And that too then eſpecially, when this new created monarch, on the feſtival of his inauguration, called all his ſubject animals by their names: "appellavitque Adam nominibus ſuis cuncta animantia;" ſays the ſacred chronologer, Geneſ. iii. Which text of holy writ, Euſebius, Preparat. Evangel. lib. xi. cap. 4. reciting, ſays, that Moſes meant nothing elſe by it, than that a name was given to each thing, agreeable and ſuitable to its nature. And ſince the nature of man is prone to learn, and greedy of knowledge, why might not the reſt of men, who came afterwards into the world, and converſed with that firſt giver of names, willingly retain them in their memory, as they received them from him? from him, I ſay, who, not like mute animals, could expreſs only his own affections, his own deſires; but likewiſe knew and expreſſed the nature and manners of others. But of the original of human ſpeech, ſee Laërt. lib. x. Diodor. Sicul. lib. i. ſub initium, & Plato in his Cratylus.

Ver. 1110. That is to ſay, if any one man could impoſe names on things, another might, at the ſame time, do the ſame thing.

Ver. 1111. In theſe ten verſes the poet aſks; how that firſt nomenclator could compel the reſt of men to learn from him what they were to ſay; and to retain in their memory the words he had invented, and the names he had given to things? this argument is of little validity: for, beſides, as we ſaid before, that the nature of man is prone to learn, and deſirous of knowledge, we know that children eaſily accuſtom themſelves to pronounce and ſpeak by degrees the words they hear ſpoken by their parents, nurſes, and others that are about them. The child, who had been brought up by goats, and never in his life heard a human voice, bleated like that animal, and ſpoke only the language of goats. Even parrots, pies, ſtarlings, &c. when they are taught, learn to pronounce human words articulately, merely by their own induſtry; and we obſerve them conning over by themſelves, and ſoftly muttering the leſſons that have been taught them: Plutarch de Animal. Compar. makes mention of a magpie he had ſeen at a barber's ſhop at Rome, that ſung no leſs than nine different tunes, obſerving the due time and meaſure in all of them. What wonder then, that, man, a creature endowed with reaſon and underſtanding, ſhould learn to imitate the words of his fellow-creature?

Ver. 1121. Here the poet in ver. 35. ſays, that it is not ſurpriſing, that any man, to whom nature had given a tongue and a voice, could, as he thought fit, and according to the various knowledge he had conceived of the great variety of things, diſtinguiſh and mark each of them by a proper name; eſpecially ſince even mute animals can, and do expreſs the different paſſions and affections, by different voices and ſounds: for they declare and ſignify their pain and pleaſure, and the other affections, that are ſubject to thoſe two, by inarticulate indeed, but unlike and various ſounds. Why then may not any man mark and denote different things by different names? but this is not what was done by the firſt impoſer of names? for he not only expreſſed his own affections; but the proper nature, and genuine manners of others, by virtue of the divine gift, the knowledge which the Almighty had infuſed into him.

Ver. 1123. For, as Faber on this paſſage obſerves, if the names themſelves gave any knowledge, τῶν φύσεων, of the natures and qualities of the things that are called by them; and if upon the bare pronunciation of three or four ſyllables, any particular notes were obtained, that indeed would deſervedly claim our admiration; but ſince it depends only upon uſe, and that uſe upon chance, convenience, and ſometimes on the temerity and ignorance of the meaner and illiterate part of mankind, Lucretius is in the right to ſay, that there is no wonder in it.

Ver. 1125. Sextus Empiricus, lib. xi, Pyrhon.

Hypotyp. seems to be of opinion, that birds and brute beasts have a particular language according to their different kinds; and with him agrees Lactantius, and says, that speech is proper to man; and yet we may observe in birds and beasts a certain similitude of speech, and that too, different upon different occasions: To us, indeed, their voices seem imperfect and inarticulate; and so too perhaps do ours to them: but their voices utter words to themselves, because they understand them. "Proprius homini sermo est; tamen et illis quædam similitudo sermonis: Nam et dignoscunt invicem se vocibus; et cum irascuntur, edunt sonum jurgio similem; et cum se ex intervallo videre, gratulandi officium voce declarant: Nobis quidem voces eorum videntur inconditæ, sicut illis fortasse nostræ; sed illis, qui se intelligunt, verba sunt." Lactan. de Irâ Dei. cap. vii. And the credulous ancients firmly believed, that magicians understood the languages of birds. And Porphyry assures us, that Apollonius Tyanæus could expound the notes of swallows; or, as Philostratus says, the chirping of sparrows. Tiresias likewise is renowned for his knowledge in the languages of birds. Apollon Rhodig. lib. iii. mentions one Mopsus, who understood the languages of crows and daws. Pliny, lib. x. cap. 49. relates of Melampus, that he was instructed to interpret the tongues of birds by a serpent, that came to him, and licked his ears. But of this, even he himself seems to question the truth; nor does he give much credit to what he reports of Democritus, who said, that the blood of several birds, mixed together and corrupted, will produce a serpent, of which whoever eats, "intellecturus sit avium colloquia," will understand the discourse of birds. That the soothsayers drew their divinations from the voices of birds, as well as from their flight, is notorious. Virgil, Æn. iii. ver. 359.

Trojugena, interpres Divûm, qui numina Phœbi,
Qui tripodas, Clarii lauros, qui sydera sentis,
Et volucrum linguas, et præpetis omina pennæ:

And the birds, from whose voice they took their auguries, were called "oscines," from "os et cano," singing with the mouth: and these were crows, ravens, pies, and the like: as the others, from whose flight the divined future events, were called *prepetes*, from προπέτεσθαι, flying before, as vultures, eagles, &c. But besides all this, we may produce the authority of some of the Jewish doctors, who affirm Solomon to have been learned in the languages of birds: Nay, they say, that he sent a message by a certain bird, to the queen of Æthiopia; who must therefore be thought to have been as knowing in the language of birds as himself. And in the Alcoran, he is made to say, "O homines, intelligite avium eloquentiam." And from the same authority we learn, that a lapwing, or a bird called a houp, brought him the first news of the queen of Sheba: Of which notice is taken in the Prolegom. in Bibl. Polyglott. But Delrius denies, that either birds or beasts can use discourse, because they are void of reason; yet he confesses, that they have certain indications, or expressive sounds, by which they reveal and make known their affections and appetites; and which men by long observation, may come to understand. He adds, that these indications of theirs are perfectly known to the devil, and that he may instruct magicians to know them as well as himself; which, whether he ever did or not, says he, I cannot tell; but, "non est incredibile fecisse," it is not incredibile but he has. Delrius Disquis. Mag. lib. ii. cap. 19.

Ver. 1149. Crows are said to prognosticate the change of weather, either to fair or foul; and to give notice of each by their different croaking. If they croak often, and with a hoarse voice, it is a sign of rain. Virg. Georg. i. ver. 381.

——Et è pastu decedens agmine magno
Corvorum increpuit densis exercitus alis.

And ver. 388.

Tum cornix raucâ pluviam vocat improba voce,
Et sola in siccâ secum spatiatur arenâ.

But if they croak not above three or four times, and with a shrill and clear voice, it betokens fair weather. Thus Virgil, in the same Georgic, ver. 410. speaking of fair weather, says, that

Tum liquidas corvi præsso ter gutture voces
Aut quater ingeminant: et sæpe cubilibus altis
Nescio quâ præter solitum dulcedine læti.
Inter se foliis strepitant: juvat imbribus actis
Progeniem parvam, dulcesque revisere nidos.

See the note on ver. 89. book vi.

Ver. 1156. He has before made mention of fire, ver. 1073. He now teaches, in fifteen verses, that fire was either thrown down to earth by thunder; or that the trees, being rudely shaken by stormy winds, and their branches growing hot by frequent striking and dashing against one another, burst out at length into flames, and first gave fire to men, who used it to dress their meat, having observed that the heat of the sun ripened and brought their fruits to maturity, and made them more fit for their service. And thus another way of life, and change of food, invented by witty luxury, was first introduced.

Caneparius de Atramentis, cap. 13. reckons up six several ways, by which fire may be generated and kindled, viz. "propagatione, putredine, coitione, antispasi, frictione et percussione:" by propagation, corruption, coition, antipasis, or contrary revulsion, friction and percussion; which, nevertheless, he reduces to these three kinds, propagation, coition, and motion, in which the other ways are included. For corruption and revulsion to the contrary kindle fire, by compelling the dispersed heat to unite together, and therefore fall under the head of coition; as friction and percussion do under that of motion.

Ver. 1160. This, if we may believe some authors, happened often formerly in Hungary. And Lucretius has already made mention of trees taking fire by collision, book i. ver. 902. See the note on that place. Moreover, Vitruvius, lib. ii.

ap. I. aſcribes the original of our culinary fire to his accident of trees taking fire in a tempeſt. His words are as follow: "Ab tempeſtatibus et ventis denſæ crebritatibus arbores agitatæ, et inter ſe terentes ramos, ignem excitaverunt:" Which the ancients having obſerved, took from thence the firſt hint of the invention of their igniaria; for their way of getting fire was by rubing one ſtick againſt another, till being heated, they catched fire, which they fed with dry leaves, or ſome other matter, that was eaſily combuſtible. Virgil, Æn. i. ver. 179.

Suſcepitque ignem foliis, atque arida circum
Nutrimenta dedit.————

And theſe dry nourifhments, ſays Turnebus, in his notes on Theophraſtus de Igne, they called ἰσχάρα, i. e. focus; or, according to the Scholiaſt of Apollonius, σορέυτρ, i. e. ſtrator; which we may compare with our tinder. The other parts, which were the ſticks, they called τέρετρον, i. e. terebrum, and they ſerved inſtead of our flint and ſteel. The trees, that are moſt ſubject to take fire in this manner, are ſaid to be the fig-tree, laurel, oak, holm, tile-tree, ivy and vine; but above all the laurel. And if we may give credit to Manilius, fire may be got almoſt out of every thing.

Sunt autem cunctis permixti partibus ignes;
Qui gravidas habitant fabricantes fulmina nubes;
Et penetrant terras, Ætnamque imitantur Olympo,
Et calidas reddunt ipſis in fontibus undas:
Ac ſilice in durâ, viridique in cortice ſedem
Inveniunt, cum ſylva ſibi colliſa crematur,
Ignibus uſque adeo natura eſt omnis abundans.
Lib. i. *ver.* 350.

Which our tranſlator thus renders:

Fire lies in ev'ry thing; in clouds it forms
The frightful thunder, and deſcends in ſtorms:
It paſſes through the earth, in Ætna raves,
And imitates heav'n's thunder in its caves:
In hollow vales it boils the riſing flöods;
In flints 'tis found, and lodges in the woods;
For, toſs'd by ſtorms, the trees in flames expire,
So warm are Nature's parts, ſo fill'd with fire.
Creech.

Ver. 1171. In theſe thirty verſes, he tells us, that to provide the better for their common ſafety, they gave the ſovereign power to one man, to whom nature had given to excel in beauty, wit, or ſtrength; and had thus herſelf declared him a king. This monarch fell to building of towns and towers, to defend himſelf and his ſubjects from the inſults of their enemies. He governed them at will; every thing was done that he commanded, and,

O happy mankind under ſuch a prince!

But avarice and ambition ſoon corrupted and overthrew all things. And ſuch is the condition of princes, even at this day, that whoſoever values his eaſe and quiet, and deſires to live happily, will, if he be wiſe, avoid the adminiſtration of public affairs; for the ſovereign authority is hard to gain, and harder to keep. Inſtead of pleaſures, it brings cares and troubles; it is always tottering and inconſtant; always attacked by ambition and envy, and often thrown down by conſpiracy.

Ver. 1174. Thus too Ovid. Metam. i. ver. 135.

Communemque prius, ceu lumina ſolis et auras,
Cautus humum longo ſignavit limite menſor.

Then land-marks limited to each his right,
For all before was common as the light. *Dryd.*

Ver. 1178. It was the cuſtom formerly in many countries to chooſe their kings for the beauty and majeſty of their perſons. This Ariſtotle, lib. i. de Rep. reports to be true of the Ethiopians; who, ſays he, when they obſerve any one, who, in his looks, reſembles the images of their gods, immediately conclude, that he was born to rule over others. And Xenophon in Symph. ſays, that beauty is ſomething that nature herſelf has ſtamped with royalty. Heliogabalus, though but a boy, was choſen emperor by the Roman ſoldiers at firſt ſight of him; as if he had had what Euripides calls Εἶδος ἄξιον τυραννίδος, a countenance that deſerved a kingdom. Thus Dryden:

————Manly majeſty
Sate in his front, and darted from his eyes,
Commanding all he view'd.————

And in another place:

Eyes that confeſs'd him born for kingly ſway;
So fierce they flaſh'd intolerable day.

And Virgil ſeems to have had ſomething like this in his thoughts, when he deſcribes the difference of look between the lawful king of the bees, and the uſurper; of which deſcription, that this note may not ſtretch too long, I will omit the original, and give only Dryden's tranſlation:

With eaſe diſtinguiſh'd is the regal race:
One monarch wears an open, honeſt face,
Shap'd to his ſize, and godlike to behold,
His royal body ſhines with ſpecks of gold,
And ruddy ſcales: for empire he deſign'd,
Is better born, and of a nobler kind:
That others look like nature in diſgrace:
Gaunt are his ſides, and ſullen is his face.
And like their griſly prince appears his gloomy race.

To which I will only add, that θεοείκελος, like a god, is often uſed by Homer as an epithet for a beautiful perſon.

For as Varro Margop. ſays very well:

Qui pote plus viget, piſces ut ſæpe minutos
Magnus' comeſt; ut aves enecat accipiter.

Thus Horace, Sat.

————Omnis enim res,
Virtus, fama, decus, divina, humanaque pulchris
Divitiis parent, &c.————

And Ovid:

Aurea ſunt verè nunc ſæcula ; plurimus auro
Venit honos.——

And the author of Hudibras in two words,

For money is the only pow'r,
That all mankind falls down before.

Ver. 1187. Who, that reads theſe lines, can believe that Epicurus was an epicure: he believed that a wiſe man cannot be poor: becauſe he lives content with what he has: and thinks it enough, even though it be but little: he placed indeed the chief happineſs of life in pleaſure; and what he meant by pleaſure, let Cicero teach us: "Negat Epicurus jucundè poſſe vivi, niſi cum virtute vivatur: negat ullam in ſapientem vim eſſe fortunæ: tenuem victum antefert copioſo, &c." Tuſcul. Quæſt. lib. 3. And Laërtius tells us, that Epicurus was often inculcating into his hearers, parſimony, continency, ſparingneſs of food, and equanimity, or eaſineſs and content of mind in all ſtates and conditions: whence he had often in his mouth this ſaying, ἥδιστα πολυτελὲς ἀπολαύσιν ἐκ ταύτης διόμενοι.

Thus too Dryden in the Wife of Bath's tale after Chaucer;

Content is wealth, the riches of the mind,
And happy he, who can the treaſure find:
But the baſe miſer ſtarves amidſt his ſtore,
Broods on his gold, and griping ſtill at more,
Sits ſadly pining and believes he's poor.

Ver. 1190. "Ventre nihil novi frugalius," ſays Juvenal, Sat. v. ver. 6. And it was the conſtant obſervation of the ſoberer heathens, that nature is content with very little: Diogenes in the life of Socrates, relates of that philoſopher, that he was wont to ſay, That moſt men ſeemed to live only to eat; but that for his part he eat only to live. And Plato obſerves, that of all creatures, man is longeſt in digeſting his food: and that nature has ordered it thus to intimate to us, that ſhe would not have thoſe nobler occupations, of which ſhe has rendered us capable, and for which we were chiefly created, to be interrupted by too frequent eating. And as this is a good moral reaſon, ſo neither is the phyſical reaſon, which anatomiſts give us, to be contemned: for they obſerve, that the ileon, one of the guts, through which the meat muſt paſs, and ſo called from εἰλέω, I involve, is ſix times longer than our whole body, and twiſted and folded in ſuch a manner, and withal ſo ſmall, that what we eat cannot paſs through it eaſily, and in a ſhort time.

Ver. 1203. Diadems were uſed by the ancient kings as crowns are now, for the mark of royalty: they are by ſome ſaid to be only white ribbonds, adorned with precious ſtones, and which they bound about their heads. The word comes from διαδέω, to bind about. But Pancirollus, from an epiſtle to St. Jerome to Fabiola, deſcribes a diadem to be a little cap, like a half football, bound about with a white *faſcia* or wreath. This paſſage of St. Jerome is in Epiſt. 128, *de veſtitu ſacerdotum*, where that father calls it *rotundum Pileolum*, a round cap; ſuch a one as that in which Ulyſſes is repreſented in an arched walk, called by his name. The Greeks, ſays he, call it πίλος, and ſome galerus: after which he adds, that this *pileolum* was tied on to the back part of the head with a ribband, in ſuch a manner, that it could not eaſily ſlip off: "ita in occipitio vitta conſtructa eſt, ut non facilè labatur ex capite." Yet indeed the *facia* or *vitta* itſelf ſeems rather than the bonnet to have been the diadem: for Marcellinus, lib. xv. acquaints us, that Pompey was ſuſpected of treaſon, for wearing the *faciola cadina* about his leg, to hide, as he pretended, a ſore: but, ſays he, the *faſciola candida* being generally interpreted a diadem, it created a ſuſpicion, that he was aiming at the empire: the rather, becauſe it was not material on what part of the body it was worn. See likewiſe Alexander ab Alex. Gen. dier. lib. i. cap. 28. And Britannicus ſays poſitively, it was not *corona*, but *faſcia*: which agrees likewiſe with the etymology of the word diadem, which we gave before.

Ver. 1208. Here the poet tells us, that the monarchy being aboliſhed, violence, oppreſſion, and tumults began to rage anew, and the life of man returned to its primitive ſavageneſs: however, they at length thought fit to create magiſtrates among themſelves, and to make laws, in order to puniſh the oppreſſors: and this was an inſtance of their prudence; for the dread of puniſhment keeps men in awe, and retains them within the bounds of their duty. And let none imagine they can violate the laws with impunity, even though they offend in private; for conſcience herſelf is a babbler; and many, when raving under the violence of diſeaſe or even in their dreams, have been their own accuſers, and betrayed their ſecret crimes.

Here we may obſerve, that Lucretius, from ver. 1170. to ver. 1233. has ſolved the following political problems.

I. Why man, who was born free, ſubjected himſelf from the very beginning, to the obedience of kings? For no man, as Plutarch elegantly argues, is by nature born a ſlave.

Either for the reſpect and reverence they bore to ſome men, on account of their beauty and majeſtic looks: or by reaſon of the ſuperior ſtrength of ſome, by which they compelled the weaker to unwilling obedience and ſervitude: or for the excellence of their wit, which eaſily and juſtly acquired them the command over others.

II. Why did they conſer the government on one man? Were there not ſeveral endowed with equal qualifications? beſides, every man ſeems in his own eyes to be beautiful and witty enough.

Becauſe they deemed a monarchy to be preferable to a government of many, and believed they ſhould live more free under the dominion of one, than of many rulers.

III. Why did the beautiful the ſtrong, and the wity, ceaſe at length to reign?

The invention of gold dethroned them, for when men grew rich, the ſovereign authority devolved on the moſt wealthy.

IV. Why did the kings fall at firſt to building of towers and citadels?

Either becauſe they apprehended the inſults of enemies, or were jealous of their own ſubjects, whom they oppreſſed with too ſevere a ſlavery.

V. How came the kingly power, with all its marks of royalty, to be at length totally ſubverted and laid aſide?

Becauſe nothing reſiſts envy; which climbs the loftieſt towers, and invades the palaces of kings: nay, the favourites of fortune are chiefly expoſed to her aſſaults.

VI. Why were laws firſt invented and made?

Perhaps for the ſake of commerce: for man is a ſociable animal, and indigent of mutual offices. Therefore, that he might not be perpetually in arms, laws were invented to eſtabliſh a rule of common ſociety, and to reſtrain and keep within certain bounds, the petulancy and unbridled luſt of the wicked.

Ver. 1226. For, as Cicero ſays very truly, "ſua quemque fraus, ſuum facinus, ſuum ſcelus, ſua audacia de ſanitate ac mente deturbat," Lib. i. de Finib."

Ver. 1229. That is, as Cicero, lib. 1. de Finib. treating of theſe things, ſays, "nunquam confidant id fore ſemper occultum," let them never flatter themſelves, that theſe enormities will lie forever buried in darkneſs: becauſe many are ſaid to have betrayed their crimes in their dreams: and others in the delirious ravings of a diſeaſe, have diſcovered their abominable actions, that had lain a long time concealed.

Ver. 1230. Thus Book iv. v. 1012.

Multi de magnis per ſomnum rebu' loquuntur,
Indiciique ſui facti perſæpè fuêre.

Some talk of ſtate affairs, and ſome betray,
The plots, their treach'rous minds had fram'd by day.

Ver. 1233. Religion, ſays he, and the fear of the gods, began at the firſt birth of men: But from whence had they their knowledge of the deities? It is uncertain, whether from the images that flowed from the gods themſelves, to whom Epicurus aſcribed, as it were, a body and blood; or from images that aroſe by chance. Now thoſe images, whatever they were, or from whence ſoever they came, by continually ſtriking the minds of men, either when they were ſleeping or awake, were the cauſe that men conjectured that ſome ſubſtances, like thoſe images, and capable of underſtanding, did exiſt ſomewhere or other: for the images ſeemed to ſpeak, and to move their members; and they believed them immortal too, becauſe the form of the images was always the ſame, and their power and ſtrength, ſeemed to be immenſe; and happy likewiſe, becauſe they were never terrified at dangers, nor diſturbed at the fear of death: and never grew weary, as if they enjoyed eternal reſt.

Ver. 1262. In theſe eleven verſes he farther aſſerts, that the ignorance of natural cauſes gave riſe likewiſe to religion. For when men obſerved the motions of the heavens, and the viciſſitudes of the ſeaſons, when they perceived the hail, the ſnow, the winds, the thunder, the lightning, &c. and could not comprehend what ſhould be the cauſes of all thoſe wonderous effects, they concluded that God was the author of them: for to whom could they aſcribe the conſtant and continual motion of the ſpheres, rather than to a wiſe ruler and Lord? And where could they place his abode better, or with greater reaſon, than in the places from whence comes the ſnow, the hail, the thunder, &c.? Thus argued the Epicureans; but much better the Stoics, who made uſe of this very argument, to aſſert and prove the divine Providence; which the others brought to oppoſe it.

Thus Manilius, lib. i. v. 475. ſpeaking of the motions of the ſtars and ſpheres:

Nec varios obitus nôrunt, varioſque recurſus;
Certa ſed in proprias oriuntur ſydera luces;
Nataleſque ſuos, occaſumque ordine ſervant:

And v. 483. he adds,

At mihi tam præſens ratio non ulla videtur,
Quâ pateat mundum divino numine verti,
Atque ipſum eſſe Deum; nec forte coïſſe magiſtrâ,
Ut voluit credi, qui, &c.

Which our tranſlator thus renders:

The ſtars ſtill keep one courſe: they ſtill purſue
Their conſtant track, nor vary in a new:
From one fixt point they ſtart, their courſe maintain,
Repeat their whirl, and viſit it again:
A moſt convincing reaſon, drawn from ſenſe,
That this vaſt frame is rul'd by Providence;
Which, like the ſoul, does ev'ry whirl advance:
It muſt be God: nor was it made by chance,
As Epicurus dreamt, &c.

Ver. 1273. This belief of a Divine Providence, Epicurus held to be the ſole cauſe of all the anxieties that diſturb the life of man: and this opinion of his Lucretius explains in theſe twenty-five verſes. From that belief, ſays he, proceeds the vain and cauſeleſs ſuperſtition of the greateſt part of mankind, which is not piety to the gods. The pious man is he who looks into himſelf, who explores the ſecrets and power of nature, that he may comprehend the cauſes of all things, and wonder at nothing: This is he, who with an undaunted ſoul beholds the motions of the heavens, and all the other phenomenons of nature; becauſe he is convinced upon certain grounds, that all things here below happen without the care and intervention of the gods: But ignorance is the parent of piety.

"Papicolam crederes Lucretium," ſays Creech, on this paſſage. Horace, Epiſt. vi. lib. 1.

Nil admirari, prope res eſt una, Numici,
Solaque quæ poſſit facere et ſervare beatum.
Hunc ſolem, et ſtellas, et decedentia certis
Tempora momentis, ſunt qui formidine nullâ
Imbuti ſpectent.———

And Virgil:

Fœlix qui potuit rerum cognoſcere cauſas,
———ſtrepitumque Acherontis avari
Subjecit pedibus.———

Ver. 1274. *Subject unto rage.*] Velleius in Cicero explains this opinion of Epicurus, and gives us the reaſon of it in theſe words: "Quæ enim nobis Natura informationem Deorum ipſorum dedit, eadem inſculpſit in mentibus, ut eos æternos, et beatos haberemus: Quod ſi ita eſt, verè expoſita eſt illa ſententia ab Epicuro, quod æternum beatumque ſit, id nec habere ipſum negotii quidquam, nec exhibere alteri, itaque neque irâ, neque gratiâ teneri; quod quæ talia eſſent, imbecilla eſſent omnia: Nihil enim agit Deus, nullis occupationibus eſt implicatus, nulla opera molitur; ſuâ ſapientiâ et virtute gaudet: habèt exploratum fore ſe ſemper tum in maximis, tum in æternis voluptatibus. Hunc Deum ritè beatum dixerimus, veſtrum vero laborioſiſſimum: Nos enim beatam vitam in animi ſecuritate, et in omni vacatione munerum ponimus." De Natur. Deor. lib. 1. Upon which Lactantius ſays, that he is apt to believe with Poſſidonius in the ſame Cicero, that Epicurus did indeed believe, that there were no gods at all; and that what he ſaid of the immortal deites, he ſaid only to avoid the cenſure of the world: That though he indeed confeſſed with his mouth, that there were gods, yet he denied them in effect, by exempting them from all manner of affections, and from all employment whatever. De Irâ Dei. cap. 4.

Ver. 1279. *To bend.*] Lucret. "Vertier ad lapidem." For the Romans were wont, in their worſhip of the images of their gods, to turn their bodies round to the right. Plaut. in Curcul. act. i. v. 70.

All cover'd.] For the Romans likewiſe worſhipped the images of their gods, with a veil hanging down from their head, Plaut. in Amph. "Invocat Deos immortales, ut ſibi auxilium ferant manibus puris, capite operto." The reaſon of which ceremony, you may ſee at large in Plutarch, ἐν ῥωμαϊκοῖς· and in the life of Marcellus. See likewiſe the interpreters of Minutius Felix, p. 10.

Ver. 1281. *Spread arms.*] Lucr. "Pandere palmas;" which was a cuſtom obſerved likewiſe in their ſupplications to the gods: Virgil. Æneid. i. v. 97.

Ingemit, et duplices tendens ad ſydera palmas.

Ver. 1298. In theſe twenty-eight verſes he ſays, that fear is another cauſe of religion: for men, being frighted at tempeſts, earthquakes, &c. againſt which they could not ſtroggle with any ſtrength, nor avoid them by any art or induſtry of their own, implored the aid and aſſiſtance of inviſible powers: This was the beginning of prayers and vows; and thus

Primos in orbe Deos fecit Timor.

But what do vows avail? The wind ſtill rages on relentleſs; the unpitying gods are as deaf and unmoved as the tempeſt: and chance alone directs and governs all things.

Ver. 1304. Thus Shakſpeare in the tragedy of King Lear, deſcribing a tempeſt,

———Man's nature cannot carry
Th' affliction, and not fear. Let the great gods,
Who keep this dreadful pother o'er our heads,
Find out their enemies now. Tremble, thou wretch,
That haſt within thee undivulged crimes,
Unwhipt of juſtice: Hide thee, thou bloody hand;
Thou, perjur'd; and thou, ſimilar of virtue,
That art inceſtuous: Caitiff, to pieces ſhake,
That under covert, and convenient ſeeming,
Haſt practis'd on man's life: Cloſe pent-up guilt
Rive your concealing continents, and cry
Theſe dreadful ſummoners grace.

Ver. 1326. In theſe thirty-eight verſes, he teaches how metals came firſt to be diſcovered, what uſe they put them to, and the value they ſet upon them. He aſcribes the firſt diſcovery to the burning down of the woods: No matter how, nor why they were ſet a fire: but the heat of the flames melted the metals that were diſperſed here and there in the veins of the earth, and made them flow into one maſs. Now when men firſt happened to ſee that glittering body, they were ſurpriſed at its ſplendor, and this it was that invited them to handle it, and try what it was good for: And taking notice that the figure of each lump of it reſembled, and bore a proportion with, the figure of the hole or hollow place out of which they had taken it, they concluded, that by melting thoſe metals again, they might bring them into what form they pleaſed; and that they might be made ſo thin, as to receive an edge, and be ſharpened: Thus they began to make inſtruments of each ſort of metal; and with them fell to cutting down the woods, cleaved the timber, made beams, &c. Now becauſe the inſtruments and tools they had made of gold and of ſilver, as being ſofter metals, were more ſubject to blunt than the others; thoſe firſt men ſet a greater value upon braſs, becauſe it was the more uſeful metal. Whence the poet takes occaſion to ſay, that thoſe wretched miſers who ſit brooding over their unprofitable gold and ſilver, and contemn braſs and iron, thoſe more uſeful metals, act contrary to the dictates of nature, who teaches to ſet value on things according to the utility and uſefulneſs of them.

Gold.] Cadmus, the Phœnician, is by ſome ſaid to have been the firſt who diſcovered gold: Others ſay, that Thoas firſt found it, and that too in the mountain Pangæus in Thrace, now called Malaca, and Caſtagua: The Chronicon Alexandrinum aſcribes it to Mercury, the ſon of Jupiter, or to Picus, king of Italy, who, quitting his own country, went into Egypt, where, after the death of Miſraim, the ſon of Cham, he was elected to ſucceed him in the royal dignity, and was, for the invention of gold, called Θεὸς χρύσιος, the golden god. Æſchylus attributes the inven-

tion of this and all other metals to Prometheus: And there are others who write, that either Æaclis, whom Hyginus calls Cæacus, the ſon of Jupiter, or Sol, the ſon of Oceanus, firſt diſcovered gold, and that too in Panchaia. See Plin. lib. vii. cap. 56. and Polydore, Virgil, lib. ii. de Rer. Invent. cap. 9. Moreover, among the other metals Lucretius mentions iron, though our tranſlator does not. The author of the Diſpenſary deſcribes theſe mines of metals in the earth, in lines worth tranſcribing:

Now thoſe profounder regions they explore,
Where metals ripen in vaſt cakes of ore:
Here, ſullen to the ſight, at large is ſpread
The dull unwieldy maſs of lumpiſh lead:
There, glimm'ring in their dawning heds, are ſeen
The more aſpiring ſeeds of ſprightly tin:
The copper ſparkles next in ruddy ſtreaks,
And in the gloom betrays its glowing cheeks:
The ſilver then, with bright and burniſh'd grace,
Youth, and a blooming luſtre in its face,
To th' arms of thoſe more yielding metals flies,
And in the folds of their embraces lies:
So cloſe they cling, ſo ſtubbornly retire,
Their love's more vi'lent than the chemiſt's fire.

Ver. 1331. Here we may obſerve, that men waged war firſt of all with fire, having, before the invention of iron, braſs, or arms, with which they fought afterwards, diſcovered the deſtructive force of that element.

Ver. 1340. Ariſtotle, in his treatiſe περὶ θαυμάσ. ἀκουσ. ſays, that ſome ſhepherds in Spain having ſet fire to certain woods, and heated the ſubſtance of the earth, the ſilver that was in the bowels of it, melted, and flowed together into a heap: and that a little while afterwards there happened an earthquake, which cleaved the earth, and diſcloſed a vaſt quantity of ſilver, that had flowed together by that means. This too is confirmed by Strabo, lib. 3. where he ſays, that the mines in Andaluſia were diſcovered by this accident. So too Athenæus, lib. vi. c. 4. But of the firſt diſcoverers of metals, conſult the authors mentioned, v. 1336. and Georg. Agricol. lib. i. de Metal.

Ver. 1345. Thus Ovid. Met. i. v. 138.

——Itum eſt in viſcera terræ, [bris,
Quaſque recondiderat, Stygiiſque admoverat umEffodiuntur opes, irritamenta malorum.
Jamque nocens ferrum, ferroque nocentius aurum
Prodierat, prodit bellum, quod pugnat utroque.

Thus Engliſhed by Dryden:

Then greedy mortals, rummaging her ſtore,
Dug from her entrails firſt the precious ore,
(Which next to hell the prudent gods had laid)
And that alluring ill to ſight diſplay'd:
Then curſed ſteel, and more accurſed gold,
Gave miſchief birth, and made that miſchief bold,
And double death did wretched man invade,
By ſteel aſſaulted, and by gold betray'd.

Milton, in the firſt book of Paradiſe Loſt, ſpeaking of Mammon;

——By him firſt
Men alſo, and by his ſuggeſtion taught,
Ranſack'd the centre, and with impious hands
Rifled the bowels of their mother earth
For treaſures better hid.

Ver. 1359. The author of the Diſpenſary ſays to the ſame purpoſe:

Gold makes a patrician of a ſlave;
A dwarf, an Atlas; a Therſites, brave:
It cancels all defects.——

And Dryden in Amphitryo makes Jupiter ſay,

——When I made
This gold, I made a greater god than Jove,
And gave my own omnipotence away.

Ver. 1360. To the ſame purpoſe, Dryden

Thus ev'ry moment alters what is done,
And innovates ſome act till then unknown:
——For former things
Are ſet aſide, like abdicated kings.

Ver. 1364. Since it is reaſonable to ſuppoſe, that the veins of iron, as well as of braſs, ſilver, lead, &c. were melted by the heat of thoſe burning foreſts, how comes it to paſs, that the ancients ſcarce make any mention of iron, but often of braſs? Becauſe, ſays he, in theſe ſixteen verſes, braſs was a more eaſy metal to work, and there was greater plenty of it: therefore the weapons and tools of huſbandry that were firſt uſed, were made of braſs: at length, iron came in play; a fitter metal to plough and till the ſtubborn and hardened earth, and more proper for the daily increaſing roughneſs and cruelty of man.

Ver. 1366. For as Cowley ſays, David. 3.

Theſe were the firſt rude arts that malice try'd,
Ere man the ſins of too much knowledge knew,
And death, by long experience, witty grew.

Ver. 1370. Ovid. Faſt. lib. iv.

Æs erat in prætio, chalybs jam maſſa placebat:
Eheu! perpetuo debuit illa tegi.

Ver. 1372. Heſiod. Ἔργων, καὶ Ἡμερῶν, lib. i. v. 149. ſpeaking of the brazen age:

Τοῖς δ' ἦν χάλκεα μὲν τεύχεα, χάλκεοι δὲ τε οἶ-
κοι,
Χαλκῷ δ' ἐργάζοντο, μέλας δ' οὐκ ἔσκε σίδηρος.

And Euſtathius on Iliad i. v. 236. χαλκὸν δὲ τὸν σίδηρον λέγει διὰ τὴν παλαι χρῆσιν τῷ χαλκῷ &c. to which I add this of Athenæus, lib. vi. cap. 4. Ἱστορῶ τὰ αὐτὰ καὶ Φανίας, ἐν τῷ περὶ τῶν ἐν Σικελίᾳ πυράννων· ὡς χαλκῶν ὄντων τῶν παλαιῶν ἀναθημάτων, καὶ τριπόδων, καὶ λεβήτων, καὶ ἐγχειριδίων· ὧν ἐφ' ἑνὸς καὶ ἐπιγεγράφθαι φησίν

Θάνσαί μ', ἐτεὸν γὰρ ἐν Ιλίῃ εὐρεῖ πύργῳ
Ἦν, ὅτε καλλικόμῳ μαρνάμεθ' ἀμφ' Ἑλένῃ,
Καὶ μ' Ἀθηνορίδης ἐφόρει κρείων Ἑλικάων, &c.

Ver. 1380. Having made mention of wars in the preceding verſe, he takes occaſion to explain in forty-eight verſes, thoſe ſavage, which we call warlike, arts of the firſt men, who improved in cruelty, and grew daily more and more ingenious

to deſtroy. At firſt they fought on horſeback, and a horſe is a tame and gentle animal: then they joined two horſes to a chariot, then four, and armed their chariots with iron bills and ſcythes After this, wild beaſts were brought to the wars, elephants by the Africans, lions by the Parthians, then bulls, boars, &c. But Lucretius himſelf does not believe all this: only having met with theſe relations in ſome hiſtories, he mentions them, and mingles truths with falſities. And yet, ſays he, they are not altogether incredible: For what has not witty rage and cruelty invented? And what kind of aſſiſtance and relief will men not embrace and refuſe, who labour under oppreſſion and deſpair?

Sophocles aſcribes the firſt invention of the bridle, and of riding on horſeback, to Neptune: Lyſias, the orator, to the Amazons: and others, to others: But Virgil abſolutely to the Lapithæ, a people of Theſſalia, that inhabited the mountains Pindus and Othrys, and were next neighbours to the Centaurs. Georg. iii. v. 115.

Frœna Pelethronii Lapithæ, gyroſque dedêre,
Impoſiti dorſo: atque equitem docuêre ſub armis
Inſultare ſolo, et greſſus glomerare ſuperbos.

Thus rendered by Dryden:

——— The Lapithæ add the ſtate
Of bits and bridles; taught the ſteed to bound,
To run the ring, and trace the mazy ground;
To ſtop, to fly, the rules of war to know,
T' obey the rider, and to dare the foe.

Ver. 1383. The firſt invention of chariots is by Æſchylus aſcribed to Prometheus, by Cicero to Minerva, by the Trezenians to Hippolytus, and by Virgil to Ericthonius:

Primus Ericthonius currus et quatuor auſus
Jungere equos, rapidiſque rotis inſiſtere victor.
Georg. iii. v. 113.

Bold Ericthonius was the firſt that join'd
Four horſes, for the rapid race deſign'd,
And o'er the duſty wheels preſiding ſate. *Dryd.*

But whether the poet means that Ericthonius, who was king of the Athenians, the ſon of Vulcan and Tellus, who is ſaid to have been ſnake-footed, *anguipes*, and, to conceal that deformity, to have firſt invented a chariot; or that other Ericthonius, the Phrygian, who was the ſon of Dardanus, grandſon of Jupiter, and one of the anceſtors of Æneas, is uncertain. Pliny ſays the Phrygians firſt drove a chariot with two horſes, and Ericthonius one with four: "Bigas primum junxit Phrygum Natio, quadrigas Ericthonius." Nat. Hiſt. lib. vii. cap. 56. Euſebius in Chronic. makes Trochilus, the Argive, who was ſon of Callithea, the prieſteſs of Juno, to be the firſt inventor of chariots; and with him agrees Tertullian de Spectac. However, he is erroneouſly called Orſilochus by Hyginus, who nevertheleſs is followed in his error by Corippus in Panegyr. I. as we find by theſe verſes, which Scaliger on Euſebius cites:

Orſilochum referunt primas junxiſſe quadrigas,
Et currus armâſſe novos, Pelopemque ſecundum
In ſoceri veniſſe necem. ——

But Dempſter, in his edition of Corippus, inſtead of *Orſilochum* reads *Cecropidem*, by which he means Ericthonius, who was the fourth king of Athens from Cecrops, who founded that city: Others again will have it to have been Œnomaus, the king of Elis: But Theon, the Scholiaſt of Aratus ſays plainly, that the conſtellation of Heniochus, which the Latins called *Auriga*, the Charioteer, is, εἴδωλον ἢ Βελλεροφοντου, ἢ Τροχιλου, the repreſentation either of Bellerophon or of Trochilus, the firſt inventor of the *quadriga*. Moreover, as to the manner of joining theſe four horſes in a chariot, the ancients, as they differed from us, ſo they differed among themſelves likewiſe: For ſome chariots had two poles, one between each pair of horſes; for the horſes went "æquatâ fronte," all a-breaſt: ſo that all the horſes were ζύγιοι, i. e. *jugales*, yoked and harnaſſed to the poles: Afterwards Clythenes, the Sycionian, changed that manner, and made chariots with one pole only; ſo that the two middle horſes only were *jugales*; the other two that were outmoſt to the right and left. had only reins, and the other neceſſary harneſs and traces, and were therefore called σειραφόροι, i. e. *funales*; and theſe were more at liberty than thoſe called *jugales*. Of the *funales*, Suetonius, in the life of Tiberius, gives us a remarkable example in theſe words, "Tiberius, pubeſcens Actiaco triumpho, currum Auguſti comitatus eſt ſiniſteriore funali equo, cum Marcellus, Octaviæ filius, dexteriore veheretur:" Which paſſage of that hiſtorian Alexander ab Alexandro undertakes to explain, but is miſtaken in it: for he ſays, that the *equi funales* are ſo called *à funalibus*, i. e. *à facibus triumphalibus*, &c. from the triumphal torches, which their riders carried in their hands: But of this ſee Salmaſius in his Plinian Exercitations, Tom. ii. pag. 899, where he treats of theſe matters at large. The ſeveral figures of the *currus quadrijuges* may be ſeen in the conſular and imperial coins, which we find repreſented in Urſinus, Golizius, and in Panvinius de Ludis Circenſibus: but above all ſee Schefferus, who not long ago publiſhed a treatiſe upon this ſubject, intitled, de re vehiculari Veterum. Tertullian in his book de Spectaculis, acquaints us, That Romulus was the firſt who brought the *quadriga*, or chariot with four horſes, in uſe among the Romans: Pliny makes mention of *currûs ſejuges*, chariots drawn by ſix horſes, and ſays, that the firſt of them among the Romans was in the time of Auguſtus, to whom the ſenate decreed a chariot with ſix horſes, as a triumphal honour, of which nevertheleſs the modeſty of that prince would not permit him to accept.

Ver. 1384. *The armed cars.*] Of them, ſee book iii. ver. 615.

Ver. 1385. *Caſtled elephants.*] Becauſe they carried towers on their backs. Lucretius calls them *Lucas Boves*: and Faber ſays, that *Lucas* is there put for *Lucanas*, as we find *Campas* for *Campanas*

in Plautus: Then he adds, that elephants were ſo called, becauſe the firſt time the Romans had ſeen any, was in the war againſt Pyrrhus, and at *Lucanus*, now called *Lugano*, a town in the Milaneze, Pliny, lib. viii. cap. 6. "Elephantas Italia primum vidit Pyrrhi Regis bello, & boves Lucas appellavit in Lucanis viſas; anno urbis 472." This confirms the opinion of Faber: But Varro, lib. vi. de Linguâ Latinâ, has this Paſſage: "Lucas bos Elephas, cur ita ſit dicta duobus modis invenio ſcriptum: Nam in C. Ælii Commentario à Lybicis Lucas, & in Virginii Commentario à Lucanis Lucas, ab eo quod noſtri maximam quadrupedem; quam ipſi habebant, vocarent bovem; & in Lucanis Pyrrhi bello primum vidiſſent apud hoſtes Elephantes, id eſt, quadrupedes cornutas, (nam quæ dentes multi dicunt ſunt cornua) Lucam bovem appellâſſe: Ego arbitror potius Lucas á luce, quod longe relucebant; propter inauratos regios clypeos quibus eorum tum ornatæ erant turres." But this reaſon of Varro's ſeems but weak: And it is certain, that Pyrrhus firſt made uſe of them in Lucania, and afterwards Hannibal in Africa, againſt the Romans. Lucretius calls them likewiſe *Anguimanos*, ſnake-handed: for the *proboſcis* of the elephant is called a hand, in Cicero ii. de Naturâ Deorum: but that hand is, like a ſerpent, voluble and pliable. *Milton.*

——Th' unwieldy elephant,
To make them mirth, us'd all his might and wreath'd
His lithe proboſcis.——

Ver. 1386. The Africans, but more particularly the Carthaginians, who, as I ſaid before, under their leader Hannibal, fought againſt the Romans.

Ver. 1390. Here the poet teaches, that in their wars, they likewiſe made uſe of bulls, boars, and lions, to help them to fight their battles, but that theſe untractable beaſts often did them more hurt than good; for when the armies were engaged in heat of action, theſe ſavage animals raged not on the enemy alone, but turned back upon their own maſters, and, tearing them to pieces, put all into diſorder. See the note on book iii. ver. 614.

Ver. 1391. The Parthians were a people of Aſia, who long enjoyed the empire of the Eaſt. The country they inhabited was called Parthia, and lay between Media to the weſt, and Aſia to the eaſt; and between Perſia to the ſouth, and Hyrcania to the north: It was called Parthia, ſays Stephanus, from theſe people, who were originally Scythians, and fled out of Scythia to the Medes, who called all fugitives Parthi, and Parthyæi, and thus the country where they ſettled was from them called Parthia. It has now ſeveral names. Mercator calls it Arach: Alphonſus Hadrianus, Jexdi; and Niger, Coraſſau: For, conſiſting of divers provinces, it comes likewiſe to have ſundry names. The Parthians were remarkable for their drunkenneſs; and from them came the proverb, "Parthi quo plus biberint, eo plus ſitiunt." The more the Parthians drink, the more they are adry; nay, to be able to drink a great deal is eſteemed honourable among them: Their wine was made of the fruit of the palm-tree, and their chief food was graſhoppers. Tertullian ſays, they are ſo addicted to venery, that they mix promiſcuouſly with their own ſiſters and mothers: Theft is with them unpuniſhed: They neither built temples, nor erected ſtatues to the gods; but worſhipped their king for their deity: However they offered ſacrifices in the mountains to Jupiter, and to Sol, Luna and Tellus, the ſun moon and earth. They held lying to be the moſt heinous of all crimes.

Ver. 1412. In like manner an Engliſh poet.

As lions, though they once were tame,
Yet if ſharp wounds their rage inflame,
Liſt up their ſtormy voices, roar,
And tear the keepers they obey'd before.
Walſh.

Ver. 1428. In theſe eleven verſes he tells us, that in regard to the more civilized arts, their firſt care was to clothe themſelves, which they did at firſt with the ſkins of beaſts, tagged together with thorns, not ſewed, nor were the arts of ſpinning or of weaving yet diſcovered: Nor indeed was it poſſible they ſhould be ſo, before the uſe of iron, without which the tools for ſpinning and weaving could not be made: Nor was ſpinning firſt practiſed by women, but by men; they being the more induſtrious and inventive ſex: till at length the ſturdy peaſants reproached theſe male ſpinſters for their effeminate lazineſs, laughed them from the diſtaff, and brought them to follow the more laborious occupations.

All arts are generally diſtinguiſhed into two ſorts: I. The illiberal, or manual: II. The liberal, or ingenuous: Of the firſt ſort the number is almoſt without number: yet both kinds, though very imperfectly, are reduced each to a ſeptenary diviſion, and expreſſed in the following diſtich:

Lingua, Tropus, Ratio, Numerus, Tonus, Angulus, Aſtra:
Rus, Nemus, Arma, Faber, Vulnera, Lana, Rates.

The firſt of which verſes expreſſes the liberal ſciences, viz grammar, rhetoric, logic, arithmetic, muſic, geometry, and aſtronomy: The ſecond, the illiberal; as agriculture, hunting, arts military and fabrile, chirurgery, ſpinning and weaving, and arts nautical: Of the firſt inventors of which, ſee Pliny, lib vii. cap. 56. Polydore Virgil, and Garzone in his Piazza Univerſale: And as to the different eſteem and practice of theſe arts among the Greeks and Romans, you may conſult Aldus Manutius in Quæſt. per Epiſtol. lib. ii. cap. 9.

Ver. 1439. In theſe nineteen verſes the poet teaches, that Nature herſelf taught them to plant: for they had obſerved that the acorns berries, &c. that dropped off the trees, produced new ſhoots; and this put them upon endeavouring to make them do the like: Every one according to his capacity added ſome improvement to the culture of the fields and gardens: And thus by degrees they arrived to the perfection in which we now admire them, by the beau-

tiful order, and regular diſpoſition of greens, flowers, and fruits.

The antiquity of agriculture cannot certainly be conteſted by any other art; ſince the three firſt men in the world, were a gardener, a ploughman, and a grazier: Though this be an unqueſtionable truth, yet the ancients differed in opinion concerning the firſt inventor of it: but this variety of opinions might ariſe from the ſeveral perſons that firſt introduced it into ſeveral countries: Varro, lib. iii. de R. R. confeſſes it to be the moſt ancient of all arts: The Egyptians ſaid, it was firſt found out by Oſyris, or Maneros, Joſephus attributes it to Cain, as he does paſturage to Abel. Antiqu. lib. i. cap. 3. The Grecks aſcribed it to Ceres, and the Italians to Saturn. Pliny, lib. xvii. cap. 9. ſays, that King Augeas was the firſt who invented manuring of ground by ſtercoration, and that he firſt inſtructed the Greeks in that art, as Hercules did the Italians: who nevertheleſs immortalized, and made a god of their King Stercutius, the ſon of Faunus; if he were not rather the ſame, as ſome will have him to be, with Evander, the Arcadian, who firſt introduced the worſhip of Faunus, that is to ſay, of Pan, or univerſal Nature, into Italy, and taught the Latins the art of manuring ground, for which he was honoured by the name of Stercutius. Tertullian in Apologet. calls him Sterculus or Sterculius; and Servius on Æneid. viii. Sterquilinius, whom he aſſerts to be the ſame with Pitumnus, brother of Pilumnus: By Macrobius he is called Stercutus, which he proves to be one of the names of Saturn: "Saturnum Romani etiam Stercutum vocant, quod primus ſtercore fœcunditatem agris comparaverit." Saturnal. lib. i. cap. 7.

But as no other art can diſpute antiquity with this of agriculture, ſo neither can any lay claim to an equal ſhare of dignity: It is indeed, as Columella, lib. i. cap. 1. calls it, "res ſine dubitatione proxima & quaſi conſanguineâ Philoſophiæ," without doubt the next neighbour, and the neareſt of kin to philoſophy; Varro ſays the principles of it are the ſame with thoſe that Ennius makes to be the principles of the whole univerſe; earth, water, air, and the ſun: And Cicero de ſenectute, ſpeaking of the pleaſures of a huſbandman, ſays of them, that they ſeem to him to approach very near to the pleaſures of a philoſopher, "mihi quidem ad ſapientis vitam proximè videntur accedere." To be a huſbandman, ſays our excellent Cowley, is but a retreat from the city, to be a philoſopher apart from the world; or rather, a retreat from the world, as it is man's, into the world, as it is God's. There is no other ſort of life, that affords ſo many branches of praiſe to a panegyriſt: the utility of it to a man's ſelf; the uſefulneſs, or rather neceſſity of it, to all the reſt of mankind: Its innocence, its pleaſures, its antiquity, its dignity: Under all which heads that author has treated of it in his admirable Eſſay of Agriculture, to which I refer the reader.

Ver. 1443. Lucretius. "Stirpes committere ramis;" by which he expreſſes only one of the ſeveral ways of inſition, and what we call to graff cleft-wiſe. Virgil in the ſecond Georgic teaches the ſeveral ways, by which trees are propagated, either naturally, or artificially. They may be produced three ſeveral ways by nature.

I. Of their own accord: as the broom, the withy, the poplar, the oſier, &c. are.

II. By their ſeed that drops by chance: I ſay, by chance; for there is a certain way of ſowing that belongs to art: the trees that grow of fortuitous ſeed, are the cheſnut, the oak, the beech, &c.

III. By their root: for the cherry-tree, hornbeam, laurel, &c. will ſhoot out young trees from their roots.

The ſame poet teaches, that trees may be propagated ſeven ſeveral ways by art, and the induſtry of men:

I. By avulſion, that is to ſay, by plucking up young ſhoots, roots and all, from the bodies of trees, and planting them in the ground.

II. By planting the ſtocks, that is to ſay, the loweſt and thickeſt part of the trunk, together with the roots; or by taking the ſtock without any root, and either cutting it into a ſharp point at the lower end, or ſplitting it at the bottom, and then planting it; but the general way is to ſplit it in form of a croſs; and therefore Virgil calls ſuch ſtocks *quadrifidas*.

——— Hic ſtirpes obruit arvo,
Quadrifidaſque ſudes, et acuto robore vallos.
Georg. ii. *ver.* 24.

III. By propagation, which is chiefly uſed in vines; and this is done by bending the ſhoots or branches in the ſhape of a bow, without cutting them off from the mother-tree, and laying down the top of them into the ground. The branch ſo bent is called *propago*, a layer. Milton deſcribes this way of propagating the Indian fig-tree, which, ſays he,

In Malabar or Decan ſpreads her arms,
Branching ſo broad and long, that in the ground
The bended twigs take root, and daughters grow
About the mother-tree; a pillar'd ſhade
High over-arch'd, and echoing walks between.

IV. By taking little trees or plants, together with the earth that covers them about the root, and tranſplanting them into another place.

V. By cutting off a ſucker from a tree, and planting it, even though it have no root.

VI. By cutting the ſtem of the tree without any root to it, but in the middle, and into ſeveral pieces, and planting them. This way is chiefly practiſed in the propagation of the olive-tree.

VII. When a branch, or twig, of one tree is inſerted into another tree, and that too of a different kind, and paſſes into the nature of it. This is the true grafting, which is practiſed in two manners: One, which the Latins call *inſitio*, i. e. grafting within a cleft made in the top of the ſtock; which is the ordinary way now uſed, and properly called grafting; the other, inoculation, called likewiſe budding, and grafting ſcutcheonwiſe. Pliny adds a third way, which he calls emplaſtratio; which is generally confounded with inocula-

n; yet there seems to be this difference be-
een these three ways of grafting: That called
ition, was done by cleaving the trunk of the
e, and putting one or more twigs into the cleft.
culation, by making an aperture between the
k and the trunk, and including in it the graff,
twig. And lastly, emplastration, by taking off
rt of the bark of the stock, and substituting in
place the bud of another tree, exactly of the
e bigness, so as to fill up the space of the bark
it is taken away. This is manifest from Pliny,
. xvi. cap. 16, 18, &c. whence it is evident, that
s art of grafting has been variously practised in
ferent ages. And our gardeners at this day dif-
from the method of Virgil, who teaches to
ake the aperture in the very knot or joint of the
ck; whereas they make it either below or a-
ve, in that part of the bark that is brightest and
oothest.

Ver. 1452. See above, ver. 308.

Ver 1458. Music too, like all the other arts, hen first invented, was rude and unpolished; nor as it more at first than an imitation of the chirp-g and singing of birds. Then having observed, at reeds, when shaken by a gentle gale, sent rth a whispering murmur, they made themselves pes of reeds; with these the pensive shepherds ere wont to sooth their cares, and, when the ighbourhood met to be merry, they delighted, irh their uncouth airs, the whole company and emselves. In these merry assemblies they first gan to laugh and jest at one another, and to mple the ground with unequal steps; and this id the first foundation of dancing. Thus they verted themselves, and knew no better; nor do ir more artful and melodious airs delight us ore, than these unharmonious artless strains of eirs did them; but new things always please, id we grow weary of the old. Thus men be-in to loath their acorns, and to indulge their petites with more delicious food. Thus they spised their grassy beds, and invented easy ouches and beds of down. Thus they laid aside eir skins of beasts, and by degrees clothed emselves in purple. This is contained in forty-ght verses.

Ver. 1462. The western winds, says the poet, histling among the reeds, taught them to make pes of the stalks. But of the first invention of pes, see Book iv. ver. 595. and Ovid. Metam. ver. 705.

Ver. 1467. Virgil, Eclog. i.

ormosam resonare doces Amaryllida sylvas.

From whence our translator took the thought? t least he had no hint of it from his author. A-aryllis is a fictitious name, used by the ancients n their pastoral poems, and continued down to his day. It is derived from the channels they ade to convey water into their meadow grounds, r to drain them, if too wet; for such a conduit he Greeks called ἡ ἀμάρα.

Ver. 1468. This and the following verse are re-eated below, ver. 1536.

Ver. 1471. Lucret.

——Nam tum sunt omnia cordi:

Which is the reading of all the copies; but Faber says, it ought to be "otia cordi," a judicious emendation, which our translator has followed. Vossius on Catullus, p. 167. corrects this passage of our poet, and says it ought to be read, "omnia chordæ." For after men, says he, have indulged and filled themselves with eating, nothing is more delightful than music, which at that time is, τὰ πάντα, all things.

Ver. 1472. This, and the five following verses are repeated from book ii. ver. 31. Cowley and Anacreon:

Underneath this myrtle shade,
On flow'ry beds supinely laid,
With od'rous oils my head o'erflowing,
And around it roses growing;
What should I do, but drink away,
The heat and troubles of the day, &c.

Compare Creech's translation of this passage with the original of Lucretius, and with these verses of Cowley, and judge from whence he took it

Ver. 1481. Lucretius:

Tum caput, atque humeros plexis redimire corollis,
Floribus, &c.

Where the poet alludes to the luxury of his own age, when, in their feastings, they used to trim up their bowls with flowers, and to wear garlands of roses on their heads, and round their necks; and, in a manner, to wallow in them. Tibullus:

Et capite et collo mollia serta gerat.

But of this custom see at large book iii. ver. 896.

Ver. 1489. *Morpheus.*] The sun, or rather the servant, of Somnus, the god of sleep. See book iv ver. 1026

Ver. 1495. To the same purpose, Dryden, in the Tragedy of Aurenge-Zebe, says finely:

'Tis not for nothing, that we life pursue;
It pays our hopes with something still that's new.
Each day's a mistress, unenjoy'd before;
Like travellers, we're pleas'd with seeing more.

Ver. 1502. Faber says, that the first garment, though but a worthless undressed skin of a beast, so pleased these earth-born men, that it was the cause of his death, who first invented and wore it.

Ver. 1506. But this fighting and murder for the skin, says the poet, in fourteen verses, may be in some measure, excused; because, before they had found out the art of weaving, skins were all the covering they had to defend their bodies from the cold. But what excuse is there for men, who destroy, and lay all things waste, with wars and rapine, that they may shine in gold, and clothe themselves in purple? This, nevertheless, they do, transported with an insatiable thirst of avarice and ambition, and because they are ignorant of that true pleasure, which Epicurus taught; and which is not so greedy after delights, as content with necessaries.

Ver. 1514 For man is seldom contented with a competency, and never knows when he has enough nor when to put a stop to what Ovid calls excellently well: "Amor sceleratus habendi." Thus Manilius begins his fourth book:

Quid tam sollicitis vitam consumimus annis,
Torquemurque metu, cæcâque cupidine rerum?
Æterni ilq senes curis, dum quærimus, ævum
Perdimus et nullo votorum fine beati
Victuros agimus semper, nec vivimus unquam;
Pauperiorque bonis quisque est, quo plura requirat, [optat.
Nec quod habet memorat; tantum quod non habet,

Which our translator has thus rendered:

Why should our time run out in useless years
Of anxious troubles, and tormenting fears?
Why should deluding hopes disturb our ease,
Vain to pursue, yet eager to possess?
With no success, and no advantage crown'd,
Why should we still tread on th' unfinish'd round?
Grown gray in cares, pursue the senseless strife,
And seeking how to live, consume a life?
The more we have, the meaner is our store,
The unenjoying craving wretch is poor.

Ver. 1520. Men being convinced by a long experience, that the seasons of the year return in a certain order, and that nothing is imbroiled, nothing arrives by chance, (for the atoms that at first fortuitously jumbled together, are composed in such a manner, both by the laws of their own motion, and by the power of nature, that unless some cause from without should hinder and disturb them, they will for ever observe the same motions); they at length embraced a constant and settled way of life. To this end they constituted republics, and established commerce between several nations. Then poets, the authors of history, were born: and lastly, the arts, that are subservient to life, or conducive to pleasure, were found out. For the names of the inventors of them are still preserved and known.

Ver. 1525. The nations, who are famed for the invention of navigation, are, first the Phœnicians, from whom it came to the Egyptians, and from them to the Greeks; among whom the first that sailed are said to be the Cretans. But as to the first building, and use of ships, not to mention Noah's ark, Clemens Alexandrinus ascribes the invention to Atlas, the Libyan, Æschylus, to Prometheus; and Diodorus Siculus, to Neptune: the invention likewise of sails is ascribed by the same Æschylus to Prometheus alio: by Diodorus to Æolus; by Pliny and Pausanias to Dædalus and his son Icarus: by Cassiodorus, lib. 5. Variar. and by Hyginus to Isis; who, for that reason, on the reverse of some of the Roman coins, is represented, holding in her hand, a sail, swelling with the wind: it is certain that the Latins styled her Dea Navigia, as being the president of navigation: to confirm which, we find in Gruterus, p. 312. the following inscription:

DIIS MANIBUS SAC.
SER. SULPITIO AUG. L.
ALCIMO ÆDITUO
AD ISIDEM PELAGIAM.

Of the original and first essays of navigation Claudian in the Preface to the Rape of Proserpine:

Inventâ secuit primus qui nave profundum,
Et rudibus remis solicitavit aquas;
Tranquillis primum trepidis se credidit undis,
Littora secuto tramite summa legens.
Mox longos tentare sinus, et linquere terras,
Et leni cœpit pandere vela Noto:
Ast ubi paulatim præceps audacia crevit,
Cordaque languentem dedidicêre metum;
Jam vagus erupit pelago, cœlumque secutus,
Ægeas hyemes, Ioniumque domat.

Ver. 1526. Thus too Manilius, lib i. ver. 87.

Tum vagus in cæcum penetravit navita pontum,
Fecit et ignotis itiner commercia terris.

Which Creech thus renders:

Through seas unknown the sailor then was hurl'd
And gainful traffic join'd the distant world.

The original of traffic is generally ascribed to the Phœnicians: some indeed, particularly Phornutus or Cornutus, de Naturâ Deorum, and Cæsar, lib. 6. de Bello Gall. attribute it to Mercury, whom for that reason Arnobius calls "Nundinarum, Mercium, Commerciorumque mutator," lib. 3. ad Gentes. And that merchants used to sacrifice to him as to the god of gain, and president of negociation and commerce, is confirmed by Ovid. lib. 4 Fastor. where speaking to Mercury, he says,

Te quicunque suas profitentur vendere merces,
Thure dato, tribuas ut sibi lucra rogant.

This too is confirmed by that ancient inscription that was found at Metz, in the year 1589, and recorded by Philippus Thomasinus de Denarii pag. 274.

MERCURIO NEGOTIATORI
SACRUM
NUMISIUS ALBINUS
EX VOTO.

Ver. 1528. Cicero says, that the invention of letters has circumscribed, in a few literal marks, the sounds of the voice, which seemed infinite: "Sonos vocis, qui infiniti videbantur, paucis literarum notis terminavit." Tusc. 1. Suidas calls it γραμματικὴν φιλοσοφίαν, the grammatical philosophy, and ascribes the invention of it to Prometheus: others to the Phœnicians: thus Lucan:

Phœnices primi, famæ si creditur, ausi
Mansuram rudibus vocem signare figuris.

which passage, Brebœuf, the French interpreter of that poet, applying it to Cadmus, who from the Phœnicians brought most of the letters of the Greek alphabet into Greece, has rendered in these excellent verses.

C'est de lui que nous vient cet art ingenieux
De peindre la parole, et de parler aux yeux;
Et par les traits divers de figures tracées,
Donner de la couleur, et du corps aux pensées.

Which I the rather chooſe to take notice of, becauſe they are finely rendered into our own language by a perſon of quality, and not till now made public.

He that ingenious art did firſt deſcry
Of painting words, and ſpeaking to the eye;
And, by the various ſhapes of figures wrought,
Gave colour, and a body to a thought.

But as to the firſt characterizers of ſpeech, ſee the learned digreſſion of Joſeph Scaliger de Liter. antiqu. upon Euſebius: and Petit. in obſervat. lib. ii. c. 1. To which I add theſe anonymous verſes, as they are recorded by Crinitus and Giraldus, and from them tranſcribed by Gerard. Joh. Voſſius, lib. i. de Arte Grammat.

Primus Moyſes Hebraicas exaravit literas:
Mente Phœnices ſagaci condiderunt Atticas:
Quas Latini ſcriptitamus edidit Nicoſtrata:
Abraham Syras, et idem reperit Chaldaicas:
Iſis arte non minore protulit Ægyptias:
Gulfilas promſit Getarum quas videmus literas.

But the origin of letters is, with greater appearance of truth, referred by others to Adam himſelf: for is it not highly improbable, that he, who was to tranſmit all learning and knowledge down to his poſterity, ſhould want the neceſſary conveyances and inſtruments for ſo great a work? And this opinion is confirmed by the early mention that is made of letters, even in the days of Seth, who was his ſon; and who no doubt received them from him. I know not of what weight it may ſeem, but I cannot omit to take notice, that, in the Vatican Library at Rome, there is extant, to this day, an ancient picture of Adam, with a hebrew inſcription over his head; which indeed makes nothing to our preſent purpoſe: but under his feet there is another in Latin, conceived in theſe words:
ADAM DIVINITUS EDOCTUS, PRIMUS SCIENTIARUM ET LITERARUM INVENTOR. See Lomeier. de Biblioth. p. 10.

OF THE
SEVERAL WAYS OF WRITING
PRACTISED BY THE ANCIENTS.

HAVING given this ſhort account of the firſt invention of letters, it may not be amiſs in this place to give ſome account likewiſe in a ſhort digreſſion, how thoſe characters of old preſerved themſelves from death. And indeed there is ſcarce any matter capable of receiving the marks of letters, that ſome or other of the ancients have not made uſe of for that purpoſe.

The firſt letters that we read of were engraved in ſtone: witneſs the two famous pillars of Enoch, one of which was yet remaining, even in the days of Joſephus: and Jamblicus confeſſes, that he took the principles of his myſtical philoſophy from the pillars of Mercury. Pliny, in his Natural Hiſtory, lib. 7. cap 5. acquaints us, that the Babylonians, and the Aſſyrians, engraved their laws in pillars of brick, "incoctis lateribus." And we know that Moſes writ his on ſtone: Horace too makes mention of this ſort of writing on ſtones:

Non inciſa notis marmora publicis.

The Roman laws of the twelve tables were engraven in braſs; and ſo too was the league made with the Latins, as Livy witneſſes, Decad. i. lib. 2. And Talus. of whom was reported many ridiculous ſtories, was, upon no other ground, feigned by the Cretans, to be a man made of braſs by Vulcan, but likewiſe he carried about Crete the laws that were graven in braſs, and put them ſeverely in execution.

Pauſanias, in Bœoticis, makes mention of all the books of Heſiod, that are intituled, Ἔργων καὶ ἡμερῶν, written in plates of lead: which ſort of plates Suetonius, in the life of Nero, calls "chartam plumbeam," leaden paper: but this cuſtom was in uſe even before the days of Job · who himſelf, chap. 19. cries out: "Oh that my words were graven with an iron pen, and lead in the rock for ever:" which the interpreters explain, that he would have the leaden plates placed upon rocks or pillars.

They uſed alſo of old to write on leaves or plates of ivory; and hence the books were called "libri elephantini; and not as ſome imagine from their bigneſs and huge bulk. Thus Martial. lib. 14. Epigram. 5.

Languida nè triſtes obſcurent lumina ceræ,
Nigra tibi niveum litera pingat ebur.

Waxen table-books were very ancient: for Prœtus ſent a letter in one of them by Bellerophon, as Homer tells us, Iliad 6. Theſe table-books were made of wood, covered with wax, on which they writ with an inſtrument of iron or braſs, and therefore they were called "pugillares, à pungendo," as Aldus Manutius obſerves. De quæſitis per Epiſt. lib 2. epiſt. 1. Georgius Longus, de Annulis Signatoriis cap. 8 deſcribes them to be of a triangular form: but Laurentius Pignorius de ſervis, p. 116. ſays "Pugillarium forma fuit oblonga et quadrata, eminenti quâdam margine circumcirca concluſa, ut vidimus Romæ in veteri arcâ ſepulchrali in hortis Cyriaci Mattheii." The ſame Pignorius in the ſame book, p 117. deſcribes likewiſe the form of the Roman Graphium, or Stylus, with which they uſed to write in theſe waxen table-books: It was firſt made of iron, but that being dangerous to ſtab with, and too frequently abuſed in that practice, was, in after times, forbid at Rome, and publicly prohibited to be worn, as Caſaubon notes on Suetonius, lib. i. cap. 82. and then ſtyles of bone were in uſe: theſe were made ſharp at one end to cut the letters, and flat at the other to deface them; whence the phraſe, "ſtylum vertere:" this ſtylus was uſually carried in a little caſe, called graphiarum, as Beroaldus obſerves on the ſame place of Suetonius. As for ſlates, and plates of wood, it cannot be doubted but that they were uſed to write upon.

Pancirolus tells us, That the Longobards, now by corruption called Lumbards, at their firſt

coming into Italy, made leaves to write on, of thin ſhavings of wood, ſome of which he had ſeen and read in his days. The ancients writ likewiſe on the leaves of palm-trees, ſee Pliny, lib. xiii. cap. 11. and thence letters are called Phœnician, not from the country, but from φοῖνιξ, a palm-tree. Yet Guilandnus de Papyro, makes a mighty buſtle to prove, that palm-leaves were never uſed to write upon; he believes that Phœnicea, which Pliny there uſes, is not the ſame with φοῖνιξ, and would have us read "malvarum," inſtead of "palmarum. It is indeed true, that they did anciently write on the leaves of mallows likewiſe, as appears by Iſidorus, and the following epigram of Cinna, which that author cites:

Hæc tibi Arateis multùm invigilata lucernis
Carmina, queis ignes movimus æthereos,
Lævis in aridulo malvæ deſcripta libello,
Pruſiacâ vexi munera naviculâ.

But this was not frequent: for the leaves of mallows are too ſoft, to be proper for that uſe. The names of thoſe who were expelled the ſenate at Athens, were written on leaves, though of what kind, is uncertain: but from thence the ſentence againſt them was called Ἐμφυλλοφόρησις; and the names of thoſe baniſhed by the people, were written on ſhells: but at Syracuſe, the names of ſuch ſentenced citizens were written on the leaves of the olive-tree; and thence it was called Πεταλισμος, ἀπὸ τῦ πέταλα ἐλαίας. And the Cumæan Sybil in Virgil was wont to make uſe of this ſort of paper:

Fata canit, foliiſque notas et carmina mandat.
Æn. iii. *ver.* 444.

Upon which Hortenſius cites Varro to prove, that it was peculiar to that Sybil, to deſcribe the oracles in the leaves of palm-trees: but Cerdanus believes it to have been the general cuſtom of thoſe times, and that they did not yet write on the barks of trees, or on the reed called papyrus, or on parchment.

Pliny makes mention in ſeveral places of books made of linen: theſe were public records, and called by ſome "libri lintei," by others, "linteæ mappæ, and "carbaſina volumina," ſilken volumes: Claudian.

——— Quid carmine poſcat
Fatidico cuſtos Romani carbaſus ævi.

And Symmachus Epiſtolar. lib. 4. "Monitus Cumanos lintea texta ſumpſerunt:" and Pliny ſays the Parthians uſed to interweave letters in their clothes.

The ancients were likewiſe wont to write on the thin kind of ſkin, that grows between the outmoſt bark and the body of the tree; and the paper, which the Chineſe and ſome Indians uſe to this day, ſeems to be made of that, or ſomething like it: and from thence a book was called *liber*.

Having tried all theſe experiments, at length they fell to uſe paper, which they called Papyrus, from a reed of that name, that grew in the fens and marſhy grounds in Egypt, and of which paper was made: they likewiſe called it Charta, from a town of that name in the marſhes of Egypt, where it grew. Herodotus in Terpſichore ſays, that even in his days the Ionians called paper, ſkins; becauſe in times paſt they were fain to ſupply the want of paper with ſkins, which ſhows the error of Pliny, in ſaying, that neither paper nor parchment were uſed before the time of Eumenes; from whoſe city Pergamus, parchment firſt came, and thence was called Pergamena: but of the invention, uſe, and improvement of paper and parchment, ſee at large Melch. Guilandin. in his Treatiſe de Papyr. I only add, that the Diphtheræ of the Greeks were only ſkins of beaſts: and that, in which Jupiter is feigned to keep his memorial of all things, was made of the ſkin of the goat, that gave him ſuck: and many are of opinion, that the famous golden fleece was nothing but a book, written on a ſheep's ſkin. Diodorus the Sicilian, affirms in his ſecond book, that the annals of Perſia were written on ſuch ſkins: and many more authorities might be produced, if they were needful.

At length the poets, ſays Lucretius, began to celebrate in their hymns the noble actions of the heroes of thoſe days; and this cuſtom is at this time obſerved amongſt the Indians, whoſe ſongs are the only hiſtories they have. Laſtly, the poet teaches, that all the other arts were invented and improved by the ſagacity and experience of men; inſomuch that it is hard to ſay, which of them was firſt found out.

Ver. 1536. This and the following verſe are repeated from above, ver. 1467.

Ver. 1538. Thus too Manilius, ſpeaking of the invention of arts, ſays,

Semper enim ex aliis alias profeminat uſus.
Lib. 1. *ver.* 98.

Which Creech paraphraſes thus:

New hints from ſettled arts experience gains,
Inſtructs our labours, and rewards our pains:
Thus into many ſtreams one ſpring divides,
And through the valley rolls refreſhing tides.

Conſonant to which is this of Columella, lib. 10.

Ipſa novas artes varia experientia rerum,
Et labor oſtendit miſeris; uſuſque magiſter
Tradidit.——

And Theocritus in Idyl. 21. aſcribes the invention of all arts to want and neceſſity:

Ἀστινία, Διόφαντε. μόνα τὰς τέχνας ἐγείρει,
Αὐτὰ τῶ μόχθοιο διδάσκαλος· οὐδὲ γὰρ ὕπνῳ
Ἀνδράσιν ἐργατίναισι κακὰ παρίχονθι μέριμναι.

To which may not improperly be applied, what Philoſtratus, in the life of Apollonius, as cited by Photius, reports of the temple of Hercules at Gades; where among other altars, there was one dedicated to penury and art; to intimate, that as penury ſtirs up art, ſo art drives away penury; as Hercules put to flight, and ſubdued monſters, the incitements of his valour. See Riccard. Brixian.

and Casaubon explaining this passage of the prologue to Persius;

Magister artis, ingeniique largitor
Venter.——

ANIMADVERSION,

BY WAY OF RECAPITULATION, ON THE FIFTH BOOK OF LUCRETIUS.

What Lucretius in this book asserts from ver. 60. to ver. 461. that the sun, the earth, the sea, in a word, the whole frame of this world has not existed from all eternity, nor will continue to all eternity, is believed in general by all pious men, and sound philosophers: but his proving this assertion by some probable, and by many strong and unquestionable arguments, that indeed seems peculiar to Lucretius only: for certainly no stronger proofs, no more cogent reasons [I always except the Holy Scriptures] are any where to be found. This makes me wonder the more, how so excellent a wit could insert those foolish verses from ver. 168 to ver. 266. in which he endeavours to evince, that God did not create the world: for he believes, that God is not generous enough, or rather is too spiteful and envious, to do any thing for the sake of man; and fancies, that whatever he does, he does for the sake of himself, of his own ease and quiet. If any man should give such a character of Epicurus, Lucretius would treat him as an impudent babbler. In the next place he imagines, that neither God nor man can have any notice or knowledge of any things, but by the means of images. And who is this God? Is it not he whom the mind of man perceives, whom all nations acknowledge and adore? In the next place, who can bear with him, while he enumerates the faults, as he calls them, of the world? All of them false and foolishly invented. And were these defects in the new and infant world? Lucretius himself denies they were; and therefore is the more to blame, to impute the decays and flaws in a building, worn out with age, to the fault of the architect.

From ver. 461. to ver. 551. he describes the rise or birth of the world; and among all the physiologers, there is not a description of it more likely to be true, nor more lively and beautiful. The atoms are moved by their own weight, they meet, this makes them rebound, and according to the difference of the stroke and weight, the resilition is made into different places, where they combine and grow into bodies.

Having, as he imagines, freed the Deity from all care and trouble, and kept him in ease and quiet, while the world was making, he proceeds, and from ver. 550. to ver. 824. delineates the order: and because he does not assign any one certain cause of the motions of the heavens, of eclipses, of day and night, with that positiveness as some others do, he seems to some to waver in his opinions. but I insist, that such a constancy as they call it, in an Epicurean physiologer, would be very ridiculous: for he pronounces that all things are made and done by chance: and that no man can determine one, to say, certain cause, of these phenomenons, since they may be explained in several manners. Nor should I indeed think a man worthy of blame, who assigns several causes, while among the rest the only true and certain cause is proposed. Nor can I imagine a man could act more agreeably to his principles, or describe chance better: resolving all philosophy, all our search, and inquiry into those matters, into a naked *may be:* nay, often scarce standing within the comprehensive bounds of possibility: but to pass by all the contradictions that lie in the very principles, and beginning of his hypothesis, let us suppose these infinite atoms, moving in the infinite; and grant they could strike, and take hold, and squeeze out the lesser and more agile parts into seas, heaven, moon, stars, &c. I ask, why this mighty mass of earth as its nature requires, does not constantly descend? Why is it fixed and steady? Lucretius answers: because it lies in congenial matter, and therefore presses not: but still the question returns: why does not this congenial matter fall, since it has weight, the Epicurean property of atoms, and that other fit matter spread below it? The demand constantly returns. Besides, this matter was squeezed out of the earth by the descending heavier particles, and therefore the mass may press, and descend through it. Well then, if this earth cannot be framed, neither can any of the other elements; since, according to his description, the latter depends on the former. And since he refuses to stand to any one cause of the motion of the sun or stars, it would be endless to pursue this flying bubble, and follow him through all the mazes of conceit and fancy. Nor will I add any thing concerning what he alleges of the magnitude of the sun, moon, and stars, having said before, that that opinion is too vulgar to be regarded.

Read the rest of this book, and commiserate a man of so excellent parts, who could forget himself, and play the fool so egregiously: but it is a fate upon all who deny a Divine Providence, to reason foolishly in ethics, and absurdly in physics. Yet in the description he gives of the state of the first men, of their manners and way of life, we have a perfect image of the manners of all the present barbarous and savage nations: and in these earth-born men of Lucretius, you will easily discover the Cannibals, Brasileans, and several others of the people of the West Indies.

BOOK VI.

THE ARGUMENT.

THE firſt thirty-ſeven verſes of this ſixth and laſt book of Lucretius contain the praiſe of Athens, in which city the great Epicurus was born; together with an encomium of that philoſopher. II. From ver. 37. to ver. 96. the poet explains the argument of this book, in ſuch a manner as might reaſonably be expected from an Epicurean. From thence, to ver. 431. he proceeds to dive into the very nature of the things we call meteors; and, that men might learn not to be diſmayed at the thunder of angry Jupiter, he teaches, that thunder is made either by the colliſion, or corraſion, or diſruption of clouds, when contrary winds fight againſt one another: or, by the force of winds, either ſtruggling within the bowels of the clouds, or driving them with violence againſt each other: or, that it is only the hiſſing of flames, that fall from a dry cloud into a wet: or, laſtly, that thunder is but the craſhing noiſe of bodies of hail and ice, that meeting violently in the air, are daſhed to pieces. As for the lightning, which the Latins called *Fulgur*, he ſays it is nothing but fire forced out of clouds, either by their colliſion, or other motion; or the ſeeds of flames that are driven out of clouds, by the force of winds. And then, as to the thunderbolt, that other ſort of lightning which the ancients called *Fulmen*, he teaches, that it conſiſts of a ſubtile and fiery nature; that it is conceived and bred in thick and high-built clouds; that being grown to maturity, it burſts out of the clouds by the force of wind, that either breaks through them, daſhes them to pieces, or beats from without, with great violence againſt them; that it conſiſts of atoms ſo ſubtile and minute that it is borne along the air with wonderous celerity: and that it is moſt frequent in the vernal and autumnal ſeaſons: then he concludes this diſputation with deriding the ſuperſtitious doctrine of the Thuſcans, and others, who held that thunder and lightning are not the effects of natural cauſes, but proceed merely from the will of the offended, angry gods, and that Jupiter himſelf is the darter of thunder. And becauſe a preſter or fiery whirlwind, which is indeed a ſort of lightning, and all other whirlwinds are certain kinds of meteors, the poet, from ver. 431. to ver. 460. diſputes, IV. concerning them. and explains the nature, cauſes, motions, and differences of them. V. From ver. 459. to ver. 532. he treats of clouds and of rain. Clouds he ſuppoſes to be made either of the rougheſt and moſt dry particles of the air; or of the ſteams, vapours, and exhalations, that ariſe from the earth and waters And as to rain, he ſays, it is generated, either by compreſſion, as they term it, or by tranſmutation: by compreſſion, if the force of the winds ſqueeze the water out of the clouds; by tranſmutation, if the clouds themſelves are changed, and diſtil in falling drops of water. VI. In regard to the other meteors, as the rainbow, ſnow, wind, hail, and froſt, he diſputes briefly of them, or rather only mentions them, from ver. 531. to ver. 541. VII. From ver. 540. to ver. 609 he treats of the ſeveral ſorts of earthquakes, and of the cauſes of them: which he aſcribes, either to hollow parts of the earth, which, falling in, cauſe it to tremble; or to the tremulous motion of the waters, which he ſuppoſes the earth to ſwim in, or to ſubterraneous, and other winds; which either ſhake the earth in ſeveral parts, or drive it to and fro. VIII. From ver. 608. to ver. 646. he treats of the ſea; and teaches, that the reaſon why it does not increaſe, notwithſtanding the immenſe quantity of water that is continually flowing into it, is, either becauſe of the vaſtneſs of the ſea itſelf, or becauſe the heat of the ſun dries up its waters: or becauſe the winds, bruſhing over them, bear much of them away; or becauſe the clouds draw much moiſture from them; or, laſtly, becauſe of the dryneſs of the earth itſelf, which ſucks in, and imbibes, the waters of the ſea. IX. From ver. 645. to ver. 715. he inquires into the cauſes of the fires that are ejected out of Ætna; and imputes them either to the violence of the wind, or to the exeſtuation of the waters of the ſea; which, entering beneath into the cavities of the mountain, extrude and force out the ſeeds of flame, that are engendered and collected there, through the apertures, that are on the top of it. X. From ver. 714. to ver. 735. he treats of the annual increaſe of the Nile; and aſcribes it either to the Eteſian winds, that blow full againſt the ſtream of that river: and thus, hindering its courſe, cauſe the waters to overflow: or to heaps of ſand, which the ſea drives to the mouths of it, and thus chokes them up; or to the rains and ſnows that fall, and are melted, near the fountain of the Nile. XI. From ver. 734. to ver. 831. he diſpures of the Averni, and other tracts of the earth, that are noxious, and even deadly, to birds, men, deer, crows, horſes, &c. XII. From ver. 830. to ver. 894. he teaches, why the water of ſome wells and ſprings is hot in winter, and cold in ſummer. XIII. And thence to ver. 1006. he explains at large the attractive power and virtue of the loadſtone. XIV. Laſtly, from ver. 1006. to the end of the book, he diſcourſes briefly of the cauſe and origin of plagues and diſeaſes; and concludes his poem with an elegant deſcription, taken from Thucydides, of the plague that raged in Athens, and almoſt laid waſte and deſolate the whole country of Attica, in the time of the Peloponneſian war.

Athens first gave us laws, and chang'd our food;
For acorns, tender fruit and corn bestow'd
On wretched man: each was a mighty good!
But then she taught us how to live at ease,
She taught the joys of life, and show'd us peace.
When Epicurus rose; when he began,
That oracle of truth, that more than man;
The fame of whose inventions still survive'd,
And rais'd an everlasting pyramid, [wide.
As high as heav'n the top, as earth the basis
For he, observing some that could supply
Contented nature's thrifty luxury,
Happy in honours, and in wealth's embrace,
And doubly happy in a noble race,
Still groan'd at home; with cares and fears op-
Each found a sad disturber in his breast, [press'd,
Imagin'd strait, some fault lay hid in man,
Whence this corruption of the joys began:
Because his wish is boundless, vast his mind;
The goods ran through and left no sweet behind:
Or else some ill opinion still destroys
The ent'ring good, and still sours all his joys.
Then he, the mighty he, by pow'rful rules,
And true philosophy reform'd our souls,
He purg'd away all vain and empty care,
And taught what man should hope, what man should fear.
The end, at which our actions aim, he show'd,
And taught an easy way to find the good:
What we from chance, or nature's force may fear,
And taught us how t' avoid, and how to bear,
And prov'd that man is fondly vex'd with care.
For we, as boys at night, at day do fear
Shadows, as vain, and senseless as those are:
Wherefore that darkness, that o'erspreads our souls,
Day can't disperse, but those eternal rules,
Which from firm premises true reason draws,
And a deep insight into nature's laws.
And therefore I'll proceed. Since then the sky
And all that is, or can be, fram'd on high,
Is mortal, once was made and once must die;
Since this is prov'd, now I'll go farther on,
And finish this so happily begun.
The various wonders of the lower air [care,
Perplex mens doubtful thoughts with vexing
And make the wretches bend with slavish fear:
For ignorance of causes heaves the mind
To pow'rs above; as birds soar high, when blind.
We see effects; but when their causes lie
Beyond the ken of vulgar reason's eye,
We then ascribe them to the Deity.
For ev'n those few exalted souls, that know
The gods must live at ease, nor look below;
If they look up, and view the world above,
And wonder how these glorious beings move,
They are entrap'd, they bind their slavish chain,
And sink to their religious fears again;
And then the world with heav'nly tyrants fill,
Whose force is as unbounded as their will.
Deluded ignorants! who ne'er did see
By reason's light, what can, what cannot, be:
How all at last must yield to fatal force;
What steady bounds confine their nat'ral course:
And therefore err. If you refuse to fly
Such thoughts, unworthy of the Deity;
But think they act such things, as break their ease,
And opposite to joy and happiness;
Then thou shalt surely smart, and, fancying still
The gods are angry, fear a coming ill: [ploy;
Though no revengeful thoughts their minds em-
No thirst to punish man disturbs their joy:
Yet thou dost think their happy quiet age
Still vex with waking cares, and vi'lent rage.
Nor shalt thou visit on the sacred days
Their shrines with quiet mind, or sing their praise,
Besides, the images, the forms, that rise
From their pure limbs, and strike thy reason's
And constantly present the deities; [eyes,
Those images will still disturb thy mind,
Strike deep, and wound, and leave despair behind:
And then how sad thy life! what pungent cares
Will vex thy wretched soul? What anxious fears?
But now to chase these phantoms out of sight
By the plain magic of true reason's light;
Though I have sung a thousand things before,
My lab'ring muse must sing a thousand more:
How thunder, storm, and how swift lightning flies,
Singing with fiery wings the wounded skies!
Lest superstitious you observe the flame,
If those quick fires from lucky quarters came;
Or with sad omen fell, and how they burn
Through closest stones, and waste, and then return.
And you, my sweetest muse, come lead me on
I'm eager, and 'tis time that I were gone;
Come lead me on, and show the path to gain
The race, and glory too, and crown my pain.
First, then, the dreadful thunder roars aloud,
When fighting winds drive heavy cloud on cloud:
For where the heav'n is clear, the sky serene,
No dreadful thunder's heard, no lightning seen;
But where the clouds are thick, there thunders rise;
The furious infant's born, and speaks, and dies.
Now clouds are not so thick, so close combin'd
As stones; nor yet so thin, and so refin'd
As rising mists, or subtile smoke, or wind:
For then the upper clouds, like weighty stone,
Would fall abruptly, and come tumbling down:
Or else disperse, like smoke, and ne'er enclose
The hanging drops of rain, nor hail, nor snows.
They give the crack, as o'er a theatre
Vast curtains spread, are ruffled in the air;
Or torn (for such a sound is often known
From thunder's crack), they give a mighty groan;
Or as spread clothes, or sheets of paper, fly
Before the wind, and rattle through the sky.
But clouds meet not directly still, but slide,
And rudely grate each others injur'd side:
And hence that buzzing noise we often hear;
That with harsh murmurs fills the lower air;
Continues long, but with a softer sound;
At length it gathers strength, and breaks the bound.
But more, the thunder, arm'd with pointed flame,
May seem to shake the world, and break the frame;
When e'er a fierce, and strong, and furious wind,
In narrow, thick, and hollow clouds confin'd,

Breaks through the priſon with a mighty noiſe,
And ſhoots at liberty with dreadful voice:
Nor is this ſtrange, when one poor breath of air,
That ſtarts from broken bladders, ſounds ſo far.
Again: 'tis reaſon too that noiſe ſhould riſe
When vi'lent ſtorms rage o'er the lower ſkies,
For thouſand clouds appear, rough, cloſe combin'd,
And thick, and able to reſiſt the wind:
Thus noiſe muſt riſe, as when the woods they wound,
The vext and injur'd boughs ſigh forth a mournful ſound.
And winds oft cut the clouds, and, paſſing through,
With murm'ring ſound fill all the air below:
For that the winds may break the clouds, and fly
Through all reſiſtance in the lower ſky,
'Tis eaſy to diſcover, ſince they break,
And twiſt our trees: yet here there force is weak.
Beſides; vaſt waves of clouds ſeem roll'd above,
And in confus'd and tumbling order move:
Theſe, meeting, ſtrike, and break, and loudly roar,
As billows daſhing on the trembling ſhore.
Or elſe hot thunder falls on rain, or ſnow,
And dies, and hiſſes, as it paſſes through:
As when we quench a glowing maſs, the fires
Fly off with noiſe, with noiſe the heat expires.
But if the cloud be dry, and thunder fall,
Riſes a crackling blaze, and ſpreads o'er all;
As when fierce fires, preſs'd on by winds, do ſeize
Our laurel groves, and waſte the virgin trees;
The leaves all crackle; ſhe, that fled the chaſe
Of Phœbus love, ſtill flies the flames embrace.
Or elſe vaſt hills of hail, and rocks of ice,
May break; and, tumbling, rattle through the ſkies:
For when rough ſtorms conjoin the parts of hail,
Or ſcatter'd ice, their weight muſt make them fall.
Quick lightning flies, when heavy clouds ruſh on,
And ſtrike as ſteel and flint, or ſtone and ſtone:
For then ſmall ſparks appear, and ſcatter'd light
Breaks ſwiftly forth, and wakes the ſleepy night:
The night, amaz'd, begins to haſte away,
As if thoſe fires were beams of coming day.
And firſt we ſee the light, and then we hear
The noiſes: theſe but ſlowly reach the ear;
Becauſe the images of things do fly
More ſwift than ſounds, and quickly ſtrike the eye:
One inſtance clears it; for, obſerve, and ſee,
Whene'er a cruel ax does wound a tree,
The tree ſtrait ſighs: but if at diſtance ſhown,
We ſee the ſtroke before we hear the groan:
So whilſt the noiſe moves ſlow the winged light
Flies ſwiftly on, and ſtrikes the diſtant ſight:
Though both aroſe at once, that moves the eyes,
Before the ſlow-tongu'd thunder ſpeaks, and dies.
But more; a cloud ſeems fir'd, a tempeſt brings
Swift trembling flames upon his dreadful wings;
When ſhut within a cloud, it ſcorns the bound,
And ſtrives to break, and whirls, and tumbles round;
And, whirling, hollows out the wat'ry frame,
At laſt grows hot, takes fire, and breaks in flame:
For motion cauſes heat: thus balls of lead,
From engines thrown, have melted as they fled:
The wind grows hot, when loos'd from cold embrace
Of preſſing clouds, and gets a larger ſpace:
Strait ſcatters ſparks of fire, which ſwiftly fly,
And ſpread quick lightnings o'er the lower ſky:
Then the grave murmur comes: the light appears
Before the heavy ſound can reach our ears,
Now this is done, when cloud lies heap'd on cloud;
Thence lightning flies, and thunder roars aloud.
Nor muſt you think this falſe; becauſe the eye,
When plac'd below, ſees clouds more broad than high:
For look and ſee, the lab'ring winds can bear
Vaſt mountain-clouds, and whirl them through the air;
The lab'ring winds then move but ſlowly on,
And, as oppreſs'd with burdens, ſigh and groan.
Or when upon a mountain's lofty head,
We ſee the higher clouds o'er lower ſpread.
And, though the winds all huſh'd, they ceaſe to move,
Yet ſtill the low are preſs'd by thoſe above:
Then you may gueſs their bulk; how high they rear!
How vaſt theſe real caſtles built in air!
How great, how ſtrong their hollows, where the wind
Shut up, grows fierce, and ſcorns to be confin'd,
But roars through all the clouds; as beaſts diſdain
The den's confinement, and the flaviſh chain,
And roar to get their liberty again:
And, ſeeking way, rolls round the watery frame,
And gathers num'rous ſeeds of ſubtle flame,
And theſe it whirls, until the ſhining ſtreams
Break through the cloud, and ſhow their feeble beams.
But more, theſe glaring fires, theſe flames, may
And fall to earth through all the ſpacious ſkies,
Becauſe the clouds hold num'rous parts of light:
For if they're dry, their colour's fiery bright:
For they muſt catch, and hold deſcending rays,
And thus look fiery red, and often blaze:
Theſe, preſs'd by winds, to narrow place retire,
And ſcatter ſeeds that frame the glaring fire.
But farther; lightning often ſeems to glide
When clouds grow rare; for, as the winds divide,
The clouds muſt loſe the ſeeds: Thoſe ſhow the fire,
But without thunder ſilently expire.
But now what ſeeds the thunder's parts compoſe,
Their ſtinks, their marks, and ſulph'rous odour ſhows:
For theſe are ſigns of fire, not wind, or rain:
Nay, oft they burn our towns, and men complain
Of heav'nly fires, and angry gods, in vain.
Now theſe celeſtial fires are fram'd above,
Of parts refin'd, and thin, and apt to move:
Too ſtrong to be oppos'd, they ſcorn a bound,
And paſs through cloſeſt walls, as voice and ſound:
They fly with eaſe through ſtone, through gold, and braſs:
And in one inſtant melt the ſtubborn maſs.

Nay, oft the caſk entire, the liquors flow,
Becauſe the pointed flames, with ſecret blow,
Widen the veſſel's pores in paſſing through:
Which yet the ſun, with all his beams and rage,
And all his fires can't do within an age:
So quick theſe parts muſt move, ſo ſwift they run,
So much excel in force the vig'rous ſun.
Now, how this force begins, how thunder flies
With that quick ſtrength, how theſe fierce motions riſe,
That break our ſtrongeſt tow'rs, our towns infeſt,
Demoliſh houſes, ruin man and beaſt,
That ſplit our trees, and rage o'er all the wood,
I will explain, and make my promiſe good.
Firſt, then, 'tis certain thunder ſeems to fly
From dark, thick clouds, and thoſe built vaſtly high:
For when the ſmiling heav'n's ſerene and clear,
Or thinly clouded, we no thunder hear:
But now ev'n ſenſe aſſures no ſmiles adorn,
No ſky's ſerene, while mighty thunder's born:
But athic cloud o'erſpreads heav'n's threat'ning face,
As if the ſhades of hell had left their place,
And fill'd the arched ſkies: ſo thick the night,
So dark the horrid clouds, and ſo affright!
Beſides; at ſea dark clouds do often fall,
As ſtreams of flowing pitch, and ſpread o'er all,
Far from the darken'd ſky; and, ſwoln with rain,
And ſtorms, they draw behind a dreadful train
Of thunder-cracks, which rage o'er all the main.
Ev'n we on earth all ſhake, with terror aw'd,
We ſeek for ſhelter, nor dare peep abroad.
Therefore theſe clouds, that ſpread o'er all the ſky,
Muſt needs be thick, and all built vaſtly high:
For elſe they could not ſtop deſcending light
Nor check the rays, and bring ſo thick a night;
Nor ſuch great floods, nor ſo much water yield,
As ſwell our ſtreams, and ſpread o'er ev'ry field.
Theſe winds and fires, when ſpread o'er all the ſky,
Make thunders roar, and the wing'd lightning fly.
For I have taught before that clouds contain
A mighty ſtore of fire, and much they gain
From the ſun's heat, and the deſcending rays,
Theſe when the wind has forc'd to narrow place,
And ſqueez'd ſome ſparkles from the wat'ry frame,
And cloſely mixes with the gather'd flame,
It whirls, and then within the cloud retires;
And, tumbling, forges there, and points the fires:
This, by the rapid whirl, or neighb'ring ray,
Is fir'd; for flame is rais'd by either way.
Thus when the wind, grown hot, ſtill whirls around,
Or when the furious flame breaks o'er the bound,
Then thunder, fit for birth, diſſolves the cloud,
And ſhows the glaring fires, and roars aloud:
The heav'ns then crack, as if the orbs would fall,
And feeble fear, and tremblings ſeize on all: 290
Then ſhow'rs, as if the air were chang'd to rain,
Fall ſwiftly down, and threaten floods again.
So great the thunder-ſtorms, as if they came
From the revengeful clouds to quench the flame.
Sometimes external winds the clouds divide,
And break wide caverns in their injur'd ſide.
Through theſe the infant thunder makes its way:
Theſe winds call forth the flames, and they obey.
And ſometimes too a wind unkindled flies,
But kindles in its paſſage through the ſkies; 300
Loſing ſome heavy parts it us'd to bear,
Which could not ſwiftly cut the middle air;
And gath'ring others of convenient frame, [flame:
Which join, and fly with them, and raiſe the
As balls of lead, when ſhot with mighty force,
Their ſtubborn, their ungentle parts divorce,
And, ſoften'd, melt in middle of their courſe.
Sometimes the fury of the ſtroke may raiſe
Quick ſparks of fire, and make a mighty blaze:
For by the ſtroke ſmall ſtreams of light may ſpring 310
Both from the ſtriking, and the injur'd thing:
As from cold flint and ſteel bright ſparks appear;
They fly the blow, and fly to open air.
And thus the clouds, if of convenient frame,
May well be kindled, and diſſolve in flame:
Nor can the winds be cold, becauſe they move
Through ſuch vaſt ſpace, ſtill tumbling from above:
For, if not kindled by the flames they meet,
Yet ſure they muſt come warm with mingled heat.
The thunder's force comes thus: For, while it lay 320
Confin'd in clouds, it ſtrove to break away:
At laſt prevails, and flies with mighty force;
And hence ſo great the ſtrength, ſo ſwift the courſe!
As mighty weights from ſtrong baliſtæ thrown,
Which break the walls, and ſhake the frighted town.
Beſides, its parts are ſmall, and quick the blows,
And therefore meets with nought that can oppoſe:
No ſtops can hinder, and no lets can ſtay:
The cloſeſt pores will yield an open way:
And hence it flies with ſuch a mighty force; 330
And hence ſo great the ſtrength, ſo quick the courſe.
Beſides; all weights by nature downward go;
But when that motion is increas'd by blow,
The ſwiftneſs, and the force muſt needs increaſe,
And break, whatever dares reſiſt, with eaſe.
Laſtly; ſo vaſt a ſpace ſince thunders run,
Their ſwiftneſs muſt increaſe in tumbling down:
For motions ſtill increaſing run their race,
And all by odd proportions mend their pace:
Or all the ſeeds direct their vi'lent courſe, 340
And ſtrike one part with their united force:
Or elſe, as through the air they ſwiftly rove,
Meet parts which ſtrike, and make them ſwifter move.
And when the pores receive the ſubtle fire,
The force flies through, the thing remains entire:
But when it ſtrikes the ſubſtance, then the maſs
Is broken: Thus it melts ſtrong gold and braſs:
Becauſe its parts are thin, and ſwiftly fly,
And enter in, and ſoon diſſolve the tie.
Now ſpring and autumn frequent thunders hear; 350
They ſhake the riſing, and the dying year:

For winter yields not heat enough; the wind
Flies cold: In ſummer, clouds are too refin'd:
But in theſe middle quarters all concur;
All cauſes join to make the thunder roar;
Becauſe thoſe ſeaſons heat and cold engage;
Both neceſſary things for thunder's rage;
That parts may diſagree, and raiſe a war,
And fires, and rapid whirls diſturb the air.
For, firſt the ſpring within its limits holds
The coming heats, and the retiring colds:
And therefore theſe two parts, thus oppoſite,
When join'd, and mix'd, muſt ſtrive, and fiercely fight.
But then in autumn, ſummer's flames retreat,
And coming winter fights the flying heat.
Theſe are the troubled ſeaſons of the year;
The times that elements go forth to war:
What wonder, then, if frequent thunder flies,
If frequent ſtorms diſturb the lower ſkies;
Since, fighting, all in doubtful wars engage,
Here heat and flames, there cold and waters, rage?
And hence we know the nature of the flame;
And how it works, and whence the fury came:
For not by reading Thuſcan books inquire
The gods' deſign by this celeſtial fire;
Obſerve the moving flame, and then preſage
The kindneſs of the gods, or coming rage:
Or if the clouds in lucky quarters ſwell;
And thunder break, and with ſad omen fell:
And hence we know, how its quick forces paſs
Through cloſeſt ſtones, and melt or break the maſs:
What drives ſwift lightning on, what makes it flow,
And all the harm celeſtial flames can do
For if theſe bolts were thrown by gods above,
Or if they were the proper arms of Jove;
Why do the daring wicked ſtill provoke,
Why ſtill ſin on, ſecure from thunder's ſtroke?
Why are not ſuch ſhot through, and plac'd on high,
As ſad examples of impiety,
That men may ſin no more, no more defy?
And why does heedleſs lightning blaſt the good,
And break his bones, or cruddle all his blood?
Why good and pious men theſe bolts endure?
And villains live, and ſee their fall ſecure?
Why do they throw them o'er a deſert plain,
Why through the empty woods, and toil in vain?
Is it to try their ſtrength? or elſe in play
The wantons ſport, and throw Jove's bolts away?
Or why, the ſenſeleſs rocks, they idly wound?
Why blunt their father's bolts againſt the ground?
Why does he ſuffer this? why not prepare,
And keep his uſeful arms for times of war?
Leſt ſome gigantic, impious rebels riſe,
And unprovided he ſhould loſe the ſkies.
Why then the heav'n is clear, no thunder flies?
What, when thick heavy clouds o'erſpread the ſkies?
Does he deſcend to take the ſurer aim,
At nearer diſtance then, and dart the flame?
Why ſtrike the floods? What mean ſuch bolts as theſe?
Is it to check the fury of the ſeas?
Poor weak deſign! The troubled waters roar,
And, vex'd by whirling flames, ſtill rage the more.
Beſides: this Jove is willing men ſhou'd fly
Theſe bolts, or not: if willing, tell me why
The thunder is too ſubtle for our eye?
If not; why does he ſhow the threat'ning light?
And why o'erſpread the heav'ns with clouds and night?
And make a noiſe, and give us time for flight?
Beſides, how can theſe flames at once be thrown
To diff'rent parts? Or is it never done?
Does Jove at once but throw a ſingle one?
Fond fancy! For, as rain, ſo lightning flies
To many parts at once, and breaks the ſkies.
Nay more: Why does he beat the temples down,
Thoſe of his fellow-gods, and of his own?
Why does he hurt, and break the ſacred ſtone?
Why break the curious ſtatue, ſpoil the grace,
And wound with fiery bolts the ſacred face?
Why does he ſeldom ſtrike the humble plain,
But blunt his fires on hills and rocks in vain?
And hence 'tis known, how fiery whirlwinds riſe,
How they deſcend, and cut the threat'ning ſkies;
For often dark and heavy clouds increaſe,
And pillar-like deſcend, and reach the ſeas,
While all around the troubled ocean raves,
Fierce winds ſtill blow, and raiſe the boiling waves.
And all the ſhips, in reach of danger toſs'd,
Are whirl'd with rapid turns, and wreck'd, and loſt.
This happens when the tumbling winds, that lay
Confin'd in clouds, too weak to force a way,
Do drive it down; for then, by ſlow degrees,
As if ſome hand, or arm above did preſs,
The pillar-clouds deſcend, and reach the ſeas:
When this divides, the ruſhing winds engage
The flood, and make the waters boil and rage:
For then the whirling winds deſcend, and bear
The thick, tough, heavy clouds through all the air,
But when they reach the ſea, they break their bound,
And mingle with the waves, and, whirling round,
With dreadful noiſe, the furious billows raiſe,
And light the waters with a mighty blaze.
Sometimes the whirling wind might whiſk the air,
And, gath'ring parts of clouds that wander there,
Might hollow out itſelf a wat'ry frame,
All like a preſter, but without the flame:
From theſe, as wombs, fierce whirlwinds take their birth,
And impiouſly torment their parent earth:
But ſince, at land, the hills muſt ſtop their way,
Theſe ſtorms are oft'ner ſeen at open ſea.
Now clouds combine, and ſpread o'er all the ſky,
When little rugged parts aſcend on high,
Which may be twin'd, though by a feeble tie.
Theſe make ſmall clouds, which driven on by wind,
To other like, and little clouds are join'd,
And theſe increaſe by more, at laſt they form
Thick heavy clouds, and thence proceeds a ſtorm.
And thus the lofty hills may ſeem to yield
More miſts and vapours than the humble field;

Becauſe when thin and little miſts ariſe,
Not thicken'd yet, and wander o'er the ſkies,
All too refin'd, and ſubtile for our eyes;
The winds do drive them to the mountain's head,
And there the thin and airy cov'rings ſpread;
Which, thick'ning round the top, there firſt appear,
And ſeem to riſe from that, and fill the air.
But farther on; the ſeas give vaſt ſupplies,
From theſe the greateſt ſtores of vapours riſe:
For clothes grow wet, expanded near the ſhore,
And drops ariſe, and ſtand in ev'ry pore:
And therefore from the deep and ſpacious floods,
Great ſtores of miſts may riſe, and frame the clouds.
Beſides; the earth, and rivers, urg'd by heat,
Oft breathe ſoft miſts, and num'rous vapours ſweat:
Which join, and make thick clouds, and ſtop the light;
And ſtain the glorious ſkies with ſudden night:
For the warm vig'rous rays, with conſtant blows,
Still beat them on the back, and preſs them cloſe.
And more: external matter give ſupplies,
And ſeeds of clouds, which ſpread o'er all the ſkies.
For I have prov'd the maſs immenſe, the ſpace
Is infinite, and knows no loweſt place:
And how the atoms through the vacuum rove,
How quick they meaſure ſpace, and how they move:
Slow time admires, and knows not what to call
The motion, having no account ſo ſmall.
What wonder, then, that ſudden ſtorms ſhould riſe;
And haſty night ſpread o'er the lower ſkies.
Since from the maſs ſuch vaſt ſupplies are hurl'd
Through ev'ry pore, and paſſage of the world;
And linger here, and join or break the chain,
And fly through the divided ſkies again?
Now ſing, my muſe, how rain is ſpread o'er all,
How wat'ry clouds are join'd, and ſhowers fall.
Firſt, with the clouds moiſt ſtreams of vapours riſe,
From ev'ry thing, and ſpread o'er all the ſkies:
And, as in man; the moiſture, ſweat, and blood
Grow with the limbs, increaſing with the cloud.
And oft as winds do whirl them o'er the main,
The clouds, like wool do dip themſelves in rain,
To ſhake their fleeces o'er the earth again.
The rivers, lakes, and pools, when ſtirr'd by heat,
Breathe forth ſoft miſts, and num'rous vapours ſweat.
Theſe riſe, and ſet in clouds; and there combin'd,
Or by the ambient cold, or driving wind,
They thence deſcend, becauſe the winds divide,
Or elſe the clouds contract, their injur'd ſide;
Or elſe the upper clouds preſs thoſe below,
And ſqueeze the water out, and make it flow.
And when the wind makes thin the wat'ry frame,
Or rays cut through it with a vig'rous flame,
The rain breaks forth, the injur'd cloud appears
Like melted running wax, and drops in tears.
But when the wind with higher clouds agrees,
And their united force begins to ſqueeze,
When both do preſs the cloud, ſwoln big with rain,
Then ſtorms deſcend, and beat the humble plain.
Then conſtant ſhow'rs, when wat'ry clouds, that lie
On one another's back, receive ſupply
From ev'ry quarter of the lower ſky:
And when the thirſty earth has drunk the rain,
And throws it up in vapours back again.
And when the adverſe ſun's bright beauties flow,
And ſtrike thick clouds, they paint the gawdy bow.
And how the other meteors riſe and fall,
What ſtamps the figur'd ſnow, and moulds the hail.
And why the water's pride and beauty's loſt,
When rig'rous winter binds the floods with froſt,
'Tis eaſy to conceive, if once we know
The nature of the elements, or how
Their fighting pow'rs muſt work, or what they do.
And next of earthquakes.———
Firſt, then, you muſt ſuppoſe the earth contains
Some ſeeds of winds, ſpread o'er its hollow veins;
And there, as well as here, fierce vapour reigns:
And many lakes, and pools, and ſpacious caves,
And ſecret rivers there roll boiſt'rous waves:
For nature's laws command, and reaſon's prove,
The parts below reſemble thoſe above:
Theſe things ſuppos'd: when thoſe vaſt courts below
Shall fail, the upper earth muſt tremble too:
For hills muſt ſink, and from the mighty fall
Quick tremblings muſt ariſe, and ſpread o'er all:
No wonder this: while carts go ſlowly on,
Or ſwifter coaches rattle o'er the ſtone,
Although the weight's not great, the houſes feel,
And ſhake at ev'ry jumping of the wheel.
Or elſe from arched caves great ſtones may fall,
And ſtrike the under waves, and trouble all;
Thoſe agitate, and ſhake th' encloſing ball:
For when the liquor, as experience proves,
Is troubled, all the veſſel ſhakes and moves.
Beſides; when winds below, with mighty force
Againſt reſiſting caves direct their courſe,
The earth that way inclines: then fixt before,
Our houſes nod; the higher nod the more:
The hanging beams ſtart from the tott'ring wall,
We fly our houſes, and we dread the fall.
And yet ſome think the world will ne'er decay;
The ſcatter'd ſeeds, diſſolv'd, fly all away;
Though theſe few fighting winds with eaſe diſplace
The heavy earth, and turn the weighty maſs.
For did theſe ſtill ruſh on, no force could ſtay
The coming ruin; all would ſoon decay:
But ſince they preſs but now and then, their courſe
Now here, now there, now fly with mighty force,
And, then repell'd, return with weaker wings,
The earth oft threatens ruin, ſeldom brings:
Inclining only from its uſual plain,
Then turns, and ſettles in its ſeat again:
And therefore houſes nod, and ſeem to fall;
High, moſt; low, leſs; the loweſt, leaſt of all.
But more; the earth may ſhake, when winds begin,
(Or rais'd without in air, or bred within)

To rage through hollow caves, and, whirling round,
Endeavour ſtill to force the narrow bound,
At laſt break through, and leave a gaping wound.
Thus Ægæ, thus Phœnician towns did fall,
The greedy earth gap'd wide, and ſwallow'd all:
Beſides, a thouſand towns, a thouſand iſles,
Whilſt cruel eddies dimpled into ſmiles,
Have fall'n, all ſwallow'd by the greedy main,
And poor inhab'tants ſtrove for life in vain.
But if the vapour's cold, too weak the wind
To force a way, if by ſtrong bounds confin'd,
It ſpreads o'er all the pores the earth contains,
And brings a ſhiv'ring cold through all the veins;
As when froſt comes, it brings a trembling chill,
And makes our members ſhake againſt our will:
Then men begin to fear, and wiſely dread,
And fly the tow'rs that nod their threat'ning head:
Or elſe they think the earth will fail; the ground
Will gape, and all ſink through the mighty wound.
Ev'n thoſe, who think the world muſt ſtill endure,
Eternal ſtill, from fate and age ſecure,
Yet often, waken'd by the preſent fear,
Start all, and think the diſſolution near;
They think the earth will ſink, the world will fall;
And ruin and confuſion ſpread o'er all.
Now I muſt ſing, my muſe, why greedy ſeas
Devour the water ſtill, yet ne'er increaſe;
For it ſeems ſtrange, that rivers ſtill ſhould flow,
And run for num'rous years as much as now;
And, though they daily bring a mighty ſtore,
The ſpacious ocean ſhould increaſe no more,
But ſtill be bounded with the former ſhore:
And yet it is not ſtrange: for theſe, the rain,
And all the moiſture that the clouds contain,
Scarce ſeem a drop, compar'd to ſpacious ſeas;
No wonder then the waves do ne'er increaſe.
Beſides; the ſun draws much; the fiery ray
Deſcends, and forces many parts away:
For ſenſe aſſures, that when the buſy beams
Preſs moiſten'd clouds, the vapours riſe in ſtreams:
Therefore from ſpacious ſeas the rays muſt bear
More wat'ry parts, and ſcatter through the air:
But now, though here and there few parts ariſe,
Yet a vaſt ſpacious maſs of water flies
From the whole ſea, and ſpreads o'er all the ſkies.
And then the winds take ſome, with wanton play
They dip their wings, and bear ſome parts away:
This ſenſe declares; for often after rain,
In one ſhort night, if winds ſweep o'er the plain,
The dirt grows hard, the ways are dry'd again.
Beſides; as winds drive on the low-hung clouds,
And make them ſkim the ſurface of the floods,
They take ſome drops away: and theſe compoſe
And fall to earth, in hail, in rain, and ſnows.
And ſince the earth is rare, and full of pores,
And waves ſtill beat againſt the neighb'ring ſhores,
As rivers run from earth, and fill the main,
So ſome through ſecret pores return again:
Theſe loſe their ſalt, and through ſmall channels ſpread,
Then join where'er the fountain ſhows her head:
Hence ſtreams ariſe, in fair meander's play,
And through the vallies cut their liquid way.
Now next, why Ætna burns, and why the flame
Breaks forth in whirls, and whence the fury came:
For ſure 'tis fond to think that flames ariſe,
Directed by the angry deities,
To waſte fair Sicily, and burn, and ſpoil
The farmer's hopes, and fruits of all his toil,
Whilſt all the neighb'ring nations ſtood amaz'd,
Oppreſs'd with anxious fear, and wildly gaz'd:
The heav'n, all ſpread with flames, they flock'd to view,
And wonder'd what vex'd nature meant to do.
But if you look about on ev'ry ſide,
Conſider that the whole's immenſely wide;
Then view the arched ſkies, and ſee how ſmall,
And mean a portion of the ſpacious all,
How little man, compar'd to earth's vaſt ball!
You then will find your fears and cares decreaſe,
Your jealouſies, and admiration ceaſe.
For who admires to ſee a patient ſweat,
Or hear him groan, when ſcorch'd by fever's heat,
Or when the foot, or eye is vex'd with pains,
Or any hot diſeaſe ſpread o'er the veins?
And this, becauſe there lie vaſt ſtores of ſeed
In heav'n, and earth, all fit, all apt to breed
Such ſtrange and vexing pains; or elſe increaſe
The noxious flame, and feed the ſtrong diſeaſe:
So you may think the maſs ſends great ſupplies,
And ſtores of ſeed through all our earth and ſkies,
Sufficient to raiſe ſtorms, to ſhake the frame,
Raiſe Ætna's fires, and cover ſkies with flame:
For that appears, when ſeeds of flame combine,
As rain, and clouds, when drops of water join:
You'll ſay the fire's too ſtrong, the flame too great:
A vain objection this, and fancy's cheat:
Thus he, that views a river, man, or tree,
Or elſe whatever 'tis he chance to ſee,
Straight thinks them great, becauſe, perhaps, he knows
No larger ſtreams, no greater things than thoſe:
Yet theſe, and all the ſpacious ſkies controul,
Are ſmall, and nothing to the mighty whole.
Now why the flames break forth——
Firſt, then, this Ætna's cave's a mighty one;
A ſpacious hollow, and all arch'd with ſtone:
This ſwells with winds, which whirl and tumble there,
(For wind is nothing elſe but troubled air).
When theſe, by whirling round the arched frame,
Grow hot, and from the flints ſtrike ſparks of flame,
Then, proud, and furious too, and riſing higher,
Break forth at top, in ſmoke, and ſparks of fire:
By the ſame force, ev'n weighty mountains riſe,
And whirling rocks cut through the wounded ſkies.
But more, this hollow, fiery mountain's ſide
The ſea ſtill waſhes with impetuous tide,
And, paſſing through the pores, the flame retires,
The preſſing waters drive the yielding fires,
And force them out; theſe raiſe large clouds of ſand,
And ſcatter ſtones, and aſhes o'er the land
And thus my muſe a ſtore of cauſes brings;
For here, as in a thouſand other things,

Though by one ſingle cauſe th' effect is done,
Yet ſince 'tis hid, a thouſand muſt be ſhown,
That we may ſurely hit that ſingle one.
As when a carcaſe we at diſtance view,
We all the various means of death muſt ſhow,
That in the number we may ſpeak the true:
For whether he was kill'd by ſtrong diſeaſe,
Or cold, or ſword, though 'twas by one of theſe,
We cannot tell; and thus it muſt be done
In other things, a thouſand others ſhown,
When ſenſe determines not our choice to one.
In ſummer Nile o'erflows; his waters drown
The fruitful Egypt's fields, and his alone:
Becauſe the mouth of that wide river lies
Oppos'd to north: for when th' Eteſias riſe
From heavy northern clouds, and fiercely blow
Againſt the ſtreams, theſe ſtop, and riſe, and flow.
For northern winds blow full againſt the ſtreams,
Their ſpring is ſouth, it boils with mid-day beams;
Then cuts its way through ſun-burnt Negroe's land,
And hiſſes, paſſing o'er the fiery ſand.
Or elſe the troubled ſea that rolls to ſouth,
Brings heaps of ſand, and chokes the rivers mouth:
Theſe ſtop the headlong floods; they ſtrive in vain
To force a way, but weary'd turn again,
And break their banks, and flow o'er all the plain.
Or elſe rain makes it ſwell; th' Eteſias bear
The northern vapours through the ſouthern air:
Theſe thicken'd round the hill the rain compoſe.
Or elſe the ſun melts Ethiopean ſnows;
Theſe ſwell the river, and the water flows.
Next of th' Avens ſing, and whence the name,
And whence the rage, and hurtful nature came.
So call'd, becauſe the birds that cut the ſky,
If o'er thoſe places they but chance to fly,
By noxious ſtreams oppreſs'd, fall down, and die:
Death meets them in the air, and ſtrikes them dead;
They fall with hanging wing, and bended head;
And ſtrike the pois'nous lake, or deadly field:
Such vapours boiling ſprings near Cumæ yield.
In Athens, where Minerva's temple ſtands,
There never crow, nor boading raven flies,
Not, though the fat and oily ſacrifice
Allure his ſmell, and call his willing eyes.
Not that he fears Minerva's vain preſence,
Or baniſh'd from her train for an offence;
But 'tis the noxious vapour drives him thence.
A place, as ſtory tells, in Syria lies,
Which if a horſe goes o'er, he groans and dies,
As if by ſudden ſtroke, and vi'lent blow,
He fell a ſacrifice to gods below:
Yet theſe effects agree with nature's laws,
And ſtrict obſervers may diſcern the cauſe:
Leſt you ſhould fancy theſe the gates of hell,
That there the ſmutty gods, and manes dwell;
And through thoſe places draw the wand'ring ſouls,
As deer ſuck ſerpents from their lurking holes:
But that's abſurd, irrational, and vain:
Come, underſtand the cauſe, for I'll explain.

Firſt, ſeeds do lie, as I have prov'd before,
In earth, of ev'ry ſhape a mighty ſtore:
Some, vital parts to men, prolong their breath,
Some apt to breed diſeaſe, and haſten death:
To other animals ſome parts are good:
Some hurt, ſome kill, and ſome give wholeſome food:
And all theſe different effects ariſe
From diff'rent motion, figure, ſhape, and ſize.
A thouſand hurtful parts through ears deſcend,
A thouſand paſs the noſtrils, and offend:
A thouſand hurt the touch, a num'rous ſtore
Diſturb the eye, the taſte a thouſand more:
Beſides, on man, a thouſand atoms wait,
And hurtful all, and carry haſty fate:
Thus often, under trees ſupinely laid,
While men enjoy the pleaſure of the ſhade,
Whilſt thoſe their loving branches ſeem to ſpread,
To ſcreen the ſun, they noxious atoms ſhed,
From which quick pains ariſe, and ſeize the head.
Near Helicon, and round the learned hill,
Grow trees, whoſe bloſſoms with their odour kill:
And all theſe hurtful things from earth ariſe,
Becauſe the parents earth's vaſt wombs compriſe
Thoſe diff'rent ſtores and kinds of pois'nous ſeed,
Which, fitly join'd, theſe hurtful natures breed:
The ſnuff of candles, this is often known,
Offends the noſe with ſtench, and makes us ſwoon.
Beſides a thouſand other things, that ſeize
The ſoul within, oft make their way with eaſe,
And ſhake the vital pow'rs with ſtrong diſeaſe.
So when the belly's full, go ſit, and ſtay,
And wanton in hot baths, ſtrait flies away
Thy life, thy ſtrength, and all thy pow'rs decay:
From charcoal deadly ſmells the brain engage,
If draughts of water not prevent their rage.
To thoſe whom fevers burn, the piercing ſmell
Of vig'rous wine is grievous, death, and hell.
Beſides, obſerve what pains the earth contains,
And how much pois'nous ſulphur fills her veins.
Laſtly, Whilſt men purſue the hidden ſtore,
And dig in mines of gold, or ſilver ore;
What hurtful damps, what noxious vapours riſe!
The wretched miner o'er the metal dies.
What noxious parts from golden mines exhale!
How ſoon they ſeize, and make the miners pale!
With what quick force they kill the wretched ſlaves!
How ſoon they bury them in precious graves!
Therefore theſe noxious parts muſt often rear,
And ſcatter poiſon through the upper air.
Thus hurtful parts from the Averni riſe,
And with ſtrong poiſons fill the lower ſkies:
And theſe, as birds cut through the liquid way,
Seize them; and then ſome parts of life decay:
Thus they amaz'd on the Averni fall,
And there the poiſons work, and ruin all:
For firſt they make them giddy; then their wing
Grows weak; they fall into the poiſon's ſpring;
There die; there leave their ſouls in deep deſpair,
Becauſe the poiſon's fierce, and ſtronger there;

Or elſe the conſtant riſing ſtreams diſplace
The neighb'ring air, and leave an empty ſpace:
Where, when the birds are come with nimble force,
And ſtill endeavour to purſue their courſe,
Deceiv'd they fall, they clap their wings in vain;
For no reſiſting airy parts ſuſtain,
Their weight does force them on the pois'nous plain.
And while they helpleſs in the vacuum lie,
Breathe out their ſoul through ev'ry pore, and die.
In ſummer, ſprings are cold; for earth contains
Some ſeeds of heat within her hollow veins:
But when the heat's increaſe, and vig'rous ray
Forces a paſſage through, they fly away:
Thus as the ſummer comes, and rays begin
To cleave the earth, the ſtreams grow cold within:
But cold contracts the pores to leſſer ſpace,
And binds the ſeeds of heat with ſtrict embrace:
And theſe, ſqueez'd from the pores, with nimble wings
Paſs into lower wells, and warm the ſprings.
Near Ammon's ſhrine, as fame has loudly told,
A ſpring runs hot by night, by day 'tis cold:
This men admire, and think, when night has ſpread
Her blackeſt curtains o'er our ſleepy head,
The ſun below does caſt his vig'rous beams,
And pierces through the earth, and warms the ſtreams.
Abſurd and vain! For, ſince the furious ray,
When, roll'd above, it makes our warmeſt day,
And beats the open ſurface of the ſea,
Can raiſe but little warmth; when roll'd below,
How pierce the earth, and heat in paſſing through?
Since ſenſe aſſures, that when the rays do beat,
Our houſes yield us a ſecure retreat;
We lie within, and ſcorn the ſummer's heat.
Then what's the cauſe? 'Tis this; a ſpongy ground,
And fill'd with fiery ſeeds, lies all around:
This when cold nights contract, the ſeeds of fire,
Squeez'd out, fly off, and to the ſpring retire,
And make it hot: but when the vig'rous ray
Peeps forth, and opens them an eaſy way,
They leave the cold embrace, and ſoon retreat
To earth again, and take their former ſeat:
And thus, by day, it loſes all its heat.
Beſides, the water grows more rare by day;
In parts, divided by the piercing ray,
So loſe their fire: as when the beams ariſe,
And warm the frozen ſtreams with ſoft'ning kiſs,
They melt in the embrace, and loſe their ice.
And ſome cold ſprings light flax, held o'er the ſtreams,
The flax takes fire, and ſcatters feeble beams:
A torch is kindled too: the flames appear,
And nod at ev'ry little breath of air;
Becauſe the water ſeeds of heat contains,
And many riſe from earth's capacious veins,
And cut the body of the ſtreams, and flow,
Too weak to warm the waves in paſſing through.

Beſides, their own quick force will make them move,
And paſs the yielding waves, and join above:
As little ſtreams, that cut their ſecret way,
And riſe up ſweet i' th' bottom of the ſea;
Beat off the ſalt, and the reſiſting flood
To thirſty ſailors proves a mighty good:
Juſt ſo theſe ſeeds of fire might riſe and flow,
And cut the yielding waves, and paſſing through,
Straight ſtrike, and kindle oily torch, or tow;
Becauſe thoſe parts are of convenient frame,
Hold ſeeds of fire, and fit to raiſe a flame:
Thus take a torch, but lately dead, and ſtrive
To light the ſnuff again, and make it live,
It kindles long before it comes to touch;
And ſure experience ſhows a thouſand ſuch,
Which light at diſtance, ere they reach the flame:
And thus this fountain acts; the cauſe the ſame.
Now ſing, my muſe, for 'tis a weighty cauſe,
Explain the magnet, why it ſtrongly draws,
And brings rough iron to its fond embrace:
This men admire; for they have often ſeen
Small rings of iron, ſix, or eight, or ten,
Compoſe a ſubtle chain, no tie between:
But, held by this, they ſeem to hang in air,
One to another ſticks, and wantons there;
So great the loadſtone's force, ſo ſtrong to bear!
In order to the cauſe, muſt firſt be prov'd
A thouſand things, a thouſand doubts remov'd,
And long deductions made; do you prepare
A ſtrict obſerving mind, and liſt'ning ear.
Firſt, then, from objects ſeen thin forms ariſe,
In conſtant ſubtle ſtreams, and ſtrike our eyes:
Thus odours fly from gums; a gentle breeze
From rivers flows, and from the neighb'ring ſeas
Sharp ſalts ariſe, and fret the ſhores around;
Thus all the air is fill'd with murm'ring ſound;
And while we walk the ſtrand, and pleas'd to view
The wanton waves; or ſqueeze, or mingle rue,
Or ſalt, or bitter taſtes our tongues ſurpriſe:
So that 'tis certain ſubtle parts ariſe
From all, and wander in the lower ſkies;
And never ceaſe to flow, becauſe the ear,
And eye, and noſe ſtill ſmell, and ſee, and hear.
Next I'll repeat what I have prov'd before,
No compound's perfect ſolid, free from pore:
For though 'tis uſeful to direct our eye
Through all the ſecrets of philoſophy,
To prove that ſolid ſeeds can never join,
Unleſs ſome empty ſpace is left between
It has its proper force in this deſign.
Then, firſt, in caves the ſubtle moiſture creeps
Through hardeſt rocks, and even marble weeps:
And ſweat from ev'ry lab'ring member flows,
And ſtubborn hair o'er all the body grows:
And nature drives our food with curious art
Through all the limbs, increaſing ev'ry part:
Strong flames divide the rigid gold and braſs;
And to a liquid ſubſtance break the maſs:
Through ſilver, heat, and cold; and each diſdains
And ſcorns a priſon, though in precious chains:
This ſenſe aſſures; into a well-clos'd room
The parts of odours, ſounds, and heat will come:

And often, as our ſickly ſoldiers feel,
The moiſt and ſubtle air creeps through their ſteel.
Therefore 'tis certain, as I prov'd before,
No compound's perfect ſolid, free from pore.
Beſides:——
The parts that riſe from things, not all alike,
Nor equally agree to what they ſtrike;
For, firſt, the beauteous ſun, with vig'rous ray,
Melts ſnow, and ice, and wax, and hardens clay:
Thus leather ſhrinks in fire; but gold and braſs
Diſſolve; flames ſoften all the rigid maſs:
Thus water ſtrengthens ſteel, grown weak by heat,
But gently ſoftens ſkins, and boiling meat:
Leaves of wild olives yield a ſweet repaſt
To goats; to man a rough and bitter taſte:
Thus pigs fly ſweeteſt odours; thoſe that pleaſe
And tickle man, offend and poiſon theſe;
Yet they will roll in dung, in filth delight;
Though ſqueamiſh man can ſcarce endure the ſight.
Beſides: We muſt remember,——
Since things compos'd do num'rous pores compriſe,
Thoſe muſt have diff'rent ſhape, and diff'rent ſize:
In animals, are various organs found,
And each the proper objects gently wound;
One taſte, another ſmell, another ſound.
Some things through ſtones, or ſilver, gold, or braſs,
Some move through wood alone, and others glaſs:
And thoſe that paſs the ſame, not always flow
With equal eaſe, and cut their paſſage through:
And this depends on the varieties,
And difference of pores in ſhape and ſize,
Which things of diff'rent texture ſtill comprize.
Theſe things thus prov'd, I now will ſing the cauſe,
Explain the magnet, ſhow thee why it draws
And brings rough iron to its fond embrace.
Firſt, from the magnet num'rous parts ariſe
And ſwiftly move; the ſtone gives vaſt ſupplies;
Which, ſpringing ſtill in conſtant ſtreams, diſplace
The neighb'ring air, and make an empty ſpace;
So when the ſteel comes there, ſome parts begin
To leap on through the void, and enter in.
But ſince they're twin'd, the foremoſt parts muſt bring
The latter on, and ſo move all the ring:
For parts of ſteel are very ſtrictly join'd,
Scarce any compounds are ſo cloſely twin'd.
No wonder, then, that when the foremoſt ſtrove,
The other parts ſhould ſtir, and all ſhould move;
Which ſtill they do, they ſtill preſs farther on,
Until they reach, and join the willing ſtone.
The ſteel will move to ſeek the ſtone's embrace,
Or up, or down, or t'any other place,
Which way ſoever lies the empty ſpace.
Not that the heavy ſteel by nature flies,
But blows without will force, and make it riſe.
Beſides, the air before the ſteel is rare,
And emptier than it was, and weaker far;
And therefore all the air that lies behind
Grown ſtrong, and gath'ring like a ſubtle wind,
Muſt force it on, for ſtill the ambient air
Endeavours, ſtill contends to drive it near:
But then alone can move it, when the ſpace
Is free, and fit to take the coming maſs.
This fills the pores, and then with ſubtle gales
Drives on the ſteel, as winds great ſhips, and ſails.
Beſides, all compounds hold ſome parts of air;
For ev'ry compound is by nature rare:
This lurking air, no doubt, with nimble wing,
And conſtant turns, ſtill whirls and beats the ring:
But, once determin'd forward, keeps the courſe
It firſt receiv'd, and that way bends its force.
But more than this: coy ſteel will ſometimes move,
And fly the ſtriving ſtone, and ceaſe to love.
And thus ſteel filings, I have often known,
In little brazen pots held o'er the ſtone,
Will ſtrive, and leap, as eager to be gone;
Becauſe the little brazen parts, that rear,
Fill all the ſteel's ſmall pores, and ſettle there:
And ſo the other riſing ſtreams, that come
From magnets, find no way, no open room,
And therefore ſtrike: thus, flying through the braſs,
They rudely beat, and drive away the maſs;
Which otherwiſe they'd take to their embrace.
Beſides, no wonder this alone ſhould feel
The loadſtone's power, and that move only ſteel,
For ſome their weight ſecures, as gold; and ſome
Their pores: they give the ſtreams too large a room;
And ſo they find an eaſy paſſage through,
And thus the ſubſtance ne'er endures the blow:
But ſteel, when brazen parts fill ev'ry pore,
And ſettle there, when it can take no more,
Is then prepar'd to take the ſubtile ſhove
The loadſtone's ſtreams can give, and fit to move.
Nor is there friendſhip 'twixt theſe two alone;
A thouſand things beſides, but one to one,
Agree: thus lime will faſten only ſtone:
Thus glue, hard boards; and we may often view
The ſolid table break before the glue:
Thus pure and fountain ſtreams will mix with wine,
But oil and heavy pitch refuſe to join:
The purple's blood gives wool ſo deep a ſtain,
That we can never waſh it out again;
No, pour on all the ſea, 'tis all in vain.
Solder ignobly weds the golden maſs
To ſilver; proper ſolder lead to braſs:
Beſides theſe mention'd, there's a thouſand more:
But ſtay; what need of ſuch a num'rous ſtore?
Why ſhould I waſte my time, and trouble thee?
Take all in ſhort: of things, whoſe parts agree,
Whoſe ſeeds, oppos'd to pores, ſecurely lie,
The union there is ſtrong, and firm the tie:
Others by rings and hooks are join'd in one:
This way combine the loving ſteel and ſtone.
Now next I'll ſing what cauſes plagues create,
What drives a peſtilence, ſwoln big with fate,
To waſte, and lay a nation deſolate.
I've prov'd, that num'rous vital parts do fill
The air: ſo num'rous too are thoſe that kill.

Theſe poiſons, whether from the threat'ning ſkies,
Like clouds, they fall, or from the earth ariſe,
When ſhe's grown putrid by the rains, or ſweats
Such noxious vapours, preſs'd by ſcorching heats,
Infect the lower air, and hence proceed
All raging plagues; theſe all diſeaſes breed.
A traveller, in ev'ry place he ſees,
Or hazards, or endures a new diſeaſe,
Becauſe the air or water diſagrees.
How diff'rent is the air of Britain's iſle,
From that which plays upon the wand'ring Nile?
What diff'rent air does Pontus' ſnows embrace,
From that which fans the ſun-burnt Indian's face?
And as mens ſhape or colour diſagrees,
So ev'ry nation has its own diſeaſe:
The lepers are to Egypt only known,
Thoſe wretches drink of Nilus' ſtreams alone:
Athens, the muſes' ſeat, and chief delight,
Offends the feet; Achaia hurts the ſight:
And thus in ev'ry land a new diſeaſe,
New pains on all the other members ſeize,
And diff'rent air is ſtill the cauſe of theſe.
Thus often when one country's air is blown
Into another, and forſakes its own,
It ſpoils the wholeſome air where'er it goes,
And, like itſelf, makes all unfit for us.
Thence plagues ariſe; and theſe deſcend and paſs
Into our fountains, tender corn, and graſs,
Or other food, or hang within the air,
Held up by fatal wings, and threaten there:
So, while we think we live, and draw our breath,
Thoſe parts muſt enter in, and foll'wing death.
Thus plagues do often ſeize the lab'ring ox,
And raging rots deſtroy our tender flocks:
And thus the thing's the ſame, if winds do bear
From other countries an unuſual air,
And fit to raiſe a plague and fever here:
Or if we travel all, and ſuck it there.
A plague, thus rais'd, laid learned Athens waſte;
Through ev'ry ſtreet, through all the town it paſs'd,
Blaſting both man and beaſt with pois'nous wind:
Death fled before, and ruin ſtalk'd behind.
From Egypt's burning ſands the fever came,
More hot than thoſe that rais'd the deadly flame:
The wind, that bore the fate, went ſlowly on,
And, as it went, was heard to ſigh and groan.
At laſt the raging plague did Athens ſeize,
The plague, and death attending the diſeaſe.
Then men did die by heaps, by heaps did fall,
And the whole city made one funeral.
Firſt, fierce unuſual heats did ſeize the head;
The glowing eyes, with blood-ſhot beams, look'd red,
Like blazing ſtars, approaching fate foreſhow'd:
The mouth and jaws were fill'd with clotted blood;
The throat with ulcers: the tongue could ſpeak no more,
But, overflow'd and drown'd in putrid gore,
Grew uſeleſs, rough, and ſcarce could make a moan,
Nay ſcarce enjoy'd the wretched pow'r to groan
Next through the jaws, the plague did reach the breaſt,
And there the heart, the ſeat of life, poſſeſs'd:
Then life began to fail: ſtrange ſtinks did come
From ev'ry putrid breaſt, as from a tomb:
A ſad preſage, that death prepar'd the room.
The body weak, the mind did ſadly wait,
And fear'd, but could not fly, approaching fate:
To theſe fierce pains were join'd continual care,
And ſad complainings, groans, and deep deſpair,
Tormenting, vexing ſobs, and deadly ſighs,
Which rais'd convulſions, broke the vital ties
Of mind and limbs, and ſo the patient dies.
Yet touch the limbs, the warmth appear'd not great,
It ſeem'd but little more than nat'ral heat;
The body, red with ulcers, ſwoln with pains,
As when the ſacred fire ſpreads o'er the veins.
But all within was fire: fierce flames did burn,
No clothes could be endur'd, no garments worn;
But all, as if the plague that fir'd their blood,
Deſtroy'd all virtue, modeſty, and good,
Lay naked, wiſhing ſtill for cooling air,
Or ran to ſprings, and hop'd to find it there:
And ſome leapt into wells; in vain the heat,
Or ſtill increas'd, or ſtill remain'd as great.
In vain they drank; for when the water came
To th' burning breaſt, it hiſs'd before the flame:
And through each mouth did ſtreams of vapours riſe,
Like clouds, and darken'd all the ambient ſkies.
The pains continu'd, and the body dead,
And ſenſeleſs all, before the ſoul was fled:
Phyſicians came, and ſaw, and ſhook their head.
No ſleep, the pain'd and weary'd man's delight:
Their fiery eyes, like ſtars, wak'd all the night.
Beſides, a thouſand ſymptoms more did wait,
And told ſad news of coming haſty fate:
Diſtracted mind, and ſad and furious eyes;
Short breath, or conſtant, deep, and hollow ſighs,
And buzzing ears; and much, and frothy ſweat,
Spread o'er the neck; and ſpittle, thin with heat,
But ſalt and yellow; and the jaws, being rough,
Could hardly be thrown up with violent cough:
The nerves contracted, ſtrength in hands did fail,
And cold crept from the feet, and ſpread o'er all:
And when death came at laſt, it chang'd the noſe,
And made it ſharp, and preſs'd the noſtrils cloſe;
Hollow'd the temples, forc'd the eye-balls in,
And chill'd and harden'd all, and ſtretch'd the ſkin.
They lay not long, but ſoon did life reſign:
The warning was but ſhort, eight days or nine.
If any liv'd, and ſcap'd the fatal day,
And if their looſeneſs purg'd the plague away,
Or ulcers drain'd; yet they would ſoon decay:
Their weakneſs kill'd them; or their poiſon'd blood,
And ſtrength, with horrid pains, through noſtrils flow'd.
But thoſe that felt no flux, the ſtrong diſeaſe
Did oft deſcend, and wretched members ſeize:
And there it rag'd with cruel pains and ſmart;
Too weak to kill the whole, it took a part:

Some loſt their eyes, and ſome prolong'd their breath,
By loſs of hands: ſo ſtrong the fear of death!
The minds of ſome did dull oblivion blot;
And they their actions and themſelves forgot.
And though the ſcatter'd bodies naked lay,
Yet beaſts refus'd; the birds fled all away,
And us'd their wings to ſhun their eaſy prey:
They fled the ſtench: whom tyrant hunger preſs'd,
And forc'd to taſte, he prov'd a wretched gueſt;
The price was life: it was a coſtly feaſt!
Few birds appear'd; no wing could ſerve for flight:
The beaſts ſcarce dar'd to truſt themſelves to night:
The plague walk'd through the woods: in ev'ry den
They lay, and ſigh'd, and groan'd, and dy'd, like men.
The faithful dogs did lie in ev'ry ſtreet,
And dy'd at their departing maſters' feet.
Diſorder'd funerals were hurry'd on;
No decent mourners, nor a friendly groan:
Neglecting others' fates, all wept their own.
No common remedy did health impart
To all; phyſic was grown a private art:
For that which gave to one freſh vigour, eaſe,
And health, and ſtrength, and conquer'd the diſeaſe;
Ev'n the ſame thing, with equal art apply'd,
Another took, and by the phyſic dy'd.
All the infected lay in deep deſpair,
Expecting coming death with conſtant fear;
Pale ghoſts did walk before their eyes, and fright:
No dawning hopes broke through their diſmal night,
No thoughts of help: this was a grievous ill,
This ſharpen'd the plague's rage; theſe fears did kill.
Beſides, the fierce infection, quickly ſpread,
When one poor wretch was fall'n, to others fled:
One kill'd, the murderer did caſt his eye
Around, and, if he ſaw a witneſs by,
Seiz'd him, for fear of a diſcovery.
Thoſe wretches too, that greedy to live on,
Or fled, or left infected friends alone,
Strait felt their puniſhment, and quickly found
No flight could ſave, no place ſecure from wound:
A ſtreng infection all their walk attends;
They fall as much neglected as their friends:
Like rotten ſheep, they die in wretched ſtate;
And none to pity, or to mourn their fate.

Thoſe whom their friends' complaints, and piteous cries,
Did force to come, and ſee their miſeries,
Receiv'd th' infectious and the fatal breath:
An inn'cent murd'rer he that gave the death.
This kind of death was beſt; ſo men did chooſe
(A wretched choice!) this way their life to loſe:
Some rais'd their friends a pile; that office done,
Return'd, and griev'd, and then prepar'd their own:
A treble miſchief this, and no relief:
Not one but ſuffer'd death, diſeaſe, or grief.
The ſhepherd, midſt his flocks, reſign'd his breath:
Th' infected ploughman burnt, and ſtarv'd to death:
By plague and famine both the deed was done:
The ploughman was too ſtrong to yield to one:
Here dying parents on their children caſt,
There children on their parents breath'd their laſt:
Th' infected ploughman from the country came,
They came, and brought with them additional flame:
Men flock'd from ev'ry part, all places fill'd:
Where crowds were great, by heaps the ſickneſs kill'd:
Some in the ſtreets, ſome near the fountains lay,
Which quench'd their flame, but waſh'd their foul away;
And ſome in public, half alive, half dead,
With filthy cov'rings o'er their members ſpread,
Did lie and rot; the ſkin, the poor remains
Of all the fleſh, the ſtarting bones contains,
All cover'd o'er with ulcers, vext with pains.
Death now had fill'd the temples of the gods:
The prieſts themſelves, not beaſts, are th' altar's loads:
Now no religion, now no gods were fear'd;
Greater than all the preſent plague appear'd:
All laws of burial loſt, and all confus'd:
No ſolemn fires, no decent order us'd;
But, as the ſtate of things would then permit,
Men burn'd their friends, nor look'd on juſt and fit:
And want and poverty did oft engage
A thouſand acts of violence and rage;
Some, O imperious want! a carcaſe ſpoil,
And burn their friend upon another's pile;
And then would ſtrive, and fight, and ſtill defend,
And often rather die, than leave their friend:
The other loſt his pile by pious theft;
A poor poſſeſſion! all that fate had left.

NOTES ON BOOK VI.

Lucretius, who, throughout his whole poem, is profuſely laviſh in praiſe of Epicurus, begins this ſixth and laſt book with the praiſes of Athens; which city, he declares, men ought to honour and revere, not only becauſe humanity, learning, religion, the tillage of the earth, the uſe of corn, laws, and civil ſocieties, are believed to have taken riſe there, and to have been from thence diſtributed amongſt all the nations of the earth: [Cicero Orat. pro Flacco. "Ab Athenis

enim humanitas, doctrina, religio, fruges, jura, leges orta, atque in omnes terras distributa putantur:"] but chiefly because it was the place that gave birth to Epicurus, who, when he observed men flowing in abundance of all things necessary to lead a happy and quiet life, and that nevertheless they wasted their days in cares, and sorrows, and anxieties, applied himself to inquire into the origin of this great evil; and at length discovered, that the vessel itself, that is, the mind of man, was the cause of this calamity: for, as whatever things we put into a stinking vessel are soon corrupted and tainted with the same offensive odour; in like manner, if the mind of man be insincere, and not sound, he will never be able so to govern himself, as may be most conducive to his own felicity: In the first place, therefore, he says, that Epicurus was the man who first purged and cleansed the minds of those whom he instructed in wisdom; to whose affections he put stops and bounds of restraint; from whose minds he expelled terror; to whom he revealed the chief good, and showed the easy and direct road that leads to the attainment of it; to whom he taught the means to obviate all evils, and, lastly, whom he proved to be tormented with vain anxieties, and to tremble, and be disquieted with causeless and empty fears. And this is what the poet says in the first thirty-seven verses of this book.

Ver. 1. *Athens.*] The most famous and ancient city of Greece, situate on the sea coast of Attica, and built by Cecrops, A. M. 2407. and from him called Cecropia: As to its name, Athens, the fables say, that a contest arising between Neptune and Minerva, which of them should give the name to that city, the gods, to compose the difference, were pleased to decree, that the city should be called by the name of either of them, who should confer the greatest benefit on mankind. The gods were assembled in judgment, and Neptune darted his trident against the earth, which opening was delivered of a horse, a warlike animal: Minerva struck her spear into the ground, and up starts an olive-tree, the emblem of peace. The gods decided it in favour of Minerva, who named the city Athenæ, from her own name, Ἀθήνη, for so the Greeks called her.

Justin. lib. ii. Cicero pro Flacc. Diodorus Sicul. lib. xiii. Plin. lib. vii. cap. 56. say, that the Athenians were the first who taught men, that fed before upon acorns, to plough the earth, and to sow corn; and that they were the first likewise who made laws, and compelled men to quit their savage way of life, and to enter into civil societies.

Ver. 6. *Epicurus.*] Of whom, B. I. v. 88. and the beginning of B III.

Ver. 9. This and the following verse are transcribed out of Cowley's Ode on the Death of Mrs. Phillips. A pyramid is a figure broad at bottom, and smaller and sharper by degrees upwards, till it end in a point like our spire-steeples. It is so called from πῦρ, fire, because flame ascends in that figure.

Ver. 17. This and the following verse run thus in the original:

Intellexit ibi vitium vas efficere ipsum,
Omniaque illius vitio corrumpier intùs.

Where by *vas*, the vessel, the poet means the mind of man: for, in like manner as a vessel, when it is once imbued with an unsavoury odour, corrupts all the liquors it receives: so men too, says the poet, because they have admitted into their minds the fear of the gods, and the dread of punishments after death, do therefore lead their lives in tormenting inquietudes, while anxious cares fluctuate in their uneasy breasts; from which cares and terrors they might deliver their minds, if they would once consider and believe that the gods are not the authors of things, and that death to them is nothing: an impious assertion, but the main drift of our poet.

Ver. 19. Dryden from Juvenal, Sat. 10.

Such is the gloomy state of mortals here,
We know not what to wish, nor what to fear;
Ev'n he who grasp'd the world's exhausted store,
Yet never had enough, but wish'd for more,
Rais'd a top-heavy tow'r, of monstrous height,
Which, mould'ring, crush'd him underneath the weight.

Ver. 20. Lucretius here alludes to the fable of the Danaides, or daughters of Danaus; of whom book iii. ver. 1005. The allusion is clear in the original, though obscure in this translation.

Ver. 26. For Epicurus would have had men set bounds to their desires, and content themselves with what the necessities of nature required: for he said, that the things, that are neither necessary nor natural, are infinite in number, and fit only for fools.

He delivered the minds of men from fear, by proving the soul to be mortal, by taking away all belief of Providence, and overthrowing all religion: for he taught that the gods need not be feared because they cannot be angry; and that no sense remains after death. An opinion no less weak than impious.

Ver. 29. Epicurus held that all the ills, to which mortality is subject, happen from chance, or are the effects of nature: and that all the calamities that attend us, of what kind soever they be, must be ascribed to one of those two causes: all is chance or nature: there is no third to fly to: for the god of Epicurus, as Tertullian more than once observes, "pene nemo est," is next to nobody.

Ver. 32. You will find these six verses in the second book, ver. 58. See there the note upon them.

Ver. 38. Hitherto has been only the praise of Epicurus and of Athens. Now follows in 58 verses, an explication of the argument of this book. He says, that having in the preceding book treated of the beginning of all things, and of the celestial motions, he will now dispute of meteors, and of the other wondrous effects of nature, which men

who are ignorant of the causes of them, ascribe to the gods: whence proceed, religion, the vain dread of powers above, groundless fears, idle apprehensions, tormenting anxieties, &c. These are the ruin of true piety, and the reason that vain superstition reigns in the minds of deluded and mistaken man.

Ver. 42. Here our translator has wholly omitted the three following verses of his author;

Quandoquidem semel insignem conscendere currum
Vincendi spes hortata est, atque obvia cursu
Quæ fuerant sunt placato conversa furore.

And indeed Lambinus utterly rejects them: and the other interpreters read them so variously, and give them such different explications, as evidently shows, that, upon the whole matter, they knew not well what to make of them: and for these reasons I resolved not to add them in the text of this translation.

Ver. 43. He means the meteors, thunder, lightning, storms, whirlwinds, rain, snow, hail, &c.

Ver. 47. This similitude, though it be not in the original, is so pertinently applied in this place, that Lucretius himself, were he living, would judge it worthy of him.

Ver. 48. This and the two following verses are in book i. ver. 185. and they should be repeated again below after ver. 91. of this translation, for Lucretius does so in the original, but Creech has nevertheless omitted them in that place.

Ver. 51. This, and the ten verses that follow it, are likewise repeated from book v. ver. 87.

Ver. 57. Severe and cruel gods; whom such wretches as are ignorant of the causes of things, fear and adore, as if they were the authors of them. See Book v. ver. 94.

Ver. 60. This and the two next verses are in book i. ver. 99. as well as book v. ver. 96.

Ver. 71. Horace in like manner:

——Namque Deos didici securum agere ævum,
Nec si quid miri faciat Natura, Deos id
Tristes ex alto cœli demittere tecto.

Ver. 78. Epicurus foolishly believed, that a god, who foresees all, protects all, and provides for all, must be indeed, a terrible and dreadful god: insomuch, that the image of such a god can never enter into the mind of man, but anxiety, fear, and terror will be the immediate effect.

Ver. 82. It is next to incredible to believe, to how great a degree wilful ignorance and dulness prevailed among the ancients: and that too, even in the midst of Athens, the chief seat of learning. Plutarch, in the Life of Nicias, tells us; that they could not discover the reason of the eclipses of the moon, but thought it a portent that foreboded some great disaster. For, says he, Anaxagoras, who first treated of the celestial phenomenons, durst not discourse of them in public, but only in private, and with some particular friends: for neither natural philosophers, nor those they called Μετεωρολόγους, i. e. such as argued concerning meteors; were suffered among them: they being looked on as men, who endeavoured to limit the Divine Power, and to derogate from it, by ascribing all things to natural causes: for which reason Protagoras was banished, and Anaxagoras thrown into prison: but Pericles with much ado, procured him to be set at liberty: Socrates was taken off, merely for the name of a philosopher: for he was averse to studies of that nature. At length, the authority of Plato, as well by reason of the probity of his life, as for that he subjected natural effects, to more potent and divine causes, wiped off the scandal from those studies, and opened a way to the doctrine of the mathematics. Thus Plutarch; who, in the life of Pericles, farther teaches us, what great advantages that Athenian general gained by his acquaintance with Anaxagoras: for he there informs us, that he delivered his mind from all superstition, which strikes a terror into those, who are ignorant of the causes of the celestial meteors; and tremble at the things above, which consternation, adds the same author, the knowledge of natural causes takes away; and, instead of that frightful and disquieting superstition, inspires a secure and quiet religion together with good hope. Thus we see to what tend the endeavours of Lucretius, in the following disputation, and how much they ought to be esteemed.

Ver. 89. This relates to the discipline of the Thuscans: of which Cicero in the second book de Divinat. "Cœlum in sex decim partes diviserunt Etrusci: facile id quidem fuit, quatuor, quas nos habemus, duplicare: post idem iterum facere, ut ex eo dicerent, fulmen quâ ex parte veniisset." The Thuscans divided the heaven into sixteen parts: it was indeed easy for them to do so, by doubling the four we have, and then doing the same again: that they might know by that means, from what part comes the lightning: but the same quarters were sometimes reckoned lucky, sometimes unlucky, lucky as in this of Virgil:

——Subitoque fragore
Intonuit lævum. Æn. ii. ver. 692.

Unlucky, as in this of the same poet,

Sæpè malum hoc nobis, si mens non læva fuisset,
De cœlo tactas memini prædicere quercus:
Sæpè sinistra cavâ prædixit ab ilice cornix.
Eclog. i.

Thus the left side was ambiguously taken by the Romans often as a good omen, often as a bad: and the right, in like manner, was sometimes a lucky omen, sometimes unlucky But whence came the same part to have so different, nay, contrary a power? Was it because, in the interpretation of their auspices, they sometimes had regard to the place and site of the gods, by whom those bodings were given them, and sometimes to that of the augurs, who asked those tokens of the gods? for the right of the giver is the left of the asker or receiver: some favour this opinion, and ground their belief on the testimony of

Plutarch lib. de Quæſtionibus Romanis: but Cicero ſuggeſts another reaſon, for lib. ii. de Divin. he ſays, that the Greeks and Barbarians take the omens from the right to be beſt, as the Romans do thoſe from the left. Hence the Romans may, in the affair of divination, be ſaid to ſpeak often after their own manner, often after that of the Greeks. However, it is certain, that amongſt the Romans, in "auſpiciis, quæ ſiniſtra ſunt, benè eventura putantur;" the auſpices on the left were thought to forebode good ſucceſs: as Alexander ab Alexandro in his Gen. dier. lib. v. cap. 13. & Tiraquel. on that place prove at large; without omitting the reaſon of it: for they acquaint us, that in taking their "Auſpicia ex cœlo," their auſpices or omens from heaven, which was the chief kind of all; and on which they moſt depended; the thunder or lightning that came from heaven, was ſuppoſed to come from the right hand of God, when it was on the left of the auſpex, or ſooth-ſayer: as, on the contrary, when it happened on his right ſide, they believed it to come from the left hand of God; becauſe, they always took it for granted, that his face was turned towards the auſpex. Thus too Donatus, on the "intonuit lævum," of Virgil, which I cited before, ſays, "Quod dixit lævum, debet proſperum intelligi: cujus ratio hæc eſt; læva in aliis contraria ſignificant; in ſacris autem ſignis idcircò proſpera accipiuntur quæ læva ſunt, quia ſacrificantis, vel precantis latus lævum dexterum eſt ejus, qui poſtulata largitur." So likewiſe in the omens taken from the voices of birds, the rule was, that thoſe on the left were always lucky; "ſemper cantus Oſcinis, quum ſiniſter eſt, ſecundiſſimus fuit," ſays Alexander ab Alex. in the place above cited: indeed he makes ſome exceptions to this doctrine, but delivers it in general to be true. And here we may obſerve by the way, that of the birds, from which the ancients took their augūries, ſome were called Oſcines, and from the voices of theſe they drew their divinations; and others Præpetes, from the manner of whoſe flight, they took their omens: crows, ſwallows, kites, owls, and ſuch like birds, were counted inauſpicious; and others, as vultures, eagles, ſwans, &c. in ſome caſes portended good luck, in others bad: but even this depended too on which ſide the bird was; and ſome birds were held to be lucky on one ſide, and unlucky on the other. A raven was lucky on the left, a crow on the right: "Cornix à ſiniſtrâ, corvus à dextrâ, ratum facit," ſays Cicero, de Divin. lib. i. But which auguries did the ancient Greeks and Latins take to be left, which right? for both of them, though they ſpoke differently, yet meant the ſame thing: that is to ſay, the oriental omens, or thoſe that came from the eaſt, did to both of them ſeem to be the beſt, for this reaſon, becauſe the beginning of light and motion is from that part of the heavens: and yet what the Greeks called right omens, the Romans called left. Concerning the Greeks it is manifeſt from Homer, Iliad. xii. ver. 239. where Hector ſays, that he values not the augural birds, whether they go to the right towards the Aurora and the ſun; or to the left towards the duſky weſt:

Εἴτ' ἐπὶ δεξί' ἴωσι προὸς ἠῶ τ' ἠέλιόν τε,
Εἴτ' ἐπ' ἀριστερὰ ποίγε, ποὶ ζόφον ἠερόεντα.

As to the Romans, it is evident from Varro, who, Epiſt. Quæſt. lib. v. ſays, "A deorum fede cum in meridiem ſpectes, ad ſiniſtram ſunt partes mundi exorientes, ad dexteram occidentes: factum arbitror, ut ſiniſtra meliora auſpicia, quam dextera, eſſe exiſtimentur." Feſtus Pompeius quotes this paſſage, and mentions others of the ancients of the ſame opinion: which Pliny, lib. ii. cap. 54. confirms in theſe words: "Læva, proſperia exiſtimantur, quoniam lævâ parte mundi ortus eſt." Now the reaſon of the different appellation is, becauſe, in taking their auguries, the Greeks turned themſelves towards the north, the Romans towards the ſouth. But to inquire why they did ſo, would engage me into too long a digreſſion.

Ver. 90. See below, ver. 379.

Ver. 92. The poet invokes his muſe in theſe four verſes, of which, our tranſlator, not having fully rendered them, obliges me to give the original.

Tu mihi ſupremæ præſcripta ad candida calcis
Currenti ſpatium præmonſtra, callida Muſa,
Calliope, requies hominum, divûmque voluptas;
Te duce ut inſigni capiam cum laude coronam.

Whence we ſee, that, notwithſtanding what ſome imagine, that Lucretius never finiſhed his poem, or at leaſt writ more books that are loſt, he never propoſed to himſelf to write above ſix; and that he is now haſtening "ad præſcripta candida ſupremæ calcis:" which Seneca helps us to explain: for that author, Epiſt. 19. teaches, That what in the Circus was in his days called Meta, the goal, the ancients called Calx, becauſe the end of the courſe was often marked with chalk. Calliope was one of the muſes, ſo called from καλὸς, beauty, and ὄψ, ὄπος, a voice: ſhe was mother of Orpheus, and preſident of heroic verſe. See book i. ver. 932.

Ver. 93. This verſe our tranſlator ſeems to have been fond of: for he repeats it from book i. ver. 930. where it is placed with as little authority from Lucretius, as it is here.

Ver. 96. Lucretius begins his diſputation of meteors; and firſt of thunders: the various motions and differences of which he explains ſeveral ways: and I. in theſe thirteen verſes, teaches, that the noiſe of thunder is made by the colliſion of clouds, that are driven and daſhed againſt one another by adverſe winds. And if it be objected, that clouds are rare and thin bodies, and therefore very improper and unlikely to make ſo great a noiſe, the anſwer is, that the clouds do not equal ſtones and wood in denſity; nor on the other hand, are ſo rare as miſt, or ſmoke: for then indeed they would vaniſh away: but they are however of a middle nature between both, and denſe enough to contain hail and ſnow.

Diogenes Laërtius ſays, this was the opinion of Epicurus and Anaxagoras, and we read in Sto-

bæus, that Democritus and the Stoics too were of the ſame belief: nor does Seneca oppoſe it, cap. 39. Nat. Quæſt. where he ſays, " Quid enim non quemadmodum illiſæ manus plauſum edunt ſic illiſarum inter ſe nubium ſonus poteſt eſſe magnus quia magna concurrunt?" Since even the hands clapped together make a noiſe, why ſhould not the noiſe of clouds daſhing againſt one another be great, ſeeing they are great bodies that meet, and ſtrike one another? And to one that objected, " nubes impingi montibus nec ſonum fiere," that clouds ſtrike againſt mountains, but make no noiſe, he anſwers: " Non quomodocunque nubes illiſæ ſunt, ſonant, ſed ſi aptè ſunt compoſitæ ad ſonum edendum. Adverſæ inter ſe manus colliſæ non plaudunt: ſed palſa cum palmâ collata plauſum facit," the clouds do not make a ſound in what manner ſoever, they are daſhed againſt one another, but only when they are compoſed in a due manner to make a noiſe: The backs of our hands ſtruck one againſt another, do not make that ſound of applauſe, as when we clap one palm againſt the other. This was the opinion of many of the ancients, and, if we will give credit to ſome of our philoſophers at this day, it is next to truth.

Ver. 98. For the Epicureans denied that it ever thunders, when the ſky is clear; and therefore Horace when he was about to leave that fooliſh wiſdom, as he calls it, ſays,

————Namque dieſpiter
Igne coruſco nubila dividens,
Plerumque, per purum tonantes
Egit equos, volucremque currum.

Ver. 109. In theſe ſix verſes, he explains, by a compariſon, the noiſe that clouds make when they are daſhed by winds againſt one another, and at the ſame time brings a ſecond explication of thunder. For one ſingle cloud driven by the wind, is ſometimes rent aſunder by the violence of the blaſt; nor ſhall we condemn this interpretation, if we compare the noiſe that a cloud ſo torn makes, with the ruffling of curtains that are hung up in a large theatre; with that of paper when you tear it haſtily, or of clothes hung abroad, and ruffled by the wind.

Nardius obſerves, that what Lucretius in this place advances, that the noiſe of thunder may be made by the mutual confrication of clouds, that juſtle againſt one another; like the noiſe made by ſails or curtains ruffling in the wind, and the like, is altogether improbable, but agrees but ill with his own doctrine. For having, ver. 102. aſſigned a middle conſiſtency to the clouds, he baniſhes from them that dryneſs and ſolidity, which of neceſſity all ſuch bodies muſt have, as, by their colliſion excite a ſound, that can be perceived from far. Beſides, that ſort of noiſe, which is made in the clouds, is not like the mutual arietation of ſolid bodies. For then one only noiſe anſwers to one only blow; but the roar of thunder laſts, and is repeated. Nay, ſometimes the cloud grumbles for a conſiderable ſpace of time; and ſince the poet pretends, that this is done by contrary winds that violently drive the clouds againſt one another; we add, that when two oppoſite winds, ſuppoſe the north and the ſouth, contend with each other, no thunder, but roaring blaſts only are then heard. And this laſt obſervation is ſtrong againſt Lucretius; for it never thunders except when the clouds move ſlowly, at leaſt not when the rack drives with violence; and, which is chiefly to be conſidered, the clouds grumble, and burſt out in thunder, when they are not agitated by winds.

The Roman theatres were uncovered at top; and to keep off the ſun or rain from the ſpectators, curtains were ſpread over them, as appears by what Lucretius himſelf ſays, book iv. ver. 75. Propertius too mentions theſe curtains, lib ii. Eleg.

Nec ſinuoſa cavo pendebant vela theatro.

Quintus Catulus was the firſt who introduced the uſe of them, when he dedicated the capitol; and Lentulus Spinter firſt brought up the uſe of ſilken curtains, in the Apollinarian games. This we have from Pliny, lib. xxiii. in theſe words: " Vela in theatris tantum umbram fecêre, quod primus omnium invenit Q. Catulus, cum capitolium dedicaret. Carbaſina deinde vela primus in theatrum duxiſſe fertur Lentulus Spinter, Apollinaribus Ludis." Of theſe curtains ſee more, book iv. ver. 75.

Ver. 115. In theſe ſix verſes, he gives us a third explication of the noiſe of thunder. Sometimes the noiſe of thunder is like a craſhing, or creaking ſound; and this happens when the clouds do not meet full; but as we call it, but only rudely juſtle and ſhock the ſides of one another in an oblique manner. From whence proceeds that clangour, which Lucretius calls " aridus ſonus," a dry ſound; and our tranſlator, ver. 118, a harſh murmur. Thus Milton:

————The clouds,
Juſtling, or puſh'd by winds, rude in their ſhock,
Tine the ſlant lightning, &c.

Ver. 119. Dryden in Troïlus et Creſſida, deſcribes this ſort of thunder-clap.

It comes like thunder, grumbling in a cloud
Before the dreadful break, &c.

Ver. 121. Theſe eight verſes contain the fourth explication. Wind, ſays he, pent up in a cloud, rages to get free. Thence proceeds a grumbling noiſe, till the wind having burſt its paſſage, makes a dreadful roar. Pliny, lib ii. cap. 43. favours this opinion, and ſays, " Poſſe ſpiritum nube cohibitum tonare, naturâ ſtrangulante ſonum dum rixetur, edito fragore cum erumpat, ut in membranâ ſpiritu intentâ." That wind, while it continues ſhut up in a cloud, may thunder; becauſe ſo long as nature chokes the ſound, it makes a grumbling noiſe, but when the wind frees its paſſage, and breaks out, it gives a horrid clap; as when we break a bladder, blown hard with wind. If you are diſpoſed to laugh, ſee Ariſtophanes in Nubibus, Act. i. Scen. 4. Moreover, this was likewiſe the opinion of Strato, and Diogenes, but chiefly of Leucippus, Empedocles, and Ariſtotle.

who allow nothing but this to be the cauſe of thunder. Moreover, this ſort of thunder which Lucretius explains by the burſting of a blown bladder, may yet better be explained by the report of our cannon, elegantly deſcribed by Pontanus in Meteor. in theſe verſes.

Ut cum armata manus tormento excluſit aheno
Fumantem pilam, verſatque volubile ſaxum,
Incluſi erumpunt ignes nigrantibus auris;
Fit tremor, horrendumque ſonat; tum plurimus antè
Sternit iter fragor, et gemitu ſaxa icta reſultant;
Disjectæque ruunt proſtratis mœnibus arces.

And by Milton in Paradiſe Loſt, book vi.

————Immediate in a flame,
But ſoon obſcur'd with ſmoke, all heaven appear'd,
From thoſe deep-throated engines belch'd, whoſe roar
Embowel'd with outrageous noiſe the air,
And all her entrails tore, diſgorging foul
Their deviliſh glut, chain'd thunderbolts and hail
Of iron globes, &c.

Now, though theſe implements of miſchief were wholely unknown to the ancients; yet Epicurus in Lacrtius, lib. x. uſes almoſt the ſame compariſon, and ſays, that thunder may be made by wind ſhut up in hollow clouds, even in like manner as our veſſels burſt with noiſe, when they are heated by it cluded fire. Moreover, Anaximander and Metrodorus ſeem to have been of the ſame opinion. For they held thunder to be a wind conceived, and encloſed within the bowels of a thick cloud; and which, breaking out with violence, makes the noiſe we call thunder; and that the lightning is cauſed by the breaking of the cloud. In like manner, added Anaximenes, who ſubſcribed to this belief, as the ſea, when daſhed and broken with oars, ſparkles and ſhines.

Ver. 129. In theſe ſix verſes is contained explication fifth. We ſee, ſays the poet, ſome clouds, whoſe branchy edges reſemble the boughs of trees, growing out on all ſides from the body; and if winds get in among them, why ſhould they not cauſe thunder? For when a rough blaſt of wind blows through a thick foreſt, the ſhaken branches claſh againſt one another, and make a rattling noiſe.

Ver. 135. In theſe ſix verſes, he gives explication ſixth. The clouds, ſays the poet, may likewiſe be broken to pieces by the winds, when they bear hard upon them; and none can doubt but that winds can ſhatter the clouds, ſince we often ſee that they tear up the ſtouteſt trees, and toſs their broad roots into the air

Ver. 141. Explication ſeventh, in theſe four verſes. If you like not theſe reaſons, imagine the air to be an immenſe ſea, and the clouds its waves. Let them daſh againſt one another; and they roar no leſs than the vexed billows of a boiſterous ocean, when they inſult the ſhores that bound them.

Ver. 145. Some philoſophers taught, that thunder was cauſed by the falling of ſtars into a wet cloud, and their ſtruggling with the moiſture. Now Lucretius for the eighth cauſe of thunder, in the room of their ſtars, ſubſtitutes the flame of lightning, which, falling from a dry cloud into a wet, hiſſes like red hot iron, when plunged into the ſmithy. This was particularly the opinion of Anaxagoras.

Ver. 149. Explication ninth. That he may be ſure to omit none of the cauſes of thunder; he now, in thoſe ſix verſes, ſets the very clouds on fire; and pretends, that as laurels and other things crackle in the flames, clouds may do ſo too.

Ver. 152. Pliny, lib. xv. cap. ult. ſays that Cato diſtinguiſhed between two ſorts of laurel; the Delphic, and the Cyprian; this laſt has a ſhort blackiſh leaf, turning up at the edges and indented. The other, a very large leaf, and bears very large berries, that turn from green to red; with this the victors at Delphi, and thoſe that triumphed at Rome, were wont to be crowned. Pompeius Lernæus added a third ſort of laurel, which he called "muſtas, quod muſtaceis ſubjiceretur." Lucretius here calls it "Delphica laurus," the laurel being a tree ſacred to Apollo, becauſe, as Pliny, Nat. Hiſt. lib. xv. cap. 30. ſays, many very fine laurels grew on the Mountain Parnaſſus; and becauſe, as the interpreter of Heſiod ſays, ἱερὸν ἐστὶ τοῦ ἀπόλλωνος. Dryden from Chaucer's Tale of the Flower and the Leaf.

The laurel is the ſign of labour crown'd,
Which bears the bitter blaſt, nor, ſhaken, falls to ground:
From winter winds it ſuffers no decay;
For ever freſh and fair, and ev'ry month is May:
Ev'n when the vital ſap retreats below;
Ev'n when the hoary head is hid in ſnow;
The life is in the leaf, and ſtill between
The fits of falling ſnow appears the ſtreaky green.

Becauſe Daphne flying from Apollo, to whoſe love, ſhe would not conſent, was changed into a laurel. See the next note.

Ver. 153. Pliny, lib. xv. cap. 30. "Laurus maniſeſto abdicat ignes crepitu." The laurel, by its crackling in the flames, ſhows its natural deteſtation of fire.

This alludes to the known fable of Phœbus and Daphne, who was feigned to be the daughter of the River Peneus in Theſſalia, becauſe the banks of that ſtream abound with laurels. With this nymph, Phœbus fell in love, and ſhe, refuſing to yield to his deſires, who would have offered violence to her, fled from him, and in her flight arriving on the banks of her father's flood, and imploring his aſſiſtance, was changed into a laurel. Her tranſformation is deſcribed at large by Ovid. Metam. 1. and finely tranſlated by Dryden, as follows:

Scarce had ſhe finiſh'd, when her feet ſhe found
Benumb'd with cold, and faſten'd to the ground:
A filmy rind about her body grows;
Her hair to leaves, her arms extend to boughs;
The nymph is all into a laurel gone:
The ſmoothneſs of her ſkin remains alone;

Yet Phœbus loves her ſtill, and, caſting round
Her bole his arms, ſome little warmth he found:
The tree ſtill panted in th' unfiniſh'd part,
Not wholly vegetive, and heav'd her heart.
He fix'd his lips upon the trembling rind,
It ſwerv'd aſide, and his embrace declin'd:
To whom the God: becauſe thou canſt not be
My miſtreſs, I eſpouſe thee for my tree.
Be thou the prize of honour and renown;
The deathleſs poet, and the poem, crown:
Secure from thunder, and unharm'd by Jove;
Unfading, as th' immortal powers above:
And, as the locks of Phœbus are unſhorn,
So ſhall perpetual green thy boughs adorn;
The grateful tree was pleas'd with what he ſaid,
And ſhook the ſhady honours of her head.

Ver. 155. In theſe four verſes is contained the tenth and laſt cauſe of the noiſe of thunder. When it thunders, hail, and many little fragments of ice, fall in ſome places, but chiefly in the northern climates. Therefore, that noiſe may well be aſcribed to the breaking into ſhivers of congealed and frozen clouds.

To this laſt opinion ſubſcribes our countryman Hobbes, who holds thunder to be the breaking of a cloud, congealed to ice; and that breaks by the ſtruggling of encloſed air. The Stoics held it to be a noiſe occaſioned by the colliſion of two hollow clouds; and that the lightning proceeds from their attrition. This I hinted before; and mention it in this place again, only to ſay, that Des Cartes differs not much from the opinion of theſe philoſophers: for he conceives thunder to be cauſed, when ſeveral flat clouds, "tabulatorum inſtar," ſays he, like ſo many floors, are driven with violence, the higher on thoſe below them, and clatter one upon another; and the lightning to proceed from the nature of exhalations, that are included in the interſtices, or ſpaces between the clouds, and which, by their falling upon one another, is cruſhed out, and explored with violence. But much more conſonant to truth, nay, indeed true, is their opinion, who hold thunder to be a hot and dry exhalation, of a ſulphurous and nitrous matter, contracted and ſhut up in a cold and moiſt cloud; whence ſtruggling to get free, it kindles itſelf by the agitation, and violently breaks forth from its confinement. And according to this opinion, Cowley ſays finely,

Why contraries feed thunder in the cloud;
What motions vex it, till it roar ſo loud.
David. iii.

Ver. 159. Hitherto of thunder: He comes now to inquire into the cauſes of lightning, which may be ſtruck out of hardened clouds, daſhed againſt one another; in like manner as fire is out of iron, flint, or wood; for we ought to believe that ſome ſeeds of fire are lurking in the clouds, as well as in thoſe other things, ſays Lucretius in theſe ſix verſes.

But before we proceed any farther, it will be neceſſary to obſerve, that under the general name of thunder, three ſeveral things are comprehended: I. The noiſe, which the Greeks called Βροντὴ, the Latins, *tonitru*, in Engliſh, thunder. II. The coruſcation, by the Greeks called Ἀστραπὴ, by the Latins, *fulgur*, which anſwers to what we call the lightning. III. What the Greeks cali Κεραυνὸς, the Latins *fulmen*, and we a thunderbolt. I know that the ancients, eſpecially their poets, no leſs than we at this day, often confounded theſe three things, taking one of them for the other, though they are different, as will more plainly appear by what ſhall be ſaid by and by, when I come to explain the difference between the *fulgur* and *fulmen* of the ancients. I now return to Lucretius, who held, that as in ſtone, iron, and wood, there are ſeeds of fire, which by attrition may be forced out, and ſtruck into ſparkles. So in the clouds likewiſe there are ſeeds of fire, that by the attrition of thoſe clouds, cauſed by the violent force of the wind, may be ſtruck out into lightning. For though the clouds be moiſt, yet fire may nevertheleſs be generated and produced by their attrition. This Seneca ſeems to confirm, Nat. Quæſt. lib. ii. cap. 25 and 26, where he ſays, that neither is fire produced without ſome moiſture, nor are the clouds wholly watery, but contain a part that may take fire; in like manner, as we often ſee the ſame piece of wood burning in one part, and ſputtering out moiſture in another: "eo modo, quo ſæpe in ligno alia pars ardet, alia ſudat." Nor is this opinion contradicted by Pliny, who, lib. ii. cap. 42. ſays, "Poſſe et attritu, dum in præceps fertur, illum, quiſquis eſt, ſpiritum accendi: poſſe et conflictu nubium elidi, ut duorum lapidum ſcintillantibus fulgetris." And Seneca, in the place above cited, adds the example of the wood of laurel, and of ivy, which by attrition produce fire. Thus too Democritus in Stobæus, Eclog. Phyſ. ſays, that lightning is the colliſion of clouds; by which colliſion, the corpuſcles, that are the efficient cauſes of fire, being by various confrications, got together, and kindled in one body, are, as it were, ſtrained through the many pores and apertures of the clouds.

Therefore, what the Latins called *fulgur*, is nothing elſe than light emitted from the flame of *fulmen*, and diffuſed through the air. Yet Pliny, lib. ii. cap. 43. Seneca, lib. ii. cap. 16. and 18. and Ariſtotle, lib. ii. de Meteor. cap. 9. will have the fire of *fulgur* to be more looſe and rare, inaſmuch as it only cleaves the cloud, and vaniſhes into air; but the fire of *fulmen* to be more compreſſed and cloſe; becauſe it breaks the cloud with violence, and ſometimes daſhes againſt the earth. But this ſeems probable only in the coruſcations without thunder; but cannot be in thoſe that are attended, "cum tonitu ac fulmine." For ſuch coruſcations break the cloud to pieces, and cannot be ſaid to cleave it, but rather to ſcatter and diſperſe it on all ſides, while the *fulmen* itſelf is directed to one part only. And thus the very moment that the matter of *fulmen* is kindled, the *fulgur* or coruſcation is produced; but this *fulgur* is momentary, becauſe the flame of the *fulmen* is ſo too; and if the *fulgur* have ſometimes any duration, the flame of the *fulmen* muſt of neceſſity con-

tinue the longer. This is manifeſt in our cannon; which being fired in the night, a coruſcation from the flame of the powder is diffuſed all around; whence men that ſtand at a diſtance eaſily gueſs, that they ſhall ſoon hear the report.

Ver. 162. This and the two next verſes our tranſlator has added to his author. The thought ſeems to be taken from Waller's ſea-fight.

Ver. 165. But if thunder and lightning be both made by the ſame colliſion of the clouds, why do we ſee the lightning before we hear the thunder? Becauſe, ſays he, in theſe twelve verſes, light is ſwifter than ſound: For common experience evinces, that the ſpecies of a viſible thing is ſooner conveyed to the eyes, than the noiſe it makes is to the ears. Thus Ariſtotle, lib. ii. Meteor. ſpeaking of lightning, ſays, γίνεσθαι δὲ μετὰ τὴν πλῆγὴν, καὶ ὕστερον τῆς βροντῆς, ἀλλὰ φαίνεται πρότερον διὰ τὸ τὴν ὄψιν πρόσιεσθαι τῆς ἀκοῆς. The coruſcation is made after the ſtroke and after the thunder; but it is ſeen firſt, becauſe the ſenſe of ſeeing is ſwifter than that of hearing: And in the ſame place he brings an inſtance of men rowing a boat in the water, and ſays, that they are ſeen lifting up their oars the ſecond time out of the water, by that time the noiſe of the firſt ſtroke is heard.

That the action of light is quicker than that of ſound; and that light is therefore ſooner conveyed to the eyes, than ſound to the ears, is true beyond any contradiction; and the inſtance Lucretius brings to prove this aſſertion is juſt: for nothing is more certain, than that we ſee the motion of the hatchet, lifted up the ſecond time to ſtrike, before we hear the ſound cauſed by the firſt blow, even though we are placed but at a ſmall diſtance from the ſtriker. The reaſon of which is, becauſe the "materia ſubtilis" in lucid bodies, which is the medium by which we ſee, conſiſts of particles, that are much leſs, and more ſolid than thoſe of the air, the medium by which we hear: And conſequently the motion of that ſubtile matter is more quick than that of the air: becauſe more ſtrength is requiſite to overcome the reſiſtance of a greater body, than that of a leſs: Beſides, the greater body loſes much of its motion, in conquering the reſiſtance of the body it meets: Therefore the air, whoſe particles are intricate, and, like thoſe of all other ſulphureous bodies, twiſted and entangled in one another; and in their magnitude far ſurpaſſing thoſe of the ſubtile matter, whoſe very name ſuppoſes ſomething the moſt minute that can be conceived; therefore, I ſay, the air cannot move with equal ſwiftneſs, as does the "materia ſubtilis," whoſe particles being extremely minute, and ſolid, and inflexible, muſt therefore move more nimbly, and retain their motion longer. And this is the reaſon that the ſenſe of ſeeing is quicker than that of hearing.

Ver. 177. In theſe fourteen verſes, he ſays, that if thunder be cauſed by the winds breaking and tearing the clouds, lightning is likewiſe made by the ſame winds, that by the ſwiftneſs of their motion grow hot, and kindle into flames, as they are agitated and whirled about in the bowels of the clouds. Thus Creech interprets this paſſage, and ſays that Gaſſendus, and all that follow him, are miſtaken in their interpretation of it. Now to confirm this opinion of Epicurus, we may obſerve, that ſeveral of the ancients ſeem to have been of the ſame ſentiments: For Heraclitus, as Seneca, lib. ii. cap. 56. witneſſes, held, that this fulguration is like the attempts of our fires, when they begin to kindle, and reſembles the firſt uncertain flames, now dying, now riſing again at every puff of the bellows. And we learn from Plutarch de Placit. Philoſoph. lib. iii. cap. 3. that Metrodorus believed, that this coruſcation is produced, when a cloud is aſſaulted and daſhed to pieces by the wind. And theſe opinions are like theirs, who hold, That motion is the cauſe of heat: For we ſee many things grow hot by motion, as wheels, the axletrees on which they are hung, &c.

Ver. 183. This is no truer than what Virgil writes of the arrow of Aceſtes,

Qui tamen æthereas telum contorſit in auras,
Oſtentans artem pariter, arcumque ſonantem:
——volans liquidis in nubibus arſit arundo,
Signavitque viam flammis, tenueſque receſſit
Conſumpta in ventos: cælo ſeu ſæpe refixa
Tranſcurrunt, crinemq. volantia ſydera ducunt.
Æn. v. *ver.* 520.

Who, ſhooting, upwards, ſends his ſhaft to ſhow
An archer's art, and boaſt his twanging bow:
Chaf'd by the ſpeed, it fir'd, and as it flew,
A trail of foll'wing flames aſcending drew;
Kindling they mount, and mark the ſhiny way,
Acroſs the ſkies, as falling meteors play,
And vaniſh into wind, or in a blaze decay.
Dryd.

Ver. 193. In theſe twenty-three verſes he anſwers the objections of thoſe, who pretend that the clouds, though they are broad, yet cannot be deep or thick enough to contain within their bowels, ſuch vaſt hollows, as could be capable to encloſe ſo much wind: To which he adds ſomething of the winds grumbling within the clouds, and then burſting out into flames.

Ver. 197. For this and the following verſe, our tranſlator has no authority from his author: but has tranſcribed them from the Biſhop of Rocheſter's Plague of Athens, and repeats them again almoſt word for word, ver. 1099. of this book. Where indeed they are better applied than here: For how come the winds, that, in the preceding verſe, whirled the clouds through the air, which implies a violent and ſwift motion, to be able to move but ſlowly in this, and to groan under the weight of their burdens? Dennis ſpeaking of a row of oaks, as he calls them, ſays finely,

The tempeſt ſees their ſtrength, and ſighs, and
paſſes by.

Ver. 203. Sir R. Blackmore gives a lively deſcription of theſe mountain-clouds in the following verſes:

When on their march embattle'd clouds appear,
What formidable gloom their faces wear!
How wide their front! How deep and black their rear!
How do their threat'ning heads each other throng!
How flow the crowding legions move along!
The winds, with all their wings, can ſcarcely bear
Th' impending burden of th' oppreſſive war.

Ver. 205. Thus after our poet Virgil ſays of the winds,

Illi indignantes magno cum murmure montis
Circum clauſtra fremunt ——

This way and that th' impatient captives tend,
And, preſſing for relief, the mountain rend;

Ver. 214. In theſe eight verſes he propoſes another cauſe of lightning, and ſays, that not only the ſeeds of fire, agitated and whirled about in the clouds, may be kindled into flames, but the clouds themſelves contain many corpuſcles of fire, which they receive from the ſun, or from elſewhere: and this is evident from the bright and flamy colour of ſome clouds: Now theſe corpuſcles, or ſeeds of fire, being forced out by the wind that drives and compreſſes the clouds together, make the lightning. Ariſtotle ſays, that ſeveral adhered to this opinion, which nevertheleſs he confutes, lib. ii. Meteor. Empedocles held that this fire, that catches in the clouds, is kindled by the beams of the ſun: but Anaxagoras will have it deſcend from the higheſt ether, which he holds to be fire.

Ver. 222. He ſaid in the laſt place, that the ſeeds of fire that are in the clouds, are driven out by the ſtrength and violence of the wind: But now in theſe four verſes, he ſays, that if they are not driven out in that manner, yet they muſt of neceſſity fall down, when the clouds grow thin, and break, and open of themſelves: and that from thence proceeds the mild and gentle lightning, whoſe ſplendor dazzles the eyes, though no thunder invade the ear.

By this breaking, or rather rarefaction of the clouds, and the falling down of the atoms that make the lightning without any thunder or noiſe, the poet ſeems to inſinuate the opinion of Clidemus, who, as Ariſtotle ſays, believed lightning not to be real fire, but only an empty ſpecies, that is to ſay, that the cloud, being agitated, and as it were ſtruck and beaten in the humid part of it, brightens in like manner as the ſea foams and turns white, if it be beaten with a rod. To this purpoſe too Anaximenes in Stobæus alleges the example of the ſea turning bright when the oars cut the waves. Thus likewiſe Xenophanes ſaid, that the cloud by its motion conceives the ſplendor that lightens: And, laſtly, Animaxander favoured this opinion, when he ſaid, that lightning is only the wind that turns bright by forcing its way through the blackneſs of the cloud.

Ver. 226. Hitherto the poet has treated of the coruſcation of lightning, which the Latins called *fulgur*: he is now going to diſpute concerning the *fulmen*, by which the ancients meant the lightning, that falls and does miſchief upon earth, and which in Engliſh is called a thunderbolt: The French call it "Carreau de Foudre:" which anſwers to our denomination of it: The Greeks called it κεραυνὸς; and Ariſtotle defines it in theſe words: τὸ δὲ ἀτρέψαν ἀναπυρωθὲν βιαίως ὡς ἄχρι τῆς γῆς διιχθέον, κεραυνὸς καλεῖται· i. e. the lightning, if it continues its courſe to, and daſhes upon the earth, is called a thunderbolt; Lucretius, even in this diſputation, confounds the words *fulgur* and *fulmen*, often uſing one for the other: and indeed they both ſignify lightning, and the ſole difference is in the effects they produce: Our tranſlator too does the like; nay, ſometimes uſes the word thunder for lightning, particularly in this verſe; though thunder properly means only the noiſe. This diſtinction was neceſſary to be obſerved in order to the better underſtanding of the following diſputation; in which the poet treats of many things relating to lightning: I. Of its nature: II. How it is generated: III. Of its motion: IV. In what ſeaſons of the year it is moſt frequent: And V. he inveighs againſt the ſuperſtition of ſuch as aſcribe thunder to Jupiter; and againſt the Thuſcans, who drew their auguries from thunder and lightning. This diſputation continues to ver. 431; and, firſt, in theſe eighteen verſes, he diſputes of the nature of lightning, and teaches that it muſt conſiſt of a fiery ſubſtance, becauſe it ſinges and burns whatever it touches, ſets fire to houſes, &c. But that it pierces through walls, that it melts gold, braſs, and other metals, that it draws out the liquor and leaves the veſſel entire, muſt be aſcribed to the ſwiftneſs of its motion, and the tenuity and ſubtleneſs of its fire.

Ver. 227. For things that are blaſted by lightning not only ſeem burnt, but retain a ſulphurous ſmell.

Ver. 234. While the poet here takes notice of the wonderful effects of lightning, he obſerves the ſeveral ſorts of it. Ariſtotle allows only two; one, which he calls καπνώδης, ſmoky, which occaſions the ſwarthy colour of the things it blaſts: the other, λαμπρὸς, clear, to which he aſcribes its penetration. But Pliny, lib. ii. cap. 51. adds a third ſort, which he calls *ſiccus*, dry; whoſe nature, ſays he, is indeed wonderful, ſince by that veſſels are exhauſted of their liquors, and drawn dry, while the veſſels themſelves remain untouched: Since gold, and ſilver, and braſs, are melted by it, while the bags that contain them are not ſo much as ſinged, nor even the wax which ſeals them in the leaſt melted, nor the impreſſion diſordered: Nay, what is yet more ſtrange than all this, "Martia Romanorum princeps," ſays he, "ictа gravida, partu exanimato, ipſa citra ullum aliud incommodum vixit:" Martia, a Roman princeſs, was ſtruck with lightning when ſhe was big with child; which killed the child within her; but ſhe received no other hurt whatever. To which we may add what Seneca ſays, that it melts the ſword without doing any hurt to the

ſcabbard; and all the iron of a ſpear, without ſo much as ſcorching the wood: that it breaks the veſſel, and hardens the wine, ſo that it will continue as it were in a lump, and not run away: but that this ſtiffneſs or congelation of the liquor laſts not above three days, "nec citra triduum rigor ille durat," &c. lib. ii. cap. 31. And cap. 52. of the ſame book, he ſays, "Valentiora, quia reſiſtunt, vehementius diſſipat: cedentia nonunquam ſine injuriâ tranſit: cum lapide, ferroque, & duriſſimis quibuſque confligit, quia viam neceſſe eſt per illa impetu quærat; itaque faciat viam, quâ effugiat: teneris et rarioribus parcit, quamquam et flammis opportuna videantur, quia tranſitu patente minus ſævit:" &c. But here, ſince Lucretius gives us this opportunity, we will, with Nardius, propoſe ſeveral queſtions and problems, relating to thunder and lightning, and give the anſwers and ſolutions of them.

PROBLEMS CONCERNING THUNDER AND LIGHTNING.

1. Why is a man debilitated, and deprived of all his ſtrength by lightning, even before he is actually ſtruck by it? This was the obſervation of Thages the Thuſcan, as Ammianus Marcellin. lib. xiii. witneſſes.

Becauſe the blaſt is quicker than the bolt: and therefore every thing is ſhaken and blaſted, before it is ſtruck. But that which blaſts is pernicious, and collected out of the Averni, ſays Pliny, lib. ii. cap. 54.

2. Why, as it is reported, is not he ſtruck, who either firſt ſees the lightning, or hears the thunder? Plin. loc. cit.

Becauſe he provides for his ſafety by his flight: and, as Seneca ſays, No man ever feared lightning, without avoiding it "Nemo unquam fulmen timuit, niſi qui effugit." Nat. Quæſt. lib. ii.

3. Why does one ſort of lightning pierce, another daſh to pieces, and another burn? Senec. loc. citat.

This depends on the quality of the thing that is ſtruck, and of the matter of which the lightning is compoſed; which matter, if it be ſubtle, and chance to light on a thin and unreſiſting body, pierces it through and through: if the matter be more denſe, and meet with a more ſolid body, it enters it indeed, but in the penetration daſhes and tears it to pieces: when the matter is bituminous, it clings to combuſtible bodies, and burns them.

4. Why does it lighten more without thunder, in the night, than by day? Plin. lib. ii. cap. 54.

It lightens likewiſe in the day time; but the coruſcations are drowned by the ſuperior light of the ſun, unleſs they be vaſt indeed.

5. Why is it ſeen to lighten without thunder? Plin lib. ii. cap. 54.

It does thunder, but at too great a diſtance to be heard; but if no object intercepts the flame, it may be ſeen at the moſt remote part of the horizon.

6. Why is man the only animal, that lightning does not always kill outright, though it ſtrikes any other creature dead in a moment? Plin. lib. citat.

The matter of lightning may be leſs noxious to man than to brutes; or, perhaps, becauſe his lungs are ſofter and more lax, whence coming to breathe without any forcible endeavour, without ſtraining, more ſeldom, and at longer intervals, he does not ſo eaſily reſpire and ſuck in the ambient infection: Thus too it happens to the ſeal-fiſh, or ſea-calf.

7. Why do all things, that are ſtruck with thunder, always fall down and lie on the contrary part? Plin. loc. citat.

The violence of the blow tumbles them down in that manner.

8. Why is a man, who is ſtruck with lightning, when he is awake, found with his eyes winking, or half cloſed; and a man ſtruck when aſleep, with his eyes broad open? Plin. loc. citat.

This obſervation is not always true. But when it does happen, the reaſon is, becauſe the bodies, blaſted by lightning, grow ſtiff in an inſtant, and continue exactly in the ſame ſite they were in before; the man awake, with eyes winking and half-ſhut for fear; the ſleeper, wakened by the ſudden noiſe.

9. Why was it not permitted to burn the body of a man thus ſlain? Plin. loc. citat.

Becauſe, though they held that the purging fire of the funeral pile cleanſed the ſoul of its contracted filth, yet they deſpaired that ſo great pollution would ever be admitted into their ſociety. And this too was the reaſon why the Greeks burnt not the bodies of ſuch as laid violent hands on their own perſons. Servius in Æneid. iii. Quintil Declam. x.

10. Why did they eſteem it a piece of religion to bury them in the earth? Philoſtrat. in Heroic.

Leſt beaſts and birds of prey ſhould mangle and devour the body, or the ferryman of the Stygian lake refuſe to waft over the wandering ſouls. Plin. loc. cit.

11. Why are the wounds of the thunder-ſtruck colder than the reſt of their body? Plin. ibid.

Becauſe the heat in the other members is only ſuffocated, but quite conſumed in the wounded: for all ſuffocated things long retain their heat; but ſuch as corrupt and waſte by degrees, grow ſtiff and cold immediately.

12. Why were men blaſted by lightning never removed, but buried in the very place where they were ſtruck, wherever it happened to be?

Becauſe the law of Numa forbade funeral rites to be paid to a man killed with lightning; which would have been in ſome meaſure done, if the body had been removed, and carried from the place where it lay.

13. Why did they bury the body of ſuch a man, by heaping up dirt over it?

Becauſe they believed that to touch it would offend the gods.

14. Why were the augurs permitted to handle ich bodies?

Becauſe holineſs becomes the holy. "Sacros ecra decent."

15. Why were the places that were blaſted by ghtning, hedged in and encloſed around?

Leſt a ſacred thing ſhould be trampled on una- vares.

16. What means Lucan by this verſe,

Incluſum Thuſco veneratur ceſpite fulmen?

Becauſe the place was immediately eſteemed acred

17. For what reaſon was it thought ſo?

They believed that God ſeemed to conſecrate it o himſelf.

18. What then was their opinion of a perſon who was killed by thunder?

They ſeem to have had the ſame opinion of im too; for Artemidorus held that a man, kill- d in that manner, was not polluted, but ought o be worſhipped as a god.

19. Why is the money melted, and the bag ntouched: and in like manner the ſword, while he ſcabbard receives no damage? Seneca in Quæſt. Nat. lib. i. Q. 51.

Becauſe of the ſubtle force of the lightning. vhich paſſes through ſome things; though ſuch s are denſe, and reſiſt its force, it inſtantly tears o pieces.

20. Why are metals melted by lightning in a nonient's time, while the workmen receive no lamage? Sen. loc citat.

Becauſe of the arſenical ſpirits that are in the ightning For even the coiners of money can ender metals fluid with a very ſmall quantity of rſenic.

21. Why does the wine ſtay in a broken veſſel? Senec ibid.

Becauſe it is congealed by the nitral ſpirits.

22. Why does not that ſtiffneſs laſt above three lays?

Becauſe the remaining ſulphurous ſpirits, fa- voured by the ambient air, at length overcome he nitral.

Why is the wine hurtful, and even pernicious? Senec. lib. cit. Q. 3.

By reaſon of the virulence of the arſenic, that the wine has conceived; for wines will retain ſomething of ſulphur, as we know by experience in Rheniſh wines.

Why is the venom of ſerpents taken away by lightning?

Becauſe lightning conſumes it: Thus the poi- ſon of ſcammony abates by the bare ſteam of ſul phur; which, continued for ſome time, totally takes away its cathartic virtue.

Why are ſome things turned black by light- ning?

Becauſe, being burnt, they retain the ſooty marks of the fire.

Why are ſome things diſcoloured?

Becauſe there is a leſs portion of ſulphur in the lightning, and a greater of ſome other combuſ- tible; for fire alone gives iron a violet colour, and the foils that are put under precious ſtones are coloured by fire only.

To all which I add what Nardius relates of the wife of a certain apothecary at Florence, who had been blaſted with lightning, but was ſtill liv- ing in his days, and who, after that misfortune had happened to her, became, of a very cold temperament, as ſhe had been of before, to be of a conſtitution ſo extremely hot, that ſhe could ſcarce endure to wear any clothes, though ever ſo thin; of which he gives this reaſon: Becauſe, ſays he, that moſt ſubtle fire conſumed immedi- ately the ſuperfluous humidity that had been long ſtagnating in her members, and imprinted and left behind it ſome of its own fiery quality.

Ver. 244. In inquiring into the cauſe of thun- der, it muſt be obſerved, that it never thunders but when the ſky is over-caſt with clouds: For unleſs the clouds were thick and high-built, ſo great a quantity of rain or hail could not fall at the ſame time. Therefore, in thoſe clouds you may imagine a wind agitated and whirled about in a turbulent motion, growing hot with that motion, and forcing out of the clouds many ſeeds or atoms of fire: And that at length the wind itſelf takes fire, either by its own motion, or by thoſe fiery particles, and breaks out with a horrid roar; and that, by that violent eruption, it ſo ſhakes and tears the parts of the clouds, that they are all ſhivered into hail, or diſſolved into a ſhower of rain. This is contained in fifty-one verſes.

Ver. 252. The ſame matter compoſes wind, thunder, lightning, and earthquakes, that is to ſay, a dry exhalation, ſays Ariſtotle, lib. ii. Me- teor. cap. ult. For of this dry exhalation wind is made in the air, earthquakes within the earth; ſhowers, tempeſts, thunder, and lightning in the clouds.

Ver. 256. Theſe four verſes Lucretius has be- fore in book iv. ver. 172.

Ver. 260. Sir R. Blackmore's excellent deſcrip- tion of a ſtorm at ſea, will illuſtrate this paſſage of Lucretius:

Now gath'ring clouds the day begin to drown;
Their threat'ning fronts through all th' horizon frown:
Their ſwagging wombs low in the air depend,
Which ſtruggling flames, and in-bred thunder rend:
The ſtrongeſt winds their breath and vigour prove,
And through the heav'ns th' unwieldy tempeſts ſhove:
O'ercharg'd with ſtores of heav'ns artillery,
They groan, and pant, and labour up the ſky:
Loud thunder, livid flames, and Stygian night,
Compounded horrors, all the deep affright:
Rent clouds, a medley of deſtruction ſpout;
And throw their dreadful entrails round about:
Tempeſts of fire, and cataracts of rain
Unnat'ral friendſhip make t' afflict the main:
This orb's wide frame with the convulſion ſhakes,
Oft opens in the ſtorm, and often cracks:

Horror, amazement, and deſpair appear
In all the hideous forms that mortals fear.

Ver. 266. Suetonius ſays of Tiberius, that he was frighted at the noiſe of thunder, that he ran to hide himſelf in caves and cellars.

Ver. 268. It is therefore evident, that there can be no thunder except in thick and deep-bellied clouds, that the matter that compoſes it may be included within them: For what Pliny ſays to the contrary, "Catilianis prodigiis Pompeiano ex municipo M. Herennium decurionem ſereno die fulmine ictum fuiſſe:" and Horace, who, Carmin. lib. i. ſpeaking of Jupiter, ſays, that he "plerumque per purum tonantes egit equos, volucremque currum:" Theſe inſtances, I ſay, are no farther to be credited than that thunder may perhaps have ſometimes been heard, and lightning ſeen by perſons, over whoſe head the ſky was clear: but then ſome other part of the horizon muſt have been covered with clouds, from which the thunder and lightning broke out.

Ver. 273. The poet having taught, that lightning is generated in thick and high-built clouds; he now, in theſe twenty-two verſes, farther ſhows, that the fires and winds, contained within the clouds, oft produce lightning, which is followed by a roaring noiſe, a trembling of the earth, and a violent ſhower of rain. For, firſt, ſays he, The clouds contain many ſeeds of fire: Secondly, The wind drives and compels thoſe clouds, as it were, into high mountains, and by that means ſqueeze out of the clouds thoſe particles of fire, by whoſe contact, or at leaſt by the violence of its own motion, the wind itſelf is kindled into flame: Thirdly, When that wind is thus kindled, the lightning grown mature, cleaves the clouds, and glares around in dreadful flaſhes: Laſtly, The thunder roars, the earth trembles, mortals are ſeized with conſternation and diſmay, and the rain falls with ſuch violence, as if the heavens were deſcending in the ſhower.

Ver. 287. Milton in Paradiſe Regained, Book iv.

——— Either tropic now
'Gan thunder: at both ends of heav'n the clouds
From many a horrid rift abortive pour'd
Fierce rain, with lightning mix'd; water with fire
In ruin reconcil'd: Dreadful was the rack
As earth and ſky would mingle.——

And Sir R. Blackmore:

Heav'n's cryſtal battlements, to pieces daſh'd,
In ſtorms of hail were downward hurl'd:
Loud thunder roar'd, red lightning flaſh'd,
And univerſal uproar fill'd the world:
Torrents of water, floods of flame
From heav'n in fighting ruins came:
At once the hills that to the clouds aſpire;
Were waſh'd with rain, and ſcorch'd with fire.

Ver. 295. In theſe four verſes, he ſays, that if the wind that is pent up in the cloud cannot break through, it may be aſſiſted by other winds from without: and by whatever means the cloud be opened, the flames that is ripe for birth will neceſſarily fall down.

Ver. 299. Lucretius adds two other ways by which lightning may be cauſed; the firſt in nine verſes. For unkindled wind breaking out of a cloud may grow hot and take fire, by the ſwiftneſs of its motion, and the length of its courſe: Nor is this in the leaſt incredible, ſince a ball of lead, driven with mighty force, will melt as it flies. Thus the poet: and though the inſtance he brings might be confirmed by ſeveral authorities of the ancient poets and hiſtorians, yet it ought to be reckoned among the fables of antiquity: Nevertheleſs, no man will deny but that many things take fire by the ſwiftneſs of their motion.

Ver. 305. This inſtance the poet brought before ver. 183. See the note upon it.

Ver. 308. The ſecond, in theſe twelve verſes. If the wind beat furiouſly upon any thing, the ſeeds of fire may flow together upon the ſtroke, as well out of the wind as out of the thing it ſtrikes. Thus the wind takes fire, and lightning is made. But that ſuch a confluxion of the ſeeds of fire may be made in that manner, is evident from the ſtriking of flint and iron: And the objection of the wind's being cold (though even that can by no means be granted, by reaſon of the ſwiftneſs of their motion), is of no weight: for the nature of iron is full as cold, yet fire will ſparkle out when we ſtrike it.

Ver. 320. Hitherto he has treated of the nature and generation of thunder, he comes now to argue of its ſwiftneſs, and violence of ſtroke; which, ſays he, may be gathered and explained from what has been ſaid already. For wind ſhut up in a cloud, rages and grows hot; ſtruggles on all ſides to get out of its priſon; and, therefore, where it finds a paſſage, it muſt of neceſſity burſt out with mighty force and violence, in ſix verſes. Beſides, it conſiſts of ſmooth and ſmall particles, and therefore paſſes through the void and empty paſſages of the air, in ſix verſes. Add to this its weight, and that too very much increaſed by blows, in four verſes. And, laſtly, in eight verſes, that it falls from a great diſtance, and therefore every moment increaſes the ſwiftneſs of its motion: perhaps, too, it is helped forward by the air. And what wonder that a heavy body, burſting out with violence out of a cloſe priſon, and ſhoved forward by other bodies, falls impetuouſly and daſhes to pieces all it meets in its way?

Ver. 324. The baliſta was a warlike engine which the ancients made uſe of in their wars to ſhoot darts or ſtones. It was called baliſta from βάλλω, I caſt.

Ver. 326. In theſe ſix verſes, he proves the ſwiftneſs of lightning, from the tenuity of the atoms of which it conſiſts. See book ii. ver. 365 where the poet has already proved, that lightning is compoſed of ſmooth and ſubtle principles, which is the reaſon that nothing can withſtand the violence of its ſtroke.

Ver. 332. In theſe four verſes, the poet argues for the ſwiftneſs of lightning, and the violence o

its blow, from the deſcent that is natural to all heavy bodies; to which, if any external force be added, they deſcend with yet greater velocity: But lightning is a heavy body, and, falling from above, is impelled by the force of the wind; therefore, it is not ſtrange, that it overturns and tears to pieces whatever oppoſes its paſſage.

Ver. 336. In theſe eight verſes, he brings his laſt argument for the celerity and impetuous force of lightning, from the great diſtance from whence it comes; and ſays of it, as Virgil of Fame, that

Mobilitate viget, virefque acquirit eundo,
Æn. iv. ver. 175.

——— Ev'ry moment brings
New vigour to her flight, new pinions to her wings.

It was anciently obſerved by thoſe who made it their ſtudy to inquire into natural things, that the motion of all moveables is the ſwifter, the nearer they approach to the place for which they are deſigned; inſomuch that they move ſwifteſt of all when they are almoſt at their journey's end. Thus a ſtone gives a heavier blow to a plate of braſs, or tin, for example, when it falls upon it from a great height, than it does when it drops from a leſs diſtance: according to the variety of which diſtance, experience evinces, that the effect varies likewiſe, and that the deſcending thing gains a ſurpluſage of gravity, though not of weight. This, nevertheleſs, is denied by Simplicius, in his Comment upon Ariſtotle de Cœlo, lib. i. cap. 85. where he derides this increaſe of gravity, and declares it a vain fiction. But we may aſk him why that ſtone deſcends? Is it not by reaſon of its weight? And ſince nothing is done without cauſe, why does it deſcend ſwifter this moment than it did the laſt? Its ſwiftneſs muſt increaſe either by ſome external or internal cauſe: which laſt can be only a more intenſe gravity: the firſt, Lucretius aſcribes, as we have ſeen already in the foregoing argument, to the additional and like ſeeds, that the deſcending ſtone meets in its paſſage, and that help to drive it down with greater ſwiftneſs. And, according to the doctrine of Epicurus, a more proper ſolution of this problem cannot be given. Others again aſcribe it to a certain, I know not what, quality, that the medium through which it paſſes imparts to it; and that ſtill preſſes it more and more: Others impute it to the natural, ſympathetical, and attractive power of the centre; to which, ſay they, all heavy bodies, the nearer they approach, move the ſwifter. According to which opinion, which is indeed conſonant to many other experiments in nature, Cowley ſings,

And now the violent weight of eager love
Did with more haſte ſo near in centre move.
David. iii.

And if it cannot be denied, that the air, though it be light in its own nature, does nevertheleſs deſcend, and inſinuate itſelf into the pores of the earth, as compelled by a certain neceſſity ſo to do, by reaſon of the impurity it has contracted, then this queſtion is eaſy to ſolve; for the deſcending ſtone may be ſaid to be borne through the air, as a boat that goes down the river with the ſtream; and both of them, the air as well as the ſtone, move the ſwifter when they are near the centre; for the air is there more thick and impure, and conſequently has a greater propenſity to tend downwards: Beſides, when it is arrived on the confines, as I may ſay, of its journey's end, it is ſwallowed up, and ingulfed as by a certain violence, and imparts the ſame lot to its companion in the fall.

Ver. 340. For the ſeeds of thunder, like thoſe of other things, wander undetermined to any certain place, but being driven by that length of violence, are determined and moved in a direct line.

Ver. 344. But lightning does not break in pieces all that it falls upon: for all rare bodies remain ſafe and unhurt, becauſe the ſubtle fire finds a free paſſage through their pores: it diſſolves ſolid bodies, as braſs, gold, &c. becauſe it ſtrikes into their ſolid corpuſcles, and being once entered into their pores, and not finding a paſſage out, it diſjoins the very principles, melts metals, and reduces ſtones into powder.

Ver. 356. In theſe twenty-two verſes, the poet ſolves the fourth queſtion which we propoſed above, in the note on ver. 226. and inquires into the reaſon why it thunders more frequently in the ſpring and autumn than either in winter or ſummer? [But this muſt be taken to be meant only of ſome countries of Italy.] And the reaſon is, ſays he, becauſe, ſince thunder is of a fiery nature, and breaks out of thick clouds, it is then moſt to be expected, when the weather is warm, and not altogether free from cold: for where there is no heat, it is in vain to look for fire, and where there is too much heat, it ſuffers not the clouds to thicken. But in the ſpring, and in autumn, the cold and the heat are blended together: thence proceed clouds, winds, fire, and at length tumults and tempeſts in the air, and from them thunder and lightning.

In this opinion Seneca agrees with Lucretius; and ſo too does Pliny, lib. ii. cap. 50. where he teaches that it never thunders in winter and ſummer, except in as much as "mitiore hyeme, et æſtate nimbosâ, ſemper quodammodo vernat, vel autumnat;" in a mild winter, and in a cloudy ſummer, the weather is neither violently cold, nor violently hot, but partakes in ſome meaſure of the middle temperatures of the ſpring, or of autumn. and he ſtrengthens this argument, by inſtancing in ſome countries, where by reaſon of the extreme cold, as in Scythia, or of the violent heat, as in Egypt, it never thunders at all. But of theſe matters you may conſult P. Gaſſend. in lib. 10. Laert. de Meteorolog.

Ver. 370. In the ſpring, and in autumn, heat and cold contend for maſtery: in ſummer heat governs, and cold in winter.

Ver. 372. Here the poet inſults the college of augurs and ſoothſayers at Rome, who pretended to teach divination, as if it had been a ſcience: this, ſays he, is to know the nature of thunder, &c.

a ſcience not to be met with in your books, that are made up of nothing but trifling and falſe conjectures.

Ver. 374. The books that treated of divination were compoſed by the Thuſcans, a people of Italy, whom Tages had inſtructed in that art: from him theſe books were called Tagetici; and Macrobius ſays they were handed about in his days. Of this Tages, Cicero gives us the following account. "Tages quidam dicitur in agro Tarquinienſi, cum terra araretur, et ſulcus altius eſſet impreſſus, extitiſſe repentè, et eum affatus eſſe, qui arabat. Is autem Tages, ut in libris eſt Hetruſcorum, puerili ſpecie dicitur viſus, ſed ſenili ſuiſſe prudentiâ. Ejus aſpectu cum obſtupuiſſet bubulcus, clamoremque majorem cum admiratione edidiſſet, concurſum eſſe factum, totamque brevi tempore in eum locum Hetruriam conveniſſe: tum illum plura locutum multis audientibus, qui omnia ejus verba exceperint, literiſque mandaverint: omnem autem orationem fuiſſe eam, quâ Haruſpicina Diſciplina contineretur, eam poſtea creviſſe rebus novis cognoſcendis, et ad eadem illa principia referendis," lib. 2. de Divinatione. As they were ploughing in the Tarquinian field, and the ſhare ſtriking deep into the ground, one Tages is ſaid to have ſtarted on a ſudden out of the earth, and to ſpeak to the ploughman. This Tages, as we find in the Tuſcan books, is ſaid to have had the look of a boy; but the prudence and wiſdom of old age. The peaſant diſmayed at the apparition, cried out aloud, and people flocked about him, inſomuch that in a little time the whole country of Etruria were got together in that place: then Tages ſpoke a great deal in the hearing of many perſons, who writ down all his words: the ſubject of his diſcourſe was only the doctrine of divination: which afterwards got footing in the world by new additions of knowledge, built on the principles he had taught them: Ovid. Metam. lib. 15. ver. 553.

——Cum Tyrrhenus arator
Fatalem glebam mediis aſpexit in arvis,
Sponte ſuâ primum, nulloque agitante, moveri:
Sumere mox hominis, terræque amittere formam;
Oraque venturis aperire recentia fatis:
Indigenæ dixêre Tagen, qui primus Etruſcam
Edocuit gentem caſus aperire futuros.

See likewiſe Lucan, lib. i. ver. 530, 587, 606.

Ver. 379. *Omen.*] This word, as we find in ſome authors, ſeems not to have had originally ſo extenſive a ſignification, as we generally give it. Feſtus explains it, "Omen quaſi orimen, quod ore fiat augurium." Now auguries were drawn either from tokens given by the gods, or by men: and thoſe given by men were properly called omens: "neque ſolùm Deûm voces Pythagorei obſervabant; ſed etiam hominum, quæ omnia vocabant," ſays he, in lib. 1. de Divinat. Apuleius de Deo Socr. ſays, "Ita eſt apud Platonem; ne quiſquam arbitretur, omnia eum vulgo loquentûm captâſſe:" and ſoon after he adds, "videmus pleriſque uſu venire, qui nimiâ omnium ſuperſtitione non ſemper ſuopte corde, ſed alterius verbo reguntur:" yet other authors reſtrain not the ſignification of this word to the voice, or utterance of the mouth only, but extend it to all the actions of life; making it to ſignify the ſame with the *σύμβολα* of the Greeks, who by that word underſtood the foreboding ſigns or tokens of proſperous or improſperous events: thus to begin with Cæſar, we read that Auguſtus, contrary to his cuſtom, had put on his left ſhoe firſt, the day that he narrowly eſcaped being killed in a mutiny of the ſoldiers: and Lampridius recounts among the ſigns of Alexander's future empire, that the picture of the emperor Trajanus, which hung over his father Philip's genial bed, fell down upon it, while his mother was in labour of him in the temple: and this omen Feſtus and other authors call "caducum auſpicium." Spartianus, in the Life of Hadrian, ſays, that while he was ſpeaking in praiſe of Antonius, a "prætexta" [a gown worn by the children of noblemen] dropt down of its own accord, and covered his head; and that a ring, on which his figure was engraved, fell off his finger, of its own accord likewiſe: Ovid too believed in omens, when he ſaid,

Omina ſunt aliquid: modo cum decedere vellet,
Ad limen digitos reſtitit icta Nape.

Pliny too ſpeaks of theſe remoras, theſe obſtacles, and hindering omens, which he calls "offenſiones pedum; et Plautus, auſpicia & religionem: ante auſpicium commoratum eſt:" In Amphit. And in another place, "an religio tibi objecta?" Of like nature is that, which was offered to Otho, going againſt Vitellius; when ſome adviſed him to defer the expedition becauſe the bucklers were not all ready. This Tacitus relates in theſe words: "Fuêre qui proficiſcenti Othoni moras religionemque non conditorum ancilium afferrent." See Suetonius likewiſe in the life of Nero, cap. 19. And Tibullus elegantly of theſe ſtumblings;

O quoties ingreſſus iter mihi triſtia dixi
Offenſum in portâ ſigna dedidiſſe pedem!

And ſuch were the omens they regarded in going to a place: but they likewiſe drew auguries from their departure; as if any one who went with an intention to go to a certain place, returned on a ſudden unexpectedly, and without executing his deſign: but this took place only in ſacrifices. Apollonius concerning the ceremonies of the goddeſs Trivia, or Diana, is thus rendered:

——— Sacriſque peractis
Ruſus abire pyra moneo: convertere nullus
Te retro ſtrepituſque pedum, fremituſque caninus
Cogat; nam ſacri fiat labor irritus omnis.

where he ſeems to imply, that the ſolemn myſteries were rendered of no effect by a noiſe, or any other interruption. Valerius Max. lib. iii. cap. 5. "Ne ſacrificium Alexandri aut concuſſo thuribulo, aut edito gemitu impediret:" but this was chiefly obſerved in ſacred rites; yet Pythagoras gave the like precaution by a perpetual ſymbol: *βαδίζοντας ἐὶς ἀποδημίας μὴ μίσγεσθαι* of which he adds

the reaſon: for the furies are paſſing along. And of greater moment, but not unlike this, is the admoniſhment of the author of Human Salvation: "qui aratro manum applicuit, ne reſpiciat:" moreover, as they named theſe omens, "religionem objectam," ſo, on the other hand, we learn from Plautus, that when they had a mind to give a favourable interpretation to an omen, they called it, "religionem à ſe rejicere," and the Greeks, ἀποτόμωσιν. This might be confirmed by many examples; but we have one illuſtrious indeed in the perſon of Julius Cæſar, who, at his landing in Africa, as he leaped aſhore, happened to fall down, and to avert the unlucky omen of that accident, cried out, I have thee, Africa. Suetonius: "Cum Cæſar Africæ oram appuliſſet, et in terram inſulturus corruiſſet, dixit, ut infauſtum ex caſu omne averteret, Teneo te Africa." And the ſame Cæſar always diſcovered an undaunted greatneſs of ſoul, and his mind was ſo much ſuperior to theſe ſuperſtitions, that we no where read that any omen whatever could deter him from any enterpriſe, or make him delay the execution of any deſign he had reſolved to attempt. The ſame Suetonius tells us, that though the victim had eſcaped from the altar, he would not put off his expedition againſt Scipio and Juba. "Licet," ſays he, "immolanti aufugiſſet hoſtia, profectionem adverſus Scipionem et Jubam non diſtulit." To which Seneca alludes in Conſolat. ad Marciam, where he ſays, "tam cito dolorem vicit, quam omnia ſolebat." Moreover, the left parts of the body, as the left hand, the left foot, &c. are in many authors eſteemed unlucky: but, on the contrary, Apuleius repreſents them as omens of good ſucceſs: and ſpeaking of the left hand, ſays: "Quartus æquitatis oſtendebat indicium, deformatam manum ſiniſtram porrecta palmula; quæ genuina pigritia, nulla calliditate, nulla ſolerita prædita, videbatur æquitati magis aptior quam dextera." And Macrobius in Saturnal. lib. i. cap 9. "Ideo Apollinis ſimulacra manu dextra Gratias portant, arcum cum ſagittis ſiniſtra; quod ad noxam ſit pigrior, et ſalutem manus promptior largiatur:" which the following paſſage of Catullus at once illuſtrates and explains:

Hæc ut dixit, amor ſiniſtra amanti
Dextram ſternuit approbationem.

After which he adds:

Nunc ab auſpicio bono profecti,
Mutuis animis amant, amantur.

But theſe omens properly relate to the actions of human life; and the ancients had beſides ſome more occult and ſecret omens, which they took from things, from days, from names, and even from places and clothes: to things ſeem to relate the omens that were taken to be unlucky, as ſhipwrecks, and the remains of them: and thoſe things chiefly which from ſome unfortunate accidents have given riſe to proverbs; as "aurum Toloſanum," and Equus Sejanus:" which, becauſe they are ſo well known, I purpoſely forbear to explain. But I cannot omit a remarkable paſſage in Virgil, which makes much to our purpoſe, and which that poet, who was deeply read in the augural and Pythagorean doctrine, has ſecretly veiled with this ſuperſtition. For to avoid openly to aſſert, that thoſe gifts of Æneas to Dido, as being ſaved from the deſtruction of Troy, were unlucky to her, he has inſinuated that they were ſo by circumlocution, in the following verſes:

Munera prætercà Iliacis erepra ruinis
Ferre jubet, pallam ſignis auroque rigentem,
Ornatus Argivæ Helenæ, quos illa Mycenis,
Pergama cum peteret, inconceſſoque Hymenæos,
Extulerat, Ledæ matris mirabile donum.
Æn. i. *ver.* 651.

And ſoon after; ver. 683.

Dona ferens pelago, et flammis reſtantia Trojæ.

This Statius underſtood, and has imitated, lib. 2. Thebaid.

Nec mirum: nam tu infauſtos, donante marito,
Ornatus Argiva geris, dirumque monile
Hermiones. Longa eſt ſeries, ſed nota malorum
Perſequar, unde novis tam ſæva potentia donis.

The belt of Pallas too ſtrengthens this opinion: for Æneas would have ſpared the life of the proſtrate Turnus, had not that unlucky token, which Turnus had taken from the ſlain Pallas, called afreſh to his remembrance, and renewed his grief for the loſs of his deareſt friend:

——— Stetit acer in armis
Æneas, volvens oculos, dextramque repreſſit:
Et jam jamque magis cunctantem flectère ſermo
Cœperat: infælix humero cum apparuit ingens
Balteus; et notis fulſerunt cingula bullis
Pallantis pueri, victum quem vulnere Turnus
Straverat, atque humeris inimicum Inſigne gerebat.
Ille oculis poſtquam ſævi monumenta doloris,
Exuviaſque hauſit; furiis accenſus, et ira
Terribilis: tunc hic ſpoliis indute meorum
Eripiare mihi? Pallas te hoc vulnere, Pallas
Immolat, et pœnam ſcelerato ex ſanguine ſumit.

And Homer, in like manner, deſcribes Achilles ſwelling with rage and fury, at ſight of the arms that Hector had taken from Patroclus. As to the days, ſuch as were noted for any overthrow in battle, or any the like unfortunate event, were called religioſi, nefaſti, and atri: of all which ſee Augellius, lib. i. cap. 18. who there fully handles this matter; to which I will only add this paſſage out of Tacitus, lib. 2. "Hiſtor. Funeſti omnis loco acceptum eſt, quod maximum Pontificatum adeptus Vetellius de Ceremoniis XV. Cal. Aug. edixiſſet, antiquitùs infauſto die Cremerenſi Allienſiq. cladibus." Of names, ſome were omens of proſperity and diuturnity; others of the contrary: Craſſus, Valerius, Macrobius, Luciùs, Lucris, were names foreboded good. Plautus in Perſ. Luc. "Nomen atque omen quantivis eſt pretii: Dor. Si te eam mihi quoque Lucridem confido fore re." Furius, Hoſtilius, Macer, were ill names. Martial. lib. v Epigram 22.

Quinctum pro decimo, pro Craſſo, regule, Macrum
Ante ſalutabat Rhetor Apollonius.

See likewiſe Feſtus in Lacu Lucrino. Nor may we omit Aul. Gellius, who, lib. i. cap. 28. ſays, "Cavenda igitur non improprietas ſola verbi, ſed etiam pravitas animi, ſi quis ſe nunc ſenior Advocatus adoleſcenti ſupereſſe dicat." Places were held to be ominous, either from their names, or for their having been polluted with dead bodies, or otherwiſe: Plautus in Menæchm. had regard to the name: "Ne mihi Damnum in Epidamno duas." And Petronius, "Epidamni Nomina quære." As to any thing that foreboded ill in the places themſelves, we find a remarkable teſtimony in Tacitus, Annal. lib. i. where Germanicus purges by ſacrifices the places where Varus had encamped with his whole army: "Quid Tiberio," ſays he, "haud probatum, ſeu cuncta Germanici in deterius trahenti, ſive exercitum imagine cæſorum inſepultorumque tardatum ad præli. et formidoloſiorem hoſtium credebat. Neque Imperatorem auguratis et vetuſtiſſimis Cæremoniis præditum attrectare feralia debuiſſe." Of clothes or garments we have an inſtance in Q. Curtius, who believed them ominous, and even to portend the change of empire in Alexander, inaſmuch as he affected and took delight to wear a foreign, or Perſian dreſs: to which the judicious Tertullian ſeems to allude: "Vides," ſays he, quaſdam et capillum croco vertere: pudet eas etiam nationis ſuæ, quod non Germania aut Gallia procreatæ ſint. Ita patriam capillo transferunt. Male ac peſſime ſibi auſpicantur flammeo capite." Where by "flammeo capite," he means that perpetual fire, which in another place he calls "ignem jugem." St. Jerome in like manner: "Ne caput gemmis oneres, nec capillum irrufes, et ei aliquid de Gehennæ ignibus auſpiceris." This paſſage is in the Epiſtle to Læta, and no doubt copied after Tertullian, as many other paſſages in that father are.

Ver. 384. Here the poet takes away the thunder from Jupiter, and the other gods, who ſeem to him not to employ it ſo prudently as it were to be wiſhed they did: and at the ſame time he overthrows the whole doctrine of the Thuſcans: for, if it be not the gods who dart the thunder, there can be no divination by thunder; and if they do, why do they let the wicked eſcape, and often deſtroy the innocent? What does it avail the thunderer to launch his bolts upon uninhabited deſarts? What, when he throws his unerring ſhafts into the middle of the ſea? or upon the bare tops of mountains, which he does very often? And laſtly, why is there no thunder without clouds? Why does he ſtrike down his own temples, and thoſe of his undergods? All this the poet has included in forty-ſeven verſes, in which there are many things ſpoken ſatirically, and many by way of deriſion.

Ver. 384. The Thuſcan books taught, that Jupiter gave leave to nine gods to dart thunder down upon the earth. Plin lib. ii. cap. 52. Arnobius, p. 122. "Diis novem Jupiter poteſtatem jaciendi ſui fulminis permiſit."

Ver. 385. Why Jupiter is ſaid to be the author of thunder and lightning, Pliny, lib. ii. cap. 20. gives this phyſical reaſon: the fires of the three higheſt planets, ſays he, falling to the earth, bear the name of lightning: but chiefly that of the three, which is placed between the two others, that is to ſay of Jupiter: becauſe, participating of the exceſſive cold and moiſture of the circle of Saturn, which is above him, and of the immoderate heat of Mars, that is next under him, he, by that means, diſcharges the ſuperfluity of either: and hence it is commonly ſaid, that Jupiter is the darter of lightning. But Seneca, much better than our poet, and with more analogy to truth, takes not away the thunder from Jupiter, when he ſays, that Jupiter is not indeed the darter of thunder: but all things are ordered in ſuch a manner, that even the things that are not made by him, are not made without cauſe and reaſon, which are his. The force and power of them is his permiſſion: for though he makes them not now himſelf, he was the cauſe that they are made: "Interim hoc dico, fulmina non mitti à Jove, ſed ſic omnia diſpoſita, ut etiam ea, quæ ab illo non fiunt, ſine ratione non fiunt, quæ illius eſt: vis eorum illius permiſſio eſt: nam etſi Jupiter illa nunc non facit, fecit ut fierent; ſingulis non adeſt, ſed ſignum, et vim, et cauſam dedit omnibus." Thus Seneca, in lib. ii. Nat. Quæſt. 48 who is miſtaken only in the true name of the firſt Divine Cauſe. Horace;

Tu parum caſtis inimica mittes Fulmina lucis.

And according to the doctrine of the Tagetic books, nothing was ever blaſted with fire from heaven, but what had before been ſtained with ſome pollution.

Ver. 386. Seneca propoſes this queſtion in a few words: "Quare Jupiter, aut ferienda tranſit, aut innoxia ferit?" And the laſt exceptions, which Lucretius brings againſt Providence, are drawn from that common obſervation; Good men are oppreſſed with trouble and miſery, ſubject to all the rage and violence of the wicked; whilſt the impious ſwell with the glories, and revel in the delights of life: This has been the ſubject of many ſollicitous diſquiſitions: Diſputes have been multiplied; and ſome have been as induſtrious to vindicate the methods of Providence from all ſeeming irregularities, as others to defame them. Some have ſent us to look for retribution in another world, and indeed this is an eaſy way of ſolving the difficulty, and with little pains deducible from the immortality of the ſoul, which I have already aſſerted. But becauſe to look beyond the grave, requires a ſharp and ſteady eye, I ſhall obſerve the reaſons of the philoſophers, and propoſe what Plutarch has excellently delivered. And here we muſt take notice, that only that part of the objection, which concerns the proſperity and impunity of the wicked, ſeems formidable and concluding; for all thoſe men we generally call good, as their own conſcience will tell them, deſerve thoſe afflictions which the moſt miſerable have endured. And upon this the poets, orators, and hiſtorians have been very copious.

τολμῶ καλειτῶιν μήποτ' ἓκ εἰσὶν θεοί·
κακοὶ γὰρ εὐτυχοῦντες ἐπιστηρίζουσί με.

I dare to say no gods direct this whole,
For villains prosperous distract my soul

says Aristophanes: and Diagoras resolved to be an Athiest, as Empiricus delivers, because he did not see vengeance fall presently on the perjured person, and consume him: Velleius Paterculus produces the long and quiet reign of Orestes, as a convincing proof, that the gods directed him to murder Pyrrhus; and approved the action: and Martial has contracted all the force of the argument into one Epigram.

Nullos esse Deos, inane Cœlum
Affirmat Scilus, probat q. quod se
Factum, dum negat hæc, videt beatum.

Seneca in his treatise, "Cur Malis benè & Bonis malè, cum sit Providentia," talks much of the privilege of sufferings, that to afflict argues care and kindness; and, in short, thinks this a great commendation of virtue.

Τῆς δ' ἀρετῆς ἱδρῶτα θεοὶ προπάροιθεν ἔθηκαν
Ἀθάνατοι ——

Th' immortal pow'rs have sweet near virtue plac'd.

But this is not the way to answer the demands of an Epicurean, to satisfy his doubts, who had rather be accounted a happy servant, than a miserable son of the Deity, who would not be fond of torments, that he might show "spectaculum Jove dignum, virum fortem cum malâ fortunâ compositum:" who cannot think that fears and jealousies are the necessary products of irreligious opinions; but makes such the only means of obtaining happiness and perfect serenity of mind: who is most delighted with the most pleasing physic, and would think him cruel, who makes use of saws and lances, when a gentle cordial would restore the patient to his health; we must therefore look for other answers, and Plutarch presents us with enough, some of which have a peculiar force against the Epicureans; who confess man to be a free agent, and capable to be wrought on by example and precept.

First, then, quick vengeance does not blast the wicked, that they themselves might learn lenity, and not be greedy to revenge injuries to others: τέλος τῶν ἀλαθῶν τὸ ὁμοιωθῆναι Θεῶ· it is the end of good men to be like God, says Plato; and Hierocles places the life of the soul in this imitation: Here God sets forth himself an example, and any noble and generous mind would rejoice to have the most excellent for a pattern of his actions: Lucretius followed Epicurus, because he thought him so, and the rest of his admirers make his fancied virtues the ground of their respect. This, taken by itself, I confess, is but a weak answer, since one thunderbolt would secure them from doing mischief, whilst mercy and forbearance often exasperate; and, because God holds his tongue, they think he is even such a one as themselves: but if we consider it as a consequent of another reason, that is drawn from the goodness and kindness of the Deity, then it proves strong and satisfactory.

The second reason follows: God doth not presently punish wicked men, that they may have time to become better; and here Plutarch brings examples of such, whose age was as glorious as their youth infamous: if Miltiades, says he, had been destroyed, whilst he acted the part of a tyrant; if Cimon in his incest, or Themistocles in his debaucheries, what had become of Marathon, Erymedon and Dianium, what of the glory and liberty of the Athenians? for as the same author observes, ἐᾶν καὶ μεγάλαι φύσεις μικρὸν ἐκφέρωσι, ὁ δὲ ἀργεῖ δι' ὀξύτητα τὸ σφοδρὸν ἐν αὐταῖς, καὶ δραστήριον, ἀλλ' ἐν σάλῳ διαφέρουσας περὶν εἰς τὸ μόνιμον, καὶ καθεστηκὸς ἦθος ἐλθεῖν· great spirits do nothing mean, the active principles that compose them will not let them lie lazily at rest, but toss them as in a tempest, before they can come to a steady and settled temper.

Thirdly, The wicked are sometimes spared to be scourges to others, and execute just judgment on men of their own principles: this is the case of tyrants and outrageous conquerors; such was Phalaris to the Agrigentines, such Pompey and Cæsar to the Romans, when victory had made them swell beyond their due bounds; and pride and luxury fled from other countries upon the wings of their triumphing eagles: Such Alexander to the Persian softness, and, if we look abroad, ten thousand instances occur and press upon us; Cedrenus, page 334, tells us, that when a monk inquired of God, why he suffered cruel Phocas, treacherous to his emperor Mauritius, and an implacable enemy of the Christians, to obtain the empire, and enjoy power as large as his malice? a voice ἀοράτως, gave this answer to his demand, χείρονα ἐκ εὗρον πρὸς τὸν κακίαν τῶν καλοικένων ἐν τῇ πόλει· because I could find none worse to scourge the wickedness of the citizens: and Alaricus declared, ἐκ ἑκόντος τὰ ἐκεῖ πορεύομαι, ἀλλά τις καθ' ἑκάστην ὀχλεῖ μοι βασανίζων καὶ λέγων, "Ἀπιθι ἐπὶ τῶν Ρωμαίων πόρθησον πόλιν· it is not of my own accord that I attempt this, but something will not let me rest, but urges me on, and cries, Go sack Rome: and this requires, that they should not be only free from punishment, but likewise enjoy wealth and power, and all the opportunities and instruments of mischief: and this answer is equal to the objection in its greatest latitude, and gives satisfaction to all those numerous little doubts, which lie in the great objection, as it was proposed.

Fourthly, The impious are not presently consumed, that the method of Providence may be more remarkable in their punishment. The history of Bessus and Ariobarzanes in Curtius is an excellent instance of this; and, amongst others, Plutarch gives us a memorable one of Belsus, who, having killed his father, and a long time concealed it, went one night to supper to some friends; whilst he was there, with his spear he pulled down a swallow's nest, and killed the

young ones, and the reaſon of ſuch a ſtrange action being demanded by the gueſts, his anſwer was, ὑ γὰρ μὴ πάλαι καʼαμαρʼυρῶσιν αὗται ψευδῶς, καὶ καʼβοῶσιν ὡς ἀπεκʼτόνʼος τὸν πατέρα; do not they bear falſe witneſs againſt me, and cry out, that I killed my father? Which being taken notice of, and diſcovered to the magiſtrate, the truth appeared, and he was executed.

A great many other reaſons are uſually mentioned, but theſe are the principal, and ſuppoſe the liberty of the will; for if a man follow fate blindly, he is driven on, not perſuaded to act: if he be an automaton, and move by wheels and ſprings, bound with the chain of deſtiny, it is evident that fate is the cauſe of all his miſcarriages, and the man no more to be blamed for wicked actions, than a clock for irregular ſtrikings, when the artiſt deſigns it ſhould do ſo. No example can prevail on him, no promiſes entice, no threatenings affright him; being as unfit to rule himſelf, or determine his own actions, as a ſtone in its deſcent; and a piece of iron may be ſaid to act as freely as a man, if he be led on by fate, and its motion as ſpontaneous, if liberty conſiſted in a bare abſence of impediments.

Ver. 395. In theſe ten verſes, he argues, ſecondly, That thunder is the effect of natural cauſes, and not made by the gods: for if it were, they would not be ſo laviſh of their bolts, as to throw them into ſolitary deſerts: Had not Jupiter better keep them in ſtore to deſtroy his enemies, in time of need?

Ver. 405. The poet in theſe eight verſes argues, thirdly, That thunder comes not by the will of the gods, but is made by the laws of nature: for otherwiſe, why does it never come without clouds and noiſe? Why does it fall alike upon the ſeas and earth? What crime have the waters been guilty of, that they are thus puniſhed?

To what has been ſaid of this already in the note on verſe 68, and the example we gave verſe 268, in the perſon of M. Herennius, the Decurion, who was killed by thunder in a clear day, we add this of Lucan. lib. i.

Emicuit cælo tacitum ſine nubibus ullis
Fulmen———

And this diſtich, which we find in Tully, de Divinat.

Aut cum terribili percuſſus fulmine civis
Luce ſerenanti vitalia lumina liquit.

For they held that thunder, in a clear and unclouded ſky, was an evincing proof of a Deity, and a certain preſage of ſome extraordinary event: Cicero, in great indignation againſt the Atheiſts of his days, and ſpeaking of this accident, cries out: "Negemus omnia, comburamus annales, ficta hæc eſſe dicamus; quidvis denique potius, quam Deos res humanos curare, fateamur?" Lib. de Divinat.

Ver. 409. Why does he throw his bolts on any thing that is not guilty of ſome crime? Thus Cicero, lib. ii. de Divinatione. "Quid enim proficit, cum in medium mare fulmen jacit Jupiter? Quid cum in altiſſimos montes? Quod plerumque fit. Quid cum in deſertas ſolitudines? Quid cum in earum gentium oras, in quibus hæc ne obſervantur quidem? And, to the ſame purpoſe, Ariſtophanes, Νεφέλ. If Jupiter's bolts, ſays he, are aimed againſt the perjured, how comes it to paſs, that neither Simon, Cleonymus, nor Theodorus are blaſted by that celeſtial flame? They, who are perjured with a witneſs! Why does his own temple, why does Sunion, the promontory of Attica, and why do mighty oaks, rather feel the effect of the fire? No doubt, becauſe they are all perjured.

Ver. 413. In theſe ſix verſes, he, by way of dilemma, propoſes two other wonderful arguments to deprive Jupiter of his thunder. Either he would have us avoid his bolts, or he would not: If he would, why is his thunder ſo ſubtile, and ſo ſwift, that we cannot perceive it coming, and get out of its way? And if we would not, why does he give us notice before hand of its coming, by overcaſting the air with gloomy clouds, by the grumbling of his thunder? &c.

Ver. 419. In theſe five verſes he argues, ſixthly, That thunder muſt be the effect of nature, ſince it thunders in ſeveral places at the ſame time: a taſk too laborious for any one Jupiter. But let us hear Seneca delivering the opinion of the ancients upon this matter: They did not believe, ſays he, that a Jupiter, like him we worſhip in the capitol, darted his thunders with his hand: but they meant the mind and ſpirit, who is the maker, lord and ruler of this mundane ſyſtem, to whom every name agrees: The Thuſcans too therefore held that thunder is ſent by Jupiter, becauſe nothing is done without him. "Ne hoc quidem crediderunt, Jovem, qualem in Capitolio, & in cæteris ædibus colimus, mittere manu fulmino; ſed eundem, quem nos Jovem, intelligunt, cuſtodem rectoremque univerſi, animum, ac ſpiritum, mundani hujus operis dominum, & artificem, cui nomen omne convenit. Idem Etruſcis quoque viſum eſt: & ideo fulmine à Jove mitti dixerunt, quia ſine illo nihil geritur. L. ii. Q. 45.

Ver. 424. In theſe ſeven verſes, he argues, ſeventhly, to this purpoſe: If thunder were directed by the will of the gods, is it credible they would beat down their own ſtately temples? Would they daſh to pieces ſuch elaborate ſtatues, the very maſterpieces of Polycletes? a poor mean-ſpirited revenge! The poet ſpeaks this by way of ridicule.

Ver. 429. In theſe two verſes he argues, eightly, That it is but reaſonable to believe, that thunder is produced by natural cauſes, ſince, for the moſt part it falls on the higheſt mountains. Doſt thou not ſee, ſays Artabanus, the uncle of Xerxes, that God ſtrikes with his lightning the largeſt animals, nor ſuffers them to grow inſolent, and that he leaves the leſs unhurt? Doſt thou not ſee that his fiery darts always throw down the moſt lofty edifices, and the talleſt trees? For God takes delight to depreſs and humble the haughty. Herodotus, lib. vi. And Horace agrees with Lucretius,

——Feriant altos
Fulmina montes:

Of which Seneca gives a phyſical reaſon, and ſays, That the tops of the mountains, being oppoſite to the clouds, are expoſed to ſtand the brunt of every thing that falls from heaven; ſo that they intercept the lightning in its courſe.

Thus Lucretius concludes his diſputation concerning this amazing meteor; which made no ſmall part of the religion of the ancient Romans, whoſe many ſuperſtitious opinions concerning thunder and lightning will not improperly find a place here; and therefore I promiſe myſelf, that the reader will not be diſpleaſed to ſee them at one view, as I find them collected by Nardius, page 452. in his 27th accurate animadverſion on Lucretius.

THE SUPERSTITIOUS OPINIONS

OF THE ANCIENTS CONCERNING LIGHTNING AND THUNDER.

The Romans derived theſe ſuperſtitious opinions from the Thuſcans, and, ſoon imbibing the precepts of this new religion, they committed them to the care of certain prieſts: who, nevertheleſs, diſmayed at the enormity of ſome lightnings, did, at the general requeſt of the people, repair to the Thuſcan augurs, from whom they had their firſt inſtructions, to be informed what thoſe dreadful ſheets of flame, and burſts of horrid thunder portended: For the Thuſcans, as Diodorus Siculus, lib. vi. cap. 9. witneſſes of them, having employed much time in ſearching into the cauſes of natural events, and in the ſtudy of theology, were of all men the moſt knowing in the interpretation of lightning: inſomuch, ſays he, that, even to this day, almoſt the whole world admire their depth of ſcience, and apply to them to be inſtructed in the art of interpreting that celeſtial fire. Verrius, the grammarian, relates, that theſe Thuſcan diviners were ſent for to Rome, and, being diſaffected to the Romans, wilfully ordered undue ſacrifices, and ſuch as were diſpleaſing to the gods: and that, by their treacherous advice, the people of Rome were prevailed on unfortunately to remove the famous ſtatue of Horatius Colches to a certain place, where, being ſurrounded by high-built houſes, the ſun might never ſhine upon it: but, their treachery being diſcovered, they were accuſed before the people, and, being convicted of the perfidy, were put to death: And upon this occaſion was made this ſenary verſe,

Malum conſiilum conſultori peſſimum eſt,

which was ſung about by the boys in all the ſtreets of Rome. This accident of the Thuſcan augurs increaſed the credit of the books of the Sybils, which, according to Servius on Æn. 6. were kept in the temple of Apollo, as well as of thoſe of the Marſians, and of the nymph Bygois, who had writ the art of divination, as practiſed by the Thuſcans.

We have already ſpoken in the foregoing notes of the matter, of which the ancients held lightning to conſiſt, and of the manner of its generation, which it is needleſs to repeat in this place: we likewiſe have ſaid already, that the Latins often confounded "fulgur" and "fulmen:" and how they came to do ſo, Feſtus teaches in theſe words: "Fulgere priſci pro ferire dicebant, unde fulgur dictum eſt; fulguratum id, quod eſt fulmine ictum." And they believed there was no other difference between them, than only that of more or leſs, which among logicians makes no difference whatever of the ſpecies: And we find a remarkable paſſage in Seneca, who, after an accurate diſputation, concludes, by determining the difference between "fulgur" and "fulmen," as follows: "Ergo," ſays he, "et utramque rem ignem eſſe conſtat, et utramque rem inter ſe meando diſtare. Fulguratio eſt fulmen non in terras uſque perlatum et rurſus licet dicas, fulmen eſſe fulgurationem uſque in terras perductam. Non ad exercendum verba hæc diutius pertracto, ſed ut iſta cognata eſſe, et ejuſdem notæ, ac naturæ probem. Fulmen eſt quiddam plus, quam fulguratio: vertamus iſtud; fulguratio eſt pene fulmen." Nat. Quæſt. lib. ii. cap. 21. And in Quæſt. 57. of the ſame book: "Et, ut breviter dicam," ſays he, "quod ſentio, fulmen eſt fulgur intentum." And lib. citat. Quæſt. 16. "Quid ergo inter fulgurationem et fulmen intereſt? Dicam: Fulguratio eſt late ignis explicitus: Fulmen eſt coactus ignis, et impetu factus."

The poets, according to their cuſtom, ſhadowed the nature of either under the veil of fables, which nevertheleſs Servius accurately explains, upon the following paſſage of Virgil, which I am obliged to tranſcribe at length, for the better underſtanding of what follows:

Inſula Sicaniam juxta latus Æoliumque
Erigitur Laparen, fumantibus ardua ſaxis.
Quam ſubter ſpecus, et Cyclopum exeſa caminis
Antra Ætnæa tonant, validique incudibus ictus
Auditi referunt gemitum, ſtriduntque cavernis
Stricturæ chalybum, et fornacibus ignis anhelat:
Vulcani domus et Vulcania nomine tellus.

Æn. 8. *v.* 416.

Which is thus rendered by Dryden:

Sacred to Vulcan's name, an iſle does lie
Between Sicilia's coaſt and Lipare;
Rais'd high on ſmoking rocks; and deep below
In hollow caves the fires of Ætna glow.
The Cyclops here their heavy hammers deal:
Loud ſtrokes and hiſſings of tormented ſteel
Are heard around: the boiling waters roar,
And ſmoking flames through fuming tunnels ſoar.

This paſſage of Virgil is explained by Servius, as follows: By Vulcan, ſays he, is meant fire, which is called Vulcanus, "quaſi Volicanus," becauſe it flies through the air: For fire is generated in the clouds: And for this reaſon too Homer ſays, that Vulcan was precipitated from the air upon earth, becauſe all lightnings fall from out the air; and becauſe it often lightens in the iſland Lemnos, therefore Vulcan is ſaid to have fallen upon that iſland. "Vulcanus, ut diximus ignis,

eſt, ei dictus Vulcanus, quaſi Volicanus, quod per aerem volat, ignis enim nubibus naſcitur. Unde etiam Homerus dicit eum de mare præcipitatum in terras, quod omne fulmen ab aere cadit: quod quia crebro in Lemnum inſolam jacitur, ideo in eam dicitur Vulcanus cecidiſſe." Thus Servius: and this fall of Vulcan is deſcribed by Milton in the following verſes.:

——In Auſonian land
Men call'd him Mulciber: and, how he fell
From heav'n, they fabled, thrown by angry Jove
Sheer o'er the chryſtal battlements. From morn
To noon he fell, from noon to dewy night;
A ſummer's day: and with the ſetting ſun
Dropt from the zenith, like a falling ſtar,
On Lemnos, the Ægean iſle.——.

The ſame Servius, on the above cited paſſage, teaches, that Vulcan is ſaid to be lame, becauſe flame, by nature, is never ſtraight: "Claudius autem dicitur Vulcanus, quia per naturam nunquam rectus eſt ignis." And, what is more than all this; Virgil ſays, the thunder is forged in ſubterranean caverns

Hic tunc ignipotens cœlo deſcendit ab alto:
Ferro exercebant vaſto Cyclopes in antro, [racmon:
Bronteſque, Steropeſque, et nudus membra Py-
His informatum manibus jam parte polita
Fulmen erat, toto genitor quæ plurima cœlo
Dejicit in terras, pars imperfecta manebat:
Tres imbris torti radios, tres nubis aquoſæ
Addiderant, rutuli tres ignis et alitis auſtri.
Fulgores nunc terrificos, ſonitumque, metumque,
Miſcebant operi, flammiſque ſequacibus iras.
Æn. viii. *ver.* 424.

Hither the father of the fire, by night,
Through the brown air precipitates his flight;
On their eternal anvils here he found
The brethren beating, and the blows go round:
A load of pointleſs thunder now there lies
Before their hands, to ripen for the ſkies:
Theſe darts for angry Jove they daily caſt,
Conſum'd on mortals with prodigious waſte:
Three rays of writhen rain, of fire three more;
Of winged ſouthern winds and cloudy ſtore
As many parts the dreadful mixture frame;
And fears are added, and avenging flame.
Dryd.

The phyſiology of which is thus explained: Vulcan is ſaid to have a forge in thoſe places, between Mount Ætna and the iſland Lipare, that is to ſay, between fire and wind. becauſe thoſe two things are very proper, nay neceſſary for ſmiths: "Phyſiologia eſt cur Vulcanus in ipſis locis officinam habere fingantur inter Ætnam et Liparum, ſcilicet propter ignem et ventos, quæ apta ſunt fabris," ſays Nardius. "in proluſione de igne ſubterraneo." The ſeveral offices of his ſervants,

Bronteſque, Steropeſque, et nudus membra Py-
racmon,

their very names in part declare: For Brontes was ſo called ἀπὸ τῆς βροντῆς, from thunder; Steropes, ἀπὸ τῆς στροπῆς, from lightning; and Pyracmon, ἀπὸ τοῦ πυρὸς καὶ τῆς ἄκμονος, becauſe he never ſtirs from the burning anvil: And Virgil himſelf more particularly, Georg. iv. ver. 170.

Ac veluti lentis Cyclopes fulmina maſſis
Cum properant: alii taurinis follibus auras
Accipiunt, redduntque: alii ſtridentia tingunt
Æra lacu: gemit impoſitis incudibus Ætna:
Illi inter ſeſe magnâ vi brachia tollunt
In numerum; verſantque tenaci forcipe ferrum.

As when the Cyclops, at th' almighty nod,
New thunders haſten for their angry god;
Subdu'd in fire the ſtubborn metal lies:
One brawny ſmith the preſſing bellows plies,
And draws, and blows reciprocating air;
Others to quench the hiſſing maſs prepare:
With lifted arms they order ev'ry blow,
And chime their ſounding hammers in a row:
With labour'd anvils Ætna groans below.
Strongly they ſtrike; huge flakes of flame expire:
With tongs they turn the ſteel, and vex it in the fire. *Dryd.*

Moreover, on the ancient marbles, thunder is figured with twelve rays, diſpoſed into a circle; the rays not ſtraight, but bending into ſeveral angles, each of which ends in three ſharp-pointed fangs: Such too is the figure of this Virgilian thunder; of whoſe form Cerdanus thus: It generally thunders, either when it hails, or in great ſhowers of rain, or when the air is hot and ſultry; or, laſtly, when the winds blow: Now, by rain, "imber tortus," Virgil means hail; by "aquoſæ nubes," great ſhowers of rain; by "ignis," the heated ſultry air, and by "auſter," blaſts of wind; for tempeſts are more frequent when auſter, the ſouth wind, blows, than when any other.

After this, not uſeleſs, but neceſſary digreſſion, it is time to return and keep cloſe to our ſubject: firſt, then, The art and doctrine of thunder, according to Seneca, is divided into three parts: I. Inveſtigation. II. Interpretation. III. Exoration. The firſt part relates to the form; the ſecond to divination; the third to the propitiation and pacification of the gods; of whom, ſays he, we ought to pray for good things, and to deprecate from us all manner of evil: to pray that they would make good their promiſes; to deprecate that they would remit their threats; beſides, to imprecate and draw down thunder on the heads of our enemies: which laſt I add to Seneca; not to give occaſion to the learned Muretus, to take in ill part the omiſſion of it. The form I interpret to be the ſpecies and nature of the lightning, together, with whatever elſe can conduce to the phyſical and perfect knowledge of it; in the diſquiſition of which, according to the Thuſcans, its riſe, that is to ſay, whether it burſts out of the earth, or breaks from the ſkies, deſervedly claims the firſt to be inquired into. Now the Thuſcans held that the earthly lightning darts in a ſtraight line, the aerial obliquely. It was believed to be of great moment too, from what part of heaven the lightning came; whither it directed its courſe, and where it fell. For we muſt not forget what Pliny, lib. ii. cap. 54. teaches, That the Thuſcans

of old divided and quartered out the heavens into ſixteen parts, which they called temples, as is obſerved by Varro de lingua Latina, lib. 3. Nor did they lay any ſmall ſtreſs upon this circumſtance; whether the thunder ſtruck down the ſtrongeſt buildings, and overturned the towers and caſtles of kings; or whether it was weak, and vaniſhed inoffenſive in the air. Its force and violence too was likewiſe conſidered: that is to ſay, whether it ſtruck in an inſtant, or lingered in its flight: and, in ſome meaſure, gave warning of the blow: They likewiſe obſerved the ſize and magnitude of it; which they meaſured and determined by the events and effects it produced. Beſides, by the conſent of all, there are properly three ſorts of lightning, which, according to Seneca, are, I. That which pierces. II. That which ſhakes to pieces: And, III. That which burns. According to Servius, which blaſts, which burns, which cleaves; and according to Feſtus, which burns, which blaſts, which pierces; and from hence it came to be called "triſulcum," three-forked; unleſs we had rather aſcribe that epithet to the three kinds of lightning mentioned by Pliny, i. e. the dry, the humid, and the bright; which were ſo called from their effects: For the dry does not burn, but diſſipate; the humid does not burn, but infuſcates; and that, which they called the bright, is indeed of a wonderful nature, as we ſhall ſee by and by. I go now to that ſort of lightning that infuſcates, or renders ſwarthy the things it ſtrikes: Now this, ſays Seneca, either ſtrains, or colours, which is thus diſtinguiſhed: that is ſaid to be ſtained, whoſe colour is tarniſhed, not changed: that to be coloured, whoſe colour is changed from what it was before, as cerulean, or black, or pale, &c. They obſerved beſides, the manner of the lightning's coming, and the number of the flaſhes and claps; whether even or odd, and whether alone, or with hail or rain: They had regard beſides to the quality of it, whether it were reſplendent and glittering, which, perhaps, is that which Suidas calls white, or ſwarthy and obſcure: and it was of the greateſt importance, whether it thundered in a clear or cloudy ſky, whether in the night or by day; whether in the morning, or the evening, or at noon: And ſo much for the diagnoſtic part. We come now to the prognoſtic or divining.

The prognoſtic doctrine of lightning was, no doubt, contained in their fulgular books, and the prieſt, or interpreter of lightning, was called Fulgurator. The ancients aſcribed to lightning and thunder a power of foreboding future events, ſuperior to all other ominous portents: For whatever any other omens might have portended as a fixed and certain event, was all taken away, and held to be of no effect, if thunder chanced to intervene; but not on the contrary: For whatever thunder had portended was unalterable, and could not be changed by the intervention of any other omen whatever. It is not certain, who they were that did at firſt diſtinguiſh lightning into two ſorts; "brunum et fatidicum," brute and fatidic, or fate foretelling, as they afterwards called them; for they held, that whatever was the cauſe of lightning, it was always deſtined to forebode ſome future event; whether it proceeded from a fortuitous colliſion of the clouds, as the Latins believed, or whether the clouds ſuffered that colliſion, by the command of the Deity, that lightning might be ſtruck out of them by that means, which was the belief of the Thuſcans, who likewiſe held, that lightning does not portend, becauſe it is made, but is made on purpoſe that it may portend ſomething. But Pliny, lib. ii. cap. 43. ſays, That no doubt fortuitous lightnings do ſometimes happen, which either forebode nothing at all, or at leaſt if they do, the knowledge of what they portend comes not to us. Hence they were called brute lightnings, as coming on no deſign, and, as I may ſay, upon no errand whatever. Theſe, ſays Seneca, ſtrike the mountains, fall into the ſeas, and do no manner of harm: But the lightnings that are called fatidic, come from their own ſtars, and are deſtined to forebode ſome unavoidable event: Of theſe, ſays Cæcinna, there are three ſorts; which he calls "conſiliarium, auctoritatis, and ſtatus:" The "conſiliarium," or counſel-giving, precedes the action, but comes after the thought; as when we are conſidering in our minds, whether we ſhall do a certain thing or not, and are perſuaded to do it by a flaſh of lightning, or diſſuaded from the attempt: That of authority comes after the action is done, and forebodes whether the event will be proſperous or unlucky: That which he calls "ſtatus," of ſtation, is when lightning happens at a time when we are in total inaction, neither doing, nor even thinking of any thing; this either threatens, or promiſes, or admoniſhes: therefore he calls it "monitorium," monitory: He makes no mention of a fourth ſort, which was called "executivum," the executive, and that inflicts puniſhments on tranſgreſſors; of which anon.

But before we proceed any farther, it will be neceſſary to know from whom theſe thunders were ſent: The Thuſcan books, as Pliny witneſſes, taught, that nine gods had the privilege of darting theſe fiery bolts, and that there are eleven kinds of them: of which Jupiter launches but three: Of theſe eleven ſorts the Romans had retained but two, and aſcribed the diurnal to Jupiter, the nocturnal to Pluto: The firſt Manubia, as they called it, that is, thunder-bolt of Jupiter, gently forewarns, and is mild: this he ſends at his own pleaſure, whenever he will: He indeed ſends a ſecond but by the advice of his council, which conſiſts of twelve gods, whom he ſummons for that purpoſe. This ſhaft does ſometimes do good: but in ſuch a manner that the good it does is always attended with ſome hurt; its chaſtiſements avail, but puniſh. The ſame Jupiter ſends alſo a third bolt, but not without the advice and conſent of the gods, whom they call "Dii Majores, Dii Valentes, et Dii Potentes," Θεοὶ μεγάλοι, Θεοὶ χρησὸι, καὶ Θεοὶ δυναλοὶ. This bolt deſtroys whatever it meets; it changes and overturns the ſtate of things, as well public as private: For fire ſuffers nothing to remain in

the same condition in which it finds it. Others plunder the armoury of Jupiter, (Acron in Horat.) and scarce reserving to him the red and bloody thunderbolts, they assign the white and black to Minerva.

———Scit triste Minervæ
Sydus———*Æn. viii.* 265.

Hence "Minervales Manubiæ," says Servius on that passage of Virgil, by the power of which the Grecian fleet was driven on the rocks of the Mountain Caphareus, and perished there. Nor is Pallas idle,

Prima coruscanti signum dedit Ægide Virgo,
Fulmineam jaculata facem———

Flacc. Argonaut. 4.

And she is the more to be feared, because not content with her own, but

——Fulmine irati Jovis
Armata——Sen. Trag. Agamemn.

armed with the thunder of angry Jove, she threatens sore, and exterminates her enemies. This privilege Juno envies her,

Ipsa Jovis rapidum jaculata è nubibus ignem,
Disjectque rates, evertitque æquora ventis.

Æn. i. *ver.* 46.

For Minerva could come at the thunder, when she would, as she herself boasts in Æschines in Eumen.

Κχί κλυδὰς εἶδα μόνη δῶρ[illegible]ων Σίων
Ἐν ὦ κεραυνὸς ἐστι.———

I alone, of all the gods, know the keys of the magazines where the thunder is kept. And Servius, "ex actio," observes, that Juno too had her thunder: Hence she upbraids Jupiter for darting her thunderbolts:

———Mea fulmina torques. *Statius.*

Thus we have three thundering gods: Mars was the fourth, and his bolts are red-hot and burning: those of Saturn, cruel and execrable, nor are Pluto's more mild: What can we expect from Vulcan and the south wind, which is said to be "pollens fulminibus," potent in thunderbolts?

The Romans, loath to weary so many gods, gave the thunder but to two: they assigned the day-lightning to Jupiter, who was called Diespiter, i. e. the father of the day: and the night-lightning to Pluto: the lightning which they called *fulmen pervorsum*, because it was uncertain whether it happened in the night, or by day, they gave sometimes to the one, sometimes to the other. Besides this, they had, I. Their Postularia Fulmina, which signified the breach of vows, and the profane neglect of religious sacrifices: II. Monitoria, by which they were taught what to avoid. III. Pestifera, lightnings, which portended death and banishment. IV. Fallacia, which were fatal under an appearance of good: these gave the consulship to persons, to whom that office would be fatal; and an inheritance t[illegible] those who were to be ruined by getting it. V. Deprecanea, which brought a show of danger where there was none. VI. Peremptalia, which utterly destroyed the threatening tokens of other lightnings. VII. Atestata, that confirmed the promises of former. VIII. Atterranea, that happened in close places. IX. Obruta, by which things that had been struck before, were struck again, before they had been purged by sacrifice. X. Regalia, which fell upon the courts of justice, or other public buildings, or places, belonging to a free city. Concerning the duration, they say, that lightnings are either, I. Perpetua, whose tokens belong to the whole life: nor does this sort denounce one single thing only, but embraces the whole context and series of whatever is to happen in the future age of a man. These are the lightnings that happen next after the enjoyment of a patrimonal estate, and in any new circumstance or condition of any man, or city. II. Finita, whose prognostications extend only to a certain day. III. Prorogativa fulmina, are those whose threats may be delayed to be executed, but can never be wholly averted, or taken away: and such of these as they called Privata, because they related only to particular persons, they held could not be delayed for more than ten years, except from the day of first marriage, or the birth-day: nor the publica, which regarded communities, and civil societies, for above thirty years, except in the dedication of towns.

Moreover: we said before, that the lightnings, which fly in a direct line, burst out of the earth: These the Thuscans called Infera, they are most frequent in the winter, and are held to be the most fatal and execrable; because they come from a small distance, and out of a troublous matter. The Syderial and general, which dart obliquely, and from thence are called Obliqua Fulmina, are not always lucky, and the most unlucky of them are those that go from west to north; thus it is of the highest importance, from whence the lightning comes, and which way it directs its course. The most lucky is that which returns towards the eastern parts of the heavens: therefore, when they come from that part of heaven, and incline the same way again, they portend the greatest felicity: we read that an omen of this sort was given to Sylla the dictator. The others in that part of the world are less prosperous, if not absolutely unlucky. They held it unlawful to interpret, or even to inquire into some: unless they were sent as indications of future events to a guest, or a parent: the lightnings that happened on the left were esteemed lucky, because the east is in the left part of the world: the coming of it was not so much regarded, as its return: whether fire re[illegible]nded from the stroke, or whether the work [illegible]g perfected, or the fire consumed, the blast returned back. The Greeks in general, and some of the Latins, held the lightning on the right to presage good fortune: of this we have frequent examples in Xenophon, some in Homer, and many in the Latin poets: however they all agreed, that none portended good fortune, except those

that happened in the day; forasmuch as the nocturnal were unlucky, from whatever part of heaven they came. There is a verse of Ennius recorded by Cicero de Divinat. lib. 2. which makes to our present purpose:

Cum tonuit lævum benè tempestate serena.

And though, as Capitolinus tells us in the life of of M. Antonius Pius, the lightning was innoxious, that in a clear sky fell into the court of his palace, yet it was ominous, and a presage of death to Titus. Diodorus Siculus, and Suetonius both witness in general, that in those days lightnings were often seen in a serene and unclouded sky: but those historians have neither of them thought fit to particularize any of them.

Besides, they had great regard to the number of the flashes; and an even number seems to portend good fortune, rather than an odd; at least, it betokens neither calamity nor death: But if the lightning fell on temples or public buildings, or if men were blasted by it, in either of those cases it was judged to signify some great misfortune: To a free city it threatened a kingly power; and to others the subversion of their present state, or total destruction. And this, as Cicero in Vatin. observes, was the reason, that from the first building of the city, it was not permitted, but even held irreligious, to hold any assembly of the people, or to continue the sittings of their courts of justice, whenever it happened to thunder. And Livy, lib. v. decad. 3. relates, that Marcellus, being created consul, was removed from that office, because it had thundered when he entered upon the consular dignity: what would have been done, if a tempest of wind and hail had accompanied the thunder? Which accident was held to forebode calamity. And even at Rome, as the same Livy, lib. x. decad. 4. affirms, a tempest only did sometimes make the senate break up their assemblies: For the minds of men had already imbibed the superstitious credulity, that lightning portended future events, and gave tokens, not of particular things only, but denounced in a successive order the whole series of future fates; and that too by decrees more plain and evident, than if they had been written in the most visible characters: This Seneca teaches, Nat. Quæst. xxxii. lib. 2. Pliny too seems to have been tainted with the same superstition; for, lib. ii. cap. 53. he says in express terms, That the science of the interpretation of lightnings was improved to that degree, as was evident from innumerable, both public and private examples, that it foretold what should happen even on a fixed and certain day, and whether the lightning foreboded the delay, or the total obstruction of fates, already foretold, or revealed, or gave tokens of others, that lay till then concealed: Wherefore let them be, as it has pleased nature to make them, certain to some, doubtful to others, approved by some, and condemned by others. Thus Pliny.

It now remains, that we say something of their expiations, by which they endeavoured to avert the imminent dangers that threatened them. In the first place, the fulgural books pronounce, That a place struck with lightning ought neither to be regarded, nor trod upon: For which reason, says Ammianus Marcellinus in Jul. it was lawful to hide or bury the lightning; but a crime against the gods to uncover it. Now the lightning was then said to be buried, when an altar was erected over the place where it had fallen: And this altar had a hole in the top of it, open towards heaven; and was called Puteal, or Capitium, by Vulpianus, Operculum. The place itself Nigidius Figulus calls Bidental, because two sheep were sacrificed there; after which, says he, it was immediately deemed holy. And Augustus consecrated and dedicated to Apollo the area in the palace he had bought, because lightning had fallen in it: But bidental signifies sometimes the sacrifice likewise, and sometimes too the person that was struck, as in Persius, Satir. ii. ver. 27.

Triste jaces lucis evitandumque bidental.

Moreover, to this custom of burying the lightning, Lucan alludes, lib. i.

———Dispersos fulminis ignes
Colligit, & terræ mœsto cum murmure condit.

And the ancient interpreter of Juvenal, on this verse,

Atque aliquis senior, qui publica fulgura condit, *Sat. 6.*

says, that lightning is then said to be buried, when the priest has collected together the scattered fires, by which we may reasonably conjecture, that they meant, when he had collected together what was scorched by the lightning; and consecrated the place by a certain prayer, pronounced with a low voice to himself, and by heaping up earth upon it. Thus it had fared but ill with the Parthian magicians, if, as Pliny, lib. xxxvii cap. 9. says they had tried to find, by digging for it, the gem, which is called "ceraunia," and some take for a real thunderbolt, because it is never found, but in places blasted with lightning, since it was not permitted even to look upon such places. Besides, we learn from Festus, that, by an old law of Numa, it was forbid to burn the body of a man, who had been killed by thunder, or to allow him the rites of funeral. Every man, who was slain by thunder, was buried in the place where he was struck; except, as Quintilian, and some other learned men observe out of Festus, the place belonged to the public. Such men had this privilege, that the priests were permitted to gather up their scattered members: This we have from Seneca, who besides, speaking of such as apprehend and tremble at the danger of thunder, has this remarkable passage: "Non maximum ex periculis, sed speciosissimum fulmen est. Male scilicet erit actum tecum, si sensum mortis tuæ celeritas infinita prævenerit, si mors tua procurabitur, si tu nunc quoque cum expiras, non supervacuæ, sed alicujus magnæ rei signum es." Lib. ii. Nat. Quæst. in calce. The earth

was heaped up, not dug into the ground, as Cornutus is of opinion, till it raiſed a monument high enough, to give notice of the place to paſſers by. Plutarch. in Symp. iv. Probl 2 aſſerts, That the bodies of men blaſted with lightning never putrify: for many, ſays he, neither burn them, nor bury them, but ſuffer them to lie where they were ſtruck: and hedge in the place, that thoſe uncorrupting carcaſes may remain as a ſpectacle of admiration: And for this reaſon they fooliſhly thought ſuch perſons to be honoured by Jupiter. But Seneca, Nat. Quæſt. lib. ii with more conſonance to truth, ſays, that bodies, killed by thunder, crawl with worms in a few days; and adds beſides, that they were buried with the lightning: Whence the ſaying, "Male tecum agitur, ſi cum fulmine conderis:" The places were hedged about, that they might not be trod on unawares; and the bodies were interred to avoid the ſtench of their corruption: For it is known by experience, that as well men as beaſts, are for the moſt part ſuffocated by the blaſt of lightning, not burnt with the fire; and when the innate heat of the animal decays, the remaining moiſture is prone to corruption. Yet ſome perſons, ſtruck with lightning, were not buried, but only covered with a white garment; as well becauſe they believed ſuch bodies did not putrify, as that they might be ſeen by the people; who, nevertheleſs, were not permitted to look at them, except at ſome diſtance: for none were permitted to come within the enclоſure, but the prieſts.

I ſhall paſs by many things relating to thunder, but cannot omit one, which Pliny mentions, lib. xxviii. cap. 25. where he ſays: "Fulgetras Poppyſmis adorare, conſenſus eſt gentium:" All nations agree in adoring the thunderbolts, by preſſing their lips cloſe together, and then, by drawing in the air by force, to make ſuch a ſound as horſemen generally do, to encourage and put forward their horſes, for ſuch a noiſe the word "poppyſmus" ſignifies and this was the cuſtom both of the Greeks and Romans in their expiatory ſacrifices: Some of the learned add likewiſe the clapping of hands, which others nevertheleſs take to be only the noiſe that is made, by cloſing the palms of the hands, and hiſſing between the thumbs. But to proceed:

When the portents and prodigies were uncommon, or more than uſually frequent, they conſulted the Thuſcan Fulguratores, or the Sybilline books, and the city was expiated, by public ſacrifices and ſupplications, and by the ceremonies they called Lectiſternia, i. e. bringing their beds, on which they lay down to eat, into the temples, where they uſed to feaſt themſelves in honour of the ſacred rites; as alſo by votive games, Livy in decad. iv. lib. 10. gives an example of the purgation of the city, after the fall of lightning, in theſe words: "Ob ea decemviri juſſi adire libros, edidere quibus diis, et quot hoſtiis ſacrificaretur: Et a fulminibus complura loca deformata, ad ædem Jovis ut ſupplicatio diem unum eſſet. Ludi denique votivi Q. Fulvii Conſ. per dies decem magno apparatu facti." For to diſtinguiſh to which god the ſacrifice was due, was not ſo eaſily diſcerned by the Romans, but that they equally ſacrificed ſometimes to Jupiter and Pluto, when the lightning happened at a doubtful time, that is to ſay, either in the morning or evening twilight; and this lightning, as we ſaid before, they called "perverſum." Joannes Magnus, in his hiſtory, lib. iii. cap. 8. relates a ridiculous cuſtom of the Goths and Vandals; and which is likewiſe confirmed by his kinſman Olaus Magnus. They tell us, that thoſe people, when they heard the noiſe of thunder in the clouds, were wont to ſhoot arrows up into the air, to expreſs their earneſt deſire to aſſiſt their own gods, whom they believed to be then engaged in battle with other gods; and that, not contented with this fooliſh ſuperſtition, they had mallets of an unuſual weight, bound about with braſs, and which they held in great veneration, on purpoſe that, by their help, as by the imitative thunder of Claudian, they might expreſs the noiſe they heard in the heavens, and which they believed was made by mallets likewiſe: And they held it very meritorious to be thus preſent, and aſſiſt in the battles of their gods.

It remains only to ſpeak of the lightnings, which the ancients called Elicia, and theſe were either commanded and compelled from heaven, or allured and obtained by holy rites. Pliny tells us, That lightning may either be compelled, or implored from heaven, by certain holy rites and ſupplications; that there was an old tradition in Etruria, that it had been obtained by holy rites, when a monſter they called Volta, entered into the city Volſinii, after having firſt depopulated the country round it: And the ſame author, on the teſtimony of Piſo, whom he calls an author of credit, ſays, That Porſenna, king of the Thuſcans, drew down thunder from heaven; and that, before him, Numa had often done the like. He adds, that Tullus Hoſtilius, endeavouring to imitate them, and either not knowing, or for not obſerving the due rites, was himſelf ſtruck dead by a thunderbolt. "Extat annalium memoria, ſacris quibuſdam et precationibus, vel cogi fulmina, vel impetrari: Vetus fama Hetruriæ eſt, impetratum; Volſinios urbem, agris depopulatis, ſubeunte monſtro, quod vocavere Voltam. Evocatum et à Porſenna ſuo rege, et ante eum à Numa ſæpius hoc factitatum, in primo Annal. ſuorum tradit L. Piſo, gravis Author: quod imitatum parum rite Tullum Hoſtilium, ictum fulmine. Lucoſque et aras, et ſacra habemus inter quæ Statores, et Tonantes, et Feretrius, Elicium quoque accepimus Jovem." Plin. lib. ii cap 52 He concludes with making this remark: "Varia," ſays he, "in hoc vitæ ſententia, et pro cujuſque animo. Imperari naturæ adacis eſt credere: nec minus hebetis, beneficiis abrogare vires." Thus Pliny. In relation to Numa, Livy relates the matter at large, in decad i. lib. 1 where, among many other things, he tells us, that Numa, in order to allure down thunderbolts from the divine minds, erected an altar on the Aventine hill, to Jupiter Elicius: "Ad ea (ſcil. ful-

mina) elicienda, ex mentibus divinis, Jovi Elicio aram in Aventino dicavit; deumque confuluit auguriis, quæ capienda eſſent." And that nothing might be wanting to this fable, Valerius Antias, as cited by Arnobius, adverſ. gent. lib. v. ſays, that king Numa, not having the ſcience of procuring lightning, and, by the advice of the nymph Ægeria, being deſirous to know it, gave chains and fetters to twelve chaſte young men, and placed them in ambuſcade, near a certain water, in which Faunus and Martius Picus were went to bathe, with orders to ſurpriſe and bind them: This they did, and extorted from them the art of alluring Jupiter, of whom Numa by this means learnt the art of drawing down thunderbolts out of heaven. The Greeks, however, will not allow this honour to be firſt due to Numa, but aſcribe it to Prometheus; who, as Servius on the 6th Eclogue of Virgil, relates, by reſiding long upon the top of Mount Caucaſus, diſcovered the art of alluring down lightning, and taught it to men; from whence the fable of his having ſtolen fire out of heaven. Laſtly, Theſe "elicia fulmina" were of three ſorts: I. "Hoſpitalia," which Seneca mentions in lib. ii. Nat. Quæſt. and theſe by ſacrifices compel, or rather, to uſe their milder expreſſion, invite Jupiter from heaven: But if his godſhip ſhould happen to be unwilling, or in an angry mood, they invite him to their own coſt: and this, ſays the ſame Seneca, was the misfortune of Tullus Hoſtilius, the third king of the Romans, whom we mentioned before. II. The "Auxiliaria," which were alſo called "Advocata," but theſe always came for the good of thoſe that called them. III. The "Imprecatoria," which cannot be reckoned in the number of auxiliary lightning; for no man deſires deſtruction, or imprecates thunderbolts on his own head. After all, Pliny, lib. xxviii. cap. 2. obſerves out of old authors, that it was a very difficult taſk to allure down lightning by ſupplications and ſacrifices. And ſo much for the ſuperſtition of the ancients, in regard to thunder and lightning.

Ver. 431. Hitherto the poet has been treating of thunder and lightning; and is now about to diſpute of another kind of meteor, called whirlwinds: And for the better underſtanding of ſuch diſputation, it will be neceſſary, with Ariſtotle, lib. iii. Meteor. and with Pliny, lib. ii. cap. 48. to diſtinguiſh between the ſeveral ſorts of whirlwinds, which the ancients called by ſeveral names, according to their ſeveral natures; as "ecnephias, preſter and typho:" For ſince all theſe things, thunder, lightning, "ecnephias, preſter, and typho," and thunderbolts, are only ſeveral winds, we ought to diſtinguiſh between them. Firſt, then, if the wind be thin and ſubtle, and if it be blown and ſcattered piecemeal here and there, it produces thunder and lightning. If it be more denſe and thick, it begets the tempeſt, which the Greeks call Ἐκνεφίας, i. e. a ſtorm without rain, a hurricane, as Pliny ſays, lib. ii. cap. 48. But if the wind burſting out of the bowels of a cloud, meet with other winds, breaking out of other clouds likewiſe, and without fire, it comes to be that ſort of whirlwind, which the Greeks called τύφος, of which there are two ſorts, called by the Latins "vortex and turbo:" "Vortex," if it make a great and roaring noiſe: "Turbo," if it make none at all, or but a whiſtling one. But if the wind, when it breaks from the clouds, takes fire, and kindles into flame, it makes a "preſter," called by the Greeks πρηστὴρ, which ſignifies, inflaming, ſwelling, and making hot, "quaſi comburens contacta, pariter et proterens," ſays Pliny, in the place laſt cited: If the wind, after it breaks from the clouds, do not take fire; but burſts out in a flame, it makes the lightning, which the Greeks call κεραυνὸς, a thunderbolt: And, laſtly, if the wind cannot break the cloud, but forces and drags it down upon the earth, or ſea, it then makes the whirlwind, which the Latins called "columna," a pillar. And of theſe whirlwinds the poet diſputes in the following twenty-nine verſes, and ſeems to call the "columna, vortex, and turbo," all of them certain preſters. And firſt, in theſe twenty-one verſes, he explains the cauſe of a fiery whirlwind, called a preſter; which, ſays he, is a wind impetuouſly whirled about, and that takes fire by the continuance and vehemence of the agitation. If this wind burſt out of the clouds, and move violently in a ſtraight line, it kindles into lightning only; but if the cloud be ſo tough, that it cannot break through, but bears it down into the ſea, and, there impetuouſly whirling round in the waves, it becomes a preſter, the ſure deſtruction of ſailors.

Ver. 452. Preſters are ſeldom felt at land, but chiefly infeſt the ſea. There is another ſort of whirlwind, which is not fiery: and this too is a wind, that turns and whiſks about with violence in a cloud, and tumbles down with that cloud upon the earth; where breaking out without being kindled into flame, it whirls and tumbles down all things where it lights: Neither is this ſort of whirlwind frequent at land; for the hills hinder its deſcent, and break its force; but at ſea the poor ſailors often feel its violence.

Of this ſort of whirlwind, Pliny, lib. ii. cap. 48. "Sin vero flatus repentini depreſſo ſinu arctius rotati nubem effregerint, ſine igne, hoc eſt, ſine fulmine, Vorticem faciunt:" which agrees with what Lucretius ſays of it. But whatever he ſays of their being moſt frequently felt at ſea, they are very common in Florence, and in ſeveral other countries.

But before we leave this ſubject of whirlwinds, it will not be improper to give a ſhort account of the cauſe of wind; the original of which is reckoned among the hidden ſecrets of nature. Ariſtotle will have it to proceed from the earth, and defines it to be a dry earthy exhalation: Metrodorus and Animaxander held, that it proceeds from the water: of the ſame opinion too is Vitruvius, who, lib i cap. 6. ſays, "Ventus eſt ăĕris fluens unda, cum incerta motus redundantia; naſciturque cum fervor offendit humorem & impetus fervoris exprimit vim ſpiritus flantis:" This he illuſtrates, by the example of *æolipilæ*,

windballs: and Des Cartes pretends to demonſtrate the truth of this opinion in the ſame manner. And Salmaſius, lib. de Anno Climacter. aſſerts the ſame opinion, in the very words of Vitruvius. There is a third opinion, which ſeems to have been more ancient than either of the former; and according to that, wind is nothing but air put in motion. Apuleius de Mund. is of this laſt opinion. "Nec enim," ſays he, "aliud eſt ventus, niſi multum et vehemens in unum coacti aëris flumen:" But this is not ſatisfactory; for, by not aſſigning the firſt cauſe of that motion, it leaves the matter in ſuſpenſe, and undetermined. The moſt probable opinion therefore is, that wind is an earthy or watery exhalation, mixed with ſaline ſpirits, and other vapours, drawn or forced out of the earth or ſea, by the power of the ſun, or of ſubterranean fires, which being rarefied by heat, or condenſed by cold, and impelled for the moſt part by a tranſverſe, but ſometimes by a direct motion, exagitates the earth, air, and ſea. But of this ſubject ſee particularly my Lord Bacon's treatiſe de Ventis; Des Cartes in the place above cited; Gaſſendus's Animadverſions on Epicurus; Fromend. in Meteor.; Kircher. in Mund. ſubterran.; and Iſaac. Voſſius, de motu Marium & Ventorum.

Ver. 460. The poet is now going to treat of the generation of clouds; which, he ſays, may be produced three ſeveral ways: And firſt, in theſe ſeven verſes, he teaches, that certain rough and hooky atoms, that are flying to and fro in the air, meet and join together: Theſe form the thin clouds firſt; and theſe thin clouds, condenſing and joining with one another, make the thick and heavy clouds.

Anaximenes, Plutarch, and Seneca, held the clouds to be made of the very concretion or congelation of the air itſelf: The firſt of them indeed believed, that all things proceed from the air: And Plutarch, de Placit. Philoſ. l. iii. c. 4. calls the clouds ἀέρος πυκνότητας, thickenings of the air; and Epicurus in Laërtius, ἀέρος πιλήσεις, accumulations or heaps of air; but Seneca, lib. ii. c. 30. "Spiſſitudinem aëris craſſi," the thickneſs of groſs air: for he will not allow, that clear and unmuddy air can thicken and grow into clouds; becauſe it is too ſubtile, and free from vapours; by virtue of which only it can condenſe into clouds. Macrobius, "Aër terreni frigoris exhalatione denſatus, in nubem cogitur." In Somn. Scipionis, lib. i. cap. 22.

Ver. 467. In theſe nine verſes he obſerves, that clouds frequently ſeem to riſe from the tops of high mountains: the reaſon of which, he ſays, is this; becauſe ſome thin miſts and watery ſteams, that are too ſubtile to be ſeen, are driven up thither by the wind; where joining together, and growing thick, they become viſible. Moreover, our tranſlator has omitted the two laſt verſes of this argument, which, in the original, are as follows.

Nam loca declarat ſurſum ventoſa patere
Res ipſa, & ſenſus, montes cum aſcendimus altos.

And indeed they are of no great moment; and therefore I have foreborn to tranſlate and inſert them in the text of this verſion. What they ſay is only this: For, when we aſcend a high mountain, the thing itſelf and ſenſe demonſtrate, "ventoſa loca ſurſum patere," i. e. that the winds tend to the higheſt places, and reign there. This is the interpretation Creech himſelf gives them in his Latin edition of Lucretius.

Ver. 476. In theſe ſix verſes Lucretius propoſes a ſecond reaſon of the generation of clouds: and that matter may not be wanting to compoſe ſuch vaſt bodies of clouds as are rolling up and down in the air, he raiſes vapours and exhalations from the ſea; and then, in ten verſes, from the rivers and other waters, nay, even from the earth itſelf; not that he believes any earthy particles aſcend, as Gaſſendus interprets, but becauſe the earth, being moiſtened with dews and rain, ſeems to ſmoke, and breathe forth watery exhalations, which the particles of heat, that are continually deſcending from above, meet in their aſcent, and preſs them into clouds. The laſt verſe of this argument is likewiſe omitted by Creech in this verſion: It runs thus in the original:

Nam ratio cum ſanguine abeſt humoribus omnis.

And indeed the interpreters know not well what to make of it: ſome place it above, after ver. 410. others below, after ver. 531. In either of which places it ſeems to have but as little to do as here: ſo that upon the whole matter, their opinion ſeems beſt, who will not allow it to be genuine, and therefore abſolutely reject it.

Ver. 478. This the poet has mentioned before, b. i. v. 357.

Ver. 486. This and the following verſe in the original run thus:

Urget enim quoque ſigniferi ſuper ætheris æſtus,
Et quaſi denſando ſubtexit cærula nimbis:

In his interpretation of which we may obſerve, that Creech has followed the opinion of Gaſſendus, and ſome others, who interpret *ætheris æſtus* to mean the ether itſelf, whoſe heat condenſes the clouds; and this muſt be explained, ſay they, to be intended of the antiperiſtaſis, by reaſon of which the region of the clouds grows cold. But our tranſlator, in his Latin edition of Lucretius, has changed his opinion, and ſays, that this antiperiſtaſis of theirs, as they call it, will avail them nothing; and that they allege a cauſe, by which the clouds may indeed be attenuated, but never condenſed: And Lucretius himſelf, a few verſes lower, urges the heat of the ſun for one of the reaſons of the liquefaction and diſſolution of the clouds into rain:

Aut diſſolvuntur ſolis ſuper icta calore,

ſays he, v. 513. And therefore Creech explains *ætheris æſtus* to mean the little bodies that are ſtill deſcending from the heavens in a confuſed and turbulent manner. And indeed this interpretation ſeems more conſonant to reaſon than the

other: therefore inſtead of, For the warm vig'rous rays, &c. read, For the deſcending parts, &c.

Ver. 488. In theſe fourteen verſes, as a third cauſe of clouds, he fetches the ſeeds of them from the infinite ſpace, and from the other worlds. For Lucretius, after Epicurus, believed, that the atoms which aſſemble in the concretion of clouds, came not only out of the air, water, and earth, but out of the void likewiſe: for having taught, book i. ver. 1005. & ſeq. that the ſpace in which, out of which, and through which the infinite atoms are continually flying, is immenſe and infinite likewiſe, what wonder is it, if they ſupply from that inexhauſtible magazine a ſufficient quantity of ſeed for the production of clouds?

Ibid. *External matter.*] That is to ſay, matter that comes not only from the ſea, nor only from the earth, nor only from the air, but from without; i. e. from the immenſe and infinite ſpace of the univerſe.

Ver. 490. See book i. ver. 960. & ſeq. & 1050. & ſeq. where the poet has brought many arguments to prove the univerſe to be infinite, and that it has no centre.

Ver. 493. See book ii. ver. 134. &c.

Ver. 494. This and the following verſe are tranſcribed from Cowley, and repeated in this place, from b. iv. v. 226.

Ver. 502. Theſe thirty verſes contain a ſhort diſputation of rain. Many ſeeds of water riſe up together with the ſeeds of the clouds, and grow bigger together with the clouds, in like manner, as the blood, and other humours increaſe in proportion with our bodies. For a cloud may be ſuppoſed to be a body, that contains the rain, which may be compared to the blood in the bodies of animals. To theſe ſeeds of water and clouds, add thoſe particles of water that the clouds, like fleeces of wool, which they ſeem to reſemble, draw from the rivers and ſea. And thus when the clouds are full of water, if they are preſſed either by the force of the wind, or their own weight, water muſt of neceſſity be ſqueezed out, and drop from them: This in ſeventeen verſes. Then he ſays in four verſes, that if the winds rarefy the clouds, the rain will likewiſe drop from them; and if the heat of the ſun pierce the clouds, they will flow like melted wax. That a violent haſty ſhower is occaſioned by a violent compreſſion of the clouds: in four verſes, and laſtly, in five verſes, that conſtant ſhowers happen, when many clouds are heaped upon one another, and when the earth reſolves into vapours the rain it has received, and ſends it up again into the region of the clouds.

Ariſtotle and his followers, who held that the elements change from one into another, and ſo make a circle of generation, define rain to be air converted into water, and diſtilling from a cloud in drops. Epicurus held that rain might be generated two ſeveral ways: I. By tranſmutation. II. By compreſſion. By tranſmutation; becauſe ſuch is the nature of the air, that it changes by condenſation into water; and ſuch too is the nature of a cloud; that by the retreat and abſence of heat, and by the acceſſion of cold, its parts are ſo tranſpoſed and varied, as renders them more apt to flow and fall. This is exemplified by vapours gathering together in a limbeck, and then falling in drops. By compreſſion, when by wind or cold the cloud is compreſſed, and the vaporous corpuſcles within the hollows of it are crowded together; and thus, by that acceſſion of weight, or by the force of the wind, are driven and ſqueezed out of the cloud, in like manner as water out of a ſponge. From whence it appears, that the drops of rain are formed by coalition, rather than by diviſion; and that rain is not, as it is vulgarly taken to be, a watery maſs effuſed from a cloud, as water out of the roſe of a watering pot, nor as Trepſiades and Ariſtophanes, deriding this opinion, ſays, does it proceed from Jupiter's making water through a ſieve. For, if there were any ſuch ſtagnation of water in a cloud, it would fall from thence in a torrent, or as water does from ſpouts, rather than in drops. Moreover, there are reckoned three kinds of rain. "Stillicidium, Imber, and Nimbus." The firſt is a miſty rain. The ſecond more intenſe, and compoſed of larger drops, a ſober rain. The third, a violent pouring rain; which, as Fromondus ſays, falls "decumanis guttis:" Apuleius de mundo, ſums up the whole matter in a few words: "Tot diverſitatibus," ſays he, "pluviæ cadunt, quot modis aër nubium conditionibus cogitur."

Ver. 505. Hippocrates agrees with Lucretius in this opinion, and lib. de Aër. Aqu. et Loc. ſays expreſsly, that there is moiſture in all things.

Ver. 508. Here the poet teaches in five verſes, that while the clouds are driven by winds over the ſurface of the ſea, or other waters, they, like wool, hung in damp places, imbibe and ſuck in the moiſture.

Ver. 513. In theſe ſix verſes, the poet mentions one of the ways, by which rain diſtills from the clouds, that is, by compreſſion; when the clouds, compreſſed by the force of the wind, or by the great quantity of water, contained within their bowels, let drop the rain; as water is ſqueezed out of a ſponge, by preſſing it.

Ver. 519. Theſe four verſes contain the other way, by which Epicurus, and, after him, Lucretius held, that rain might be made, to wit, by tranſmutation, that is to ſay, when the clouds, being ſtruck and rarefied, either by the force of the wind, or the heat of the ſun, diſtil in rain, as is explained above, ver. 502.

Ver. 523. Theſe four verſes, that give the reaſon of a violent ſtorm of rain, are ſufficiently explained in the note on ver. 502. and ſo likewiſe are the five that follow them, and aſſign the cauſe of conſtant ſhowers.

Ver. 532. In theſe two verſes, he tells us, that a rainbow is made by the beams of the ſun, ſtriking upon an oppoſite and wet cloud.

Lucretius ſays not any thing of the various colours of the rainbow; a ſubject which nevertheleſs has employed many of the philoſophers; and concerning which, there are two things chiefly to

be inquired into; their number, and their order. As to the firſt, Ariſtotle diſcerns only three diſtinct colours; φοινίκεον, a light red, or ſaffron, as ſome interpret it; χλωρὸν, green, and πορφύρεος, purple, or violet, and cerulean; and thence he called the rainbow three coloured: but Ptolomæus calls it ſeven coloured, becauſe of the mingled colours that intervene among thoſe three chief colours. Others call it many-coloured, as if the number of its colours could ſcarce be diſtinguiſhed. Whence Virgil, Æn. iv. ver. 701.

Mille trahit varios adverſo ſole colores.

A rainbow is only the picture of the light of the ſun, in an oppoſite cloud, moiſt or wet, and juſt ready to be diſſolved, and fall down in rain. It is in itſelf of no colour; and the various colours that appear, are but reflections of the light of the ſun received differently, according as the cloud is more or leſs denſe: this is evident by artificial rainbows. And yet this ſhadow, this almoſt nothing, does, by reflection, ſometimes make another rainbow, though not ſo diſtinct and beautiful. Sir R. Blackmore deſcribes a rainbow poetically, and like a philoſopher too.

Thus oft the Lord of Nature, in the air,
Hangs ev'ning clouds, his ſable canvaſs, where
His pencil, dipt in heav'nly colours, made
Of intercepted ſun-beams, mix'd with ſhade
Of temper'd ether, and refracted light,
Paints his fair rainbow, charming to the ſight.

There are only four chief colours in a rainbow. I. A light red. II. A yellow, or ſaffron. III. A green. IV. A purple. Theſe colours change their ſite and order, according to the difference of the rainbow; for there are two diſtinct ſorts of rainbows; "iris primaria," and "iris ſecundaria," the primary and ſecundary rainbow. The primary rainbow is that which, for the moſt part, appears alone, and in which the ruddy colour is outmoſt, or higheſt; the yellow next, the green the third colour, and the purple the inmoſt, or loweſt. But the "iris ſecundaria," or ſecundary rainbow, is that which never appears alone, but always above, and larger than the primary, and has the ſame colours, but more faint, and quite inverted; that is to ſay, in the ſecondary rainbow, the purple colour is the outmoſt, or higheſt, the next to that the green, the third the yellow, and the ruddy the inmoſt or loweſt. This rainbow is not ſo diſtinct and beautiful as the other, of which it is held to be only a reflection. It is agreed by all, that there are two cauſes of the colours of the rainbow; the ſun, and the watery cloud placed againſt it; but they do not explain this in the ſame manner. Metrodorus in Plutarch de Placit. Philoſ. l. iii. c. 3. believes, that the redneſs of the rainbow proceeds from the beams of the ſun, and the cerulean colour from the cloud. Seneca aſſents to this opinion, and adds, that the other colours are only a mixture of theſe two. Ariſtotle, 3. Meteor. will have the cloud to be in the nature of a mirror, from which the beams of the ſun, being variouſly reflected, produce the various colours: the light red, becauſe they are reflected from that part of the cloud that is neareſt to his orb; the green, becauſe they are reflected from the part that is farther off; laſtly, the purple, becauſe they are ſcarce reflected at all, by reaſon of the yet greater remoteneſs of the cloud; nor does he diſtinguiſh the yellow from the red, only becauſe it grows whitiſh, by reaſon of the vicinity of the green. Scaliger believes the cloud to conſiſt of the particles of the four elements, and therefore will have the upmoſt parts of it to turn red, when they receive the light of the ſun, becauſe they are fiery; the next to become yellow, as being aërial, and the third to grow green, as holding of the earth. As to the figure of the rainbow, it is round; but it would be too tedious to relate the various opinions why it is ſo. Of this conſult P. Gaſſendus on the tenth book of Laërtius. Animad. de Meteorolog. p. 1123.

Ver. 534. Lucretius ſays nothing in particular of the cauſes of ſnow, wind, hail, hoar-froſt, ice, &c. but only takes notice in theſe ſeven verſes, that whoever contemplates on theſe things, and conſiders the clouds and ſhowers, and at the ſame time reflects on the various figures and motions of the principles, will eaſily be able to comprehend the cauſes of theſe and the other meteors, which he leaves unexplained.

Ver. 535. Pliny, lib. xvii. cap. 2. calls ſnow, the foam of celeſtial waters, when they daſh againſt one another; which, ſays Cowley, is ingeniouſly expreſſed for a poet, though but ill defined for a philoſopher. Ariſtotle, and after him, moſt of our modern philoſophers, hold it to be generated of a moiſt, but rare and thin cloud, which, being condenſed by cold, as it falls down, that it may the more eaſily cut through the air, divide itſelf into flakes, like fleeces of wool; to which the Pſalmiſt alludes, "Qui dat nivem, ſicut lanam," Pſal. 147. He gives ſnow like wool. Yet Bodinus, in Theatro Naturæ, is of opinion, that the Royal Pſalmiſt reſembles ſnow to wool, becauſe of the warmth it affords to plants and vegetables in the cold of winter, as woollen garments do to men, rather than for its fleecy ſimilitude. The whiteneſs of ſnow is derived from its efficient cauſe, which is cold; and alſo from the copious mixture of aërial ſpirits. Anaxagoras affirmed it to be black; and in Armenia it is of a ruddy colour; which, as Euſtathius on the ſecond Iliad obſerves, is cauſed by the terreſtrial particles, or atoms of the ſoil of that country, which abounds with minium. For thoſe particles, mixing with thoſe of the air, tinge the ſnow, and give it that hue. Of the wonderful contexture and figure of ſnow, which is ſaid to be always ſexangular, ſee Kepler, who has written a particular treatiſe upon that ſubject.

Ibid. Hail is nothing elſe but rain congealed in its fall: and this congelation or concretion is made not far from the earth, becauſe hail is never ſeen upon the high mountains, which are often covered with ſnow; beſides; hail, the nearer to the earth the cloud is, out of which it falls, is the more triangle or pyramidal in its figure: the

higher the cloud, and the more remote from the earth. the rounder the hail. the reaſon of which is, becauſe thoſe inequalities, or angles, are worn away, and rounded by the length of its paſſage and deſcent through the air: and its congealed hardneſs proceeds from the antiperiſtaſis of the lower region of the air: and this too is the reaſon why hail falls more frequently in ſummer than in winter; and ſeldom in the night, unleſs the night be warm. See more in Fromondus, Meteorolog lib. v. cap. 9. I will only add Ariſtotle's ſhort, but true, definition of ſnow and hail: ſnow, ſays he, is a cloud congealed, and hail congealed water.

Ver 541. Before we enter on this diſputation, of earthquakes, it may not be amiſs to take notice of the ſeveral ſorts of them. Apuleius, lib. i. de Mundo, reckons up ſeven ſeveral ſorts of earthquakes. I. The firſt is termed Epiclintes, ſeu inclinator, from ἐπικλίνω, I incline. becauſe it moves ſidelong; and, thus, ſtriking at oblique angles, overturns things by inclination or ſideward. II. The ſecond is called Braſtes, ſeu efferveſcens, from βράζω; I boil. the ſimilitude of boiling water, becauſe it bears all above it in a direct line. III. The third, Chaſmatias, from χασμάω, I gape, becauſe it makes an hiatus or chaſm, in which the place it forces, is ſwallowed up. IV. The fourth, Rhectes, from ῥήσσω I break, becauſe it forces its way by a rupture: though it opens not ſo wide a chaſm as the former. V The fifth ſort is called Oſtes, from ὠθίζω I thruſt with violence: and this both ſhakes and overturns VI. The ſixth, Palmatias, from πάλλω, I ſhake or throb: this ſhakes the ground and buildings, but not ſo as to overturn them. VII. The ſeventh is called Mycematias, or Mycetias, from μύκασμαι, I bellow, becauſe it makes a roaring noiſe. But Ammianus Marcellinus, and, after him, Cœlius Rhodiginus, allow but four kinds of earthquakes.

Thales and Democritus aſcribe the cauſe of earthquakes to ſubterranean winds, that undermine the bowels of the earth, and then force out their paſſage: the Stoics attribute it to moiſture, rarefied into air; which ſtruggling for room to get free, and meeting with the thick and tough body of the earth, ſhakes it by its ſtruggling. Others hold that earthquakes proceed from encloſed air, or ſpirits ariſing from combuſtible matters, as ſulphur, nitre, allum, ſal-armoniac, bitumen, or the like; which being ſet on fire, and conſequently rarefied, cauſe the ſame effects as gunpowder does in mines. See Fromond. Meteorolog. lib. iv. cap. 2. where thoſe authors treat of theſe matters at large. I now return to Lucretius, who, in order to give a right explication of earthquakes, firſt ſuppoſes ſeveral things, which I think no man ever doubted: and firſt, ſays he, in eight verſes, you may ſuppoſe the earth to be full of hollows, that the caverns are full of vapours, into which the wind can eaſily ruſh: in the next place, that there are many lakes, many broad pools of water, and rivers too, rolling their waves within the bowels of the earth. Theſe things being granted: the poet aſſigns the firſt cauſe of earthquakes to the earth itſelf; and in eight verſes more tells us, that one cauſe of earthquakes may be this: when any of thoſe ſubterranean cavities are decayed by length of time; and it is certain they will decay: the upper part of the hollow will fall down: nor can it be doubted, but that a trembling of the earth muſt be cauſed by ſuch a concuſſion, ſince we ſee, that when coaches or waggons go along the ſtreets, the houſes on either ſide are ſhaken.

This was the opinion of Anaximenes, who in Seneca. lib. vi. ſays, that the parts of the earth, which moiſture has looſened, or ſubterranean fire undermined and conſumed, or the violence of wind has ſhaken, or that the length of time has brought to moulder and decay, may fall in. But Ariſtotle and Plutarch ſay, that Anaximenes held, that theſe fallings in of the earth could not proceed, except from dryneſs and moiſture. Epicurus in Seneca lib. vi. cap 20. ſpeaks of this firſt cauſe of earthquakes, in theſe words: "Fortaſſe aliqua parte terræ ſubito decidente terra ipſa percutitur, & inde motum capit Fortaſſe calida vis ſpiritûs in ignem verſa & fulmini ſimilis cum magna ſtrage obſtantium fertur." Perhaps, ſays he, ſome part of the earth falling down on a ſudden, the earth itſelf is ſhaken, and thence is cauſed the motion. perhaps in ſome parts the earth is ſupported as with pillars, which being decayed, and giving way, the ſuperimpoſed weight trembles: perhaps the hot force of wind is changed into fire, and borne about like lightning, makes a wide deſtruction of all things that reſiſt its paſſage. And in the ſame author, lib. vi. cap 9. Anaxagoras holds almoſt a like cauſe of earthquakes, which, he ſays, are the effect of lightning.

Ver 553. Seneca, Nat Quæſt. lib. vi. cap. 22. "Si quando magna onera per vicos vehiculorum plurium tracta ſunt, (perhaps per vicos vehiculorum plurium ordine tracta ſunt) & rotæ majori niſu in ſalebras inciderunt, terram concuti ſentes. Aſclepiodorus tradit, cum petra è latere montis abrupta cecidiſſet, ædificia vicina tremore collapſa. Idem ſub terris fieri poteſt, ut ex his, quæ impendent, rupibus aliqua reſoluta magno pondere & ſono in ſubjacentem cavernam cadat, eo vehementius, quo aut plus ponderis habuit, aut venit altius: & ſic commovetur omne tectum cavatæ vallis." When heavy loads are drawn in carts along the ſtreets; if the wheels happen to plunge into a hole, you will feel the ground tremble. Aſclepiodorus relates, that a rock, breaking off from the ſide of a mountain, ſhook down the neighbouring buildings as it fell. The ſame thing may happen in the hollows under ground: many of the impending rocks break off with mighty weight and noiſe, and tumble down into the ſubjacent cavern, and that too with more violence and impetuoſity, the greater the weight is, and the higher it falls; then all the bulk of earth, that covers that cavity, will be moved and tremble.

Ver. 557 Another cauſe of earthquakes, and which he aſcribes to water, is contained in theſe five verſes, to this effect. If a vaſt quantity of

earth fall down into a great pool of water, it will cauſe an agitation in that water, and that agitation may cauſe a ſtaggering or reeling of the earth, that contains that water, as in a veſſel.

Democritus, as Ariſtotle, lib. ii. " de rebus ſuperis" witneſſes, was of opinion, that the earth, ſince it abounds with water, and admits into its bowels a great quantity of rain, is moved and ſhaken by it: for, becauſe the cavities cannot contain all the water, the earth ſwells and increaſes with it: and thus the water, forcing its way into the earth, cauſes an earthquake: and the earth growing dry, and attracting the water from the places, that are full, into thoſe that are empty, is moved by the water, and changes place, and glides from one into another. Thus Epicurus in Seneca, lib. vi. cap. 20. " Ergo, ut ait Epicurus, poteſt terram movere aqua, ſipartes aliquas eluit & abraſit, quibus deſiit poſſe excavatis ſuſtineri, quod integris ſerebatur " Thus in A. Gellius, lib. ii. cap 28. the poets feign, that Neptune, that is, water, is the mover and ſhaker of the earth: to this likewiſe may be referred the opinion of Thales, that the earth is ſupported by water, and ſometimes runs adrift, and floats, like a ſhip, got looſe from her anchor. And indeed, in earthquakes, when the earth opens and gapes, water for the moſt parts breaks out, almoſt in the ſame manner, as it works itſelf into a ſhip that has ſprung a leak. But Lucretius believes that the earth ſhakes, by reaſon of huge pieces of it, that break off and fall down into a cavern of water: as, for example, a veſſel full of water cannot remain without motion, if the water it contains fluctuate; till that water ceaſes its agitation, and be at reſt. Thus he ſeems to ſpeak after the opinion of Thales, who held that the earth floats in water.

Ver. 562. In theſe twenty verſes, he propoſes the wind as a third cauſe of earthquakes, and ſays, that the wind, ruſhing into the caverns of the earth, makes it incline, and, as it were, drives it forward: but ſince the blaſt is not continued on [for if it were, the whole earth would fly before the driving violence], and ſince, ſometimes meeting with oppoſition, it is repelled, and goes back, the earth, after ſeveral fluctuating motions, ſettles again in its ancient former ſeat. But by this fluctuation of the earth, buildings are ſhaken and tumbled to the ground.

To this ſort of earthquake may be referred, that amazing prodigy, which Pliny, from the authority of the Thuſcan books, relates of two mountains in the country of Modena, which Lucius Marcius and Sextus Julius being conſuls, met, and butted againſt each other, making a dreadful noiſe, and caſting out ſmoke and fire into the air, and then retiring: he adds, that this was ſeen by many Romans from the Æmilian way. " Namque montes duo inter ſe concurrerunt crepitu magno aſſultantes; inter eos flamma fumoque in cœlum exeunte interdiu; ſpectante è viâ Æmiliâ magnâ equitum Romanorum familiarumque et viatorum multitudine," Plin. lib. ii. cap. 83. Moreover, the ſort of earthquake which Lucretius here ſpeaks of, is that which they call " Epiclintes," or " inclinator;" and is compared to the nodding motion of a veſſel in the water. But Ariſtotle allows only two ſorts of earthquakes, which he calls a trembling and a pulſion; the trembling is compared to the ſhaking that ſeizes us in a fit of an ague; the pulſion to the beating of the arteries. Now, becauſe this laſt ſeems to be a ſucceſſion of the earth while it is ſhaken, or an intermitting and perpendicular motion: and becauſe the trembling ſeems to be without intermiſſion, and a lateral or ſidelong motion, therefore ſome bethought themſelves of this ſort of earthquake, which they call an inclination, while the earth inclines and nods towards the horizon. This inclining earthquake is mentioned by Milton in Paradiſe Loſt, Book vi. As if, ſays he,

Winds under ground, or waters forcing way
Side long, had puſh'd a mountain from his ſeat
Half ſunk with all his pines.——

Ver. 572. To this purpoſe, Ovid ſpeaking of the wind, ſays,

His quoque non paſſim mundi fabricator habendum
Aëra permiſit. Vix nunc obſiſtitur illis,
Cum ſua quiſque regant diverſo flamina tractu,
Quin lanient mundum. *Met.* i. ver. 57.

Nor were theſe bluſt'ring breth'ren left at large,
O'er ſeas and ſhores their fury to diſcharge:
Bound as they are, and circumſcrib'd in place,
They rend the world, reſiſtleſs where they paſs.
Dryd.

And Virgil yet more cloſely to the ſenſe of Lucretius, ſays, that Æolus

Luctantes ventos, tempeſtateſque ſonoras
Imperio premit, ac vinclis et carcere frænat.
Æn. i. ver. 57.

Ni faciat, mare ac terras, cœlumq. profundum
Quippe ferant rapidi ſecum, verrantque per auras.
Ver. 63.

With pow'r imperial curbs the ſtruggling winds,
And ſounding tempeſts in dark priſons binds:
Which did he not, their unreſiſted ſway
Would ſweep the world before them in their way: [roll,
Earth, air, and ſeas, through empty ſpace would
And heav'n would fly before the driving ſoul.
Dryd.

Ver. 582. In theſe twenty-one verſes, he ſays, that this inclination and fluctuating motion of the earth is often attended with a violent beating and ſucceſſion of it; for if the wind break through the caverns, and cleave the earth, then cities, iſlands, &c. together with all their inhabitants, are ingulfed and ſwallowed up in the hideous chaſm; but if the wind do not break through them, there is then only a trembling, or as it were, a ſhuddering of the earth, which is cauſed by the chilling wind that is diffuſed through all its pores. Now, though there ſeem but little or no danger to be apprehended from a bare tremb-

ling of the earth only, yet it may be joined with the other ſorts of earthquakes: Nor can any one be certain but that the trembling may be often repeated, and that too with ſtill more and more violence, ſo as to overthrow the buildings, and make the earth gape a little. Seneca ſays, that Epicurus held wind to be the chief cauſe of earthquakes, "Nullam tamen placet Epicuro cauſam eſſe majorem, quam ſpiritum." Nat. Quæſt. lib. vi. cap. 20.

Ver. 587. *Ægæ.*] The name of ſeveral towns. I. In Macedonia, not far from the river Halyacmon, and where the kings of Macedonia were buried, Plin. lib. iv. cap. 10. II. In Cilicia, on the banks of the river Pyramus, now Malmiſtra, Plin. lib. v. cap. 27. III. In Æolia, Plin. lib. v. cap. 30. IV. In Eubœa, now called Negroponte, and from which Strabo ſays the Ægæan ſea took its name. V. In Lydia. VI. In Ætolia. VII. In Locris, Steph. But Lucretius ſpeaks of Ægæ in Achaia, and which is commonly called Ægira, Plin. lib. iv. cap. 5. And the earthquake which the poet here mentions is perhaps the ſame of which Ariſtotle, lib. ii. Meteor. cap. 8. and ſome other of the ancients make mention, and ſay, that two great towns, not far from Ægira, and whoſe names were Helice and Bura, were ſwallowed up by an earthquake. Of which Ovid. Metam. xv. ver. 293.

Si quæras Helicen et Buran, Achaïdas urbes,
Invenies ſub aquis; et adhuc oſtendere nautæ
Inclinata ſolent cum mœnibus oppida merſis.

Phœnician towns.] Lucretius mentions Sidon, a city of Phœnicia, one of the provinces of Syria, and which was built by the Tyrians, who at firſt inhabited the midſt of the country, where, being afflicted with continual earthquakes, they left their abodes, and built a new city near the ſeaſhore, and called it Sidon, from the great plenty of fiſh with which the ſea abounded. For Sidon in the Phœnician language ſignifies a fiſh. "Tyriorum gens condita à Phœnicibus fuit, terræ motu vexati, relicto patriæ ſolo, Aſſyrium ſtagnum primo, mox mari proximum littus incoluerunt, condita ibi urbe, quam à piſcium ubertate Sidona apellaverunt. Nam piſcem Phœnices Sidon vocant." Juſtin, lib. xviii. And what Lucretius ſays of this town, is confirmed by Poſſidonius, who in Strabo writes, that a city, ſituate above Sidon, was totally ſwallowed up by an earthquake, and that near half of Sidon itſelf was thrown down. But notwithſtanding theſe authorities, Faber believes that ſome other earthquake is meant in this place. For, ſays he, that paſſage of Juſtin is taken erroneouſly; for Juſtin is not ſpeaking of that earthquake which threw down the town of Sidon, but of that which did great miſchief to the Phœnicians, not on the coaſt where Sidon ſtood, but in the country of the Idumeans; for the Phœnicians of Juſtin are the Idumeans: and Herodotus, Pliny, and Dionyſius the African, witneſs, that they were originally inhabitants of the coaſt of the Red Sea; to which he adds, that by the Stagnum Aſſyrium of Juſtin is meant that very ſea or lake which in Holy Scripture is called the Lake of Genneſareth. Sidon is the port in the Mediterranean now called Sayde.

Ver. 589. Pliny, lib. ii. cap. 80. mentions twelve cities of Aſia that were deſtroyed by an earthquake all in one night. The like happened not many years ago to the city of San Severo in Apulia, now Puglia: and part of Raguſa was lately ſwallowed up.

Ver. 590. If this verſe were left out, the ſenſe of Lucretius would not be interrupted nor imperfect, therefore Creech might have left it where he found it. Cowley, David.

The terror of their brows, ſo rough e'er while,
Sunk down into the dimples of a ſmile.

Ver. 596. Lucret. "Diſpertitur ut horror." Which Celſus, lib. iii. cap. 3. ſpeaking of fevers, explains, interpreting horror to be a trembling of the whole body. "Horrorem voco," ſays he, "ubi totum corpus intremit."

Ver. 603. In theſe ſix verſes, he inſults over thoſe who believe the world eternal and immortal, even though they perceive the earth, that great part of it, to be thus ſhaken and impaired; nay, though they themſelves fear the diſſolution and ruin of the whole frame.

Ver. 609. Since ſo many and ſo great rivers are continually diſcharging their waters into the ſea, why does it not increaſe and overflow its bounds? Lucretius anſwers, in eleven verſes, I. That the gulf into which the rivers diſembogue their ſtreams is ſo vaſt, that all their waters, together with the rain, ſnow, hail, &c. ſeem not to add one drop to the ſea. II. In nine verſes, that the ſun drinks up a great deal of its moiſture. III. In five verſes, that the winds bruſh off and carry away no ſmall quantity. IV. In four verſes, that the clouds take ſome away. And, V. In eight verſes, that as the rivers run into the ſea, ſo they are reconveyed from thence through the hidden veins of the earth back to their own ſprings. Thus the waters roll in a revolving courſe, and therefore no wonder the ſea does not increaſe.

Thus too the author of Eccleſiaſ. ſolves this queſtion: "Omnia flumina intrant in mare, et mare non redundat, quoniam ad locum, unde exeunt flumina revertuntur, ut iterum fluant." Eccl. i. And for this reaſon Homer and the other poets call Oceanus, not only the origin and parent of all ſeas, rivers, fountains, lakes, &c. but the gulf and tartarus of them all likewiſe: For all rivers flow into that abyſs, and from thence again derive their origin.

Ver. 620. This ſecond reaſon why the ſea does not increaſe, the poet has given already, book v. ver. 300.

Ver. 629. This reaſon too we have ſeen before in book v. ver. 302. and ver. 432.

Ver. 638. This laſt and true reaſon why the ſea does not increaſe, the poet has likewiſe given already, book v. ver. 306.

Ver. 642. This and the three following verſes are repeated from book v. ver. 305. Conſult the place and notes upon it.

Ver. 644. *Meanders.*] Of this we have ſpoken at large on the note on book v. ver. 308.

Ver. 646. Lucretius having, as he thinks, ſufficiently explained the cauſes of meteors, of earthquakes, and of ſome of the phenomenons of the ſea, he now endeavours to ſhow the cauſes of the other wonders of nature, which he ſuſpects may create a belief of the gods, and of Divine Providence. And, firſt, in thirty-nine verſes, he diſputes of the fires of Mount Ætna, which, ſays he, though they ſometimes burſt out with great violence, and lay waſte the iſland of Sicily, ought not, nevertheleſs, ſo much to ſurpriſe us, as to make us fooliſhly believe they ſurpaſs the ſtrength of nature. Some may ſay that the flames are vaſt indeed, and their force wonderful, becauſe they ſee no other like them; but in many things we are deceived by judging over-haſtily of them. If we contemplate the infinite univerſe, there is nothing that can be ſaid to be great, nothing that deſerves our admiration: For, from that univerſe may flow together, on a ſudden, an infinite quantity of the ſeeds of fire, or of wind, and they, gathering together in a body in Mount Ætna, or in any other mountain, may aſſume ſtrength and violence, may cauſe earthquakes, may at length burſt out, and ſcatter far and wide, ſmoke, flame, aſhes, and coals of fire. But theſe eruptions are, as it were, the diſeaſes and convulſions of this world: And as the ſeeds of diſeaſes may be derived, and flow out of this world into man [for we are often in fevers, our teeth ache, &c.], ſo may they likewiſe out of the univerſe into this world: For, to make a compariſon, a man is, in reſpect to this world, what the world is in reſpect to the univerſe.

Ver. 646. *Ætna.*] Of Ætna, the greateſt mountain of Sicily, and now called Mongibello, beſides what is contained in this diſputation, and the notes upon it, ſee book i. ver. 742.

Ver. 650. *Sicily.*] An iſland of Italy, and the largeſt of all the iſlands in the Mediterranean ſea; being, according to the modern geographers, at leaſt 700 miles in compaſs. See the reſt, book i. ver. 737.

Ver. 654. That Mount Ætna throws out fire, flames, and aſhes, almoſt all authors witneſs; but chiefly St. Auſtin, lib. iii. de Civitate Dei. cap. 31. in theſe words: "Legimus apud eos, Ætneis ignibus ab ipſo montis vertice uſque ad littus proximum decurrentibus ita ferviſſe mare, ut rupes exurerentur, et pices navium ſolverentur. Hoc utique non leviter noxium fuit, quamvis incredibiliter mirum. Eodem rurſus ignium æſtu tanta vi favillæ ſcripſerunt oppletam eſſe Siciliam, ut Catanenſis urbis tecta obruta, et oppreſſa diruerint, qua calamitate permoti miſericorditer ejuſdem anni tributum ei relaxavêre Romani." We read, ſays he, that Mount Ætna has caſt out fires with ſuch violence, that they have flown even to the ſea-ſide, heated the waters of the ſea, burnt the rocks, and melted the pitch of the ſhips. This; though incredibly wonderful, muſt have done much damage. They write beſides, that the country round is ſometimes overwhelmed with the vaſt quantity of cinders it throws out; and that the roofs of the houſes at Catana [a city ten miles diſtant from Ætna] were broken down by the weight of the cinders that fell upon them, inſomuch that the Romans, commiſerating the condition of the inhabitants, forgave them the tribute of that year. Thus, too, the mountains, Veſuvius in Naples, Hecla in Iſland, and Quit in Peru, ſometimes eject coals and flames. Cicero ſays that Mount Ætna has caſt out ſo much ſmoke among the flames, as has darkened the country round to that degree, that the inhabitants, for two days together, could not know one another. "Nos autem tenebras cogitemus tantas, quantæ quondam eruptione Ætnæorum ignium finitimas regiones obſcuraviſſe dicuntur, ut per biduum nemo hominem homo agnoſceret," lib. ii. de Naturâ Deorum. And Pliny the younger witneſſes, in his epiſtles, that his uncle, the great Pliny, was ſuffocated by the ſmoke, ſtones, and cinders that Veſuvius had thrown out. Appian, lib. v. de Bello Civili, adds horrid noiſe; and Lucretius takes notice of all theſe things, and more, as we ſhall ſee by and by.

Ver. 666. Lucret.

Exiſtit ſacer ignis, et urit corpore ſerpens
Quamcunque arripuit partem, repitque per artus.

Where the poet deſcribes the diſeaſe which the Latins call "ſacer ignis," the Greeks Ἐρυσίπελας, and we, St. Anthony's fire. Celſus, lib. v. cap. 20. calls it an ulcerous diſeaſe. "Sacer ignis," ſays he, "malis ulceribus annumerari debet." Virgil. Georg. iii. ver. 556.

——Contactos artus ſacer ignis edebat.

But of this diſeaſe, ſee at large Celſus in the place above cited, and Paulus Ægineta, lib. iv. cap. 20.

Ver. 674. Of the fiery eruptions of Ætna, Virgil, Æneid, iii. ver. 571.

Interdumque atram prorumpit ad æthera nubem,
Turbine fumantem piceo, et candente favilla:
Attollitque globos flammarum, et ſydera lambit:
Interdum ſcopulos avulſaque viſcera montis
Erigit eructans, liquefactaque ſaxa ſub auras
Cum gemitu glomerat, fundoq. exæſtuat imo.

Thus rendered by Dryden:

By turns, a pitchy cloud ſhe rolls on high,
By turns, hot embers from her entrails fly,
And flakes of mounting flames that lick the ſky:
Oft from her bowels maſſy rocks are thrown,
And, ſhiver'd by the force, come piecemeal down:
Oft liquid lakes of burning ſulphur flow;
Fed from the fiery ſprings that boil below.

But of theſe eruptions, ſee at large Cluverius, de Siciliâ, lib. i. cap. 2.

Ver. 685. In theſe thirty verſes, the poet explains the reaſon why the flames that are gathered together in the cavities of Mount Ætna burſt out with ſo great violence. He ſays that the eruption is cauſed by the force of wind; that the

ſeeds of that wind come from the infinite univerſe, and, gathering together in the mountain Ætna, drive out either the flames that lurk within the bowels of the mountain, or thoſe they ſtrike and force out from the very ſtones of it; or elſe, that wind ruſhes in at the hollows that are at the foot of the mountain, and whoſe entrances are open, when the ebbing ſea leaves the ſhore (for the ſea waſhes the foot of the mountain) and blows out the flames. Laſtly, He ſays, that winds are bred in the very hollows of the mountain. And then he tells us, he gives many reaſons, that among them one at leaſt may be true and certain.

By the wind that rages within the caverns of Ætna, may be underſtood the ſulphurous and bituminous exhalations which are continually generated and agitated within thoſe hollows, and which, when they can no longer, by reaſon of their great quantity, be contained within them, break their priſon, and burſt out in flames. Thus Trogus in Servius, on the third Æneid: "Nam Sicilia terra cavernoſa et fiſtuloſa: Quo fit, ut ventorum flatibus pateat; unde ignis concipitur: Intrinſecùs ſulphur habet et bitumen; in quæ ubi ventus per ſpiramenta cavernarum incubuit, diu luctatus, ignem concipit: Sic Ætnæ durat incendium.

Ver. 689. There are three opinions concerning the wind. I. Ariſtotle, Meteor. lib. ii. and Theophraſtus, as Olympiodorus, in 1ſt and 2nd Meteor. witneſſes, held the matter of winds to be an exhalation ariſing out of the cavities of the earth. And this opinion moſt of the philoſophers, ſince them, have followed. II. Others aſcribe the origin of winds to the water; as Metrodorus, who, in Plutarch de Placit. 37. defines wind to be an ebullition, or violent ſurging of a watery vapour; and Vitruvius, who, lib. iii. cap. 6. calls the wind, "Aëris fluens unda, cum incertâ motûs redundantiâ. III. And others held the wind to be only an agitation of the air. Of this opinion was Hippocrates, lib. i. de flatibus, where he calls it a violent flux and motion of the air. And with him agree Animaxander in Plutarch 2. de Placit. Philoſoph. 7. Anaxagoras in Laërtius, Seneca, lib. v. cap. 1. and 6. and Lucretius in this place. But the opinion of Ariſtotle is chiefly followed. And it is generally held, that in thoſe concavities of the earth, when the exhalations, which Seneca calls ſubterranean clouds, overcharge the place, the moiſt vapours turn into water, and the dry into wind; and theſe are the ſecret treaſures out of which God is ſaid in the ſcripture to bring them. This too is what the poets meant when they feigned that Æolus kept the winds impriſoned in a vaſt cave. Thus Virgil, Æn. i. ver. 56.

—— Hic vaſto rex Æolus antro
Luctantes ventos, tempeſtateſque ſonoras
Imperio premit, ac vinclis et carcere frænat.

Upon which Seneca ſeems too critical, when he ſays, "non intellexit, nec id quod clauſum eſt, eſſe adhuc ventum, nec id quod ventus eſt, poſſe claudi: nam quod in clauſo eſt, quieſcit, et aëris ſtatio eſt: omnis in fuga ventus eſt." For though it get not out, it is wind as ſoon as it ſtirs within, and attempts to do ſo. Juvenal, in his fifth ſatire, deſcribes very well the ſouth wind in one of theſe dens:

—— Dum ſe continet Auſter,
Dum ſedit, et ſiccat madidas in carcere pennas.

See more above in the note on ver. 452. where we have already ſpoken of the cauſe of wind.

Ver. 694. Milton in the firſt book of Paradiſe Loſt:

—— As when the force
Of ſubterranean winds tranſports a hill
Torn from Pelorus, or the ſhatter'd ſide
Of thund'ring Ætna, whoſe combuſtible
And fuel'd entrails thence conceiving fire,
Sublim'd with min'ral fury, aid the winds,
And leave a ſinged bottom all involv'd
In ſtench and ſmoke.——

Ver. 696. In theſe ſix verſes, the poet ſubjoins another peculiar cauſe why Ætna vomits flame; and ſays, that the ſea waſhes the foot of the mountain; and entering into the cavities where the fire is conceived, the flames yield to the driving flood, which compels them to belch themſelves out at the breathing holes on the ſummit of the mountain. Our tranſlator has totally omitted the two laſt verſes of this argument, which in the original are as follows:

In ſummo ſunt ventigeni crateres, ut ipſi
Nominitant, nos quas fauces perhibemus et ora.

i. e. On the top of the mountain there are certain "crateres," for ſo the Greeks call them, baſons or ciſterns, but we, the Latins, call them "fauces" and "ora," mouths and jaws. Now the apertures of Ætna were called "crateres," becauſe through them winds are almoſt continually iſſuing out of the bowels of the mountain. Of this no man can doubt, if any credit may be given to Strabo, who, in lib. vi. has theſe words: Οὔτε γὰρ προσίσον εἶναι τὸν τόπον, ὡϑ' ὁραῖον· Εἰκάζειν τὲ μηδὲ καταῤῥιφϑῆναι τι δύνασϑαι ἐκεῖσε, ὑπὸ τῆς ἀντιπνοίας τῶν ἔξ βάϑους ἀνέμων, καὶ τῆς ϑερμότητος, ἣν προσπαντῶν ἔυλογον πόῤῥωϑεν, πρὶν ἢ τῷ στομίῳ τῷ κρατῆρος προσελάσαι· εἰ δὲ καταῤῥιφϑείη, φϑάνοι ἂν διαφθαρεὶς πρὶν ἀναῤῥιφϑῆναι πάλιν, ὁποῖον παρειλήφϑη πρότερον· τὰ μὲν ὧν ἐκλείπων, ποῖ τὰ πνεύματα καὶ τὸ πῦρ, ἐκλειπόντος πότε τῆς ὕλης, οὐκ ἄλογον· ὃ μὲν ἐπὶ τοσοῦτόν γε, ὅσ τε ἀντὶ τῆς τοσαύτης βίας, ἐφικτὸν ἀνθρώπῳ γενέσϑαι τὸν πλησιασμόν· that is to ſay, for that place can neither be approached, nor look upon, and that he conjectured even that nothing could be thrown in it, becauſe of the oppoſite blaſt of the winds and heat that come from the bottom; which, it is probable, comes from far before it approaches the mouth of the crater: But if any thing were caſt in, the figure it had when injected, would be changed long before it was thrown out again: Beſides, that it is not abſurd to ſay, that if the matter for ſome time fail, the wind and fireceaſe for ſome time likewiſe; but that

that intermiſſion is not ſo great that any man can approach near and place himſelf againſt that force. Apuleius likewiſe retains the Greek word, and calls the mouths or apertures by which flames, ſmoke, ſtones, coals of fire, &c. belch out of this mountain, "crateres:" "Ex Ætnæ cervicibus quondam effuſis crateribus per declivia, incendio divino, torrentis vice, flammarum flumina concurrerunt." Apul. lib. de Mundo, page 73. Now what Lucretius ſays, in theſe two verſes, is, that the wind enters into the caverns, not only at the apertures in the foot of the mountain, but is generated in the mouths and breathing holes on the top of it. Nor, indeed, is this in the leaſt improbable, ſince nothing is more certain than that air ruſhes on all ſides to flame, and that wind is thence generated. Thus Creech himſelf upon this paſſage.

Ver. 702. In theſe thirteen verſes, the poet makes an excuſe for his having aſſigned ſo many cauſes: but, ſays he, this is the ſafeſt way of proceeding in doubtful things; and among them all, ſome one may, perhaps, ſatisfy the reader: and, laſtly, he confirms this method by a ſimilitude. We may obſerve, that Lucretius takes no notice of the ſnows that are continually lying on the top of this mountain. It is, nevertheleſs, very extraordinary, that ſnow and fire ſhould inhabit ſo near each other; and many of the ancients mention it as ſuch; particularly Pindar, Od. i. Pyth. Solinus, cap. xi. and Claudian, who, in 1. Rapt. Proſerp. ſays,

Sed quamvis nimio fervens exuberet æſtu,
Scit nivibus ſervare fidem; pariterque favillis
Dureſcit glacies, tanti ſecura vaporis,
Arcano defenſa gelu, fumoque fideli
Lambit contiguas innoxia flamma pruinas.

Thus too Silius Italicus, lib. 14.

Summo cana jugo cohibet, mirabile dictu,
Vicinam flammis glaciem, æternoque rigore
Ardentes horrent ſcopuli; ſtat vertice celſi
Collis hyems, callidaque nivem tegit atra favilla.

And this deſcription of the neighbourhood of fire and ſnow upon Mount Ætna, Cowley has imitated from thoſe poets, in his Pindaric Ode to Hobbes.

So contraries on Ætna's top conſpire;
Here hoary froſts, and by them breaks out fire:
A ſecure peace the faithful neighbours keep:
Th' embolden'd ſnow next to the flame does ſleep.

Tacitus ſays the ſame of Mount Libanus, and uſes the like expreſſion. "Præcipuum," ſays he, "montium Libanum, mirum dictu, tantos inter ardores opacum, fidumque nivibus;" ſhady in the midſt of ſuch great heats, and faithful to the ſnow: but theſe expreſſions are too poetical for proſe, and become the poets better than the hiſtorian. See likewiſe Seneca, Epiſt. 79.

Ver. 715. From the ſummer ſolſtice to the autumnal equinox, the river Nile then ſwells to ſuch a degree, that it overflows the country of Egypt, and, covering the fields with a ſlimy mud, manures and renders them fruitful, though without it they would be barren and produce nothing. A manifeſt and wonderful monument of Divine Providence! "Ægypti incolæ aquarum beneficia percipientes, aquarum colunt," ſays Julius Firmicus de Err. Prof. Rel. The Egyptians, perceiving the great benefits of this inundation, worſhip the water. Lucretius, according to his cuſtom, aſſigns natural cauſes for the overflowing of this river: and firſt, in ten verſes, ſays, that the Eteſian winds, which blow from the north, repel and drive back the ſtream of the river, that comes from the ſouth, and are the cauſe that it fills up its channel, and overflows its banks. Now if it ſhould be objected, that the Eteſian wind, for winds are light bodies, is too weak to ſtop ſo great a weight of waters, he adds, in five verſes, that the ſands, which the ſea, being agitated by thoſe winds, caſts into the mouths of the Nile, choke them up, and thus cauſe the inundation. To theſe he adds two other cauſes: the rains that fall at the ſources of the river, in three verſes, and the melting of the ſnows, in two verſes. For all theſe cauſes conſpiring, will make the Nile, or any other river, overflow.

Thales Mileſius held the firſt of theſe to be the true cauſe of the overflowing of the Nile; nor does Philo the Jew, lib. 1. de vit. Moſ. nor Pliny, lib. 5. cap. 9. diſapprove of his opinion. Euthymenes, likewiſe in Seneca, l. 4. Nat. Quæſt. c. 2. aſcribes the cauſe of the overflowing of this river to the Eteſian winds; for he believes that the Nile increaſes by means of the waters of the Atlantic Sea, which the Eteſias drive into the channel of the river. Theſe are his words: "Inde [from the Atlantic Sea] enim Nilus fluit major, quamdiu Eteſiæ tempus obſervant; tum enim ejicitur mare obſtantibus ventis: cum reſederint, pelagus conquieſcit, minorque diſcedenti inde vis Nilo eſt; Cæterum dulcis mari ſapor eſt, et ſimiles Niloticæ belluæ." But this reaſon is good for nothing. For ſometimes the Nile increaſes before the Eteſias blow, and decreaſes even while they are yet blowing: nay, though they blow exactly contrary to the ſtream, the Nile nevertheleſs runs into the ſea. Beſides, why does not the like happen to other rivers that run againſt the Eteſian winds? But the truth is, thoſe winds are unable to keep back, much leſs to repel the current of that river.

In ſummer.] For the Nile never begins to ſwell till after the ſun has entered into Cancer: which is about the eleventh of June. Thus Manilius, lib. iii. ver. 630.

——— Niluſque tumeſcit in arva,
Hic rerum ſtatus eſt, Cancri cum ſidere Phœbus
Solſtitium facit, et ſummo verſatur Olympo.

The reaſon of which we will give by and by.

The Nile o'erflows, when with exalted ray,
In ſummer ſolſtice Phœbus bears the day
Through Cancer's ſign, and drives the higheſt way.

Ver. 718. Ariſtotle, lib. 2. de rebus ſuperis: οἵδε Ἐτησίαι πνέουσι μετὰ τροπάς, καὶ κυνὸς ἐπιτολήν· The Eteſians blow after the ſolſtice, and the riſing of the Dog-ſtar: and this wind continues generally for eleven or twelve days. They are called Eteſias, from the Greek word ἔτος, which ſignifies a year, as who ſhould ſay annual, becauſe they blow conſtantly at a certain ſeaſon of the year: Strabo calls them "ſubſolanos," eaſtern winds; but Pliny, lib. ii. cap. 47. "Poſt biduum exortus Caniculæ Aquilones conſtantius perflant diebus quadraginta, quos Eteſias vocant." When the Dog-ſtar has been two days riſen, the northern winds, called Eteſias, blow conſtantly for forty days together. And Lucretius himſelf ſays, ver. 720. The Eteſias bear the northern vapours; which ſhows the miſtake of Fayus, who takes it for a ſouth wind.

Ver. 722. Many of the ancients deſpaired, that the ſource of the Nile would ever be diſcovered: Hence Ammianus Marcel. lib. 22 "Origines fontium Nili, ſicut adhuc factum eſt, poſteræ quoque ignorabunt ætates:" Hence too thoſe complaints of the poets, Tibull. lib. 1.

Nile Pater, quanam poſſum te dicere cauſa,
Aut quibus in terris occuluiſſe caput?

Claudianus Epigr.

Se certo de fonte cadens, qui ſemper inani
Quærendus ratione licet; nec contigit ulli
Hoc vidiſſe caput: fertur ſine teſte creatus.

And Lucan, lib. 10.

Arcanum Natura caput non prodidit ulli,
Nec licuit populis parvum te, Nile, videre.

And again,

——— Ubicunque videris,
Quæreris, et nulli contingit gloria genti
Ut Nilo ſit læta ſuo———

Hence Homer calls the Nile διὸς πεδάμοιο, the river ſent down from heaven. And Diodorus, lib. 1. tells us, that the inhabitants of Meroe call it in their language "aſtapoda," that is to ſay, dark or obſcure. Herodotus, after he had travelled four months in ſearch of the fountain of this river, ſtopped in his journey, being told that it flowed from beyond the iſland of Mero. Ptolemy Philadelphus ſent perſons on purpoſe to diſcover the ſource of it, but without effect, as Strabo witneſſes, lib. 17. and Lucan ſays, that Alexander the Great ſent on the ſame errand, but his meſſengers had the like ſucceſs. Pliny, lib. vi. c. 6. ſays, that Nero ſent two centurions, and that when they came back, he heard them ſay: "Ad ulteriora quidem pervenimus, ad immenſas plaudes, quarum exitum nec incolæ noverant, nec ſuperare quiſquam poteſt." The ſacred authors believed the Nile to ariſe in the terreſtrial paradiſe. Pomponius Mela thinks it riſes at the Antipodes. Euthymenes in Seneca, lib. iv. c. 2. and in Plutarch 4. Placit. 1. brings it out of the Atlantic Sea: Pliny from a mountain of the lower Mauritania: and Ptolemy from two lakes beyond the Equinoxial Line. And Voſſius, de Ætat. Mund. and in Melam. obſerves, that before the diſcovery of the Indian Ocean, many of the ancients were ſo ignorant as to believe, that the Nile derived its ſource from the utmoſt eaſt, even from India itſelf. With which error, not to mention many others of the ancients, Virgil ſeems to have been tainted, as appears, Georg. iv. ver. 290.

Quaque pharetratæ vicinia Perſidis urget,
Et viridem Ægyptum nigra fœcundat arena,
Et diverſa ruens ſeptem diſcurrit in ora,
Uſque coloratis amnis devexus ab Indis.

Thus various were the opinions of the ancients, and none of them true; for the Nile is now known to riſe on the ſouth of a great lake called Zambre, at the foot of the mountains, called the Mountains of the Moon, Lunæ Montes, which are in the province of Guyoma, a country inhabited by the Æthiopian Abyſſines. And one of the titles of Preſter John is, King of Guyoma, where the Nile begins: but of this the ancients were totally ignorant, inſomuch that it was reckoned among the famous properties of that river, that it concealed its ſpring: "Fontium qui celat origines." And indeed the Nile is incomparably the moſt famous river in the whole world, whether we conſider the largeneſs of it, and the length of its courſe, for it runs about 900 German miles, or the things that it produces, and its miraculous overflowing, and returning again within its banks. Seneca, lib. iv. Nat. Quæſt. cap. 11. ſays, it brings both water and earth too, to the thirſty and ſandy ſoil: for flowing thick and troubled, it leaves, as it were, all its lees in the clefts of the parched and gaping ground, and ſpreads the dry places with the fatneſs it brings with it; and thus does good to the country two ways, both by overflowing and manuring it: for this reaſon Herodotus calls it Ἐργάϊκον, the huſbandman. Tibullus.

Te propter nullos tellus tua poſtulat imbres;
Arida nec pluvio ſupplicat herba Jovi.

And Lucan ſays that Egypt has no need of Jupiter:

——— Nil indiga mercis
Aut Jovis; in ſolo tanta eſt fiducio Nilo.

And one in Athenæus yet more bold, calls it the Egyptian Jupiter, Αἰγύπτιος Ζεὺς Νεῖλος· Nay, the Egyptians themſelves called it ἀνῖμιμμας τῷ οὐρανῷ, the river that emulates and contends with heaven; and even in the Scripture itſelf it is called abſolutely Nachal Miſraim, the river of Egypt: from whence the word Nile may not unnaturally be derived, Nahal, Naal, Neel, Neil; as Bahal, Baal, Beel, Bel, βῆλος· And Pomponius Mela, lib. v. cap. 10. reports that the fountain of Nilus is called Nachal by the Ethiopians. The learned Maſſacus, upon Plutarch de Fluv. and Mont. nominibus, has collected the ſeveral names that were given by the ancients to this river. It was firſt of all called Oceanus, or (but as he ſays, bar-

barously) Oceames: then Aëtos, or Aquila, and Melas, from its depth or profundity, because all deep waters seem black; or from Melas, the son of Neptune: afterwards Ægyptus, either from Ægyptus, the son of Belus, or of Vulcan and Leucippes, who threw himself into it; or παρὰ τὸ αἴγας πιάνειν, from fattening of goats; from whence likewise the whole country of Egypt seems to be so named. The Hebrews call it Gehon, and Schior, the last of which signifies black, or troublous, and from hence perhaps came its Æthiopian name, Siris. It was also called Νῦς; or Nus, and Triton; and last of all Nilus, either from what we said before, or from Nilus, the son of Cyclops, or Nileus, or Nilesius, Egyptian princes: or lastly, and rather than all the other, παρὰ τὸν νίλην ἄγειν, from bringing new mud or slime. By the Latins it was particulary called Melo, as is evident from the testimonies of Ennius, Festus, Servius, and Ausonius.

Ver. 723. He means Æthiopia, in the south parts of which country the Nile arises. Manil. lib. i. ver. 44.

——Gentes, in quas et Nilus inundat.
Qua mundus redit, et nigras superevolat urbes.

Ver. 725. This reason is mentioned likewise by Pomponius Mela; and that too with a seeming approbation of it.

Ver. 730. There were three parties who favoured this opinion. I. Democritus; who held that exhalations arise from the melted snows in the northern climates, and being driven by the Etesian winds into Æthiopia, they dash against the mountains, where they stop and thicken into rain. This opinion Lucretius here approves. II. The philosophers of Memphis, now called Grand Cairo, who, as Diodorus witnesses, held that the Nile flows out of the temperate southern zone; and that, since it is winter in those countries when it is summer with us, that river swells by reason of the frequent rains that fall near its fountain, during the winter of those southern regions. III. Agatharchides, who, as the same Diodorus reports, held that the Nile is increased by the great rains that are continually falling all the summer long in the mountains of Æthiopia. And to strengthen the probability of this opinion, he urges, that during the whole summer, it rains about the river Hydaspes, snows on Mount Caucasus, and hails in many parts of India.

Ver. 733. This opinion is ascribed to Anaxagoras, who believed that the Nile swells by means of the snows that are melted during the summer in the mountains of Æthiopia. But that this belief is erroneous, Herodotus gives these reasons: because those countries are very warm, and exempt from snows; nay, even the very air is always hot; besides, the sun is very remote from those regions, when the snows must be melted to swell that river.

Æthiopian.] Ethiopia is a vast region of Africa, that borders upon Egypt: the country of the Abyssines. It lies beneath the torrid zone, extended from the Tropic of Cancer to beyond the Equator. The river Nile cuts its way almost through the middle of it, as it does through Egypt.

OF THE ANNUAL INUNDATION OF THE RIVER NILE.

The constant and annual increase of the Nile has long and much employed the thoughts of the studious; and that too not without reason; for many things occurred that deservedly claimed their admiration. Among others, not the least is this, that it constantly overflows about the middle of June, or rather a day or two after; some positively fix it to the time of sun-rising on the 17th of that month; besides, it gives beforehand such certain tokens, to what height the flood will rise, that they, whose business it is to discover it, are never deceived in their conjectures, whether they weigh the sand in a balance, or measure the future inundation by a rule, which they call a Niloscope. The event is certain, the cause doubtful: For it is controverted, whether the swelling is occasioned by its mouths being stopped and choked up, or by the rains that fall in Ethiopia, and by the melted snows of the mountains of that country; or, lastly, by the water of the sea, driven into the channel of the river by the Etesian winds: And here we may not omit an Egyptian erudition, which we find in Horus Apollo, touching the symbols of the Nile: "Tres porro Hydrias, nec plures, nec pauciores pingunt, quod triplex ex eorum sententia fit inundationis causa effectrix: unam quidem Ægyptiæ terræ ascribunt, quæ ex sese aquam producit: alteram oceano, ex quo, inundationis tempore, aqua in Ægyptum exæstuat: tertiam imbribus, qui per id tempus, quo intumescit Nilus, ad austrinas Æthiopiæ partes contingunt." The Egyptians, says he, make three water pots, neither more nor less, because in their opinion there are three efficient causes of the inundation: one of them they ascribe to the land of Egypt, which produces water out of itself; another to the ocean, out of which, at the time of the flood, the water surges into Egypt; the third to the rains, which, at the time when the Nile swells, happen in the southern parts of Ethiopia: As to the first of these reasons, it is evidently false; for the parched and thirsty soil of Egypt gapes indeed for moisture; but in no part of the country does the land ooze out water: Nor can we judge more favourably of the second, when we consider the difference between the sea water, and that of the river Nile: And as for the rain, which they assign for the third cause, we will speak of that by and by: Meanwhile we will observe, that those mounds of sand, with which they dam up the river, are soon borne down, and washed away by the never-ceasing course of the stream; and, what is chiefly to be considered, if any let or opposition whatsoever were the cause, that the Nile, by retrogression, overflowed its banks, the waters of that river would be observed to rise first in the lower

part of the country, that is to ſay, from the Mediterranean to Cairo, rather than on the contrary, in the more inland parts of it; but that it does ſo, is allowed by the unanimous conſent of all. We muſt therefore travel out of Egypt, for the cauſe of this inundation. No doubt but a plenteous acceſſion of waters ſwells the river, before it waſhes the land of Egypt: And this it was that perſuaded ſome to believe (ſee the note on ver. 733.) that the Nile increaſes by means of the ſnows that melt in Ethiopia. And indeed they are certainly miſtaken, who hold with Herodotus, that it never ſnows in that country: For they go contrary to experience and obſervation: Neither are thoſe others to be credited, who aſſert, that at the ſeaſon when the Nile inundates the land of Egypt, it is the depth of winter in Ethiopia. For who can believe that the ſnow, which was congealed by cold, can be diſſolved by cold likewiſe? This would be repugnant to the laws of nature, who has ordained, that things congealed by cold ſhall be melted by heat. The third cauſe is aſſigned to rain, (ſee the note on ver. 730.) and to this adhere the authors of greateſt note, though it has been long and ſtrenuouſly oppoſed by ſome of no mean reputation: They who call it in queſtion, object the great heat of the country, and the ſcarcity of vapours; but there are ſeveral things, of which theſe perſons ought not to be ignorant: The firſt is, that in thoſe countries there are two winters, and as many ſummers, in the year; though of unlike effect indeed, if compared with ours. The winter is more ſevere with us; but not ſo mild with the Ethiopians, as not to produce ſnows in the mountains, together with conſtant rains, that continue for 40 days, as is affirmed by the natives, as well as by travellers into thoſe parts. This truth Democritus has learned in his travels, and, as by tradition, delivered it down to poſterity, till at length it became known in Italy, by the care of our Lucretius. Beſides, in ſummer, the ſun is nearer to Ethiopia, than it is to us; and his rays, though troubleſome to the inhabitants, yet ſuffer themſelves to be overcaſt by a very thick miſt, that hangs over a certain mountain, which mariners call Serra Leone, perhaps from the noiſe it makes; for it generally roars, and from the duſky miſt almoſt continually darts out lightning, together with dreadful thunder, that is heard 40 miles around. And a maſter of a ſhip, as he was ſailing to the iſland St. Thomas, obſerved, that all this happened when the ſun ſtruck perpendicularly on Ethiopia. Let ſuch then, as object the heat of the country, make the moſt of that weak argument; nor will they fare better, who deny vapours to that region. For they ought to reflect on the lakes and rivers that Africa contains; and to have ſome regard to the ocean that waſhes its coaſts: all which may furniſh an immenſe quantity of matter for future rain; and then eſpecially, when the ſun, retiring, permits the inferior elements to extend their own bounds: The Mediterranean too conduces ſomething to increaſe the ſtore, by gratefully ſending into Ethiopia a vaſt quantity of clouds, which the winds, that ariſe in Greece, bear thither: This Proſper Alpinus, who was himſelf an eye witneſs of it, relates in theſe words: "Cayri, in toto fere augmenti fluminis tempore, Eteſiæ, perflantes ſingulis fere diebus ab orto ſole, uſque ad meridiem, multas nubes nigras, craſſas, pluvioſas in altiſſimos uſque Libyæ, Ethiopiæque montes, propellunt atque aſportant: in quibus montibus hæc concreſcentes, in pluvias vertuntur, quæ, ab his in Nilum cadentes, ſunt cauſæ ipſius augumenti. Obſervatur quotidie Cayri, dum flumen hoc augetur, qua die multæ nubes ſupra Ægyptum verſus meridiem à ſeptentrionalibus iis ventis aſportatæ tranſierint, multùm flumen augeri; atque ex contrario, clara apparente die, nulliſque nubibus in eo cœlo apparentibus, parùm creſcere: Et hæc eos nunquam fallit obſervatio," Lib. 1. de Medic. Egypt. At Cairo, ſays he, during almoſt the whole time of the ſwelling of the river, the Eteſias blow almoſt every day, from ſun-riſing till noon, and bring, and drive before them, many black, thick, and rainy clouds into the high mountains of Libya and Ethiopia: In which mountains, theſe clouds gathering together, are turned into rains; which, falling from thence into the Nile, are the cauſe of its increaſe: It is obſerved every day at Cairo, that ſo long as this river is increaſing, on what day ſoever many clouds are brought by thoſe northern winds, and carried over Egypt towards the ſouth, the river that day ſwells very much; and, on the contrary, that in a clear day, when no clouds appear in the ſky, it increaſes but little. And this obſervation never fails them. It is credible enough, that when the clouds are come into Africa, they are reſolved into rain, not that, as Lucretius thought, it is ſqueezed out of them, as water out of a ſponge, but becauſe, by reaſon of the cold of the place, the included fire of the clouds flies away, or is extinguiſhed; and then the vapours grow thick, and return into their former nature. But on what day the rains begin to fall, and how much time the waters take up in their courſe, while they are flowing into the Nile, has not been inquired into, or at leaſt is doubtful: But this in our age we know for certain, that theſe things happen in the kingdom of Guyoma, which is ſubject to the emperor of the Abyſſines. Hence the great hoſpitality of the Egyptians to the Abyſſines, that come to ſojourn among them; not ſo much out of gratitude, as for fear of a famine and general inundation: For the monarch of Ethiopia, whom we commonly call Preſter John, commands the cataracts of the Nile; for which reaſon the emperor of the Turks pays him a yearly tribute, on condition, that he do not divert the waters of the Nile, nor ſuffer them to come in too great a quantity, either of which would be the deſtruction of Egypt. Hence in the laſt age ſprung up a cruel war, as Natalis Comes relates. In the year 1570, ſays he, Selim emperor of Conſtantinople, who was then at war with the Venetians, received an unfortunate piece of news; for David, the great king of Ethiopia, whoſe empire extends from the equinoctial, almoſt to either tropic, ſince many kings are ſubject to

him, had begun to deſtroy, by an inundation of the river Nile, the city of Cairo, and all the neighbouring country of the Turks, together with many other cities thereabouts: The reaſon of this hoſtility was, becauſe Selim owed him 400,000 crowns for two years tribute; for he paid him 200,000 a year: Now the country of Egypt has not rain enough to render the land fertile; for it rains there very ſeldom, and the ſoil is of all others the moſt fruitful, and owes its fertility to the waters of the Nile, which are in the power of the king of the Abyſſines, who can ſend them down in what quantity he pleaſes, and either refreſh the thirſty land with a gentle flood, or, by cutting certain dykes, pour in ſuch an inundation, as will lay waſte the whole country. Now the Sultan, becauſe he would not pay the tribute that was due, levied a great army, and, invading Arabia, put all to fire and ſword. Thus Natales Comes, hiſtor. lib. 23. But more prudently Oſiris, who, if we may give credit to Diodorus Siculus, lib. vi. cap. 2. when he was in the mountains of Ethiopia, mounted up the banks on either ſide the Nile, that the inundation might not be too great; and made ſluices to let in only ſuch a quantity of water, as would be neceſſary for the fertility of the land: The increaſe of the Nile, therefore, is more due to rains than melted ſnows; whatever Anaxagoras ſay to the contrary: And indeed the true cauſe of the overflowing of the Nile is only the great rains that conſtantly fall in Ethiopia, from about the beginning of June, to the month of September: This is teſtified by Alvarez Fernandus, and many others of late date: And, in confirmation of their opinion, it is obſerved, that the river Niger ſwells at the ſame time, and never fails to increaſe when the Nile does: And that the rains, which fall in Ethiopia, are the cauſe of the ſwelling of the river Niger, is certain beyond diſpute: Nor was this unknown to Pliny, who, lib. v. cap. 8. ſays, "Nigro fluvio eadem natura quæ Nilo." Beſides, the reed papyrus grows on the banks of both thoſe rivers, and they produce the ſame ſorts of animals. See Gaſſendus, page 1084. on the tenth book of Diogenes Laertius.

Proſper Alpinus propoſes two problems concerning the Nile, but deſpairs of the ſolution of either of them: I. Why that river conſtantly ſwells the 17th of June at ſun-riſing? II. How, by weighing the earth, or ſand of the river, the inhabitants foretel the meaſure and degree of its increaſe? For, ſays he, in the month of June, ſeveral days before the ſun's acceſſion to the tropic, they take ſome of the ſand of the river, that has been kept and dried for a whole year before; they weigh this ſand in ſcales, and, by adding or ſubtracting, make the number of the weights anſwer exactly to the drachms of the ſand: For example, let us ſuppoſe the ſand to weigh three drachms, which they lay by, and keep in a dry place, cloſe ſhut up on all ſides: this they weigh every day, and obſerve it nothing increaſed or diminiſhed in weight, till the 17th day of June; on which day they find its weight augmented: and from the weight, more or leſs increaſed, they foreknow that the river will be more or leſs augmented likewiſe: and from the knowledge of the exact increaſe of the weight, they know for certain before hand, how many cubits the river will ſwell that year: The cauſe whereof, ſays the ſame Alpinus, I cannot conceive, can be diſcovered by natural principles. His very words are as follows: "Nam menſe Junio, ante ſoliis ad tropicum acceſſum, multis diebus Egyptii terram illiuſce fluminis toto integro anno adſervatam, et ſiccatam, areſactamque accipiuut, quam lance expendunt, faciuntque ut ponderum numerus, addentes, ac ſubtrahentes, drachmis ſedulo reſpondeat: ut exempli gratia, terra ſit trium drachmarum pondere, quam in loco ſicco, undique concluſo reponunt, et conſervant: quotidieque librantes, ipſam obſervant nihil auctam, nihilque imminutam pondere eſſe, uſque ad diem decimam ſeptimam menſis Junii, in aqua die auctam ipſo pondere inveniunt; ex cujus pondere, multùm vel parùm aucto, multùm vel parùm flumen illud auctum iri prænoſcunt: à diligentique perauctì illius ponderis notitia, quoties etiam cubitibus ipſam ſit augendum, certo prænoſcunt. Quorum cauſas naturalibus principiis poſſe cognoſci, nullo modo fieri poſſe arbitror." However, it is not forbid to inquire into this matter: Now Seneca acquaints us, that in the tenth and eleventh year of queen Cleopatra, the Nile did not increaſe at all; which, he alſo tells us, on the authority of Calliſthenes, had happened in former ages for nine years together: Of this Ovid was not ignorant, when he ſung:

Dicitur Egyptus carniſſe juvantibus arva
Imbribus, atque annis ſicca ſuiſſe novem.

Let this ſuffice for the inconſtancy of its increaſe: and as to the uncertainty of the time, there was a remarkable delay of it in the reign of the emperor Theodoſius, which is recorded by Nicephorus and Sozomen. Nor can that be imputed to the want of rain; for the Nile, not long after, ſwelled to ſuch a degree, that the higheſt parts of Egypt were covered with the inundation: Now, though theſe events happen but ſeldom, yet they are ſufficient, if not to deſtroy, at leaſt to render ſuſpected, that generally believed conſtancy of time: Let us nevertheleſs grant Alpinus, what he for ſeven years ſucceſſively obſerved with great diligence and ſedulity: the rather, becauſe it is not civil to diſtruſt, or derogate from, the teſtimony of an eye-witneſs: The queſtion is, Why the Nile begins every year to increaſe, for the moſt part, at a certain day? The cauſe muſt proceed from the conſtant and certain return of the ſeaſon, which the invariable conſtitution and revolution of the heavens have preſcribed them: For, ſince the ſun is at that time at his remoteſt diſtance from Ethiopia, nothing can hinder the vapours from coming to a conſiſtency, nor from condenſing into rain, becauſe the ambient air is changed from hot into cold, at leaſt has loſt its effervescency. And the winds, that blow from the north, cannot there, as they frequently do with us, haſten the winter; for in that ſcorching

climate, the matter of the winds is ſoon diſſolved, and their piercing nature qualified immediately. And ſo much for the ſolution of the firſt problem: The other is not ſo difficult, though at firſt ſight the cauſe of it ſeem obſcure. For the ſand that has been long kept for the ſake of making the experiment, being grown thorough dry, and, as I may ſay, thirſty, does, when it is expoſed to the ſurrounding air, attract to itſelf the moiſture, with which that air is newly grown damp, and the weight of the dry body is increaſed in proportion to the degrees of its dampneſs: And that the near approaching waters of the Nile taint the air with humidity, the ſagacity of the birds in Egypt is a pregnant and convincing proof: For they never lay their eggs, except in ſuch a place, as they perceive before hand, will not be covered by the inundation. Men, indeed, who enjoy a perfect ſtate of health, are leſs ſenſible of ſuch ſmall mutations of the air, as nevertheleſs brute animals ſeem to have ſome foreknowledge of, and of which even inanimate bodies give foreboding ſigns. The geeſe, we know, often gaggle, and the frogs croak in uncertain weather, but not in ſettled fair, which cinders ſticking to the tongs foreſhow: The very ſtuff of lamps give bodings of rain, and that too ſo viſible, that even our drudging maids perceive them: Virg. Georg. I. ver. 390.

Nec nocturna quidem carpentes penſa puellæ
Neſcivere hyemem, teſta cum ardente viderent
Scintillare oleum, et putres concreſcere fungos.

But of this ſee Aratus, lib. iii. var. lect. cap. 21. and chiefly Theophraſtus, in his book "de Indiciis Ventorum, Serenitatis, et Pluviæ," who firſt of any, ſays P. Victorius, fully adorned this ſubject. And no doubt the dried dirt, and ſlime of which we were ſpeaking, would have imbibed ſome portion of the humidity, the day before the Nile overflowed, had it not been kept ſo cloſe: but being once releaſed from that cuſtody, it forthwith ruſhes into the embraces of the deſired moiſture, following the natural propenſity of dry bodies to wet.

Ver. 735. Lucretius does not acknowledge a beneficent, but flatly denies an angry God: and as he takes from the gods above the phenomenons of the heavens and of the air, ſo does he too from the powers below ſome noxious things that paſs for prodigies upon earth. For, ſays he, there are certain places, which we call Averni, and that are fatal to birds that fly over them, and to other animals that chance to paſs by them. One of theſe Averni is at Cumæ, another near Minerva's temple in Athens, and a third in Syria. Theſe places men believe to be the entrances of the roads that lead to hell, to the palace of Pluto, and that the manes, or ſouls of the dead, paſs that way to the ſubterranean abodes. Now the poet, that he may more fully and diſtinctly explain the force and nature of theſe places, teaches, firſt, that the earth contains many ſeeds, as well noxious as wholeſome, both to men and other animals: and then he brings a heap of examples, to prove that the exhalations that flow from many things, are hurtful and deadly to many things. Having premiſed this, he comes to the queſtion, and ſays, that a noxious vapour breathes from the Averni, and either that poiſonous ſteams ſtrike with ſudden death the birds that fly over them, or that the riſing exhalation attenuates and drives away the air to that degree, that the birds cannot ſupport themſelves, nor ſuſtain their flight in ſo void and empty a ſpace, and that, falling into that void, they forthwith expire. This is contained in ninety-ſix verſes.

Ver. 737. In theſe ſeven verſes, the poet premiſes the etymology of the word Averni, or rather the reaſon why theſe places were ſo called. Virgil too gives the ſame reaſon of the name, and has imitated this paſſage of Lucretius in his ſixth Æneid, v. 237. in theſe verſes.

Spelunca alta fuit, vaſtoque immanis hiatu,
Scrupea, tuta lacu nigro, nemorumque tenebris;
Quam ſuper haud ullæ poterant impunè volantes
Tendere iter pennis; talis eſe halitus atris
Faucibus effundens ſupera ad convexa ferebat;
Unde locum Graii dixerunt nomine Avernum.

Which Dryden thus interprets:

Deep was the cave, and downward as it went
From the wide mouth, a rocky, rough deſcent:
And here th' acceſs a gloomy grove defends,
And here th' unnavigable lake extends,
O'er whoſe unhappy waters, void of light,
No bird preſumes to ſteer his airy flight;
Such deadly ſtenches from the depth ariſe,
And ſteaming ſulphur, that infects the ſkies.
From hence the Grecian bards their legends make,
And give the name Avernus to the lake.

For the Greeks called it Ἄορνος, from the privative particle ἀ, and ὄρνις, a bird, becauſe the noxious vapours that exhaled from the Averni, were ſo poiſonous, that they ſtruck dead the birds that flew over them. Thus Homer, Odyſſ. 12.

Τῇ μὲν τ' οὐδὲ ποτητὰ παραίσχεται, οὐδὲ πέλειαι,

i. e.

Where neither dove, nor other bird can fly.

And ſo much for the reaſon of the name Avernus, which extends to all places, whoſe deadly exhalations kill the birds that fly over them.

Ver. 741. Lucretius:

Remigii oblitæ pennarum vela remittunt.

For the wings do the ſame office to birds, as oars and ſails to ſhips, which are ſaid to fly with ſails, as with wings. Virg. Æn. iii. v. 520.

——Velorum pandimus alas.

And, on the contrary, birds are ſaid to ſwim Virg. Æn. vi. v. 15. ſpeaking of Dædalus,

Præpetibus pennis auſus ſe credere cœlo,
Inſuetum per iter gelidos enavit ad Arctos.

And in the ſame book, ver. 19. we find the very expreſſion of Lucretius, "Remigium alarum:" And Æn. i. ver. 304. ſpeaking of Mercury,

——Volat ille per aëra magnum
Remigio alarum.———

But not only Virgil after Lucretius; for all the ancient poets uſed this metaphor. Ovid, in his Epiſtles, applies it to mens arms:

——Remis ego corporis utar.

I'll uſe the bodies oars.

See more, book v. ver. 315.

Lucret. "Molli cervice profuſæ:" A fine image of a fainting, dying bird; and not unhappily rendered by our tranſlator.

Ver. 743. This verſe runs thus in the original:

Qualis apud Cumas locus eſt, montemque Veſe-
Oppleti calidis ubi fumant fontibus auctus. [vum,

In which two verſes the poet teaches, that there is ſuch a place at Cumæ, and on the mountain Veſuvius. Cumæ was a city of Campania, not far from Puteoli, now called Puzzuolo, in the kingdom of Naples: but of Cumæ there are no footſteps remaining. The lake Avernus is to this day called Lago d'Averno, and lies between Baia and Puzzuolo. Near this lake there are now to be ſeen the remains of two caves; one on the ſouth ſide of it, ſtill called Grotta di Sibylla, where dwelt the Cumæan Sibyl, and ſeems to be the mouth of that paſſage under ground, which led from Avernus to Cumæ, but is now ſtopt up by the falling in of the earth; the other is that which to this day leads from Puzzuolo to Naples, being dug through the mountain Pauſilypum, now known by the names of Antignana and Conocchia. Now the true nature of the lake Avernus was this: The waters of it were very clear and deep: whence Herodotus, lib. 4. calls them cerulean, that is to ſay, black; for all deep waters ſeem of that colour. This lake was ſurrounded with ſteep rocky hills, covered with thick woods, that rendered it inacceſſible, except in one place only. This we learn from Strabo, lib. v. And Pliny, lib. xxxi. cap. 2. acquaints us, that all that tract of land abounded with innumerable ſprings of hot water, mixed with ſulphur, alum, ſalt, nitre, and brimſtone. But that the vapours which ſteam from this lake are fatal to birds, is by Strabo, in the place above cited, deemed a fable, becauſe of the clearneſs and tranſparency of the water: of which Ariſtotle too takes notice. Veſevus, or Veſuvius, is a mountain of Campania, not far from Naples, and that vomits out flame and ſmoke, like Ætna in Sicily. Sir R. Blackmore deſcribes it thus:

As high Veſuvius, when the ocean laves
His fiery roots with ſubterranean waves,
Diſturb'd within, does in convulſions roar,
And caſts on high his undigeſted oar,
Diſcharges maſſy ſurfeit on the plains,
And empties all his rich metallic veins,
His ruddy entrails: cinders, pitchy ſmoke,
And intermingled flames the ſun-beams choke.

Ver. 744. In theſe ſeven verſes the poet ſays, there is ſuch another place at Athens, at the very top of the tower, near the temple of Pallas.

Eſt & Athenæis in mœnibus, arcis in ipſo
Vertice, Palladis ad templum Tritonidis almæ.

Of Athens, ſee the note on the firſt verſe of this book.

Ibid. *Minerva.*] She was the ſame with Pallas, who was called Minerva, either from *minari*, to threaten, becauſe ſhe is painted in armour; or from *memini*, I remember, becauſe ſhe is ſaid to be the goddeſs of memory; or rather from the old word *minervo*, I admoniſh, becauſe ſhe gives good advice to men, as being the goddeſs of wiſdom and of arts. She was called Pallas, from the Greek word πάλλω, I ſhake, becauſe ſhe is feigned to be born out of the brain of Jupiter, and armed, and brandiſhing a ſpear. She is ſaid to be the firſt who invented building, and even to have built herſelf the tower at Athens, which was called Ἀκρόπολις, becauſe it ſtood in the higheſt place of the city. Hence Virg. Ecl. ii. v. 61.

——Pallas, quas condidit arces,
Ipſa colat.———

She refuſed to marry with Vulcan, and kept her virginity. Whence the ſame Virgil, Æn. ii. ver. 31. calls her innupta Minerva. She was likewiſe called Tritonis, or Tritonia, either from the Greek τρίτη, which ſignifies a head, becauſe, as we ſaid before, ſhe was produced out of the head of Jupiter; or becauſe, in the time of king Ogygius, ſhe was firſt ſeen in the habit of a virgin, on the banks of the river Triton. This is confirmed by Pomponius Mela, lib. i. cap. 7. where, ſpeaking of Triton, the name of a lake and river in Africa, not far from the Syrtis Minor, he ſays, that Minerva was called Tritonis, becauſe, as the inhabitants believe, ſhe was born there; and that they celebrate her birth-day with ludicrous ſports, of virgins contending with one another. "Unde," ſays he, "Minervæ cognomen inditum eſt, ut incolæ arbitrantur, ibi genitæ: faciuntque ei fabulæ aliquam fidem, quod quem natalem ejus putant, ludicris virginum inter ſe decertantium celebrant." Thus too Lucan, lib. ix. ver. 347.

Torpentem Tritonos adit illæſa paludem:
Hanc & Pallas amat: patrio quæ vertice nata,
Terrarum primam Libyen, (nam proxima cœlo
eſt,
Ut probat ipſe calor) tetigit: ſtagnique quietâ
Vultus vidit aquâ, poſuitque in margine plantas;
Et ſe dilectâ Tritonida dixit ab undâ.

Or perhaps the Latin authors allude to the Greek epithet of Pallas, who, Iliad. ii. ver. 157. and elſewhere, is ſaid to be ἀτρυτώνη, untamed, void of fear, from privative ἀ, and τρέω, to tremble.

Ver. 746. The raven, ſays Lucretius, has ſuch an averſion to that place, that, although ſacrifices are offered there, he will not even then come near it, though the ſmell of the tempting fleſh ſeem to invite his hunger to taſte.

Ver. 748. Lucretius alludes to the known fable of the nymph Coronis, who, flying from Neptune, who would have offered violence to

her, was changed by Minerva into a raven, and permitted nevertheleſs to attend her train: But when that goddeſs had given Ericthonius, ſhut up in a baſket, in charge to Pandroſos, Herſe, and Aglauros, with orders not to open it, the raven ſaw them tranſgreſs the commands of Minerva, and acquainted her with it: for which garrulity ſhe baniſhed her from her protection and train. The fable is related at large in Ovid. Metam. 2. by Coronis herſelf, who ſays,

Acta Deæ refero: pro quo mihi gratia talis
Redditur, ut dicar tutelâ pulſa Minervæ.
———Mea pœna volucres
Admonuiſſe poteſt, ne voce pericula quærant.

Ver. 751. In theſe four verſes the poet ſays, there is a place in Syria that ſtrikes dead in a moment any four-footed beaſt. But Lambinus believes the poet ſpeaks of the Plutonium in Hierapolis, not far from Laodicea; which is a cave ſo called from Pluto, becauſe it was believed to be the breathing hole of that infernal god. Strabo, lib. 13. deſcribes it to be a hole in a hollow place, under the brow of a mountain, wide enough to receive the body of a man, but immenſely deep; that it is preſent death to any animal that goes into it. Bulls, ſays he, led to the place, drop dead immediately. He adds the like of ſparrows, that were put in at the mouth of it. To which we add, what is reported of the cave called Panium, at the foot of mount Libanus: That it exhales a vapour, that cauſes likewiſe ſudden death.

Ibid. *Syria.*] Is a province of Aſia, and the largeſt of that quarter of the earth. It is generally divided into four: Syria, Aſſyria, Cœloſyria and Leucoſyria.

Ver. 755. In theſe eight verſes he ſays, that all theſe things proceed from natural cauſes: Therefore the poets falſely taught, that theſe Averni are the gates of the roads that lead to hell: which fables they invented only to ſtrike a terror into eaſy believers. And he promiſes, that he will explain all theſe matters, and ſhow the natural cauſes of theſe ſeeming wonderful effects.

Ver. 757. The Latin poets, when they treat of the affairs of their own country, make that Avernus, of which ver. 743. to be the gate of hell. Virg. Æneid. vi. ver. 126.

——Facilis deſcenſus Averni.

And Æneas, with the Sybil, deſcended that way. But when the ſame poets deſcribe the affairs of the Greeks, they place the gates that lead to the infernal manſions in the caves of the mountain Tænarus, which is a promontory of Laconia, in the moſt ſouthern part of Peloponneſus, between the Laconic and Meſſeniac Gulfs, and now called Capo Maina. Orpheus is ſaid to have deſcended this way, Georg. iv. ver. 467.: and ſo too are Hercules and Theſeus, in the Herc. Fur. of Seneca.

Ver. 758. *The ſmutty gods.*] The infernal gods. Lucretius names Orcus, whom Silius Italicus takes for Cerberus, and others for Charon; but Cicero, de Naturâ Deorum, lib. iii. cap. 43. for Pluto, the brother of Jupiter and of Neptune; and to whom by lot fell the empire of hell. He raviſhed Proſerpina, the daughter of Ceres. He was called Dis, as well as Pluton, both which names he has from riches, which are ſaid to be dug out of the bowels of the earth. For he was called Dis by the Latins, from *divitiæ*, and Pluton by the Greeks, from πλοῦτος, which ſignifies the ſame thing.

Ibid. *Manes.*] Of the manes, and the ſeveral acceptations of the word, we have ſpoken at large in our note on ver. 52. of book 3.

Ver. 760. Pliny ſays, that the breath of elephants draws ſerpents out of their holes; and that the breath of deer burns them. "Elephantorum anima ſerpentes extrahit, cervorum item urit." Nat. Hiſt. lib. xi. cap. 53. But if this be falſe, the raillery of Lucretius is not the leſs ſharp and pleaſant.

Ver. 763. In the following forty-nine verſes, the poet, before he demonſtrates that all theſe things happen by natural cauſes, puts us in mind of what he taught in the firſt and ſecond books, viz. that in the earth are contained atoms of many various ſhapes; and that by reaſon of the diſſimilitude of their nature, and the different texture of their figures, ſome of them are beneficial, others pernicious to men; but that ſome of them are hurtful to the eyes, others to the ears, others to the tongue, &c. all which he confirms by ſeveral examples.

Ver. 777. In theſe five verſes, he brings example firſt of things that are hurtful to man; but ſays nothing of the name of the tree, whoſe ſhade is offenſive. Pliny, lib. xvii. cap. 12. ſays, that the ſhade of the walnut-tree offends the head, and that no plants will thrive under it. Fayus, in his note on this place, cites theſe two verſes of Virgil, Eclog. x. vet. 75.

Surgamus; ſolet eſſe gravis cantantibus umbra,
Juniperi gravis umbra; nocent & frugibus umbræ.

But the ſhade of the juniper is very grateful, being an odorous tree, and that ſuffers nothing venomous to grow near it. But the meaning of Virgil was, that to continue long in the ſhade, might be dangerous, becauſe of the cold: and ſome editions read not *cantantibus*, but *cunctantibus*. And Lucretius means the ſame thing, and not the ſhade of any particular tree. The ſhade of the box-tree, however, is ſaid to cauſe the headach.

Ver. 782. In theſe ſix verſes, he propoſes his ſecond example. What tree he means is hard to ſay: ſome ſuppoſe it to be the box; of which Pliny, lib. xvi. cap. 10. But beſides that the "floris odore necare," which are the words of Lucretius, agrees but ill with that tree, why ſhould he ſend us to Helicon for a tree that is very plentiful in Italy? Helicon is a hill in Bœotia, not far from Parnaſſus, which our tranſlator here means by the learned hill: and they have both of them equal title to that appellation, be-

ing alike facred to Apollo and the muſes. Of Helicon, ſee more in the note on ver. 557. book iv.

Ver. 788. Third example. To which we may add what Pliny ſays, lib. vii. cap. 7. that it often cauſes abortion in women.

Our tranſlator has omitted the fourth example, which Lucretius brings of an ointment made of the teſticles of the beaver, which by its nauſeous ſmell, ſays Pliny, makes women with child miſcarry: But Lucretius ſays only, that it ſtupifies women, and throws them aſleep; and that if they ſmell the odour of it at the time when they have their monthly diſeaſe, it makes them let fall whatever they hold in their hands. This in the original runs thus:

Caſtoreoque gravi mulier ſopita recumbit,
Et manibus nitidum teneris opus effluit ei,
Tempore eo ſi odorata eſt, quo menſtrua ſolvit.

Ver. 793. In theſe three verſes he brings example fifth, of bathing: for, ſays he, it is hurtful to continue long in a hot bath immediately after eating. The cuſtom among the Romans was to bathe before ſupper: but the riotous uſed to bathe themſelves alſo after ſupper; and this they did to procure digeſtion. See Pliny, lib. 29. However the phyſician in Perſius adviſes his patient not to bathe after eating, that being a cuſtom very pernicious to health: but the gluttonous youth, refuſing to take his advice, paid dear for his obſtinacy, if the effects of his bathing were truly ſuch as they are deſcribed by that poet, Sat. iii. ver. 30. in theſe verſes:

Turgidus hic epulis, atque albo ventre lavatur,
Gutture ſulphureas lente exhalante mephites:
Sed tremor inter vina ſubit, calidumque trientem
Excutit è manibus; dentes crepuêre retecti;
Uncta cadunt laxis tunc pulmentaria labris, &c.

Juvenal too, Satyr. i. ver. 142. mentions the danger of this practice of bathing with a full ſtomach, and ſays,

Pœna tamen præſens, cum tu deponis amictus
Turgidus, & crudum pavonem in balnea portas.

Moreover, we may farther obſerve, that at their baths there were three cells; the cold, the warm, and the hot: all which were baths of water. But in ſome of their bathing houſes there was a fourth cell, which they called "laconicum," or "cella aſſa," that is to ſay, "ſicca ſine lotione:" ἀφιδρωτήριον· and where theſe were, the places were rather called "balnearia," than "balnea:" according to the property, of which, as Marcilius notes, Tully, lib. 3. ad Q. Frat. epiſt. 1. ſpeaks, when he calls them "aſſa in balneariis." Horace likewiſe, and others, often mention the faintneſs that ſeizes ſuch as bathe themſelves after a full meal.

Ver. 796. Example 6th in two verſes, and example 7th in two verſes likewiſe, need no explication.

Ver. 800. In theſe two verſes, which contain example 8th, the poet obſerves, that ſulphur and all bituminous matter, whoſe ſteams and vapours are very offenſive and hurtful to man, are generated in the very bowels of the earth.

Ver. 882. In theſe ten verſes, the poet brings the 9th and laſt example; and ſays that the mines, in which metals are dug, exhale ſuch noxious damps and vapours, as often kill the wretches, who are condemned to that ſlaviſh drudgery. Thus, from theſe veins of the earth, as well as from the other things above mentioned, breathe forth poiſonous and deadly exhalations.

Ver. 806. It is obſerved, that all metals have not the ſame ſmell. Gold, heated in the crucible, is ſweet: Silver not ſo pleaſing: melted braſs ſtinks: and the ſteam of melted iron is intolerable.

Ver. 812. In theſe ten verſes, he concludes by way of ſimilitude from the inſtances above given, That in theſe places, which are called *Averni*, the earth exhales virulent and deadly vapours, and ſends out noxious atoms, which kill the birds as they are flying over thoſe places.

Ver. 822. In theſe nine verſes, he adds another, but ridiculous cauſe, why the birds drop down dead into the *Averni*: As if the vapours that exhale from thence, change the air into *vacuum*, or rather totally expel, and drive it away, ſo that the birds cannot bear themſelves up, nor ſupport their flight in a mere void.

Ver. 831. There are many things ſo excellently well accommodated to the uſe of man, that they are alone ſufficient to evince a bountiful and gracious Providence: Thus in ſummer well-water is cold, as if it were ordered ſo on purpoſe to moderate the heat of that ſeaſon: and on the contrary, it is warm in winter, to refreſh and revive us. But Lucretius, in theſe ten verſes, endeavours to elude this difficulty: and gives this natural reaſon of that change: In ſummer, ſays he, the ſurface of the earth, is rarified by the heat of the ſun; and the ſeeds of fire, that are contained in the earth, break out into the air: but in winter the ſame ſeeds are conſtrained, and, being bound faſt in the earth by the cold of that ſeaſon, are compreſſed and ſqueezed into wells; and thence proceeds the warmth of the water.

Ariſtotle ſays this is cauſed by an "antiperiſtaſis," i. e. "circumobſiſtentia," a reciprocation, and ſurrounding on all ſides, by means of which, where heat is, thence cold is expelled: where cold, thence heat. And Cicero, after the opinion of the Stoics, explains it thus: "Omnes igitur partes Mundi, tangam autem maximas, calore fultæ ſuſtinentur: quod primum in terræ natura perſpici poteſt: nam & lapidum conflictu, atque tritu elici igem videmus: & recenti ſoſſione terram fumare calentem: atque etiam ex puteis jugibus aquam calidam trahi, & id maximè hibernis fieri temporibus, quòd magna vis, terræ cavernis, contineatur caloris; eaque hieme fit denſior: ob eamq. cauſam calorem inſitum in terris contineat arctius," Lib. ii. de Nat. Deorum. Therefore, ſays he, all the ſeveral parts of the world are ſupported by heat: this is evident from the nature of the earth itſelf: for, by ſtriking and rubbing of ſtones, we urge out fire, and new-dug ground exhales a warm ſmoke: beſides,

we draw warm water out of our wells, and that too chiefly in winter: the reaſon is, becauſe much heat is contained in the caverns of the earth: and the earth becomes more denſe and contracted in winter; and for that reaſon keeps in the more cloſely its innate heat and fires. There are ſome, however, who controvert the truth of this matter, and aſſert it to be only a vulgar error, and not a ſolid and certain obſervation. But moſt are of a contrary opinion, and aſſign two cauſes of this effect: One of them they call privative; the other, poſitive: The firſt of them is, by reaſon of the departure of the heat, or hot bodies (for we are permitted to ſpeak thus in the ſchool of Epicurus, and of Ariſtotle too, who will not allow, that accidents paſs from ſubject to ſubject), out of the earth. That innate heat of the earth is occaſioned by ſubterranean fires; and evaporates in ſummer, attracted by the ambient heat: for, according to the obſervation of Hippocrates, like things reſort to like, and naturally delight to be together.

Ver. 841. But it may be objected, that though the Divine Power be not in all ſprings and wells, it is certainly viſible in the fountain, that is at the temple of Jupiter Ammon, of which Curtius, lib. iv. ſect. 7. ſays: "Ammonis nemus in medio die, cum vehementiſſimus eſt calor, frigida eadem fluit; inclinatio in veſperum, caleſcit; media nocte fervida exæſtuat: quôque propius nox vergit ad lucem, multum ex nocturno calore decreſcit, donec ſub ipſum diei ortum aſſuoto tempore langueſcat:" In the midſt of the grove of Ammon, there is a ſpring of water, called the Water of the Sun: at ſun-riſing it flows out luke-warm, at noon, when the heat is moſt violent, it comes out quite cold: in the evening it grows warm again; at midnight it guſhes out very hot; and as the night wears away, and the morning approaches, the heat it had in the night decreaſes, till about the uſual time, at break of day, it becomes again barely warm. This is confirmed by Pliny, lib. ii. cap. 103. by P. Mela, lib. i. cap. 8. in theſe words: "Ammonis Oraculum fidei inclytæ; & fons, quem ſolis appellant:——Fons media nocte fervet: mox & paulatim tepeſcens, fit luce frigidus: tum, ut ſol ſurgit, ita frigidior: ſubinde per meridiem maximè rigit: ſunt deinde tepores iterùm; & prima nocte calidus: atque, ut illa procedit, ita calidior: rurſùs, ut eſt media, perfervet." Nor may we omit the teſtimony given by Ovid. Metam. lib. xv. ver. 308. in theſe words:

——Quid? non & lympha figuras
Datque capitque novas? medio tua, corniger Ammon,
Unda die gelida eſt; ortuque, obituque caleſcit.

See likewiſe Potanus in Meteor. And Ammianus, lib. iii. But this too, ſays Lucretius, is alleged in vain, and ſignifies nothing: For though they are miſtaken, that impute the cauſe of it to the ſun, who, as they pretend, when he is beneath the earth, warms thoſe waters through the body of the whole earth thick as it is; yet the reaſon may be, becauſe the earth, being contracted by the cold of the night, ſqueezes down and tranſmits the ſeeds of fire into the water, which by that means grows warm; but the ſame earth being looſened and ſet at liberty by the heat of the day, receives, and, as it were, ſwallows them in again: and thus the waters loſe much of the heat they had in the night. Beſides, that very water, which becomes warm, becauſe the cold and chilling night depreſſes and keeps down the ſeeds of fire, grows cold again in the day; becauſe the beams of the ſun, darting into the water, and rarifying it, open a free paſſage for thoſe ſeeds to get out into the air: For the heat of the ſun diſſolves ice in ſuch a manner, as to releaſe and ſet at liberty the ſlender ſtalks of corn, and other things of like nature, which by the cold of the night, were detained and bound in icy fetters. This is contained in twenty-eight verſes. Thus Lucretius aſſigns two cauſes; but whether either of them be true or not, it is not worth while to inquire, ſince the thing itſelf is a mere fiction: for none of our hiſtorians or geographers, who deſcribe fountains, pretend that they ever ſaw this. Yet we have pretty good authority for a fountain, that was diſcovered not long ago in the woods, near Clermont in Auvergne: whoſe waters freeze hard in the months of July and Auguſt; but never in the winter. "Prope urbem Claramontem fons, nuper inventus, dicitur, La Cave de la glace: Qui fons certe mirabilis: nam ejus aqua, Julio, & Auguſto menſibus, gelu vehementer aſtringitur, minime vero hyeme," ſays a certain eye-witneſs of it.

Ibid. *Ammon.*] Jupiter Ammon had an oracle that was in great renown with the Egyptians and Africans, and a temple in Lybia, to the eaſt of the country of Cyrenaica, to the weſt of Egypt, and to the north of the Garamantes and Naſamones, in a moiſt and palm-bearing ſoil, though all the country round be moſt dry and deſert. The origin of this is variouſly reported: the moſt common opinion is, that Liber or Bacchus, after he had conquered all Aſia, and was leading his army through the deſerts of Lybia, was in danger of periſhing, he and all his men with thirſt: In this diſtreſs a ram appeared to him, and with his horn ſhowed him a fountain of water: now he ſuppoſed this ram to be his father Jupiter, and therefore erected a temple to him, and gave him a ram's head and horns. He called him Ammon from the ſand, which in Greek is ἄμμος, or ψάμμος. But Plutarch, "lib. de Iſide," ſeems to deny this name to be of Greek extraction, and ſays it is derived from the Egyptian language: Whence ſome believe that Ham or Cham, the ſon of Noah, and who was the firſt that cultivated the land of Egypt, was worſhipped under that name: others will have Ammon to be the ſun; Macrob. Saturnal. lib. i. cap. 21. "Ideo & Hammonem, quem Deum ſolem occidentem Libyes exiſtimant, arietinis cornibus fingunt, quibus maximè id animal valet, ſicut ſol radiis; nam & apud Græcos ἀπὸ τῦ κεραυρίος, apellatur." And, to ſtrengthen this opinion, the Hebrew word "Hamma," ſignifies the ſun and heat: But whoever it was that

was there worſhipped under the name of Ammon, Alexander the Great, when he was in Egypt, went to this temple, and made the prieſts acknowledge him for the ſon of their god.

Ver. 847. In theſe eight verſes the poet confutes their opinion, who believed, that the water of the fountain of Ammon grew cold by day, and hot in the night, for the ſole reaſon of the departure, or acceſſion of the ſun: And this he proves to be impoſſible by an argument, "a majori," as they call it. For, if the ſun cannot warm the open and naked body of the water, when he ſhines upon it from above, much leſs can he impart his heat to the waters through the thick and cloſe-compacted body of the earth: For the heat of the ſun muſt of neceſſity paſs through the whole body of the earth to warm by night the waters of that fountain: And yet we ſee that even our houſes ſhelter and protect us from the fierceſt of his beams.

Ver. 855. In theſe nine verſes, he aſcribes the firſt cauſe of the nocturnal heat, and diurnal cold of the waters of the fountain of Ammon to the ſeeds of fire or heat, that are in the earth about that fountain, and beneath the water: He explains this in the manner that follows: The earth, ſays he, being compreſſed by the cold of the night, ſqueezes out, and tranſmits into the water, thoſe ſeeds of heat; by means of which the water grows hot: but, being looſened by the heat of the day, ſhe receives again into her bowels thoſe very ſame ſeeds, and thus the water becomes cold.

Ver. 864. In theſe five verſes, he refers the ſecond cauſe to the heat of the ſun: as if it were poſſible that the water, which in the night is made hot by the ſeeds of fire, could grow cold again in the day, by reaſon of the beams of the ſun penetrating into the ſame water, and rarifying it in ſuch a manner, as to open a free paſſage into the air for thoſe ſeeds of fire.

Ver. 867. Here our tranſlator had his eye upon Cowley; who ſays,

So the ſun's am'rous play
Kiſſes the ice away.

Ver. 869. In theſe twenty-five verſes, he mentions a ſpring, that will both extinguiſh a lighted torch, if it be plunged into the water, and light it again, if it be moved gently to touch the ſurface of the water: The reaſon of which, ſays he, is, becauſe there are in that water, or in the earth under it, many ſeeds of fire, which, breaking out of the water, ſtick to the tow, or torch newly extinguiſhed, and ſet fire to them again. Nor is it more incredible, that ſeeds of fire ſhould force their way out of water, than that a ſpring of freſh water ſhould riſe up in the middle of the ſea: And we every day ſee candles, torches, &c. that are but juſt put out, kindle again, even before they come to touch the fire towards which they are moved.

Lucretius mentions neither the name nor place of this miraculous ſpring: but having ſhown that there is nothing wonderful or divine in the ſpring of Jupiter Ammon, he here attacks the fountain of Jupiter of Dodona: for he never gives any quarter to that god. Now, not far from Dodona, a city of Epirus, there was a grove of oaks ſacred to Jupiter, where the oaks are ſaid to have pronounced oracles; though others ſay the anſwers were given by two doves ſitting on theſe oaks, and one of which flew away to the temple of Apollo at Delphi, the other to that of Jupiter Ammon, where they continued their old trade of fortune-telling. Pliny, lib. ii. cap. 103, ſays, "In Dodonæ Jovis autem Fons, cum ſit gelidus, & immerſas faces extinguat, ſi extinctæ admoveantur accendit." And Gaſſendus, on the tenth book of Laërtius, page 157, ſays, that not far from Grenoble, there is an ardent fountain, that will take fire, if it be touched with a lighted torch, and continue burning for more than a few days. Pliny, lib. xxxi. cap. 2, ſays, that there is a fountain in India, called Lycos, whoſe water will light a candle; and he reports the ſame thing of another at Echbatan, which Solinus confirms to be true. And ſince we are on this ſubject of wonderful fountains, we will mention ſome of the many recorded by the ancients, and whoſe effects, if true, are indeed miraculous. There is a fountain in the Iſland Cea, that perfectly ſtupifies thoſe that drink of its waters: Plin. lib. xxxi. cap. 2. Another, near Clitor in Arcadia, whoſe water cauſes a loathing of wine: Plin. Loc. citat. And Ovid. Metam. xv. ver. 322.

Clitorio quicunque ſitim de fonte levârit,
Vina fugit; gaudetque meris abſtemius undis.

On the contrary, the water of Lynceſtis in Macedonia inebriates, ſays the ſame poet, lib. citat. ver. 329.

Huic fluit effectu diſpar Lynceſtius amnis,
Quem quicunque parùm moderato gutture traxit,
Haud aliter titubat, quam ſi mera vina bibiſſet.

And Plin. lib. i. cap. 103, reports from Mutianus, that there is a fountain in the Iſland Andros, whoſe waters have the taſte of wine, and inebriate likewiſe. The river Athamas in Phthia kindles wood, if it be thrown in, in the wane of the moon: Ovid. Metam. xv. ver. 311.

Admotis Athamanis aquis accendere lignum
Narratur, minimos cum Luna receſſit in orbes.

A river at Coloſſæ turns wood into ſtone: Plin. lib. xxxi. cap. 2. And Ovid ſays, the Ciconians, have a river that petrifies the bowels of thoſe that drink of it: and brings a ſtony hardneſs on all things that touch the waters.

Flumen habent Cicones, quod potum ſaxea reddit
Vicera quod tactis inducit marmora rebus.
Metam. xv. *ver.* 313.

But Pliny ſays only, that a ſtony bark grows over wood, thrown into this river; and that the lake Velinus, now Lago di Pie di Luca, the rivers Silarus and Surius turn wood or leaves into ſtone. Nat. Hiſt. lib. ii. cap. 103. A fountain at Perperene in Lydia turns earth that is moiſtened

with its waters into ſtone, Pliny, lib. xxxi. cap. 2. There are two fountains at Orchomenus in Eubœa; the water of one of them confers memory: that of the other cauſes forgetfulneſs, Plin. loco citat. Mutianus witneſſes, that there is one at Cyzicus, which delivers from the uneaſy paſſion of love. A pool at Samoſata breeds a ſort of ſlime, that burns when put into water, and is extinguiſhed with earth. Plin. lib. ii. cap. 104. Whatever is thrown into the lake Sides, or Sideris in India, inſtantly ſinks to the bottom. Idem, lib. xxxi. cap. 2. The waters of a fountain at Zama in Africa, render the voice harmonious, Idem, lib. xxxi. cap. 2. There is a lake at Troglodytæ, the water of which grows bitter, and then again ſweet, three times every day, and as often every night. Plin. lib. xxxi. cap. 2. And many other wonderful ſtories are related of other rivers and waters; but I may not omit to mention what many now living have experimented, and know to be true. There are two baths or fountains at Baia, not far from Naples, into one of which, when a dog is thrown, he is immediately deprived of ſenſe, and ſeems to be dead; but, thrown into the other, he comes to himſelf, and revives in as little time. And from thence the place is called Grotto del Cane.

Ver. 877. In theſe ſeventeen verſes, Lucretius argues, that the reaſon why the water of this fountain kindles tow, &c. may be this: Thoſe ſeeds of fire, riſing up to the ſurface of the water, may there be condenſed, and gathered together in ſuch a manner, as to kindle any combuſtibles, that are apt to take fire, if they be advanced to them. Thus too fountains of freſh water bubble up in the midſt of the ſea; and as thoſe ſeeds of freſh water, riſing up, join into one body, and flow in a ſtream of freſh water; ſo too theſe ſeeds of fire, riſing up, and combining into one, may eaſily create a flame. Thus a candle, newly extinguiſhed, if put to a burning taper, or to fire, catches again, and is lighted even before it touch the flame.

Ver. 879. Thus Alpheus, a river of Peloponneſus, after it flows into the ſea, is ſaid to preſerve its waters unmixed with thoſe of the briny flood, and, flowing in one continued courſe, to dive into the earth, and break out again at the head of the fountain Arethuſa, in the weſt of the iſland Ortygia. Virg. Æn. iii. ver. 694. ſpeaking of Ortygia,

———Alpheum fama eſt huc, Elidis amnem,
Occultas egiſſe vias ſubter mare; qui nunc
Ore, Arethuſa, tuo ſiculis confunditur undis.

And this the ancients would have to be true, becauſe in the Olympic games, which were celebrated at Elis every fifth ſummer, the garbage of the victims being thrown into Alpheus in Greece, was reſtored through the mouth of Arethuſa in Ortygia. Plin. lib. ii. cap. 107. "Quidam fontes odio maris ipſa ſubeunt vada, ſicut Arethuſa, fons Syracuſanus, in quo reddunturjacta in Alpheum." But Strabo, lib. vi. explodes this fiction. This, however, gave occaſion to the fabulous loves of Alpheus and Arethuſa. Pliny reports the like of the rivers Lycus and Eraſinus; the firſt in Lydia, the other in Arcadia; which is likewiſe confirmed by Ovid. Metam. lib. xv. ver. 273.

Sic ubi terreno Lycus eſt epotus hiatu,
Exiſtit procul hinc, alioquè renaſcitur ore.
Sic modò combibitur, recto modo gurgite lapſus
Redditur Argolicis ingens Eraſinus in arvis.

Thus Lycus, ſwallowed up, is ſeen no more;
But far from thence knocks at another door:
Thus Eraſinus dives, and, blind in earth,
Runs on, and gropes his way to ſecond birth;
Starts up in Argo's meads, and ſhakes his locks
Around the fields, and fattens all the flocks.
Dryden.

Ver. 894. The following 156 verſes, contain a diſputation concerning the loadſtone. And here too, ſays Creech, the drift of the poet is the ſame as in all his other diſputations; which has not been hitherto obſerved. For Hercules is ſaid to have found out this ſtone; and no doubt his godſhip is well-pleaſed that men ſhould hold themſelves obliged to him for ſo great a benefit; and that the virtues of that ſtone are aſcribed to him. Jupiter has already loſt his fountains, and why ſhould the poet give quarter to the ſon, ſince he never would ſpare the father?

In the three firſt of theſe verſes, the poet tells us, he is going to diſpute of the virtue or power of the loadſtone; which, though Lucretius acknowledge but one, is known nevertheleſs to have a twofold power, or two different virtues, which are thus diſtinguiſhed: I. The power, by which it attracts the ſteel to itſelf. II. The power, by which it directs both itſelf and the ſteel towards the poles of the world. The firſt of theſe is called its attractive power, the ſecond, its directive. As to the firſt of them, though it may ſeem a very hard paradox, nay, even an abſurdity, to aſſert, that attraction is unjuſtly aſcribed to the loadſtone, and that we ſpeak not properly, when we ſay, that it draws and attracts iron, yet we ſhould not want great authority, nor even experiment itſelf, to confirm this aſſertion. For, in the firſt place, Renatus Des Cartes, in his principles of philoſophy, has theſe expreſs words: "Præterea magnes trahit ferrum, ſive potius magnes et ferrum ad invicem accedunt; neque enim ulla ibi tractio eſt." This too is ſolemnly determined by Cabius: "Nec magnes," ſays he, "trahit propriè ferrum, nec ferrum ad ſe magnetem provocat; ſed ambo pari conatu ad invicem confluunt." And with theſe authors agrees the aſſertion of Doctor Ridley, phyſician to the emperor of Ruſſia, and who, in his tract of Magnetical Bodies, defines magnetical attraction to be a natural incitation and diſpoſition, conforming to contiguity; or a union of one magnetical body with another, and not a violent and forcible attraction, and hauling of the weaker body to the ſtronger. And this is likewiſe the doctrine of Gilbertus, who terms this motion a coition, which, ſays he, is not made by any attractive faculty, either of the loadſtone,

or the iron, but by a ſyndrome, or concourſe of both of them: a coition always of their vigours, and of their bodies likewiſe, if not obſtructed by their bulk, or ſome other impediment; and therefore thoſe contrary actions, which flow from oppoſite poles or faces, are not ſo properly expulſion and attraction, as "ſequela et fuga," a mutual following of, and flight from, each other.

Moreover, the foregoing opinions are confirmed by ſeveral experiments: For, I. If a piece of iron be faſtened to the ſide of a bowl, or baſon of water, a loadſtone, ſwimming freely in a boat of cork, will preſently make to it. II. If a ſteel, or knife, untouched, be offered towards a needle that is touched, the needle moves nimbly towards it, and ſtrives to unite to the ſteel, that remains without motion. III. If a loadſtone be filed very fine, the powder, or duſt of it, will adhere and cleave to iron that was never touched, in like manner, as the powder of iron does likewiſe to the loadſtone. And, IV. Laſtly, if a loadſtone and ſteel be placed in two ſkiffs, or ſmall boats made of cork, and within the orbs of their activities, neither of them will move, while the other ſtands ſtill; but both of them, if I may uſe the expreſſion, hoiſt ſail, and ſteer to each other; inſomuch, that if the loadſtone attract, the ſteel too has its attraction; becauſe, in this action, the alliciency is reciprocal, and, being jointly felt, is the reaſon, that they mutually approach, and run into each others arms. Thus, therefore, upon the whole matter, more moderate expreſſions than are often uſed, would more ſuitably expreſs this action; which, nevertheleſs, ſome of the ancients have delivered in the moſt violent terms of their language. Thus St. Auſtin calls the loadſtone, "mirabilem ferri raptorem;" and Hippocrates, λίθος ὅτι τὸν σίδηρον ἁρπάζει· "Lapis, qui ferrum rapit:" Galen, diſputing againſt Epicurus, uſes the term, ἰλκεῖν, which ſeems likewiſe too violent. Ariſtotle alone among the ancients ſpeaks more warily, and calls it, λίθος ὅτις τὸν σίδηρον κινεῖ, the ſtone that moves the iron, and him, Aquinas, Scaliger, Cuſanus, and others have followed.

I return now to Lucretius, and muſt firſt obſerve, that our tranſlator has omitted the third and fourth verſes of this argument, in which the poet explains how this ſtone came to be called the magnet: Theſe verſes run thus in the original:

Quem magneta vocant patrio de nomine Graii;
Magnetum quia ſit patriis in finibus ortus.

i. e. which ſtone the Greeks call the Magnet, from the name of the country; becauſe it is produced and found in the country, inhabited by the Magnetes. This country is a region of Lydia, and called Magneſia, whence the inhabitants had their name. Ariſtotle, by way of excellence, calls it barely, λίθος, the ſtone: Some, "Herculeus lapis," either becauſe Hercules firſt diſcovered it; or from the city Heraclea, where it is ſaid to be found: or, laſtly, from its great ſtrength, or wonderful power. The Italians call it "pietra d'amante," the loving ſtone: the name of the loadſtone, by which it is commonly known among us, is a word of Saxon extraction; but the French know it only by the name of "l'aimant," the lover: And this modern name agrees with what Orpheus ſings in Claudian, Epig. iv. That iron ruſhes to the loadſtone, as a bride to the embraces of the bridegroom.

Pronuba fit natura Deis, ferrumque maritat
Aura tenax.——————
Flagrat anhela filex, et amicam faucia ſentit
Materiem; placidoſque chalybs cognoſcit amores:
Jam gelidas rupes, vivoque carentia ſenſu
Membra feris: jam ſaxa tuis obnoxia telis,
Et lapides ſuus ardor agit, ferrumque tenetur
Illecebris, &c.

Now Lucretius, the better to explain the attractive virtue of this ſtone, premiſes four heads, or chief poſitions, which, though he has proved them already, yet, becauſe of the great difficulty of the taſk he is now going to undertake, he thinks fit to inculcate here again. I. That certain corpuſcles are continually flowing out of all things, in twenty-ſix verſes. II. That no concrete body is ſo ſolid, as not to contain ſome empty little ſpaces, in twenty-three verſes. III. That the corpuſcles, that are emitted from things, do not agree with all things alike, and in the ſame manner, and produce not the ſame effects on them, in fourteen verſes. IV. That the void little ſpaces are not alike in all things, but differ in ſize and figure, and therefore cannot be fit for all bodies indifferently, in thirteen verſes. This being premiſed, he endeavours to tell the reaſon why, or the manner how, the loadſtone attracts iron, or the iron is conveyed to the loadſtone, which conſiſts in this. Many particles flow from the loadſtone, and diſſipate the air all around it; and thus many void little ſpaces are made: But when the iron is placed within the ſphere of that diſſipated air, there being a great deal of empty ſpace between that and the loadſtone, the corpuſcles of the iron leap more freely forward into that void (for the ſeeds of all bodies fly forward on a ſudden into empty ſpace), and for that reaſon are carried towards the loadſtone: now they cannot tend that way, without dragging along with them their coherent ſeeds (for the ſeeds of iron are moſt intricately entangled, and twined together), and conſequently the whole maſs of iron, in ſeventeen verſes. But becauſe the iron moves any way, upwards, downwards, acroſs, or in any obliquity, without the leaſt diſtinction, according as it is placed to the loadſtone, he teaches in five verſes, that this could not be, but by reaſon of the empty ſpace that is made by corpuſcles that flow from the magnet, and into which all bodies, that otherwiſe tend only downwards, are protruded indiſcriminately, by the ſtrokes and blows of other bodies. And this is in general what Lucretius teaches concerning the loadſtone; we will examine his arguments a part, in the order he has obſerved in the diſpoſition of them.

Ver. 897. In theſe ſix verſes, he takes notice of the firſt power and virtue of the loadſtone; and ſays, that it draws five, or more iron rings, ad-

hering one to another. This is the virtue of the magnet, which is called the attractive; but of the other, the directive, he says nothing; nor indeed do any of the ancients treat of this last power of the loadstone. The moderns alone have inquired into that matter; and that too, only since the invention of the magnetic needle; which, according to some, was first discovered a little more than five ages ago, that is to say, A. D. 1200. At which time Guyotus, a native of Provence in France, writ a poem, which he called Marineta, in praise of this invention. And hence, say the French authors, the Flower de Luce, which is the arms of France, is every where, even among the barbarous nations, represented at one of the ends of that needle. Petrus Peregrinus, another Frenchman, about three hundred years ago, writ a treatise of the Magnet, and of a perpetual motion to be made by it; which treatise has been preserved by Gasserus. Paulus Venetus, and Albertus Magnus, who flourished about five hundred years ago, both of them, mention this verticity of the loadstone, and cite for it a book of Aristotle's, intituled, De Lapide; but Cabeus and others rather judge that book to be the work of some Arabic writer, who lived not many years before the days of Albertus. And, indeed, it is very probable, that the knowledge of the loadstone's polary power and direction to the north was unknown to the ancients; and Pancirollus justly places it among the modern inventions; though Levinus Lemnius, and Cœlius Calcagninus are of another belief; but their strongest argument is only the following passage in Plautus:

Hic ventus jam fecundus est; cape modo versoriam.

Now the word "versoriam" they interpret to be the compass; but, according to Pineda, who has particularly discussed this matter, and to Turnebus, Cabeus, and several others, it rather signifies the rope that helps to turn the ship, or that makes it tack about; for the compass shows that the ship is turned, rather than contributes to its conversion. As for the long expeditions and voyages of the ancients, which may seem to confirm the antiquity of this invention, it is not improbable, but they were performed by the help of the stars, by the flight of birds, or by keeping near the shore: for thus the Phœnician navigators, and Ulysses too, might sail about the Mediterranean; and thus likewise might Hanno coast about Africa. And as to what is contended, that this verticity of the loadstone was not unknown to Solomon, who is presumed to have had a universality of knowledge, it may as well be averred, that he knew the art of typography, of making guns and powder, or that he had the philosopher's stone, though he sent to Ophir for gold. It cannot indeed be denied, but that, besides his political wisdom, he was very knowing in philosophy; and perhaps too, as some believe, from his philosophical writings, the ancient philosophers, especially Aristotle, who had the assistance of the acquisitions of Alexander, collected many things worthy of note; yet it must be granted, that if he knew the use of the compass, his ships were very slow sailers, since they made a three years voyage of it from Eziongeber in the Red Sea to Ophir, supposed to be Taptobana, or Malaca, in the Indies, which is not many months sail; and since too in the same, or a less, time, Drake and Cavendish performed their voyage round the earth.

Moreover, some are of opinion, that this directive power of the loadstone depends upon, and is derived from the two poles of the heavens: others from the Arctic pole only: Cardanus, from the tail of the Bear; Des Cartes from I know not what tractorious point, as he calls it, and which he imagines to be I know not where too, beyond the heavens; Fracastorius, from certain magnetic mountains under the Arctic Pole: Gulielmus Gilbertus, from the earth itself, which, as one huge loadstone, conforms and brings into its native and natural site, that is to say, towards the north and south, the loadstone itself, as a small earth, and the iron as its offspring. In regard to the attractive virtue of the loadstone, the opinions likewise are different. Thales, Aristotle and Hippias ascribed it to the soul, with which they held it to be endowed. But it is not certain what hands, or what senses nature has given to this stone. Cardanus intimates that it is only a certain appetite, or desire of nutriment, that makes the loadstone snatch the iron; and according to this opinion, Claudian Epig. 4.

Ex ferro meruit vitam, ferrique rigore
Vescitur: has dulces epulas, hæc pabula novit.

And Diogenes Apolloniota, lib. ii. Nat. Quæst. cap. 23. confirms the same opinion, when he says, that there is humidity in iron, which the dryness of the magnet feeds upon. Others fly to sympathy, and certain occult qualities. The opinions of Democritus, Epicurus, and Lucretius, are explained in the following notes.

Ver. 903. In these four verses, the poet only tells us, that to give a methodical account of the attractive power of the loadstone, it will be necessary to take the matter higher, and to repeat some of the maxims he has taught already.

Ver. 907. In these thirteen verses, he premises, I. That corpuscles are perpetually flowing from all things: and this he has taught before, Book IV. ver. 47. et seqq.

Ver. 919. This and the ten following verses are repeated from B. IV. ver. 240. et seqq. Consult there the notes upon them.

Ver. 920. In these twenty-three verses, he premises, II. That no compound body is so solid, as not to consist of some void: that is to say, as not to contain some empty little spaces. And this the poet has demonstrated at large. B. I. ver. 402. et seqq.

Ver. 933. This, and the three next verses are repeated word for word, from book i. ver. 335. though Lucretius varies them in the original; but the sense indeed is the same.

Ver. 939. This and the following verſe run thus in the original,

——Quin ferri quoque vim penetrare ſuevit,
Undique qua circum corpus lorica coërcit,
Morbida vis quæcunque extrinſecus inſinuatur.

This paſſage has puzzled the interpreters, and after all, they know not well what to make of it: Creech in this tranſlation has followed the opinion of none of them, and indeed diſapproves of them all in his Latin edition of Lucretius: for, ſays he, what can Lucretius mean by a coat of mail? No man ever believed, that the infectious power of diſeaſe ever pierced through a coat of mail. He diſlikes alſo all the other explications given by the ſeveral other annotators to this paſſage: which at length he corrects, and inſtead of "morbida vis," reads "fervida vis;" which lection, ſays he, makes all things plain and eaſy: for often, when men armed from head to foot, ſcaled the walls of a city, the beſieged poured down upon them melted pitch, ſulphur, ſcalding water, &c. the heat of which pierced through their armour, and made them ſenſible of it. This expoſition ſeems the moſt natural of any that have been given to this paſſage, and agrees beſt with the preceding part of the argument. But he is evidently miſtaken in the interpretation he gives it in this tranſlation: and this may ſerve for one of the many inſtances might be given, that he had not ſtudied his author ſo thoroughly, when he rendered him into Engliſh, as afterwards, when he came to publiſh his Latin edition.

Ver 943 In theſe fourteen verſes, the poet premiſes, III That the corpuſcles which flow from things, do not agree with all things, nor affect them alike, or in one and the ſame manner. This he has demonſtrated in many places of the preceding books; but chiefly in the fourth.

Ver. 957. In theſe thirteen verſes, he premiſes, IV. That there are different little ſpaces, or pores of various figures in all compound bodies: from whence it comes to paſs, that all things cannot be adapted to, nor fit, and agree with, every one of them this he has proved before, in the ſecond and fourth books: and confirms again in this place, by the ſame examples he there alleged in proof of this doctrine.

Ver 970 In theſe three verſes he concludes, and ſays, that theſe things being premiſed, it is eaſy to diſcover and underſtand, how, and for what reaſon the loadſtone attracts iron. And this is what he is going next to explain.

Ver 973 Epicurus explained two ſeveral ways the attractive virtue of the loadſtone; and it is ſtrange Lucretius has omitted one of them: or rather it has been loſt out of the text, ſince what Lucretius has ſo carefully premiſed, ſeems more properly adapted to that cauſe, than to the other that remains. If you are deſirous to know more of it, ſee Gaſſendus, tome ii. p. 129. where you will find many things, by which this doctrine of Epicurus is illuſtrated, and fully explained But to proceed: Lucretius having premiſed the four propoſitions abovementioned, undertakes in this place to ſhow the reaſon why, or manner how, the loadſtone attracts the iron, and the iron, on the other hand, is carried and moves towards the loadſtone. To this end, in theſe fourteen verſes, he teaches, I. That many corpuſcles flow as well from the loadſtone as from the iron; but the greater quantity, and the more ſtrong from the magnet: whence it comes to paſs, that the air is always diſperſed, and driven away to a greater diſtance round about the loadſtone, and conſequently, that fewer empty little ſpaces are made around the iron. And becauſe, when the iron is placed within the ſphere, as they ſay, of the air, that is removed and driven away, there muſt be a great deal of void ſpace between that and the loadſtone; the corpuſcles of the iron fly the more freely into that empty ſpace, and therefore neceſſarily towards the magnet; but thoſe corpuſcles of the iron cannot hurry that way in a great quantity, without dragging along with them the particles that adhere to them, and by conſequence the whole maſs of iron.

Ver. 987. Theſe five verſes Gaſſendus thus explains: inaſmuch as the iron tends indiſcriminately upwards, downwards, acroſs, in a word, any way, according as it is placed above, below, on one ſide, &c. of the magnet; the poet teaches, that it could not move in that manner, but by reaſon of the induction of the void, into which the corpuſcles of the iron, that would otherwiſe move downwards only, are carried indifferently, and without the leaſt diſtinction. Thus Gaſſendus believes, that theſe five verſes relate to the explication laſt above propoſed; but I, ſays Creech, am of another opinion: for the whole matter there relates to the corpuſcles of the iron leaping forward into the void, that is made by the effluviums from the loadſtone: but here, in theſe verſes, the little bodies are protruded into the void by blows: therefore they more properly belong to what follows. Creech. in Edit. Lat.

Ver. 992. Lucretius labours hard to prove, that the motion of the ſteel is helped forward by the air, becauſe of its certain continual motion and agitation. And firſt, in theſe ten verſes, he ſays, it is aſſiſted by the exterior air, which, ſince it is always driving forward, and that too with more force, the more there is of it, cannot but puſh on the iron into that place where there is leaſt air, and conſequently moſt void: which muſt be towards the loadſtone Then, in ſix verſes, by the interior air, which for the ſame reaſon, ſince it always agitates, moves, and drives forward cannot but begin the motion towards that place, which is rendered moſt void and empty.

Ver. 1008. Gaſſendus here obſerves, that Lucretius ſeems to have ſeen that experiment, in which the loadſtone ſometimes manifeſtly repels, or at leaſt ſeems to repel, the iron. What he means is this: it is diſcovered, that there are in the loadſtone two oppoſite parts [we now commonly call them poles; one the northern, the other the ſouthern], to one of which, if one end of the iron needle be moved, it is drawn and attracted by it; and if the ſame end of the needle

be afterwerds applied to the other pole, it leaps, and ſeems to be repelled from it. But that great man, ſays Creech, indulges himſelf too much in his own opinion: for the poet propoſes nothing in theſe verſes concerning the flight of the iron from the loadſtone, nor do any of the following examples ſpeak fully of it: but Lucretius had ſeen little rings, and filings or ſegments of iron, when put into a veſſel of braſs, move and dance about, if a loadſtone were applied to the bottom of the veſſel: and, perceiving this to be cauſed by the interpoſition of the braſs (though the ſame will happen if glaſs, wood, ſtone, or any other ſubſtance be interpoſed), in theſe twelve verſes, he gives this reaſon of it, That ſome corpuſcles are emitted from the braſs into the filings, or little bits of iron, and that theſe corpuſcles ſo fill up the little void ſpaces of the iron, that the magnetic corpuſcles, which come afterwards, and are tranſmitted through the braſs, finding theſe little empty ſpaces already taken up, heave and drive forward the bits of iron with all the ſtrength they can.

Ver 1010. *Steel filings*] Lucretius calls them "Samothracia ferrea," which were hollow iron rings, made to open, and in which they wore their amulets: at firſt the "Flamen Dialis" wore them: "annulo, niſi pervio caſſoque, ne utitor." At length ſervants took upon them to wear them; and, in the age of Pliny they were laid over with gold: "ſervitia jam ferrum auro cingunt; alia per ſeſe mero auro decorant: cujus licentia origo nomine ipſo in Samothrace, id inſtitutum declarat." Plin. Nat. Hiſt. lib. xxxiii. cap. 1.

Ver. 1020. It may be aſked, why a loadſtone does not make the filings of other bodies move in like manner? The poet teaches in theſe ten verſes, that the reaſon is, becauſe they are either too heavy to be moved, or if they are light, they are then too rare; inſomuch that the corpuſcles of the magnet find a free and open paſſage through them.

Ver. 1030. Hitherto of the motion of the iron towards the loadſtone, or of its flight from it. Now, as to its adheſion to it, he tells us in twenty verſes, that it ought not to ſeem ſtrange, becauſe there is a like conſent and agreement between other things alſo, which refuſe to be joined, or connected, except to one certain thing only. Thus ſtones are cemented with plaſter and lime: boards with glue; and that too ſo ſtrongly, that the planks themſelves will break, rather than the glue disjoin: water mingles with wine, but not with oil and pitch: wool is dyed with the blood of the purple fiſh: and gold is ſoldered with ſilver, but not with lead; which nevertheleſs ſolders braſs to braſs. And thus the adheſion of the ſteel to the loadſtone is made in this manner: on the ſurface of the magnet there are hooks, and on the ſurface of the ſteel little rings, which the hooks catch hold of.

Ver. 1033 Lucret. "glutine taurino:" for the ſtrongeſt glue was made of the ears and genitals of bulls: "glutinum præſtantiſſimum fit ex auribus taurorum, et genitalibus." Plin. Nat. Hiſt. lib. xxviii. cap. 17.

Ver. 1036. *Oil and heavy pitch*] Both of them refuſe to mix with water; but differently: for oil riſes above the ſurface of the water; therefore Lucretius here calls it "leve olivum;" but pitch ſinks to the bottom.

Ver. 1037. The purple of the ancients was dyed with the blood of a ſhell-fiſh, called Purpura; it was found in a white vein, running through the middle of the mouth, which was cut out and boiled; and the blood, uſed in dying, produced the colour "nigrantis roſæ ſublucentem," which Pliny ſays is the true purple, though there were other ſorts too of it, as the colour of violet, hyacynth, &c. Of this invention, ſee Plin. lib. ix. cap. 38. and Pancirollus. The greateſt fiſhing for theſe purples was at Tyre; and there was the chief manufacture and trade of purple, as likewiſe the firſt invention of it; which is attributed to Hercules Tyrius, who, walking upon the ſhore, ſaw his dog bite one of thoſe fiſh, and obſerved his mouth all ſtained with that excellent colour, which gave him the firſt hint of teaching the Tyrians how to dye with it: from this invention of this colour, it is called in Greek ἁλιεργὸς becauſe, ſays Ariſtotle, de color. it is, as it were ἁλὸς ἔργον, the work of the ſea; and Plate in Timæus defines ἁλιεργὲν, to be red mingled with white and black. See Guil Tyrenſis, Pontif. lib. 13. Belli Sacri, cap. 1. where he ſpeaks of Tyre. The purple of Africa, a country nearer to the ſun, was, as we are told, for that reaſon, of a violet colour: the ingredients of which conſiſt of much white, and a little red: but the common purple now-a-days is, as the beſt artiſts tell us, a mixture of a great deal of red and a little black; yet the Tyrian purple is generally held to have been more inclining to red, which is a certain mixture of white and black, or rather to ſcarlet. But this ſort of purple, ever ſince the fiſhing for the purpura, is by the taking of Tyre, come into the power of the Turks, has been totally loſt: not for want of materials; for the fiſh is ſtill to be found; but becauſe the true art of ordering it is no longer known. Pancirollus tells us, we may gueſs at the colour of it by the Italian July-flower; and that it was not, as ſome believed, like the amethyſt, but rather like the ruby, pyropus, or carbuncle. Some will have it to have reſembled the colour of the elemental fire: and others, that of what they never ſaw, the empyrean heaven. But to gueſs what the colour of this true purple was, by the deſcription, which the ancients have left of it, we may call to mind, that Juvenal calls it "ardens purpura," flaming purple; and we find in Cicero, "Qui fulgent purpurâ," who ſhine in purple, which Statius yet improves:

"Illius è roſco flammatur purpura vultu:"

And many the like inſtances might be produced from the ancients, of the refulgency of this colour. Some mention an extraordinary way of dyeing the purple colour with the blood of apes: and the Indians make trial of the beſt common purple, by dropping ſome oil on a piece of purple ſilk, which, they ſay, will not ſtain it, if the purple be good: but theſe two particulars I mention only for the

ſake of their extravagancy. Whatever the purple of the ancients was, our purple is made of what the druggiſts call turneſol, which is a mixture of vermilion and blue byſſe, or cynnaber. As to the ancient wearing of purple, Lemazzo, lib. iii. cap. 14. obſerves, that the kings of Troy, and the chief of the nobility, were wont to dreſs themſelves in ſeveral colours, on the ſeveral days of the week, and wore a particular colour on each day; and that the chief of them was the purple: thus on Sunday they wore yellow, on Monday white, on Tueſday red, on Wedneſday blue, on Thurſday green, on Friday purple, and on Saturday black. Now the reaſon, why they dreſſed themſelves in purple on Friday, may have been, becauſe that day was ſacred to Venus, whoſe buſkins are ſaid to have been red, between which and purple, there was but little difference, ſays the ſame Lomazzo, in the place above cited. He farther obſerves, cap. 19. of the ſame book, that they wore likewiſe ſeveral colours on the feſtivals of ſeveral months of the year: in thoſe that happened in January, they wore white, in February aſh-colour, in March tawny, in April dark green, in May light-green, in June carnation, in July red, in Auguſt yellow, in September blue, in October violet, in November purple, and in December black. Now the month of November was under the protection of Diana amongſt the Romans, who derived themſelves from the Trojans, and that goddeſs, like Venus, wore red, or rather purple, buſkins: and therefore, for the like reaſon, it may be conjectured, that they wore purple on the holidays of that month. Beſides, in November their feſtival dedicated to Jupiter, and therefore they might probably go then dreſſed in purple: for many of the Roman cuſtoms, as well as their pretended original, were derived from the Trojans: and laſtly, that author takes notice, that in ſucceeding ages, whenever the emperor himſelf went into the field, the ſtandard was of a purple colour. Thus wee ſee, that purple was anciently the wear of princes: and therefore honeſt Umbritius in Juven. Sat. 3. conceived ſo great indignation, that the meaner ſort of people began to clothe themſelves in that regal colour, that he alleges it as one of the reaſons of his retiring from Rome: "Horum ego non fugiam conchylia?" ver. 81. And Auguſtus, as we find in Suetonius, in his life, forbid the promiſcuous uſe of it: for which Tacitus commends that emperor, and at the ſame time gives the reaſon of that prohibition in theſe words: "Præclarè vero prudentérque Cæſar ordines civium veſte diſcriminavit, ut ſcilicet qui locis, ordinibus, dignationibus anteſtant, cultu quoque diſcernerentur." Annal, 2. Yet at length, liberty prevailed at Rome, and the meaner ſort, if their money could reach it, clothed themſelves in purple; and lived as in the Spartan commonwealth, where, by the laws of Lycurgus, it was forbid to all alike, that any one man ſhould go better dreſſed than another.

Ver. 1038. Thus Waller:

The fleece that has been by the dyer ſtain'd,
Never again its native whiteneſs gain'd.

Ver. 1040. *Solder.*] What the goldſmiths uſe to ſolder gold, is called borax, a ſort of chryſocol, which is a kind of mineral, found like ſand in mines of braſs, ſilver, or gold.

Ver. 1045. Here Lucretius tells us, that the juncture is moſt ſtrong, and the union moſt firm and laſting, between things, whoſe parts exactly correſpond and ſquare with one another: thoſe things, ſays he, whoſe textures mutually anſwer to one another, in ſuch a manner, that the cavities of this thing agree with the plenitudes of that and the cavities of that with the plenitudes of this, may be conjoined moſt eaſily, and in the ſtricteſt manner: and ſome things may be ſo joined to others, as if they were faſtened together with hooks and rings: and in this manner it is, that the loadſtone ſeems connected to the ſteel.

Thus our poet concludes his diſputation concerning this wonderful ſtone: which is alone ſufficient to humble the towering arrogance of prying man, and to baffle and mock his vain pretence to knowledge; ſince he never could attain to the diſcovery of what it is, nor of the great power, that the Divine Wiſdom has beſtowed upon it: well may it be ſtyled Herculean, it being inſuperable on many accounts: the ancients knew ſcarce any thing of it; and the modern philoſophers, that they might ſeem to be ignorant of nothing, pretend to explain this hidden ſecret of nature; but have failed in the attempt, and have only involved it in yet greater difficulties: for what is more abſurd, or more repugnant to common obſervation, than to imagine to ourſelves, that the whole earth is compacted of ſolid iron, or than to call it the great loadſtone, whoſe purer ſegments do now and then by chance fall into our hands. Is it thus that we philoſophize, and think it better to pervert than ſuffer things to lie hid in the inſcrutable majeſty of nature? Lucretius endeavoured to diſcover the cauſe of a moſt notorious effect, viz. Why iron runs to the loadſtone, and obſtinately adheres to it? But ſetting ſail imprudently, was ſhipwrecked in the port. His firſt aſſertion is, that the corpuſcles of the loadſtone ſtrike and chaſe away the air: but this we know by experience to be falſe: for the water is not moved, when a loadſtone is put under the veſſel that contains it: neither will you find the air to be moved, if, for trial's ſake, by the exhalation that ſteems from a cenſer, or the vapour of hot water, you render it ſo thick, that from perſpicuous it become conſpicuous: for the ſmoke will go alike forward, whether you apply the loadſtone, or take it away: and if no force be offered to the medium, the loadſtone will ſtill ſtrongly attract the ſteel: therefore the place is not made empty, nor the air expelled: but grant the ſpace to be void, whence proceeds that great ſedulity of the ſteel, to fill immediately the vacant place? If it be anſwered, from the eſtabliſhed order of things, to the end, nothing in the univerſe may be void of body; it may be replied, that it then overthrows their opinion, who hold the void to be the ſecond principle of natural things. Beſides, corpuſcles flow no leſs from the iron, than

from the magnet: therefore, if the effluviums of the iron have filled the vacant ſpace, why is not the ring ſtopped, and why does it haſten onward? If it be anſwered, that it is driven forward by external air, why is not that protruſion perpetual, even while the magnet is away? And whence proceeds this inconſtancy, that compels the air to renounce its natural gravity, and move by aſcent? Nor is the internal air, included in the ring, of any greater moment: For ſince the iron emits corpuſcles on all ſides, why does it incline and move one way rather than another? Beſides: how ill does what Lucretius here aſſerts, that the air reſides in, and fills up the pores or open paſſages of concrete bodies, agree with his doctrine of a void, which he endeavoured before to perſuade us to believe, and which he grounded on thoſe very pores of bodies? In vain, therefore, has been the ſearch of our poet into this miraculous ſecret of nature, ſince it has led him unawares into arguments, that tend to the confutation of that philoſophy, which he has been labouring to eſtabliſh.

Ver. 1050. Hitherto our poet has been diſputing of the things, that are commonly ſaid to be, "fecundùm naturam," natural: he is now going to try the ſtrength of his philoſophy in thoſe, which by the phyſicians are called, "præter naturam," preternatural; and theſe are held to be three: I. Diſeaſe. II. The cauſe of diſeaſe. III. The ſymptom, or the effect, accident, or paſſion, attending any ſickneſs: for ſymptom, in the general acceptation of the word ſignifies whatever happens to an animal preternaturally: i. e. diſeaſe, and the internal cauſe of diſeaſe, together with whatever ſupervenes in the diſeaſe. As to what relates to the cauſe of diſeaſes, and their ſymptoms, Lucretius takes but little notice: for he diſdains common diſeaſes; and is going to treat of plagues only, and to inquire into the cauſes of them. And here we may take notice, that phyſicians allow two ſorts of diſeaſes, which they call, "communes, & ſparſim vagantes," common diſeaſes, and ſuch as wander here and there, and come not after an ordinary manner: theſe laſt Hippocrates in his language calls σποραδικὰς· the diſeaſes they call common, are thoſe that are peculiar and naturally incident to one place or country; for which reaſon they are likewiſe called Endemii, that is to ſay, regional; and, becauſe they often ſeize many perſons, popular or vulgar; but by the Greeks ἐπιδημικοὶ, i. e. public or univerſal. Now if theſe diſeaſes, beſides that they ſeize many perſons at the ſame time, and in one and the ſame place, have this to boot, that they kill many perſons likewiſe, they are then called a plague; by the Greeks λοιμὸς; by the Latins "peſtis, à paſcendo," in like manner as, according to Iſidorus, peſtilentia is ſaid, "quaſi paſtulantia, quòd veluti incendium depaſcit," becauſe it conſumes and devours like a burning flame. But in the art of phyſic, diſeaſes likewiſe admit of another diſtinction; taken from their longer or ſhorter duration; for ſome diſeaſes are lingering, and of long continuance; for which reaſon, they are called chronic, from χρόνος, time: others diſpatch the patient in a little time, or elſe he recovers, and therefore they are called acute: I now return to Lucretius, who ſeems to imply, that the only tokens of an offended and angry deity, that he has left unmentioned, are epidemical diſeaſes and plagues: and if there be nothing wonderful and divine in theſe things neither, we may then indeed diſclaim, and bid adieu to all providence. But our poet tells us, that there is no need of much ceremony, nor to beat about the buſh, to diſcover the cauſes of plagues: for, ſays he, in eight verſes, as in the univerſe, there are many corpuſcles that are healthful to man, and other animals, ſo there are many too that are noxious and deadly. Now, when theſe noxious corpuſcles, whether they ariſe out of the earth, or whether they fall down from the ſkies, fill the air, it grows diſeaſed and infectious; and thus plagues and contagions enter into the bowels of men and other animals. If we will not allow of theſe foreign corpuſcles, he bids us, in ſeven verſes, ſearch into the air itſelf, and we ſhall find the cauſe of this great calamity and deſtruction: for the air of different countries is different, and that which is healthful to the native inhabitants, is unhealthful to foreigners, who are not uſed to it: and this, ſays, our poet, in nine verſes, is the reaſon, that certain diſeaſes are peculiar to certain countries: then he teaches, in ſeven verſes, that when the air of our region is blown into another, the whole air of the ſky muſt of neceſſity be corrupted; and thus, ſays he, in twelve verſes, the ſprings and herbs are infected; or the corrupted air itſelf proves mortal. Laſtly, he confirms this diſputation, by the example of that memorable plague which happened in Athens, during the heat of the Peloponneſian war, and deſcribes it at large in one hundred and ſixty-five verſes.

Here we muſt obſerve, that our tranſlator has not fully rendered the beginning of this diſputation; which in the original is as follows:

Nunc, ratio quæ ſit morbis, aut unde repentè
Mortiferam poſſit cladem conflare coorta
Morbida vis hominum generi pecudumque catervis,
Expediam.

In which verſes the poet propoſes, that he is now going to treat of the cauſes of thoſe diſeaſes, that are mortal both to men, "pecudumque catervis," and to beaſts. of which laſt our interpreter has taken no notice; though it be certain, that plagues are not peculiar to man alone; but promiſcuous and common to beaſts likewiſe; as ſhall be ſhown by and by in our note on ver. 1087.

Ver. 1053. In theſe eight verſes the poet ſays, that the cauſe of diſeaſes may be aſcribed to the very noxious nature of the air itſelf; and teaches, how the air comes to be morbiferous: for, ſays he, many atoms, that bring both diſeaſe and death, are continually flying to and fro in the air; as many others are likewiſe, that are healthful and vital, or conducing to the maintenance and preſervation of life: but thoſe diſeaſed and ſickly

atoms fall from without into the air; being either sent from above out of the sky, or raised up from beneath out of the earth, whenever it has contracted any filthy and unwholesome stench, by being drenched with excessive and unseasonable rains, and pierced by the scorching beams of the sun. Hippocrates too held the air that surrounds us, to be the most general and common cause of all diseases: for the air, says he, varying from its proper nature, whilst it is altered, corrupted, or defiled, infects almost all the animals that breathe within the circuit of it: but whether there be any other common causes of diseases, or the air alone be to blame, we will examine by and by.

Ver. 1061. In these seven verses, the poet being about to advance a position, that may seem incredible to such as have had no experience of it, concerning the diseased and noxious power, that by some means or other is imparted to the air, and perceptible to none of the senses, alleges by way of example, the inconveniencies and harms, that happen to us in an air, to which we have not been accustomed, even though that air be not in the least tainted or corrupted: and he confirms, that the air of one climate is different from that of another: for, no doubt, the air, that surrounds Great Britain, says he, is quite different from the air of Egypt: nor is the air in Pontus less different from that of Gades and Æthiopia: the truth of which is daily experienced by such as travel into foreign countries, and from this difference of air proceed the different colours and complexions of men. Aristotle too argues to the same purpose in his treatise, "de aëre, aquis, & locis."

Ver. 1063. This reason is not to be controverted; for the difference of air, and change of water, are often prejudicial to travellers into foreign countries: the banished Ovid had therefore just reason to complain, that

"Nec cœlum ferimus, nec aquis affuescimus istis."

Ver. 1064. This, and the three following verses run thus in the original:

Nam quid Britannis cœlum differre putamus,
Et quod in Ægypto est, quâ mundi claudicat axis?
Quidve, quod in Ponto, est differre à Gadibus, atque
Usque ad nigra virûm percoctaque fæcla calore?

In which verses the poet confirms by examples, his last assertion, concerning the difference of air in different climates: and instances in the air of Egypt as opposed to that of Great Britain; from whence Egypt is distant the whole extent of the Mediterranean sea: besides, by Egypt, which is a country of Africa, he means the south part of the world, and by Britain the north: by Pontus which is a country of Greece, he means the east part of the world; and by the Gades, which are islands in the occidental ocean, where Europe is divided from Africa, he means the west part of it: for he chose to mention those four places, because they were the most noted, that in his days were believed to be the farthest distant from one another: that is to say, two from the north to the south, Britain and Egypt, which is the distance of latitude: and two from the east to the west, Pontus and Gades, which is the distance of longitude.

Ver. 1065. *Nile*] Of this river we have spoken at large in the note on ver. 722 of this book.

Ver. 1066. Pontus is a country of Asia the Less, lying between Bithynia, Paphlagonia, and the Luxine sea.

Ver. 1067. Lucretius means the air of Mauritania, or Æthiopia, in which countries the natives are black.

Ver 1068. In these nine verses the poet produces instances of certain countries, that are obnoxious to certain diseases, by reason of the very nature of the air: thus, says he, the leprosy is frequent in Egypt only; the Athenians are subject to the gout, &c.

Ver 1070. Galen seems to subscribe to this opinion of Lucretius, who believes, that the leprosy is a disease that infests the country of Egypt only; for, in his second book to Glauco, chap. xiii. he says, That in Alexandria, a city of Egypt, many are afflicted with the leprosy, by reason of the food they eat, and of the heat of the country: But in Germany and Mysia this disease is very seldom known; nor has it scarce ever appeared among the Scythians, who are drinkers of milk: Yet it is very frequent at Alexandria, for the reason above mentioned; for they feed upon boiled meal, and lentiles, and periwinkles, and eat many things that are dried with salt: nay, some of them eat asses flesh, and some other things, that breed a thick and melancholic humour. And the air of the country being hot, the motion of the humours is driven towards the skin. Thus Galen. But Celsus, lib iii. cap. 24, is more in the right as to this disease; for, though he says indeed, that it is almost unknown in Italy, yet he owns it to be very frequent in several other countries. In the last age, the leprosy was not uncommon in Germany; and A. Pareus relates, that in Spain, and all over Africa, there are more lepers than in the rest of the world; and more in Guienne, and the south parts of France, than in all the other parts of that kingdom. If we may believe Pliny, lib. xix. cap. 16. it was altogether unknown in Italy, till the time of Pompey the Great; when it was first brought thither, but soon cured and extinguished. Yet history informs us, that it broke out again in that country, in the days of Constantine the Great, who was himself afflicted with it; till, having refused to make use of the impious bath of human blood, that was prescribed to him as a remedy for that disease, he was, in the Lateran church, bathed in the fount of holy baptism, by the Roman pontiff Sylvester, and cured at once of either leprosy. Nor is it unlikely, but that the emperor might have been advised to that cruel immersion in the blood of infants, by some Egyptian or other; especially if what Pliny says be true: That when this disease, which was peculiar to Egypt, happened to seize any of the kings of that country, it was fatal to their subjects; for to cure it, they were wont to bathe their thrones in human blood: "Ægypti

peculiare hoc malum, et cum in reges incidiſſet, populis funebre: quippe in balneis ſolia temperabuntur humano ſanguine ad medicinam eam." Plin. Nat Hiſt. lib. xix. cap. 16. Moſes in Exod. chap. ix. ver. 10. calls it "ulcus inflationum germinans in homine;" which Jun. and Tremel. explain, "erumpens multis puſtulis" ſprouting out with many blains, &c. This diſeaſe is one of the curſes with which the diſobedience to God is threatened. Deut. chap. xviii. ver. 27 "The Lord ſhall ſmite thee with the botch of Egypt," &c. which likewiſe confirms what Lucretius here ſays; and perhaps gave occaſion to the calumny which Trogus Pompeius, Diodorus Siculus, Tacitus, and other heathens caſt upon the Hebrews, that they were expelled out of Egypt for being ſcabby and leprous; which miſtake was eaſy: inſtead of being diſmiſſed for having brought thoſe diſeaſes upon the Egyptians. The Latins call it "elephantiaſis," becauſe it makes the ſurface of the body rough with black wanniſh ſpots, and dry parched ſcales and ſcurf, like the ſkin of an elephant. It is a contagious diſeaſe, and incurable, if not taken in time; for it ſpreads over the whole ſkin, almoſt like a cancer.

Ibid. *Egypt.*] This country was ſo called from Ægyptus, the brother of Danaus, whom the ſame Ægyptus ſlew, and reigned there ſixty-eight years. It was called before, Melas, Aëria, Aëra, Ogygia, Hephœſtia, Melamboles, and by ſeveral other names The Hebrews called it Miſraim and Chus. It is divided by Mela into two parts, Delta and Thebais: In the time of Amaſis it had 20000 cities, and in the time of Pliny 3000. It is bounded on the eaſt with the Red Sea on the weſt with Cyrene, on the north with the Mediterranean, and on the ſouth with Habaſſia

Ver. 1071 *Nilus.*] Of this river ſee above, in the note on ver. 922

Ver. 1072. *Athens.*] Of this city we have ſpoken in the note on the firſt verſe of this book.

Ver. 1073. *Offends the feet.*] In like manner as the Ægyptians, ſays Lucretius, by reaſon of the air of their country, were ſubject to the leproſy, ſo too were the Athenians, for the very ſame cauſe, ſubject to the gout.

Ibid. *Achaia hurts the ſight.*] A part of Peloponneſus was called by this name; as was likewiſe the whole country of Greece; from one Achaus, the ſon of Jupiter, or Zuthus, who reigned there. What Lucretius ſays of the countries being hurtful to the eyes, we muſt take his word for. I know nothing to the contrary.

Ver. 1074. What our poet ſays in theſe three verſes, may be confirmed by many examples: The air of Florence is prejudicial to the brain, but very beneficial to the legs; and the air of Piſa is diametrically oppoſite to that of Florence, notwithſtanding that thoſe two cities are not at moſt above forty miles diſtant from each other, ſays Nardius. Thus too the air of Paris, ſays Fayus, is very dangerous to wounds in the head, &c.

Ver. 1077. In theſe four verſes, he concludes, that all peſtilential diſtempers proceed from the inclemency of the air; which, being unhealthful to us, creeps unheeded by us into our limbs and bodies, in like manner as a miſt, or ſmoke; and wherever it enters, it diſturbs and changes all things, and cauſes us all to fall ſick. Or, that when that infected air comes into our country, it corrupts the whole air of it; from whence ariſes a regional diſtemper, which ſpreads itſelf through many places.

Ver. 1081. In theſe twelve verſes the poet, leſt thoſe ſeeds of peſtilence ſhould be thought to be grown weary with the length of their journey, and to remain pendulous in the lazy air, aſſigns them fixed and certain ſtations, where they fall and ſettle: For, ſays he, ſome of them fall into the waters, others on the fruits of the earth, and the ſeveral ſorts of the foods of animals: And this is the reaſon, why a plague ſometimes equally ſeizes both men and cattle. Thus he acknowledges the air to be the ſole cauſe of plagues.

WHETHER PLAGUES ARE PROMISCUOUS AND COMMON TO ALL SORTS OF ANIMALS.

Our authors of beſt credit teſtify, that murrains, which are plagues in cattle, precede, accompany, or follow any peſtilential mortality in men. They precede, when noxious and ſickly vapours exhale from the earth; which vapours, the cattle, as they feed, receive firſt into their bodies, and are ſeized with a deadly diſeaſe. A mortality of this nature was obſerved to happen in the kingdom of Naples, in the year 1617; when, after exceſſive rains, that had continued for many days together, without almoſt any intermiſſion, and had laid under water all the plains of the country, the cattle eat the graſs, as it ſprung out of the ground, while it was yet ſlimy, and full of mud: This cauſed a putrilaginous diſeaſe in their jaws and throats, which ſoon ſuffocated and killed them; and neceſſity compelling the Neapolitans to ſlaughter ſome of theſe infected cattle for the butchery, whoever eat of the fleſh of them, were ſeized with the ſame diſeaſe, which by this means ſpread itſelf in a ſhort time over the whole kingdom, and ſwept away a vaſt number of the inhabitants. Pliny too mentions a like peſtilence, which fell on beaſts one year, and on men the next; "quæ priore anno in boves ingruerat, eo verterat in homines," ſays he, Nat. Hiſt. lib. xli. cap. 9. And Silius Italicus, ſpeaking of a plague, ſays,

Vim primam ſenſere canes; mox nubibus atris
Fluxit deficiens, penna labente, volucris;
Inde feræ ſylvis ſterni————

And Ovid to the ſame purpoſe ſings:

Strage canum primò, volucrumque, aviumque, boumque,
Inque feris ſubiti deprenſa potentia morbi eſt.

To which I add the following verſes of Dryden, deſcribing the plague at Thebes, in his tragedy of Œdipus:

———The raw damps
With flaggy wings fly heavily about,
Scattering their peſtilential colds and rheums
Through all the lazy air: Hence murrains follow
On bleating flocks, and on the lowing herds:
At laſt the malady———
Grew more domeſtic; and the faithful dog
Dy'd at his maſter's feet; and next, his maſter:
For all thoſe plagues, which earth and air had brooded,
Firſt on inferior creatures try'd their force,
And laſt they ſeiz'd on man.——

Beſides, as the murrain in brute beaſts often precedes the plague in man; ſo too, as moſt authors have rightly obſerved, it no leſs frequently accompanies it; and the rational and irrational animals mutually impart the infection to one another. Thus Thucydides, ſpeaking of the plague of Athens, which our poet is going to deſcribe, ſays, That the birds and beaſts, that uſe to feed on human fleſh, though many bodies lay above ground unburied, either avoided to come at them, or, if they taſted, periſhed: *Τὰ γὰρ ὄρνεα, καὶ τετράποδα, ὅσα ἀνθρώπων ἅπτεται, πολλῶν ἀτάφων γιγνομένων, ἢ οὐ προσήει, ἢ, γευσάμενα διεφθείρετο.* Thucyd. To which he adds, That by the dogs this effect was ſeen much clearer, becauſe they are familiar with men: *οἱ δὲ κύνες*, ſays he, *μᾶλλον αἰσθησιν παρεῖχεν τῷ ἀποβαίνοντος, διὰ τὸ ξυνδιαιτᾶσθαι.* Boccace, in the Proœmium to his Decameron, ſpeaking of the violent plague that raged in Italy, in the year 1348, ſays expreſsly, and of his own knowledge, that the nature of the peſtilence was ſuch, that it imparted its contagion not only from man to man; but that if the clothes of a perſon infected with that diſeaſe, or dead of it, were touched by any animal of another ſpecies, it not only infected that animal with the ſame diſtemper, but killed him in a very ſhort time. Then he adds, what he had been an eye-witneſs of: That the tattered clothes of a poor man, who died of that peſtilence, being thrown into the high-way, two hogs came up to them, and after they had, as their cuſtom is, tumbled them about with their ſnouts, taking them in their teeth, and ſhaken them about their cheeks, they in a very little time, after ſeveral times turning round, both dropped down dead upon them, as if they had eaten poiſon. "Dico," ſays he, "che di tanta efficacia fù la qualità della peſtilentia narrata, nello appiccarſi da uno all' altro, che non ſolamente l' huomo à l' huomo, ma queſto, che è molto più, aſſai volte viſibilmente fece, cioè, che la cosa dell' huomo infermo ſtato, ò morto di tale infermità, tocca da un' altro animale fuori della ſpetie dell' huomo, non ſolamente della infermit il contaminaſſe, ma quello infra breviſſimo ſpatio uccideſſe, di che gli occhi miei, ſi come poco davanti è detto, preſero tra l' altre volte un' di coſi fatta eſperienza, che eſſendo gli ſtracci d' un povero huomo, da tale infermità morto, gittati nella via publica, et abbatendoſi ad eſſi due porci, è quegli ſecondo il lor coſtume prima molto col grifo, et poi coi denti preſigli, et ſcoſſigli alle guancie, in piccola hora appreſſo, dopo alcuno auvolgimento, come ſe veleno haveſſer preſo, amenduni ſopra gli mal tirati ſtracci, morti caddero in terra." Hippocrates nevertheleſs, will not allow contagious diſeaſes to be promiſcuous and common to all ſorts of animals; for he, in his Treatiſe de Flatibus, having aſked this queſtion, Why infectious diſtempers ſeize not all animals alike, but only ſome one ſpecies of them? immediately anſwers: That one body differs from another body, one nature from another nature, and one nutriment from another nutriment: Nor are the ſame things alike beneficial or hurtful to all the ſeveral ſpecies of animals; but ſome things agree with ſome animals, better than they do with others: Therefore, when the air is filled with ſuch filth and pollutions, as are noxious to human nature, men only fall ſick; but when it is hurtful and offenſive to any one of the other ſpecies of animals, then the diſeaſe ſeizes that ſpecies only. Thus Hippocrates; and indeed the propoſition he advances is true, whenever a diſeaſe ſeizes one ſort of animals only, and leaves all the other ſafe and unhurt: But when ſeveral ſorts of them labour under one common diſeaſe, that diſeaſe muſt have proceeded from the like cauſes; and therefore their natures in ſome reſpects may be ſaid to be alike alſo: And hence it is, that contagious diſeaſes in brute animals ſometimes precede, ſometimes march hand in hand with, and ſometimes follow, peſtilential diſtempers in the human kind. Lucretius, therefore, is in the right to ſay, that plagues are promiſcuous and common

——Hominum generi, pecudumque catervis.

WHETHER THE AIR BE THE SOLE CAUSE OF PLAGUES.

Lucretius, as we have already ſeen, is of opinion, that all infections and peſtilential diſeaſes and plagues owe their origin to the inquinations and corruptions of the air: But, before him, Hippocrates himſelf had advanced the ſame doctrine; for, in his Book de Flatibus, after a long narration of the effects that the air produces, as well in the great world, as in the leſſer, the body of man, he at length falls on the ſubject of diſeaſes, all which he affirms to be bred and generated in the bodies of animals by means of the air: Firſt, ſays he, I will begin with the moſt common feverous diſeaſe, which accompanies in ſome meaſure all diſeaſes whatever. For there are two ſorts of fevers; one, that is promiſcuous and common to all, and is called the plague; the other, by reaſon of unhealthful diet, is peculiar only to ſuch as uſe that diet; but of both theſe kinds of fevers, the air is the ſole author and cauſe: For the common fever, or plague, therefore happens to all, becauſe they all breathe the ſame air; and it is certain, that the like air, being alike mingled in like bodies, muſt beget the like fevers. Thus the great Hippocrates, whoſe authority nevertheleſs is not of ſuch validity, as

to command our aſſent to this primacy of the air in all manner of peſtilential diſeaſes; for, let us grant, that a peſtilent fever may be cauſed by the air, will it follow from thence, that every peſtilent fever is ſo? and that they all proceed from the air only? In the firſt place, the logicians allow, that an indefinite propoſition, when the conſequent is not of neceſſity, is not of the ſame force with an univerſal: therefore, though we will admit, that a common fever is ſometimes cauſed by the air, there is not any neceſſity, from the teſtimony alleged, but that we may ſubſtitute other cauſes of a peſtilent fever, and even of the plague itſelf. Galen, in his Treatiſe de diff. Febr. obſerves, that peſtilential fevers proceed ſometimes from a great abundance of humours, whenever thoſe humours have acquired, from the ambient air, the leaſt tendency to corruption. And the ſame author, ſpeaking of the above-cited opinion of Hippocrates, ſays: He was miſtaken in aſcribing the cauſe of epidemical diſeaſes to the air only; for, when a famine raged in Ænus in Thrace, all that fed upon roots, loſt the uſe of their legs; and ſuch as eat vetches, were ſeized with violent pains in their knees. I have known too, continues he, that when, in a famine, people have been forced to eat corn that was half-rotten, they have fallen into a common diſeaſe, from that common cauſe; and ſometimes too, when a whole army had been compelled to drink corrupted water, all the ſoldiers have been alike afflicted with a like diſeaſe. Thus Galen, who lived himſelf at Rome, when, in the reign of Marcus Antoninus, a raging plague, that was occaſioned by a famine, deſolated that city, and ſwept away multitudes of the Roman citizens. This, therefore, may ſuffice to invalidate the prerogative, which Hippocrates acknowledges to be due to the air, of its being the only promoter of plagues, ſince it is evident, that unwholeſome food, and vitiated waters, have no ſmall ſhare in cauſing epidemical diſeaſes. Let us now inquire, what, how much, and how, the air contributes to the communicating, or promoting of a plague.

Though the air be not the ſole cauſe of a plague, yet it cannot be denied, but that it is very inſtrumental, as well in continuing its duration, as in bringing it into a country: But an univerſal plague, generally ſpeaking, can owe its origin to nothing but contagion; for it muſt of neceſſity be firſt introduced, either by contact, or what foments and cheriſhes the infection. Nor is it in the leaſt repugnant to this, that a particular plague is cauſed by the ambient air, provided it be granted, that ſuch an infectious air comes from a near, not from a far diſtant, country; the want of reflecting on which diſtinction has, perhaps, been the cauſe of the miſtake, and variance of opinions: For that tainted air, being agitated by the winds, blended with the immenſe maſs of pure air, and coming from a great diſtance, cannot retain its ancient gravity; but the inquinations it had contracted, muſt be entirely broken, diſperſed, and diſſolved; which nevertheleſs, it cannot wholly loſe in a ſhort time, and coming from a moderate diſtance. This is demonſtrated by the example of ſtrong odours, which ſtrike the ſenſe, if they come from a near place, but not when they come from one that is far diſtant; for thoſe vapours, being agitated for any length of time, will be loſt and deſtroyed; and their moſt tenuious ſubſtance will, according to the cuſtom and nature of mixtures, convert and reſolve it into its proper element, And therefore the air ſucceeds, but not precedes, a contagion, and may propagate a plague peculiarly, and by degrees; but not bring it univerſally, and all at once, into a healthful and uninfected country: In a word, the ſum of all is, that the air does not begin, but propagates the contagion, that is already begun; eſpecially when it is tainted with the pollutions, that proceed from the corruption of infected bodies.

Ver. 1089. In this and the three following verſes, the poet ſays, that we incur a like danger, when we travel into a country, whoſe air is unhealthy, or diſagrees with our conſtitution, as we do, when nature introduces into our bodies a tainted and corrupted air, or any other new thing, to which we have not been accuſtomed, and that is hurtful to us.

Ver. 1093. Hitherto he has been treating of the corruption of the air, or the cauſe of a plague, which is a diſeaſe that gains ground in ſuch a manner, that, ariſing for the moſt part from ſmall beginnings, it increaſes by degrees, and ſpreads itſelf far and wide. Now, from this verſe to the end of the book, the poet gives us a deſcription of that memorable plague, which broke out in Attica, in the firſt year of the Peloponneſian war; and laid waſte that whole country, as well as the city of Athens, the metropolis of it. Thucydides, who was himſelf both a ſpectator and ſharer of it, has deſcribed it no leſs accurately than elegantly, in the ſecond book of his hiſtory: Hippocrates too, who was likewiſe an eye-witneſs of it, not only, as a private man, lent his aſſiſtance, and, for the public good, extinguiſhed and put to flight that raging peſtilence, for which reaſon he obtained divine honours of the Athenians; but has alſo left a lively relation of it in his third Book de Morb. Popul. Our Lucretius embraced the ſame argument, and, in the following deſcription of that plague, has copied after thoſe two authors, but more particularly after Thucydides, whom he has imitated ſo happily, that Macrobius Saturnal. lib. vi. cap. 2. ſays that Virgil has borrowed from him in his ſecond Georgic, as Ovid moſt viſibly has in his ſeventh Metamorphoſes. Now, in theſe twelve verſes, Lucretius teaches, that the plague of Athens, which he is now beginning to deſcribe, proceeded from the ſame cauſes, he has mentioned already; but plagues generally come from foreign countries, and therefore he ſays this came from Egypt to Athens; yet, according to Thucydides, it came from a remoter diſtance; for he brings it from Æthiopia, which is beyond Egypt.

Lucretius ſays,

Finibu' Cecropiis funeſtos reddit agros,

For Athens was firſt called Cecropia, from Cecrops, who built it, and was the firſt king, and legiſlator of the people of Attica, whom, ſays Suidas, he aſſembled together, and divided them into twelve tribes: but before his days they lived ſcattered up and down in villages.

Ver. 1095. *Poiſonous wind.* This Lucretius calls "morbifer æſtus," but what he means by it is uncertain, though he ſeems to intend that deadly heat and ſtrength of the diſeaſe, which, like a raging fire conſumed and deſtroyed all it ſeized on. Therefore, by the word "æſtus" may be underſtood, either the heat of the plague; ſince a plague is either a fever, or never without a fever: or elſe we may underſtand the great abundance of the infectious air; ſince the poet has above imputed the cauſe of the plague to the very corruption of the air; and this ſeems to have been the opinion of our tranſlator: or, laſtly, and rather than any of the two other explications, we may interpret it to mean the vehement heat of the air; ſince Æthiopia and Ægypt, from whence the plague came to Athens, are countries exceſſively hot.

Ver. 1097. Thus too Thucydides: Ἤρξατο δὲ τὸ μὲν πρῶτον, ὡς λέγεται, ἐξ Αἰθιοπίας τῆς ὑπὲρ Αἰγύπτου, ἔπειτα δὲ καὶ ἐς Αἰγύπτου καὶ Λιβύην καὶ ἐπὶ βα, καὶ ἐς τὴν Βασιλέως γῆν τὴν πολλήν· ἐς δὲ τὴν Ἀθηναίων πόλιν ἐξαπιναίως ἐνέπεσε· It began, by report, firſt in that part of Æthiopia, that borders upon Egypt, and then fell down into Egypt and Libya; and into the greateſt part of the territories of the king: It invaded Athens on a ſudden.

Ver. 1099. Lucretius has given no occaſion for this and the following verſe; which are borrowed from the biſhop of Rocheſter's plague of Athens, where, in Stanza iv. we read,

The loaded wind went ſlowly on,
And, as it paſs'd, was heard to ſigh and groan.

Ver. 1101. Hitherto the poet has been treating of the cauſes of plagues in general; and particularly of that of Athens, which he is about to deſcribe: Now the learned in phyſic tell us, that an infectious diſeaſe may be caught three ſeveral ways: the firſt they call, "per diſtantiam," by which they mean, when the tainted or corrupted air is breathed and ſwallowed by ſuch as are at ſome diſtance from the perſons infected: the ſecond, "per contactum," that is, when we are near, and touch thoſe that are viſited with the plague. Hence, as Ovid ſays,

——Inque ipſos ſæva medentes
Erumpit clades; obſuntque auctoribus artes.

To which he adds ſoon after;

Quò proprior quiſque eſt, ſervitque fidelius ægrum,
In partem lethi citiùs venit.——

The third they call, "per fomitem," by which they would have us underſtand, when the vitiated, infectious air is a long time preſerved in clothes, wool, &c.

Ver. 1103. To the ſame purpoſe Dryden, deſcribing the deſolation and havoc of a plague, ſays finely:

And then a thouſand deaths at once advanc'd,
And ev'ry dart took place; all was ſo ſudden,
That ſcarce a man fell: one but began
To wonder, and ſtraight fell a wonder too:
A third, who ſtoop'd to raiſe his dying friend,
Dropp'd in the pious act. Heard you that groan?
A troop of ghoſts took flight together there:
Now death's grown riotous, and will play no more
For ſingle ſtakes, but families and tribes:
With dead and dying men our ſtreets lie cover'd;
And earth expoſes bodies on the pavements,
More than ſhe hides in graves.——
Between the bride and bridegroom have I ſeen
The nuptial torch do common offices
Of marriage and of death. Caſt round your eyes,
Where late the ſtreets were ſo thick ſown with men,
Like Cadmus' brood, they juſtled for their paſſage,
Now look for thoſe erected heads, and ſee them,
Like pebbles, paving all our public ways.
Tragedy of Oedipus.

For it is the nature and property of a plague, grown adult, and in the height of its raging, that many perſons ſhould be viſited by it at once, and many die of it: But it has been diſputed by phyſicians, whether it can be called a plague at its firſt breaking out, and while only one or two are ſick of it; which ſome poſitively affirm, but others as ſtrenuouſly deny. It cannot indeed be controverted, but there are definitions of things grown to perfection: Thus mankind, while yet in their infancy, can ſcarcely be ſaid to be endued with reaſon. In like manner a plague, juſt breaking out, is not indeed common, but will be ſo, unleſs it be timely prevented: However, it is truly a plague, though but ten perſons are ſick of it, nay, if but one.

Ver. 1105. Here the poet, in eighteen verſes, enumerates the ſeveral and chief ſymptoms and tokens that were obſerved in thoſe that were viſited with this plague of Athens. I. An extreme heat in their head. II. An inflammation of the eyes. III. Ulcers in the throat, and an emanation of blood from thence. IV. A roughneſs of the tongue, and ſuch a heavineſs, that they could ſcarce move it; together with ulcers; and putrid blood flowing from thence likewiſe. V. A noiſome ſtinking breath. VI. Fainting fits, or ſwoonings. VII. Dejection of the mind. VIII. Groans and complainings. IX. Frequent, convulſive yexings, or hickets.

Thus too Thucydides: Πρῶτον μὲν τῆς κεφαλῆς θερμαὶ ἰσχυραὶ, καὶ τῶν ὀφθαλμῶν ἐρυθήματα, καὶ φλόγωσις ἐλάμβανε. They were firſt taken with an extreme heat in their heads, and with a redneſs and inflammation of the eyes. Thus, ſays that hiſtorian, upon whom the biſhop of Rocheſter has paraphraſed as follows;

Upon the head, firſt, the diſeaſe,
As a bold conqueror, does ſeize,
Begins with man's metropolis,
Secur'd the capitol, and then it knew,
It could at pleaſure weaker parts ſubdue:
Blood ſtarted through each eye:
The redneſs of that ſky
Foretold a tempeſt nigh.

Ver. 1107. This verſe our tranſlator has added to his author.

Ver. 1108. In like manner Thucydides: Καὶ τὰ ἐντὸς, ἤτε φάρυγξ, καὶ ἡ γλῶσσα ἐυθὺς αἱματώδη ἦν. i. e. And inwardly their throats and tongues grew preſently bloody. This third is indeed a dreadful ſymptom, and an infallible mark that the economy of the whole body was vitiated. Mattheus Villanus relates, that in the plague which raged in Italy in the year 1348, they were afflicted almoſt in the ſame manner; and that when they were ſeized with the diſeaſe, they either died ſuddenly, or the next day, or lived but to the third at fartheſt. This too is confirmed by Guido Cauliacus, lib. ii. cap. 5. the Pope's chirurgeon, and an eye-witneſs of it; who, beſides, voluntarily depoſes, that the mortality was ſo great in all the places infected, that ſcarce a fourth part of the inhabitants were left alive.

Lucretius ſays,

Sudabant etiam fauces intrinſecùs atro
Sanguine.——

i. e. And inwardly their jaws and throats ſweated out black blood: where the word "ſudabant," they ſweated, is not ſpoken figuratively, but properly; for the blood was forced out "per diapedeſim," i. e. by tranſolation, or exudation; for ſo they generally interpreted that word. Now this ſweating, or oozing out of blood, was occaſioned by the weakneſs and decay of the retentive power that reſides in the ſmall veins: beſides, the whole maſs of blood being enormouſly vitiated, it ſtimulated and urged nature to that excretion.

Ver. 1109. This fourth ſymptom of the Athenian plague, of which Thucydides is ſilent, Lucretius has taken from Hippocrates, de Morb. Popul. lib. iii. cap. 3, 10, 11. where that author repreſents it to be no leſs fatal than the former, and ſays it proceeded from the ſame cauſe.

Ver. 1111. Lucretius ſays, "motu gravis," heavy in motion. Galen, in Com. 1. takes notice of this ſymptom, and ſays, it was cauſed by the imbecility of the animal faculty, and the exorbitant plenty of the humours that the tongue had imbibed.

Ibid. *Rough.*] Though the tongue, ſays Galen in the place above cited, had imbibed a great abundance of humour, yet that humour being exceeding hot, hindered not the tongue from being rough and ſcurfy, as it conſtantly was, by reaſon of the too much heat that exhaled from the "præcordia."

Ibid. *Scarce could make a moan.*] This thought our tranſlator has added to Lucretius, and taken it from the B. of R. who, in his plague of Athens, Stanza 11. ſays,

The tongue did flow all o'er
With clotted filth and gore;
As does a lion's, when ſome inn'cent prey
He has devour'd, and brought away.
Hoarſeneſs and ſores the throat did fill,
And ſtopt the paſſages of ſpeech and life:
No room was left for groans or grief:
Too cruel and imperious ill,
Which, not content to kill,
With tyrannous and deadly pain,
Doſt take from men the very power to complain!

Ver. 1113. What Lucretius repreſents in theſe ſeven verſes, Thucydides relates as follows: Καὶ ἔν ᾧ πολλῷ χρόνῳ καθέβαινεν ἐς τὰ στήθη ὁ πόνος μετὰ βήχος ἰσχυροῦ. καὶ ὁπότε ἐς τὴν καρδίαν στηρίξειεν, ἀνέστρεφέ τε αὐτὴν, καὶ ἀποκαθάρσεις χολῆς πᾶσαι, ὅσαι ὑπὸ ἰατρῶν ὠνομασμέναι εἰσὶν ἐπήισαν καὶ αὗται μετὰ ταλαιπωρίας μεγάλης that is to ſay, not long after the pain, together with a mighty cough, came down into the breaſt; and, when it once ſettled in the ſtomach, it cauſed vomit; and all manner of bilious purgation that phyſicians ever named came up with great torment. Lucretius takes no notice, neither of the vehement coughing, which no doubt proceeded from a convulſion of the trachea or windpipe, nor of the other ſymptoms of ſneezing and hoarſeneſs, which are likewiſe mentioned by Thucydides. Ἔπειτα, ſays he, ἐξ αὐτῶν πήαρμος καὶ βράγχος ἐπεγίγνετο.

Ver. 1114 *The heart.*] He means the ſtomach: For here our tranſlator has literally followed his author, who makes uſe in this place of the word "cor," which ſometimes ſignifies the ſtomach; as the καρδία of the Greeks, which ſignifies likewiſe both "cor" and "ſtomachus." Thus the Scholiaſt, on the foregoing paſſage of Thucydides ſays, Οἱ παλαιοὶ ἰατροὶ τὸν στόμαχον καρδίαν ἐκάλεν, καὶ καρδιαγμὸν τὸν πόνον τῆ στομάχῃ· i. e. The ancient phyſicians called the ſtomach the heart, and a pain in the ſtomach, a pain in the heart.

Ver. 1115 When the diſeaſe was got down into the ſtomach, there followed a ſtinkingneſs of breath, ſays Lucretius, like the ſtench that exhales from dead bodies. Thus too the B. of R.

Then down it went into the breaſt;
There all the ſeats and ſhops of life poſſeſs'd:
Such noiſome ſmells from thence did come,
As if the body were a tomb.

Now theſe offenſive ſmells muſt have proceeded, either from the putrefaction of the humours, or of the lungs, or rather of both; which ſeems more conſonant to reaſon, as well as to the opinion of Hippocrates, who, Epidem. 3. 5. 3 relating the ſymptoms of this plague, makes mention of many putrified parts: nor can it be doubted but that the infected Athenians were then troubled with a peripneumony, by reaſon of the great defluxion of vitiated blood that fell upon the lungs. Now a ſtinking breath is held to be an ill ſymptom in all diſeaſes, but worſt in epidemical: For, if what Galen, 3 de Præſag. ex

Pulſib. cap. 4. obſerves, be true, that whatever is vitiated does not putrify, but that noiſome ſmells are a certain mark of putrefaction; a rottenneſs of humours, or of parts, muſt have been added, by way of over-meaſure, to this fatal corruption. It has been obſerved, that many, who, when they were in health, had ſtinking breaths, have died a ſudden death; the reaſon of which was, becauſe the whole ſubſtance of their lungs was by degrees putrified: but, what a long catarrh can perform in the courſe of a man's life, a plague may accompliſh all at once, by reaſon of its greater efficacy; and therefore a ſtinking breath is certainly a dangerous ſymptom in peſtilential diſeaſes.

Ver. 1118. What Lucretius here ſays of the general dread that had ſeized the Athenians, affords us an opportunity to make the following inquiry.

WHETHER FEAR PROMOTES AND PROPAGATES A PLAGUE.

Consternation and dejection of mind are never beneficial, not even in health; but they are prejudicial in all diſeaſes, and worſt of all in a plague: Hence Lucretius more than once makes mention of it; and gives us a handle to inquire, I. Why is it ſo? And, II. Whether what ſome have aſſerted to be true, viz. That the plague is caught by bare imagination only? To begin with the laſt: They who hold the affirmative, are not content it ſhould be granted, that, by the ſtrong apprehenſion of the patient, an infectious diſeaſe may be brought upon him; but they inſiſt likewiſe, that it may be imparted to him by witches, or other ill-minded perſons: theſe opinions ſpring from this belief; that our fancy can affect, and work upon, not only our own body, but thoſe likewiſe of others. Theſe things might paſs for idle tales, were it not, that, under the maſk and diſguiſe of imagination, were concealed the arts of the ſworn enemy of mankind, by whoſe perſuaſion and aſſiſtance plagues and ſorceries are ſometimes propagated in the world: I doubt not of the ill, malicious habit of mind which his votaries may have contracted; but that alone, without his more powerful aid, to whom, for the horrid ſins of mankind, is permitted a power to do hurt, is unable to affect others.

The other opinion, which imputes the infection of a plague to the ſtrong apprehenſion of the patient, ſeems, at firſt ſight, to carry with it a greater ſemblance of truth; for no man ever controverted the ſtrength of imagination in regard to its operations on a man's own body; thus we ſhudder, and our very blood cruddles within us, on the bare remembrance of any horrible action; we rejoice, even when the object of our joy is abſent; we grow angry, though no man provokes us; let us but fancy ourſelves applauded, we exult for joy: and Nardius relates, that he knew a fanciful ſilly woman, who ſoon experimented in her own body the diſeaſes under which ſhe had heard her acquaintance or relations were labouring. Such things have certainly a reliſh of hypocriſy or madneſs: For what the ſticklers for the ſtrength of fancy fooliſhly allege, of I know not what intentional form, as they term it, that is able to introduce itſelf into any matter that is prepared and made ready to receive it, are mere trifles, and fictitious day-dreams of ſuperſtitious men: For no man in his ſenſes ever threatens, or heartily wiſhes ill to himſelf; nor does he wilfully and induſtriouſly endeavour to increaſe a peſtilential diſeaſe; but he hates, abhors, and fears it; which laſt is, perhaps, the trueſt cauſe of the propagation and continuance of a plague.

Fear and ſorrow are powerful agents, and produce wonderful effects in the minds of men: for, as Galen obſerves, a violent fear kills immediately; and one that is leſs vehement, but of long duration, is no leſs fatal. Fear dejects the mind, and diminiſhes the ſtrength; even at the firſt aſſault it overwhelms the ſpirit, and contracts the blood, cauſing a refrigeration and chillneſs of the exterior parts of the body: For theſe reaſons, in ſuch as are ſeized with fear, the pulſe, as well of the arteries as of the heart, is very ſmall, and extremely weak. Vide Galenum, 12. Meth. cap. v. 5. de loc. Off. cap. i. 4. de Ca. Pulſ. cap. v. 2. de Symp. Caſ. cap. ii. de Tre. Rig. cap. ii. 2. de Symp. Ca. cap. v. And the ſame author, in his Treatiſe de Pul. ad Tyr. and in his fourth de Caſ. Pul. cap. iv. accurately diſtinguiſhes the difference of pulſes, according to the nature and quality of fear. In a ſudden and violent fear, he believes the pulſe to be quick, quivering, diſordered, and unequal; in a fear of long continuance, he holds the pulſe to be little, languid, ſlow, and rare: This laſt ſort of pulſe he aſcribes likewiſe to the effect of ſorrow, between which, ſays he, and a fear of long duration there is no difference: for in both of them the ſtrength is impaired; and that failing, the pulſes cannot be unlike; becauſe, according to the ſame author, in thoſe whoſe ſtrength is infirm, and, by reaſon of their ignorance, the affections and paſſions of the mind, forceful and ſtrong, the eſſence of the ſoul may eaſily be diſſolved. Now, that by the word ſoul he means the life itſelf, is manifeſt from what he ſays, 12. Meth. cap. v. that the eſſence of the life of man is corrupted by the affections of the mind; and that all great fears, though they do not kill outright, yet they certainly render the ſpirit infirm, and eaſy to be diſſolved; but ſorrow and anxiety are hurtful, becauſe they impair the ſtrength. And to theſe opinions of Galen, Lucretius himſelf ſubſcribes, in theſe verſes:

Verùm ubi vehementi magis eſt commota metu mens,
Conſentire animam rotam per membra videmus:
Sudoremque ita, palloremque exiſtere toto
Corpore, et infringi linguam, vocemque oboriri,
Caligare oculos, ſonere aureis, ſuccidere artus:
Denique concidere ex animi terrore videmus
Sæpe homines.—— *Lib.* iii. *ver.* 153.

The interpretation of which the reader may find above, book iii. ver. 150.

Thefe, then, are the effects that fear and imagination produce in the body they feize on: and if an infectious peftilential air meet with a body thus ill-difpofed already, that body will foon imbibe the contagion, and fall ick of the difeafe, being unable to ftruggle againft it, by reafon of the weaknefs it has already contracted. Rightly, therefore, has Thucydides, taking notice of the two greateft miferies of the Athenian plague, the ἀθυμία, or conftternation of the mind, and the inevitablenefs of the contagion, given the preference to the conftternation of mind, and affigned it as one of the chief caufes of the mortality that raged among them. Δεινότατον, fays he, δὲ παντὸς ἦν τῇ κακῇ ἥ τε ἀθυμία, ὁπότε τις αἴσθοιτο κάμνων, πρὸς γὰρ τὸ ἀνέλπιστον εὐθὺς τραπόμενοι τῇ γνώμῃ, πολλῷ μᾶλλον προΐεντο σφᾶς αὐτοὺς καὶ οὐκ ἀντεῖχον· i. e. But the greateft mifery of all was, the dejection of mind in fuch as found themfelves beginning to be ick; for they grew prefently defperate, and gave themfelves over without making any refiftance. And, in the laft age, during the fiege of Breda, it was obferved, that the plague which then raged, either abated or increafed as the minds of the foldiers were either raifed with hope or depreffed with fear. So great are the effects of conftternation of mind!

Ver. 1120. Thefe fo many and fo intolerable ills of the body were attended, fays the poet, with a perpetual anguifh of mind, which occafioned unmanly groans and complainings. Plutarch relates of Pericles, that though, with unweeping eyes, he had beheld the funerals of fo many of his friends and relations, yet the death of his only furviving fon extorted from him fome unwilling tears: and that the plague, that malignant inmate, had by little and little corrupted the body of that magnanimous man, and overcome his fortitude and ftrength of mind: for, while he was languifhing under that difeafe, he fhowed a friend, that came to vifit him, fome charms and inchantments that hung about his neck, and women had tied upon him; which evidently prove the diforder of his mind, that could be prevailed on to condefcend to fuch fuperftition. Thus fays Plutarch, in his Life.

Ver. 1122. Lucretius fays, "Singultus frequens," a frequent hicket: And for the better underftanding of this ninth fymptom, it will be neceffary to recite the words of Thucydides, relating to it, and that are as follows: Λύγξ τε τοῖς πολλοῖσιν ἐπέπιπτε κενὴ, σπασμὸν ἐνδιδοῦσα ἰσχυρὸν, τοῖς μὲν μετατάντα λωφήσαντα τοῖς δὲ καὶ πολλῷ ὕστερον· that is to fay, moft of them had likewife an empty hicket, which brought with it a ftrong convulfion, and in fome it ceafed quickly, but in others was long before it gave over. Now, according to the common opinion of phyficians, the hicket is a convulfion of the ftomach: but Galen, weighing the matter more narrowly, and confidering that the mufcles only are convulfed, and that neither the ventricle, nor the mouth of it, are either mufcles, or perform the function of mufcles, fays, in his third book, de Sympt. Cauf. cap. 4. that the hicket is only a depraved motion of the mouth of the ventricle, that endeavours to expel what is offenfive and troublefome to it, which could not be wanting in our cafe; for the peftilential defluxion falling down through the throat, and a great quantity of bilious matter regurgitating from the liver, into the ftomach, were certainly offenfive to it, and fufficient to caufe the hicket, which was of longer or fhorter continuance, according to the greater or lefs quantity and protervity of the offending matter. But to whom are we to give credit; to Lucretius, who calls it "frequens fingultus," a frequent hicket; or to Thucydides, who calls it λύγξ κενὴ, an empty hicket? Lambinus, overcome, perhaps, by the difficulty of the matter, as it often happens to fuch as meddle with the affairs of others, very boldly corrects the hiftorian, and gives more credit to a poet that lived long after, than to an eye-witnefs that writes what he faw. The learned F. Paulinus comes nearer to the point, and believes that the hicket is faid to be empty from the caufe that produces it, that is to fay, exinanition: for both Hippocrates and Galen allow, that there are two caufes of convulfion, the repletion, and the exinanition, or emptinefs of the nerves. And the laft of thofe authors admonifhes, that a convulfion, proceeding from the exinanition of the nerves, is the worft fymptom in a hicket. But in this cafe of the plague of Athens, there cannot be the leaft ground to fufpect any emptinefs; fince, as we faid before, there was a copious and continual defluxion of humours. Befides, it is notorious, that there are other caufes of convulfions, than thofe before mentioned; and from which it is more probable, that the violent and laborious hicket proceeded: for why might not they who were vifited with a plague, have a frequent and empty or fruitlefs hicket? The firft was a token of the pertinacy of the moleſting caufe, the other of the ineffectual fatigation: for, as Galen, 3. de Sympt. Cauf. cap. 1. witneffes; in vomits, thofe things are thrown up that are in the cavity and fpace of the ventricle; in hickets, thofe that adhere to the very body of the ventricle, the difpofition and motion being both alike. As, therefore, what the phyficians call *nauſea*, is a vain and fruitlefs vomit, and conſequently the more fatiguing; fo too is a hicket, when nothing is brought up.

Ver. 1125. In thefe eighteen verfes, the poet takes notice of feveral other fymptoms and tokens, that happened to thofe who were vifited with this plague. Firft, fays he, the exterior parts of their bodies were not hot to the touch, but only warm; yet they looked fomewhat red, and were beflowered with fmall puftules, as is the body of thofe that have the St. Anthony's fire: nevertheleſs they burned inwardly to fuch a degree, that they could not endure to wear the flighteft clothes, nor any the thinneft covering upon them: and it availed them nothing to expofe their bodies to the cold and wind, nor to leap into rivers, or go down into wells; nor could any quantity of water quench their thirft.

Hippocrates, in 3. Epidem. c. 34. fpeaking of

this plague, says, that the fever which attended it was ὐκ ἐξύς, not acute: and Galen, 9. de Sympt Caus cap. 9. says of pestilential fevers in general, that they are not violently hot. Now the reasons that physicians give us, why some bodies in pernicious diseases are barely warm, and the extreme parts of others even cold, are these: Some, say they, are warm, by reason of their small provision of natural heat, or because of their age: as in the old, in whom, according to the observation of Hippocrates, 6. Epidem. cap. 19. fevers are the less acute, because, says he, their body is cold: others are warm in fevers, by reason of their natural constitution, having from their birth laboured under a want of spirits and blood: besides, in some diseases, the like disposition is acquired: sometimes too the humours, stagnating in the outmost little vessels, hinder the inwardly conceived heat from breaking out; and the same humours, whenever they are heated, do, according to the difference of their nature, impart a different degree of heat; for one sort of heat attends an adust choler, another a putrifying phlegm: Tepidity is likewise caused in a malignant corruption, by reason of the inwardness and profundity of the fire, and the nature of the disease, which threatens death to the patient, not by manifest symptoms, but by a clandestine corruption of the whole substance. The ex reme parts and members of the body are cold and livid in those whose vital faculty is utterly decayed, and dying away. They likewise are cold outwardly, whose almost total natural heat is retired to, and gathered about their inflamed entrails, in order to succour decaying nature. And one or more of these reasons concurring, will cause the patient to be either barely warm, or even cold, outwardly, and to the touch.

Ver. 1128. *The sacred fire*] "Sacer ignis," says Lucretius, by which name the Latins know the disease, which the Greeks call Ἐρυσίπελας, and we St. Anthony's fire, of which, according to Celsus, there are two sorts, thus described by him. "Sacer quoque ignis malis ulceribus annumerari debet; ejus duæ sunt species: alterum est subrubicundum, aut mistum rubore, atque pallore, exasperatumque per pustulas continuas, quarum nulla alterâ major est, sed plurimæ perexiguæ: alterum autem est, in summæ cutis exulceratione, sed sine altitudine, latum, sublividum, inæqualiter tamen," &c. Celsus de Re medicâ, lib. vi. cap. 28 But in this passage of our author, we are to understand the first sort of that disease, which, as described above by Celsus, is an ulcerous eruption, reddish, or mixed of pale and red; and painful to the patient, by reason of the continued pustules or wheals, not one of which is bigger than another, though there be an infinite number of them, and all extremely small Which description of Celsus seems to represent to us the disease that physicians commonly call "herpes milliaris," from the figure and frequency of the small blisters or wheals, which, rising on the uppermost skin, and standing out but very little, are not unlike to millet seed, sown or scattered thick upon the ground. The disease which they call Herpes only, is likewise a kind of St. Anthony's fire, and seems to be the same that Pliny, lib. xxvi. cap. 11 calls Zoster, and Scribonius Largus, c 106 Zona: this disease comes on the middle of the body, and, if it compass it about, is mortal, as, in the last age, according to J. Langius, epist. 32. it proved to be to the Marquis of Brandenburgh. Some call it the shingles; some, the running-worm; and some, wild-fire. But the erysipelas, that afflicted the infected Athenians, though but a cutaneous disease, must nevertheless have been very troublesome to them, both on account of its filthiness, and because it incommoded them, either standing or lying down.

Ver. 1129. Thucydides in like manner describes this outward tepidity, and inward burning of the infected, in these words. Καὶ τὸ μὲν ἔξωθεν ἁπτομένῳ σῶμα, ὐκ ἄγαν θερμὸν ἦν, ὔτε χλωρὸν, ἀλλ' ὑπέρυθρον, πελιδνόν. φλυκταίναις μικραῖς καὶ ἕλκεσιν ἐξηνθηκός· τὰ δὲ ἐντὸς ὥστε ἐκαίετο, ὥστε μήτε τῶν παν λεπτῶν ἱματίων καὶ σινδόνων τὰς ἐπιβολὰς, μήτ' ἄλλοτι, ἢ γυμνὸν ἀνέχεσθαι. Their bodies, says he, outwardly to the touch, were not very hot, nor pale, but reddish, livid, and beflowered with little pimples and whelks; yet inwardly, they burned to that degree, as not to endure any the lightest clothes, or linen garments to be upon them, nor any thing, but mere nakedness. Thus Thucydides: to which I add what Hippocrates, Aph. 48. teaches, that in fevers, which have no intermission, it is a fatal symptom, when the outward parts of the body are cold, and the inward burning.

Ver. 1131. This thought our translator has not copied from his author, but is beholden for it to the Bishop of Rochester, who, in his Plague of Athens, stanza 17. says,

So strong the heat, so strong the torments were,
They, like some mighty burden, bear
The lightest covering of air:
All sexes and all ages do invade
The bounds which nature laid,
The laws of modesty, which she herself had made:
The virgins blush not, yet uncloth'd appear;
Undress'd they run about, yet never fear:
The pain and the disease did now
Unwillingly reduce men to
That nakedness once more,
Which perfect health and inn'cence caus'd before.

Ver. 1135. Diodorus Siculus, in the twelfth book of his History, speaking of this plague, says, that the sick felt so intolerable a heat within them, that many cast themselves into the very wells and fountains, hoping to cool and refresh their bodies But Thucydides relates this better, and more consonantly to truth. Ἦισα, says he, τὲ ἂν ἐς ὕδωρ ψυχρὸν σφᾶς αὐτὲς ῥίπτειν, καὶ πολλοὶ ἔδρασαν ἐς φρέατα τῇ δίψῃ ἀπαύστῳ ξυνεχόμενοι καὶ ἐν τῷ ὁμοίῳ καθειστήκει τό τε πλέον καὶ ἔλασσον ποτόν· That is to say, they would most willingly have cast themselves into cold water; and many of them, that were not looked to, possessed with in-

ſatiable thirſt, ran to the wells; and to drink much or little was indifferent. This inſatiable thirſt with which they were tormented, is finely deſcribed by the B. of R. in the poem above cited, ſtanza 16.

The ſtreams did wonder, that ſo ſoon
As they were from their native mountains gone,
They ſaw themſelves drunk up, and fear
Another Xerxes' army near.
Some caſt into the pit the urn,
And drink it dry at its return;
Again they drew, again they drank:
At firſt the coolneſs of the ſtream they thank;
But ſtrait the more were ſcorch'd, the more did burn,
And, drunk with water, in their drinking ſank.
Some ſnatch'd the waters up;
Their hands, their mouths the cup:
They drunk, and found they flam'd the more,
And only added to the burning ſtore.
So have I ſeen on lime cold water thrown;
Strait all was to a ferment grown,
And ſudden ſeeds of fire together run:
The heap was calm and temperate before,
Such as the finger could endure;
But when the moiſtures it provoke,
Then did it rage, and ſwell, and ſmoke,
And move, and flame, and burn, and ſtrait to aſhes broke.

———The heat,
Or ſtill increas'd, or ſtill remain'd as great,

Lucretius ſays,

Inſedabilitèr ſitis arida corpora merſans
Æquabat multum parvis humoribus imbrem.

i. e. So great and ſo unquenchable was their thirſt, that a great quantity of water ſeemed to them to be but a little water. But ſome, inſtead of *parvis*, read *pravis;* and then the ſenſe muſt be this: The malignancy of the humours, which were the cauſe of their thirſtineſs, equalled, and at length eluded the great plenty of water they drank: Hence it came to paſs, that they who drank but little, underwent the like danger with thoſe who drank a great deal; for their thirſt was not extinguiſhed, though they drank ever ſo much. This laſt interpretation ſeems to agree beſt with the paſſage of Thucydides next above cited.

Ver. 1137 This, and the three following verſes our tranſlator has added, by way of paraphraſe, to his author.

Ver. 1141 In theſe three verſes, he teaches that no remedy could be found to expel this diſeaſe, ſo new and unknown till then was this raging peſtilence. Thus too Manilius, ſpeaking of this plague:

Qualis Ericthêos peſtis populata colonos
Extulit antiquas per funera pacis Athenas,
Aſter in alterius lubens cùm fata ruebat;
Nec locus artis erat medicæ: nec vota valebant:
Ceſſerat officium morbis, & funera deerant
Mortibus & lacrimæ: feſſus deſecerat ignis,
Et coacervatis ardebant corpora membris.

Which Sir Edward Sherburne thus renders:

Through Erecthean lands when that plague ſtray'd,
And Athens waſte by peaceful fun'rals lay'd,
When each contracted others death, then art
No cure could find, nor pray'rs could help impart:
Care to the ſick, and fun'rals to the dead, [ſhed:
Ev'n tears were wanting: thoſe no mourners
The weary'd flame did from its office ceaſe,
And heaps of fir'd bones burnt the dead carcaſes.

But if our poet in this place, as in others, imitates Thucydides, then this is not his meaning: for that hiſtorian only ſays, that whatever remedy was applied to procure ſleep to the ſick, they were ſtill as far from eaſe, and the power to ſleep, as ever.

Ver. 1144. Hippocrates, Epidem. 6. ſays, that nothing is more deſtructive of human nature, or impoveriſhes and waſtes the ſpirits, blood, and ſtrength more, than watching, and want of ſleep. Truly therefore does Ovid ſing,

Quod caret alternâ requie durabile non eſt:
Hæc reparat vires, feſſaquemembra novat.
Heroid. Epiſt. 3.

See the note on book iv. ver. 905. And the phyſicians obſerving this fatal ſymptom, had reaſon, as Lucretius expreſſes it, "tacito muſſare timore," to mutter to themſelves for fear: for, being at a ſtand what to do, they went away without preſcribing, and left their patients in deſpair of relief. This ſymptom too, and the effects of it, are finely deſcribed by the Biſhop of Rocheſter.

No ſleep, no peace, no reſt,
Their wand'ring and affrighted minds poſſeſs'd:
Upon their ſouls and eyes
Hell and eternal horror lies:
Unuſual ſhapes and images,
Dark pictures and reſemblances
Of things to come, and of the world below,
To their diſtemper'd fancies flow.
Sometimes they curſe, ſometimes they pray
The gods above, the gods beneath;
Sometimes they cruelties and fury breathe:
Not ſleep, but waking now, was fitter unto death.
Plague of Athens, ſtanz. 17.

Ver. 1146 In theſe fourteen verſes, he mentions many other tokens of death, that happened to thoſe who were viſited with the plague and which he has chiefly taken from Hippocrates, in Prognoſt. For Thucydides ſcarce mentions any of them.

Ver. 1148. Lucretius ſays,

"Perturbata animi mens in mœrore metuque:"

In which the poet intimates, a total dejection of mind, occaſioned by too deep a ſenſe and apprehenſion of the dangerous ſtate they were in, and which was inevitably followed by deſperation; and all this was only the neceſſary effect of their diſeaſe: for the attrabileous blood, that was engendered by the violent aduſtion, irrigated the internal parts of the diſeaſed: and, by the unanimous conſent, and conſtant obſervation of phyſi-

cians, melancholy, fear, ſorrow, and the like, are the neceſſary conſequences of ſuch blood, as well as of any other melancholic, exceſſive humour: I ſay, exceſſive: for, though men, in whoſe bodies any melancholic humour prevails, are naturally inclined and ſubject to grief and fear; yet, if that humour be not exceſſive and, either in quantity or quality, tranſgreſs not the bounds of nature, it never ſeduces or overthrows the mind.

In the original we read,

"Triſte ſupercilium; furioſus vultus, & acer."

i. e. Diſconſolate eyes, and frowning eye-brows, together with a ſternneſs and wildneſs of look. Theſe ſymptoms, of which Thucydides is ſilent, Lucretius has borrowed of the Coan dictator, who, in Coac. Præſag. lib. i. ſect. ii. cap. 3. teaches, that a good colour in the face, with a wildneſs of aſpect, is an ill ſign in acute diſeaſes; in which too, frowning eyebrows are a mark of frenzy. But, as we ſhall hear by and by, the conſtitution of the whole face was altered and amiſs; therefore it portended ſomething worſe than frenzy But though a frowning forehead preſage a frenzy, in acute diſeaſes; becauſe the blood, by reaſon of its corruption is degenerated into a plenteous quantity of bileous and melancholic humour; yet it is often obſerved in ſome, even when they are in perfect health; nor does it portend any thing dreadful in them; though ſome are apt to be ſhy of their converſation. But the ſternneſs and wildneſs of countenance, mentioned by Lucretius, was a moſt certain token, not of an eminent, but of a preſent frenzy, occaſioned by the inflammation of the bileous humour, accompanied by the corruption that bred it, either in the præcordia, or in the brain, that already ſympathized with the inferior parts.

Ver. 1149. Lucretius ſays,

"Creber ſpiritus, haud ingens, raróque coortus."

For the better underſtanding of which, we muſt take notice, that the reſpiration in animals, which is truly a mixed function, it being both natural and voluntary, was excellently inſtituted by provident nature, chiefly for the refreſhment of the heart: for when ſhe had made the heart the chief ſeat and reſidence of the innate heat, from whence that vivifying and lively power is, through the tubes of the veins and arteries, as likewiſe through inviſible pores, communicated to the body of the animal, it was of neceſſity, that this member ſhould be hot, and, in ſome meaſure, inflamed itſelf, that it might ſupply with warmth all the other members. But this inflammation would have been fatal, or, according to the nature of all fires, a moſt certain ſuffocation had enſued, had ſhe not wiſely provided againſt it, as well by the introduction of cooling air, as by the expulſion and excretion of the ſuliginous vapours, engendered in the heart; the firſt of which is performed by inſpiration; the laſt, by what we call expiration. But between both theſe reciprocating and alternate motions two reſts or intervals neceſſarily intervene: wherefore the chief differences of reſpiration are diſtinguiſhed, in regard to the time of the motion, into

Quick moderate, ſlow,

In regard to the reſts, or intervals, into

Thick, moderate, rare:

And, in regard to the extention of the organs into

Great, moderate, ſmall.

Now, the organs of reſpiration are the whole thorax, but chiefly the midriff; on whoſe motion the lungs are extended every way, and receive the external air: but when the midriff ceaſes to move, the lungs fall down, and breathe out the ſuperfluous air, together with the fumid nocent exhalation; and by theſe alternate breathings, the indemnity of the ever-burning heart is wiſely ſecured. Since, therefore, by the common conſent of all, the vital faculty, and even life itſelf, are chiefly due to this member, it is conſonant to reaſon, that they, who, by rules of art, are to judge of the iſſue of a diſeaſe, and to the ſtate of their patients, ſhould, almoſt preferably to the motion of their arteries, obſerve the manner of their breathing, which nature governs, according as the heart requires. With good reaſon, therefore, has Lucretius, enumerating the fatal ſymptoms of thoſe who were viſited with this plague, taken notice of this difficulty and diſorder of their reſpiration, which he expreſſes after the manner of phyſicians, making a threefold diſtinction of it. Theſe ſeveral diſorders of their reſpiration he has borrowed from Hippocrates, and the firſt he takes notice of, is, "creber ſpiritus," a thickneſs or frequency of breathing, which is ſpoken in regard to the reſts or intervals: and this, ſays Hippocrates, in Prognoſtic. cap. 24. denotes a pain, or an inflammation in the parts that are above the præcordia: ſecondly, "haud ingens," not great, which admits of a double interpretation: either that, in regard to the extenſion of the organs, their reſpiration was moderate, and in due order; or ſmall: both which nevertheleſs contradict Hippocrates, who, in the place above cited, ſays in expreſs words, that their reſpiration was great and ſtrong, with long intervals interpoſing: however, as Galen, in Prog. Com. obſerves, in the ſtorment they ſuffered, their reſpiration might be both frequent and ſmall, nature already growing weak, and tending to a decay; and their organs being diſordered with inflammations. Thus too Hippocrates himſelf, in Coacis Prænotion, teaches that a frequent and ſmall reſpiration betokens an inflammation and pain in the principal parts: now, we have heard already, that they were afflicted with a peripneumony and frenzy; wherefore their reſpiration, as Lucretius ſays, might be, "haud ingens," not great, but moderate; or, even in the other extreme, ſmall, and below the due mediocrity, the third and laſt difference of their difficult reſpiration, and which Lucretius expreſſes by "raro cootus," a rareneſs or ſeldomneſs of breathing, relates to the time of the motion, and is explained by Galen, in Com. t. 24. Progn. where he teaches, that a rareneſs of breath,

that is to say, when the rests or intervals are long, if the respiration be great and strong in regard to the extension of the organs, indicates a delirium; if small, an extinction of the innate, or natural heat.

Ver. 1150. Lucretius says:

" Sollicitæ porro, plenæque sonoribus aures:"

These were tokens that the humours were crept upwards by the duct of the arteries: and Hippocrates, in " Coacis Præsagiis, teaches, that sounds and noises in the ears, are a deadly symptom in acute diseases.

——Much and frothy sweat,
Spread o'er the neck;] Lucretius says,

" Sudarisque madens per collum splendidus humor."

And this too he borrowed from Hippocrates, in Progn. who there teaches, that sweats are very good in all acute diseases, if they happen at a critical time, and entirely allay the fever: that they are good likewise, if they come from the whole body, and make the patient the more easily bear his disease: but if they effect nothing of this, they are not in the least beneficial: that cold sweats, and such as come only about the head, face, and neck, are the worst of all, and, for the most part, very dangerous symptoms. Besides; those that labour under impostthumations, especially such as are caused by a pleurisy, or by an inflammation of the lungs, are subject to sweat about the neck. Thus Hippocrates: and from hence we see, that the peripneumony, or inflammation and impostthume of the lungs, under which the infected Athenians laboured, was the cause of this fatal symptom.

Ver. 1151. The words in the original are,

Tenuia sputa, minuta, croci contincta colore,
Salsaque, per fauces raucas vix edita tussi.

Which is taken almost word for word from Hippocrates, in the place above cited: where he says, that the worst sort of spittle are those that are yellow, or of a reddish colour; or that cause a violent coughing, and that are thin, and come away in little quantity. Now Lucretius calls these spittles " tenuia," thin, which is a mark of their crudity, in regard to their substance; " minuta," that is to say, fewer than they ought to be, in regard to their quantity; " croci contincta colore," yellowish, which was a mark of their bilious nature; and, " salsa," salt, which quality was due to the corruption of the humours, or to a mixture of salt and serious humidity: for these are the causes, that Galen himself, 2. de diff. Feb. cap. 6. assigns, of the saltness of humours. And then the poet, to show us that these were not only the excrements of the brain, that are often purged away by spitting, and are called spittle, adds, " per fauces raucas vix edita tussi," i. e. that they could scarce be thrown up, by coughing, through their hoarse sounding jaws: for it is the proper function and sole business of a cough, to serve the members that are employed in respiration, and to extrude and throw from thence whatever is molesting to them; and the hoarseness Lucretius mentions, proceeded from the exasperation of the larynx, occasioned by a defluction of salt phlegm, which likewise fell upon the lungs, and then caused a violent cough.

Ver. 1154. Lucretius says,

" In manibus vero trahier nervi."

This contraction of the nerves of the hands was a sure token of present convulsions, which, as we have seen already, proceeded, according to Thucydides, from what he calls λύγξ ἀπὸ, an empty hicket. See above in the note on ver. 1122. Now a convulsion is an involuntary contraction of the parts, that communicate and partake with the nerves, proceeding from a preternatural cause. But whether some of our modern physicians, who differ from the ancients, in assigning several other causes of convulsions, than those which these last allowed of, be in the right, it is not our business in this place to inquire. Hippocrates, 8. de Comp. Med. positively asserts, that there are but two causes of convulsion; viz. Repletion and inanition: and Galen too, firmly avouches, that no third cause can be found out for the siccity or dryness, which the same author more than once affirms to be the cause of spasms, is included in, and reduced to inanition. The hands, therefore, of the infected were convulsed, by reason of the dryness and inanition of the nerves, and of the whole inflamed body, that was weakened and brought low by a manifold evacuation: besides; an erysipelas, from whence proceeded a frenzy, had seized the brain, and all its membranes; hence the pernicious filthiness of the corrupted blood was imparted to the marrow of the spina, or back-bone, from the first knuckles or joints of which arise the nerves of the hands and fingers. Thus that corruption, falling down, doubled the difficulties, irritating, and filling, or choking up the ducts of voluntary motion.

Here our translator has omitted the latter part of the verse above cited, in which his author mentions another symptom, that attended this disease: viz. a trembling of the joints,

" In manibus vero trahier nervi, tremere artus."

Now, according to the definition of physicians, " Tremor est symptoma in actione læsa;" and this happens when the voluntary motive faculty is depraved, by reason of its disproportion to its own object, which is the body. For, since, in the concretion of animals, the elements of earth and water are predominant, and since they are for that reason by nature heavy, whatever moves, would by natural inclination always descend, unless the motive faculty sustained and kept it up: and if that faculty be strong, and in due order, all things are performed aright, and according to the strict command of the will: but if that faculty be weakened or disordered; then there immediately arises a complicated motion, which is called a trembling; and that proceeds from the motive

faculties endeavouring to lift up the member, which, at the same time, by its own natural inclination, is striving to sink down. Galen in his Treatise, de Trem. Palp. cap. 3. brings a very evident example of this alternate endeavour of the faculty and member: I presume, says he, you have seen, how a man's legs will tremble, if he strives to run apace with a weighty burden on his shoulders: and how his hands too will tremble, if he attempts to lift up, and carry, a weight superior to his strength. Thus Galen: and this shows the reason of the trembling of the joints, as well in old age, as in diseases: well, therefore, might their limbs and joints tremble, the strength of whose motive faculty in so great and various a conflict, was extremely impaired, and carried headlong to utter destruction.

Ver. 1155. This verse runs thus in the original:

A pedibusque minutatim succedere frigus
Non dubitabat.——

The symptoms grow still more and more dangerous: for, though it cannot be controverted, that the feet are cool not without reason; inasmuch as, by nature, they are both thin of flesh, and abound with nerves; yet they grow cold besides, by reason of their distance from the warmest parts of the body; the heat retreating to, and gathering itself together in, the breast, in almost all fevers, except in the bilious and burning; and unless too the disease be malignant, as this at Athens was. Galen, in his Comment on epid. 3. teaches the causes of this coldness of their feet: If the disease, says he, be malignant, the extreme parts grow cold, by reason of the decay of strength, and the greatness of the inflammation, that attracts the whole mass of blood to itself, for without these, the disease is never mortal. And the same author, in his comment on this Aphorism of Hippocrates, in great pains of the belly, a coldness of the extreme parts is an ill sign, comprises this whole matter in a few words. The coldness of the extreme parts, says he, is caused by the violence of the inflammation in the bowels. It proceeds likewise from the defection and decay of the vital faculty, which happens whenever the natural heat is either extinguished, or suffocated, by reason of the great quantity of it, then chiefly, when it becomes cold. It is occasioned, besides, by any violent pain, that seizes the middle parts of the body, and by means of which, nature is contracted into itself, and the blood repairs to it, abandoning not only the extreme parts of the body as the feet, the hands, and the head: but the whole skin likewise. Thus Galen: and hence we see, why the natural heat, that was attacked by so many enemies, languished and decayed, "minutatim," as Lucretius expresses it, by little and little, till at length a coldness of the extreme parts succeeded in its place; and that too, perhaps, not without a lividness of colour: both which are fatal tokens in all acute diseases.

Ver. 1156. Here the poet begins to describe symptoms of an imminent and near approaching death, which discovered themselves in the face of the infected. Now, of all the several parts that compose the human face the preference is justly due to the nose and nostrils, because of the comliness they add to, or detract from, the whole structure of the face according to which opinion Horace sung long ago;

Non magis esse velim, quam pravo vivere naso
Spectandum nigris oculis, nigroque capillo.

But though as Galen, in his book de opt. sec. cap. 26. truly observes, accuminated nostrils, and hollow eyes, are in some, tokens of death, but natural in others; yet in the diseased Athenians, of whom our poet is speaking, they were preternatural, and proceeded from the force of the disease, which had overpowered the strength of the body: Since, therefore, the countenance of the sick was very unlike, and different from the aspect of the healthy, though but in one part of it, we may well, with Hippocrates, in Progn. c. 5. call it a most dangerous symptom for a sharp nose and compressed nostrils, on many accounts, portend the worst that can happen. The nose itself is composed of two substances, the one cartilaginous, the other bonny: The bonny part of it remains always firm and unshaken; nor is it exposed to any motion or damage; but the cartilaginous or gristly substance of it is subject to both: for, in the first place, the wings, or round risings on either side of the nose are moved naturally by their own muscles: of which you may consult at large Julius Casserius, in his accurate treatise, de Fabrica Nasi; but with this caution, nevertheless, not to take the two muscles, which he lately invented, for the janitores, as he calls them, porters of the nose, till use and experience convince us, that we can, whenever we list, compress the nose, and contract or straiten the passages of it. But that extreme part of the nose, because it is more carneous, and contains more humidity than the other, is sooner affected by diseases: and what great necessity soever urges, the innate power of motion is taken away from the muscles whenever nature is overpowered and worn out by disease: Hence the nostrils are compressed; and, what necessarily follows, the cartilage and muscles of the nose being grown dry, the globulous part of it is attenuated and contracted.

Ver. 1158. The causes of these events we learn from Galen, who, in Comment. Progn. teaches, that such accidents proceed, either from some cause that wastes and corrupts the carneous parts of animals, or from the weakness and decay of the natural heat, which can no longer extend itself into the extreme parts of the body; but remains in little quantity confined to the bowels only. Besides, it always happens in these cases, that so great a portion of blood and spirits flows not to the extreme parts of the body as did before, when nature was fully provided with them. for which reason, a great alteration of the natural habit of body is apparently discerned in the face, and these are the causes that the eyes first of all are contracted and hollowed: For, being of a softer substance than the other parts, they swell and

protuberate when they are supplied with a sufficient quantity of spirits; but, for want thereof, they sink and subside. Add to this, that the muscles of the temples are consumed and wasted away, by the malignancy, or by the diuturnity, of the disease; and disabled nature is rendered incapable to repair that loss: Hence the temples are hollowed, and, the jugal bone being prominent, the eyes seem to be sunk within their sockets.

Ver. 1159. These effects, according to Galen, proceeded from the same causes we mentioned in the note on ver. 1155. where we produced the authority of that author.

Ver. 1160. In these two verses the poet tells us, that they died generally the eighth or ninth day after they were taken sick: from which Thucydides varies a little: for his words are as follows: Καὶ τὸ σῶμα, ὅσον πρὸς χρόνον καὶ ἡ νόσος ἀκμάζοι, ἀκμαιότατον ἐφαίνετο, ἀλλ' ἀντεῖχε παρὰ δόξαν τῇ ταλαιπωρίᾳ, ὥστε δ' φθείρονται οἱ πλεῖστοι ἀναλωθέντες καὶ ἐβδομαῖοι ὑπὸ τῷ ἐνδεκάτῳ καύματος, ἔτι ἐχοντές τι δυνάμεως· that is to say, as long as the disease was at the height, their bodies wasted not, but resisted the torment beyond all expectation, insomuch, that most of them died of their inward burning, in nine or seven days, and whilst they yet had strength. Whoever desires to be satisfied of the power of these critical days, in judging of diseases, may consult Galen, de Crisibus de dieb. decretor. where his curiosity will be abundantly contented. I will only take notice, that the pestilence, which raged in Italy, in the year 1548. was much more violent at the time of its first breaking out: for, as Guido Cauliacus relates, they died within three days after they fell sick: and the Florentine historian, Mattheo Villano, speaking of the same plague, says, "e morivano, chi di subito, chi in due, e chi in tre dì:" i. e. and they died, some suddenly, some in two, and some in three days. And the plague that desolated the same country in the year 1631, was scarce less violent; for it snatched them away in three or four days at most, say the authors who have written of it.

Ver. 1162. Here the poet tells us in thirteen verses, that if any chanced to escape, yet even they were forced to compound for their lives, with the loss of some of their members, either their eyes, or their privy parts, or feet, or hands; for the whole virulence of the disease, falling upon those parts of the body, caused so great a corruption, that, for fear of death, they were necessitated to submit to an amputation of them. Nay, says he, so great an oblivion of all things seized upon some, that they knew not even their own selves, nor remembered who they were.

Ver. 1163. This too Lucretius has taken from Thucydides, who says, Ἐπιφύγοιεν, ἐπικαλίσαντος τῷ νοσήματος ἐς τὴν κοιλίαν, καὶ ἠλκώσεως τε αὐτῇ ἰσχυρᾶς ἐγγιγνομένης, καὶ διαῤῥοίας ἅμα ἀκράτου ἐπιπεσούσης, οἱ πολλοὶ ὕστερον διὰ τὴν ἀσθένειαν διεφθάρησαν. If, says he, they escaped that (their inward burning) then the disease falling down into their bellies, and causing there great exulcerations, and immoderate looseness, they died, many of them, afterwards through weakness.

Ver. 1165. A pain in the head is very frequent in all pestilential diseases: nay, some have thought fit to place it among the forerunning tokens of an approaching plague. But the pain, mentioned by Lucretius, proceeded not from a cold, or vaporous cause; but from too great a quantity of corrupted blood, which oppressed the head with its weight, inflamed it with its heat, and, by its malignancy, disordered the membranes of the brain. Hence nature, rousing up to her own relief, endeavoured to expel the offensive humour through the passage of the nostrils, which are the proper emunctories of the head: But since the blood, besides its over-abundance, was repleniſhed with a certain virulency, it grew extremely refractory and rebellious to nature, and the whole mass of it, all at once, flowed to the place where it had found an open passage; and there discharged itself, even as a rapid torrent whose mound is thrown down, pours out all its waters through the gaping breach: No wonder, therefore, that, as Lucretius says,

Huc hominis totæ vires, corpusque fluebat.

Ver. 1167. The loss of their members, which Lucretius mentions in these six verses following, is described by the historian, in these words: Διεξῆει γὰρ διὰ παντὸς τοῦ σώματος, ἄνωθεν ἀρξάμενον τὸ ἐν τῇ κεφαλῇ πρῶτον ἱδρυθὲν κακόν, καὶ εἴ τις ἐκ τῶν μεγίστων (κινδύνων δηλονότι· Schol.) περιγένοιτο τῶν γε ἀκρωτηρίων ἀντίληψις αὐτῷ ἐπεσήμαινε, κατίσκηπτε γὰρ καὶ ἐς τὰ αἰδοῖ· καὶ ἐς ἄκρας χεῖρας, καὶ πόδας· καὶ πολλοὶ περισκόμενοι τέτων διέφυγον, ἐσὶ δὲ οἳ καὶ τῶν ὀφθαλμῶν. Thucyd. For the disease, says he, which first of all took the head, (see above ver. 1164.), began above, and came down, and passed through the whole body: and whoever overcame the worst of it, was nevertheless marked with the loss of some of his extreme parts; for, breaking out both at their privy members, and at their fingers and toes, many escaped with the loss of these only: There were some likewise that lost their eyes. Thus Thucydides. Yet it might, one would think, have been expected, that they, who had had so copious a discharge of corrupted blood through the nostrils, would, for the future, have been exempted from any fresh attack: but Galen, lib. i. de Crisib. cap. 3. solves this difficulty, and teaches, that bleeding at the nose may be beneficial, if it happen at a due time; but that otherwise it is rather prejudicial. Humours, that wandered all over the bodies of the infected, may, with reason, be believed to have fallen upon some of the members, rather than upon others; and particularly, as Lucretius, after Thucydides, says,

———in partes genitales corporis ipsas,

Of which our translator takes no notice. But the reason why the corruption fell chiefly on those parts, is, because of the familiarity and sympathy between them, and the members that serve to respiration: For, we have heard already, that the greatest part of the diseased laboured under a pe-

ripneumony, or inflammation of the lungs, which had occaſioned a violent cough; and in thoſe caſes, as Hippocrates ſays, ſeveral times of his own experience, the matter generally diſcharges itſelf on the privy parts: therefore it is not ſtrange, that, for fear of death, thoſe wretches ſuffered an amputation of their pudenda; and, as Lucretius ſings,

Vivebant ferro privati parte virili;

Of which too our tranſlator is wholly ſilent. And we may eaſily believe, that the defluxion of humours on thoſe parts, occaſioned ſuch a corruption, as reduced phyſicians to their laſt remedies, amputation and fire, ſince Galen, in his comment. on epidem. 3. firmly avouches, that even where there is no peſtilential infection, if an inflammation, or an eryſipelas, ſeizes on theſe parts, they very ſoon corrupt, and affect the ſuperior parts of the body: ſo that we are neceſſitated, ſays he, to cut away the putrefaction, and to ſeer the place, as being the root of the diſeaſe.

Ver. 1171. Galen, in com. epidem. 3. aſcribes the cauſe of this loſs of members, only to the putrefaction of the humours; the nature of which is to corrupt the parts on which it ſeizes, Here Lucretius is carped at by P. Victorius, in var. lection. for not having, as he pretends kept cloſe enough to the narration of Thucydides: He is excuſed, however, by Lambinus, whom Hieronymus Mercurialis, lib. iii. var. lection. cap. 12. accuſes of being a plagiary, in the defence he makes for our author.

Ver. 1173. Thucydides in like manner, Τὸ δὲ καὶ λήθη ἐλάμβανε παραυτίκα ἀναστάντας (ὑγιάντας Schol.) τῶν πάντων ἐμοίως, καὶ ἠγνόησαν σφᾶς τε αὐτὺς καὶ τὺς ξυνηδεύς· that is to ſay, and many of them, preſently upon their recovery, were taken with ſuch an oblivion of all things whatſoever, that they neither knew themſelves nor their acquaintance. Though the loſs of memory be not uncommon in acute diſeaſes, yet it is frequent in chronical diſtempers, that are of a long duration. It is related of Benedictus Florettus, a perſon of univerſal learning, who lived in the laſt age, that having long ſtruggled with a diſeaſe of eight months continuance, he at length overcame his adverſary; but in the conflict had entirely forgot the Greek tongue, of which he had been a great maſter; as likewiſe the rules of metrical numbers in all languages whatſoever. Nor does the memory decay through the means of diſeaſes only, but of old age likewiſe; and ſometimes too it is loſt even in the vigour and full ſtrength of life, either by external or internal cauſes? Well, therefore, may we declaim with Pliny: "Memoria nihil æquè fragile eſt in homine, morborum, et caſûs injuriis, atque etiam metûs ſentiens; aliàs particulatim, aliàs univerſim," cap. 24. There is nothing, ſays he, in man ſo frail as his memory, it being obnoxious to the injuries of diſeaſes and accidents, nay, even of fear: ſometimes it is loſt in part, ſometimes totally. We need not, therefore, be aſtoniſhed, that they, who were viſited with the moſt acute of all diſeaſes, a virulent plague, loſt their memory. The only cauſe of which was the corruption of the humours, which had, as I may ſay, laid violent hands on nature, and alienated the parts from their due conſtitution. It is indeed hard to explain the manner how this comes to paſs; but it is almoſt generally held, though ſome few are of another opinion, that loſs of memory proceeds, not only from a cold and humid diſtemperature, but from a dry likewiſe; for Galen. 3. de loc. aff. relates of his own knowledge, that this misfortune happened, through dryneſs, to a certain ſtudious, ſedentary perſon, and to a ſturdy, labouring peaſant. The biſhop of Rocheſter, in the following verſes, finely deſcribes theſe miſeries of the ſurviving Athenians, who had been viſited with that fatal peſtilence,

But if through ſtrength, or heat of age,
The body overcame its rage;
The vanquiſh'd evil took from them,
Who conquer'd it, ſome part, ſome limb:
Some loſt the uſe of hands, or eyes;
Some arms, ſome legs, ſome thighs.
Some all their lives before forgot;
Their minds were but one darker blot:
Thoſe various pictures in the head,
And all the num'rous ſhapes were fled:
And now the ranſack'd memory
Languiſh'd in naked poverty,
And loſt its mighty treaſury:
They paſs the Lethe lake, although they did not die.

Plague of Athens, Stan. 13.

Ver. 1175. In theſe twelve verſes, the poet deſcribes the great corruption that attended this peſtilence; and which, ſays he, was ſo exceſſive, that even the birds and beaſts of prey, but eſpecially the dogs, who had taſted of the dead bodies, dropt down dead immediately: Nay, ſo noiſome was the ſtench of the unburied carcaſes, that neither in Athens, nor around the city, were any ravenous birds ſeen by day, not any wild beaſts by night. In like manner Thucydides, Τὰ γὰρ ὄρνεα καὶ τετράποδα, ὅσα ἀνθρώπων ἅπτεται πολλῶν ἀτάφων γιγνομένων, ἢ οὐ προσήει, ἢ γευσάμενα διεφθείρετο, i. e. The birds and beaſts, that uſed to feed on human fleſh, though many bodies lay abroad unburied, either came not at them, or, if they taſted, periſhed. Thus too the biſhop of Rocheſter, in the poem above cited, Stanza 18.

Scatter'd in fields the bodies lay:
The earth call'd to the fowls to take their fleſh away:
In vain ſhe call'd; they came not nigh,
Nor would their food with their own ruin buy;
But, at full meals, they hunger, pine, and die;
The vultures afar off beheld the feaſt,
Rejoic'd, and call'd their friends to taſte:
They rally'd up their troops in haſte:
Along came mighty droves,
Forſook their young ones, and their groves;
Each one his native mountain, and his neſt:
They come; but all their carcaſes abhor;
And now avoid the dead men more

Than weaker birds the living men before:
But if some bolder fowl the flesh essay,
They were destroy'd by their own prey.

Ver. 1178. Thucydides says only that they came not near the dead bodies, but gives not the reason of it; that is to say, whether it happened out of any natural instinct, which is often observed in brutes; or whether any of their senses gave them notice of the danger. But Lucretius takes away this difficulty, and says, that the wary birds and beasts of prey were admonished by their smell to keep away from the dead carcases, "ut arcem," says he, "exirent odorem." Now, of all the feathered kind, the vulture is said to have the most exquisite smell, or even to know beforehand where he shall find his prey. This is confirmed beyond all dispute, if we may credit Horus Ægyptius, a very ancient author, who says, that in time of war, vultures repair, seven days before, to a place where a battle will be fought; and even that they haunt chiefly about that part of the army where the greatest slaughter will be made. But, allowing this to be true, it cannot be ascribed to their smell, or any other of their senses, but rather to a presaging instinct that nature has conferred upon them: a credulity, which Plautus long ago derided, when he said,

Quasi vulturii, triduò priùs divinabant, quo die esituri fient.

And, indeed, who but a superstitious augur can give credit to so extravagant a notion, or believe that vultures, by their smell, can distinguish between bodies that are to die in a few days, or to live a longer time. The truth is, that they generally keep with armies, because they feed on the garbage and offals of beasts, a great number of which are daily slain for the subsistence of such a multitude of men.

Ver. 1181. Lucretius says,

Nec tamen omninò temerè illis solibus ulla
Comparebat avis:——

This too is confirmed by Thucydides, in these words: Τεκμήριον δὲ (viz. modò dicta vera esse) τῶν μὲν τοιούτων ὀρνίθων ἐπίπεψις σαφὴς ἐγίνετο, καὶ ἐκ ἐωρῶντο ὅτε ἄλλως, ὅτε περὶ τοιῶνδε ἐδέη· i. e. An argument that what I said, touching the birds, is true, was the manifest defect of such fowl, which were not then seen, neither about the carcases nor any where else.

Ver. 1182. Lucretius, to augment the horror, adds this circumstance, of which Thucydides is silent, that even the wild beasts hid themselves in their dens, where, nevertheless, they died at length of the infection: a most certain argument that the disease overcame the strength of all mortal animals; and that too not only of the body but of the mind: insomuch that its rage and cruelty far surmounted all expression of words, as Thucydides observes, and made it appear to be a kind of sickness which exceeded human nature in the fierceness with which it handled every one; and likewise to be none of those diseases that are bred amongst us. But from this passage of our author, we make two observations: First, That a plague is common to all animals, and propagated from men into beasts; and, on the contrary, from beasts into men. Secondly, That a pestilential venom does not end with the life, but remains in the dead body, though it be not so virulent by reason of the want of heat: But when the putrilaginous heat has succeeded in the place of the natural, it emits a pernicious and fatal infection, as may be proved by many experiments. This is indeed controverted by some, but to no purpose; for their main argument is, the example they bring of venomous animals, which, nevertheless, they say, retain no poison after they are killed; but common observation abundantly evinces the contrary.

Ver. 1185. It is generally testified by all authors, that dogs have been first infected with, and before any other animals, have felt the first fury of a coming plague. Thus Homer, in Iliad. H. expose, κύνας ἀργοὺς, the white dogs first to the infection. And

Strage canum primò,

says Ovid, Metam. lib. viii. after whom Silius Italicus has copied,

Vim primi sensêre canes.—— *Lib.* xiv.

And the reason why dogs feel the first attacks of a pestilential contagious disease, according to Eustathius, is, because of their exquisite sense of smelling; of which Ælian likewise approves. Others blame the pestilent exhalations of the earth, to which, say they, the dogs, by reason of their proximity to it, are most obnoxious. But the opinion of Thucydides, which we mentioned before, seems the most plausible. Οἱ δὲ κύνες, says he, μᾶλλον αἴσθησιν παρεῖχον τῷ ἀποβαίνοντας διὰ τὸ ξυνδιαιτᾶσθαι, which Hobbes thus renders. But by the dogs, because they are familiar with men, this event was seen much clearer. For so Hobbes has rendered it: But why may not the διὰ τὸ συνδιαιτᾶσθαι, be rather interpreted, "ob convictum," because of their eating of the same sort of food? For it not only indicates the contagion, which is the most potent propagator of plagues, even into men, but a certain, I know not what, sickly preparative, or analogy, as they call it, proceeding from a common food with particular men. Nardius relates, that he knew a certain prince, who was taken with a violent vomiting of blood, that was occasioned by an external cause: this prince was extremely fond of one of his greyhounds, who, not long after, of his own accord, and without having received the least hurt, vomited blood likewise; till at length he died, wasted with a long disease, and swelled with a dropsy; all which accidents had likewise happened to his master: and, what is yet more strange, the bowels of both of them were observed to be tainted with a like corruption.

Ver. 1187. Here the poet describes the neglect of funeral rites during the time of the plague: However, it is most notorious, how much cost

and ceremony the ancients, and more particularly the superstitious Athenians, were wont to bestow on the funerals of their dead: Of which we shall have occasion to speak more at large on ver. 1246. Mean while what Lucretius here intimates is, That no solemn pomp or rites were observed; that no friends or relations attended the dead bodies to their funeral piles; but either suffered them to lie abroad unburied, or cast them carelessly on the piles that had been prepared for others. This tumultuous disorder of their funerals, is finely described by the Bishop of Rochester.

Mountains of bones and carcasses
The streets, the market-place possess,
Threat'ning to raise a new Acropolis.
The woods gave fun'ral piles no more;
The dead the very fire devour,
And that almighty conqu'ror overpow'r.
The noble and the common dust
Into each others graves are thrust:
No place is sacred, and no tomb;
'Tis now a privilege to consume:
Their ashes no distinction had:
Too truly all by death are equal made;
And poor mens bones the noble urns invade.
Plague of Athens, Stanza 30.

Ver. 1188. Tears and bewailing the dead were no small part of funeral exequies; whence Servius on Virgil, Æn. 11. says, "Sine fletu non est sepultra:" the want of tears being accounted as great a misfortune, as even the deprivation of funeral itself. Therefore Virgil, in Æn. 11. joins them as alike calamitous:

Nos, animæ viles, inhumata, inflataque turba:

And Ovid, in Metamorph. 11. introduces the drowned Ceyx appearing, and speaking thus to Halcyone:

Surge, age, da lacrymas, lugubriaque indue, nec me
Indeploratum sub inania Tartara mitte.

Which Sandys thus renders;

Rise, weep, and put on black; nor undeplor'd,
For pity, send me to the Stygian ford.

For the ancients believed the dead to be comforted and delighted with the tears of their surviving friends: And this is the reason, that, in the ancient inscriptions on tombs, we so frequently find,

LACRIMAS POSUIT.
CUMLACRIMIS POSUIT.
LACRIMIS ET OPOBALSOMO UDUM CONDIDIT.
TUMULUM LACRIMIS PLENUM DEDIT.

and the like; of which Gutherius, de Jure Manium, lib. 1. gives many examples. And for this reason too Manilius, speaking of this plague, by the want of so mean and ordinary an obsequy, aggravates the miseries of a pestilential mortality, by which mankind is deprived of all the tender resentments and benefits of commiserating humanity.

——Funera deerant
Mortibus, & lacrimæ: fessos defecerat ignis;
Et coacervatis ardebant corpora membris.
Manil. lib. i. *ver.* 886.

These, therefore, were a sadder kind of funeral than that which Virgil. Æneid. 11. gives to the slaughtered Latines, for they had yet wood to burn them,

Cætera confusæque ingentem cædis acervum
Nec numero, nec honore cremant.——

Upon which last words Gutherius observes; "Nec numero, nec honore combusti dicuntur, qui confuso lignorum acervo lento dabantur igni, multis corporibus simul congestis." And this, by Macrobius, is called "tumultarium funus," and only used in calamitous accidents. In which kind of promiscuous funerals, it is noted by the same author, that it was usual, to every ten mens bodies, to add one woman's, to make them burn the better. Of which he likewise gives this reason: "Quod muliebre corpus juvabat ardentes viros, non caloris erat, sed pinguis carnis, & oleo similis." Vide Macrobium, Saturn. lib. vii. cap. 7.

Ver. 1190. In these six verses, the poet relates, that all the remedies of physic were applied in vain: for the medicaments that some found good by, were fatal, and brought death to others. In like manner too Thucydides: Ἐν τε ἰδίᾳ κάμνοντα ἴαμα, ὡς ἐπεῖν ὅτι χρὴν προσφέροντας ὠφελεῖν· τὸ γὰρ τῷ ξυνενεγκὸν, ἄλλον τοῦτο ἔβλαπτε, σώματι αὐτάρκεις ὂν οὐδὲν διέφαινε πρὸς αὐτὸ ἰσχύος περὶ ἢ ἀσθενείας, ἀλλὰ πάντα ξυνήρει, καὶ τὰ πάσῃ διαίτῃ θεραπευόμενα· Nor was there any, to say certain medicine, that, applied, must have helped them. For, if it did good to one, it did hurt to another: nor any difference of body for strength or weakness, that was able to resist it; but it carried all away, what physic soever was administered. Thus Thucydides: And upon this passage of that historian, the Bishop of Rochester ingeniously paraphrases:

Physicians now could nought prevail;
They the first spoils to the proud victor fall:
Nor would the plague their knowledge trust,
But fear'd their skill, and therefore slew them first.
So tyrants, when they would confirm their yoke,
First make the chiefest men to feel the stroke;
The chiefest and the wisest heads, lest they
Should soonest disobey,
Should first rebel, and others learn from them the way.
No aid of herbs, or juices pow'r;
None of Apollo's arts could cure,
But help'd the plague the speedier to devour.
Physic itself was a disease;
Physic the fatal tortures did increase:
Prescriptions did the pains renew:

And Æsculapius to the sick did come,
As afterwards to Rome,
In form of serpent: and he brought new poisons with him too,
Plague of Athens, Stanza 15.

The natural remedies that are used in extinguishing and driving away a pestilential disease, are of two sorts: for some are called common, others particular. The common remedies are fires, odours, firing of guns, a strict regimen of life, and what is more than all the rest, an avoiding of the contagion, together with an extermination and utter destruction of all things that may retain and preserve the infection, as clothes, bedding, and the like: as likewise to absent from all company whatever for a certain time. And, whatever Lucretius advances to the contrary, Hippocrates is said to have bethought himself of a common remedy for this plague viz. by burning piles of scented wood at the corners of the streets. The particular remedies are those that are adapted to the constitution and habit of body of each person infected: and these in the case of the Athenian plague, as both the historian and our poet inform us, were all used in vain. And, indeed, in vain hitherto have proved all the cares and endeavours of men: and the Divine Providence has eluded the attempts of those bragging Charlatans, who boast of their panaceas, amulets, and infallible remedies against the plague, and often compels them dearly to rue their enormous temerity: Not that I would be understood to mean, that the care of the sick ought to be committed to fortune only: for there is an honour justly due to medicaments that support the vital faculty, and contain it within its due bounds; as there is likewise to topics, when experience has once established and confirmed the usefulness of them. But what I say is, that the Supreme Wisdom has hitherto denied to mortals, to find out any universal and certain alexicacon for the plague. And therefore Mattheo Villano, speaking of the plague that raged in the year 1348, says, That the physicians, in any part of the world, could not, either by natural philosophy, or by physic, or by the art of astrology, find out any remedy, or certain cure for it: That some of them indeed, out of covetousness, went to visit the sick, and gave them their remedies; but that by their own death they evinced the vanness of their art, leaving their lives as a restitution for the money they had unjustly taken. "E i Medici," says he, "in cotuna parte del Mundo, per philosophia naturale, ò per Fisica, ò per arte d' Astrologia, non hebbono Argomento, ne vera cura. Alquanti per guadagnare andarono visitando, e dando loro argomenti, i quali, per loro morte, monstrarono l' arte esser ficta, e non vera assai per Conscienza lasciarono à restituere i danari, che di ciò havevano presi indebitamente."

Ver 1192. From what Lucretius, after Thucydides, says in this and the three following verses, we may gather this observation; that in each plague there is not one only manner of corruption, but that it differs very much, according to the various dispositions of the bodies and humours; even though it derives its origin from one and the same cause.

Ver 1196 In these six verses the poet teaches, That the greatest calamity of all was: that as soon as they perceived themselves seized with the disease, they fell into a despair of recovery, and neglected to take care of themselves: a neglect that sometimes is more fatal than the force of the disease. Thus too the historian: Δεινόταλον δὲ πανὸς ἦν ἡ τὰ ἀθυμία, ὁπότε τις αἴσθοιτο κάμνων. πρὸς γὰρ τὸ ἀνέλπιστον εὐθὺς τραπόμενοι τῇ γνώμῃ πολλῷ μᾶλλον προΐεντο σφᾶς αὐτὰς καὶ ἀκ ἀντεῖχον. Thucyd. That is to say But the greatest misery of all was the dejection of mind, in such as found themselves beginning to fall sick: for they presently fell into despair, and gave themselves over without making any resistance. Now this consternation and dejection of mind was prejudicial to them on a double account: For, besides that it very much impaired their strength, it brought with it this additional mischief, that, despairing of recovery, they thought it to no purpose to take care of themselves. And thus the disease raged uncontrouled, and soon was fatal to such as neglected the means of their own safety, and gave themselves over for lost. And here we might take occasion to inquire narrowly into a question, which some have started, viz. Whether an absent person can catch the plague by the strength of imagination? The affirmative has many sticklers for it, as may be seen in Fab. Paulinus, lib 1 and the negative is no less strenuously asserted by others: Imagination may indeed operate on our own bodies; by reason of the mutual consent and sympathy that each part has to the other. But what strength can it have to work on the bodies of others? Whoever yet heard of a pick-pocket, who, by the intenseness of his fancy only, could get the money out of another's purse? Or, of a hunger-starved wretch, who, by the strength of his imagination, could get into his own clutches the bread he saw lying at a distance on a baker's stall? Besides in this case of the Athenian plague, both the historian and our poet expressly say, That the disease preceded the dread and apprehension of it.

Ver 1198. This verse our translator has added to his author.

Ver. 1202. Here the poet, in these thirteen verses teaches farther, that some, though they came not to visit their friends and relations, or had neglected to tend them, caught nevertheless the contagion, and died like infected sheep or cattle: and, because they had neglected to take care of their friends, they too, in their turn, were neglected by them. Thus too Thucydides, Ἔλεγος ἀφ' ἑτέρῃ θεραπείας ἀναπιμπλάμενοι ὥσπερ τὰ πόρβαλα ἔθνησκον καὶ τὸν πλέιστον φθόρον τῷδε ἐποίει· ἐπὶ γὰρ μὴ θέλοιεν διδιόσες ἀλλήλοις προσιέναι, ἀπώλλυντο ἔρημοι, καὶ οἰκίαι πολλαὶ ἐκενώθησαν ἀπορίᾳ τῦ θεραπεύσοντος. They died, says he, like sheep, being infected by mutual visitation: And if men, for fear, forbore to visit them, then they died forlorn: so that many families became empty, for want of such as should have taken care of them. Thus Thucydi-

des: And were there no other teſtimony for contagion to be found, than this of that hiſtorian and our poet, it would be abundantly ſufficient, evidently to convince their peremptorineſs, who obſtinately hold, that it was unknown to the ancients: and them too, who as poſitively aſſert, that the air only is the cauſe of epidemical diſeaſes; and will not admit of contagion, except only when ſubſtituted in the place of the air. But how much they are miſtaken will manifeſtly appear by the following animadverſion.

OF CONTAGION,

THE CHIEF CAUSE OF A PLAGUE.

As the ancients were not ignorant of, ſo they always apprehended, contagions; whatever ſome modern authors have believed to the contrary. Lucretius, who copies after Thucydides, freely confeſſes in this place, That the effects of contagion are felt from far; and to him ſubſcribe ſeveral of the ancients; as Livy, lib. iii cap. 25. Diodorus Siculus, lib. 14. Dionyſius Halicarnaſſus, lib. 10. and Euſebius, lib. 7. but, that they affect, when near at hand, is allowed by all: for none deny, that to tend and touch the ſick, will ſpread abroad the diſeaſe, and render it epidemical: Hence Virgil in Georg. iii.

Ne mala vicini pecoris contagia lædant.

And our Lucretius, ver. 1241. of this book,

Qui fuerant autem præſtò, contagibus ibant.

And yet L. Septulius, in lib. 2. de Peſte, cap. 8. too confidently affirm, That the third manner of contagion, which, as we ſaid before, the phyſicians call *per fomitem*, was unknown to the ancients, and never thought of by them. But, among many other teſtimonies that might be alleged, this miſtake of his is evident from the following verſes, with which Virgil concludes his third Georgic:

Jamque catervatim dat ſtragem, atque aggerat ipſis
In ſtabulis turpi dilapſa cadavera tabo:
Donec humo tegere, ac foveis abſcondere diſcunt.
Nam neque erat coriis uſus; nec viſcera quiſquam,
Aut undis abolere poteſt, aut vincere flamma:
Nec tondere quidem morbo, illuvieque peresa
Vellera; nec telas poſſunt attingere putres:
Verùm etiam inviſos ſi quis tentârat amictus,
Ardentes papulæ, atque immundus olentia ſudor
Membra ſequebatur: nec longo deinde moranti
Tempore, contactos artus facer ignis edebat.

Which is rendered by Dryden, as follows;

At length ſhe ſtrikes an univerſal blow:
To death at once whole herds of cattle go:
Sheep, oxen, horſes fall; and, heap'd on high,
The diſ'ring ſpecies in confuſion lie:
Till, warn'd by frequent ills, the way they found,
To lodge their loathſome carrion under ground:
For, uſeleſs to the currier were their hides;
Nor could their tainted fleſh with ocean tides
Be free'd from filth: nor could Vulcanian flame
The ſtench aboliſh, or the ſavour tame:
Nor ſafely could they ſhear their fleecy ſtore,
Made drunk with poiſ'nous juice, and ſtiff with gore,
Or touch the web: but, if the veſt they wear,
Red bliſters riſing on their paps appear,
And flaming carbuncles: and noiſome ſweat,
And clammy dews, that loathſome lice beget;
Till the ſlow creeping evil eats his way,
Conſumes the parching limbs, and makes the life his prey.

The ancients therefore knew what contagion is, though, perhaps, they were not fully aware of its great power, nor of the many ways of its imparting, and ſpreading itſelf abroad: and this is the reaſon, that this chief begetter of a plague was then ſcarce held to be a propagator of it. But in the laſt age, its power was ſo manifeſtly diſcovered, as to make the modern phyſicians believe, that true plagues, or thoſe infections at leaſt, which they call bubonic, are diſſeminated by contagion only. In Florida, the ſeaſons of the year, the fruits of the earth, the winds, the rains, all come regularly, and at due and conſtant times, nor is there the leaſt ſuſpicion there of infectious damps or exhalations; yet, upon the arrival of an ordinary fellow, who brought thither ſome inconſiderable merchandiſe from an infected place, the whole country ſoon caught the contagion, and eſſayed the fury of a peſtilential diſeaſe, till then, in thoſe parts, unknown before. Contagious diſeaſes, unleſs a timely ſtop be put to them, depopulate provinces and whole kingdoms, by ſweeping away their inhabitants. And this obſervation is one of the reaſons, that, though but of late days, contagion has been held to be the chief inſtrument, in beginning, and propagating a plague. The ancients indeed could ſcarce be reconciled to the ſetting a private and particular cauſe at the head of a public and general, or common effect; but this difficulty would not have ſtartled them, had they reflected, that even that cauſe may be ſaid to be common, by whoſe efficacy a diſeaſe becomes epidemical. Pliny, lib. 16. informs us, that they either baniſhed the lepers, or ſhut them up, and debarred them from all manner of converſation, that they might not infect the ſound; and if, through negligence, this care was at any time omitted, the whole ſociety was infected with that moſt filthy diſeaſe; of which no common cauſe could be aſſigned, beſides contagion. We read, that, in the laſt age, a ſecretary of the Pope's treaſury, being returned from Peruſa to Rome, brought the itch along with him; which foul diſeaſe, in a few days, by that means ſpread itſelf through the whole city; and that, when Lautrecchus beſieged Naples, a ſmall number of harlots, that were in the camp, gave the venereal diſeaſe, till then unknown in theſe parts of the world, to his whole army; from whence it has ſince ſpread itſelf into Africa, Aſia,

and all over Europe; treating foreigners with greater ſeverity indeed, than its native Indians, among whom it was firſt known. And were not theſe common cauſes, the firſt of which infected the whole city of Rome, the other almoſt the whole world? Then, not to dwell too long on ſo evident a matter, let us call to mind this maxim of Lucretius:

Tangere enim, et tangi, niſi corpus nulla poteſt res. *Lib.* iv. *ver.* 305.

Nothing, but body, can be touch'd, or touch.

Whatever things, therefore, meet, are bodies; not a naked quality. But, according to Ariſtotle, lib. 1. de Generat. et Corrupt. things then touch one another, when the extremeſt parts of them are together, be it done at what diſtance you will. Contagion thus is not an empty ſound, but expreſſes the manner, by which an infection, by the means of corpuſcles, that exhale from an infected body, communicates itſelf to one that is ſound; and, though it not unfrequently touches, yet it ſometimes imparts its virulence through another medium.

There are ſome, nevertheleſs, who will not be reconciled to contagion; and pretend to compel us to a neceſſity of owning, whether we will or not, and againſt truth and obſervation, that a plague ſometimes is bred, without any previous contagion, otherwiſe it would be perpetual. To make this aſſertion good, they bring, for inſtance, a country, where a new plague is broken out, and aſk us, whether it be juſt then bred in that country, or brought thither from elſewhere? If we grant the firſt, then indeed adieu to all contagion: if the laſt, they bid us name the originary place where it was bred; which would oblige us to the ſame conceſſion as the former. Therefore, ſay they, contagion will propagate, but not begin, a plague. Though this be not argued amiſs, yet it is not ſo concluſive, as to hinder us from believing, that the whole earth is at no time free from a plague; and that there are certain places, where the ſeeds of plagues are preſerved, in order to break out at a certain time. Æthiopia has an ill name on this account; nor are Grand-Cairo and Conſtantinople much better ſpoken of; nay, almoſt all that vaſt extent of land, which the Turks inhabit, in ſome part or other of it, ever has had, and ever will have, more or leſs, the plague among them; and this too through their voluntary neglect; for they think it impious to ſtruggle againſt fate. But the reaſon, why it does not always rage with the ſame fierceneſs among them, is, the various diſpoſition of their bodies, and the different ſtate of the air.

It is likewiſe obſervable, that every contagious diſeaſe rages with greateſt violence at its firſt breaking out; but in length of time grows mild, and abates of its firſt fury. Whoever doubts of this, let him compare the miſchiefs, that heretofore were cauſed by the venereal diſeaſe, with the harms, that, now-a-days, attend it; let him weigh, beſides, the devaſtation, that in the laſt age, the ſmall-pox, brought upon the Indies, where, at its firſt coming, it ſwept away, in a few days, a hundred myriads of Mexicans. The ſeeds, therefore, of peſtilential diſeaſes decay, and wear away by degrees; till, having found proper humours to work on, and ſpirits that make but weak reſiſtance, they break out afreſh, and with greater violence in other bodies. To this opinion ſubſcribes the learned Felix Platerus, who, in his Treatiſe of the Cauſes of Fevers, after having made many obſervations, that well deſerve to be known and remembered, argues to the following purpoſe: It ſeems more reaſonable, ſays he, to believe, that, in like manner as other venoms, which, from the beginning of the world, are innate and natural to certain bodies, inhere and reſide in them, ſo too this peſtilent venom may lurk, not only in the bodies of ſuch as are viſited with the plague, but of others likewiſe, who are not yet taken with a fever; or even in clothes, or any thing of like nature; and that it may be imparted and transferred from body to body; not only by mutual contact, but by the intermediate air intervening, and taking thoſe invenomed ſeeds from one body, and wafting them into another. Beſides, a peſtilent venom, if it be attracted by inſpiration, chiefly affects the heart, and kindles a fever in a moment; or, if it be caught by any other means, and poſſeſſes any other part of the body, it either makes the ſame progreſs to the heart by inſpiration, or through ſome blind paſſages; or elſe it ſtays for ſome time in the part it firſt ſeized on; and even in that caſe, though it be propagated no farther, and though no peſtilent fever yet appear, the body nevertheleſs is rendered infected by that venom; which, ſooner or later, may affect likewiſe the bodies of others. And this is the reaſon, that ſuch as fly from infected places into others, that are free from the plague, and ſtay there ſome time, are often, even after many days, taken firſt with the plague; or, if they are not taken themſelves, they may nevertheleſs infect others. In like manner too, experience teaches, that a lewd woman, who lies with a man, tainted with the venereal diſeaſe, though ſhe be not yet ſo infected by him, as to be ſick of that diſeaſe herſelf, may nevertheleſs infect others, who afterwards lie with her, with the ſame diſeaſe. This too is atteſted by Fernelius; and, therefore, we dare confidently affirm, that the ſeeds of plagues, like other venoms, are always reſiding in certain bodies, in ſome country of the world or other; and that they are propagated from thence into other places, in the manner above ſpoken. Even as we know for certain, that the venom of the venereal diſeaſe, which is well nigh as contagious and noxious, at leaſt to mankind, came firſt of all, creeping from body to body, from the Indies even to us; and now ſubſiſts no where but in bodies, and wanders by contagion out of ſome into others. Which venereal diſeaſe, manifeſting itſelf in this manner, reſides nevertheleſs, in other places, in other bodies; and, by ſome one or other of them, is carried back again into the ſame country. Thus too the plague, though it has often ceaſed to rage

for a long time together, in certain places, is nevertheleſs inherent in certain bodies, in ſome part of the earth or other; and, as is ſaid above, is, in its due time, derived from thence, and breaks out in thoſe bodies, in which it lay dormant. Inſomuch, that no neceſſity obliges us to hold, for this reaſon, viz because we hear nothing of it, nor where it rages, as if it were totally extinguiſhed, and that the whole world were free from it; that therefore when it returns again, it is engendered anew in the air, and falls down from thence upon us; though, notwithſtanding all this, it cannot in the leaſt be doubted, but that the air is imbued with a malignant quality, with which it may, and does ſometimes, affect the bodies of animals: in like manner as we grant, that they are affected by a peſtilent contagion, proceeding from infected bodies, and inſinuating itſelf into other bodies, in the method abovementioned; but that the origin of this contagion is due to the air, can in no wiſe be granted, for the reaſons before given. Thus far Platerus, with whom the generality of phyſicians agree. For the objections, which D. Sennertus, in lib. i. de Cauſ. Peſtil. cap. 21. has brought againſt him, are held to be trifling, and of no validity.

Ver. 1204. This and the two following verſes are a paraphraſe of our tranſlator on his author.

Ver. 1207. Hence we ſee, that the ſaying of the comic poet has ſtill prevailed:

Proximus ſum egomet mihi,

That charity begins at home, as our ill-natured proverb expreſſes it, and, conſequently, that men are more careful of their own health than that of others. To abandon friends in ſickneſs, is a piece of cruelty deteſtable even in heathens; how much more then is it to be abhorred in Chriſtians? Yet Guido Cauliacus tells us, that in the plague that raged in the year 1348, the living, that they might not endanger their lives by the contagion, avoided to come near the infected; inſomuch, that whole families died without attendance, and were buried without prieſts: the father viſited not the ſon, nor the ſon the father: Charity was extinguiſhed, and hope overthrown. "In tantumque," ſays he, "gentes moriebantur ſine famulis, et ſepeliabantur ſine ſacerdotibus: Pater non viſitabat filium, nec filius patrem: caritas erat mortua, et ſpes proſtrata." Mattheo Villano acknowledges this to be true: and though he endeavours to lay the blame on the Barbarians, after whoſe example the Chriſtians no leſs inhumanly abandoned their friends; yet he omits not to brand them with infamy, as men guilty of a barbarity truly deteſtable, and till then unheard of among the profeſſors of Chriſtianity.

Ver. 1215. In theſe ten verſes, the poet tells us, that ſuch of them, as came to tend the infected, were expoſed to a double deſtruction. For, either they caught the contagion of the ſick, and underwent the like fate with them, or elſe, worn out with the fatigue of tending them, they at length fell ſick of the ſame diſeaſe. But ſhame as well as piety excited them to ſerve their friends in ſo great diſtreſs; and thus the moſt virtuous among them expoſed their lives to this danger, and chiefly aſſiſted their dying friends. In like manner Thucydides: Ἐλὶ. προσίσιεν διεφθείροντο καὶ μάλιστα οἱ ἀρετῆς τι μεταδιώκοντες, αἰσχύνη γὰρ ἠφείδουν σφῶν αὐτῶν ἰσιόντος πρὸς τὰς φίλους, ἐπεὶ καὶ τὰς (πρὸς τὰς scholi) ὀλοφύρσεις τῶν ἀπογιγνομένων τελευτῶντες καὶ οἱ δικεῖοι ἐξέκαμνον ὑπὸ τῷ πολλῷ κακῷ νικώμενοι That is to ſay, if they forbore not to viſit them, then they died themſelves. For, out of ſhame, they would not ſpare their own perſons, but went into their friends; eſpecially after it was come to this paſs, that their own domeſtics, wearied with the lamentations of them that died, and overcome with the greatneſs of the calamity, were no longer moved with it.

Ver. 1217. Upon this calamity, the Biſhop of Rocheſter thus paraphraſes:

Here others, poiſon'd by the ſcent,
Which from corrupted bodies went,
Quickly return the death they did receive,
And death to others give:
Themſelves, now dead, the air pollute the more,
For which they others curs'd before:
Their bodies kill all that come near;
And, even after death, they all are murd'rers here.

Plague of Athens, Stan. 19.

Ver. 1221. This and the following verſe run thus in the original:

Inque aliis alium populum ſepelire ſuorum
Certantes, lacrymis laſſi, luctuque redibant:
Inde bonam partem in lectum mærore dabantur.

i. e. After they had ſtriven and contended to bury the bodies of whole families of their friends among thoſe of the friends of others, they returned wearied with grief and weeping; and hence moſt of them took to their beds for ſorrow.

Ver. 1225. The poet having laid before our eyes the lamentable and tragical condition of the city of Athens, he now brings upon the ſtage the herdſmen, ſhepherds, and peaſants, who, being viſited with this cruel infection, in want of all neceſſaries, deſtitute of friends, and deſpairing of relief, ſhut themſelves up, ſome of them in their narrow huts, where they died by heaps, deſtroyed no leſs by famine than the plague, while others, for fear of the enemy, who were laying waſte the whole country, and deſtroying all with fire and ſword, with the diſeaſe upon them, fled into the city; and others, whoſe ſtrength would not permit them to reach thither, lay languiſhing in the highways, naked, full of ulcers, &c. What more dreadful, what more diſmal, can imagination figure to itſelf?

Ver. 1228. This obſervation is the tranſlator's, not his author's.

Ver. 1229. The Biſhop of Rocheſter deſcribes this circumſtance very pathetically in the following verſes:

Here lies a mother and her child;
The infant ſuck'd as yet, and ſmil'd,
But ſtrait by its own food was kill'd:
There parents hugg'd their children laſt;
Here parting lovers laſt embrac'd;
But yet not parting neither:
They both expir'd, and went away together.
The friend does hear his friends laſt cries;
Parts his grief for him, and then dies;
Lives not enough to cloſe his eyes.
The father, at his death,
Speaks his ſon heir, with an infectious breath:
In the ſame hour the ſon does take
His father's will, and his own make:
The ſervant needs not here be ſlain,
To ſerve his maſter in the other world again;
They languiſhing together lie;
Their ſouls away together fly:
The huſband gaſps; his wife lies by:
It muſt be her turn next to die:
The huſband and the wife
Too truly now are one, and live one life:
That couple who the gods did entertain,
Had made their prayers here in vain:
No fates in death could them divide;
They muſt, without their privilege, together both have dy'd.

Plague of Athens, Stan. 19. & 20.

Ver. 1231. Thus Thucydides: Ἐπίεσε δὲ αὐτὸὺς μᾶλλον πρὸς τῷ ὑπάρχοντι πόνῳ καὶ ἡ ξυγκομιδὴ ἐκ τῶν ἀγρῶν ἐς τὸ ἄστυ, καὶ οὐχ ἧσσον τοὺς ἐπελθόντας, οἰκιῶν γὰρ οὐχ ὑπαρχουσῶν, ἀλλ' ἐν καλύβαις πνιγηραῖς ὥρᾳ ἔτους διαιτωμένων, ὁ φθόρος ἐγίγνετο οὐδενὶ κόσμῳ, ἀλλὰ καὶ νεκροὶ ἐπ' ἀλλήλοις ἔκειντο. This is to ſay: Beſides the preſent affliction, the reception of the country people, and of their ſubſtance into the city, oppreſſed both the citizens, and much more the people themſelves, that thus came in: For, having no houſes, and dwelling at that time of the year (for it was in the ſummer), in ſtifling booths, the mortality was now without all form, and dying men lay tumbling, one upon another, in the ſtreets. And Tit. Livius deſcribes the like event in almoſt the ſame colours. "Grave tempus," ſays he, "et fortè annus peſtilens erat urbi, agriſque, nec hominibus magis, quàm pecori: et auxère vim morbi terrores populationis, pecoribus agreſtibuſque in urbem receptis: Ea colluvio mixtorum omnis generis animantum, et odore inſolito urbanos, et agreſtem confertum in arcta tecta, æſtu, ac vigiliis angebat, miniſteriaque invicem, ac contagio ipſa vulgabat morbos. Lib. iii.

Ver. 1232. It is highly probable, that the great concourſe of country people that flocked into the city, for fear of the Lacedemonians, who had then invaded Attica, and were putting all to fire and ſword, was the chief cauſe of this plague; and that what Lucretius related before of the city of Athens, was ſpoken by a certain way of anticipation, which is not unfrequent with poets; as if he had conſidered with himſelf, that he ſhould not have explained the matter equal to its dignity, if, ſetting leſs by the metropolis than the whole province, he had begun his narration of this diſeaſe by the country. The teſtimony of Thucydides, from whom our author has taken this deſcription, is alone ſufficient to juſtify this opinion, which, nevertheleſs, may be confirmed by other undeniable proofs. For, in the firſt place, the Athenians would otherwiſe have been very injurious to their Prince Pericles, whom, as Plutarch tells us in his life, they accuſed of having been the cauſe of the plague, by admitting into the city, and in the heat of ſummer, the great multitude of peaſants, and other country people; where they, who had been accuſtomed to labour, and living in the open air, led lazy and idle lives, and were crowded and ſhut up together in narrow and ſtifling habitations: Of all which he had been the occaſion, who, during the war, had received thoſe who had fled from the enemy within the walls of the city, where he took care to find them no manner of employment, but ſuffered them, like brute beaſts, encloſed in narrow grounds, mutually to infect one another; and allowed them no change of air, or ſcarce the liberty of breathing. Thus Plutarch. Now let it be even granted that the Athenians were in the wrong as to the cauſe of this plague; yet they had no pretence of reaſon to lay the blame on Pericles, if Athens was afflicted with that peſtilence before the peaſants and other inhabitants of the country fled thither: but they were not miſtaken in believing that the plague had invaded the city by the means of this new increaſe of dwellers: for ſultry heat, and an impure corrupted air may favour and promote a plague, but are altogether incapable of firſt kindling and introducing a peſtilence. Diodorus Siculus, though he adheres too obſtinately indeed to the then commonly received opinion of the amhient air, yet favours our aſſertion concerning the contagion, by means of the country people that flocked into Athens: for, ſpeaking of this plague, he ſays, that the great multitude of all manner of people, who, out of fear, were fled from the country into the city, where, by reaſon of the narrowneſs of the place, they were promiſcuouſly, and without any order, crowded together, not without good cauſe, fell into diſeaſes; for, breathing nothing but noiſome ſtenches, that were occaſioned by filth and naſtineſs, and the air beſides being grown ſultry, and almoſt ſuffocated by the heat of the ſeaſon, they received within their bowels the contagious venom. Thus we ſee what is the chief cauſe of plagues, and from whence this of Athens took its origin. Even Lucretius himſelf, whatever he ſaid to the contrary, of the air, in the beginning of this narration, yet in this place he ſeems to own, that the plague proceeded chiefly from the contagion which the country people brought into the city. His words are as follows:

Nec minimum partim ex agris ægroris in urbem
Confluxit, languens quem contulit agricolarum
Copia, conveniens ex omni morbida parte.

There is, therefore, no reaſon to diſpute, for the future, the moſt ancient prerogative and efficacy of contagion, in all plagues; but chiefly not in this moſt memorable plague of Athens.

Ver. 1234. Thus too the Bishop of Rochester:

There was no number now of death:
The sisters scarce stood still themselves to breathe:
The sisters now, quite wearied in cutting single thread,
Began at once to part whole looms:
One stroke did give whole houses dooms.
Plague of Athens, Stan. 21.

Ver. 1235. In like manner Thucydides: Καὶ ἦν ταῖς ὁδοῖς ἐκλινοδέν[το], καὶ περὶ τὰς κρήνας ἀπάσας ἡμιθνῆτες τῇ τοῦ ὕδατος ἐπιθυμίᾳ. That is to say: And they lay half-dead in the ways, and about every conduit, through desire of water. The greatest relief of an inflamed heart, is, without doubt, to breathe in a cool and pure air: but the heart is always inflamed in a burning fever, with which the Athenians were then afflicted: and hence proceeded that implacable thirst which made them make what haste they could to the fountains; but some of them, through weakness, fainted and fell down by the way, while others, who had more strength, lay near the fountains, suffocated with the great plenty of water they had poured down into their burning entrails. Now the fountain Callirhoes, that without the walls, broke out in seven streams, and was conveyed into Athens by as many pipes, supplied with water the upper part of the city: in the lower part of which, towards the Pirœus, there were no fountains, but only wells, as has been said already.

Ver. 1237. Lucretius omits nothing that may create horror, and provoke commiseration in the minds of the readers. To this end, he now exposes to their eyes the streets of Athens, thick strowed with dead and dying bodies, half naked, and half-covered with filthy weeds, and wallowing, nay, almost buried in their own corruption.

Ver. 1242. Here the poet teaches, that necessity had reduced the Athenians to such hard extremities, that the ædiles, whose office it was to take care of the temples, had permitted those that fled into the city to take up their abodes in those holy places, where they built tents for themselves and families, and perhaps too for the cattle they brought with them. This profanation of sacred things, and contempt of all religion, proceeded from the highest desperation; if we may give credit to Thucydides, who relates it as follows: Τὰ τε ἱερὰ, ἐν οἷς ἐσκήνηντο, νεκρῶν πλέα ἦν, αὐτῷ ἐναποθνησκόντων, ὑπερβιαζομένῳ γὰρ τῷ κακῷ, οἱ ἄνθρωποι οὐκ ἔχοντες ὅτι γίνωνται εἰς ὀλιγωρίαν ἵρατο καὶ ἱερῶν καὶ ὁσίων ὁμοίως: i. e. The temples also where they dwelt in tents were all full of the dead that died within them; for, oppressed with the violence of the calamity, and not knowing what to do, men grew careless of holy and profane things alike.

Ver. 1243. For this thought our translator is not so much obliged to his author as to the Bishop of Rochester, who, on this particular, paraphrases as follows:

The gods are call'd upon in vain:
The gods gave no release unto their pain:
The gods to fear ev'n for themselves began:
For now the sick into the temples came,
And with them brought more than a holy flame:
There, at the altars, made their pray'r:
They sacrific'd, and dy'd too, there:
A sacrifice not seen before;
That Heaven, us'd but to the gore
Of lambs or bulls, should now
Loaded with priests see its own altars too.
Plague of Athens, Stan. 29.

Ver. 1244. Thucydides, after having acquainted us that the great licentiousness which was practised in the city proceeded, and began at first from this disease, adds immediately, that what any man knew to be delightful, and conducive to pleasure, that was made both profitable and honourable: Neither the fear of the gods, says he, nor laws of men awed any man: not the former, because they concluded it was alike to worship, or not to worship, seeing that they all alike perished: not the latter, because no man expected that his life would last till he received punishment of his crimes by judgment: But they thought there was now hanging over their heads some far greater judgment decreed against them; and, before it fell upon them, they thought to enjoy some little part of their lives. Οἱ δὲ ἤδεί τε ἡδὺ, καὶ, παν[τα]χόθεν τὸ εἰς αὐτὸ κερδαλέον, τοῦτο καὶ καλὸν καὶ χρήσιμον καλέσκη. Θεῶν δὲ φόβος, ἢ ἀνθρώπων νόμος, οὐδεὶς ἀπεῖργε, τὸ μὲν κρίνοντες ἴσον ὁμοίῳ σέβειν καὶ μὴ, ἐκ τοῦ πάντας ὁρᾶν ἦν ἴσω ἀπολλυμένους· τῶν δὲ ἁμαρτημάτων ὑδεὶς ἐλπίζων μέχρι τοῦ δίκην γενέσθαι βιὼς ἂν τὴν τιμωρίαν ἀνηνέγκαι· πολὺ δὲ μείζω τὴν ἤδη κα[τε]ψηφισμένην σφῶν ἐπικρεμασθῆναι, ἣν πρὶν ἐμπεσεῖν, εἰκὸς εἶναι τοῦ βίου τὶ ἀπολαῦσαι. Thus Thucydides: Upon which passage of that historian the Bishop of Rochester finely paraphrases, and concludes his poem:

But what, great gods! was worst of all,
Hell forth its magazines of lusts did call;
Nor would it be content
With the thick troops of souls were thither sent;
Into the upper world it went:
Such guilt, such wickedness,
Such irreligion did increase,
That the few good, who did survive,
Were angry with the plague for suff'ring them to live,
More for the living, than the dead, did grieve:
Some robb'd the very dead,
Though sure to be infected e'er they fled;
Though in the very act sure to be punished:
Some, nor the shrines, nor temples, spar'd,
Nor gods, nor heav'ns they fear'd,
Though such examples of their pow'r appear'd:
Virtue was now esteem'd an empty name;
And honesty the foolish voice of fame:
For, having pass'd those tort'ring flames before,
They thought the punishment already o'er;
Thought heav'n could have no worse in store:
Here having felt one hell, they thought there was no more.
Plague of Athens, Stanza 31.

Ver. 1246. In these twelve last verses the poet relates, That the Athenians were not content with polluting their holy places with dead bodies, but transgressed likewise all their laws concerning funerals, which they had till then observed, and buried their dead, as they could, wherever they found room. Thus too Thucydides: Νόμοι τὶ πάντες συνεκράχθησαν, οἷς ἐχρῶντο πρότερον περὶ τὰς ταφάς· ἔθαπτον δὲ ὡς ἕκαστος ἠδύνατο. Now by the unanimous consent of all authors, the Athenians were of all people the most ceremonious in the funerals of their dead, whom they honoured even to the highest superstition. If any one neglected to pay the rites of funeral to these who were slain in war, he was punished with death: And the pomp and expence of funerals grew at length to such excess among them, that Solon was forced to put a stop to it by laws; but when this plague was raging at Athens, no funeral rites were observed: For, as the historian, from whom our poet has taken this passage, relates, many, for want of things necessary, after so many deaths before, were forced to become impudent in the funerals of their friends: For, when one had made a funeral pile, another, getting before him, would throw on his dead, and set it on fire; and when one was burning, others would come, and, having cast upon it the dead they brought, go their way again. Καὶ πολλοὶ ἐς ἀναισχυντίας ἤλθον ἐκ τοῦ παραυτίκα, σπάνει τῶν ἐπιτηδείων, διὰ τὸ συχνοὺς δὴ προτεθνάναι σφίσιν, ἐπὶ πυρὰς γὰρ ἀλλοτρίας, φθάσαντες τοὺς νοσήσαντας, οἱ μὲν ἐπιθέντες τὸν ἑαυτῶν νεκρὸν, ὑφῆπτον· οἱ δὲ καιμένῳ ἄλλῳ ἀνωθεν ἐπιβαλόντες οὗ φέροιεν, ἀπῄεσαν. Thucyd. But this calamity of the Athenians will more visibly appear, by giving at large the laws and ceremonies, that they thought themselves religiously bound to observe in the sepulture of their dead; and which are recorded by Nardius in the following, no less learned than accurate, animadversion on this passage of our author.

ANIMADVERSION

OF JOANNES NARDIUS, CONCERNING THE FUNERALS OF THE ATHENIANS.

Cicero, in his oration for Flaccus, acquaints us, That humanity, learning, religion, laws, civil societies, and the use of corn, began first among the Athenians, and from them were distributed over the whole earth: Hence Lucretius says of them:

Et recreaverunt vitam, legesque rogârunt.
Lib. vi. *ver.* 3.

But nothing seems to have been more anciently practised among them, or more religiously observed, than the paying the just dues of funeral to their dead; especially to those, who had been slain in fighting for their country: Of this we have a famous example, recorded by Xenophon, lib. i. Ἑλληνικῶν, and by Valerius Maximus, who tells us, that the Athenians condemned, and put to death, ten of their captains, who returned to Athens after a great victory they had gained at sea, over the Lacedemonians, only because they had not paid the last duties to the dead bodies of those that had been killed in the engagement, even though they had this to plead in their defence, that the tempestuous weather had rendered it impossible: "Deeem imperatores suos, et quidem à pulcherrima victoria venientes, capitali judicio exceptos necârunt, quod militum corpora, licet, sævitia maris interpellante, sepulturæ mandare non potuissent, sed in fluctus, necessitate adacti, projecissent." Valer. Max. lib. ix. cap. 8. Deterred by this severity, Chabrias, who commanded the Athenian fleet, was more wary: For he, having defeated and put to flight the fleet of the Lacedemonians at the island Naxos, instead of pursuing the routed enemy, minded only to gather up the dead bodies of the slain; and, fearing the superstition of the people, chose rather, says Diodorus Siculus, lib. xv. to let the enemies of the republic escape, than that their dead friends should be deprived of the rites of funeral; otherwise he might easily have destroyed the whole naval force of the Lacddemonians. Nicias, the great general of the Athenians, commanded his whole army to halt, only to bury two of his soldiers. Isocrates in Panegyr. relates, That Adrastus, king of Argos, having been unsuccessful in a war against the Thebans, and not being able to carry off the dead bodies of the slain, befought the Athenians, and their king Theseus, to commiserate the public calamity of the Argives, and to assist them to compel the Thebans, to allow the ceremonies of sepulture, to those who had been killed in the battle: This the Athenians deemed a just cause of war, and the success seemed to justify their opinion; for, taking up arms against the Thebans on no other pretence but this, they defeated them, and would hearken to peace on no terms whatever, till the Thebans, by way of preliminary, had paid the due rites of sepulture to the slain Argives. Nor may we forget the piety of Cimon, who, that he might bury his father, who was dead in prison, submitted to be a prisoner himself, and redeemed the body at the price of his own liberty.

But they extended this piety not only to those who had sacrificed their blood in defence of the public safety, but likewise to their kindred, and men of the meanest condition; whose relations the Demarchus, or chief of the people, could oblige to bury the dead body, by laying a heavy fine on those that neglected to do so within a certain time: that magistrate had likewise the power to limit and fix the expence of a funeral, as also to contract himself for it with the public undertakers. Eustathius, in Com. Il. ad calcem, celebrates Pisistratus, for having always two or three servants attending him, whose business it was to carry money for him to bestow on the funerals of the poor. The charity of Simon to the dead poor, who left not enough to bury them, and whom he interred at his own expence, is likewise

extolled by Æmilius Probus; and Plutarch, in his life, records of him, that, having with great care and trouble, got together the bones of Theſeus, he brought them to Athens. Nor may we forget a ſignal office of piety, mentioned by Demoſthenes, adverſ. Macartat, and enjoined by an Attic law, which commanded every paſſenger, who happened to ſee upon the road a dead body, though of a perſon unknown to him, to throw at leaſt three handfuls of earth on the face of the defunct for his ſepulture, ſince at that time he could not have the means of burying him otherwiſe. This is atteſted likewiſe by Ælian. Var. Hiſt. lib. 5. and by Phocylidas, Moſchus, Sophocles, and Acron. And this cuſtom was ſo generally received, and deemed ſo indiſpenſibly neceſſary, that it was expected even of thoſe who were going on buſineſs that required the greateſt haſte, as Quintilian ſays, lib. 1. Decad. 5. and Horace, Carm. lib. 1. Od. 28. alludes to it in theſe expreſs words of Archytas the philoſopher, to the ſeamen:

At tu, nauta, vagæ ne parce malignus arenæ,
Oſſibus & capiti inhumato
Particulam dare.———
Quanquam feſtinas, non eſt mora longa, licebit
Injecto ter pulvere curras.

Which Creech thus interprets,

But ſeamen, pray be juſt; put near the land;
Beſtow a grave, and hide my limbs in ſand.
Though haſty now, driv'n by a proſp'rous gale,
'Tis quickly done, thrice throw the ſand; and ſail.

Nor, as the Scholiaſt on the Antig. of Sophocles informs us, were they permitted to throw clods of earth, but what they called χόος, mould, or crumbled earth: and this office they called ἐπιβάλλειν γῆν, or κόνιν καλύπτας. They feared, perhaps, that if they had thrown ſolid clods of earth, they would have lain heavy on the dead body. Let this ſuffice for the piety of the Athenians towards the dead: I will now, that I may not ſeem tedious to the reader, nor create in him a ſuſpicion of truth in a matter ſo very obſcure, ſelect only the moſt remarkable ceremonies, which they obſerved in funerals, as I find them recorded in the moſt authentic authors.

Firſt, then, to begin my intended diſcourſe with what was practiſed in the laſt agonies of the dying perſon; I find in Diodorus Siculus and Valerius Maximus, that when the ſick perſon perceived his end draw nigh, he took a ring off his finger, and gave it to the ſtander by, who was deareſt to him; hiſtorians report this to have been done by Alexander. Then pronouncing theſe laſt words, "Vive ac vale," (vide Servium in Æneid. 5.) he breathed out his ſoul, embracing and kiſſing his beſt beloved. For they believed the mouth to be the paſſage through which the ſoul went out of the body, and therefore endeavoured to catch it as it fled, by holding their mouth open cloſe to that of the perſon expiring. Thus Antigone in Euripides, in Phœniſſ. ſays, O my deareſt, and my beſt beloved, I will put thy mouth to mine. After whoſe example, perhaps, Anna in Virgil, Æn. iv. ver. 684.

——— Et extremus ſi quis ſuper halitus errat,
Ore legam.———

And Livia in the Epicedium of Albinovanus:

Soſpite te, ſaltem moriar, Nero: tu mea condas
Lumina, & excipias hanc animam ore pio.

Hence, at Rome, as we learn from Seneca, in Epiſt. 30. and from the Tragedian of that name in Herc. Fur. it was proverbially ſaid of the old, who were worn out with age, that their ſoul was in their mouth: thus the Romans derived this credulity from the Greeks; and Ariſtotle, in his Treatiſe de Inſp. et Reſp. ſays, That inſpiration is the protaſis, and expiration the cataſtrophe of life.

But the wiſhes of the abovementioned Livia, ſuggeſt to us another office that was applied to dying perſons, and which the Greeks, in their language, called καθαιρεῖν τὰς ὀφθαλμὰς, the Latins, "condere," or "tegere oculos;" to cloſe their eyes. This was the duty of the neareſt relation, or of the deareſt friend, who immediately cloſed the eyelids of his departed relation or friend: for, as Pliny teaches, lib. xi. cap. 37. they held it a crime againſt the gods to ſee the eyes of a dead perſon. And that the cuſtom, of which we are ſpeaking was religiouſly obſerved, as a pious office, that ought not to be neglected, we have the teſtimony of many of the ancients; particularly of Euripides in Hecuba, and in Phœniſſa, of Homer Odyſſ. x. and Iliad. 1. and of Plato in Socr. While theſe things were doing, all who were preſent called with a loud voice, and by his own name, the perſon, who was dead, and immediately with wailings and tears ran to embrace the corpſe: this we learn from Servius on the 4th Æneid, and from Propertius, lib. iv. eleg. 6. For, as Alcinous, de doct. Plat. cap. 12. ſays he, who with dry eyes, can behold the death of his relations and friends, has a mind inſenſible and void of all affection. Hired women attended to take care of the body, and theſe ſhut the mouth of the dead perſon, while the body was yet warm: yet Crito performed the laſt offices to the condemned Socrates, that women, by their unavailing laments, might not ſhake the conſtancy of his undaunted ſoul. Then they laid out the other members, and waſhed the corpſe with warm water: becauſe, ſays Cicero, lib. 1. de Leg. they believed the vital ſpirit to be ſhut out, and often to deceive them; for which reaſon, they were wont to waſh the bodies of their dead with warm water; in the next place they anointed the body with oil, if the perſon were free, and not of a ſervile condition: for unction was forbid to ſlaves by the laws of Solon: who likewiſe preſcribed bounds to tears and mourning; but to public indeed, rather than to private. Even he himſelf, as Stobæus, Serm. 276. witneſſes, wept for the loſs of his ſon; and when it was told him, That weeping would avail him nothing, I know it well, ſaid he, and for that very reaſon I weep. And indeed,

Quis matrem, niſi mentis inops, in funere nati
Flere vetat?

ſays Ovid, de Remed. Amor. Eſpecially when, as the cuſtom was, they placed the child, after it was waſhed and anointed, on the knees of the ſorrowful mother, who, taking it into her lap, and cheriſhing the cold limbs in her trembling boſom, clothed it at length in its funeral attire; as we learn from Lucian, de luctu, and from Herodotus Muſ. 5. The Romans called the mother of a dead child, "funera mater," and that too very properly, ſince the whole funeral, the loſs and the grief were chiefly hers: this is atteſted by Pliny, lib. xi. cap. 45. and by Servius in Eclog. 6.; confirmed likewiſe by the mother of Euryalus, who, in Virg. Æn. 9. hearing of the death of her ſon, cries out in the bitterneſs of anguiſh:

——— Nec te tua funera mater
Produxi, preſſive oculos, aut vulnera lavi,
Veſte tegens.———

But by the laws of the twelve tables, it was forbid among the Romans, to take into their laps, the body of any who were killed with lightning; or to allow to ſuch the accuſtomed rites of funeral: becauſe, according to the doctrine of the Greeks, they were eſteemed holy, and worthy of divine honour; of which we have ſpoken above, p. 629. Vide etiam Artemid. lib. ii. cap. 8.

The funeral veſtment, or ſhroud, was made of fine white linen, and they called it λαύκη ϛόλη. In weaving one of theſe, the chaſte Penelope employed many years, to get rid of her importunate wooers, to whom ſhe pretended ſhe was making that winding-ſheet for her huſband Ulyſſes. Thus Homer, Odyſſ. B. Nor in the camp of the Greeks did any take offence at Hippodamia and Diomedea, the laſt of whom Patroclus, when alive, loved even to madneſs; and who, both of them, adorned his funeral with the richeſt of veſtments, as Dictys Cretenſis has it in lib. 4. Nor can we doubt, but that, in proceſs of time, when corruption of manners had crept in among the Athenians, even they too made uſe of coſtly dreſſes for their dead. We read in Ælian. Var. Hiſt. cap. 16. and in Diogenes Laertius in vit. Socr. that Apollodorus offered Socrates, after this philoſopher had ſwallowed the poiſonous draught, and was in his laſt agony of life, a white veſtment and robe: and Plutarch, in vita Lyſandri, tells us, that Philocles, the Prætor of Athens, after having waſhed his body, put on his richeſt robes, and, thus attired, underwent with an undaunted mind the death to which his conqueror Lyſander had doomed him. Certain it is that they adorned their dead with crowns and garlands, made of the leaves of olive, and ſometimes of parſley, as Suidas reports, that Dares delivered in his book de Certaminibus; and Lucian de Luctu adds, that they ſtuck in among the leaves the flowers that the ſeaſon afforded. This garland was put on by the neareſt relation; and Plutarch relates of Pericles, that, though he ſtrove to retain his gravity, and laboured not to diſcover his inward anguiſh, yet he could not refrain from tears, when he crowned with this funeral garland the head of his dead ſon Patolus. Laſtly, they put into the mouth of the deceaſed two pieces of money of the value of one penny each, to pay his paſſage over the river Styx; thus the expoſitor on the frogs of Ariſtophanes, who ſays beſides, that the freight-money was in their mother-tongue called Δανάκη; but the Attics called it Κάρναδον, and the Latins Naulum.

Theſe ceremonies being thus performed to the body, it then was, by the permiſſion of a law of Solon's, placed any where within the doors of the houſe: and this they called the collocation of the body; but the ſame law commanded that it ſhould be carried out to burial the next morning after the collocation, and that too before daylight. This law was expired, or at leaſt was grown out of uſe, in the time of Demetrius Phalereus; and though it was then renewed, it hindered them not from keeping the body in the houſe, as the Romans likewiſe did, for the ſpace of ſeven entire days: during which time frankincenſe, ſtorax and other perfumes were continually burning on a little altar that was placed by the feet of the corpſe. And this cuſtom of keeping the body thus long was obſerved for this reaſon, to wit, becauſe the preſence of the deceaſed alleviated the ſorrow of the mourners, and accuſtomed their mind by degrees to part for good and all with what they ſo dearly loved. For this reaſon the Greeks, when they were before Troy, buried not the body of Achilles, till after they had kept it ſeventeen whole days.

Beſides, thoſe who performed the meaneſt offices to dead bodies, as the waſhing and rubbing them with oils and ointments, and whom the Greeks called Καλαγυῶται, and Νεκροδάπται, and the Latins, Pollinctores, were, as P. Vict. lib. 2. var. lect. cap. 7. and Lilius Gyraldus obſerve, held in ſuch abomination, that they were not permitted to have houſes within the walls of the city; and Seneca, lib. 6. de Benefic. ſays, that Demades condemned at Athens a perſon who ſold neceſſaries for funerals; becauſe it was evident that he intended, and wiſhed to gain by his buſineſs, which nevertheleſs he could not do without the death of many.

There were ſeveral tokens, that gave notice of a houſe, in which there was a dead body: before the door they placed boughs of cypreſs, and a large gor-bellied earthen pot, filled with holy water, and which was commonly called Ἀρδάνιον γάϛα, but by Ariſtophanes, Ἔρραχον· and that water was always brought from another houſe: the hair likewiſe of the deceaſed was hung over the threſhold of the door: and the reaſon of all this was, that none might be polluted, by going into the houſe unawares.

On theſe occaſions the Greek matrons laid aſide their uſual apparel, and mourned generally in black, though ſometimes in white; neglecting to ſet themſelves off with ornaments, and deſpiſing their accuſtomed trim: their mourning garment was, by the decree of Solon, called Ἰμάτιον. They

ſat by the corpſe with dejected looks, and weeping around the bier, on which ſat the keeper of the corpſe, "capularis cuſtos," ſome very old man or woman, that kept always next the deceaſed; the companions too of the deceaſed perſon ſtood around his body, overwhelmed with griefs, together with weeping virgins, who often beat their breaſts with their hands; and thoſe of the weaker ſex frequently tore off their hair for grief: for it was forbid to cut it quite off, except at the pile or tomb. It was an ancient cuſtom too in mourning to take the hair off their eye-brows, and to do all things that might teſtify an irkſomeneſs of life, and betray an anguiſh of mind. They ſcarce eat at all; what nouriſhment they took, was of the coarſeſt fare: nor is it improbable, that the cups they drank out of were black, as was the cuſtom at Rome, where they were made of earth that came from Polentia. See Martial, lib. xiv. Epig, 157. and Euripides in Troad.

When the ſeventh day approached, the body was, by the friends of the deceaſed, laid on a high bier, and placed with the feet next the door; which laſt cuſtom the Scholiaſt on the ſixth Iliad obſerves, was not without myſtery: for, ſays he, the dead were laid in that manner, to ſignify, that they were never more to return to the houſe again. But Pliny, lib. vii. cap. 8. gives a better reaſon, and ſays, that as by the decrees of nature man comes into the world with his head foremoſt, ſo he is carried to the grave with his feet in that manner. This ceremony was called Πρόθεσις, i. e. "collocatio," and was obſerved for this reaſon, that by thus expoſing the body, it might be ſeen whether any violence had been offered to it: and though it was indulged by the Attic laws, that the body might be placed in any part of the houſe, yet this collocation, as they called it, was generally made in the "veſtibulum," porch, or entry, and always with the feet towards the door; a cuſtom frequent enough in our days. I may not omit their fooliſh cuſtom of driving away the flies; and into which they were led, perhaps, by the example of the officious Thetis. See Hom. Iliad. 8. Socrates in Plato, in Minoe, takes notice of their obſerving an ancient Attic law concerning the "inferiæ," or ſacrifices to the infernal gods; by which law it was enjoined, not to carry the body out of the houſe, till the victims were ſlain; no doubt for the expiation of the deceaſed. And ſince we are ſpeaking of laws, I will mention the ordinance of Hippias the tyrant, who commanded, ſays Ariſtotle in Œconom. that for each dead perſon ſhould be paid to the chief prieſts of the temple of Minerva, which was in the tower of Athens, two ſextaries of barley, as many of wheat, and one penny in money. Theſe things completed the domeſtic mourning, and the firſt part of the funeral; to which immediately ſucceeded the ſecond in the following manner:

According to the laws of Solon, as Demoſthenes affirms, but as fully, of Demetrius Phalereus, in the hours of morning, that preceded daylight, eſpecially if the perſon died an untimely or ſudden death, the body was carried out of the houſe: This they called ἡμέρας ἁρπαγήν, "diei raptum," as if the deceaſed had not expired, but had been ſnatched or raviſhed away; or becauſe they thought it not fit that the ſun ſhould behold ſo great a misfortune, and therefore they ſaid, that they, "diem rapuiſſe," had raviſhed, had prevented the day. The proceſſion began by a long row of torches, whoſe ſplendor diſpelled the darkneſs of the night; and if the deceaſed had been killed, or had died a violent death, a ſpear was borne before the body; hoarſe-ſounding trumpets attended, eſpecially at the funeral of a military man, or one who had deſerved well on account of his ſignal ſervices to the republic; and at the obſequies of ſuch, the people were ſummoned to aſſiſt. Then came the Τυμβαῦλοι, players on the funeral pipes, which the Greeks by a word borrowed from the Phœnicians, called Τιγχρίαι, and which, after the Libyan mood, uttered a doleful ſound, that excited the hired women to bewail the dead. Theſe women the Greeks called Σοφισταὶ θρηνῶν, the diſſemblers, and the principals in the mourning, though they ſhared not in the grief. Theſe the Latins called Præficæ. The chief of them was called Ἰηλιμίσρια, from a ſort of ſong, which they termed Ἰήλισμος, or Ἰάλισμος, the Latins, Leſſus, Lauſus and Mortualia, a funeral dirge. With theſe mercenaries joined the virgins and matrons, that were related to the deceaſed, with their hair diſhevelled, and beſprinkled with duſt and aſhes, their face and boſom bare, beating their breaſts, tearing their face, and each of them howling rather than yelling and wailing. But let us hear Bellonius, an eye and ear-witneſs of the funeral ceremonies obſerved at this day in Greece.

The cuſtom, ſays he, of bewailing the dead, which took its riſe from the ancient Heathens howling at funerals, remains among the Chriſtians, even to this day. Now the Heathens of old were wont to lament and mourn their dead for many days; and Greece ſtill retains this uſage, which it derived from its anceſtors. For in all places, by a certain promiſcuous cuſtom, when any of the family dies, whether it be the huſband, or any other relation, for whom, according to the uſage of the country, they are obliged to mourn, the women run up and down the ſtreets bareheaded, with their hair diſhevelled, their boſom naked, and piercing the air with their loud ſhrieks and yells: tearing likewiſe the hair off their heads, rending their cheeks, and ſtriking their bare breaſts, ſometimes with one hand, ſometimes with the other: with their right hand they tear the left ſide of their body, and with their left the right; in the ſame manner too they tear off their hair, from the left ſide of their head with their right hand, from the right with their left; and thus by turns, ſometimes ſcarifying their cheeks, ſometimes beating their breaſts, and ſometimes tearing off their hair, they perform this ceremony of mourning: but this cuſtom of bewailing the dead, is permitted only to the women, of what rank ſoever they be; for the men are not ſuffered to bear a part in this ſort of

mourning. I know all this to be true, not by hearſay, or the writings of others, but have often ſeen it practiſed of late in many places of Greece; the firſt time I was an eye-witneſs of it was in the month of March, 1547, and at Corcyra anciently, but now called Corfu. I had for many days together, before it was light, heard a great noiſe, which at firſt I took to be the howling of dogs, ſhut up in their kennels: but at length I got out of my bed to diſcover the truth of it, and to my great aſtoniſhment, found it to be a company of ſcreaming and howling women. Now, that they may perform this yelling the better, they agree among themſelves on a time and place, when and where they may twice a-day mourn and wail the death of the deceaſed. Moreover, ſhe among theſe women, who has the beſt voice, and ſings the loudeſt, begins the dirge alone, and in a diſſonant voice from the others, recounts to his relations and friends the praiſes of the deceaſed: and if none of the female relations themſelves be capable of performing this office, they hire another woman to do it. For in the towns of Greece there are many women, whoſe ſole livelihood it is to wail the dead: in which they are ſo artful, that they excite even the unwilling to bear a part in their cries and yellings. And ſhe of all the women, who excels the reſt in reciting the praiſes of the deceaſed, is hired the deareſt. And the other women, who aſſiſt in the ceremony, hearkening attentively to what ſhe ſings, and mixing with hers, their ſighs and groans, chant out the funeral dirge, in the ſame doleful tune. She too, who with her nails ſcratches and tears her cheeks the moſt, is wont to receive the greateſt reward. The virgins, above the reſt, gain moſt honour by this dilaceration of the face. Thus P. Bellonius, lib. ii. de medicato funere, cap. 14.

Some footſteps of theſe dirges are ſtill remaining in Grecia Major, the cuſtom of lamenting the dead in rhyme being not totally aboliſhed. A. Santorelles, in his learned Poſtpraxis, ſeu de curando Defuncto, records a dirge, ſtill frequently uſed by the country people in Calabria: and Lilius Gyraldus witneſſes, that that feminine cuſtom of yelling and ſcreaming, and of tearing their cheeks and hair, continued among the Sabines in his days, and almoſt throughout all Italy. But no where can we find a more pathetic and moving dirge than this in our Lucretius:

At jam non domus accipiet te læta, neque uxor
Optima: nec dulces occurent oſcula nati
Præripere, et tacitâ pectus dulcedine tangent:
Non poteris factis tibi fortibus eſſe, tuiſque
Præſidio. Miſer, ò miſer, omnia ademit
Una dies infeſta tibi tot præmia vitæ.

Which Dryden thus interprets:

Alas! thou'rt ſnatched from all thy houſehold joys,
From thy chaſte wife, and thy dear prattling boys;
Whoſe little arms about thy legs were caſt;
And climbing for a kiſs, prevent their mother's haſte;
Inſpiring ſecret pleaſure through thy breaſt:
All theſe ſhall be no more; thy friends, oppreſt,
Thy care and courage now no more ſhall free:
Ah wretch! they cry: ah! miſerable thee!
One woeful day ſweeps children, friends, and wife;
And all the brittle bleſſings of thy life.

Solon, as Cicero, lib ii. de Leg. and Plutarch in his life, informs us, forbid, indeed, by law, this dilaceration of the cheeks, and bearing of the breaſts, which laſt they called στηθονυσία· the people nevertheleſs could not be prevailed on to diſcontinue that cuſtom; nor, as the abovecited Bellonius relates, were the Venetians of late days more ſucceſsful, in the late injunctions they gave to the countries of Greece, that are ſubject to their obedience. The reaſon, why the ancients adhered thus obſtinately to this cuſtom, was, becauſe they credulouſly believed, that the manes, or ghoſts of the dead, were appeaſed and ſatisfied with blood and milk: therefore, ſays Servius, the women, who aſſiſt at funerals, beat their breaſts, that they may force out the milk, and all ſcarify their fleſh, to make themſelves bleed. But becauſe a vaſt concourſe of women, of all conditions, were wont to flock to the funeral houſe, it was forbid by a law, for any woman to come to a funeral, except ſuch as were relations of the dead, and ſixty years of age: thus the great reſort of men and women was taken away to leſſen the lamentation. For the men too flocked in crowds to funerals; and therefore Pittacus, as Cicero, 2. de Legib. teaches, forbid all manner of perſons to attend burials, except the kindred of the deceaſed: which ſanction Ariſtotle, in Eth. ix. cap. 11. tells us, was continued, and in uſe, in his days. But it is not certain, whether beſides the relations, who, clad in black, and with veils over their heads, marched in order before the women, the friends likewiſe, and all who had at any time belonged to the family of the deceaſed, as alſo the maſters of defence, the players and dancers, the ſlaves manumitted by will, and thoſe whom the deceaſed had made free before his death, the bearers of the beds, gifts, garlands, trophies, and waxen images, together with the lictors, and ſervants of the ſenate, which was the cuſtom at Rome, made part of the funeral proceſſion: but this is certain that the magiſtracy of Athens ſometimes honoured with their preſence the funerals of the conſiderable citizens; on account of whoſe death they ſometimes too very unſeaſonably prorogued the courts of juſtice. And Solon, in Tzetzes hearing that the whole city attended the funeral of a young man, deceived by the cunning of his friend Thales, immediately concluded it to be his own ſon, whom they were attending to the grave. The friends and relations carried, on their ſhoulders, the bier; of which there were two ſorts in uſe among the people of ſubſtance: the one was called Λέχως, the other Κλίνη. The diſtinction was only in the ſize of them; and conſequently in the number of the bearers: the Λέχως was the largeſt, and carried by an uncertain number of bearers, according to its ſize: the Κλίνη al-

ways by six, or eight; whence it was likewise called ἑξαφόρες, or ὀκτωφόρες. And a parcel of young men, chosen by the people, carried the bier of Timoleon, says Plutarch in his life.

The funeral pomp proceeded through the chief streets of the city, till it came to the forum, or market place, where the bier was set down, and an oration pronounced in praise of the deceased: this custom, as we learn from Anaximenes the orator in Plutarch, in Vita Solonis, was first instituted by Solon; and, being in process of time discontinued, was again revived, especially about the time, when the Greeks, at the passes of Thermopylæ, overthrew the Barbarians, who had invaded their country. When the panegyric was ended, the procession moved again in the same order, and went to the place of sepulture: which sepulture was not nevertheless performed always in the same place, nor after the same manner: for both place and manner differed, according to several laws, and the various superstitions that reigned in several ages. At first they carried back the dead to their house, and intombed them there; calling them the "lares," and tutelar gods of the house: but in process of time this custom was forbid by the laws, which declared it a crime to bury any man within the walls of the city; of which we will speak particularly hereafter.

It is agreed by all, that there were two sorts of sepulture among the Athenians: And to me, says Tully, that seems to have been the ancient way of burial, which Cyrus uses in Xenophon. For the body is restored to the earth, and being laid in it, is covered as with the covering of its mother. This custom of burying in the ground, says that author, 2. de Leg. was continued at Athens, as they say, from the days of Cecrops: the nearest relations laid the body in the ground, and the earth that was thrown over the dead body, was sown with corn. The other custom of burning the dead, began about the age of Hercules, who, to avoid being perjured, reduced to ashes the body of Archeus, the son of Lycymnus, and thus restored it to his father. This we learn from Andron. Hist. and Eustath. on Iliad. 4. And this last custom was observed not only at Athens, but by all the Greeks in general: for so says the Scholiast of Thucydides, lib. 2. ἔτος γὰρ ἦν νόμος Ἀθηναίοις καὶ πᾶσιν Ἕλλησι· i. e. It was established by law among the Athenians, and all the Greeks. The reason of the institution of this custom was, because they believed the divine and immortal part of man to be by that fiery vehicle carried up to heaven; and that whatever was terrestrial and mortal, remained in the ashes. Besides, according to the testimony of Pliny, lib. vii. cap. 54. they conceived, that, by burning the dead bodies, they avoided the infection that might be caused in the air, by the putrefaction of buried carcases; but above all, the injury and ignominy which might be offered to the bodies of the dead, by taking them out of the grave before they were consumed. And for this reason the tyrant Sylla ordered his corpse to be burnt, lest he should be served in the same kind as he before had served his enemy Caius Marius, whose body he caused to be digged up, and thrown into the river Aniene, now Teverone; as Cicero, in 2. de Legibus, and Plutarch, in his life, both witness. But we may observe, that either way of burial was continued down even to the age of Socrates. This we know from the dying words of that philosopher, as they are recorded by Plato in Phædone. Besides, though the Athenians gave answer to S. Sulpicius, as we find in his epistle to Cicero, that they were bound by their religion, not to bury the body of Marcellus within the city; yet authors of better credit, particularly Pausanias in Attic. Xenophon, Ἑλληνικ. lib. 7. Thucydides, lib. 5. Arnobius, lib. 6. adverse. Gentes, and others assure us, that it was the custom of the Greeks to bury their eminent men in the midst of the city, even in the very forum. Plutarch, in the life of Theseus, acquaints us, that Cimon having in his galley brought his bones to Athens, the Athenians received them with solemn rejoicings and sacrifices, as if it had been himself who had returned alive to their city; and buried them within the walls, near the place, says he, where the Gymnasium now stands. It is certain, however, that it was more frequent among them to bury in their Ceramicus, by which name were called two several burying places in Athens: one without the walls of the city, and where they buried such as were slain in battle; the other within the city, where harlots also lived, and prostituted themselves. To which Martial, lib. i. epig. 35. alluding, says,

A Chione saltem, vel ab Helide discе pudorem;
Absconduntur spurcas hæc monumenta lupas.

And lib. 3. epig. 93.

Cum te lucernâ balneator extinctâ
Admittat inter bustuarias moechas.

But we may take notice from Pausanias in Atticis, that all were not buried in the Ceramicus, but that most of the illustrious men had their sepulchres near the high ways and public roads that led to the city: adjoining to that which came from the port Piræeus, were the tombs of Menander, of the son of Diopithes, and of Euripides. Besides, in the public enclosures without the city, and in all the roads, were temples dedicated to their gods and heroes, and the sepulchres of their great men; among which deservedly claim to be mentioned those of Thrasybulus the son of Lycus, as also of Pericles, Chabrias, Phormio, Conon, and Timotheus. But the tomb of Aristides, says Plutarch in his life, is remaining in the Phalerean port; which tomb is said to have been erected at the expence of the public, he having not left behind him enough to defray the charges of his funeral. And all who were slain fighting for their country, either in engagements at sea, or battles at land, had monuments set over their graves; those only excepted, who fell at the battle of Marathon; where, says Herodotus, lib. 6. there were killed of the Persians about six thousand three hundred, and of the

Athenians only one hundred ninety-two: And to theſe, in honour of their bravery, were erected ſepulchres in the place where they were killed: but all the others are ſaid to have been buried in the way that leads to the academy. Yet in great ſlaughters, the republic of Athens, that they might not be thought to fall off from their wonted piety and gratitude, took care that the common ſoldiers ſhould be buried at leaſt promiſcuouſly, one with another, in the following manner, as it is recorded by Thucydides: Three days before the obſequies were to be performed, they built a ſhed with boards, into which they brought the bones; and every one was allowed to bring thither whatever he thought fit of what his friend had left behind him: When the funeral proceſſion was made, the ſeveral coffins that contained the bones of each tribe were carried in a particular cart by themſelves; and one bier beſides, with coffins quite empty, was carried for thoſe whoſe bodies were not found among the ſlain. Every man that pleaſed, whether a citizen or a ſtranger, attended the funeral, and ſome women, who were related to the deceaſed, went weeping, and bewailing the dead. The bones were carried to a public ſepulchre in the ſuburbs of Athens, near the tomb of Calliſthus. Let this ſuffice for public ſepulchres. But private families had vaults, in which they were buried, in their own land, and on the utmoſt borders of it: And by this argument Marcellinus proves the relation there was between Thucydides and Cimon: and it was deemed diſhonourable not to be laid in the ſepulchre of their anceſtors. But at Athens the bodies of criminals were projected, as they called it, thrown in a certain place, where they lay expoſed above ground; nor was it permitted, even to the ſons of ſuch as had been executed, to bury them: The like treatment too was given to their bodies, who, for crimes diſcovered after their death, were condemned to be dug out of their graves. Plutarch, in the Lives of the ten Orators, mentions a decree of the Athenians, by which it was forbid to bury, neither in Athens, or within the limits of its juriſdiction, the bodies of Archeptolemus and Antiphon, who were convicted of conſpiracy againſt the government. And the like fate, ſays the ſame author, in the place above cited, would have happened to the orator Hyperides, if his kinſman Alphenus had not burnt his body, that was given him by Philopites the phyſician, and ſo brought his bones to Athens, contrary to the decrees, as well of the Athenians, as Macedonians: for he was not only baniſhed, but forbid likewiſe to be buried in his own country. And the friends of Themiſtocles did him the like good office, ſays Æmilius Probus in his life; for they buried his bones privately, which was forbid to be done at all by the laws, becauſe he was guilty of treaſon. And Plutarch, in the life of Phocion, takes notice, that his enemies commanded his body ſhould be thrown out of the borders of the Attic territories, and that no Athenian ſhould preſume to ſet fire to his funeral pile: And for this reaſon the people conceived ſuch a hatred againſt him, that no man, who was free, durſt to bury Phocion, inſomuch that he was buried by ſlaves. Nor may we omit the ſevere treatment of the thirty chief judges, who, on the accuſation of Myro the Phylenſian, were baniſhed the city; and when any of them died, and were buried, their dead bodies were dug up, and thrown out of the territories of Attica, as Plutarch reports in the life of Solon. And indeed, as Iſocrates de Jugo, ſays, the people of Athens were ſo jealous of their liberty, and held tyrants in ſo great abomination, that when they ſeized their eſtates, they not only demoliſhed their houſes, but purſued their hate to their dead remains, and tore them out of their graves. Beſides, it was permitted to no man, not even to an enemy, to go to ſepulchres, except when they attended funerals. Yet Plutarch, in the life of Theſeus, acquaints us, that his ſepulchre was a place of refuge, to ſhelter ſlaves and perſons of mean condition, who feared to be oppreſſed by the great, becauſe Theſeus had been remarkable for protecting the injured, for aſſiſting the needy, and redreſſing their grievances. But Philip the Macedonian violated the ſacred privilege of ſepulchres, as if, ſays Livy, he had not been engaged in war againſt the living, but dead Athenians, and even againſt their tombs. The common way of burying was by heaping up earth over the dead body: the more coſtly was by keeping it in a coffin, eſpecially of marble: but the moſt ſumptuous of all was in a vaulted cell, in the midſt of which the coffin was placed. One of theſe marble coffins is ſtill to be ſeen among the rarities of the Grand Duke of Tuſcany, with the following inſcription engraved on it:

ΑΧΙΛΛΕΥΣ ΕΠΑΦΡΑ ΤΗ
ΙΔΙΑ ΓΥΝΑΙΚΙ ΓΕΜΙΝΙΑ
ΜΥΡΤΑΛΗ ΜΝΗΜΗΣ
ΤΕΛΕΥΤΑΙΑΣ ΧΑΡΙΝ
ΤΗΝ ΣΟΡΟΝ ΕΦ Ω ΜΗΔΕ
ΝΑ ΜΗΤΕ ΠΩΛΗΣΑΙ
ΜΗΤΕ ΘΕΙΝΑΙ ΕΞΟΤΣΙΑΝ
ΕΧΕΙΝ ΠΑΗΝ ΕΙ ΜΗ ΤΙ
ΑΥΤΟΣ Ο ΑΧΙΛΛΕΥΣ
ΠΑΘΟΙΗ ΑΝΘΡΩΠΙ
ΝΟΝ ΕΙ ΔΕ ΤΙΣ
ΕΚΒΑΛΗ ΤΗΝ ΜΥΡ
ΤΑΛΗΝ ΔΩΣΕΙ
ΤΩ ΦΙΣΚΩ
Χ. Β. Φ.

Which is as much as to ſay, Achilles Epaphra gave this monument to his dear wife, Geminia Myrtale, for the ſake of her eternal memory. No man has the power to ſell it, or to place in it a dead body, unleſs the ſaid Achilles in civility give him leave. But if any one throw out the body of Myrtale, he ſhall be fined x. clo. clo. lo.

Moreover, it was the cuſtom of the Athenians to bury their dead with their face towards the weſt; but the Megarenſians, on the contrary, interred theirs with their face towards the eaſt. This, whatever Diogenes Laertius by a ſlip of memory ſays, is aſſerted by Plutarch, in the life

of Solon; by Euſtathius on Homer, Il. T.; and by Ælian, lib v. cap. 14. and lib. vii. cap. 19. Yet Hireas the Megarenſian, in the Solon of Plutarch, ſays, that the Megarenſians placed their dead turned to the weſt likewiſe. The Athenians alſo had a coffin for each corpſe, contrary to the Megarenſians, who were wont to bury three or four bodies in one coffin. This cuſtom indeed was ſometimes neglected: for we read, that Syrianus, the preceptor of Proclus, had, while he was yet living, deſired of him, that he might be buried with him; and for that purpoſe had cauſed a tomb to be made, that would contain two coffins. But after his death, Proclus, doubting whether decency would allow two bodies to be laid in the ſame grave, for ſome time deferred his ſepulture: upon which the ghoſt of Syrianus appeared to him in his ſleep, and chid him for his ſcrupulous delay. Vide Enarratorem in Illius vitâ, ex Verſione I. Holſtenii. Herodotus, lib. 16. ſays, that they ſometimes buried their arms with them. Of this we have an eminent inſtance in Plutarch, who, in the life of Theſeus, ſays, There was found the coffin of a great body, and in it a braſs point of a ſpear, together with a ſword. And Cimon was buried without the city, on one ſide of the road, called Diacæle, and, beſide him, the mares that thrice had won the prize at the Olympic games.

But the way of burial, by burning of the body, required much greater ceremony, and more laborious were the preparations in order to it. I wilfully omit to deſcribe the coſtly funeral of Heph-eſtion, the favourite of Alexander, to which the greateſt part of the world contributed; inſomuch that poſterity never has pretended, nor ever will be able, to imitate it. It will be ſufficient in this place to acquaint our reader, that they firſt got together a huge ſtack of ſweet-ſcented wood, which, when laid in order, the Athenians called πυρὰ νεκρῶν, the Latins *rogus*, the funeral pile: This was always built in a quadrangular form, and equilateral, as we learn from Herodianus. And Homer, in the eighteenth Iliad, makes the Myrmidons prepare for Achilles a pile of a hundred foot in length on every ſide. It is not unlikely, that they were built high for the great, and low and unadorned for the common people. For funeral expences became ſo exorbitant, that the Athenians found it neceſſary to put a ſtop to them, and to forbid, by a law, the uſe of plained wood in the piles for the dead: And after their example, as Cicero, in 2. de Legibus, obſerves, the Decemvirate forbid the burning of plained or poliſhed wood in funeral piles: "Rogum aſcia ne polito:" not to mention the rings, garlands, number of minſtrels, and other funeral gear, that were likewiſe aboliſhed by that legiſlature; the very footſteps of which, through the injury, perhaps, of time, or the never enough to be lamented negligence of men, are ſcarce to be ſeen at this day in the Fragments of the Twelve Tables.

When they were come to the Uſtrina, or place of burning, the funeral pomp ſtood ſtill, and the friends of the deceaſed coming up to the body, covered it with their hair, which they either plucked or ſhaved off in token of grief; and with olive branches alſo, which it was held a crime at Athens to convert to profane uſes. This we learn from Sophocles in Ajax and Oreſtes, M. Tyrius, Orat. 8. and Dion. Hal. l. 11. And here too, as Thucydides acquaints us, funeral orations were ſometimes pronounced, eſpecially at the burial of ſoldiers. Then they were wont to weep over, to give the laſt embraces, and to ſpeak to the dead body; to the end, that if any ſenſe were remaining after death, it might at leaſt be ſoothed and delighted with theſe tender offices of love. At length the relations laid the dead body on the top of the pile, together with the bier and funeral ornaments; but whether they uncloſed his eyes, as Pliny, lib. x. cap. 37. ſays, it was the cuſtom among the Romans, or expected that Mercury ſhould do that office, is no where expreſsly delivered. Then it was covered with the fat of beaſts that were ſlain, and which were alſo laid on the pile to be burnt; together with enemies, ſlaves, horſes, dogs, and birds, that were likewiſe killed; as alſo with rich garments, with honey, wine, gold, amber, ointments, their own and their enemies arms, and the laſt and many gifts of their friends; inſomuch, that, according to Plutarch in the life of Solon, it was thought requiſite to put a ſtop to this vain prodigality, and to forbid by a law; the ſacrificing of more than one ox, or to throw on the pile above three ſuits of apparel. And hence, no doubt, proceeded the ridiculous ſuperſtition of burning the rich houſehold-ſtuff of the deceaſed. And Herodotus, lib. 5. informs us, that Meliſſa, the wife of Periander of Theſprotia, on the river Acheron, appeared after her death, and complained of being cold, becauſe the garments, that were interred with her, not being burnt, were of no ſervice to her. Her huſband, therefore, ſtripped all the Corinthian women, who were aſſembled at the temple of Juno, and, carrying their clothes to the grave of his wife, burnt them there, calling on Meliſſa. Moreover, the ſanctions of the twelve tables, as mentioned by Cicero, in 2. de Legibus, give juſt grounds to believe, that the ſame legiſlator, prohibited the burning of gold, which would be of no advantage to the dead, and a great prejudice to the living, ſince the ſcarcity of it would be a hinderance to commerce. Lucian, "de luctu," ſays, that in their funerals they ſacrificed ſometimes the horſes and burden-bines, ſometimes the cup-bearers, of the debrias, and burnt or buried, together with the boomb their clothes and wearing apparel, as if they were to uſe and enjoy them in the infernal abodes. One of the relations of the dead, with a lighted torch, ſet fire to the funeral pile; but turning his face another way, to witneſs his reluctancy to perform that ſorrowful office. The pile was immediately in a blaze, the fuel being in great quantity, and proper to feed the flame.. Meanwhile, they invoked the winds, calling on them to aſſiſt the fire, that the body, together with the wood, might be the ſooner conſumed. Diodorus Siculus, lib. v.

cap. 2. says, that the pile of Hercules was burnt in a moment by lightening, that flashed on all sides upon it. And now was the time, when the trumpets, in mournful sounds, gave notice to the assistants thrice to go round the pile; which they did sometimes divided into two bodies, and meeting in imitation of a flight. This ceremony, the Greeks called περιδρομὴ, and the Latins "decursio," a jouſt or tournament; but the time of this jousting in funerals was different among the ancients. For Homer, Iliad 23. makes it precede the burning of the body, in the funeral of Patroclus, and accompany it in the funeral of Achilles, Odyss. 15. and sometimes it followed even the tumulation of the bones, as we find in Apollonius, Argonaut. lib. 1. They believed the dead to be purged of their offences by this ceremony; which nevertheless, according to some, was at first instituted, to divert and soothe the grief and wailings of the mourners, see Statius, Thebaid. lib. 6. and to detain the other spectators of the funeral, that they might not grow weary, and go away: for the ceremony lasted a considerable time, and they continued long in the open air, even though the pile was built of a great quantity of fuel, and that too, apt to burn. Therefore, Achilles, in the funeral even of his dearest friend, committed what remained unburnt at night, to the care of the "funeratores," buriers, who watched all the night, and laid together the wood of the pile. And we may observe, that the ὀστολογία, or gathering up of the bones and ashes, was deferred sometimes to the third day, though I am not ignorant that this ceremony was most commonly performed at the close of the same day. After the deflagration, they sprinkled the pile with old, deep-coloured wine, that they might the more safely tread on the cinders: for the nearest relations, with their feet bare, their gowns ungirdled, and flowing about their heels, and having first washed their hands, performed by night the last office of gathering up the bones. And this ceremony the Greeks called ὀστολογία, and the Latins "ossilegium." And when they found any of them that were but half burnt, and covered with cinders and ashes, they wet them with wine, milk, and tears; then wrapt them up in linen towels, and having carried them in their bosom till they were dry, they put them into an urn, together with the ashes, with perfumes, and little vessels of tears. Two of which, made of glass, were lately found in an ordinary coffin, among the ruins of a wall, in the ancient town of Fesulæ, now Fiesoli in Thuscany, and are in the possession of the Grand Duke. These cinerary vessels or urns, the Greeks called ὀστοθηκαὶ, or ὀστοδοχεῖα: and they were not always of the same form, nor made of the same matter: for those of heroes were made of gold and silver; those of the rich of brass or marble; and the poorer sort were content with urns of earth or of wood. When the remains were put into the urn, they closed it up, covered it with a piece of purple or fine linen, and then laid it in the earth. Thus we learn from Plutarch, in Vita Demetrii, that when the fleet of Antigonus approached the harbour of Corinth, the golden urn, in which were deposited the remains of Demetrius, and that was covered with purple, and had a regal crown upon it, was discovered on the poop of the admiral galley; and a troop of young noblemen, and persons of quality attended in arms on the key, to receive it at landing; and Xenophantus, the most famed musician of that age, began a mournful song in praise of the dead, to which the rowers, with sorrowful ejaculations made responses, their oars all the while in their strokes, keeping time with the doleful cadences of the music: insomuch that the pomp of his funeral was no less theatrical than dismal. Nor may we omit to mention the most pious obsequies, that were paid to Evagoras by his son Nicocles, and that were remarkable, no less for the great number and value of the sacrifices, than for the music, gymnic exercises, horse-races, galley-prizes, and the like: for, as Diodorus Siculus, lib. 11. observes, some were so fortunate, as to have their funerals conclude with spectacles and games; which nevertheless happened not at all: but the Athenians, in gratitude to those who were slain in the Persian war, besides the ornaments of their sepulchres, instituted funeral games and exercises, that were performed at the place of sepulture.

After these sacred rites were ended, then followed the ψυχαγωγία· which consisted in calling the dead thrice by his own name, bidding him eternally farewel, and praying that the earth might lie light upon him. And then, being dismissed by the "flamen," or the "funera mater," who first sprinkled them thrice with water, to purge them of the pollution they had contracted by the sight of the funeral, they went away. The word of dismission used by the "flamen," among the Greeks, was, ἄφεσις ἔστω· among the Latins, "Illicet." But besides this lustration by water, Festus takes notice of another, that was in use among the Romans, who were wont to walk over the place of sepulture: and this manner of purgation they called "suffitio," i. e. fumigation; but whether or no this custom was practised by the Athenians, I have no where observed.

The whole ceremony concluded with the Περίδειπνον, as the Greeks called it, but the Latins "silicernium; which were certain banquets given by the parents or relations of the dead, wearing garlands on their heads; at whose houses it was permitted to speak in praise of the dead, if they had any thing true to say of him, for they held it a crime to lie on this occasion, as Cicero acquaints us in these words: "Sequebantur epulæ, quas inibant parentes coronati; apud quos de mortui laude, cum quid veri erat, prædicatum; nam mentiri nefas habebatur. ad justa conjecta erant." De Legib. lib. 2. in calce. The Athenians indeed, as Plutarch, in the life of Demosthenes says, departed from this laudable institution; insomuch that at length it grew to a proverb among them, praise no man, not even at a funeral supper.

They wore black apparel for the space of seven

days after the funeral; and to lay aside their mourning before that time was expired, was held a breach of decency. Thus Plutarch, in the place above cited says, that Æschines upbraided Demosthenes, for appearing in public, gaily dressed, and with a garland on his head, before the customary week of mourning was over, laying to his charge, and accusing him of hatred to his own children: yet Demosthenes only compelled his private grief to give way to the public joy. These funeral banquets, as Lucian, de Luctu, teaches, were designed to sooth and divert the grief of the sorrowful friends and relations; whom the guests were wont to exhort, nay, even to compel, to take some sustenance, that might refresh their bodies, that were wasted and grown dry with too long fasting: for no man, as that author expresses it, takes it amiss in good earnest, that he is compelled to eat and live. We learn from Pollux, that, at Athens, the funeral banquet was wont to be given by the chief managers and directors of the funeral, at the house of the nearest relation: but it is uncertain, whether it was an open feast, and free to all comers, like that which Achilles gave at the funeral of Patroclus, and those of the Romans, which they called "visceraliones," from the great number of beasts that were slain, and whose flesh was distributed among the people.

We will not speak of the many and costly ornaments of their tombs and sepulchres: which some however were wont to prepare for themselves before they died: Cicero, in 2. de Legib. says, that the expence of sepulchres grew at length to such excess at Athens, that it was enjoined there by a law, that no more cost should be laid out, nor more work employed on a sepulchre, than what ten men could finish in three days. Nor were they permitted to adorn their sepulchres with any pargetting or fret-work; nor to place upon them any *hermæ*, as they called them; and which, as they are described by Pausanias in Arcad. were certain images, ending in a quadrangular figure, and not polished down to the feet. Besides, they were not allowed to harangue in praise of the dead, except in public sepulchres: and even then too no other was permitted to speak, but he who was appointed by the public so to do: For, according to Diodorus Siculus, lib. 5. it was enacted by a law, that the chief rhetoricians only should make funeral orations, reciting the worthy actions of those who were honoured with public sepulchre. Now it was Demetrius who set bounds to, and prescribed the manner of, the new sepulchres: For he commanded, that nothing should be set up on the place of interment, except a pillar, not above three cubits high, or a hollow stone, made in the shape of a little cistern; or a square piece of board, the care of which he committed to a certain magistrate appointed for that purpose. We learn from Plutarch, in Lycurg. and in Isocra. that on the board were engraved the name and the effigies of the deceased: But we may observe, that even in ancient times, pillars were placed on graves of this nature: This Plutarch has taken notice of from Homer, Iliad. ii. ver. 674.

Ἔνθα δ' ταρχύσουσι κασίγνητοι τε ἔται τε,
Τύμβῳ τε στήλῃ τε, τὸ γὰρ γέρας ἐστὶ θανόντων.

His friends and kindred here shall him inter,
And place a column on his sepulchre.

We learn from Pollux, lib. viii. cap. 7. that on the tombs of unmarried persons there stood the image of a young virgin, holding in her hand a water-pot, an urn, or a bason: and this image, whether it were one that bore water, or any other, Isæus called Ἐπυσήμα. Nor was the meanness of the structure ever thought to derogate from the glorious title of the trophy, which the grateful citizens had caused to be engraved for such as had fought bravely for their country: and Cicero, lib. 2. de Leg. teaches, that the pillar on the sepulchre of the geometrician, Archimedes, was laid upon the ground. Pausanias, in Atticis, relates, that the tombs, together with the pillars, on which were written the names and tribes of the slain, were still to be seen in the plains of Marathon: and that, in memory of their bravery, sepulchres were erected for them in the very place where they fell: though it was customary to erect a particular monument for every one who was killed fighting for his country, either in naval engagements, or battles at land. The epitaph on those who fell at Thermopylæ, is recorded by Diodorus Siculus, lib. 11. in these words: Stranger, tell the Lacedemonians, that we lie here, who obeyed their commands, and their captains. Plutarch, in the life of Aristides, acquaints us, that, in the battle of Platæa, there fell two and fifty Athenians, all of them of the tribe Aiantis, which, as Clidemus says, fought very bravely: and that, in memory of their victory, sacred rites, that had been commanded by the oracle of Apollo, were performed, at the public expence, to the Nymphs Sphtagitides: but they were buried in the way that leads to the academy, and square or flat-sided pillars were placed upon their tombs, with inscriptions, declaring the name of each of them, and the ward or precinct where he lived: Nor may we forget that most equitable law made by the people; which decreed the honour of public sepulture to such servants and slaves, as had bravely and faithfully served their masters in battle; and that their names should be engraved in columns, to be set up over their place of burial: It cannot indeed be doubted, but these were honorary and empty sepulchres; unless, before the elation of the body, a finger, or, after the burning, some bone of it were purposely taken, and kept to be buried in the native country of the deceased. And hence we see the reason why the Decemviri, who, as they did perhaps in almost all things else, imitated the funeral rites of the Athenians, dispensed with the ceremony of the ossilegium, or gathering up the bones, when any one died in foreign wars. And that the Greeks had their Κενοτάφια, or empty sepulchres can be doubted by such only as are ignorant of the piety of the Corinthians to the Argives, that were slain at Troy; of which Pausanias in Corinth, and of the great Cenotaphium, mentioned by the same author in

Atticis, that was made at Athens for ſoldiers, whoſe bodies were not found: not to mention the famous Cenotaphium of Cyrus, recorded by Xenophon in the ſixth book of his Expedition; nor the ſepulchre of Euripides, in the way that led from the Piræeus to Athens; though, as Pauſanias in the place above-cited, witneſſes, Euripides went to Archelaus in Macedonia, and was buried there: But this difference may be obſerved, That the honorary ſepulchres of ſoldiers, who were killed in a naval engagement, were marked with the emblem of a rudder, or of an oar, as that of Elpenor was in Homer, Odyſſ. 12. but the reſt had no mark of diſtinction: though I am not ignorant, that, beſides the inſcriptions, emblems were likewiſe put on moſt monuments: as a globe and cylinder on that of Archimedes, (Cicero in Tuſcul.) a dog on that of Diogenes, (Laertius in ejus vita) a ram on that of Iſocrates, (Plut. Rhat. 10.) and owls very frequently, as we learn from Athenæus, lib. 13. to ſay nothing of the ſepulchral ſtatues, with which the monuments of the rich were adorned: as we find in Lycophron. in Pindar, Od. 10. Nem. in Plato, 12. de R. P. and in others. Nay, even on that of Æſop, though but a ſlave, the Athenians placed a great ſtatue, that all might know, ſays Phædrus, that the way of honour lies open, and that glory is due, not to the race, but to virtue:

Igentem ſtatuam poſuere Attici,
Servumque collocârunt æternâ in baſi,
Patere honoris ſcirent ut cuncti viam,
Nec generi tribui, ſed virtuti, gloriam.

Moreover, the Athenians, when any of their relations were murdered, always carried a ſpear with the dead body to the place of ſepulture: and this ſpear they ſtuck into the tomb, as a token, that they denounced vengeance to the murderers: This we learn from Suidas: And the Scholiaſt on the Clouds of Ariſtophanes teaches, That after the dead body was carried forth to burial, it was the cuſtom for the relations and friends of the deceaſed to waſh themſelves by way of purgation. Then they renewed afreſh their unavailing tears and wailings; while libations and the funeral ſupper were brought to the ſepulchre: about which they believed the manes of the deceaſed to be always hovering; and that their ſenſes ſtill remaining alive, they wanted nouriſhment, and were delighted and ſoothed with their offices of tenderneſs and love. For theſe reaſons too they inſtituted their Ἐνιάτα, as the Greeks called them, but the Latins "Novendialia," which were certain ſacrifices uſed for nine days after the party was dead. The manner of them was this: about ſun-ſet, being apparelled in black, they poured liquors in the coffins or urns: theſe liquors were honey, milk, wine, water, blood, ointments and tears: mean while they encompaſſed the monument with garlands of parſley and myrtle. But as we learn from Plutarch, in Quæſt. Græc. the encniſma of the Argives was more full of ceremony. For the cuſtom among them was, when any of them had loſt a friend or relation, immediately after the funeral, to ſacrifice for thirty days together to Apollo, and then to Mercury: for they believed, that in like manner as the earth receives the bodies of the deceaſed, ſo Mercury does the ſouls. To the prieſt of Apollo they gave barley, and received from him the fleſh of the victims: they extinguiſhed the fire that had burnt the body, becauſe they held it to be polluted; and kindled other to dreſs the fleſh, which they called *encniſma*. Meurſius, and others of the learned, obſerve, that if it was a man or a woman that was dead, then the water was brought by women, whom they called Ἐγχυτρίστριαι if a batchelor or a virgin, then that office was committed to ſome boy, who was related to the deceaſed. And Libanus, in Progymn. takes notice, that Achilles acted not according to the cuſtom of the Greeks, in offering human blood to appeaſe the manes of the dead; and that he injured his own reputation, and the memory of his friend Patroclus by that cruel practice, which he had learnt from Barbarians, of burning, together with the pile, the bodies of men, as well as of other animals: for which he is blamed by Homer, as Plutarch, de Homer. obſerves. Iphigenia, in the Electra of Euripides, provides herſelf with the blood of mountain ſheep and heifers; not, like him, of enemies butchered on the pile. And, indeed, as Libanius in Progymn. takes notice, an enemy, taken priſoner, ought no longer to be accounted an adverſary, ſince the very victory changes his name, and of an enemy makes him be called a ſuppliant. I now return to the Athenian ceremonies.

They likewiſe ſtrewed the ground around the monument with flowers of all ſorts, but chiefly with roſes, amarants, lilies, poppies and violets: with which they dreſſed up likewiſe the diſh that was deſigned for the funeral banquet. Ovid, in Faſt. lib. 3. enumerates the ſeveral ſorts of viands they were wont to eat in theſe ceremonies; and ſo too does Lucian, de Luctu; and the ſame author in Dialog. Car. deriding the cuſtoms of his own age, ſays, That they crowned with garlands the ſtones of the monuments, and anointed them with rich ointments, and that ſome were wont to raiſe a pile before the monuments, and, digging a grave in the earth, threw in their coſtly diſhes, and poured in a great quantity of wine.

The Athenians celebrated theſe parentations in the month Anteſterion, ſays Heſychius; and the Romans, as we learn from Ovid. Faſt. lib. ii. obſerved almoſt the ſame time in the celebration of theirs: for it was the cuſtom among them to appeaſe the manes of their parents and other relations on the eleventh of the calends of March. This ceremony began very early among the Athenians, as Lyſias in Or. teaches; and that they were enjoined by a very ancient law yearly to deplore their buried friends; and on the ſame day to praiſe, in a public oration, thoſe that had been ſlain in battle, as Cicero, in lib. de Orat. teaches. And Plutarch, in the life of Theſeus, informs us, that, on the eighth of their month Pyanepſion, which was the day he returned with the young men from Crete, they performed their

chief ceremony in honour of him; and that they worſhipped him likewiſe on the eighth day of each of their other months. The like teſtimony of gratitude was ſhown to the Greeks, who were ſlain by the Medes, and buried at Platæa, ſays Thucydides, lib. iii. in Orat. Platæen, of which Plutarch, in the life of Ariſtides, gives the following particular account: The Platæans, ſays he, are went to offer yearly parentations to the Greeks, that fell in the battle, and were buried there, which cuſtom they continue even to this day, in the enſuing manner: On the ſixteenth day of the month Maimacterion, which with the Bœotians is Alalcomenus, they make their proceſſion, which, beginning by break of day, is led up by a trumpeter, ſounding a point of war; then follow certain chariots, loaden with myrtle and garlands; and after them is led a black bull; next come the young men, of free birth, carrying libations of wine and milk in large two eared veſſels, and jars of oil and precious ointments; nor is it permitted to any of ſervile condition, to have the leaſt hand in this miniſtration; becauſe the men, that were buried there, died in defence of their liberty." After all, comes the chief magiſtrate of Platæa, who, though it be unlawful for him at other times, either to wear any manner of arms, or to be clothed in any other coloured garment than white, is at that time, nevertheleſs, apparelled in a purple robe; and, taking a water-pot out of the city-chamber, proceeds, bearing a ſword in his hand, through the middle of the town to the ſepulchre; then, drawing water out of a ſpring, he waſhes, and anoints the pillars of the monuments; and, ſacrificing the bull upon a pile of wood, and making ſupplications to Jupiter, and to Mercury of the earth, he invites thoſe valiant men who periſhed in the defence of Greece, to the banquet and parentations; after this, filling a bowl with wine, and pouring ſome of it out by way of libation, he drinks the reſt, and ſays, I drink to thoſe perſons, who loſt their lives for the liberty of Greece. Theſe ſolemnities, even to this day, do the Platæans obſerve. Thus far Plutarch.

Nor may we in this place omit the great honours that the republic of Syracuſe decreed to Timoleon; whoſe bier being laid upon the pile, Demetrius, the loudeſt mouthed of all the criers of thoſe days, recited a written decree to this purpoſe: The people of Syracuſa have decreed, that this Timoleon, the ſon of Timodemus of Corinth, ſhall be buried at the public expence; that two hundred minæ ſhall be expended on his funeral, and moreover, that he ſhall be for ever honoured with muſical, equeſtrial, and gymnic games and exerciſes: becauſe, having pulled down the tyrants, overcome the barbarians, rebuilt the large cities, that were demoliſhed, and rendered them again populous, he reſtored to the Sicilians their ancient laws and liberties. We learn from the Scholiaſt on the Frogs of Ariſtophanes, that the particular time when theſe annual ſolemnities were performed to the dead, was about noon; but that even then they were ſcarce ſafe from the ſpectre of Empuſa, that by various arts diſturbed the ceremonies. The ſtories, that are told of Proclus Lycius, by his flatterer Cœlius Rhodoginus lib. vi. cap. 28 are made up of nothing but ſuperſtition and hypocriſy: for he tells us, that that bleſſed man, as he calls him, was more knowing in, and more zealous obſerver of, the rites and ceremonies, that are paid to the dead, than any other man whatever: for he never omitted at any time to perform that religious duty; but went yearly on certain days to the ſepulchres of the Attic heroes and philoſophers; and of all others, with whom he had had any friendſhip and familiarity, and offered the due ſacrifices to them, not by the help and miniſtry of others, but by himſelf, and with his own hands. Then, after he had paid theſe rites to each of them, he went to the Academy, where he appeaſed, by ſacrifices, the ſouls of his anceſtors, and of all his relations, in one place; and in another, he performed the like ceremonies to the ſouls of all the philoſophers; and more than all this, that moſt religious perſon ſacrificed in a third place to the ſouls of all the dead. And theſe pious offices aroſe at length to ſuch a height of ſuperſtition, that the Athenians, not ſatisfied with paying theſe honours to ſuch as had deſerved well of the republic, recorded their names among the number of their gods; and decreed them divine honours, as we learn from Ariſtophanes in Equitib. and Pauſanias in Atticis. Nay, it eſcaped very narrowly, that Alexander was not worſhipped at Athens as a god: for we learn from Plutarch, in Orat. Lycurg. that adulation would have prevailed, and brought that infamous thing to paſs, had not a prudent perſon prevented it, by ſcoffing at the populace, and aſking them in a jeering manner, What a god, ſaid he, will this be, into whoſe temple, whoever goes is polluted, and whoever comes out needs purgation? Thus we ſee how much the Athenians departed from their ancient rites of funeral, and what corruption of manners crept into the territories and city of Athens, during the time of this raging peſtilence.

Ver. 1249. Boccace, that parent of the Thuſcan eloquence, deſcribes almoſt the like neglect and diſorder, that happened even in a Chriſtian country, in the burial of thoſe that died of the plague at Florence, in the year 1348, and tells us, that few bodies were accompanied to their graves by more than ten or twelve of their neighbours; and thoſe too were not of the better ſort of citizens, but only a parcel of mob, that for hire, carried the body, not to the church where the dead perſon, before his death, had deſired to be buried; but, for the moſt part, to that which was next at hand; preceded only by four, or ſix prieſts at moſt, with few, and ſometimes no lights at all, and threw it haſtily into any grave they found empty, or that had room to receive it. But let us hear how movingly he deſcribes this calamity in his own words. "Et crano radi coloro, i corpi de i quali foſſer' più che da un' dieci, ò dodici de ſuoi vicini alla chieſa accompagnati, de quali non gl' horrevoli, e cari cittadini, ma una maniera di

beccamorti ſopravenuta di minuta gente, che chiamar ſi facevano Becchini, la quale queſti ſcrugi prezzolata faceva, ſottentravano alla bara, e quella con ſrettoloſi paſſi, non à quella chieſa, che eſſo haveva anzi la morte diſpoſto, ma alla più vicina, le più volte il portavano, dietro à quattro, ò ſei clerici con poco lume, e tal fiata ſenz' alcuno, li quali con l' aiuto di detti Becchini, ſenza fatigarſi in troppo lungo ufficio, ò ſolenne, in qualunque ſepultura diſoccupata trovavano, più toſto il mettevano. J. Boccacio, in Proem. Decam.

Ver. 1254. Thus too Ovid, who has moſt happily imitated both Thucydides and our author:

Ante ſacros vidi projecta cadavera poſtes;
Ante ipſas, quo mors foret invidioſior, aras:
Pars animam laqueo claudunt, mortiſque timorem
Morte fugant, ultroque vocant venientia fata:
Corpora miſſa neci nullo de more feruntur
Funeribus: neque enim capiebant funera portæ;
At inhumata premunt terras, aut dantur in altos
Indotata rogos; et jam reverentia nulla eſt;
Deque rogis pugnant, alieniſque ignibus ardent:
Qui lacryment deſunt, indefletæque vagantur
Natorumque, virumque animæ, juvenumque ſenumque:
Nec locus in tumulis, nec ſufficit arbor in ignes.
Metam. lib. 8.

Which a late ingenious perſon has thus rendered:

Death ſtalk'd around with ſuch reſiſtleſs ſway,
The temples of the gods his force obey;
And ſuppliants feel his ſtroke, while yet they pray.
The reſt, grown mad, and frantic with deſpair,
Urge their own fate, and ſo prevent the fear:
Strange madneſs that! when death purſu'd ſo faſt,
T' anticipate the blow with impious haſte.
No decent honours to their urns are pay'd;
Nor could the graves receive the num'rous dead:
For, or they lay unbury'd on the ground,
Or, unador'n'd, a needy fun'ral ſound:
All rev'rence paſs'd, the fainting wretches fight
For fun'ral piles that are another's right:
Unmourn'd they fall; for who ſurviv'd to mourn?
And ſires and mothers unlamented burn:
Parents and ſons ſuſtain an equal fate; [meet:
And wand'ring ghoſts their kindred ſhadows
The dead a larger ſpace of ground require;
Nor are the trees ſufficient for the fire.

All which calamities may the Almighty avert far from us; and not from us only, but from the univerſal ſociety of all mortals; nor let us uncharitably join in wiſhes with the heathen poet, who ſings,

Dii meliora piis, erroremque hoſtibus illum.

ANIMADVERSION,

BY WAY OF RECAPITULATION, ON THE SIXTH BOOK OF LUCRETIUS.

In this book, Lucretius reaſons of many things excellently well, but has miſcarried in his main deſign, and does not ſo much as ſtagger the belief of Divine Providence, which he attacks with his utmoſt force: for let it be granted, that the cauſes he aſſigns of meteors are perſpicuous and true; that he has rightly explained the reaſon of thunder, lightning, and earthquakes; in a word, that all things proceed from natural cauſes, and are continued and carried on by them: yet there is no nature without a Lord, nor does ſhe herſelf at leaſt reject or diſown a ruler. For nature is only that diſpoſition and order of the particles of ſenſeleſs matter, which is the cauſe of theſe effects we call natural. Now, if that diſpoſition was introduced by chance, it does not confute and overthrow Providence; and if it was the work of reaſon and wiſdom, it confirms it. Therefore theſe explications may amuſe and delight natural philoſophers; but they cannot in the leaſt avail atheiſts.

No man has more accurately collected, none more ingeniouſly explained, the ancient philoſophers opinions concerning meteors: the modern, it is true, have added a few things to them; but not better. And indeed, as this preſent age does, ſo many ſucceeding ages likewiſe will, ſeem to diſpute, face to face, with Lucretius, concerning meteors. And this is what Vitruvius ſaid long before me.

What he teaches of earthquakes, and of the ſea is ſo rational, that the things themſelves approve and confirm his doctrine: only there are ſome earthquakes that ſeem to ſurpaſs the ſtrength of the cauſes he aſſigns them.

Ætna is a noble ſubject, but difficult: and in this the poet flags a little. But then he reaſons of the increaſe of the Nile, of the Averni, and of the wonderful fountains, as if truth itſelf were ſpeaking: but it may be obſerved that he does not give full ſatisfaction concerning the fabulous ſpring of Jupiter Ammon: for Lucretius always explains nature better than fables.

He would have written more at large of the loadſtone, and have left us many things that we ſhould read with pleaſure, if the wonderful power of that ſtone had been known in his days. The explication he gives of plagues and diſeaſes is pertinent and uſeful: and laſtly, he interprets Thucydides in ſuch a manner, that he expreſſes the energy, and ſurpaſſes the majeſty, of that hiſtorian; nor is the narration of Thucydides ſo clear or ſet off with ſo much brightneſs or wit.

THE WORKS

OF

TIBULLUS.

TRANSLATED FROM THE LATIN,

BY

JAMES GRAINGER, M. D.

Μοισας Ερως κάλεσι, Μοισαι τον Ερωτα φερουσιν,
Μολπαν ται Μοισαι μοι αει ποθεουσι διδουσιν
Την γλυκιραν μολπαν, τας φαρμακον ἁδιον ὑδης. BION.

GRAINGER'S TIBULLUS.

TO JOHN BOURRYAU, Esq.

Sir,

When I firſt thought of prefixing your name to this tranſlation of Tibullus, I found myſelf conſiderably embarraſſed; as I would chooſe to avoid the ſtrain of adulation, ſo common in addreſſes of this kind, on the one hand, without ſuppreſſing the juſt ſenſe I have of your riſing merit, on the other. I ſhall not, however, I flatter myſelf, incur the imputation of the firſt, by declaring, even in this public manner, my ſatisfaction at the progreſs you have made in every branch of uſeful and polite literature; and this too, at a time of life, when young men of faſhion are generally engroſſed by the idle amuſements of an age abounding in all the means of diſſipation.

If your maturer years anſwer, as I am convinced they will, ſo favourable a dawn, I need not a moment to heſitate, to foretel the happineſs of your friends, in an agreeable companion, and polite ſcholar; and of your country, in a principled and unſhaken patriot.

It is with particular pleaſure, Sir, that I dwell, though but in idea, on this part of your future character. The time is not far off, when you will have finiſhed the plan of your education, by a ſurvey of foreign countries: and as it will then, of courſe, be expected from one of your opulent and independent fortune, you will, I hope, devote the fruits of your induſtry to the ſervice of the public:

Hunc precor, hunc utinam nobis Aurora nitentem
Luciferum roſeis candida portet equis.
Tibull.

When you become a member of the moſt auguſt aſſembly of the nation, every wellwiſher to the community will exult to ſee you unawed by power, undazzled by riches, and unbiaſſed by faction: an impartial aſſertor of the juſt prerogatives of the crown, and the liberties of the people: equally a foe to corruption, and a friend to virtue.

Such, Sir, are the hopes which all your friends at preſent conceive of you: and as your talents, both natural and acquired, ſeem ſtrongly to confirm theſe hopes, the more inexcuſable you will prove, ſhould they be hereafter diſappointed.

In regard to the tranſlation, with which I here take the liberty to preſent you; I will not pretend to ſay, I ſet no value upon it. My offering it to you is a proof of the contrary.—Indeed, the chief merit it has with me, is, that it formerly pleaſed you. It ſerved alſo, to make many of my hours paſs agreeably, which otherwiſe would have been extremely irkſome, amid the din of arms, and hurry of a camp life.

But while you peruſe Tibullus as a poet, let not his integrity, as a member of the commonwealth, be forgotten. In this light he merits your higheſt regard. for though he juſtly obtained a diſtinguiſhed rank among the great writers of the Auguſtan age; yet ought it more eſpecially to be remembered to his honour, that neither the frowns of a court, nor the diſtreſſes of fortune, could ever induce him to praiſe thoſe powerful but wicked men, who had ſubverted the liberties of his country: and this, at a time, when the practice of the poets his cotemporaries might have countenanced in him the moſt extravagant adulation.

I am, Sir,
Your moſt obedient
humble ſervant,
James Grainger.

ADVERTISEMENT.

The following verſion of Tibullus was begun and completed ſeveral years ago, when the author was in the army. A military man, even in the moſt active campaign, has many hours of leiſure: and as theſe cannot be ſpent more rationally than in ſome literary purſuit, he employed that part of his time, which was not devoted to his profeſſion, in peruſing the claſſics.

Time and place influence us more in our opinions of, and reliſh for, particular writers, than is commonly imagined. Amid the horrors of war, the tranſlator could moſt readily ſympathize with, and beſt account for, his poet's averſion to a military life: and while expoſed to all the hurry and tumult of a camp, could not but taſte with a peculiar reliſh all deſcriptions of the unruffled and

tranquil ſcenes of the country: beſides theſe, every motive conſpiring to make him regard the fair ſex as the chief ornaments of ſociety was it ſurpriſing that Tibullus, who abounds in ſentiments of this kind, ſhould ſoon become a favourite; and that what delighted him, he ſhould at laſt be tempted to tranſlate?

A pleaſing employment is ſeldom neglected.—Thoſe elegies which particularly touched him, were firſt rendered into Engliſh; and as theſe make the greater part of Tibullus's poems, he was contented afterwards to complete the work, by finiſhing as a taſk, what he begun as an amuſement.

A favourite author, on whom ſome labour has been employed, is not eaſily forgotten; the verſion, therefore, was retouched as often as opportunity ſerved. All this while, indeed, the tranſlator had no intention to make the public acquainted with his poetical amuſements: he knew his poet too well, and admired him too much, to think he had done him juſtice:—yet when Mr. Dart's tranſlation of Tibullus was ſent him, he was reſolved to publiſh his own; that thoſe who did not underſtand the original, might not form an idea of the moſt exact, elegant and harmonious of the Roman elegiac poets from the moſt inaccurate, harſh, and inelegant verſes of the preſent century.

The tranſlator hopes he will be acquitted of vanity, in prefering his own performance to Mr. Dart's: indeed that gentlemen often miſſed the meaning of his author, while his poetry always eſcaped him. Neither does he appear to have been a competent judge of his own language: and from the little tenderneſs transfuſed into his verſes, it may be concluded, that he was an utter ſtranger to that paſſion, which gave riſe to moſt of the elegies of Tibullus.

What advantage the preſent tranſlator may have over his predeceſſor in theſe reſpects, does not become him to determine: yet he is well appriſed, that no tranſlator, however qualified, can give Tibullus the genuine air of an Engliſhman.

It is true, that amorous elegy is leſs local than many other of the minor kinds of poetry, the paſſion of love operating pretty nearly the ſame upon the human mind in all ages. Yet as the modes of expreſſing that paſſion differ much in different countries, ſo theſe modes muſt not be confounded: a Grecian ought to make love like a Grecian, and a Roman like a Roman.

Beſides this, Tibullus abounds in images of rural theology.—He has even preſerved ſome ſuperſtitious uſages, which are to be met with in no other poet: but as theſe are alſo characteriſtical, and muſt be preſerved in the verſion, who can hope to give a tranſlation of Tibullus the eaſy air of a modern original?

Verbal tranſlations are always inelegant, becauſe always deſtitute of beauty of idiom and language; for by their fidelity to an author's words, they become treacherous to his reputation: on the other hand, a too wanton departure from the latter, often varies the ſenſe, and always alters the manner.

The tranſlator choſe the middle way, and meant neither to tread on the heels of Tibullus, nor yet to loſe ſight of him. He had not the vanity to think, he could improve on his poet: and though he has ſometimes endeavoured to give a more modern poliſh to his ſentiments, he has ſeldom attempted to change them. To preſerve the ſenſe of his original was his firſt care; his next was, to clothe it in as elegant and becoming a dreſs as poſſible. Yet he muſt confeſs, that he has now and then taken the liberty to tranſpoſe, and ſometimes paraphraſtically to enlarge the thoughts. Where a ſentiment was too much contracted by the cloſeneſs of the Latin idiom, to be unfolded in a correſpondent expreſſion in Engliſh; or from its peculiarity, might, in a modern language, ſeem flat, he has endeavoured to inſpirit it by collateral thoughts from other poets; and where its colours were languid, to heighten them—with what ſucceſs, the reader muſt determine.

The Hexameter and Pentameter is ſaid to be peculiarly ſuited to plaintive ſubjects. The Engliſh have no ſtanza correſpondent to that, but the alternate, which is ſuppoſed to poſſeſs a ſolemnity and kind of melancholy flow in numbers. This Mr. Hammond choſe for his imitation of Tibullus; and it muſt be confeſſed, that he has happily ſucceeded. Yet, as in this ſtanza, the ſenſe naturally ends at the fourth line, the tranſlator thought he could not in general have adopted it, without violence to the original: he therefore preferred the heroic meaſure, which is not better ſuited to the lofty ſound of the epic muſe, than to the complaining tone of elegy. The reader, however, will find one or two elegies rendered in the alternate ſtanza, which is by no means ſo difficult as the heroic.

As Tibullus wrote love poems like a Roman, any tranſlation of them without notes, would have been extremely obſcure to an Engliſh reader: moſt of his commentators are mere philologers, or at beſt they have only diſplayed their eruption in the hiſtory of a heathen god, or the topography of a river. From this cenſure, however, Broekhuſius, his Dutch editor, and Vulpius, his Italian commentator, may in part be exempted; they have indeed ſometimes entered into the propriety of our poet's thoughts. Yet even their chief excellence conſiſts in arranging the text; in ſelecting the moſt approved readings; and in giving thoſe paſſages, which they ſuppoſe Tibullus either borrowed from his predeceſſors, or the moderns copied from him. The deſign of the tranſlator is very different; he has commented on his author as a Roman poet, and as a Roman lover: and although he owns himſelf enamoured of his beauties, (as who can draw a pleaſing reſemblance of a face which diſguſts him?) he hopes he has not been blind to his imperfections. Theſe, indeed, he has touched upon with the tenderneſs of a friend, not the acrimony of a critic.

Yet as moſt of the commentators were conſulted, the tranſlator has taken from each of them, ſuch notes, as he imagined would be moſt ſerviceable to an Engliſh reader, always aſcribing them

however to the author who furniſhed them. Thus, beſide Broekhuſius and Vulpius, the name of Mr. Dart will ſometimes be found at the bottom of an obſervation. Nor muſt it be forgotten; that the tranſlator has been obliged to that gentleman for ten or twelve lines in his verſion.

It has been judged neceſſary to print the Latin text along with the verſion: this the tranſlator would willingly have declined, as his work can hope to find favour with thoſe only, who underſtand not the original. Yet, when he conſidered, that the Engliſh preſs had afforded no one accurate edition of Tibullus: and that even the beſt of thoſe printed abroad were not exempted from material errors; he ſurmounted his ſcruples, and has endeavoured to give a leſs exceptionable text of his poet, than any hitherto publiſhed *.

Before he concludes, the tranſlator muſt return his ſincere thanks to a worthy friend, for his elegant verſion of the firſt elegy, and of Ovid's poem on the death of Tibullus. By what accident his own tranſlation of the firſt elegy was loſt, is of no conſequence; eſpecially too, as the reader, from a peruſal of Mr. P***'s ſpecimen, will probably be induced to wiſh, that more of thoſe now publiſhed, had undergone a like fate, provided the ſame gentleman had likewiſe tranſlated them.

Nor is that the only good office which challenges his gratitude: the tranſlator is particularly obliged to his friend, for having procured him the valuable acquaintance of another learned gentleman; who not only took the trouble to compare his verſion of the three laſt books with the original; but who alſo favoured him with ſome notes, which conſtitute the chief ornament of the ſecond volume †. Thus, like the Britains of old, the tranſlator has called in auxiliaries to conquer him.

* *The inſertion of the Latin text, in this edition, has been deemed unneceſſary.*

† *This tranſlation was firſt publiſhed in 2 vols. 12mo.*

THE LIFE OF TIBULLUS.

We are not only unacquainted with the prænomen of Tibullus, but with the year of his birth. The biographers, from a line * in the fifth elegy of his third book, indeed informs us, that Ovid and he were born the day that Hirtius and Panſa were killed, viz. on the tenth of the calends of April, A. U. C. 710. This was the opinion of the learned for many centuries; nor was it controverted, till Joſeph Scaliger firſt entertained ſome doubts of it; and Janus Douſa the younger, about a hundred and ſeventy years ago, was induced, by comparing what our poet had ſaid of himſelf, with what Ovid and Horace have wrote concerning him, to reject that line as ſpurious, and to aſſert that Tibullus muſt have been born almoſt twenty years ſooner. Although we think ſome conſiderable objections may be raiſed againſt Douza's opinion †, yet as the old account is liable to ſtill greater, we ſhall venture with that critic, to inform the reader, that Albius Tibullus, the prince of elegiac poets, was born at Rome, A. U. C. 590, ſix years after the birth of Virgil, and one after that of Horace,

Tibullus might ſay with his great admirer, Ovid,

——uſque a proavis vetus ordinis hæres,
Non modo militiæ turbine factus eques ‡.

being deſcended from an equeſtrian branch of the Albian family: and though ſome of the old biographers § aſſert, that his anceſtors made a figure in the forum and in the field, yet as hiſtory makes no mention of them, poſterity would have been unacquainted with this branch of that illuſtrious houſe, had it not been for our poet.

As the ancient writers of Tibullus's life have favoured us with no particulars of his infancy, if it is probable it was diſtinguiſhed by nothing remarkable. The human mind does not always bloſſom at the ſame period; and it by no means follows that his childhood muſt have flouriſhed, whoſe maturer age has produced fair fruits of ſcience. Perhaps too, details of early excellence are leſs uſeful than is commonly imagined, as they often diſpirit thoſe who would otherwiſe in due time have expanded into an extenſive reputation.

But if ſuch accounts are leſs uſeful, it would have been no unprofitable gratification of curioſity to have known by what plan his ſtudies were conducted, and who were his preceptors. Antiquity, however, having left us in the dark with regard to theſe matters, we can only ſuppoſe that as his father's condition was conſiderable, ſo nothing was omitted to render our poet an uſeful and elegant member of ſociety.

The Romans poſſeſſed a real advantage over the moderns in point of education; for as the ſame citizen might plead cauſes, command armies, and arrive at the firſt dignities of the prieſthood; ſo their literary inſtitutions were made to comprehend theſe ſeveral objects. It is eaſy to ſee of what vaſt utility ſo general a plan muſt have been to a ſtate; and perhaps it is not paying letters too high a compliment, to ſay, that the ſucceſſes of the Romans were in a great meaſure owing to this advantage.

In the year of Rome 705, the civil war broke

* *Natalem noſtri primum videre parentes*
Quum cecidit fato conſul uterque pari.

† *See the arguments on both ſides of the queſtion in the notes to the fifth elegy of the third book.*

‡ *Amor. lib. iii. el. 14.*

§ *Crinitus, &c.*

out between Cæsar and Pompey. The army and corrupt part of the legislature followed Cæsar; while the majority of the senate and of the knights, with all those who dreaded a perpetual dictator, sided with Pompey, as the person from whom the republic had less danger to apprehend. Of this number was the father of Tibullus; and there is reason to suspect, that he either fell in the field, or was butchered by proscription, for we know that a considerable part of his estate was left a prey to the rapacious soldiery *. These events probably determined our author's public attachments; but without these motives to revenge, it is not unlikely that Tibullus had, before this time, adopted the political opinions of his father †.

At what actions in the civil war our young knight was present, as it was not prudent in him to mention in his poems, so historians do not inform us; but as principle and revenge equally conspired to rouse his courage (and courage he certainly possessed ‡), may we not safely infer, that Tibullus did not run away, like his friend Horace, from Philippi ‖, at which battle he was present with his patron the illustrious Messala Corvinus?

But the fortune of Octavius prevailing over the better cause of Brutus and Cassius, Messala too (who was next in command to these patriot citizens) going over with his forces to the conqueror, Tibullus, although he paid the greatest regard to the sentiments of that excellent soldier and orator, yet determined to leave the army; for as he would not fight against the party which his friends had now espoused, so neither could he appear in arms against those whom his principles taught him to regard as the assertors of liberty. Besides, the bad success of the patriot party and his own experience, had now inspired him with an abhorrence of the war; he therefore retired, A. U. C. 712, to his country seat at Pedum, there, by an honest industry, to raise his impaired fortune to its ancient splendor, while his hours of leisure were either devoted to philosophy or the muses §.

But we are not to imagine that rural objects and study solely engaged our poet's attention, for being formed with a natural tenderness of disposition, he began to enlarge the sphere of his pleasures by conversing with the fair sex. The first object of his affection was probably Glycera; and and we have Horace ¶ on our side, when we add, that she at first gave him hopes of success: but though his person was elegant ††, his fortune not contemptible, and his life was then in the prime, Glycera deserted him for a younger lover *. As he entertained a real affection for that lady, her infidelity gave him much uneasiness: he therefore endeavoured, by exerting his elegiac genius, to reclaim her. But his poems producing in Glycera no change to his advantage, his friend and old fellow-soldier Horace advised him to abate of his sorrow for her loss, and send her no more elegies.

None of these elegies having come down to our times, Lilio Gyraldi † supposes that Nemesis and Glycera were the same—but the poems which are inscribed to Nemesis ‡ do not favour this supposition; and, indeed, it seems more likely that Tibullus was so piqued at the ill success of his first amour, that he destroyed all those elegies which it gave rise to.

Some time after this (A. U. C. 718.) the fierce inhabitants of Pannonia rebelling, and Messala being one of the generals appointed by Augustus to reduce them, that nobleman invited Tibullus to attend him in the expedition. As this service was not against the Pompeian party §, and as he hoped in the hurry of a military life to find a remedy for his melancholy, he complied with his noble friend's request, and in every action behaved with his usual bravery. In proof of this, the commentators quote our poet's description of the old soldier of Arupinum.

Testis Arupinas, et pauper natus in armis.
Quem si quis videat, vetus ut non fregerit ætas,
Terna minus Pyliæ miretur sæcula famæ,
Namque senex longæ peragit dum sæcula vitæ,
Centum fecundos Titan renovaverit annos:
Ipse tamen velox celerem super edere corpus
Audet equum, validisque sedet moderator habenis ‖.

Besides these verses, some others may be brought from the panegyric, and in particular the three following, to strengthen their assertion:

Nam bellis experta cano, testis mihi victæ
Fortis Japidiæ miles, testis quoque fallax
Pannonius, gelidas passim disjectus in Alpes ¶.

In this manner did our poet subdue his passion for Glycera: but being by nature addicted to the love of the fair sex, at his return from the army, he fixed his affections on Delia.

Cyllenius, in his commentary on Tibullus ††, conjectures, that she obtained the name of Delia

from the Greek word δηλαν, on account of her ſurpaſſing in beauty the Roman ladies. But we have the more reſpectable authority of Apuleius *, for aſſerting that Delia was an appellation given her by our poet, her real name being Plania.

Some critics † contend, that Delia was a woman of the town:—but many paſſages in the elegies addreſſed to her ‡, contradict this aſſertion. Which of theſe poems were firſt written, cannot now be determined; but it is certain, they were not compoſed in the order they are now printed.

It would ſeem, that ſome time after his attachment to Delia, Meſſala invited our poet to accompany him in ſome military expedition; but he was then too deeply enamoured of Delia to attend the call of honour. Tibullus, therefore, compoſed his firſt elegy, in which, as he prefers a country retirement with Delia, and a moderate income, to all the triumphs of war and allurements of fortune, ſo Corvinus could not well urge, with propriety, our poet's departure.

Meſſala having ſoon after obtained the conſulſhip, Tibullus compoſed his panegyric. This poem is in heroic numbers, and though not deſtitute of poetical beauties, is inferior to his elegies: it ſeems rather an effuſion of friendſhip than an effort of genius: it has, therefore, not been tranſlated.

In the year of Rome 725 §, Meſſala being intruſted by Auguſtus Cæſar with an extraordinary command over Syria, inſiſted on Tibullus's accompanying him thither, to which our poet conſented. This ſacrifice to friendſhip was not, however, obtained without much reluctance; for Delia, it would ſeem, oppoſed his departure. But as Meſſala, in this expedition, was to viſit Greece, Aſia, &c. and as Tibullus, in his panegyric, had ſaid,

Pro te vel rapidas auſim maris ire per undas,
Adverſis hyberna licet tumeant freta ventis.
Pro te vel ſolus denſis ſubſiſtere turmis:
Vel pavidum Ætnæ corpus committere flammæ
Sum quodcunque tuum eſt ‖, &c.

he embarked with his patron. He, however, had not been long at ſea, before he was taken ſo ill, that Meſſala was obliged to put him aſhore, and leave him in Phæacia ¶. In this iſland, ſo famous for the gardens of Alcinous, our poet compoſed the third elegy of the firſt book; which ſhows, that whatever effect this ſickneſs had upon his conſtitution, it did not in the leaſt impair his poetical talents.

From the ſentiments of tenderneſs expreſſed in that beautiful poem, it would not have been ſurpriſing, had Tibullus on his recovery returned to Italy: but he had too ſincere a regard for his friend, to deſert him: he therefore, as ſoon as he was able to renew his voyage, haſtened after Meſſala, and with that nobleman ** travelled through Cilicia, Syria, Egypt, and Greece, being then probably initiated into the Eleuſinian myſteries at Athens †.

What were the political conſequences of this expedition, hiſtorians do not mention: but the conſequences to Tibullus were highly diſagreeable; for, if any ſtreſs in this point is to be laid on his elegies, there is reaſon to ſuſpect that Delia married before his return.

This, doubtleſs, occaſioned much uneaſineſs to, and rendered our poet the leſs unwilling to embrace another offer made him ſoon after by Meſſala, of going to Aquitaine; which province having revolted (A. U. C. 726.), Auguſtus had intruſted that excellent officer with the important buſineſs of its reduction ‡.

The Romans, ſays an elegant writer, fought with other nations for glory, but with the Gauls for liberty. This obſervation was at leaſt verified at this time: for it was not till after many ſharp actions, in which both the general and his ſoldiers diſtinguiſhed themſelves, that Meſſala completed the ſervice he was ſent upon. In all theſe battles, our poet ſignalized his courage in ſo remarkable a manner, that the ſucceſs of the expedition was, in no ſmall degree, owing to him.

Non ſine me eſt tibi partus honos: Tarbella Pyrene
Teſtis, & oceani littora Santonici: [rumna,
Teſtis Arar, Rhodanuſque celer, magnuſque Ga-
Carnuti & Flavi cœrula lympha Liger §.

For which reaſon, he had military honour conferred on him; "militaribus donis ornatus eſt," as the old writer of his life informs us ‖.

The reduction of Aquitaine was ſo acceptable to the Emperor, that Meſſala had a triumph decreed him the year after ¶: and as our poet had borne ſo diſtinguiſhed a ſhare in the war, it is not to be ſuppoſed, but he was preſent at that ſuperb ſolemnity; which, as an ancient inſcription ** acquaints us, was celebrated on the ſeventh of the calends of October.

But his Gallic expedition not having baniſhed

Delia from his breaſt, he again paid his addreſſes to her: and, from ſome paſſages in the ſecond and ſeventh elegies of the firſt book, it would ſeem that they were but too ſucceſsful.

When a woman has once ſo far forgot herſelf, as to beſtow improper favours on a lover, nothing is more natural than for that lover to ſuſpect he is not the only favourite. Our poet is an inſtance of the truth of this obſervation; for to ſuch a height did his ungenerous ſuſpicions of Delia ariſe (notwithſtanding all her proteſtations of innocence), that he made her huſband acquainted with his intrigue *. Whether Delia was innocent or not, ſhe could never forgive this diſcovery. Or had ſhe been willing to forget the paſt, we cannot ſuppoſe that her huſband would ever admit Tibullus again into his houſe.

Such, then, was the extraordinary concluſion of our poet's intimacy with Delia; and therefore the poem which furniſhed theſe particulars is juſtly made the laſt of the poems inſcribed to that beauty.

Although the elegies of Tibullus warrant, in ſome ſort, theſe ſurmiſes, yet it ought to be conſidered, that poets write from imagination more frequently than from reality, becauſe ideal ſubjects afford greater ſcope to their faculties, than occurrences in common life:—and indeed, if what Ovid tells us may be depended on, Delia was again enamoured with our poet at the time of his deceaſe, when probably her huſband was dead.

Some time elapſed, before Tibullus entered into any new engagements. In this interval, he compoſed his famous elegy on Meſſala's Birth-day, the ninth and the following elegies of the firſt book, with the firſt and ſecond of the ſecond book; endeavouring to forget his diſaſters, by dividing his time between his country-ſeat and Rome, but chiefly by converſing, more than ever, with the learned and polite: of theſe the moſt eminent among his acquaintances were Meſſala, Valgius, Macer, and Horace.

Meſſala was now in the height of his reputation: in eloquence and military knowledge, he was excelled by none of his cotemporaries; and yet the goodneſs of his heart ſurpaſſed his abilities. His houſe was the rendezvous of the the learned; and his patronage, as an admirable poet† expreſſes it, was

The ſureſt paſſport to the gates of fame.

Happy in the approbation of all parties, his ſiding with Auguſtus, after the defeat at Philippi, did not loſe him the eſteem of his old friends; and his intereſting himſelf in their behalf, to the honour of that emperor, made him not the leſs beloved by Auguſtus ‡.

J. Valgius Rufus was eminent, not only for heroic poetry, but alſo for his elegies, eſpecially thoſe on the death of his ſon Myſtes *. He alſo wrote ſome excellent epigrams. But all his poems are now loſt. As Tibullus thought him the beſt poet next to Homer, poſterity has ſuffered much in their loſs †.

Of Macer, all that is known, is mentioned in the notes to the ſixth elegy of the ſecond book.

But although Tibullus himſelf informs us of his acquaintance with theſe eminent ſcholars; yet ſhould we not have known of the friendſhip which Horace and he entertained for one another, had it not been for Horace, who probably about this time ſent our poet an epiſtle, which is thus tranſlated by Mr. Francis.

Albius! in whom my ſatires find
A candid critic, and a kind,
Do you, while at your country ſeat,
Some rhiming labours meditate,
That ſhall in volum'd bulk ariſe,
And e'en from Caſſius bear the prize;
Or, ſauntering through the ſilent wood,
Think what befits the wiſe and good.

Thou art not form'd of lifeleſs mould,
With breaſt inanimate and cold;
To thee the gods a form complete,
To thee the gods a large eſtate,
In bounty give, with ſkill to know
How to enjoy what they beſtow.

Can a fond nurſe one bleſſing more,
Ev'n for her favourite boy, implore,
With ſenſe and clear expreſſion bleſt,
Of friendſhip, honour, wealth, poſſeſt;
A table elegantly plain,
And a poetic eaſy vein?

By hope inſpir'd, depreſt by fear,
By paſſion warm'd, perplex'd with care,
Believe that every morning's ray
Hath lighted up thy lateſt day;
Then, if to-morrow's ſun be thine,
With double luſtre ſhall it ſhine.

Such are the maxims I embrace,
And here, in ſleek and joyous caſe,

---

* *Lib.* i. *El.* 7.

† *Dr. Young.*

‡ *Meſſala had a brother, who was alſo a polite ſcholar, as Horace informs us. According to St. Jerome, this illuſtrious Roman married Terentia, Cicero's widow, and by her had two ſons, Marcus and Lucius, who both attaining to the conſulſhip, and were an ornament to their families, by their military and civil capacities. Meſſala himſelf was ſo old before he died, as to forget his own name. Pliny the elder tells us, that he would not permit a perſon of his family to have his ſtatue placed among thoſe of his anceſtors, becauſe he was a diſgrace to them.*

* *We learn this circumſtance from Horace, who wrote Valgius a beautiful conſolitary ode on the occaſion.*

Non ſemper imbres nubibus hiſpidos
Manant in agros, &c. Lib. ii. Ode 9.

† *The critics have been able, from all antiquity, to glean only ſeven lines of Rufus's poetry, which the reader, if curious of ſuch literary ſcraps, will find collected by Broekhuſius, in his notes on Tibullus's Panegyric to Meſſala.*

You'll find, for laughter fitly bred,
An hog by Epicurus fed *.

Francis.

Monſ. Dacier † obſerves, that this epiſtle is all ironical; for Tibullus, according to him, having exhauſted his fortune by extravagance, had now retired to the country, to recruit his finances, and avoid the importunity of his creditors.

To find out theſe things from the epiſtle before quoted, required a ſtrange obliquity of underſtanding; as to ſupport them, demanded ſome learning:—however, it muſt be confeſſed, that the French editor of Horace is not the firſt author who maintained this extraordinary opinion. An old grammarian ‡, whoſe comment on Horace, Caſpar Barthius owns he peruſed, but to whom Dacier was willing to ſink his obligations, though he alſo muſt have ſeen him, has out-done the French critic in what he writes of Tibullus. "Fuit hic Albius" (ſays this uncommon genius) "eques Romanus, qui primus in amatorio carmine habetur: eum per ironiam irridet Horatius, quaſi rem bene geſſerit, cum in juventa omnia prodegerit, et poſtea verſibus victum quæſiverit. Ergo ubi eum laudat, ſe innuit Horatius; ubi vituperat ſe, & Epicurum nominat, Albium intelligit, quem ridendum ait quod prodegerit omnia, jam nihil habens, quo, ut ſolebat, cutem curare poſſet: quod vero ait

* Di tibi divitias dederint, &c.

manifeſta ironia eſt, nam Epicuri non credentes deos habere curam rerum humanarum, omnia prodigunt; quod poſtquam factum eſt omnibus ſunt ridiculi."

Whence this "ſemi-priſcus Grammaticus" (for ſo Broekhuſius calls him) drew theſe particulars relating to our poet, is not known: but that Dacier ſhould adopt them, is matter of wonder; as, in all probability, the Frenchman had read Tibullus's panegyric §, which plainly ſhows that the diminution of his fortune was not owing to his own intemperance. And if the grammarian had peruſed his elegies ‖ with ever ſo little attention, he would have ſeen, that Tibullus was rather religious than otherwiſe, and by no means an Epicurean, at leaſt in belief.

But, ſay ſome critics, who have too thoughtleſsly embraced this opinion, does not Horace confirm it, where he tells us, that his father warned him, when a young man, from purſuing extravagant courſes, by ſetting before his eyes the infamy and miſerable life of Albius,

Nonne vides Albi ut male vivat filius?

To make this objection deciſive, the critics muſt firſt prove, that there were no other Albiuſes in Rome than the father of Tibullus; which, by the way, is falſe: and then they muſt ſhow, that this infamous and indigent ſon of Albius's was our poet; which cannot be done, eſpecially as we know that he died a knight, and of courſe was worth upwards of three thouſand pounds ſterling.—There are alſo innumerable paſſages in his elegies *, which prove, that he was by no means in diſtreſſed circumſtances, though leſs wealthy than his anceſtors. Again, is it to be imagined, that the rich and generous Meſſala would have ſuffered ſo fine a genius, and one whom he regarded ſo much, to have been diſtreſſed by his creditors? And, to crown all, as Tibullus was confeſſedly ſome years younger than Horace, with what propriety could Horace's father propoſe Tibullus as an example not to be followed by his ſon?

When ſuch were the friends of Tibullus, and his poetical abilities had long ſince obtained him univerſal applauſe, he could have found no difficulty in getting admiſſion to the learned court of Auguſtus. How then, aſk the commentators, has it come to paſs, that he never once mentions either that emperor, or Mæcenas, both whom his brother poets celebrated with ſuch a laviſhneſs of praiſe? And yet, add they, there are many parts of his writings where thoſe patrons of genius might have been introduced with uncommon propriety?

True to the principles of the republic, and a real friend to the liberties of the people, Tibullus never could prevail upon himſelf to flatter thoſe, whatever affection they expreſſed for the muſes, whom his principles taught him to deteſt as the enſlavers of his country.

This, as Pope emphatically expreſſes it, "kept "him ſacred from the great," who, doubtleſs, perceived with ſecret diſpleaſure (for Auguſtus and Mæcenas well knew the importance of having the poets on their ſide), that no loſs of fortune, and no allurement of ambition, could induce Tibullus to join in the general chorus of their praiſe. Although both the emperor and his favourite muſt in their hearts have applauded our poet's integrity; yet that mental applauſe, in all probability, would not have ſecured Tibullus from the effects of their diſpleaſure, had it not been for the intereſt which he had with Meſſala.

Beſides Meſſala, Valgius, and Macer, Tibullus mentions Cornutus, Marathus, Titius, and Meſſalinus. The conjectures of the critics concerning theſe Romans, are inſerted in the notes to the elegies, where their names occur.

Soon after this, Tibullus fell in love with Neæra. It is true, that the elegies he wrote to Ne-

æra, in every edition of our poet, follow thoſe, in which he celebrates Nemeſis: yet as Ovid (who could not well be miſtaken in what related to one whom he regarded ſo much as Tibullus) ſays that Nemeſis was his laſt miſtreſs, and as it is probable that the fifth elegy of the ſecond book (our poet being then certainly very fond of Nemeſis) was written between the years 732 and 734, when Auguſtus wintered in Samos, that is, a ſhort time before our poet's death, we ſuppoſe, although the learned gentleman who favoured the author with the notes marked B, is of a different opinion, that Neæra was the third object of his affections.

Fabricius conjectures, from her name, that ſhe was a woman of the town; Neæra, in the declenſion of the Roman empire, being a ſynonimous term for a courtezan *: but Fabricius ſhould have conſidered that Tibullus wrote in the Auguſtan age. Beſides, it appears from Homer †, from Valerius Flaccus ‡, and from an old marble ſtatue preſerved by Pignorius §, that women of the firſt rank, and moſt unſuſpected modeſty, were called by that name. Without, however, theſe authorities, Tibullus himſelf ſcreens this favourite from the imputation of libertiniſm, by beſtowing on her the epithet *caſta* ‖: He alſo characteriſes her parents, as people of virtue and fortune.

It appears from the ſecond and third elegy of the third book, that Neæra, after a long courtſhip, having conſented to marry Tibullus, was ſomehow or other forced away from him. This gave our poet an uncommon concern, which was redoubled, when he diſcovered, that ſhe herſelf had not only been acceſſary to her being carried off, but meant alſo to marry his rival.

Mr. Dart, in his Life of Tibullus ¶, is of opinion, that Neæra was the ſame with Glycera. But why, then, does our poet not call her by that name? Beſides, if any one will attentively peruſe Horace's conſolatory ode to our author on the infidelity of Glycera, and compare it with many paſſages in the third book of Tibullus, he will eaſily ſee, that Mr. Dart muſt be miſtaken.

Tibullus, who had hitherto been unſucceſsful in his addreſſes to the fair, was not more fortunate in his laſt miſtreſs; for, if Nemeſis (for ſo was ſhe called) poſſeſſed beauties of mind and perſon equal to thoſe of Delia and Neæra, her extreme avarice obſcured them all. And though Martial ** founds Tibullus's chief claim to poetical reputation on the elegies he addreſſed to that lady,

Fama eſt arguti Nemeſis formoſa Tibulli,

we have our poet's authority for aſſerting, that they produced no effect upon her.

Whether Nemeſis ever abated of her rigour to Tibullus, his elegies do not inform us. It is indeed probable ſhe did, eſpecially ſince Ovid repreſents her as ſincerely grieved at Tibullus's death, which, according to Marſus, a cotemporary poet, happened ſoon after that of Virgil:

Te quoque, Virgilio comitem, non æqua, Tibulle,
Mors juvenem campos miſit ad Elyſios:
Ne foret, aut elegis molles qui fleret amores;
Aut caneret forti regia bella pede.

Thee! young Tibullus, to th' Elyſian plain
Death bid accompany great Maro's ſhade;
Determin'd that no poet ſhould remain,
Or to ſing wars, or weep the cruel maid.

For Tibullus died either A. U. C. 735, the year of Virgil's death, or the year after, in the forty-fourth or forty-fifth year of his age.

Nor was Marſus the only poet who celebrated this melancholy event: Ovid *, who had no leſs friendſhip than admiration for Tibullus, has immortalized both himſelf and his friend in the following beautiful elegy; which, containing ſome further particulars relating to our poet, will make a proper concluſion to this life, which, from the ſcantineſs, as well as the little authority of many of the materials, the author is ſorry he cannot render more complete.

If Thetis, if the bluſhing Queen of Morn †,
If mighty goddeſſes could taſte of woe
For mortal ſons; come, Elegy forlorn!
Come, weeping dame! and bid thy treſſes flow:

Thou bear'ſt, ſoft miſtreſs of the tearful eye,
From grief thy name, now name alas too juſt!
For ſee thy favourite bard, thy glory lie,
Stretch'd on yon funeral pile, ah! lifeleſs duſt!

See Venus' ſon, his torch extinguiſh'd brings,
His quiver all revers'd, and broke his bow;
See penſive how he droops with flagging wings,
And ſtrikes his bared boſom many a blow:

Looſe and neglected, ſcatter'd o'er his neck,
His golden locks drink many a falling tear:
What piteous ſobs, as if his heart would break,
Shake his ſwoln cheek? Ah ſorrow too ſevere!

---

Memnona ſi mater, mater ploravit Achillem,
Et tangunt magnas triſtia fata deos;
Flebilis indignos, Elegia, ſolve capillos,
Ah nimis ex vero nunc tibi nomen erit!
Ille tuî vates operis, tuâ fama, Tibullus
Ardet in extracto corpus inane rogo.
Ecce, puer Veneris fert everſamque pharetram,
Et fractos arcus, et ſine luce facem.
Adſpice, demiſſis ut eat miſerabilis alis;
Pectoraque infeſtâ tundat aperta manu.
Excipiunt ſparſi lacrymas per colla capilli,
Oraque ſingultu concutiente ſonant.

* *Lib.* iii. *El.* 8.

† *Aurora.*

Thus, fair Iülus! for thy godlike ſire *,
'Tis ſaid, he weeping from thy roof withdrew:
Nor deeper mourn'd the queen of ſoft deſire †,
When the grim boar her lov'd Adonis ſlew.

And yet we bards are fondly call'd divine,
Are ſacred held, the gods' peculiar care:
There are, that deem us of th' ethereal line,
That ſomething of the Deity we ſhare.

But what can death's abhorred ſtroke withſtand?
Say what ſo ſacred he will not profane?
On all the monſter lays his duſky hand,
And poets are immortal deem'd in vain.

Thee, Orpheus, what avail'd thy heavenly ſire?
Thy mother-muſe, and beaſt-inchanting ſong?
The god for Linus ſwept his mournful lyre,
And with a father's woes the foreſts rung.

Great Homer ſee, from whoſe eternal ſpring
Pierian draughts the poet train derive,
Not he could 'ſcape the fell remorſeleſs king ‡,
His lays alone the greedy flames ſurvive.

Still live the work of ages, Ilion's fame,
And the ſlow web by nightly craft unwove:
So Nemeſis ſhall live, and Delia's name;
This his firſt paſſion, that his recent love.

Now what avails, ye fair! each holy rite,
Each painful ſervice for your lover paid?
Recluſe and lonely that you paſs'd the night?
Or fought th' Egyptian cymbal's fruitleſs aid?

When partial fate thus tears the good away,
(Forgive, ye juſt! th' involuntary thought)
I'm led to doubt of Jove's eternal ſway,
And fear that gods and heaven are words of nought.

Fratris in Æneæ ſic illum funere dicunt
Egreſſum tectis, pulcher Jüle, tuis.
Nec minus eſt confuſa Venus moriente Tibullo,
Quam juveni rupit, cum ferus inguen aper.
At ſacri vates, et divûm cura vocamur:
Sunt etiam, qui nos numen habere putent.
Scilicet omne ſacrum mors importuna profanat:
Omnibus obſcuras injicit illa manus.
Quid pater Iſmario, quid mater profuit, Orpheo?
Carmine quid victas obſtupuiſſe feras?
Ælinon in ſylvis idem pater, Ælinon, altis
Dicitur invitâ concinuiſſe Lyrâ
Adſpice Mœonidem, à quo, ceu fonte perenni,
Vatum Piĕriïs ora rigantur aquis;
Hunc quoque ſummo dies nigro ſubmerſit Averno;
Effugiunt avidos carmina ſola rogos.
Durat opus vatum Trojani fama laboris,
Tardaque nocturno tela retexta dolo.
Sic Nemeſis longum, ſic Delia nomen habebit,
Altera cura recens, altera primus amor.
Quid nunc ſacra juvant? quid nunc Ægyptia proſunt
Siſtra? quid in vacuo ſecubuiſſe toro?
Cum rapiant mala fata bonos, (ignoſcite faſſo)
Sollicitor nullos eſſe putare Deos.

* *Æneas.* † *Venus.* ‡ *Pluto.*

Live pious, you muſt die: religion prize,
Death to the tomb will drag you from the fane:
Confide in verſe; lo! where Tibullus lies!
His all a little urn will now contain!

Thee, ſacred bard! could then funereal fires
Snatch from us? on thy boſom durſt they feed?
Not fanes were ſafe, not Jove's refulgent ſpires *,
From flames that ventur'd on this impious deed.

The beauteous queen that reigns in Eryx towers,
From the ſad ſight averts her mournful face;
There are, that tell of ſoft and pearly ſhowers
Which down her lovely cheeks their courſes trace.

Yet better thus, than on Phæacia's ſtrand,
Unknown, unpitied, and unſeen to die:
His cloſing eyes here felt a mother's hand,
Her tender hands each honour'd rite ſupply.

His parting ſhade here found a ſiſter's care,
Who ſad attends, with treſſes looſe and torn:
The fair he lov'd his dying kiſſes ſhare,
Nor quit the pyre afflicted and forlorn.

"Farewel, dear youth!" thus Delia parting cry'd,
"How bleſt the time, when I inſpir'd the lay?
"You liv'd, were happy; every care defy'd,
"While I poſſeſs'd your heart, untaught to ſtray."

To whom thus Nemeſis, in ſcornful mood,
"Mine was the loſs, then why art thou diſtreſs'd?
"Me, only me with parting life he view'd;
"My hand alone with dying ardour preſs'd †."

Vive pius; moriere pius: cole ſacra; colentem
Mors gravis à templis in cava buſta trahet.
Carminibus confide bonis; jacet ecce Tibullus,
Vix manet è toto parva quod urna capit.
Tene, ſacer vates, flammæ rapuere rogales?
Pectoribus paſci nec timuere tuis?
Aurea ſanctorum potuiſſent templa deorum
Urere, quæ tantum ſuſtinuere nefas.
Avertit vultus, Erycis quæ poſſidet arces,
Sunt quoque, qui lacrymas continuiſſe negent.
Sed tamen hoc melius, quam ſi Phæacia tellus
Ignotum vili ſubpoſuiſſent humo.
Hîc certè manibus fugientes preſſit ocellos
Mater; & in cineres ultima dona tulit:
Hîc ſoror in partem miſerâ cum matrĕ doloris
Venit, inornatas dilaniata comas.
Cum tuis ſua junxerunt Nemeſiſque, priorque
Oſcula: nec ſolos deſtituere rogos.
Delia diſcedens, "Felicius," inquit, "amata
"Sum tibi; vixiſti, dum tuus ignis eram."
Cui Nemeſis, "Quid," ait, "tibi ſint mea damna dolori?
"Me tenuit moriens deficiente manu."

---

* *The Capitol.*

† *Alluding ironically to the following paſſage in the firſt Elegy, which Tibullus there applies to Delia,*

Te videam ſuprema mihi cum venerit hora!
Te teneam moriens deficiente manu!

O may I view thee with life's parting ray!
And thy dear hand with dying ardor preſs!

And yet, if ought beyond this mouldering clay
But empty name and ſhadowy form remain,
Thou liv'ſt, dear youth! for ever young and gay,
For ever bleſt, ſhalt range th' Elyſian plain.

And thou, Catullus! learned gallant mind,
(Faſt by thy ſide thy Calvus will attend)
With ivy wreaths thy youthful temples twin'd,
Shalt ſpring to hail th' arrival of thy friend.

And Gallus, too profuſe of life and blood,
If no ſad breach of friendſhip's law deprive,
This hand immortal of the bleſt and good,
Thy ſhade ſhall join, if ſhades at all ſurvive.

Thou, poliſh'd bard! thy loſs though here we mourn,
Haſt ſwell'd the ſacred number of the bleſt;
Safe reſt thy gentle bones within their urn!
Nor heavy preſs the earth upon thy breaſt!

Si tamen è nobis aliquid, niſi nomen et umbra,
Reſtat; in Elyſiâ valle Tibullus erit.
Obvius huic venies hederâ juvenilia cinctus
Tempora, cum Calvo, docte Catulle, tuo.
Tu quoque (falſum temerati crimen amici)
Sanguinis atque animæ prodige, Galle, tuæ.

His comes ubra tua eſt; ſi quâ eſt modò corporis umbra;
Auxiſti numeros, culte Tibulle, pios.
Oſſa quieta, precor, tutâ requieſcite in urnâ;
Et ſit humus cineri non onerosa tuo.

ELEGIES.

BOOK I.—ELEGY I.

The glitt'ring ore let others vainly heap,
O'er fertile vales extend th' encloſing mound;
With dread of neighb'ring foes forſake their ſleep,
And ſtart aghaſt at ev'ry trumpet's ſound.

Me humbler ſcenes delight, and calmer days;
A tranquil life fair poverty ſecure!
Then boaſt, my hearth, a ſmall but cheerful blaze,
And riches graſp who will, let me be poor.

Nor yet be hope a ſtranger to my door,
But o'er my roof, bright goddeſs, ſtill preſide!
With many a bounteous autumn heap my floor,
And ſwell my vats with muſt, a purple tide.

My tender vines I'll plant with early care,
And choiceſt apples, with a ſkilful hand;
Nor bluſh, a ruſtic, oft to guide the ſhare,
Or goad the tardy ox along the land.

Let me a ſimple ſwain, with honeſt pride,
If chance a lambkin from its dam ſhould roam,
Or ſportful kid, the little wanderer chide,
And in my boſom bear exulting home.

Here Pales I bedew with milky ſhow'rs,
Luſtrations yearly for my ſhepherd pay,
Revere each antique ſtone bedeck'd with flow'rs,
That bounds the field, or points the doubtful way.

My grateful fruits, the earlieſt of the year,
Before the rural god ſhall duly wait.
From Ceres' gifts I'll cull each browner ear,
And hang a wheaten wreath before her gate.

The ruddy god ſhall ſave my fruit from ſtealth,
And far away each little plunderer ſcare:
And you, the guardians once of ampler wealth,
My houſehold gods, ſhall ſtill my offerings ſhare.

My num'rous herds, that wanton'd o'er the mead,
The choiceſt fatling then could richly yield;
Now ſcarce I ſpare a little lamb to bleed
A mighty victim for my ſcanty field.

And yet a lamb ſhall bleed, while, rang'd around,
The village youths ſhall ſtand in order meet,
With ruſtic hymns, ye gods, your praiſe reſound,
And future crops and future wines entreat.

Then come, ye pow'rs, nor ſcorn my frugal board,
Nor yet the gifts clean earthen bowls convey;
With theſe the firſt of men the gods ador'd,
And form'd their ſimple ſhape of ductile clay.

My little flock, ye wolves, ye robbers, ſpare,
Too mean a plunder to deſerve your toil;
For wealthier herds the nightly theft prepare;
There ſeek a nobler prey, and richer ſpoil.

For treaſur'd wealth, nor ſtores of golden wheat,
The hoard of frugal ſires, I vainly call;
A little farm be mine, a cottage neat
And wonted couch where balmy ſleep may fall.

"What joy to hear the tempeſt howl in vain,
"And claſp a fearful miſtreſs to my breaſt:
"Or lull'd to ſlumber by the beating rain,
"Secure and happy ſink at laſt to reſt."

Theſe joys be mine!—O grant me only theſe,
And give to others bags of ſhining gold,
Whoſe ſteely heart can brave the boiſt'rous ſeas,
The ſtorm wide-waſting, or the ſtiff'ning cold.

Content with little, I would rather ſtay
Than ſpend long months amid the wat'ry waſte:
In cooling ſhades elude the ſcorching ray
Beſide ſome fountain's gliding waters plac'd,

O periſh rather all that's rich and rare,
The diamond quarry, and the golden vein,
Than that my abſence coſt one precious tear,
Or give ſome gentle maid a moment's pain.

With glitt'ring ſpoils, Meſſala, gild thy dome,
Be thine the noble taſk to lead the brave:
A lovely foe me captive holds at home,
Chain'd to her ſcornful gate, a watchful ſlave,

Inglorious poſt!—And yet I heed not fame:
Th' applauſe of crowds for Delia I'd reſign:
To live with thee I'd bear the coward's name,
Nor 'midſt the ſcorn of nations once repine.

With thee to live I'd mock the ploughman's toil,
Or on ſome lonely mountain tend my ſheep;
At night I'd lay me on the flinty ſoil,
And happy 'midſt thy dear embraces ſleep.

What drooping lover heeds the Tyrian bed,
While the long night is paſs'd with many a ſigh:
Nor ſofteſt down with richeſt carpets ſpread,
Nor whiſp'ring rills, can cloſe the weeping eye.

Of threefold iron were his rugged frame,
Who when he might thy yielding heart obtain,
Could yet attend the calls of empty fame,
Or follow arms in queſt of ſordid gain.

Unenvy'd let him drive the vanquiſh'd hoſt,
Thro' captive lands his conquering armies lead;
Unenvy'd wear the robe with gold imboſs'd,
And guide with ſolemn ſtate his foaming ſteed.

O may I view thee with life's parting ray,
And thy dear hand with dying ardor preſs:
Sure thou wilt weep—and on thy lover's clay,
With breaking heart, print many a tender kiſs;

Sure thou wilt weep—and woes unutter'd feel,
When on the pile thou ſeeſt thy lover laid!
For well I know, nor flint, nor ruthleſs ſteel,
Can arm the breaſt of ſuch a gentle maid.

From the ſad pomp, what youth, what pitying
Returning ſlow can tender tears refrain? [fair,
O Delia, ſpare thy cheeks, thy treſſes ſpare,
Nor give my ling'ring ſhade a world of pain.

But now while ſmiling hours the fates beſtow,
Let love, dear maid, our gentle hearts unite!
Soon death will come and ſtrike the fatal bow;
Unſeen his head, and veil'd in ſhades of night.

Soon creeping age will bow the lover's frame,
And tear the myrtle chaplet from his brow:
With hoary locks ill ſuits the youthful flame,
The ſoft perſuaſion, or the ardent vow.

Now the fair queen of gay deſire is ours,
And lends our follies an indulgent ſmile:
'Tis laviſh youth's t' enjoy the frolic hours,
The wanton revel and the midnight broil.

Your chief, my friends, and fellow-ſoldier, I
To theſe light wars will lead you boldly on:
Far hence ye trumpets ſound and banners fly:
To thoſe who covet wounds and fame be-
gone.

And bear them fame and wounds; and riches bear;
There are that fame and wounds and riches
prize.
For me, while I poſſeſs one plenteous year,
I'll wealth and meagre want alike deſpiſe.

NOTES ON ELEGY I.

In this beautiful elegy, Tibullus preſers the retirements of a country life, with Delia and a moderate income, to all the honours of war and ſplendors of fortune.

According to Scaliger, this elegy, though placed the firſt in the book, was written, in order of time, the laſt of thoſe inſcribed to Delia. The poem itſelf, however, gives no ſanction to this opinion.

Ver. 2. There is a great diſpute among editors, whether the original of this line ſhould be read,

Et teneat culti jugera multa ſoli:

Or,

Et teneat culti jugera magna ſoli:

The firſt, however, is the preferable reading, being beſt ſupported by MSS. Beſides, had it been deſtitute of that authority, it would ſtill merit that diſtinction, as Tibullus muſt either have been unacquainted with agriculture (every Roman acre being two hundred and forty feet long, and as many broad), had he applied *magna* to acres; or have uſed a ſuperfluous epithet. *Vulp.*

But Broekhuſius, although he reads *multa*, has yet proved, that Tully and Valerius Flaccus have uſed that adjective at leaſt once in the ſenſe of *magna*.

Ver. 6. The word *paupertas* in the original ſignifies, a mediocrity of fortune; for ſo Porphyrio interprets it in his Commentary on Horace, L. ii. Ep. 5. And, indeed, it is evident from Cicero, that this was the meaning impoſed upon *paupertas* in the Auguſtan age. From this word, then, thoſe who maintain, that our poet had ſpent his eſtate, and was obliged to retire to the country, can derive no ſupport; as indeed the whole of this elegy contradicts that aſſertion.

Almoſt all the commentators on Tibullus have obſerved, that he abounds in alliterations, and give the original of this line as an inſtance of it,

Me mea paupertas, &c.

Nor is Tibullus ſingular in this; the beſt poets and orators of the Auguſtan age were fond of them; and hence theſe gentlemen conclude, contrary to the opinion of many of the moderns, that alliterations are beautiful in poetry. A ſparing uſe of them, no doubt, adds to the melody of numbers; accordingly Pope, and the beſt Engliſh poets, practiſe alliteration.

Though Pontanus and others have wrote well on the ſubject of alliteration, they have not attempted to give a reaſon for its pleaſing the ear. When the ſame letters begin ſucceeding words, theſe run more ſmoothly off the tongue, as the organs of ſpeech are ſubjected to a ſmaller change in pronouncing them. Other cauſes may perhaps be aſſigned, but this appears to be the principal.

Ver. 7. The original of this line is variouſly read by the annotators.

Dum meus aſſiduo luceat igne focus

is maintained by Broekhuſius, &c. while Scaliger and others ſubſtitute *exiguo* in the room of *aſſiduo*; both readings are ſupported by MS. authority; that, however of Scaliger's is retained as the moſt poetical.

Ver. 9. The goddeſs Hope had many temples and public gardens at Rome, for which the reader may conſult Alexander Donatus, L. I. Romæ C. 9. L. 2. C. 25. L. 3. C. 13, 18, 23.

Boiſſard has given an elegant figure of the *ſpes ruſtica*, T. 4. Ant. P. 130.

Ver. 17. Calphurnius, a Sicilian poet of ſome merit, has a good natured precept ſomewhat ſimilar to this thought of our poet's.

Te quoque non pudent, cum ſerus ovilia viſes,
Si qua jacebit ovis partu reſoluta recenti,

Hanc humeris portare tuis, natoſque repenti
Ferre ſinu tremulos, et nondum ſtare paratos.
Ecl. v. *ver.* 39.

Humanity to brute creatures is the certain indication of a good mind. See an excellent paper on this ſubject in the Adventurer.

Ver. 21. Pales was the goddeſs of ſhepherds; ſome called her Magna Mater, and others Veſta. The feſtival inſtituted in her honour obtained the name of Palilia, or Parilia, and was celebrated on the eleventh or twelth of the calends of May, the day that Rome was ſuppoſed to have been founded. At this ſolemnity the ſhepherds, leaping over bonfires of ſtraw, &c. placed at regular diſtances, offered to their goddeſs milk and cakes of millet for the health of their flocks. This ceremony is thus deſcribed by Ovid in that wonderful effort of poetical genius his Faſti.

Paſtor, oves ſaturas ad prima crepuſcula luſtra,
Uda prius ſpargat, virgaque verrat humum.
Frondibus, et fixis decorentur ovilia ramis:
Et tegat ornatas longa corona fores.
Cærulei fiant vivo de Suphure fumi;
Tactaque fumanti ſulphure balet Ovis.
Ure maris rores, tædamque, herbaſque ſabinas;
Et crepet in mediis laurus aduſta focis.
Libaque de Milio Milii ſiſcella ſequatur:
Ruſtica præcique quo dea læta cibo eſt.
Adde dapes, mulctramque ſuas: dapibuſque reſectis
Silvicolam tepido lacte precare palen.
Conſule, dic, pecori pariter, pecoriſque magiſtris:
Effugiat ſtabulis noxa repulſa meis.
L. iv. *v.* 735.

Thus we ſee that the fumigations uſed upon this occaſion were ſovereign for diſeaſes of the ſkin.

Ver. 22. The original of this line has greatly puzzled the commentators: ſome of them underſtanding by "Paſtorem meum," Pan, and others, "Apollo nomius." The true interpretation, however, ſeems to be that which is given in the tranſlation. See notes to El. v. b. 2.

Ver. 23. We ſee from this paſſage, that a kind of adoration was paid to a ſtone, or a trunk of a tree, which divided the Roman lands. They perfumed them with eſſences, crowned them with flowers, and ſacrificed round them in the month of February. They were ſhaped into odd figures, and called "Panes Agreſtes;" as thoſe which pointed out the road had the name of "Compitalis" beſtowed on them.

The god Terminus of the Latins, or Ζευς ὁριος of the Greeks, had no animals ſacrificed to him; becauſe, as Plutarch obſerves in his Ρωμαικα, he prevented broils, and of courſe bloodſhed, among neighbours.

By the laws of Numa, if any perſon drove his plough into his neighbour's field, both he and his oxen were accurſed.

According to Arnobius, the Arabians and Peſſenuntians paid divine worſhip to ſhapeleſs unformed ſtones; and if Regnard is to be credited, the Laplanders at this day deify any large ſtone they meet with, provided it has any thing extraordinary in its figure. Theſe people probably have neither painters nor ſtatuaries among them.

Ver. 26. Commentators are not a little divided in their opinions, who the "Deus Agricola" of the original was. According to Broekhuſius the poet meant Vertumnus: and, it muſt be confeſſed, the huſband of Pomona has a better right to this place than any other of the ſylvan gods, whom the critics have recommended. See a beautiful deſcription of this ancient Tuſcan deity in Propertius, Lib. iv. El. 2.

Ver. 29. For Priapus, any of the common books of mythology may be conſulted.

Ver. 30. Gebhardus, on MS. authority, (for what abſurdities have not librarians committed?) reads,

Terreat ut fœvas falce Priapes aves.

Which he interprets by birds of bad omen. not reflecting, that birds of good omen were no leſs deſtructive to fine fruit (the keeping of which was the province particularly aſſigned to Priapus), than his "aves ſiniſtræ."

Ver. 32 The Lares were the offſpring of the nymph Lara, whom Mercury raviſhed as he was conducting her to the Stygian lake, whither Jupiter had baniſhed her for blabbing his amours.

Fitque gravis, Geminoſque parit qui compita ſervant,
Et vigiles noſtra ſemper in Æde Lares.
Faſt.

They therefore had worſhip paid them in the houſes, particularly of huſbandmen and in the highways; and their feſtival was called "Compitalitii, Compitalitia." or "Compitalia." At theſe, the images of men and women made of wool were ſuſpended, with as many balls alſo of wool, as there were ſlaves in the family, and as many "ſimulacra perfecta" as there were children. By this hanging in effigy, the ancients imagined, the Lares would be bribed (ſo true is it, that fear is the parent of Polytheiſm) to ſpare the living

Theſe deities were made of wood, ſtone, or marble, according to the wealth or ſuperſtition of the votary; and were either public or private. The former were thoſe that watched over the ſafety of the whole, while the private only ſuperintended a family. Both were clothed in a dog's ſkin, and ſometimes had the head of a dog clapped upon human ſhoulders. Their common figure, however, was a groteſque "caricatura" of a man's countenance. Vid. Boxhorn's Queſt Romanæ, P. 31. The place where the houſehold gods ſtood was called Lararium. At firſt the only offerings made them were fruits, wine, and frankincenſe, but in time both lambs and hogs were ſacrificed to them. They generally wore a chaplet of flowers; and when young gentlemen put on the "toga virilis" they dedicated to them their "bullæ;"

Bullaque ſuccinctis laribus donata pependit.

Ver. 41. This ſimplicity in the worſhip of the gods, which Numa introduced, and which ſuited

the poverty of the primæval times, continued in practice till Paganism was loſt in Chriſtianity.

Vid. Valer. Maxim. L. iv. *C.* 4. *at the end.*

Ver. 52. Scaliger reads,

——————et ſolo membra levare toro.

Suppoſing that our poet had only one bed leſt him, "Solum ſibi ſupereſſe torum." But however exactly this circumſtance may correſpond with many of the modern inhabitants of Parnaſſus, yet the whole of this elegy ſhows, that our Roman knight was by no means ſo reduced; and indeed, as Broekhuſius remarks, all the MSS. and beſt editions, read,

Solito membra levare toro.

Not a caſual bed, ſuch as campaigners muſt often put up with, but an accuſtomed fixed place of reſt; ſuch as the poet of Verona deſcribes in the following beautiful lines, addreſſed, upon his return from Bithynia, to the Peninſula Sirmio, on which he had a villa.

O quid ſolutis eſt beatius curis?
Quum mens onus reponit, ac peregrino
Labore feſſi venimus larem ad noſtrum,
Deſideratoque acquieſcimus lecto.
Hoc eſt, quod unum eſt, quo laboribus tantiſe.
Cat. Carm. 29.

Thoſe only can perceive the full force of this obſervation who have experienced it. Ovid, in his baniſhment, knew and lamented the want of a "conſuetus lectus."

Non hæc in noſtris, ut quondam ſcribimus hortis,
Nec conſuete meum lectule corpus habes.
Triſt. L. i. *El.* 10.

And again,

Tam procul ignotis igitur moriemur in cris,
Et fient ipſo triſtia fata loco?
Nec mea conſueto langueſcent corpora lecto?
Depoſitum nec me, qui fleat, ullus erit?
Triſt. L. iii. *El.* 3. *Broekhuſius.*

Quam juvat, &c.] The tranſlator finding this paſſage ſo well rendered by the late Mr. Hammond, has taken the liberty to adopt it. The commentators ſay, that Tibullus borrowed this thought of rain aſſiſting ſlumber from Sophocles; but could not our poet have obſerved, that rain, falling on the roof of a houſe, would compoſe to ſleep, without having been obliged to that tragic poet for the obſervation? Antonius Muſa, who did ſuch honour to phyſic at Rome, cured Mæcenas of a three years watchfulneſs by the falling of water; and phyſicians at this day experience the ſoporific qualities of ſuch a device; or of the ſea breaking at a diſtance upon the ſhore.

Ver. 60. After the original of this line, Scaliger and Broekhuſius place,

Quem labor aſſiduus vicino terreat hoſte:
Martia cui ſomnos claſſica pulſa fugent.

Which they explain by the extraordinary duties, eſpecially in the night-time, that ſoldiers undergo in the neighbourhood of an enemy. It muſt be owned, that theſe lines fall in here very naturally; yet, as moſt editions rank them immediately after,

Et teneat culti jugera multa ſoli. *Lin.* 2.

my friend has tranſlated them in that place.

Ver. 61. The original of this line greatly perplexed the critics, till Joannes Brodæus firſt ſaw, that a ſecond "non" before "contentus" was wanting. Manutius, in his commentary on Cicero's Familiar Epiſtles, and Muritus, in his Lect. Var. I., 10. produce many inſtances of this mode of writing from the beſt antiquity. *Broekh.*

Ver. 63. In this, and ſome of the following ſtanzas, Tibullus repreſents that ſecure tranquillity of a country life, which innocence of mind beſtows only on thoſe, who live according to the laws of nature. "Neque enim facile," adds Broekhuſius, "impurus quivis ſolitudini ſe committat, ſub arborum umbra ſomnulum capturus in molli gramine. Hæret intus ſempiterna ſcelerum comes mala conſcientia.

——Non ſiculæ dapes
Dulcem elaborabunt ſaporem, &c.
Lib. iii. *Od.* 1.

Nor dainties force his pall'd deſire,
Nor chant of birds, nor vocal lyre,
To him can ſleep afford;
Heart-ſoothing ſleep, which not diſdains
The rural lot, or humbler ſwains,
And ſhady rivers fair;
Or Tempe's ever-blooming ſpring,
Where zephyrs wave the balmy wing,
And fan the buxom air. *Francis.*

"Ut præclare Horatius noſter, ille optimus ille certiſſimus vivendi magiſter. Hanc ſibi nunc vivendi rationem ſequendam Tibullus proponit, æquiſſimo animo relinquens beatæ ſumum et opes, ſtrepitumque Romæ, qua quidem vita nihil convenientius ſapientiæ ſtudioſis, et muſarum ſacerdotibus, honæque mentis candidatis." But this opinion of Broekhuſius may be diſputed; for, though a country ſolitude is neceſſary for the perfecting works of genius, yet the town is the beſt ſchool for thoſe who would excel in deſcriptions of human life.

Ver. 69. *Meſſala.*] This great ſoldier, patriot and critic (of whom ſo much has been ſaid in Tibullus's Life) was in a high degree of favour with Tully; and though Mæcenas has been more praiſed by the poets than Meſſala, the hiſtorians ſhow us, that our poet's friend was both a greater and better man than the favourite of Auguſtus. See the notes to El. 3. and El. 8. of the firſt book.

If the authority of Virgil is to be depended upon, the Romans derived the cuſtom of adorning their houſes with hoſtile ſpoils from the remoteſt antiquity. Æn. 7. ver. 183. And indeed it is natural to imagine, where the tradition is the chief ſpring from which the firſt unlettered nations drew their knowledge of paſt events, that theſe marks of conqueſt were the beſt authority for the oral hiſtorian.

When a Roman ſold a houſe adorned with oſtile ſpoils, either won by himſelf or his anceſors, the purchaſer was not permitted to avail imſelf of the honour they beſtowed, but obliged o take them down.

Ver. 81. The perſon alluded to in this paſſage vas C. Soſius, who being Prætor when the civil war broke out, was afterwards ſent by M. Anhony to command in Syria and Cilicia, when he irſt ſubdued the Arabians; and then Antigonus, having formerly butchered a Roman garriſon, fled, after his defeat, to Jeruſalem, which Soſius ſoon after took; and uſing the Jews with no leſs cruelty than avarice, he beſtowed their kingdom on Herod of Aſcalon Neither did Antigonus eſcape the conqueror, who not only whipped, but crucified and beheaded him. Theſe actions of barbarity, although they diſgrace victory, yet procure Soſius the honour of a triumph at Rome, A. U. C. 719. *Broekhuſius.*

Ver. 89. We ſee, from this inſtance (and many ſuch occur in our poet), that elegy, as well as comedy, ſometimes raiſes her voice; and if Tibullus's panegyric had not come down to us, critics, no doubt, would have hence conjectured, that his genius was no leſs ſuited to the lofty than the tender ſubjects of poeſy.

Ver 93. This pathetic circumſtance Ovid has applied to Nemeſis in his fine elegy on the death of our poet.

Ver. 98 For the funerals of the ancients, ſee notes to El ii. book 3.

Of all the methods practiſed by different nations in their diſpoſal of the dead, the cuſtom of the Calatian Indians, as Herodotus relates it, is the moſt extraordinary. Darius, ſays that elegant hiſtorian, having one day aſked ſome of his Grecian ſubjects, what ſum would induce them to eat their deceaſed parents (*τους πατερας αποθνησκοντας κατασιτεισθαι*), they inſtantly replied, that no bribe ſhould ever make them do ſo horrid an action. Upon this, the ſame monarch, in the preſence of the Greeks too, demanding, by an interpreter of ſome Calatian Indians, how much money they would take not to eat, for that was their cuſtom (*οι τους γονεας κατεσθιουσι*), but to burn their dead parents; he was entreated, with loud and earneſt exclamations, not to compel them to do a deed which for ever muſt deſtroy their peace of mind! So juſtly, adds the hiſtorian, does Pindar call cuſtom the ſovereign of all. *νομον παντων βασιλεα.* Herod. Thal. C. 38.

Ver. 103. Thoſe who indulged an immoderate grief for their deceaſed friends, were ſuppoſed by the ancients to injure their manes, and therefore Cornelia entreats her huſband, Paulus the cenſor,

Deſine, Pauli, meum lacrymis urgere jepuicrum.
Propert. L. 4. E. 11.

And Lucian, in his excellent diſcourſe on mourning (*περι πενθους*), makes a departed youth thus anſwer the frantic ſorrowings of his father, *ω καικοδαιμον ανδρωπε τι κλαιεις*, &c. Unhappy mortal why do you thus lament aloud? Why do you cauſe me ſo much pain? Ceaſe to tear your hair and wound your face, I am far more fortunate than you.' Why then do you call me names, and term me wretched?

Ver. 104. Turnebus was the firſt who explained this paſſage. The poet, though an enemy to extravagant grief, expected that Delia would ſhow a tender concern when he died. *Broekhuſius.*

Ver. 111. That pleaſant verſifier Malherbe, thus addreſſes the muſes,

Quand le Sang bouillant en mes veines
Me donnoit de jeunes deſires
Tantot vous ſoupiriez mes peines
Tantoi vouſchantiez mes plaiſirs:
Mais aujourâhui que mes années
Vers leur fin s'en vont terminées,
Sercit il bien a mes ecrits
D' Ennuyer les races futures
Des ridicules avantures
D'un Amoureux en cheveux gris?

The reader may ſee the miſeries of an old man's falling in love well deſcribed in the elegies commonly imputed to Virgil's friend, the famous Cornelius Gallus. Theſe elegies are a modern compoſition, the work of one Longinus Maximian a phyſician.

ELEGY II.

With wine, more wine, my recent pains deceive,
Till creeping ſlumber ſend a ſoft reprieve:
Aſleep, take heed no whiſper ſtirs the air,
For wak'd, my boy, I wake to heart-felt care.
Now is my Delia watch'd by ruthleſs ſpies,
And the gate, bolted, all acceſs denies.
Relentleſs gate! may ſtorms of wind and rain,
With mingled violence avenge my pain!
May forky thunders, hurl'd by Jove's red hand,
Burſt every bolt, and ſhatter every band!
Ah no! rage turns my brain; the curſe recal;
On me, devoted, let the thunder fall!
Then recollect my many wreaths of yore,
How oft you've ſeen me weep, inſenſate door!
No longer then our interview delay,
And as you open let no noiſe betray.

In vain I plead!—Dare then my Delia riſe!
Love aids the dauntleſs, and will blind your ſpies!
Thoſe who the godhead's ſoft beheſts obey,
Steal from the pillows unobſerv'd away;
On tiptoe traverſe unobſerv'd the floor;
The key turn noiſeleſs, and unfold the door:
In vain the jealous each precaution take,
Their ſpeaking fingers aſſignations make.
Nor will the god impart to all his aid;
Love hates the fearful, hates the lazy maid;
But through ſly windings, and unpractis'd ways,
His bold night-errants to their wiſh conveys:
For thoſe whom he with expectation fires,
No ambuſh frightens, and no labour tires;
Sacred the dangers of the dark they dare,
No robbers ſtop them, and no bravoes ſcare.
Though wint'ry tempeſts howl, by love ſecure,
The howling tempeſt I with eaſe endure:
No watching hurts me, if my Delia ſmile,
Soft turn the gate, and beckon me the while.
She's mine. Be blind, ye ramblers of the night,
Leſt angry Venus ſnatch your guilty ſight:
The goddeſs bids her votaries joys to be
From every caſual interruption free:
With prying ſteps alarm us not, retire,
Nor glare your torches, nor our names inquire:
Or if ye know, deny, by Heaven above,
Nor dare divulge the privacies of love.
From blood and ſeas vindictive Venus ſprung,
And ſure deſtruction waits the blabbing tongue!
Nay, ſhould they prate, you, Delia, need not fear;
Your lord (a ſorcereſs ſwore), ſhould give no ear!
By potent ſpells ſhe cleaves the ſacred ground,
And ſhuddering ſpectres wildly roam around!
I've ſeen her tear the planets from the ſky!
Seen lightning backward at her bidding fly!
She calls! from blazing pyres the corſe deſcends,
And, re-enliven'd, claſps his wondering friends!
The fiends ſhe gathers with a magic yell,
Then with aſperſions frights them back to hell!
She wills,—glad ſummer gilds the frozen pole!
She wills,—in ſummer wint'ry tempeſts roll!
She knows ('tis true), Medea's awful ſpell!
She knows to vanquiſh the fierce guards of hell!
To me ſhe gave a charm for lovers meet,
("Spit thrice, my fair, and thrice the charm repeat.")
Us, in ſoft dalliance ſhould your lord ſurpriſe;
By this impos'd on he'd renounce his eyes!
But bleſs no rival, or th' affair is known;
This incantation me befriends alone.
Nor ſtopp'd ſhe here; but ſwore, if I'd agree,
By charms or herbs to ſet thy lover free.
With dire luſtrations ſhe began the rite!
(Serenely ſhone the planet of the night)
The magic gods ſhe call'd with helliſh ſound,
A fable ſacrifice diſdain'd the ground——
I ſtopp'd the ſpell: I muſt not, cannot part:
I begg'd her aid to gain a mutual heart.

NOTES ON ELEGY II.

The foregoing poem was written by Tibullus upon his being diſappointed in getting admittance to the apartments of Delia.

Ver. 7. It was cuſtomary with the Roman lovers to addreſs the gates of their miſtreſſes: Many inſtances of this occur in the elegiac poets.

Ver. 13. This kind of gallantry was much practiſed by the Romans.

At lacrimans excluſus amator limina ſæpe
Floribus, et ſertis operit, poſteſque ſuperbus
Ungit amaracyno. *Lucret.*

Meantime excluded, and expos'd to cold,
The whining lover ſtands before the gates,
And there with humble adoration waits;
Crowning with flow'rs the threſhold and the floor,
And printing kiſſes on th' obdurate door.
Dryd.

The Romans decked their doors with garlands upon many public and private occaſions.

Ver. 24. The beſt comment on all this paſſage, is that elegy of Ovid's which begins

Me ſpecta, nutuſque meos, &c.

Ver. 32. The civil wars, as they introduced a general diſſoluteneſs of manners, ſo they alſo increaſed the number of robbers; and we have claſſical authority for aſſerting, that Rome, in the age of Cæſar, was as much infeſted with aſſaſſins as modern Italy. Propertius has thus improved upon this paſſage of our author:

Nec tamen eſt quiſquam ſacros qui lædit amantes
Scyronis media ſic licet ire Via:
Quiſquis Amator erit, Scythicis licet ambulet oris,
Nemo adeo ut noceat, barbarus eſſe poteſt,
Luna miniſtrat iter, demonſtrant Aſtra ſalebras,
Ipſe Amor accenſas percutit ante faces.
Lib. iii. *El.* 16.

Yet, after all, the thoughts of Tibullus appear more juſt. Mr. Prior has given us the ſame ſentiment, but in a different manner, uſing mythology with more addreſs than even moſt of the ancients.

For love, fantaſtic power, that is afraid
To ſtir abroad till watchfulneſs be laid;
Undaunted then through cliffs and valleys ſtrays,
And leads his votaries ſafe through pathleſs ways:
Not Argus with his hundred eyes ſhall find
Where Cupid goes, though he, poor guide, be blind.
Henry and Emma.

Ver. 36. Broekhuſius's note on the original of is paſſage is ſo curious, that the reader ſhall ave it in his own words: "Minus recte Turebus (nam et Turnebus homo fuit) hanc digitoim concrepationem exponit de re, quam facile alloque negotio adſequimur, et levi quodam velut no et nutu jubemus et obtinemus." Adv. lib. . This explanation, adds our commentator, urnebus confirms by a quotation from Martial, hich, however, as Broekhuſius ſagaciouſly obrves, only intimates the geſture of a perſon, matulam poſcentis." He then interprets the aſſage, and his interpretation the tranſlator has dopted.

Ver. 38. This was a puniſhment ſuppoſed to e inflicted on thoſe who beheld, though without eſign, any deity. The old prieſteſs of the "bola Dea," in Propertius, thus addreſſes Alcides:

Parce oculis, hoſpes, lucoque age ſede verendo,
Cede agedum, et tuta, limina linque, fuga.
Lib. iv. *El.* 9.

Venus, in the end of the hymn aſcribed to Homer, threatens Anchiſes, if he blabbed their intercourſe, to ſtrike him with thunder. The youth, having diſregarded this warning, was thus deprived of one of his eyes. See Callimachus' poem intituled the Bath of Diana.

Ver. 49. The firſt deſcription of a witch to be found in any Latin poet, is that which Virgil has given in his eighth eclogue. Thoſe critics who are fond of tracing reſemblances among poets, would be apt to aſſert, that our author had that paſſage in his eye; and yet, if it is conſidered, that popular prejudice imputed thoſe very effects to witchcraft, there is no occaſion for ſuppoſing that Maro's Mæris aſſiſted Tibullus in his deſcription of his "Saga Verax." However diſſonant to ſound ſenſe and philoſophy magical deſcriptions may be, yet they have an excellent effect in poetry, where admiration is to be excited.

According to Marcellas, "ſaga," in its primitive meaning, ſignified "turpis amorum conciliatrix;" and as ſuch bawds uſed ſpells and drugs to effectuate their illicit purpoſes, it came afterwards to be applied to a witch.

The Romans, according to Broekhuſius, held magic in the utmoſt abhorrence. Would the reader view the full force aſcribed by the ancients to witchcraft, let him turn to Horace's fifth and ſeventeenth Epodes. Ovid's Epiſtle to Hypſipyle, ver. 83. and El. viii. lib. 1. and Metamorp. lib vii. ver. 179. lib. xiv. ver. 43. Propertius, lib. iv. El. v. Seneca's Medea, ver. 675. and his Hercules Œta, ver. 454. Lucan, lib. vi. ver. 431. Apuleius, lib. i. ii. iii. of his Metamorphoſis. Petronius. Claudian, lib. i. in Rufin. ver. 146. Silius, lib. viii. ver 496. Valerius Flaccus, lib. vi. ver. 439. and Nemeſianus's fourth Eclogue. But Virgil's deſcription (lib. iv. Æn. 487.) of a witch, though compriſed in five lines only, is, by Broekhuſius, preferred to all the reſt.

However the moderns may be obliged in other reſpects, to yield the poetical palm to the ancients, yet the moſt bigotted to claſſical ſuperiority muſt confeſs, that the ancients themſelves have been ſurpaſſed by us in the poetry of magic. Who, for inſtance, of the Greek or Roman poets, can be compared with our Shakſpeare in this particular? Nay, they might be challenged to produce any magical rites equal in propriety and terror to thoſe we find in Fletcher's Faithful Shepherdeſs; a poem from which, if Shakſpeare did not tranſplant many a beauty, Milton certainly did.

Ver. 50. It was believed by the ancients, that magic could raiſe the manes of the dead, and that thoſe ghoſts could certainly inform inquirers concerning future events. Vid. Homer's Odyſſey, lib. xi. Virgil's Æn. vi. Seneca's Œdip. Statius, lib. iv. Silius Italicus, lib. xiii. and Valerius Flaccus, lib. i. Nor did the Romans regard necromancy as an infamous or abominable art.

One of the uſages practiſed to make the manes appear, was to ſhed human blood; and, if Cicero may be credited, (vid. Interrogat. Vatin.) the entrails of boys particularly were, on ſuch occaſions, offered up.

Ver. 52. Some editors read "fluminis;" and the reading is ſupported by MS. authority.

Ver. 55. Theſe thoughts are thus aſſumed by Hammond.

A wizard dame, thy lover's ancient friend,
With magic charms has deaft thy huſband's ear;
At her command I ſaw the ſtars deſcend,
And winged lightnings ſtop in mid career.

I ſaw her ſtamp and cleave the ſolid ground,
While ghaſtly ſpectres round us wildly roam;
I ſaw them hearken to her potent ſound,
Till ſcarr'd at day they ſought their dreary home.

At her command, the vigorous ſummer pines,
And wint'ry clouds obſcure the hopeful year:
At her ſtrong bidding gloomy winter ſhines,
And vernal roſes on the ſnows appear.

She gave theſe charms, which I on thee beſtow:
They dim the eye, and dull the jealous mind;
For me they make a huſband nothing know;
For me, and only me, they make him blind.
El. v.

The whole of this fifth elegy of Hammond's is indeed a beautiful imitation of this ſecond of Tibullus.

Ver. 54. The aſperſion uſed to ſend thoſe "infernæ catervæ" back to hell was milk; and, if the tranſlator is not miſtaken, this is the only paſſage in the ancient poets where milk is taken notice of as uſed for this purpoſe. See note on the ſecond elegy of the third book, for the uſe of milk at funerals; and elegy ſixth of the ſame book, for its virtue in diſpelling diſeaſes, when offered along with blood and wine to the infernal gods.

Ver. 60. The unuſual hiſſing in the original of this line

Sola feros Hecates perdumuiſſe canes,

was probably meant to give the reader a more terrible idea of thoſe fierce attendants of Hecate; and hence the alteration of

Sola feros Hecatæ, &c.

offered by Broekhuſius, ſeems improper.

Ver. 62. The reader who wants to be informed of the many uſes made of ſpittle in medicine, in magic, in expiations, in averting witchcraft, in omens, and in conciliating love, may conſult Pliny the elder, and thoſe commentators whom Broekhuſius has quoted. We ſhall only obſerve, that the belief of its being a preſervative againſt faſcination is very ancient, for Theocritus makes Damætas thus expreſs himſelf in the ſixth Idyl.

ὡς μη βασκανθω δι, τρις πτυσα εις εμον κολπον.

Nor did only the ſhepherds of Sicily look upon ſpittle in this light, the Romans believed the ſame of it. Accordingly, on the day when an infant was named (which for girls was on the eighth, for boys on the ninth, after birth), the grandmother or aunt, moving round in a circle, rubbed, with her middle finger, the child's forehead with ſpittle, which was hence called "Luſtralis Saliva."

The number three was of great import in almoſt all the religious and magical ceremonies of antiquity; for though, as Virgil expreſſes it, the gods were ſuppoſed to be pleaſed with all odd numbers, yet three was deemed the moſt pleaſing to them. The number four was alſo of ſome eſtimation, as Macrobius, in his Commentary on the Somn. Scipion. informs us. Vid. cap. 5, 6. Our poet alſo uſes the number four in one of his elegies.

Ver. 63. Ovid, who, without any ceremony, adopts our poet's ſentiments, whenever they ſuit his purpoſe, has made uſe of the ſame argument to an over-vigilant keeper.

Viderit ipſe licet, credet tamen ille neganti
Damnabit oculos, et ſibi verba dabit.

Although it is with great reluctance that men credit any report injurious to the fame of one they love, yet nothing leſs than a ſpell was neceſſary to make a huſband deny the teſtimony of his own ſenſes.

Ver. 69. The luſtration mentioned in the original was a torch of pine-tree; to which were added ſulphur and bitumen, and, as Broekhuſius conjectures, blood. A ſolemn waſhing, and the ſacrifice of a black lamb, preceded the uſe of the torch. Theſe ceremonies were alſo performed on a clear night, "nocte ſerena." The ancients thought them equally powerful either to bind the lover, or free him from the influence of love.

Pontanus and Amaltheus among the moderns, not to mention others, have given us an ample detail of the ceremonies practiſed on theſe occaſions: but as moſt of them are unadapted to modern ſuperſtition, their accounts ſhow ſome learning, but little judgment. Ovid laughs at all theſe ceremonies in his Remedy of Love.

Ver. 71. The beſt liſt of theſe deities is to be found in the ſeventh book of Ovid's Metamorphoſis, ver. 192 and in the two Spaniſh poets, Seneca, Med. ver. 140. and Lucan, lib. vi. ver. 730. *Broekhuſ.*

Ver. 74. Though this be evidently the concluſion of the elegy, yet ſome editors have ſtrangely tacked to it,

Ferreus ille fuit,

and the thirteen following lines, which belong to the firſt elegy. Nor content with this, they have forced

Num veneris magnæ,

and the ſeven ſucceeding verſes, from their natural place in the fifth elegy of this book, and have added them to the other tranſpoſition. Mr. Dart followed one of theſe editions.

May it not have been this inaccuracy of editors which induced that great poet, as well as critic, Mr. Dryden, to aſſert, that Tibullus, in compoſing, ſeldom looked farther than the next line; that he rambles from his ſubject, and concludes with ſomething which is not of a piece with the beginning. Although it is granted, that no man underſtood the beauties of ancient poetry, and of courſe could draw the characters of ancient poets, better than Mr. Dryden; yet it is certain, that his ſentiments on theſe ſubjects were not always the reſult of mature deliberation. In the general preface to the volume from which the above cenſure on our author is taken, Mr. Dryden complains of his want of leiſure; and, indeed, this is too evident in the quotation above, as the arguments to Tibullus's elegies will ſhow a beginning, a middle, and a concluſion, even more than can be found in Propertius, who yet, according to that critic, had always a plan when he ſat down to write.

Let not, however, the reader imagine that this is meant as a cenſure on Mr. Dryden; that immortal genius had not time to correct his works. But what ſhall we ſay of the age which ſuffered its firſt pen to be hackneyed through neceſſity?

However, if Dryden's circumſtances are an apology for his little incorrectneſſes, Rapin cannot be pardoned on the ſame account: and yet that critic, who often characterizes books he never read, makes the following obſervation:

"Je ſcai, qu' il y a des ouvrages qui doivent par la qualité de leur caractére être écrits d' un air libre ſans autre deſſein, que celui d' une naiveté naturelle, et ſans contrainte, tels que ſont les hymnes d' Orphée d' Homére, de Callimachus, tels que ſont certaines Odes de Pindare, d' Anacréon, et d' Horace, qui n' ont de régle que l' enthouſiaſme, tels que ſont auſſi la plupart des Elégies de Tibulle et Properce; mais il faut avouer, que ce ne ſont pas les plus helles, et quand on ſait Reflexions aux Elegies d' Ovide on y trouve toujours un tour ſecret qui en fait le deffein." What ſhall one ſay to all this critical jargon, but that

Ten cenſure wrong, for one who writes amiſs.

Jo. Antonius Vulpius, a lawyer of Bergamo, who publiſhed an edition of Catullus, Tibullus,

nd Propertius, A. D. 1. 10. at Padua, concludes his fecond elegy with

—— nec te poſſe carere vilim,

s Broekhuſius has done; but then he immediately adds, though without any reaſon, "Videntur aliqua deſiderari. Vulpius obſerves, that "poſſe carere" was a Roman colloquial expreſſion, of which he produces two inſtances from Martial.

ELEGY III.

While you, Meſſala, plough th' Ægean ſea,
O ſometimes kindly deign to think of me:
Me, hapleſs me, Phæacian ſhores detain,
Unknown, unpitied, and oppreſs'd with pain.
Yet ſpare me, death, ah ſpare me and retire:
No weeping mother's here to light my pyre:
Here is no ſiſter, with a ſiſter's woe,
Rich Syrian odours on the pile to throw:
But chief, my ſoul's ſoft partner is not here,
Her locks to looſe, and ſorrow o'er my bier.
What though fair Delia my return implor'd,
Each ſane frequented, and each god ador'd:
What though they bade me every peril brave;
And fortune thrice auſpicious omens gave:
All could not dry my tender Delia's tears,
Suppreſs her ſighs, or calm her anxious fears;
E'en as I ſtrove to miniſter relief,
Unconſcious tears proclaim'd my heart-felt grief:
Urg'd ſtill to go, a thouſand ſhifts I made,
Birds now, now feſtivals my voyage ſtaid:
Or, if I ſtruck my foot againſt the door,
Strait I return'd, and wiſdom was no more.
Forbid by Cupid, let no ſwain depart,
Cupid is vengeful, and will wring her heart.
What do your offerings now, my fair, avail?
Your Iſis heed not, and your cymbals fail!
What, though array'd in ſacred robes you ſtood,
Fled man's embrace, and ſought the pureſt flood?
While this I write, I ſenſibly decay,—
"Aſſiſt me, Iſis, drive my pains away:
"That you can every mortal ill remove,
"The numerous tablets in your temple prove:
"So ſhall my Delia, veil'd in votive white,
"Before your threſhold ſit for many a night;
"And twice a-day, her treſſes all unbound,
"Amid your votaries fam'd, your praiſes ſound:
"Safe to my houſehold gods may I return,
"And incenſe monthly on their altars burn."
How bleſt man liv'd in Saturn's golden days,
E'er diſtant climes were join'd by lengthen'd ways.
Secure the pine upon the mountain grew,
Nor yet o'er billows in the ocean flew;
Then every clime a wild abundance bore;
And man liv'd happy on his natal ſhore:
For then no ſteed to feel the bit was broke,
Then had no ſteer ſubmitted to the yoke;
No houſe had gates, (bleſt times!) and, in the grounds
No ſcanty landmarks parcell'd out the bounds:
From every oak redundant honey ran,
And ewes ſpontaneous bore their milk to man:
No deathful arms were forg'd, no war was wag'd,
No rapine plunder'd, no ambition rag'd.
How chang'd, alas! Now cruel Jove commands;
Gold fires the ſoul, and falchions arm our hands:
Each day, the main unnumber'd lives deſtroys;
And ſlaughter, daily, o'er her myriads joys.
Yet ſpare me, Jove, I ne'er diſown'd thy ſway,
I ne'er was perjur'd; ſpare me, Jove, I pray.
But, if the ſiſters have pronounc'd my doom,
Inſcrib'd be theſe upon my humble tomb:
"Lo! here inur'd a youthful poet lies,
"Far from his Delia, and his native ſkies!
"Far from the lov'd Meſſala, whom to pleaſe
"Tibullus follow'd over land and ſeas."
Then love my ghoſt (for love I ſtill obey'd)
Will grateful uſher to th' Elyſian ſhade:
There joy and ceaſeleſs revelry prevail;
There ſoothing muſic floats on every gale;
There painted warblers hop from ſpray to ſpray,
And, wildly-pleaſing, ſwell the general lay:
There every hedge, untaught, with caſſia blooms,
And ſcents the ambient air with rich perfumes:
There every mead a various plenty yields;
There laviſh Flora paints the purple fields:
With ceaſeleſs light a brighter Phœbus glows,
No ſickneſs tortures, and no ocean flows;
But youths aſſociate with the gentle fair,
And ſtung with pleaſure to the ſhade repair:
With them love wanders whereſoe'er they ſtray,
Provokes to rapture, and inflames the play:
But chief, the conſtant few, by death betray'd,
Reign, crown'd with myrtle, monarchs of the ſhade.
Not ſo the wicked; far they drag their chains,
By black lakes ſever'd from the bliſsful plains;
Thoſe ſhould they paſs, impaſſable the gate
Where Cerb'rus howls, grim ſentinel of fate.
There ſnake-hair'd fiends with whips patrole around,
Rack'd anguiſh bellows, and the deeds reſound:
There he, who dar'd to tempt the queen of heaven,
Upon an ever-turning wheel is driven:
The Danaids there, ſtill ſtrive huge caſks to fill,
But ſtrive in vain, the caſks elude their ſkill:
There Pelop's ſire, to quench his thirſty fires,
Still trics the flood, and ſtill the flood retires:
There vultures tear the bow'ls, and drink the gore,
Of Tityus, ſtretch'd enormous on the ſhore.
Dread Jove, as vaſt as endleſs be their pain
Who tempt my fair, or wiſh a long campaign.
O let no rival your affections ſhare,
Long as this boſom beats, my lovely fair!

Still on you let your prudent nurſe attend;
She'll guard your honour, ſhe's our common friend.
Her tales of love your ſorrowings will allay,
And, in my abſence, make my Delia gay:
Let her o'er all your virgin-train preſide,
She'll praiſe th' induſtrious, and the lazy chide.
But ſee! on all enfeebling languors creep;
Their diſtaffs drop, they yawn, they nod they ſleep.

Then, if the deſtinies propitious prove,
Then will I ruſh, all paſſion, on my love:
My wiſh'd return no meſſenger ſhall tell,
I'll ſeem, my fair, as if from heaven I fell.
A ſoft confuſion fluſhes all your charms,
Your graceful diſhabille my boſom warms,
You, Delia, fly and claſp me in your arms.
For this ſurpriſe, ye powers of love, I pray,
Poſt on Aurora, bring the roſy day.

NOTES ON ELEGY III.

This elegy was written in a dangerous fit of ſickneſs, which detained our poet in the iſland of Corfu, anciently called *Phæacia*, and was apparently compoſed before the ſecond.

The commentators pretend, that Meſſala was upon his Syrian expedition at this time; and that Tibullus recovering, followed his patron to Cilicia, Ægypt, &c. As this expedition took place A. U. C. 724, Tibullus was then only fourteen years old, if he was born in the conſulſhip of Hirtius and Panſa; but as this is rather too fine an elegy for a boy of that age (and yet Pliny the younger had wrote a Greek tragedy before fifteen years), and as it appears, that he had been for ſome time in love with Delia; not to mention other arguments which the poem itſelf affords us, the tranſlator is inclined to join iſſue with Douza, who places his birth A. U. C. 690, in the conſulſhip of Cicero and of Caius Anthony. Vide the Life.

But whatſoever time this elegy was written, we may apply what Quintilian ſays of eloquence to this ſpecies of writing in particular, "Pectus eſt, quod diſertos facit."

Ver. 1. The original of theſe lines is quoted by Dr. Trapp, in his chapter on elegy, as an inſtance of the ſoothing graces of elegiac complaints, "Quam jucundus eſt dolor poeticus," (ſays that critic, prælect. 13.) "et quanta elegantia querelarum, morbum ſuum, terra peregrina ægrotus, ſic deflet Tibullus.

The cohors mentioned in the text, was Meſſala's retinue; which muſt have been very different from that of moſt modern generals, if made up of ſuch men as Tibullus But in thoſe days a man was thought the better ſoldier for cultivating an acquaintance with the muſes.

An abhorrence of our diſſolution was implanted in us by the Author of Nature for the wiſeſt purpoſes. Even the oldeſt, and moſt wretched, are, in general, unwilling to die. But to be ſnatched away in the bloom of life, and whilſt in a foreign country, at a diſtance from one's relations, eſpecially from a darling miſtreſs, are circumſtances peculiarly diſtreſsful. Homer, who knew the ſource of every paſſion, and could raiſe them all, has beautifully inſerted many ſuch pathetic ſtrokes in deſcribing the deaths of his heroes: And if his battles make the reader regardleſs of danger, they alſo increaſe his humanity: And although Virgil is ſurpaſſed by Homer, in this reſpect, yet is the lamentation of Euryalus's mother, who had left her father's court to ſhare the fortunes of her ſon, a maſterpiece of the pathetic. Taſſo has introduced many beautiful ſtrokes of this kind into his Il Goffredo; but none of the modern heroic poets are in this particular to be preferred to the author of Leonidas; unleſs indeed we admit, that Dante's deſcription of Ugolino ſurpaſſes any poetical picture of diſtreſs to be met with among either the ancients or moderns.

Ver. 14. The original runs thus:

Illa ſacras pueri ſortes ter ſuſtulit, illi
Rettulit e trimis omina certa puer.

Thoſe who were ſuperſtitious, among the ancients, generally conſulted the lots before they began any thing of importance. The firſt words ſpoken by the virgin in the temple of Juno, were the ſortes, in caſes of marriage; as the firſt ſpoken by a boy in the highway, gave the omen commonly depended upon before a journey was undertaken. An example will better explain this obſcure piece of ſuperſtition. A lady who was betrothed, went, with a young companion, to the temple of the goddeſs of marriage, to watch the firſt words ſpoken by a woman. Anxiouſly attentive ſhe ſeated herſelf, while the other ſtood. Two hours having paſſed, without a word's being uttered, or any body entering, the younger at laſt ſaid, "My dear I am tired, will you permit me "to ſit in your chair a little?" Theſe were the firſt words. The younger accordingly ſeated herſelf, and no body coming in, they both went away after having waited ſome time longer. The betrothed lady ſoon after died, and the other was married to the bridegroom in her ſtead.

There were other kind of ſortes. The old Scholiaſt on the fourth Pythian ode of Pindar, tells us, that dice thrown upon a table were uſed as a lot; and if one particular ſide turned up, what

they wiſhed would come to paſs; but if it did not, their wiſhes ſhould not be accompliſhed.

Εαν βαλλοντες μη τοδε αναζη, αποτελεσθησεται, τοδε ει, ουκ αποτελεσθησεται.

Of lots, ſome were ſacred to Apollo, ſome to Mercury; and they were ſometimes to be caſt into a deep well or fountain. We ſee an inſtance of this in Suetonius's Life of Tiberius, cap. 14. and Dempſter in his Notes on Roſinus, informs us, that thoſe who had ſucceſs in this kind of divination, often beſtowed gifts upon the fountain. See Pliny, Lib. viii. Ep. 8.

At Prænesſte was a temple, erected to fortune, where devotees uſed often to repair in order to have their future adventures told them. This temple was very magnificent, which made Carneades ſay, "He never had ſeen fortune more fortunate than at Prænesſte." In that temple the lots were blended together, thrown into an olive cheſt or urn, and drawn by a boy. This is probably the ſpecies of divination alluded to here by our poet.

Ver. 21. The ſtriking the foot againſt the threſhold, at the firſt going abroad, was, by the ancients, reputed a bad omen; and is one of the pretexts our poet uſed in order to delay his departure. The ſuperſtitious among ourſelves have many as fooliſh obſervances.

Ver. 26. Jupiter, in one of Lucian's dialogues commands Mercury to haſten to the Nemean foreſt, there to deſtroy Argus, which done, he was to waft Io over ſea to Ægypt, and there make an Iſis of her, Εγω θεατοις εσει, και τον Νειλον αναγετω και τους ανεμους αποπεμπετω, και φοζετω τους πλεοντας. "Sit illis Dea, Nilumque attollat, et ventos immittat et navigantes ſervet." The ſame witty author alſo informs us, that the Ægyptians not only uſed to call their larger ſhips by the name of Iſis, for good-luck's ſake, but alſo to have ſtatues of this tutelary deity placed in the ſtern and forecaſtle of their veſſels. Vid. his piece intitled, πλοιον η ευχαι. This ſhows the propriety of Delia's addreſſing Iſis to protect Tibullus in the voyage he was about to make.

Gruterus has tranſmitted to us the figure, &c. of a marble altar, dedicated to Iſis, to which Broekhuſius was obliged for the form he has given us of an Ægyptian Siſtrum or Cymbal. Apuleius has deſcribed this inſtrument, Lib. 3. of his Metam.

Ver. 28. In the myſteries of Iſis, it was cuſtomary for the votary to lie alone ſeveral nights ſucceſſively. This cuſtom Propertius rails at.

Triſtia jam redeunt iterum ſolemnia nobis,
Cynthia jam noctes eſt operata decem;
At utinam Nilo pereat quæ ſacra tepente
Miſit matronis Inachis, auſoniis!
Quæ Dea tam cupidos toties diviſit amantes,
Quæcunque illa ſuit, ſemper amara ſuit.
Dart.

Ver. 32. Thoſe who had eſcaped ſhipwreck, or any dangerous fit of ſickneſs, uſually hung up, in the temple of Iſis, tablets, on which, ſay authors was deſcribed the manner of their deliverance: But Broekhuſius is of opinion, that, as ſailors dedicated to Iſis a repeſentation in paint of the danger they had eſcaped; ſo thoſe who recovered from any dangerous diſeaſe, by the aſſiſtance of Iſis, ſuſpended, on the walls of her temple, tablets, whereon was repreſented the form of the organ that had been principally affected, without any mention of the remedies uſed. Thus the old poet in the Priapeia has it.

Cur pictum memori ſit in tabella
Membrum quæritis, &c.

Beſides this, among the many votive inſcriptions to Iſis for health recovered, which Gruterus and others have preſerved, we meet with no mention of the applications or medicines ſuppoſed to have been ſucceſsful.

It is, however, an odd tradition, that Hippocrates was indebted to ſuch tablets, in a temple in the iſland of Cos, for the beſt part of the Coacæ Prænotiones. Could this be proved, it would ſhow, that great good may ſometimes ſpring from ſuperſtition.

In Popiſh countries, many figures of wax, ſilver, &c. are at this day to be ſeen on the walls of their churches, chapels, &c.

Ver. 33. As the goddeſs herſelf was clothed in white linen; ſo thoſe who returned her thanks for their own, or friends, recovery from ſickneſs, were always veiled in the ſame manner, and ſat on the ground before the porch of the temple. Her prieſts had their heads ſhaved, and alſo wore linen ſurplices. Hence they were called "Linigeri." See Martial's humorous epigram on that ſubject, Lib. ii. Ep. 29. Apuleius, in the eleventh book of his Metamorphoſis, has given the fulleſt account of the worſhippers of Iſis.

Ver. 35. From the words "pharia turba," a great critic, as Broekhuſius informs us, conjectured, that Meſſala attended Auguſtus Cæſar in his Ægyptian expedition againſt Mark Anthony. But the epithet "pharia" which is every where appropriated to Iſis, and her worſhip, deceived him.

Ver. 39. Ovid has imitated the whole of this paſſage in the beautiful elegy, which he ſent to Corinna upon her going abroad. Lib. ii. El. 11.

No poet, either ancient or modern, has ſurpaſſed Tibullus in his deſcription of the golden age; yet how different that age was from the picture given us of it by Tibullus, the great rural and philoſophical poet informs us in his Autumn,

Corruption ſtill,
Voracious, ſwallow'd what the lib'ral hand
Of bounty ſcatter'd o'er the ſavage year;
And ſtill the ſad Barbarian, roving, mix'd
With beaſts of prey; or, for his acorn meal,
Fought the fierce tuſky boar; a ſhivering wretch!
Aghaſt and comfortleſs! when the bleak north,
With winter charg'd, let the mix'd tempeſt fly,
Hail, rain and ſnow, and bitter-breathing froſt;
Then to the ſhelter of the hut he fled,
And the wild ſordid ſeaſon pin'd away:

For home he had not; home is the reſort
Of love and joy, and peace and plenty, where
Supported and ſupporting, poliſh'd friends
And dear relations mingle into bliſs.
But this the rugged ſavage never felt;
E'en deſolate in crowds; and thus his days
Roll'd heavy, dark and unenjoy'd along,
A waſte of time!

Ver. 65. This deſcription of Elyſium is not ſo poetical as may at firſt ſight be imagined; ſince even the philoſophers have painted that happy reſidence of the bleſſed in as lively colours. *Brockhuſ.*

Upon turning to the paſſage in Plutarch (Con. ſol. ad Apollon.) cited by Brockhuſius in defence of this cenſure, we were not a little aſtoniſhed to find that excellent philoſopher, borrowing the whole of his deſcription of Elyſium from Pindar's ſecond Olympian ode; which, as it is one of the fineſt paſſages in the old Theban, we ſhall here tranſcribe.

ισσιν δε νυκτεσσιν αει
εσα δ' εν ἁμεραις αλι-
ον εχοντες, ασουστερου
εσθλοι νεμονται βιο-
τον, ϑ χθονα ταρασσον-
τες αλκα χειρων
ϑδε ποντιον ὑδωρ
κεινην παρα διαιταν, αλ-
λα παρ μεν τιμιοις
ϑεων οϊτινες εχαι-
ρον ευορκιαις
αδακρυν νεμονται
αιωνα, &c.

And eſpecially in the ſucceeding antiſtrophe.

ενϑα μακαρων
νασον Ωκεανιδες
αυραι περιπνεουσιν, &c.

Which paſſages are thus tranſlated by the late Dr. Weſt, in his admirable verſion of Pindar.

But in the happy fields of light,
Where Phœbus, with an equal ray,
Illuminates the balmy night,
And gilds the cloudleſs day.

In peaceful, unmoleſted joy,
The good their ſmiling hours employ:
They no uneaſy wants conſtrain
To vex th' ungrateful ſoil,
To tempt the dangers of the billowy main,
And break their ſtrength with unabating toil,
A frail diſaſtrous being to maintain.

But, in their joyous calm abodes,
The recompence of juſtice they receive;
And, in the fellowſhip of gods,
Without a fear eternal ages live.

Again, in the antiſtrophe, he ſays, that the good who have been three times purified in as many ſucceſſive tranſmigrations, &c. become then qualified to enter the fortunate iſlands, where

Fragrant breezes, vernal airs,
Sweet children of the main,
Purge the bleſt iſland from corroding cares,
And fan the boſom of each verdant plain,
Whoſe fertile ſoil immortal fruitage bears;
Trees, from whoſe flaming branches flow,
Array'd in golden bloom, refulgent beams;
And flow'rs of golden hue that blow
On the freſh borders of their parent ſtreams;
Theſe by the bleſt in ſolemn triumph worn,
Their unpolluted hands and cluſtering locks adorn.

But beautiful as this deſcription is, it does not ſurpaſs that which Homer has given in the fourth Odyſſey, line 564, which, as Mr. Spence juſtly obſerves, is the only paſſage where that father of poetry deſcribes the regions of the bleſt. But to finiſh this long note, we ſhall only remark, that, as theſe laſt mentioned pictures of Elyſium are ſuited to their different places, or the poems in which they appear, ſo is that of our poet appropriated to the elegiac muſe; Dr. Trapp accordingly quotes it for its uncommon beauty. Prælect. 13.

Ver. 83. The firſt poetical deſcription of hell is to be found in Homer; and though all the ſucceeding epic poets of antiquity have, in imitation of their great father, ſent their heroes to viſit thoſe regions of woe, none of them have improved the original.

But although Homer's hell ſurpaſſes the hell of the ancients, it cannot however be compared with many paſſages in the Inferno of that great original poet Dante. Milton perhaps has not outdone him.

Voltaire's hell is as little terrible, as his Maſſacre of St. Bartholomew is unaffectedly told.

Ver. 86. Mythologiſts place a hundred hiſſing ſerpents round the head and neck of Cerberus, whom they alſo equip with the tail of a dragon.

Ver. 89. As the poet meant, not only to keep off every one from laying ſiege to his miſtreſs, but alſo to preſerve her conſtant in his abſence; he has ſelected, from the amours of mythology, ſome incidents very proper to his purpoſe.

Yet the whole of this deſcription is liable to the cenſure which Lucan, in his admirable Treatiſe on the Manner of writing Hiſtory, paſſes on Parthenius, Euphorion, and Callimachus, who, wandering from their main ſubject, ſpend, according to that witty critic, many words in deſcribing impertinences; but as the whole paſſage is admirable, the reader will not probably be diſpleaſed to ſee it tranſlated.

You muſt be particularly cautious, how you launch out in deſcribing mountains, rivers, and fortifications; leſt, by an oſtentatious diſplay of eloquence, you entirely drop the thread of your hiſtory; whenever, therefore, perſpicuity demands that the reader ſhould, in ſome degree, be informed of ſuch circumſtances, let your deſcription of them be compriſed in as few words as poſſible. On occaſions like theſe, place Homer before your eyes, who, though a poet, yet, in his account of hell, paſſes ſlightly over Tantalus, Ixion, Tityus, and the reſt: all which particulars, were they to be deſcribed by Parthenius, Euphorion, or even Callimachus, what a profuſion of verſes would be employed in bringing the water to the lips of

Tantalus, and in turning round the wheel of Ixion?

The more judicious among the ancients saw, that under the fables of Tantalus, &c. were repreſented the torments of an evil conſcience. See Macrobius's enſible Commentary on the Somnium Scipionis.

Ver. 109. This is one of thoſe thoughts, which, as Horace happily expreſſes it, Venus has imbued with a fifth part of her nectar.

ELEGY IV.

Poet.

So round, my god, may ſhady coverings bend,
No ſun-beams ſcorch thy face, no ſnows offend!
Whence are the fair ſo proud to win thy heart,
Yet rude thy beard, and guiltleſs thou of art?
Naked thou ſtand'ſt, expos'd to wint'ry ſnows!
Naked thou ſtand'ſt when burning Sirius glows!
Thus I—and thus the garden-power reply'd,
A crooked ſickle glittering by his ſide.

Priapus.

Take no repulſe—at firſt what though they fly!
O'ercome at laſt, reluctance will comply.
The vine in time full ripen'd cluſters bears,
And circling time brings back the rolling ſpheres:
In time ſoft rains through marble ſap their way,
And time taught man to tame fierce beaſts of prey.
Nor aw'd by conſcience meanly dread to ſwear;
Love-oaths, unratified, wild tempeſts bear!
Baniſh then ſcruples, if you'd gain a heart;
Swear, ſwear by Pallas' locks, Diana's dart;
By all that's moſt rever'd—if they require:
Oaths bind not eager love, thank heaven's good Sire!
Nor be too ſlow; your ſlowneſs you'll deplore;
Time poſts; and, oh! youth's raptures ſoon are o'er:
Now foreſts bloom, and purple earth looks gay;
Bleak winter blows, and all her charms decay:
How ſoon the ſteed to age's ſtiffneſs yields,
So late a victor in th' Olympic fields?
I've ſeen the aged oft lament their fate,
That ſenſeleſs they had learnt to live too late.
Ye partial gods, and can the ſnake renew
His youthful vigour and his burniſh'd hue?
But youth and beauty paſt; is art in vain
To bring the coy deſerters back again?

Poet.

Jove gives alone the powers of wit and wine,
In youth immortal, ſpite of years to ſhine.

Priapus.

Yield prompt compliance to the maid's deſires;
A prompt compliance fans the lover's fires:
Go pleas'd where'er ſhe goes, though long the way,
Though the fierce dog-ſtar dart his ſultry ray;
Though painted Iris gird the bluiſh ſky,
And ſure portends, that rattling ſtorms are nigh:
Or, if the fair one pant for ſylvan fame,
Gay drag the meſhes and provoke the game:
Nay, ſhould ſhe chooſe to riſk the driving gale;
Or ſteer, or row, or agile hand the ſail:
No toil, though weak, though fearful, thou forbear;
No toils ſhould tire you, and no dangers ſcare:
Occaſion ſmiles, then ſnatch an ardent kiſs;
The coy may ſtruggle, but will grant the bliſs:
The bliſs obtain'd, the fictious ſtruggle paſt;
Unbid, they'll claſp you in their arms at laſt.

Poet.

Alas! in ſuch degenerate days as theſe,
No more love's gentle wiles the beauteous pleaſe!
If poor, all gentle ſtratagems are vain!
The fair ones languiſh now alone for gain!
O may diſhonour be the wretch's ſhare,
Who firſt with hateful gold ſeduc'd the fair!

Priapus.

Ye charming dames, prefer the tuneful quire,
Nor meanly barter heavenly charms for hire.
What cannot ſong? The purple locks that glow'd
On Niſus' head, harmonious ſong beſtowed!
What cannot ſtrains? By tuneful ſtrains alone
Fair iv'ry, Pelops, on thy ſhoulder ſhone!
While ſtars with nightly radiance gild the pole,
Earth boaſts her oaks, or mighty waters roll,
The fair whoſe beauty poets deign to praiſe,
Shall bloom uninjur'd in poetic lays:
While ſhe who hears not when the muſes call,
But flies their ſav'rites, gold's inglorious thrall!
Shall prove, believe the bard, or ſoon or late,
A dread example of avenging fate!
Soft flattering ſongs the Cyprian queen approves;
And aids the ſuppliant ſwain with all her loves.

Poet.

The god, no novice in th' intriguing trade,
This anſwer, Titius, to my queſtion made:
But caution bids you fly th' inſidious fair,
And paints the perils of their eyes and air;
Nor theſe alone, devoted man ſubdue,
Devoted man their ſlighteſt actions woo.
Be cautious thoſe who liſt—but ye who know
Deſire's hot fever, and contempt's chill woe;
Me grateful praiſe——contempt ſhall pain no more;
But wiſh meet wiſh, inſtructed by my lore:
By various means, while others ſeek for fame,
Scorn'd love to counſel be my nobleſt aim.

Wide ſtands my gate for all—I rapt foreſee
The time, when I love's oracle ſhall be! [throng,
When round my ſeat ſhall preſs th' enamour'd
Attend my motions, and applaud my ſong.

Alas my hopes are fled, my wiles are vain;
The fair, I doat on, treats me with diſdain: 90
Yet ſay are me, charmer, your diſdain betrays
To witty laughter my too boaſtful lays.

NOTES ON ELEGY IV.

In this elegy the poet conſults Priapus about the means to be uſed in order to become a favourite with the fair; and that god, in his anſwer, delivers an epitome of the art of courtſhip.

However immoral ſome parts of Priapus's directions may be, there are but too many among the modern men of gallantry, who implicitly obey them; for, if the tranſlator is not greatly miſtaken, perjury in love-matters prevails now as much in Britain as ever it prevailed in ancient Italy.

Thoſe who underſtand the original, need not to be told the reaſons which obliged the tranſlator to alter and omit many paſſages of this elegy, which with ſome few others of the ſame ſtamp, were probably thoſe parts of Tibullus, which made the pious Anthony Poſſevin apply to heaven in prayer, to preſerve him from temptation whenever he purpoſed to read our poet.

Ver. 4. Priapus thus deſcribes himſelf in an ancient author,

Parum eſt mihi, fixi quod hic miſer ſedem
Agente terra per caniculam rimas
Siticuloſam ſuſtinens diu æſtatem:
Parum, quod imi perfluunt ſinus imbre,
Et in capillos grandines cadunt noſtros
Horretque dura barba vincta chryſtallo.
VULP.

Ver. 11. *The vine in time.*] This was ſo favourite an illuſtration, that Ovid has thrice inſerted it in his Art of Love. Lucretius has alſo twice introduced the drop of water into his admirable poem De Rerum Natura; and Taſſo, in his Amynta, has made it his own.

——O miſerello
Non diſperar ch' acquiſterai coſtei;
La lunga etate a l' omine di porre
Freno a i Leoni, et a le Tigre Hyrcane.

Ver. 18. The ancients not only ſwore by particular divinities, but by thoſe things which were ſuppoſed to be moſt acceptable to them. But whence was it, ſays Broekhuſius, that lovers ſwore by the virgin goddeſs? and adds this wiſe ſolution, "Credo, ob adamatum Endymiona.

Minerva was ſo fond of her hair, which it ſeems was very fine, and ſo highly reſented all rivalſhip in that particular, that ſhe turned the hair of Meduſa, who had preferred her own to that of the goddeſs, into ſerpents. Vid. Serv. in 6. Æn. V. 289.

Before the virgins of Argos married, they hung up a lock of their hair in the temple of Minerva, who was thought in a peculiar manner to protect the "capillitium puellare." Broekhuſius adds, "In vicem puellas Palladi crinem diſponebant honorariæ pfecades."

Ver. 20. *Oaths bind not eager love.*] This ſentiment is introduced by Plato in his Sympoſium.

ὁ δὲ δεινότατον, ὡς γε λέγουσιν οἱ πολλοὶ ὅτι καὶ ὀμνυντι μονω ξυγγνωμη παρα θεων. &c. VULP.

See an epigram to the ſame purpoſe in Callimachus.

Ver. 26. *So late a victor.*] See an admirable diſſertation upon this ſubject by the late Mr. Weſt, prefixed to his tranſlation of Pindar.

Ver. 29 It is reported by naturaliſts, that ſerpents or ſnakes, upon eating a certain herb, called Maratos, caſt their ſkin and renew their age. Ovid has a thought like this in his Ars Amand.

Anguibus excutitur tenui cum pelle vetuſtas,
Nec faciunt cervos cornua jacta ſenes;
Noſtra ſine auxilio fugiunt bona, &c.
Lib. 3.

which Mr. Congreve has thus Engliſhed,

The ſnake his ſkin, the deer his horns, may caſt,
And both renew their youth and vigour paſt;
But no receipt can human kind relieve,
Doom'd to decrepid age without reprieve.
Dart.

This is a good poetical illuſtration, but philoſophy diſclaims it. Serpents, and moſt of the reptile kind, do indeed caſt their coats (exuviæ), but they do not thereupon grow young again, no more than a bird does after moulting.

The fugacity of beauty is a topic which almoſt every love-writer, ſince the days of Tibullus, has uſed to his miſtreſs whenever ſhe demurred; and yet Mr. Prior, in his manner of applying it, has made it entirely his own.

Take heed, my dear, youth flies apace;
As well as Cupid, time is blind;
Soon muſt thoſe glories of thy face
The fate of vulgar beauties find:
The thouſand loves that arm thy potent eye,
Muſt drop their quivers, flag their wings, and die.

Ver. 33. Bacchus was much celebrated, both by the Greek and Roman poets, for his beauty.

Anacreon honours him with the epithet καλος, and Naſo makes him the following fine compliment.

—Tibi enim inconſumpta juventus,
Tu puer æternus, tu formoſiſſimus alto
Conſpiceris cœlo, tibi cum ſine cornibus adſtas
Virgineum caput eſt.

Apollo's beauty is commonly known. Bacchus, as well as Cupid and Minerva, is always repreſented with long yellow hair; and hence the epithet χρυσοκομος, which ſome of the poets have beſtowed on him.

Ver. 37. *Go ſtrait where'er ſhe goes.*] This thought is finely imitated by that ſweet elegiac poet Joannes Secundus.

Illius imperio ventes patiemur et imbres,
Ibimus et ſolas nocte ſilente vias,
Nec grave frigus erit, nec ſolſtitium, licet in me
Fervidus ingeminet ſidera ſicca puer
Illa volet comitem ſibi, me quocunque ſequemur
Qua via nulla rotae pervia nulla rati.
El iii. *Lib.* 1.

Ver 48. *The coy may ſtruggle.*] Horace has beautifully applied this thought to Lycimnia.

Dum flagrantia detorquet ad oſcula
Cervicem, aut facili ſævitia negat.
Quæ poſcente magis gaudeat eripi
Interdum rapere occupat.

Boileau has done great juſtice to this thought in his L'Art Poetique, Chant. 2. and Mr. Francis ſeems to have caught the ſoul of Horace when he tranſlated it.

Ver. 65. If poetry beſtows immortality on charms, which would otherwiſe fade, it is eminently the intereſt of the fair ſex to keep well with the poets. Propertius and Ovid impute to their own verſes, what Tibullus more modeſtly aſcribes to poetry in general. Indeed beauty is the parent of poetry; and if the Britiſh bards have ſurpaſſed their brethren on the continent, it is chiefly owing to the ſuperior charms of our fair country women.

The images, expreſſive of beauty, when immortalized by ſong, ſhould here have been ſuch as were more appropriated to elegy; for thoſe, our poet mentions on this occaſion, would better have ſuited paſtoral.

Ver. 74. Broekhuſius is of opinion, that the Titius mentioned in the text, was Titius Septimius, a man no leſs eminent for his friendſhip with Horace, than for his real poetical abilities; and whom that excellent judge of men, as well as of writing, thus characterizes,

Quid Titius Romana brevi venturus in ora?
Pindarici fontis qui non expaluit hauſtus,
Faſtidire lacus et rivos auſus apertos:
Ut valet? ut nemini noſtri? fidibuſne latinis
Thebanos aptare modos ſtudet auſpice muſa?
An tragica deſævit et ampullatur in arte.
B. 1. *Ep.* 3.

How fares my Titius? Say when he intends
To publiſh? Does he not forget his friends?
He who diſdains the ſprings of common fame,
And dauntleſs quaffs the deep Pindaric ſtream:
Does he deſign, when all the muſe inſpires,
To tune to Theban ſounds the Roman lyres?
Or, with the tranſports of theatric rage,
And its ſonorous language ſhake the ſtage?
Francis

The old Scholiaſt accordingly informs us, that he publiſhed both lyric poems and tragedies. There is reaſon alſo to think, that he likewiſe wrote comedies; for the ſame Scholiaſt obſerves, on the following line of Horace,

Ut vinoſa g'omos furtivæ Pyrrhia lanae.
Ep. 13. *B.* 1.

that the poet Titius introduces a ſervant of the name of Pyrrhia, ſtealing a ball of wool from her miſtreſs. All his works are unfortunately loſt. He had a noble monument erected to him in the neighbourhood of Aricia, ten miles from Rome.

Barthius, in his Adverſaria, owns that he did not know who the Titius was, whom Horace mentions; and therefore Mr. Francis is the more excuſably ſilent on this article.

After all, it is impoſſible for any modern to determine, whether Horace and Tibullus meant the ſame Titius; and indeed it is of no conſequence.

Ver. 85. *Wide ſtands my gate for all.*] This is an image borrowed from the practice of the Roman lawyers. There is no word in the Engliſh language which fully expreſſes the meaning of the Latin verb "deducere." It implies that ſolicitous attendance which the younger paid to men of eminence, or clients to their patrons. To form a juſt idea of this cuſtom, a modern muſt conſult Juvenal, and Cicero de petitione conſulatus.
TIBULLUS.

Tibullus probably had in his thoughts ſome verſes of Callimachus, which Stobæus (Serm. 114) has preſerved.

Γηρασκει δ' ὁ γερων κεινος ελαφροτερον,
κουραι τον φιλεουσι, νεοι δι μιν ὡς τοκηα
χειρας ϗ' οικειην αχεις αγουσι θυρην. *Vulp.*

ELEGY V.

Of late I boasted I could happy be,
Resume the man, and not my Delia see!
And boasts of manhood and of bliss are vain;
Back to my bondage I return again!
And like a top am whirl'd, which boys, for sport,
Lash on the pavement of a level court!
What can atone, my fair, for crimes like these?
I'll bear with patience, use me as you please!
Yet, by love's shafts, and by your braided hair,
By all the joys we stole, your suppliant spare.
When sickness dimm'd of late your radiant eyes,
My restless, fond petitions won the skies.
Thrice I with sulphur purified you round,
And thrice the rite with songs th' enchantress bound:
The cake, by me thrice sprinkled, put to flight
The death-denouncing phantoms of the night:
And I nine times, in linen garbs array'd,
In silent night, nine times to Trivia pray'd.
What did I not? Yet what reward have I?
You love another, your preserver fly!
He tastes the sweet effects of all my cares,
My fond lustrations, and my solemn prayers.
Are these the joys my madding fancy drew,
If young ey'd Health restor'd your rosy hue?
I fondly thought, sweet maid, oh thought in vain!
With you to live a blithesome village-swain.
When yellow Ceres asks the reaper's hand,
Delia (said I) will guard the reaper's band;
Delia will keep, when hinds unload the vine,
The choicest grapes for me, the richest wine:
My flocks she'll count, and oft will sweetly deign
To clasp some prattler of my menial train:
With pious care will load each rural shrine,
For ripen'd crops a golden sheaf assign,
Cates for my fold, rich clusters for my vine:
No, no domestic care shall touch my soul;
You, Delia, reign despotic o'er the whole!
And will Messala fly from pomp of state,
And deign to enter at my lowly gate?
The choicest fruitage that my trees afford,
Delia will cull herself, to deck the board,
And wondering, such transcendent worth to see,
The fruit present, thy blushing handmaid she.
Such were the fond chimeras of my brain,
Which now the winds have wasted o'er the main.
O power of love, whom still my soul obey'd,
What has my tongue against thy mother said?
Guiltless of ill, unmark'd with incest's stain,
I stole no garland from her holy fane:
For crimes like these I'd abject crawl the ground,
Kiss her dread threshold, and my forehead wound.
But ye who, falsely wise, deride my pains,
Beware; your hour approaches—love has chains.
I've known the young, who ridicul'd his rage;
Love's humblest vassals, when oppress'd with age:
Each art I've known them try to win the fair,
Smooth their hoarse voice, and dress their scanty hair;
I've known them, in the street, her maid detain,
And weeping, beg her to assist their pain.
At such prepostrous love each school-boy sneers,
Shuns, as an omen, or pursues with fleers.
Why do you crush your slave, fair queen of joy?
Destroying me, your harvest you destroy!

NOTES ON ELEGY V.

Tibullus had unfortunately boasted, that Delia had not so great an ascendant over him as she imagined. Being willing to know the extent of her authority, she forbade him her presence. This he at first treated as an order which would give him no pain to comply with; but he was soon convinced of his error, and found that his felicity consisted solely in her converse. To reinstate himself, therefore, in her good graces, the following elegy was composed.

Ver. 5. No poet, perhaps, ever used fewer similes than Tibullus. The principal object always employed him too much to think of resemblances. Virgil has applied the simile of the top to Amata, in the seventh Æneid; as Valerius Flaccus does to Medea, in the eighth book of his Argonautics. Things, of no dignity in themselves, become important in the hands of a real poet.

Ver. 9. When the ancients begged a favour, they generally enforced their entreaties by alluding to the objects which were held in the highest esteem by those whom they petitioned. In amorous compositions, allusions to a person beloved

are introduced with moſt propriety. The three great elegiac poets abound with many happy inſtances of this kind.

Ver. 12. Not only the poets, but the phyſicians, ſuppoſed, that ſulphur poſſeſſed a purifying virtue; whence probably it obtained the epithet ἱερὸν θεῖον. Indeed, if the infection proceeds from alkaline or putrid miaſmata, the fteams of brimſtone may be antidotal.

Ver. 14. As many diſeaſes were thought by the ancients to ſpring from ſupernatural cauſes, incantation was early introduced into medicine. This indeed was chiefly practiſed in Perſia; but it ſoon ſpread, inſomuch, that, in the days of Pliny the elder, it became ſo common a practice in Britain, that the Perſians themſelves, according to that curious author, might ſeem to have borrowed incantation from our anceſtors. "Britannia hodie tam attonite celebrat tantis ceremoniis ut dediſſe Perſis videri poſſit." *Lib.* xxx. *C.* 1.

But had Pliny maturely conſidered the affair, he would have found, that as this, as well as every other ſuperſtition, is the off-ſpring of ignorance and impoſture, there was no occaſion for making Perſia its mother country.

Pomponius Mela informs us, that at Sena (which ſome call a maritime town in Britain, and others a Britiſh iſland oppoſite to France) there was a Gallic deity, whoſe virgin prieſteſſes were called Barrigenae; and ſuppoſed to have the power, by incantation, *(carminibus)* of raiſing and laying ſtorms, of curing diſeaſes which none elſe could cure, and of predicting events. He adds, that they only exerted their magical abilities in compliance with the requeſt of thoſe ſeamen who came on purpoſe to conſult them.

Lib. iii. *C.* 6.

The uſe of magic, in the medical art, continued long even among the Chriſtians: and there was a time, ſays Broekhuſius, when the inquiſition regarded it as a trifling treſpaſs.

If the ancient muſic cured ſo many, and ſuch inveterate diſeaſes, as Pliny, Aulus Gellius, and others, pretend it did, it muſt have been very different from that of the moderns.

Ver. 15. This cake, which (as Servius, ad Ecl. viii. ver. 82. informs us) was made three times a year by the veſtal virgins, was a compoſition of flour and two kinds of ſalt.

Ver. 17. Scaliger was miſtaken, when he ſuppoſed that theſe were infernal ſacrifices; for Diana, who was none of the Dii Inferi, was the object of them. *Broekhuſ.*

Nothing was bound in ſacrifices, ſays Broekhuſius, neither the victim nor the hair, the veſtments nor feet: It is certain, too, that Servius has aſſerted the ſame. (Æn. ii. ver. 133. &c.) And yet ſome paſſages may be quoted from claſſic authors, and even from Virgil, where the hair appears to have been bound; as, for inſtance, the following from the twelfth Æneid:

Alii fontemque ignemque ferebant,
Velati lino, et verbena tempora vincti.

We alſo ſee that Dido ſacrificed (Æn. 4.) with one foot bare only; and it is known, that fillets were tied on the victim. *Dart.*

Ver. 18. Trivia or Diana was applied to in diſeaſes, on many accounts, but eſpecially becauſe infirm bodies were ſuppoſed to be greatly under the influence of that planet. Gruterus has preſerved many addreſſes to this goddeſs in his inſcriptions. Lovers, in particular, implored her aſſiſtance. See Seneca's tragedy of Hippolitus and the ſecond idyllium of Theocritus.

Broekhuſ.

Ver. 25. No paſſion makes more frequent feaſts on expectation, than love; and a wicked wit has ſaid, that theſe are the moſt pleaſing meals it enjoys. But, be that as it will, the whole of this paſſage exhibits a moſt amiable picture of country retirement, wherein religion, love, and rural affairs, equally conſpire to make life truly deſirable. Philoſophers contend, that we ought not to indulge too flattering proſpects of futurity, becauſe, in that caſe, diſappointments fall heavier. But although we may grant that it is an error to be too ſanguine in our hopes, yet, when we conſider that hope was implanted in us by the all-wiſe Creator, it will appear little leſs than a direct contradicting of Providence, to ſuppreſs it entirely. Our author was of this opinion. There are few paſſages in the elegiac poets which ſurpaſs this of Tibullus, in the warmth, as well as delicacy of its colouring.

Ver. 32. If it be conſidered with what harſhneſs even the better ſort of the Romans treated their ſlaves, the good-nature, ſo conſpicuous in this ſentiment of our poet, muſt give us an amiable idea of his benevolence.

The peaſants, mentioned in the text, were ſlaves born on the eſtate. The Romans called them *Vernae.*

Ver. 33. Tibullus's miſtreſs was not to be employed ſolely in acts of economy; devotion was alſo to accompany her thrift. The ſeveral offerings, enumerated in the original, are preſerved in the verſion.

Daps, according to the ancient grammarians, ſignifies a ſacred banquet; and in this ſenſe Tibullus uſes it here. Paſſages, however, occur in claſſic authors, where that word only means a common entertainment. M. Cato, in his treatiſe de Re Ruſtica, l. 83. tells us, that the offering for the health and fecundity of the herds, might be made either by a ſlave or by a freedman; but that, if they choſe to ſucceed in their petitions, no woman ſhould be permitted to be preſent at the ceremony. Tibullus therefore judiciouſly omits that circumſtance of rural devotion.

Ver. 37. Martial improperly applies this line to Nemeſis.

Uſſit AmatoremNemeſis laſciva Tibullum,
In tota juvit quem nihil eſſe domo.

Lib. xiv. 193.

Ver. 38. Can any thing be more delicate than this compliment to his patron, that even Delia could give him no complete ſatisfaction

without his company? His love, indeed, was the more violent paſſion; but friendſhip for Meſſala had alſo rooted itſelf deep in his heart. Strokes of this exquiſite nature are only to be expected from thoſe who have acceſs to the great, but whom the great have not infected with ſelfiſhneſs. Mr. Hammond has applied this thought to Lord Cheſterfield.

Stanhope ſhall come and grace his rural friend;
Delia ſhall wonder at her noble gueſt,
With bluſhing awe the riper fruit commend,
And for her huſband's patron cull the beſt.
El. 13.

It is aſtoniſhing, that a late critic did not make Milton indebted to our author for the manner in which that great poet repreſented Eve attending on the angel Gabriel. Many of his alleged imitations are not half ſo well founded. But one who dealt in the rubbiſh of Staphorſtius and Foxius, could have no taſte for the elegancies of Tibullus

Ver. 48. This is ſuch an appeal to heaven, as muſt appear very becoming in a perſon conſcious of his own innocence. The ancients imagined, that diſaſters were inflicted by the gods on mortals, as a puniſhment only for their failing in the duties of religion: But experience ſhows us, that the beſt men are often expoſed to the greateſt calamities. Prior has put a fine appeal of this kind into the mouth of Emma, in that beautiful poem of his, intituled Henry and Emma.

Let envious jealouſy, and canker'd ſpight,
Produce my actions to ſevereſt light,
And tax my open day and ſecret night:
Did e'er my eye an inward thought reveal,
Which angels might not hear, or virgins tell?
And haſt thou in my conduct, Henry, known,
That I, of all mankind, have lov'd but you alone?

Ver. 50. Who can read theſe ancient ſuperſtitious penances, and not agree with Dr. Middleton, that the Romiſh church is the daughter of the Pagan?

According to Broekhuſius, the beating the head againſt the ſacred threſhold, was an expiatory ceremony brought from Ægypt along with the goddeſs Iſis. This is the only paſſage of antiquity, where this extraordinary rite is mentioned; from whence that commentator concludes, that it neither prevailed long, nor was generally received, at Rome.

Ver. 54. The original is variouſly read by editors: that which the tranſlator has retained, was the correction of Scaliger, and is approved of by Broekhuſius.

Among the few natural deſcriptions to be found in the Paſtor Fido, the following, which expreſſes the miſeries to which an old man is ſubject, is one of the chief.

Non é pena maggiore
Cb' en vecchie membra il pizzicor d' amore.

—S'e ti guinge in quella fredda etate
Ove il proprio difetto
Piu che la colpa altrui ſpeſſo ſi piagne
Al' hora inſupportabili e mortali
Son le ſue piagge, al' hor le pene acerbe:
Al' hor ſi pieta tu cerchi, male
Se non la trovi, e ſe la trovi peggio, &c.

Ver. 61. Spitting, the ceremony uſed in the text, was ſuppoſed a preſervative againſt bad omens, and is a gentler method than thoſe preſcribed by the profound authors of the fifteenth and ſixteenth centuries as charms againſt witchcraft, which was to give a gaſh with a knife on any part of the face above the organs of reſpiration.

ELEGY VI.

With wine I ſtrove to ſooth my love-ſick ſoul,
But vengeful Cupid daſh'd with tears the bowl:
All mad with rage, to kinder nymphs I flew;
But vigour fled me, when I thought on you.
Balk'd of the rapture, from my arms they run,
Swear I'm devoted, and my converſe ſhun!
By what dire witchcraft am I thus betray'd?
Your face and hair unnerve me, matchleſs maid:
Not more celeſtial look'd the ſea-born fair,
Receiv'd by Peleus from her pearly chair.
A rich admirer his addreſſes paid,
And brib'd my miſtreſs by a beldam's aid.
From you my ruin, curſt procureſs, roſe;
What imprecations ſhall avenge my woes?
May heaven, in pity to my ſufferings, ſhed
Its keeneſt miſchief on your plotting head!
The ghoſts of thoſe you robb'd of love's delight,
In horrid viſions haunt your irkſome night!
And, on the chimney, may the boding owl
Your reſt diſturb, and terrify your ſoul!
By famine ſtung, to church-yards may you run;
There, feaſt on offals, hungry wolves would ſhun!
Or howling frantic, in a tatter'd gown;
Fierce maſtiffs bate you through each crowded town!
'Tis done! a lover's curſe the gods approve;
But keeneſt vengeance fires the queen of love.

Leave then, my fair, the crafty venal jade:
What paſſion yields not, when ſuch foes invade?
Your hearts, ye fair, does modeſt merit claim?
Though ſmall his fortunes, feed his gentle flame:
For, genuine love's ſoft raptures would you know?
Theſe raptures merit can alone beſtow:
The ſons of opulence are folly's care,
But want's rough child is ſenſe, and honour's heir.
In vain we ſing—the gate ſtill bolted ſtands:
Come, vengeance, let us burſt its ſullen bands.
Learn, happy rival, by my wrongs to know
Your fate, ſince fortune governs all below.

NOTES ON ELEGY VI.

Tibullus's miſtreſs had, it would ſeem, ſhown too great a regard to a richer gallant. This gave our poet uncommon uneaſineſs; to conquer which, he not only had recourſe to the bottle, though otherwiſe temperate, but even attempted to forget her ungenerous behaviour in the company of the fair. Experience, however, ſoon convinced him, that nothing could make him either forget, or be happy without her; and gave occaſion to this poem.

Some editors have moſt injudiciouſly tacked this elegy to the former.

Ver. 6. "Devovere," the word of the original, properly ſignifies, "frigore ferire eam partem, qua viri ſumus; ut quantumvis cupiamus, tamen minime poſſumus." The French call it "nouer l'eguillette;" and the doctors of the canon law ſay, that ſuch people are "frigidi et malificiati." *Brock.*

Ovid has informed us of the various means by which ſuch an imbecillity may be produced.

Num mea theſſalico languent devota veneno
Corpora? Num miſero carmen et herba nocent?
Sagave punicea defixit nomina cera
Et medium tenues in jecur egit acus.
Lib. iii. *El.* 7.

So ſimilar is ſuperſtition in all ages.

Apuleius Celſus gravely preſcribes a remedy, by which the "vincula veneris" may be untied. Lib. de Medic. Herb. c. 7. See a curious ſtory of this kind, which Herodotus relates of Amaſis, the Egyptian king, in his Euterpe.

Ver. 8. The hair here mentioned by our poet, is that of a yellow colour, "flava coma;" and, indeed, yellowneſs may with propriety be called the claſſical colour of hair, ſince ſome of the greateſt beauties of antiquity, both men and women, are repreſented by the poets with this ſort of hair. So variable are our ideas of beauty! The Italians, however, even to this day, praiſe "chiome d'oro." See a curious diſſertation on this ſubject by Jo. Arntzenius, intituled "De colore et tinctura comarum," &c.

Ver. 10. The heathen poets, in comparing a perſon to any of their deities, had a ſure method of giving the reader a picture of that perſon, as the ſtatues of their gods were known to every one, and their features aſcertained; and this, ſays the ingenious author of the Polymetis, is one reaſon, why ſimilies of this kind are ſo frequent in ancient authors. It is to be regretted, that Tibullus has not left us more of theſe reſemblances. The few he has given us, are exquiſite; but his heart was too engaged to wander abroad for foreign ornaments. Propertius and Ovid abound with them. The modern poets alſo ſeem fond of the ſame kind of compariſons, though they have not the ſame advantages, in this reſpect, as the ancients. Valerius Flaccus gives us a ſhort but beautiful picture of Thetis, when going to be married, in the firſt book of his Argonautics. The reader may alſo ſee Catullus's fine poem on the ſame ſubject. *Poem.* 62.

Ver. 16. The original, literally interpreted, runs thus: May ſhe eat raw fleſh with a bloody mouth, and drink melancholy liquors mixed with much gall. This was no ſmall curſe, if the procureſſes of old liked good cheer as well as the modern ſiſterhood. Ovid has conciſely imitated this imprecation.

Di tibi dent nullos lares inopemque ſenectam,
Et longas hyemes, perpetuamque ſitim.

Propertius carries his malice ſtill farther.

Terra tuum ſpinis obducat lena ſepulcrum
Et tua, quod non vis, ſentiat umbra ſitim.

The ancients believed, that nothing could prevent the curſes of a perſon, unjuſtly injured, from taking effect. Of all the moderns, no poet ſurpaſſes Oldham in theſe ſort of imprecations. Vulpius is of opinion, that the poet wiſhes the bawd to be affected with that ſpecies of madneſs, which makes the diſeaſed think themſelves metamorphoſed into wolves. This is far-fetched.

Ver. 22. Commentators are greatly divided in their interpretations of this paſſage. The true meaning ſeems to be this: The Romans had private feaſts upon the death of their friends, called "Silicernia," from "Silex" and "Cæna," or ſupping upon a ſtone; part of which they eat, and left the reſt on the tomb for the ghoſts to feed upon. And therefore it became proverbial, on extreme miſery, to ſay, that one got his victuals from the tombs. *Dart.*

Ver. 29. This thought is one of the leaſt delicate in Tibullus; and therefore the tranſlator has not only omitted it, but given a different turn to the whole paſſage from "pauper erit," &c.

Ver. 35. —*the gate ſtill bolted ſtands.*] The word uſed in the original, Servius (Ad. Lib. i. Æn. v. 127.) derives from "fatim hiſcere."

Ver. 36. The young people, both of Greece and Italy, when they went to viſit their miſtreſſes at night, often carried torches along with them, to burn the doors of thoſe who ſhould refuſe to grant them admittance. This boiſterous piece of gallantry, which the modern ſpirits call beating the rounds, puts one in mind of the anſwer made by one of the family of Huntly, who was taken priſoner at the battle of Muſſelburgh, to the Duke of Somerſet, in conſequence of that Duke's having aſked his priſoner, how he ſtood affected to the marriage between Edward VI. and the young Mary of Scotland: "I have no objection, my Lord Duke, to the match, but like not your method of courtſhip."

Ver. 37. *Learn, happy rival.*] The original,

Mea furta timeto,

Broekhuſius thus wiſely interprets, Be aſſured that fortune and woman are mutable, as you yourſelf will ſoon experience.

ELEGY VII.

Love ſtill invites me with a ſmiling eye!
Beneath his ſmiles, what pains and anguiſh lie?
Yet ſince the gods, dread power, muſt yield to thee!
What laurels canſt thou gain from conquering me?
Me Delia lov'd; but by thy ſubtle wiles,
The fair, in ſecret, on another ſmiles:
That my ſuſpicion's falſe, 'tis true, ſhe ſwears;
And backs her imprecations with her tears!
Falſe fair, your oaths, and ſyren tears refrain;
Your ſyren tears, and oaths no credit gain;
For when your lord ſuſpected me of yore,
As much you wept, as many oaths you ſwore.
Yet wherefore blame I love? the blame is mine;
I, wretched I, firſt taught her to deſign!
I firſt inſtructed her, her ſpies to foil!
Back on myſelf my wanton arts recoil:
Herbs of rare energy my ſkill ſupplied,
All marks of too-fond gallantry to hide!
More artful now, alone the wanton lies;
And new pretexts her cozening brains deviſe.
Uncautious lord of a too cunning ſpouſe!
Admittance grant me, ſhe ſhall keep her vows!
Be warn'd, my friend, obſerve her when her tongue [young;
Commends in wanton phraſe the gay-dreſs'd
O let her not her heaving boſom bare,
Expos'd to every ſop's immodeſt ſtare.
When leaning on the board, with flowing wine,
She ſeems to draw ſome inconſiderate line;
Take heed, take heed (I know the warning true),
Theſe random lines aſſign an interview.
Nor let your wife to ſanes ſo frequent roam,
A modeſt wife's beſt temple is at home:
But if your prohibitions are all vain,
Give me the hint, I'll dodge her to the fane;
What though the goddeſs ſnatch my curious ſight,
I'll bring her wanton privacies to light.
Some gem ſhe wore, I'd oft pretend to view,
But ſqueez'd her fingers unperceiv'd of you:
Oft with full racy bowls I ſeal'd your eyes,
Water my bev'ridge, and obtain'd the prize.
Yet ſince I tell, forgive the pranks I play'd,
Love prompted all, and love muſt be obey'd!

Nay, 'twas at me (be now the truth avow'd)
Your watchful maſtiff us'd to bark ſo loud;
But now ſome other, with inſidious wait,
Intent obſerves each creaking of your gate,
At which, whoever of the houſe appears,
Paſſing, the mein of quick diſpatch he wears;
But comes again, the minute they remove,
And coughs, ſure ſignal of impatient love!
What boots, though marriage gave a wife ſo fair,
If careleſs you, or ſhe eludes your care?
While men are artful, and your wife can feign,
Vain are your brazen-bolts, your maſtiffs vain.
Cold to the raptures of the genial bed,
She lays the fault upon an aching head:
'Tis falſe; the wanton for ſome other ſighs;
From this, her coolneſs, this, her aches ariſe.
Then, then be warn'd, intruſt her to my care;
Whips, chains I laugh at, if you grant my prayer.
"Hence from my ward, ye ſparkiſh eſſenc'd "beaux;
"Illegal love oft ſprings from eſſenc'd clothes."
Where'er ſhe walks, not diſtant I'll attend;
And guard your honour from the caſual friend!
"Off, gallants, off: for ſo the gods ordain,
"So, the dread prieſteſs in unerring ſtrain!"
(When holy fury fires the frantic dame,
She mocks all torture, and exults in flame;
Her ſnow-white arms and heaving breaſt ſhe tears;
And with the guſhing gore Bellona ſmears;
Deep in her ſide ſhe plants the glittering ſword;
And the dread goddeſs prompts each fateful word.)
"Ye youths beware, nor touch whom Cupid "guards,
"Unpuniſh'd none attempt his gentle wards:
"As my blood flows, and as theſe aſhes fly;
"Their wealth ſhall periſh, and their manhood "die."
She menac'd then the fair, with dreadful pain;
E'en were you guilty, may her threats be vain:
Not on your own account; your mother's age,
Your worthy mother, deprecates my rage:
When love and fortune ſmil'd, her gentle aid
Oft me conducted to the blooming maid;

My footſteps, wakeful, from afar ſhe knew,
Unbarr'd the gate, nor fear'd the nightly dew:
Half of my life's long thread I'd pleas'd reſign,
My ſweet conductreſs, could I lengthen thine!
Still, ſtill, though much abus'd, I Delia prize;
She's ſtill thy daughter, and enchants my eyes.
Yet though no coy cimarr inveſt the fair;
Nor veſtal fillet bind her auburn hair;
Teach her what decent modeſty requires;
To crown my fire, alone, with equal fires.
Me too confine; and if, in wanton praiſe
Of other maids, my tongue luxuriant ſtrays;
Let thy ſuſpicion then no limits know,
Inſult me, ſpurn me, as thy greateſt foe!
But if your jealouſies are built in air,
And patient love your uſage cannot bear;
What wrath may perpetrate, my ſoul alarms;
For wrath, I warn you, heeds not female-charms.
Nor yet be chaſte, from mean unamorous fear;
Be ſtill moſt modeſt, when I am not near.
For thoſe, whom neither wit, nor worth ſecure,
Grow old, unpitied, palſy'd, worthleſs, poor;
Yet with each ſervile drudgery they ſtrive,
To keep their being's wretchedneſs alive!
The gay regard their woe, with laughing eyes;
Swear they deſerve it, and abſolve the ſkies
Nor Venus leſs exults! "May ſuch a fate,
"(From heaven ſhe prays) upon th' inconſtant
"wait."
The ſame my wiſh! but O, may we two prove,
In age, a pattern of unalter'd love!

NOTES ON ELEGY VII.

The poet had taken it into his head, that he had a rival in the affections of Delia; and notwithſtanding all her aſſeverations to the contrary, was ſo hurried on, in this elegy, as to let her huſband into the whole ſecret of their intimacy. Had not Tibullus been under the influence of a maddened jealouſy, he muſt ſoon have recollected, that this confeſſion muſt for ever terminate all his hopes from that quarter; but ſo very far was our poet from perceiving this, that after an apology, which to every huſband could not but appear highly impertinent, he propoſes to him to be received into his family, and to become a ſpy on Delia's actions. Ovid juſtly obſerves on this overture of Tibullus,

Denique ab incauto nimium petit ille marito.

Ver. 1. This cenſure of love is highly paſſionate. Jealouſy, like certain diſeaſes, converts the moſt wholeſome nouriſhment into bad humours. The deſcription probably alludes to the maſks worn by love on the ſtage, viz. an infant's face, with the head and claws of a lion behind.

Ver. 4. Virgil, in the following lines, ſeems to have imitated this paſſage of our poet.

Magnum et memorabile nomen
Una, dolo divum, ſi fœmina victa duorum eſt!

This Mr. Addiſon ſomewhere calls the wittieſt thought in the Æneid. But is not the

Attollens humeris famamque et fata nepotum

in the ſame poem, even more epigrammatic?

Ver. 11. Ovid hints at this incredulity of our poet in his triſt.

Credere juranti durum putat eſſe Tibullus.
Lib. 2.

Thoſe who have been jointly engaged in actions, which it has been neceſſary to conceal by lies, or perjury, can never afterwards have a thorough confidence in each other. So void of foundation is the friendſhip of the wicked.

Ver. 14. Theſe thoughts Ovid has copied in various places of his amorous writings. The laborious Broekhuſius having collected from Pliny the names of thoſe herbs, which were ſuppoſed to produce the effects mentioned in the text, the reader, if he is curious in thoſe matters, may conſult him, p. 123.

The ſame critic is alſo very full on the "mortiunculæ" of the original, calling them, no doubt, very ſagaciouſly, the certain marks of ſolid joy.

Ver. 22. Some editors change the "minus" of the original into "nihil," and thus explain the paſſage. "If you keep your wife from the company of other men, I ſhall be the leſs diſpleaſed to be debarred her preſence; it depends therefore entirely upon yourſelf, to prevent my approaching her." "Servare," underſtood in this manner, is the ſame with "inſpicere, obſervare, oculis notare." But this interpretation, notwithſtanding Virgil and Valerius Flaccus uſe "ſervare" in that ſenſe, is more ingenious than juſt, being contradicted by the ſequel of the elegy. One of the beſt methods of finding out the ſenſe of any obſcure paſſage, is to compare it with other parts of the original.

Ver. 31. It was not lawful for men to inform themſelves of the real name of the "bona dea." Her ſacrifices, called by Cicero the moſt ancient and occult of any in Rome, were performed once a-year by the veſtal virgins in that conſul's houſe, where the faſces happened to be depoſited, "quo menſe ſacrum fiebat pro populo univerſo." During the celebration of this ſolemnity, not only the maſter of the houſe, and all other men, were excluded, but their very pictures and ſtatues were carefully concealed. It was believed, that a ſudden blindneſs would be inflicted upon any man, who, on that occaſion, however accidentally,

ſhould view thoſe myſteries. It is true indeed, that the adventure of Clodius might have convinced even the vulgar, of the folly and ſuperſtition of ſuch an apprehenſion; yet was the attempt itſelf regarded by all as the height of profanation; and if that turbulently frantic nobleman committed, at that time, in Cæſar's houſe, the crimes with which Cicero charges him, Cæſar was in the right to divorce Pompeia: as the reaſon he gave for it, viz. that Cæſar's wife was not to be ſuſpected, ought to be looked upon as the reſult of that delicacy and ſuperiority of genius, which raiſed him, even in domeſtic matters, above the level of other men.

Ver. 34. Scaliger, from the word "aram," which is found in many of the old MSS. and editions, conjectures, that the worſhip mentioned in the text, muſt have been at the conſul's houſe; and infers, that, as none but women of the firſt rank had admittance there, Delia muſt have been a woman of faſhion. Broekhuſius, on the other hand, ſupported by an almoſt equal number of editions and MSS. read "aras," and contends, that Tibullus meant by that expreſſion, one of the two public temples in Rome dedicated to the "bona dea," alleging, that Delia was a "mulierecula imi ordinis." But ſhould not Broekhuſius have conſidered, that the poets often uſe the plural number for the ſingular. Vid. El. ii. Lib. 2. Lin. 1.

According to P. Victor, the "bona dea" had two temples, one in the 12th, and the other in the 13th region of Rome. This ſtood on that part of the Aventic Hill, which was called Remuria; and that at the foot of the ſame hill, whence, as Broekhuſius remarks, it received the appellation of Subſaxana.

Ver. 37. In Helen's fine epiſtle to Paris, there is a thought of the ſame kind.

Tu modo me ſpectas oculis laſcive protervis
Quos vix inſtantes lumina noſtra ferunt,
Et modo ſuſpiras, modo pocula proxima nobis
Sumis, quoque bibi, tu quoque parte bibis.
Ah quoties digitis, quoties ego tecta notavi
Signa ſupercilio pene loquenti dari,
Et ſæpe extimui ne vir meus illa videret
Non ſatis occultis erubuique notis.

Which is thus Engliſhed by Dryden.

Sometimes you'd ſigh, ſometimes diſorder'd ſtand,
And with unuſual ardour preſs my hand,
Contrive juſt after me to drink the glaſs,
Nor would you let the leaſt occaſion paſs,
Which oft I fear'd, I did not mind alone,
And bluſhing ſat for things which you have done.

We are not, however, to ſuppoſe, that Ovid borrowed the thought from Tibullus; for theſe are ſtratagems which have been practiſed by lovers in all ages.

Ver. 40. Broekhuſius, whom few commentators have exceeded in the knowledge of ancient cuſtoms of no moment, informs us, that the practice of challenging to drink, was a faſhion derived to Rome from Greece. See the verſes which Stobæus (Serm xvi.) has preſerved, ſaid to be written by Panyaſis the poet, who was either uncle or couſin-german to Herodotus the hiſtorian.

According to Theophraſtus, (as Pliny remarks, l. 36. c. 21.) your bcon companions of Greece in their drinking-matches, uſed the powder of pumice, which had this recommendatory property, that they ran a riſk of their lives, unleſs they ſwallowed after it an immenſe quantity of wine; for ſo cold is the pumice, adds he, that a little of it being thrown into muſt, will ſtop its fermenting.

Ver. 41. "Excuſatio quam frequens, tum frivola," exclaims the good Broekhuſius.

Ver. 61. Our poet's natural heat of diſpoſition, tranſports him to think, that he is again admitted to the guardianſhip of Delia; and the more to influence her huſband to intruſt Delia to his care, he makes heaven and Bellona denounce vengeance againſt any gallant, who ſhould make advances to her whilſt abroad.

In the deſcription of Bellona's prieſteſs (which reſembles what we are told of Baal's prieſts in the firſt book of Kings, c. 18.), our author's language riſes, and ſhows, that what Quintilian applied to Alcæus, may with equal propriety be ſaid of Tibullus. "Si in luſus et amores deſcendat, majoribus tamen aptior eſt."

The Bellonarii were fortune-tellers; and their high prieſt, according to Juvenal, was an eunuch. They ſtrolled about the ſtreets, forboding diſeaſes, &c. Theſe the ſuperſtitious were fain to avert, by donations of eggs, and a particular coloured raiment, called zerampelina, which, when hung up in the temple of their goddeſs, had, it ſeems, the power of averting thoſe calamities, with which the donor had been menaced. Vid. Juv. Sat. vi. Lin. 526.

Ver. 68. *She mocks all torture.*] Literally, ſhe dreads not the twiſted laſh, which, according to Broekhuſius, was the "flagellum" with which Bellona uſed to flog her votaries into madneſs, whence they received the appellations of "entheati et fanatici."

Ver. 78. *E'en were you guilty.*] In the original,

Si tamen admittas, ſit tamen illa levis.

This paſſage is difficult. We have followed the interpretation of Broekhuſius. Vulpius thus explains it. "Conniveat delicto, nec extemplo velit ſupplicium ſumere.

Ver. 86. The ſocial and benevolent paſſions are every where reſplendent in our poet; and theſe in ſome meaſure ought to compenſate for his amorous failings. Let it be conſidered, that Auguſtus himſelf wrote ſome obſcene poems: Example, however, is no juſtification of vice.

Ver. 89. By the "ſtola" and "vitta" mentioned in the original, the good Cyllenius "ſacerdotum integritatem, et matronarum pudicitiam, intelligebat." But Broekhuſius peremptorily inſiſts upon it, that Delia was "libertinæ conditionis," becauſe virgins and matrons "(matronæ)" wore the "ſtola" and "vitta." And yet it is cer-

tain, that dancers and citharædi wore alſo that garb.

Ver. 99. *What wrath may perpetrate.*] The literal interpretation is as follows: And if I be thought to have committed any fault, and in conſequence of this, am, though innocent, either to be undeſervedly dragged by the hair, or puſhed down a declivity, I would not, even on ſuch an occaſion, wiſh to beat you; but ſhould I become enraged, would ſincerely wiſh to be deprived of hands. This will ſound very odd in a modern fine lady's ears, and no wonder; for from this we have an undeniable proof, that the preſent age, in point of gallantry, has many advantages over the Auguſtan.

Ver 105. The text ſays, May ſhe in poverty and in age draw twiſted threads with a trembling hand, or work on a borrowed loom, or gain a wretched ſubſiſtence by picking of wool. "Joannes Secundus" has happily imitated this imprecation.

Sera tibi veniet faſtus vindicta protervi
Ætatis tenera crimina flebis anus.
Cum tibi cælatum laxis, pulcherrima, rugis
Luridus inficiet pallor ahile caput.
Conductamque trahens tremebundo pollice lanam
Involves fuſo ſtamina longa brevi.
Adſpiciet lacrimas ridens Erycina Seniles
Et levis excuſſa plaudet amor pharetra.
Et juvenes omnes, et me, tua probra juvabunt.
Lux, precor, ô fato ſit prior illa meo.

Lib ii. *E.* 8.

Ver. 112. This is a moſt extraordinary concluſion. The original in Brockhuſius is,

Exemplum cana ſtemus uterque coma.

Other editions read "ſimus," which, for obvious reaſons, we have adopted.

Pedo Albinovanus, and Juvenal, uſe the word "exemplum" in the ſame ſenſe.

ELEGY VIII.

"THIS day, (the fates foretold in ſacred ſong,
" And ſinging drew the vital twine along),
" He comes, nor ſhall the gods the doom recal,
" He comes, whoſe ſword ſhall quell the rebel
" gaul.
" With all her laurels, him ſhall conqueſt crown,
" And nations ſhudder at his awful frown;
" Smooth Atur, now that flows through peaceful
" lands,
" Shall fly affrighted at his hoſtile bands."
'Tis done! this prophecy, Rome joys to ſee,
Far-fam'd Meſſala, now fulfill'd in thee:
Long triumphs raviſh the ſpectators eyes,
And fetter'd chieftains of enormous ſize:
An ivory-car, with ſteeds as white as ſnow,
Suſtains thy grandeur through the pompous ſhow.
Some little ſhare, in thoſe exploits, I bore;
Witneſs Tarbella; and the Santoigne ſhore;
Witneſs the land, where ſteals the ſilent Soane;
Where ruſh the Garonne; and th' impetuous Rhone;
Where Loire, enamour'd of Carnutian bounds,
Leads his blue water through the yellow grounds.
Or ſhall his other acts adorn my theme;
Fair Cydnus, winding with a ſilver ſtream?
Taurus, that in the clouds his fore-head hides,
And rich Cilicia from the world divides;
Taurus, from which unnumber'd rivers ſpring,
The ſavage ſeat of tempeſts, ſhall I ſing?
Why ſhould I tell, how ſacred through the ſkies
Of Syrian cities, the white pigeon flies?
Why ſing of Tyrian towers, which Neptune laves;
Whence the firſt veſſel, venturous, ſtemm'd the
waves?
How ſhall the bard the ſecret ſource explore,
Whence, Father Nile, thou draw'ſt thy watery
ſtore?
Thy fields ne'er importune for rain the ſky;
Thou doſt benignly all their wants ſupply:
As Egypt, Apis mourns in myſtic lays,
She joins thy praiſes to Oſiris' praiſe.
Oſiris firſt contriv'd the crooked plough,
And pull'd ripe apples from the novice bough;
He taught the ſwains the ſavage-mould to wound,
And ſcatter'd ſeed-corn in th' unpractis'd ground.
He firſt with poles ſuſtain'd the reptile vine,
And ſhow'd its infant-tendrils how to twine;
Its wanton ſhoots inſtructed man to ſhear,
Subdue their wildneſs, and mature the year:
Then too, the ripen'd cluſter firſt was trod;
Then in gay ſtreams its cordial ſoul beſtow'd;
This as ſwains quaff'd, ſpontaneous numbers came,
They prais'd the feſtal caſk, and hymn'd thy name;
All ecſtacy! to certain time they bound,
And beat in meaſur'd aukwardneſs the ground.
Gay bowls ſerene the wrinkled front of care;
Gay bowls the toil-oppreſſed ſwain repair!
And let the ſlave the laughing goblet drain;
He blythſome ſings, though Manacles enchain.
Thee ſorrow flies, Oſiris, god of wine!
But ſongs, enchanting love, and dance are thine:
But flowers and ivy thy fair head ſurround,
And a looſe ſaffron-mantle ſweeps the ground.
With purple-robes inveſted, now you glow;
The ſhrine is ſhown, and flutes melodious blow:
Come then, my god, but come bedew'd with wine!
Attend the rites, and in the dance combine;

The rites and dances are to genius due!
Benign Oſiris, ſtand confeſs'd to view!
Rich unguents drop already from his hair,
His head and neck ſoft flowery garlands ſhare!
O come, ſo ſhall my grateful incenſe riſe,
And cates of honey meet thy laughing eyes!
On thee, Meſſala, ('tis my fervent prayer)
May heaven beſtow a wife, a warlike heir: 70
In whom, increas'd, paternal worth may ſhine,
Whoſe acts may add a luſtre to thy line,
And tranſports give thee in thy life's decline.
But ſhould the gods my fervent prayer deny,
Thy fame, my glorious friend, ſhall never die.
Long as (thy bounteous work) the well made way
Shall its broad pavement to the ſun diſplay,
The bards of Alba ſhall in lofty rhyme,
Tranſmit thy glory down the tide of time:
They ſing from gratitude: nor leſs the clown 80
Whom love or buſineſs have detain'd in town
Till late, as home he ſafely plods along,
Thee chants, Meſſala, in his village-ſong.
Bleſt morn, which ſtill my grateful muſe ſhall ſing,
Oft riſe, and with you greater bleſſings bring.

NOTES ON ELEGY VIII.

In the foregoing poem, for it deſerves a nobler appellation than that of elegy, Tibullus celebrates the birth day of his patron, the virtuous Meſſala; upon which occaſion he introduces the Siſter Fates as preordaining him to the conqueſt of Aquitain. As our poet attended Corvinus in that important expedition, he takes an opportunity of modeſtly mentioning his own ſhare of the ſervice. See the life.

From celebrating the reduction of Aquitain, and mentioning Meſſala's triumph on that account, our poet hints at his patron's tranſactions ſome years before, in Cilicia, Syria, and Egypt. This gives him an occaſion of recounting whatever was moſt memorable in theſe kingdoms; and as Oſiris was the chief god of Egypt, he enumerates the many favours which Oſiris was ſuppoſed, by the Egyptian mythology, to have conferred on man; and ſolemnly invokes his attendance at the genial banquet.

The poem concludes with a wiſh, that Meſſala's poſterity might reſemble him in their actions and reputation; and promiſes him immortality from the noble public road which he had lately made at his own expence.

Ver. 1. The deſtinies, at every one's birth, were ſuppoſed irrevocably to determine their after actions, having in their poſſeſſion the thread of life. Claſſic writers abound in imitations of this ſort. Catullus, in his beautiful poem, intituled, De Nuptiis Pelei et Thetidos, introduces the fates ſinging the future glories of Achilles. The "Parcæ" were three in number; their names were Clotho, Lacheſis, and Atropos; Heſiod, in his theogony, calls them the daughters of Jupiter and Themis. Clotho held the diſtaff, Lacheſis ſpun, and Atropos cut the thread.

Ver. 4. Aquitain was the third diviſion of old Gaul, and reached from the Garonne to the Pyrenees, and comprehending Guiene, Gaſcony, &c.

Meſſala, upon his having reduced to obedience that extenſive and important province, triumphed A. U. C. 721, in the ſeventh conſulſhip of Auguſtus, and third of Agrippa, on the ſeventh of the calends of October, when Tibullus was thirty-ſix years of age.

Ver. 7. This is a noble and poetical figure. Atur, (now Ador, or L'Ador), is a river of Aquitain, that runs into the ocean. Auſonius calls it Aturrus, and Ptolomy Aturius.

Ver. 11. Although no inſtitution contributed more to the greatneſs of Rome, than the public honours beſtowed on its conquerors, yet does humanity diſapprove of their triumphs. Cleopatra deſtroyed herſelf, to avoid attending in chains the triumphal car of Auguſtus.

Ver. 13. The triumphal car was drawn by four white horſes. Propertius, (l. 4. el. 1. ver. 32), attributes this inſtitution to Romulus; but Broekhuſius ſeems rather inclined to believe that Camillus, after having made himſelf maſter of the famous city of Veii, which had held out a ten years ſiege, was the firſt who invented, and put in practice this ceremony. Could any ſtreſs be laid on the authority of Statius, the cuſtom would appear to be of a much more ancient date. For that poet deſcribes (l. 12. v. 542.) Theſeus triumphing over the Amazons, in a chariot drawn by white horſes. But however this may be, we know that white horſes were held in the higheſt eſtimation of old, ſince not only the kings of Perſia uſed ſteeds of that colour in their chariots; but the conquerors, at the ſacred games of Greece, were drawn by white horſes, when they made their public entries into their ſeveral cities; and Curtius informs us, that the car, conſecrated to Jove, had horſes of that colour.

The triumphal car was ornamented with ivory and gold; but if the reader is curious to inform himſelf of all that can now be known concerning the vehicles of antiquity, he may conſult Scheffer's book on that ſubject.

Brockhus.

Ver. 16. *Tarbella.*] This is a town in Gaſcony, at

present called Tarbe. Charles Stevens says, that it is the "Aquæ Tarbellæ" of Ausonius, and probably the "Aquæ Augustæ" of Ptolomy.

Ibid. *Saintoigne Shore.*] A maritime province of Aquitain.

Ver. 17. *Witness the land, where steals the silent Soane;*

Ver. 18. *Where rush the Garonne, and th' impetuous Rhone.*

These rivers are finely contrasted. Every body knows them.

Ver. 21. Our poet having particularised most of the battles fought by Messala in Aquitain, in which he himself signalized his courage, makes a transition to the exploits performed by the same illustrious general, three years before in Cilicia, Syria, and Egypt. This leads him to expatiate on that wonder of Egypt, the Nile; and to invite Osiris, the great god of that country, to come and celebrate the birth-day of his patron.

Broekhus.

Ver. 22. *Fair Cydnus.*] A noble river of Cilicia, which Curtius thus describes: "Non spatia aquarum, sed liquore memorabilis; quippe leni tractu, e fontibus labens, puro solo excipitur; nec torrentes incurrunt, qui placide manantis alveum turbent; itaque incorruptus, idemque frigidissimus, quippe multa riparum amœnitate inumbratus, ubique fontibus suis similis, in mare evadit." lib. 3. c. 4. So excellent a geographer is Tibullus; but he probably was an eye-witness of what he describes. Vide his life.

Ver. 25. *Taurus.*] So Broekhusius interprets the word Arat in the original; "Ducta tralatione," says he, "a porca, quæ grandioribus glebis latior eminent inter fulcos."

This is a vast range of mountains, which reaching semicircularly from sea to sea, divides Cilicia from Pamphilia, Pisidia, and the other surrounding kingdoms. Both Cilicia and Taurus are thus accurately described by Xenophon in his Anabasis. Ἐντεῦθεν δὲ κατέβαινεν εἰς πεδίον μέγα, καλὸν καὶ ἐπίῤῥυτον καὶ δένδρων παντοδαπῶν ἔμπλεον καὶ ἀμπέλων δὲ καὶ Σησάμου καὶ μελίνης καὶ κεγχρου καὶ πυροὺς καὶ κριθάς, Ὄρος δὲ αὐτο περιεχει ὀχυρον, καὶ ὑπτηλον πάντη ἐκ θαλαττης εἰς θαλατταν. Then the army descended into a spacious plain, which was beautiful and well watered, producing not only vines in great plenty, but every other kind of fruit trees, and corn of all sorts. This plain was surrounded from sea to sea, by a range of lofty mountains, of very difficult access.

When the Persians were masters of Asia, says the great Baron Montesquieu, they permitted those who conveyed a spring to any place, which had not been watered before, to enjoy the benefit of it for five generations; and as a number of streams flowed from Mount Taurus, they spared no expence in directing the course of their waters. And thus, at this day, without knowing how they were brought thither, streams are found in great numbers in the fields and gardens of Cilicia.

L'Esp. des Loix.

Ver. 28. Palæstine was a province of Syria. The Syrians abstained both from fish and pigeons on a religious account. Hyginus has explained the reason of it in his 197th fable.

Broekhusius advises the reader, who is studious of Roman purity, particularly to observe, that in the original, the pigeon has three epithets bestowed on it, "Exemplo," says he, "non facile alias reperiundo."

Ver. 29. Although every nation may be supposed to have contrived and used vessels of one kind or another, to pass their great rivers, &c. yet the Phœnicians were the first who greatly improved the art of ship-building, and who made distant voyages for commerce. Tyre, in particular, was for a long time the mart of the world; and even in the time of Tibullus, notwithstanding it had been ravaged, and almost destroyed by Alexander, that city had few rivals in trade. See a truly poetical description of its grandeur in one of Dr. Young's Odes.

The houses in Tyre were built very high, whence Tibullus calls them towers. This was a circumstance which had more than once endangered the destruction of this city by earthquakes; as Strabo informs us, lib. 16. The reason assigned by Broekhusius, why the tyrants made their houses so lofty, is, that they might command a distant prospect of the sea. But might not also this be done for the sake of more accurately observing the motions of the heavenly bodies? especially if, with Mr. Glover, we look upon astronomy as the child of commerce. See Mr. Glover's elegant poem, intituled, London. The truth, however, I believe is, that building on a rock in a limited compass, the Tyrians supplied, like us in London, the want of room, by multiplication of stories.

Ver. 31. The annual overflowing of the Nile was a phenomenon which long puzzled the naturalists; and a variety of hypothesis were formed to explain the causes of it; all of which Diodorus Siculus has judiciously refuted in the end of the first book of his Universal History, except that of Agathargines the Cnidian, which ascribes the rising of the Nile in summer, to the rains that fall in Ethiopia, the country where the Nile hath its source.

The overflowing and course of the Nile, is thus explained by Mr. Thomson, in a manner no less poetical than just.

The treasures * these, hid from the bounded search
Of ancient knowledge; whence, with annual pomp,
Rich king of floods, o'erflows the swelling Nile!
From his two springs, in Gojam's sunny realm,
Pure welling out, he through the lucid lake
Of fair Dambea rolls his infant stream.
There by the Naiads nurs'd, he sports away
His playful youth, amid the fragrant isles
That with unfading verdure smile around:
Ambitious, thence the manly river breaks,
And gathering many a flood, and copious fed
With all the mellowed treasures of the sky,

* Viz. *The Vapours.*

Winds in progreſſive majeſty along; [maze.
Through ſplendid kingdoms now devolves his
Now wanders wild o'er ſolitary tracts
Of life-deſerted ſand; till, glad to quit
The joyleſs deſert, down the Nubian rocks
From thundering ſteep to ſteep, he pours his urn,
And Egypt joys beneath the ſpreading wave.
Summer.

Norden in his travels relates the ceremony at preſent practiſed at Grand Cairo, at the opening the great canal of that city for the admiſſion of the waters of the Nile. If the people expreſs their gratitude by every inſtance of licentious joy, the government, it would ſeem from that traveller, is not profuſe upon the occaſion, though, indeed, Alpinus makes it a very ſplendid affair.
De Medicin. Egypt.

Norden alſo affirms, that notwithſtanding the annual overflowing of the Nile, there is no country which requires more culture than the land of Egypt. No rains fall there in ſummer. Hence our poet ſays,

Arida nec pluvio ſupplicat herba Jovi.

This line, Seneca, through miſtake, attributes to Ovid: and indeed, as Broekhuſius well obſerves, Ovid much better ſuited the falſe epigrammatic turn of this philoſopher, than our poet.

The Greeks honoured Jupiter Pluvius with a particular devotion. The friends of Polynices, who had united to reſtore that prince to the throne of Thebes, ſwore at the altar of this deity, that they would effectuate their purpoſe, or die in the attempt. See Pauſan. in Corinth; who alſo informs us, in his Bœotia, that the worſhip of this deity was performed in the open air. According to Strabo, the Indians alſo worſhipped Jupiter Pluvius, together with the river Ganges, and the "Genii Indigites." He was alſo honoured at Rome in a ſingular manner. It is ſaid too, that in a great drought, the Romans dragged into their city a certain large ſtone, which lay originally near the temple of Mars, beyond the "Porta Capena;" and as rain immediately fell, the ſtone obtained the name of the "Saxum manale," and the ceremony itſelf was called "Aquælicium." See Feſtus. Was this ſtone a natural hygrometer? Even in our days, and in Romiſh countries, the catholic prieſts, in times of drought, ſeldom venture to lead forth their ſaints in proceſſion till they have obſerved the fall of the mercury.

Ver. 35. The beſt comment on this and the twenty-five following lines, are two paſſages, one from the firſt book of Diodorus Siculus, and the other from the Thalia of Herodotus. That from Diodorus is as follows; μετα δε ταυτα (ſays that curious and faithful hiſtorian) τον Κρονον αρξαι, και γημαντα την αδελφην Ρεαν, γενεσθαι καλα μεν τινας των μυθολογων Οσιριν και Ισιν, &c. The other from Herodotus has thus been tranſlated. Apis, whom the Greeks called ταυρος, was the calf of a cow uncapable of bearing another, and no otherwiſe to be impregnated than by thunder, as the Egyptians affirmed. The marks that diſtinguiſhed him from all others were theſe. His body was large and black, except one ſquare of white on the forehead: He had the figure of an eagle on his back; a double liſt of hair on his tail; and a ſcarabeus under his tongue. επι δε τη γλωσσῃ κανθαρον.

When this ſtrange god manifeſted himſelf among the Egyptians, they put on their richeſt apparel, and feaſted ſplendidly; and when he diſappeared, their mourning was as extreme.

Ver. 37. Virgil and Ovid attribute the invention of the plough to Ceres. Mythologiſts ſay, ſhe is the ſame with Iſis, the ſiſter and wife of Oſiris. Triptolemus, whom Ceres inſtructed, taught the natives of Greece and Aſia the art of huſbandry. Thoſe of ancient Italy were inſtructed in it by Saturn; and the Spaniards had for their teacher in agriculture one Hebades.
Broekh.

Ver. 65. The god mentioned in the text is Genius, or that power, who, as the Romans imagined, was the guardian of a man, from the hour of his birth to his death; hence called by the Greeks, Δαιμων μυσαγογος βιου. Theſe gods the ancients repreſent ſometimes in the form of a ſerpent, ſometimes in that of a boy, and ſometimes in that of an old man, crowned with leaves of plain-tree. On ſeveral coins of Trajan and Adrian, Genius holds in his hand a "patera," over an altar adorned with flowers; and, from his left, hangs down a whip. The offerings preſented to this deity, as Dart juſtly obſerves, were generally the ſalted cake (or *mola*), flowers, wine, and frankincenſe.

Ver. 76. Nothing, ſays Mr. Dart very truly, raiſes a higher idea among the moderns of the ancient Roman greatneſs, than their public ways.

When Auguſtus Cæſar perceived that the different roads leading to Rome were, through neglect, become of difficult paſſage, he took upon himſelf the reparation of the "via flaminia," as far as Arminium, and enjoined the ſenators to mend the other roads. This happened A. U. C. 727. as Dio Caſſius, in the fifty-third book of his hiſtory informs us. The way which fell to the ſhare of Meſſala, was a branch of the Latin road, which that excellent Roman either paved a-new, or repaired; for, from the ſituation of Tuſculum and Alba, it could not be the "via valeria," as Pighius conjectured. See Bergerius, l. 2. on the Roman Military-ways. *Broekhuſ.*

Meſſala's road muſt have been eſteemed a ſtrong and durable work, ſince Martial, to repreſent that perpetuity of fame, to which, as a poet, he thought himſelf entitled, alludes to it in theſe words:

Et cum rupta ſitu Meſſalæ ſaxa jacebunt.

ELEGY IX.

In vain would lovers hide their infant-ſmart
From me, a maſter in the amorous art;
I read their paſſion in their mien and eyes,
O'erhear their whiſpers, and explain their ſighs.
This ſkill no Delphian oracles beſtow'd,
No augurs taught me, and no victims ſhow'd;
But love my wriſts with magic fillets bound,
Laſh'd me, and laſhing, mutter'd many a ſound.
No more then, Marathus, indifference feign,
Elſe vengeful Venus will inhance your pain!
What now, ſweet youth, avails your anxious care,
So oft to eſſence, oft to change your hair?
What though coſmetics all their aid ſupply?
And every artifice of dreſs you try?
She's not oblig'd to bredes, to gems, to clothes,
Her charms to nature Pholoe only owes.
What ſpells devote you? ſay, what philtres bind?
What midnight ſorcereſs faſcinates your mind?
Spells can ſeduce the corn from neighb'ring plains!
The headlong ſerpent halts at magic ſtrains!
And did not cymbals ſtop thy prone career,
A ſpell thee Luna from thy orb would tear!
Why do I magic for your paſſion blame,
Magic is uſeleſs to a perfect frame! [threw,
You ſqueez'd her hands, your arms around her
Join'd lip to lip, and hence your paſſion grew.
Ceaſe then, fair maid, to give your lover pain;
Love hates the haughty, will avenge the ſwain.
See youth vermillions o'er his modeſt face!
Can riches equal ſuch a boy's embrace?
Then aſk no bribe—when age affects the gay,
Your every ſmile let hoary dotage pay;
But you your arms around the ſtripling throw,
And ſcorn the treaſure monarchs can beſtow.
But ſhe who gives to age her charms, for pay,
May her wealth periſh, and her bloom decay.
Then when impatience thrills in every vein,
May manhood ſhun her, and the young diſdain.
Alas! when age has ſilver'd o'er the head,
And youth that feeds the lamp of love is fled,
In vain the toilette charms; 'tis vain to try,
Gray ſcanty locks with yellow nuts to dye;
You ſtrip the tell-tales vainly from their place;
And vainly ſtrive to mend an aged face.
Then in thine eyes while youth triumphant glows,
And with his flowers thy cheeks my fair one ſows,
Incline thine heart to love, and gentle play,
Youth, youth has rapid wings, and flies away!
The fond old lover vilify, diſdain;
What praiſe can crown you from a ſtripling's pain?
Spare then the lovely boy; his beauties die;
By no dire ſickneſs ſent him from the ſky:
The gods are juſt; you, Pholoe, are to blame;
His ſallow colour from your coyneſs came.
Oh, wretched youth! how oft, when abſent you,
Groans rend his breaſt, and tears his cheeks bedew?
"Why doſt thou rack me with contempt? he cries,
"The willing ever can elude their ſpies.
"Had you, O had you felt what now I feel,
"Venus would teach you from your ſpies to ſteal.
"I can breathe low; can ſnatch the melting kiſs,
"And noiſeleſs raviſh loves enchanting bliſs;
"At midnight can I ſecurely grope my way;
"The floor tread noiſeleſs, noiſeleſs turn the key.
"Poor fruitleſs ſkill! my ſkill if ſhe deſpiſe,
"And cruel from the bed of rapture flies.
"Or if a promiſe hap'ly I obtain,
"That ſhe will recompence at night my pain;
"How am I dup'd? I wakeful liſten round,
"And think I hear her in each caſual ſound.
"Periſh the wiles of love, and arts of dreſs?
"In ruſſet weeds I'll ſhrowd my wretchedneſs.
"The wiles of love, and arts of dreſs are vain,
"My fair to ſoften, and admittance gain."
Youth, weep no more; your eyes are ſwoln with tears;
No more complain; for, O! ſhe ſtops her ears.
The gods, I warn you, hate the haughty fair,
Reject their incenſe, and deny their prayer.
This youth, this Marathus, who wears your chains,
Late laugh'd at love, and ridicul'd its pains!
Th' impatient lover in the ſtreet would ſtay!
Nor dreamt that vengeance would his crimes repay.
Now, now he moans his paſt miſdeeds with tears,
A prey to love, and all its frantic fears:
Now he exclaims at female ſcorn and hate;
And from his ſoul abhors a bolted gate!
Like vengeance waits you; truſt th' unerring muſe,
If ſtill you're coy, and ſtill acceſs refuſe!
Then how you'll wiſh, when old, contemn'd of all,
But vainly wiſh, theſe moments to recall!

NOTES ON ELEGY IX.

MARATHUS, one of the poet's friends, had lately become enamoured of Pholoe; but as that youth had formerly affected an averſion to love, he now wanted to conceal his paſſion. This, Tibullus tells him, was to no purpoſe, as he knew from his own experience, all the ſymptoms of an infant deſire; among which he chiefly particularizes a ſudden attention to dreſs. Tibullus informs his friend, that ſo extraordinary an application to finery was neither required in him, who was a fine figure, nor agreeable to Pholoe, who appears to have been a woman of ſenſe; and aſks him, how he expected that ſoppiſhneſs ſhould make any impreſſion on the heart of one who deſpiſed every thing elſe but an elegant ſimplicity in apparel? The poet next inquires, by what ſpells he inliſted himſelf under the banner of love? But immediately reſolves the queſtion himſelf, by emphatically calling beauty the moſt powerful of enchantments.

From ſome parts of the poem, it would ſeem that Pholoe had not always been ſo inſenſible to the merits of Marathus. This change of behaviour makes the poet warmly expoſtulate with her for his young friend, whom he introduces pathetically lamenting the rigour of his deſtiny. The poem concludes with a prediction, that unleſs Pholoe altered her conduct, heaven would undoubtedly puniſh her.

The commentators ſuppoſe that this is the Pholoe mentioned by Horace, in his beautiful ode addreſſed to Tibullus; and, indeed, it muſt be confeſſed, that theſe gentlemen have not always ſo good a foundation for their conjectures. They alſo take it for granted, that the Cyrus ſpoken of in the ſame poem, was our Marathus, whom they repreſent as a foreigner, and formerly a ſlave. Their arguments, however, in defence of this laſt ſuppoſition, are too trifling for confutation.

Ver. 6. The poet here mentions three ſorts of divination; the oracular, that of inſpecting the bowels of animals, and that called augury. This laſt, which conſiſted in deducing events from the manner in which birds fed, and from their flight or ſcreaming, was ſo particularly regarded by the Romans, that few enterpriſes of conſequence were begun, without the previous ſanction of the holy chickens; and as theſe were under the management of the officers of ſtate, and leaders of the army, they were employed generally to the purpoſes of policy. This kind of divination was not peculiar to the Romans; for we find from the Iliad, that their ſuppoſed anceſtors, the Trojans, believed alſo in augury. Hector, indeed, ſeems to place no confidence in the flight, &c. of birds; and as Homer every where repreſents him as a man of an excellent head and heart, we may readily ſuppoſe, that the old bard himſelf was of the ſame way of thinking.

Ver. 7. None but thoſe who have felt love can be proper judges of that paſſion. Reading, indeed, may give ſome imperfect ideas of it; but experience is the only certain teacher. This is what Tibullus means by the magic fillets. Salmaſius, therefore, is miſtaken in making the "magicus nodus" of the text ſignify knots, ſuch as are mentioned in the notes upon the fifth elegy.

Ver. 10. There is a ſentiment, as Vulpius juſtly obſerves, ſimilar to this in Euripides.

Κυπρις γαρ ου Φοιβητος ην πολλη ρυη
Η τον μεν εικονθ' ἡσυχη μετεσχεται
Ὁν δαν περισσα και Φρονουνθ ἰυρη μεγα
Τουτον λαβουσα πως δοκεις καθυβρισεν.

In Hippolit.

Ver. 13. The original may be thus literally interpreted: Oh! what avails it now that you ſurcharged your cheeks with juices to make them ſmooth and ruddy? and what, that you have your nails paired by the learned hand of an expert artiſt? In vain you vary the parts of your dreſs, and in vain you confine your compreſſed foot within ſo neat a ſandal.

The "ſuccus ſplendens" of the text, if Broekhuſius juſtly interprets it, was not an over-delicate preparation; for, according to him, it was "craſſius ſputum ex madido pane, quo illinebantur genæ." Some editions of merit read, "ſuco ſplendenti."

Well-paired nails were regarded by the Romans as ſo eſſential to a genteel appearance, that Horace, to ſhock us at the witch Canidia, introduces her with unpaired nails; and yet we find that Mecænas was ſometimes out of humour with this bard himſelf, for the ſame neglect.

Prave ſectum ſtomachcris ob unguem.

From the text, the learned conjecture, that none but the poorer ſort of people paired their own nails, the rich having theirs cut by the barber; yet Mr. Dacier, upon the following lines of Horace,

Conſpexit, ut aiunt,
Adraſum quemdam, vacua tonſoris in umbra,
Cultello proprios purgantem leniter ungues.—

remarks, that the Roman ladies had their nails paired by their waiting-maids; in proof of which he cites this paſſage of our poet,

Quid ſucco, &c.

Which he thus interprets:

" Pourquoy peindre vos cheveux? Pourquoy vous faire couper les ongles par une femme adroite?" and confirms this interpretation by adding, " Porcia s'etant coupé un jour, en ſe faiſant les Ongles, Brutus la gronda d'avoir fait l'office de ſa femme de chambre." But all that is here advanced (as Broekhuſius remarks), is a blunder. For, in the firſt place, the French critic unaccountably metamorphoſes Marathus into a lady; again, Porcia uſed a barber's pairing knife, as Plutarch aſſures us; and, laſtly, Valerius Maximus thus relates the ſtory of Porcia's wounding herſelf: " Quæ cum Bruti viri ſui conſilium, quod de interficiendo Cæſare, ceperit ea nocte, qua dies teterrimi facti ſecuta eſt, cognoviſſet," &c. When Porcia was let into the ſecret by Brutus her huſband, of his intention to aſſaſſinate Cæſar the next day, ſhe, as ſoon as Brutus left the room, called for a barber's knife, as if ſhe meant to pair her nails; which being brought her, ſhe let it fall as though by chance, and wounded her thigh. Brutus being brought back into her chamber, by the ſcreams of her maids, mildly rebuked her for endeavouring to perform the barber's office. But ſhe whiſpered him, I wounded myſelf on purpoſe, as a trial of my love for you; for ſhould your enterpriſe fail, I wanted to know with what equanimity I could kill myſelf. Lib. 3.

The laſt line,

Anſaque compreſſos, &c.

Signifies the extreme care Marathus took in making the ſandal ſit neat on his foot, by tightening the ſtraps tied to the anſæ or thongs, which came up on every ſide of the foot, and were faſtened over the inſtep.

Ver. 18. Many editions read " pallentibus," and it is certain, that the epithet is claſſical. But we ſhall not enter into the merits of the two claimants, O and A; but refer thoſe who are fond of ſuch altercation to the Dutch commentator.

Although almoſt every poet of antiquity has left us his teſtimony as to the efficacy of ſpells in producing love, it muſt not, however, be imagined, that they believed it in reality. For how ſhould ſpells excite that harmony,

Attuning all their paſſions into love:
Where friendſhip full exerts her ſofteſt power,
Perfect eſteem enliven'd by deſire
Ineffable, and ſympathy of ſoul, [will
Thought meeting thought, and will preventing
With boundleſs confidence.

Which Thomſon makes the eſſence of love to conſiſt in. But though ſpells cannot excite love, yet philtres, by ſtimulating, may raiſe deſire.

Ver. 21. When the moon was eclipſed, the ancients imagined that ſhe ſtruggled with witchcraft; and, therefore, to relieve her, ſtruck upon inſtruments of braſs and other ſonorous bodies, thinking that ſounds would accompliſh her deliverance. In alluſion to this cuſtom, Ovid thus ſpeaks of the bluſhes of Hermaphroditus:

Hic color aprica pendentibus arbore pomis,
Aut ebori tincto eſt; aut ſub candore rubenti,
Cum fruſtra reſonant æra auxiliariæ, lunæ.
Met. lib. vi.

A red like this, the ripening apple ſhows;
So with vermilion dyed, fair ivory glows:
Bluſhes like theſe do ſtruggling Cynthia ſtain;
When aiding braſs, and cymbals ring in vain.
Addiſon.

And Juvenal, ſatirically deſcribing a ſcold, ſays, that there was no need of a ſhrill noiſe of inſtruments to relieve the labours of the moon, the tongue of this woman being ſufficiently qualified to produce ſuch an effect. *Dart.*

Travellers inform us, that this ſuperſtition is ſtill practiſed in ſeveral parts of the eaſt, &c.

Ver. 31. Theſe lines are not only extremely indelicate, but gives us a diſpleaſing picture of Pholoe's venality.

Ver. 39. *Alas! when age.*] When the fair ſex found their eſtimation upon beauty only, without aiming at any mental accompliſhment, it is no wonder, in that caſe, that they dread old age, and endeavour, by artifices, to repay the decays of nature. Every ſtage of life has its proper bents and paſſions. A rational attachment to love and pleaſure, is ornamental in youth, allowable in more advanced life, but prepoſterous in age. What character is more ridiculous than that of a coquette of ſixty? But, ſay the fair, can life be agreeable, when the power to raiſe love is gone? Are then the matronly virtues of no conſideration? Are friendſhip and eſteem, which can be enjoyed in full vigour even in the lateſt period of life, of no avail? Mental perfection is the root from whence muſt ſpring all the doceurs of old age; and mental perfection muſt be planted in youth early, if it is ever meant to ſhoot up to maturity.

Ver. 41.

———'Tis vain to try,
Gray ſcanty locks with yellow nuts to dye.

Meurſius and Duport are of opinion, that black is the dye which Tibullus mentions in the text; but Broekhuſius, and eſpecially Arntzenius, prove, that walnut dyed the hair yellow; which, as has been obſerved before, is the claſſical colour. Vid. Diſſert. de Col. Com. p. 114.

Ver. 52. " Sontica cauſa" here is the ſame as " morbus ſonticus," which ſignifies any great diſorder, ſuch as the gods were ſuppoſed to inflict on the wicked: and hence the Greeks call it ἱερὸς; and becauſe it prevented the unhappy ſufferer from attending on buſineſs, they alſo gave it the epithet of ἀλιτὴης.

Vulpius juſtly obſerves, that our author is not the only one who uſes " cauſa" for a diſeaſe; for it is applied by Gratian, no contemptible poet of the Auguſtan age, to ſignify the ſame thing in the following line:

Cauſaſque affectuſque canum tua cura tueri eſt.

Hence thoſe ſoldiers, who by infirmity were diſabled from campaigning, were called "cauſarii milites," and their diſmiſſion "cauſaria miſſio."

When the ſuperſtitious among the Athenians, ſaw a mad or epileptic perſon, they, ſhuddering, ſpit into their boſom to avert the miſchief. And, indeed, while thoſe diſorders were reputed judgments of Heaven upon the perſons affected, no wonder the poor ſufferers were hated and ſhunned; but a ſounder philoſopher has taught us that ſuch objects always deſerve our pity, and have a right to all the relief human ſkill can procure them.

Ver. 70. *And think I bear her.*] J. Secundus has finely imitated this thought.

Dumque ego blanditeaſque tuas, et roſcida menti
Oſcula praecipio multiplicisque viceis,
Dum vacuam falſis complexibus aera capto,
Dum mea in abſenteis porrigo colla manus,
Et quem cumque movet ſtrepitum levis aura per aedes
Dilectos dominæ ſuſpicor eſſe pedes.
El. ii. *B.* 2.

But Broekhuſius very juſtly prefers a deſcription of the ſame kind in the ſeventh canto of the Orlando Furioſo, (Stanz. 24. & 25.)

Ver. 72. *In ruſſet weeds.*] Mattaire and others have injudiciouſly inſerted the original of this line, and the two following ones, at the end of the third elegy of the ſecond book.

When that part of the Roman gown, which was commonly tucked under the right arm, and ſecured by the "umbo" on the left ſhoulder, was allowed to flow about the wearer; the "toga" was then ſaid to be "laxa." This the Romans reputed a ſign of effeminacy. Hence it is not ſurpriſing that Mecænas dreſſed in this manner; but that Julius Cæſar ſhould do ſo, is more unaccountable. And although many inſtances occur in a neighbouring kingdom, ſufficient to convince us, that the ſop and the brave ſoldier are not wholly incompatible; "Væ tamen iſtis!"

Ver. 88. All the ancient editions read,

Ni definis eſſe ſuperba.

Although this may appear odd, ſays Broekhuſius, to thoſe who have ears like King Midas, it is, nevertheleſs, the genuine reading.

The following quotation from Arioſto is remarkable:

Penſò Rinaldo alquanto, e poi riſpoſe:
Una donzella dunque de morire
Perche laſcios fogar ne l'amoroſe
Sue Braccia al ſuo amator tanto deſire!
Sia maledetta chi tal puo patire.
Debitamente muore una crudele
Non chi da vita al ſuo amator fedele.
Cant. iv. *St.* 63.

After all, if Pholoe could find no love-worthy qualities in Marathus, it was ungenerous in our poet to inſult her with ſuch a prognoſtic. Love is the child of obſequiouſneſs, and not the offſpring of menace; accordingly, the fair Egyptian (in Prior) ſays, if not poetically, at leaſt truly,

Soft love, ſpontaneous tree, its parted root
Muſt from two hearts with equal vigour ſhoot;
Whilſt each delighted, and delighting, gives
The pleaſing ecſtacy, which each receives.
Cheriſh'd with hope, and fed with joy, it grows;
Its cheerful buds their opening bloom diſcloſe;
And round the happy ſoil diffuſive odour flows.
If angry fate that mutual care denies,
The fading plant bewails its due ſupplies;
Wild with deſpair, or ſick with grief, it dies.
Solomon, Book ii.

ELEGY X.

Why did you ſwear by all the powers above?
Yet never meant to crown my longing love.
Wretch, though at firſt the perjur'd deed you hide,
Wrath comes with certain, though with tardy ſtride;
Yet, yet, offended gods, my charmer ſpare!
Yet pardon the firſt fault of one ſo fair!
For gold the careful farmer ploughs the plain,
And joins his oxen to the cumbrous wain;
For gold, though ſeas that ſtormy winds obey,
By ſtars, the ſailor ſteers his watery way.
Yet, gracious gods, this gold from man remove,
That wicked metal hrib'd the fair I love.
Soon ſhall you ſuffer greatly for your crime,
A weary wanderer in a foreign clime;
Your hair ſhall change, and boaſted bloom decay,
By wintery tempeſts, and the ſolar ray.
"Beware of gold, how oft did I adviſe?
"From tempting gold what mighty miſchiefs riſe?
"Love's generous power, I ſaid, with tenfold pain
"The wretch will rack, who ſells her charms for gain.
"Let torture all her cruelties exert,
"Torture is paſtime to a venal heart.
"Nor idly dream your gallantries to hide,
"The gods are ever on the ſufferer's ſide.
"With ſleep or wine o'ercome, ſo fate ordains,
"You'll blab the ſecret of your impious gains."

Thus oft I warn'd you; this augments my
shame;
My sighs, tears, homage, henceforth I disclaim.
" No wealth shall bribe my constancy, you
" swore,
" Be mine the bard, you sigh'd, I crave no more:
" Not all Campania shall my heart entice,
" For thee Campania's autumns I despise.
" Let Bacchus in Falernian vineyards stray,
" Not Bacchus' vineyards shall my faith betray."
Such strong professions, in so soft a strain,
Might well deceive a captivated swain;
Such strong professions might aversion charm,
Slow doubt determine, and indifference warm.
Nay more, you wept, unpractis'd to betray,
I kiss'd your cheeks, and wip'd the tears away.
But if I tempting gold unjustly blame,
And you have left me for another flame;
May he, like you, seem kind, like you deceive,
And O may you, like cheated me, believe.
Oft I by night the torch myself would bear,
That none our tender converse might o'erhear;
When least expected, oft some youth I led,
A youth all beauty, to the genial bed,
And tutor'd him your conquest to complete,
By soft enticements, and a fond deceit.
By these I foolish hop'd to gain your love!
Who than Tibullus could more cautious prove?
Fir'd with uncommon powers I swept the lyre,
And sent you melting strains of soft desire:
The thought o'erspreads my face with conscious
shame,
Doom, doom them victims to the seas or flame.
No verse be their's, who love's soft fires profane,
And sell inestimable joys for gain.
But you who first the lovely maid decoy'd,
By each adulterer be your wife enjoy'd.
And when each youth has rifled all her charms,
May bed-gowns guard her from your lothed
arms!
May she, O may she like your sister prove,
As fam'd for drinking, far more fam'd for love!
'Tis true, the bottle is her chief delight,
She knows no better way to pass the night;
Your wife more knowing can the night improve,
To joys of Bacchus joins the joys of love.
Think'st thou for thee, the toilette is her
care?
For thee, that fillets bind her well-dress'd hair?
For thee, that Tyrian robes her charms enfold?
For thee, her arms are deck'd with burnish'd
gold?
By these, some youth the wanton would entice,
For him she dresses, and for him she sighs;
To him she prostitutes, unaw'd by shame,
Your house, your pocket, and your injur'd fame:
Nor blame her conduct, say, ye young, what
charms
Can beauty taste in gout and age's arms?
Less nice my fair one, she for money can
Cares a gouty impotent old man;
O thou by generous love, too justly blam'd!
All, all that love could give, my passion claim'd.
Yet since thou couldst so mercenary prove,
The more deserving shall engross my love;
Then thou wilt weep when these ador'd you see;
Weep on, thy tears will transport give to me.
To Venus I'll suspend a golden shield,
With this inscription grav'd upon the field:
" Tibullus, freed at last from amorous woes,
" This offering, queen of bliss, on thee bestows:
" And humbly begs, that henceforth thou wilt
" guard
" From such a passion, thy devoted bard."

NOTES ON ELEGY X.

The translator has been obliged to use pretty much the same freedom with this elegy as he used with the fourth. Had the other elegies of Tibullus been like these two, he had never taken the trouble of translating them. But, as both in this version are new-modelled, it is hoped that neither of them can shock the most delicate chastity.

Ver. 3. Although the justness of these moral reflections is not always discoverable on this side the grave, we have all reason to think that the perjured will meet with a deserved punishment in another state. Horace makes a remark, no less just than moral:

Raro antecedentem scelestum
Deseruit pœna pede claudo.

When Jove in anger strikes the blow,
Oft with the bad, the righteous bleed,
Yet with sure steps, though lame and slow,
Vengeance o'ertakes the trembling villain's
speed.

Ariosto, according to Broekhusius, had this passage of Tibullus in his eye, in the beginning of the sixth canto.

Miser chi mal oprando si confida
Ch' ogn' hor star debbia il maleficio occulto.

Sentences of this sort are to be met with in every author; but are we thence to conclude that they imitated one another? Such observations shoot up in the common of nature, and are to be plucked by every passenger.

Ver. 13. The original, " persolvo," is a very emphatical verb, it importing a discharge of the whole debt, without the smallest diminution.

Broekhus.

Ver. 15. The delicate among the ancients, who had fine hair, were at great pains to prevent it from becoming red *(rufus)*; an effect which they imagined the heat of the ſun might occaſion. Vid. Diſſert. de Color. Com. c. 3. p. 57.

Ver. 23. Almoſt all the old editions read,

Nec tibi celanti fas ſit peccare paranti.

To find out the meaning of which long exerciſed the ingenuity of the learned; and no wonder, for if it is not nonſenſe, it is ſomething very like it. At laſt, however, Scaliger reſtored the text; which, though ſupported by MS. authority, has been cenſured by ſome malevolent critics as an intruſion of his own. *Broekhuſ.*

Ver. 26 In the original,

Ipſe Deus tacito permiſit veſa miniſtro
Ederet ut multa libera verba mero.

For this reading we are alſo indebted to Scaliger; yet the paſſage is far from being void of obſcurity. Accordingly, the commentators, ſince his time, have all of them differed in their explanations of it. And although none of their expoſitions are ſatisfactory, yet that of Broekhuſius is the leaſt liable to objections. He ſays, that the "Tacitus Dei" miniſter, is the deceitful wine, by the vapours of which, drunkenneſs creeping on, obſcures the mind, as with a veil; "tanquam velo quodam, aciem mentis obnubit ſubrepens ſenſim ebrietas" This, it muſt be owned, conveys ſome meaning; yet the idea conveyed by it appears to be farther fetched than thoſe of Tibullus commonly are. Something like this is retained in the verſion.

Ver. 31. Campania was ſo called from its being a champaigne *(campeſtris)* country. It belongs to the kingdom of Naples, and lies ſouth of Abruzzo. It was formerly ſo fertile, that Pliny and Florus elegantly call it, "Liberi Cereriſque certamen." Its preſent name is "Terra de Lavoro." It is ſtill beautiful, though it has loſt much of its claſſic amenity.

Ver. 34. Falernus was one of the moſt fruitful diſtricts in Campania. Its wines were the moſt celebrated of any in Italy; Dart alleges, that it received its name from one Falernus, a huſbandman, who, it ſeems, firſt cultivated the vine there. It was anciently called Amineum; and hence the epithet "aminea" was applied to wines of that country, and not as Servius imagines, becauſe there was no minium in them.

Ver. 35. Though the images in the original, are natural and obvious, yet as they are not appropriated to amorous compoſitions, the tranſlator has ventured to inſert others, which to him appeared to have a better title to the place.

Donec erunt ignes arcuſque, cupidinis arma,

of Ovid, would have been more adapted to the ſubject, from whence the images ought ever to ſpring; and indeed no poet of antiquity has more exactly obſerved this rule than Ovid hath done, in the elegy from which the above line is taken, and in this view cannot be too carefully peruſed. Paſtoral poets frequently err, and even Virgil himſelf is not entirely blameleſs in this particular. Mr. Pope in this, and in moſt other caſes, where correctneſs of judgment is requiſite, has been ſurpaſſed by none. How excellent, for inſtance, are theſe lines in his Rape of the Lock!

This day black omens threat the brighteſt fair,
That e'er deſerv'd a watchful ſpirit's care;
Some dire diſaſter, or by force, or ſlight:
But what, or where, the fates have wrapt in night.
Whether the nymph ſhall break Diana's law,
Or ſome frail china jar receive a flaw;
Or ſtain her honour, or her new brocade,
Forget her prayers, or miſs a maſquerade;
Or loſe her heart, or necklace at a ball,
Or whether heaven has doom'd that Shock muſt fall.
Cant. 2.

Ver. 49. This elegy abounds in difficult paſſages; nor is the original of this paſſage the leaſt obſcure: ſhould therefore the tranſlator err here, the critical reader will the more eaſily pardon him. He had, however, in his eye, the following elegant lines of Horace.

Nunc et latentis proditor intimo
Gratus puellæ riſus ab angulo,
Pignuſve dereptum lacertis,
Aut digito male pertinaci.

The laugh which from the corner flies,
To tell you where the fair one lies;
A ring or bracelet ſnatch'd away,
The ſportive pledge of future joy;
When ſhe with amorous dear delay,
Shall ſtruggling yield the willing toy.

After all, the ſentiment, as it appears in Tibullus, can boaſt of no delicacy.

Ver. 62. *May bed-gowns guard her.*] From this wiſh, and ſome others in Tibullus, many critics have conjectured that our poet's talent was no leſs ſuited to the ſatiric, than to the elegiac muſe. The tranſlator, however, would have been better pleaſed, had his author given no proofs of genius, in that diſagreeable ſpecies of writing He has therefore been leſs ſolicitous in rendering the full force of the original.

Ver. 63. *May ſhe, O may ſhe like your ſiſter prove,*
As fam'd for drinking, &c.]

The Romans entertained ſo great an abhorrence of drunkenneſs in a woman, that the laws of the twelve tables permitted the huſband to puniſh his wife with death, if found guilty of that crime.

Ver. 85. "Faciunt hoc homines," ſays the moral Cicero, "quos, in ſumma nequitia, non ſolum libido et voluptas, verum etiam ipſius nequitiæ fama delectat; ut multis in locis, notas ac veſtigia ſceleruin ſuorum relinqui velint." But Vulpius thinks, that the poet did not mean a ſhield, but a hand (palma); which he proves the ancients uſed ſometimes to hang up in their temples, to denote that it was now freed from the fetters of deceitful love. If this is the interpretation, it may be thus tranſlated:

To love I'll dedicate a hand of gold,
And this inſcription ſhall the cauſe unfold.

ELEGY XI.

Who was the firſt that forg'd the deadly blade?
Of rugged ſteel his ſavage ſoul was made;
By him, his bloody flag ambition wav'd:
And griſly carnage through the battle rav'd:
Yet wherefore blame him? we're ourſelves to blame;
Arms firſt were forg'd to kill the ſavage game:
Death-dealing battles were unknown of old;
Death-dealing battles took their riſe from gold:
When beachen bowls on oaken tables ſtood,
When temperate acorns were our fathers food;
The ſwain ſlept peaceful with his flocks around,
No trench was open'd, and no fortreſs frown'd.
O had I liv'd in gentle days like theſe,
To love devoted, and to home-felt eaſe;
Compell'd I had not been thoſe arms to wear,
Nor had the trumpet forc'd me from the fair:
But now I'm dragg'd to war, perhaps my foe
E'en now prepares th' inevitable blow! [known
Come then, paternal gods, whoſe help I've
From birth to manhood, ſtill protect your own,
Nor bluſh, my gods, though carv'd of ancient wood,
So carv'd in our forefathers times you ſtood;
And though in no proud temples you were prais'd,
Nor foreign incenſe on your altars blaz'd;
Yet white-rob'd faith conducted every ſwain;
Yet meek-ey'd piety ſeren'd the plain;
While cluſtering grapes, or wheat-wreaths round your hair,
Appeas'd your anger, and engag'd your care;
Or dulcet cakes himſelf the farmer paid,
When crown'd his wiſhes by your powerful aid;
While his fair daughter brought with her from home,
The luſcious offering of a honey-comb:
If now you'll aid me in the hour of need,
Your care I'll recompence—a boar ſhall bleed.
In white array'd, I'll myrtle baſkets bear,
And myrtle foliage round my temples wear:
In arms redoubtable let others ſhine,
By Mars protected mow the martial line;
You let me pleaſe, my head with roſes crown,
And every care in flowing goblets drown.
Then when I'm joyous, let the ſoldier tell,
What foes were captur'd, and what leaders fell;
Or on the board deſcribe with flowing wine,
The furious onſet, and the flying line.
For reaſon whiſpers, Why will ſhort liv'd man,
By war contract his too contracted ſpan?
Yet when he leaves the cheerful realms of light,
No laughing bowls, no harveſts cheer the ſight;
But howl the damn'd, the triple monſter roars,
And Charon grumbles on the Stygian ſhores:
By fiery lakes the blaſted phantoms yell,
Or ſhrowd their anguiſh in the depths of hell.
In a thatch'd cottage happier he by far,
Who never hears of arms, of gold, or war,
His chaſte embrace a numerous offspring crown,
He courts not fortune's ſmile, nor dreads her frown;
While lenient baths at home his wife prepares,
He, and his ſons, attend their fleecy cares,
As old, as poor, as peaceful may I be,
So guard my flocks, and ſuch an offspring ſee.
Meantime, ſoft peace, deſcend, O! bliſs our plains!
Soft peace to plough with oxen taught the ſwains.
Peace plants the orchard, and matures the vine,
And firſt gay-laughing preſt the ruddy wine;
The father quaffs, deep quaff his joyous friends,
Yet to his ſon a well-ſtor'd vault deſcends.
Bright ſhine the plough-ſhare, our ſupport and joy!
But ruſt, deep ruſt, the veteran's arms deſtroy!
The villager (his ſacred offerings paid
In the dark grove, and conſecrated ſhade),
His wife and ſons, now darkneſs parts the throng,
Drives home, and whiſtles, as he reels along.
Then triumphs Venus; then love-feuds prevail;
The youth all jealous then the fair aſſail;
Doors, windows fly, no deference they pay,
The chaſteſt ſuffer in th' ungentle fray: [tears;
Theſe beat their breaſts, and melt in moving
The lover weeps, and blames his rage and fears;
Love ſits between, unmov'd with tears and ſighs,
And with incentives fly the feud ſupplies.
Ye youths, though ſtung with taunts, of blows beware;
They, they are impious, who can beat the fair:
If much provok'd, or rend their ſilken zone,
Or on their treſſes be your anger ſhown:
But if nor this your paſſion can appeaſe,
Until the charmer weep, the charmer teaze!
Bleſt anger if the fair diſſolves in tears!
Bleſt youth, her fondneſs undiſguis'd appears!
But cruſh the wretch, O war, with all thy woes,
Who to rough uſage adds the crime of blows
Bland peace, deſcend, with plenty on our plains,
And bleſs with eaſe and laughing ſport the ſwains.

NOTES ON ELEGY XI.

THERE are very few of our poet's elegies, which surpass the following. By the words,

Nunc ad bella trahor,

it would seem that Tibullus was about to depart on some military expedition; Broekhusius conjectures, that it was written soon after his being appointed to follow Messala to Syria: and of course that it ought to take place of the third elegy of this book. But the translator cannot help differing from that learned commentator; for when the third elegy was composed, it is known, that Tibullus had been for some time in love with Delia; and yet in the following poem he makes no mention of Delia: besides Pocchi informs us, that in some of his old MSS. this elegy began the second book, and was intitled De Amoribus Nemesis. But be that as it will, the elegy itself is truly worthy of our poet, and contains a vast deal of the real Tibullus. In the beginning, he draws a fine parallel between the guilty horrors of war, and the innocent pleasures of a country retirement. His invocation to his household gods to preserve his life, in the dangerous employment he was forced into, is no less pious and pathetic, than his reflections on ambition, and its fatal consequences are just and moral.

From the whole of this elegy, it may reasonably be questioned, whether Tibullus was an academic philosopher, as Mr. Francis supposes, or rather whether he was not, at least in practice, if not in theory, of the sect of Epicurus. The cheerful enjoyment of the present hour was their fundamental maxim.

Ver. 1. *Who was the first that forg'd.*] Authors differ greatly in their opinions about this matter. Aristotle asserts, that one Lydus of Scythia first showed the method of tempering and working in brass: Theophrastus ascribes this discovery to Dela a Phrygian. Callimachus, on the other hand, curses the Chalybes as the inventors of iron, and thus addresses Jove to destroy them,

Ζευ πατερ ὡς χαλυβων παν απολοιτο γενος·

While Hesiod lays this to the charge of the Dactyli Idei in Crete; as others say, that the Cyclops were the first who worked in that metal. The Lemnians, on the same account, are branded by many; and hence the proverbial expressions of λημνια κακα, λημνια χειρ, and λημνιον ἑλκειν. Bacchus is also said by some, to have invented the weapons of war; but Diodorus Siculus imputes their discovery to Isis and Osiris. But the true author was probably Jubal Cain.

Ver. 6. *Arms first were forg'd.*] This, in fact, is not true, ambition first taught man the use of arms. Pliny tells us, that Prætus and Acrisius, when at war with one another, invented the shield; and that Midias the Messanian invented a coat of mail; and that the Lacedemonians invented the helmet, sword and spear. Lib. 7. c. 56.

Ver. 8. Poets have generally given full scope to their indignation, when speaking of gold: they have looked upon it to be, what it indeed too often is, the destroyer of love, the support of unjust ambition, and the parent of luxury.

ἡ φιλοχρημοσυνη μητηρ, &c.

The worst of ills from sordid avarice flow;
And gold is but the glittering bait of woe.
Nefarious gold, with virtue's bane replete:
Oh! that thy fatal poison were less sweet!
Of thee are born wars, murders, and alarms,
Paternal curses, and fraternal arms.

Although it must be confessed, that all these mischiefs have, on some occasions, arisen from gold; yet he is but little acquainted with the history of human nature, who does not know that almost all the great passions to which man is subject, have at one time or another occasioned these very mischiefs.

Ver. 9. No poet, except Homer, abounds so much as Tibullus, in descriptions of primitive and rural simplicity of manners. To an unprejudiced mind, these are entertaining, and afford matter of curious speculation. Although our author, by his birth and abilities, might have shone in courts, and the polite scenes of active life, his good sense, poetical turn, and aversion to the villanies of office, led him to prefer the country: accordingly he never appears to more advantage, than when describing its pleasures, and the plain but honest devotion of its inhabitants.

Ver. 15. Almost all the old editions read,

Tunc mihi vita foret, vulgi nec tristia nossem
Arma.

This perplexed the commentators, who knowing, that the commons of Rome, in times of peace, or when acting in their civil capacity, neither wore arms themselves, nor had them to wear, much less to dispose of (for the arms of that people, as well as their military clothing, were placed in the custody of the supreme magistrates, who, from the public armories occasionally delivered them out); at last thus happily restored the passage,

Tunc mihi vita foret dulcis: nec tristia nossem.

An emendation which Broekhusius approves of,

———*A boar ſhall bleed.*] The whole of thi addreſs to his houſehold gods is pathetic and animated. This line has been ſtrangely corrupted in the original; the true reading however is,

Hoſtia erit plena ruſtica porcus hara.

As many from the old reading

Hoſtia e plena, &c.

ſuppoſed ſomething wanting, Pontanus thus boldly endeavoured to ſupply the deficiency;

At nobis ærata lares depellite tela;
Nec petat hoſtili miſſa ſagitta manu;
Neu gladio celer inſtet eques; proſint mihi ad aras
Quæque tuli ſupplex munera quæque feram;
Thure pio callantque ſoci, pinguiſque trahatur
Hoſtia de plena myſtica porcus hara.

But the word "trahatur," as Broekhuſius obſerves, betrays the forgery; for victims were not dragged, but led to the altar. Should not the "plena hara," in the original, have convinced thoſe authors, who affect to repreſent Tibullus as poor, that his circumſtances were far otherwiſe?

The ritual compiled by Numa, preſcribed not only the ceremonies to be uſed, but the ſacrifices to be offered, in the worſhip of each deity. The Romans, however, when they became more powerful and wealthy, added not only to the number of victims originally required, but enlarged alſo the ſpecies, or kinds of offerings. Whence this practice aroſe is not difficult to determine; yet, in ſpite of pontifical juggle, the Roman devotion always retained much of its primitive ſimplicity.

Ver. 35. Servius informs us, that the Roman prieſts always put on the white linen garment, bordered with purple, when they were about to ſacrifice. It was called pure and unpolluted, according to the ſame author, "Quando non obſtita, non fulgurita, non funeſta, neque maculam habens, Φ. K. homine mortuo."

Ver. 36. Hence ſays Broekhuſius, we may remark, that myrtle was no leſs acceptable to the Lares than to Venus herſelf; and Horace informs us, that they were often crowned with this pleaſant evergreen.

——Te nihil attinet
Tentare multa cæde bidentium,
Parvos coronantem marino
Rore Deos fragilique myrto, &c.
B. 3. l. 23.

The little gods around thy ſacred fire,
No vaſt profuſion of the victims gore,
But pliant myrtle-wreaths alone require,
And fragrant herbs the pious rural ſtore.
A grateful cake when on the hallow'd ſhrine,
Offer'd by hands that know no guilty ſtain,
Shall reconcile th' offended powers divine,
When bleeds the pompous hecatomb in vain.
Francis.

Ver. 43. There is a fine and elegant improvement of this thought, in Mr. Tickle's poem on the peace of Utrecht.

See the ſond wife, in tears of tranſport drown'd,
Hugs her rough lord, and weeps o'er every wound,
Hangs on the lips that fields of death relate,
And ſmiles and trembles at his various fate:
Near the full bowl he draws the fancy'd line,
And marks feign'd trenches in the flowing wine,
Then ſets th' inveſted fort before her eyes,
And mines that whirl'd battalions to the ſkies,
His little liſtening progeny look pale,
And beg again to hear the dreadful tale.

There are alſo ſome beautiful ſtrokes of the ſame nature in Mr. Addiſon's Latin poem, intituled Pax Gulielmi Auſpiciis Europæ Reddita. Mus. Ang. Tom. 2.

Ovid has inſerted this thought of Tibullus, in ſeveral parts of his writings, particularly in Penelope's letter to Ulyſſes.

At aliquis poſita monſtrat fera prælia menſa,
Pingit et exiguo, pergama tota, mero.

See alſo his Metam. Lib. 9. at the beginning, book xii. ver. 155. Ars Amand. book ii. ver. 127.

Ver. 48. *No laughing bowls.*] The author of the Hercules Furens, has ſtretched this ſingle thought into ten long lines, ver. 698. Not ſo that excellent poet of Italy Sannazario.

Poſt obitum non ulla mihi carcheſia ponet
Æacus, infernis non viret uva jugis.
Ep. Lib. 1. Brock.

Are we then to place the chief joys of life in eating and drinking? Ought not our poet rather to have expatiated on the pleaſures of learned ſociety, or the charms of friendſhip, and the bliſs of love? yet, after all, as the poet was only deſcribing the happineſs of rural life, theſe additional images were the leſs neceſſary.

Ver. 49. The "uſti capilli et exeſæ genæ" of the original, are far from being terrifying images. "Omnes imagines mortuorum calvæ finguntur, comis igne rogi conſumptis." Vid. Luc. in Dialog. Nir. Diogen. et Thers.

Ver. 57. *While lenient baths.*] Shall we ſuppoſe that our poet had Ariadne's fine exclamation to Theſeus in his thoughts.

Quæ tibi jucundo famularer ſerva labore?
Candida permulcens liquidis veſtigia lymphis.
Catull.

Claude Lorraine himſelf could not draw a finer picture of a village-family, than our poet has given us in this place. There is another pleaſing repreſentation of the ſame ſort in the Gentle Shepherd; a dramatic poem, which the tranſlator is perſuaded, every judge of poetry and nature will greatly prefer to the frigid Arcadian Favole Boſcorechie of Italy.

This practice however of preparing warm baths, to eaſe the limbs of the fatigued huſband, was not peculiar to the rural dame. Homer informs us, that Andromache commanded her maids to place on the fire, a large veſſel full of water, to bathe her lord in, when he ſhould return from the battle; ſhe in the mean while, employing herſelf,

as Pope conjectures, in weaving a veſtment to adorn him with. But alas, all her care was ſuperfluous, Hector never came back. Il. x. v. 440. Homer is in nothing more admirable, than in his ſoftening the ferocity of his battles, by the apt introduction of tender and domeſtic circumſtances.

Ver. 61. *Meantime, ſoft peace, deſcend.*] May not this ſignify that Tibullus was to have been employed in quelling ſome Italian commotion, and not in a foreign expedition?

Ver 62. *Soft peace to plough.*] Many editors, and among the reſt Broekhuſius, read,

Duxit aratores ſub juga curva boves.

But the adverb "primum," in the foregoing line, ſufficiently authenticates our reading "araturos:" for how could an ox, when firſt put to the plough, with any propriety be called "arator," a term intimating that he had ploughed before; though he might well be called "araturus," as that gerund only points at his future employment and office. Beſides, our reading is ſupported by the greateſt number of manuſcripts and editions.

Ver. 94. Caſimir has a beautiful ode on peace, and the reader will find many fine thoughts on the ſame ſubject, in thoſe poems of Mr. Addiſon's and Mr. Tickle's, which we have already praiſed.

Ver. 67. In the original,

Pace bidens, vomerque nitent, &c.

not "vigent," in oppoſition to Situs. This correction we owe to Heinſius.

Ver. 70. *In the dark grove*] That the Heathens, ſays Mr. Dart, had their religious rites in thick woods and groves, every one knows; the poet therefore deſcribes thoſe holidays, as the gay part of the farmer's life, when he and his family made merry, not unlike, adds he, to our country wakes and revels, when mirth is at its height, and the ſcuffles of love grow warm. There is a ſimilar deſcription in the eleventh Æneid, ver. 740.

At non in venerem ſegnes nocturnaque bella;
Aut, ubi curva choros indixit tibia Bacchi,
Expectare dapes, et plenæ pocula menſæ.
Hic amor, hoc ſtudium; dum ſacra ſecundus Harupex
Nuntiet, ac lucos vocet hoſtia pinguis in altos.

Ver. 75. *Doors, windows fly.*]

——— Sciſſoſque capillos
Fimæna perfractas conqueriturque fores.

On which Scaliger thus ſupercilioufly remarks, "Copulativa verbo addita vehementer apud me male audit; quod tametſi a magnis poetis, et a Nobis quoque factum eſt; nunquam tamen, ac ne tunc quidem, quum faccrem, probavi."

If the young rakes of Rome ſometimes broke open their miſtreſſes doors, Dr. Bentley informs us from Plautus and Seneca that the women ſometimes returned the compliment. This, in Horace's court-language, was called, "expugnare juvenum domos"

Neither was this boiſterous method of getting admittance entirely unknown to the old Sicilians, as we may perceive by Daphnis's threat to Simætha.

ει δ' αλλα μ' ωθιτι και ἀ θυρα ιιχιτο μοχλω
παντως και πελεκεις και λαμπιδες ηθον εφ' ημας.
Theocrit.

Ver. 79. *Love ſits between.*] "Totus hic locus," ſays Broekhuſius, very juſtly, "tam venuſto artificio eſt pertractatus, ut melius non queat pingi. Flet puella, male habita ab ebrio amatore; flet amator, pigetque eum tam turpis victoriæ. Adſidenter utrumque Cupido, nihil motus his lacrymis: quinimo, ut ne pax defubito confiat, inſidioſe cavet, ſubjectis utrimque novæ rixæ alimentis. Nihil poterit amænius excogitari, nihil exprimi vividius." He then deſires us to compare this ſhort picture of our poet's with another in Ovid. B. 1. El. 7 and adds. "Fallor aut illius (meaning Ovid) artis immenſam varietatem magis miraberis; hic vero non minus te dilectabit invidendus ille nitor nativæ ſimplicitatis.

This picture would afford an excellent ſubject to a Guido Rheni.

Ver 82. The original literally tranſlated, intimates, that whoever beats his miſtreſs, is of a temper as rigid and inflexible as ſtone or iron; and were it in his power, he would dethrone the gods themſelves, and expel them from heaven. This furniſhes us with a ſtrong proof of the want of gallantry of thoſe times! Ovid, according to his own confeſſion, was not over ſcrupulous in his conduct to the fair ſex; the ſixth Elegy of the firſt Book being an apology to Corinna, whom he had been ſo barbarous as to beat. Many other paſſages might be adduced from ancient writers to corroborate this aſſertion. But the ſubject is unpleaſing.

Ver 84. *Or on their treſſes.*] This affords another diſagreeable proof, that the moderns greatly ſurpaſs the ancients in point of gallantry.

Although nothing can be more acceptable to the lover, than a diſcovery of his being beloved; yet the method here made uſe of to arrive at that diſcovery, is wholly illiberal: for in ſpite of all that Propertius has wrote to the contrary, what pleaſure can there be,

Aut in amore dolere, aut audire dolentem;
Sive meas lacrymas, ſive videre tuas.

But cruſh the wretch] From theſe, and many other paſſages in Tibullus, it appears, that our author had not one ill-natured vice about him. Other poets we admire, but there is none of the ancients whom the tranſlator ſhould have wiſhed to have been acquainted with ſo much as Tibullus. One cannot be very converſant in his writings, without acquiring a friendſhip for the man, and longing, to uſe Mr. Spence's words, to have juſt ſuch another as he was for one's friend.

Ver. 91. The various figures which Broekhuſius and others who have publiſhed antiques, have given us of this goddeſs, are the beſt comment upon the original of this paſſage. Theocritus puts ears of corn blended with poppies into both her hands. See his Idyll. entitled ειρηνη.

BOOK II.---ELEGY I.

ADVERTISEMENT.

This book, though ſhorter than the former, is not inferior to it in point of poetical fancy and amorous tenderneſs; the numbers flow with the ſame eaſy correctneſs, and perhaps the ſentiments are more delicate; for, being wholly dedicated to rural devotion, friendſhip, and love, the reader will meet with nothing in it, offenſive to the ſtricteſt chaſtity.

If the verſion of the following books of Tibullus ſhould be found leſs liable to cenſure, than that of the former, it is chiefly to be imputed to the kind obſervations of a friend, who alſo obliged the tranſlator with the elegant notes marked *B.*

Attend! and favour! as our ſires ordain;
The fields we luſtrate, and the riſing grain:
Come, Bacchus, and thy horns with grapes ſurround;
Come, Ceres, with thy wheaten garland crown'd;
This hallow'd day ſuſpend each ſwain his toil,
Reſt let the plough, and reſt th' uncultur'd ſoil:
Unyoke the ſteer, his racks heap high with hay,
And deck with wreaths his honeſt front to-day.
Be all your thoughts to this grand work apply'd!
And lay, ye thrifty fair, your wool aſide!
Hence I command you mortals from the rite,
Who ſpent in amorous blandiſhment the night,
The vernal powers in chaſtity delight.
But come, ye pure, in ſpotleſs garbs array'd!
For you the ſolemn feſtival is made!
Come! follow thrice the victim round the lands!
In running water purify your hands!
See! to the flames the willing victim come!
Ye ſwains with olive crown'd, be dumb! be dumb!
" From ills, O ſylvan gods, our limits ſhield,
" To-day we purge the farmer and the field;
" O let no weeds deſtroy the riſing grain;
" By no fell prowler be the lambkin ſlain;
" So ſhall the hind dread penury no more;
" But gaily ſmiling o'er his plenteous ſtore,
" With liberal hand ſhall larger billets bring,
" Heap the broad hearth, and hail the genial
" ſpring.
" His numerous bond-ſlaves all in goodly rows,
" With wicker huts your altars ſhall encloſe.
" That done, they'll cheerly laugh, and dance,
" and play,
" And praiſe your goodneſs in their uncouth lay."
The gods aſſent! ſee! ſee! thoſe entrails ſhow,
That heaven approves of what is done below!
Now quaff Falernian, let my Chian wine,
Pour'd from the caſk in maſſy goblets ſhine!
Drink deep, my friends, all, all, be madly gay,
'Twere irreligion not to reel to-day!
Health to Meſſala, every peaſant toaſt,
And not a letter of his name be loſt!
O come, my friend, whom Gallic triumphs grace,
Thou nobleſt ſplendour of an ancient race;
Thou whom the arts all emulouſly crown,
Sword of the ſtate, and honour of the gown;
My theme is gratitude, inſpire my lays!
O be my genius! while I ſtrive to praiſe
The rural deities, the rural plain,
The uſe of foodful corn they taught the ſwain.
They taught man firſt the ſocial hut to raiſe,
And thatch it o'er with turf, or leafy ſprays:
They firſt to tame the furious bull eſſay'd,
And on rude wheels the rolling carriage laid.
Man left his ſavage ways; the garden glow'd,
Fruits not their own admiring trees beſtow'd,
While through the thirſty ground meandring runnels flow'd.
There bees of ſweets deſpoil the breathing ſpring,
And to their cells the dulcet plunder bring.
The ploughman firſt to ſooth the toilſome day,
Chanted in meaſur'd feet his ſylvan lay:
And, feed-time o'er, he firſt in blithſome vein,
Pip'd to his houſehold gods the hymning ſtrain.
Then firſt the preſs with purple wine o'er-ran,
And cooling water made it fit for man.
The village-lad firſt made a wreath of flowers
To deck in ſpring the tutelary powers:
Bleſt be the country, yearly there the plain
Yields, when the dog-ſtar burns, the golden grain:
Thence too thy chorus, Bacchus, firſt began,
The painted clown firſt laid the tragic plan.
A goat, the leader of the ſhaggy throng,
The village ſent it, recompenc'd the ſong.
There too the ſheep his woolly treaſure wears;
There too the ſwain his woolly treaſure ſhears;
This to the thrifty dame long work ſupplies;
The diſtaff hence, and baſket took their riſe.
Hence too the various labours of the loom,
Thy praiſe, Minerva, and Arachne's doom!
Mid mountain herds love firſt drew vital air,
Unknown to man, and man had nought to fear;
'Gainſt herds, his bow th' unſkilful archer drew;
Ah my pierc'd heart, an archer now too true!
Now herds may roam untouch'd, 'tis Cupid's joy,
The brave to vanquiſh, and to fix the coy.
The youth whoſe heart the ſoft emotion feels,
Nor ſighs for wealth, nor waits at grandeur's heels;
Age fir'd by love is touch'd by ſhame no more,
But blabs its follies at the fair one's door!
Led by ſoft love, the tender trembling fair
Steals to her ſwain, and cheats ſuſpicion's care,

With out-ſtretch'd arms ſhe wins her darkling way,
And tiptoe liſtens that no noiſe betray!
Ah! wretched thoſe, on whom dread Cupid frowns!
How happy they, whoſe mutual choice he crowns!
Will love partake the banquet of the day?
O come—but throw thy burning ſhafts away.
Ye ſwains, begin to mighty love the ſong,
Your ſongs, ye ſwains, to mighty love belong!
Breathe out aloud your wiſhes for my fold,
Your own ſoft vows in whiſpers may be told.
But hark! loud mirth and muſic fire the crowd—
Ye now may venture to requeſt aloud!
Purſue your ſports; night mounts her curtain'd wane;
The dancing ſtars compoſe her filial train;
Black muffled ſleep ſteals on with ſilent pace,
And dreams flit laſt, imaginations race!

NOTES ON ELEGY I.

We may, without heſitation, embrace the opinion of Muretus, that this elegy is a deſcription of the Ambarvalia, a feſtival inſtituted by Acca Laurentia, and honoured with a ſolemn ſacrifice, for procuring a bleſſing on the fields. We may even, with great probability, ſuppoſe this poem to make a very intereſting part of the feſtal entertainments. But it appears from it, that the Romans, in Tibullus's time, had added many a refined improvement from the Grecian ritual, to the plain inſtitution of the good old nurſe of Romulus; ſince we find our poet alluding to all the remarkable cuſtoms of the feſtal ſacrifices of Greece. Firſt the ſacred ſilence is proclaimed, the Ευφημειτε of the Greeks, which reſtrains the worſhippers from the uſe of words of unlucky import. Next follows an addreſs to the deities, to whoſe honour the feſtival is dedicated. The holiday being then proclaimed, and a ſtrict reſt enjoined, there follows the excluſion of all thoſe, who had contracted any pollution, and an invitation of the pure to come with clean hands and veſtments to join in the ſacrifice. The victim is then introduced, going without any force to the altar, attended by a crowd of worſhippers crowned with garlands, from the tree ſacred to the rural deities. After this, is the prayer for bleſſings on the countryman and his fields, and proſperity to the growing crop. The offering up the victim ſucceeds, and lucky omens appearing, the worſhippers are encouraged to indulge themſelves in joy and feſtivity. The ſacred hymn cloſes the whole, celebrating the honours of the rural deities recounting their various gifts, and the bleſſings which they have poured out upon the country. Whoever will look into the collectors of antiquities will find that theſe are the very particulars of the ritual of refined Greece. We may obſerve, that the proceſſions, luſtrations, as well as the buſineſs of the "fratres arvales," whoſe office it was, upon this occaſion, to ſettle boundaries, have found their way into a religion which in its original inſtitution, was little concerned with pomp and ceremony, but has been forced to receive many a ſcenical foolery from Pagan Rome. *B.*

Ver. 1. *Attend! and favour!*] The Roman poets alſo expreſs this by Dicamus bona verba.

Both theſe forms of ſpeech intimate a deſire, on the part of thoſe who prayed at the feſtival, that all who were preſent would ſincerely join with them in putting up the ſame petition.

The mythology of the ancients has been aſſigned as one of the cauſes which have contributed to render their poetical compoſitions ſuperior to thoſe of the modern.

And no doubt, that enthuſiaſm, which is ſo natural to every true artiſt in the poetical way, was conſiderably inflamed by the whole turn of their religious doctrines. When all nature was ſuppoſed to ſwarm with genii, and every oak and fountain was regarded as the haunt of ſome preſiding deity; what wonder if the poet was animated by the imagined influence of ſuch exalted ſociety; and found himſelf, as a late writer elegantly expreſſes it, hurried beyond the ordinary limits of ſober humanity. Hence aroſe the proſopopeia, which, as it is one of the boldeſt, ſo is it one of the moſt pleaſing figures in poetry. But may not the Omnipreſence of the one true God afford the Chriſtian poet a more exalted aſſiſtance? When true genius is fired with devotion, poeſy then ſhines out in all her ſplendour.

Ver. 2. *The fields we luſtrate.*] Macrobius informs us, that the verb "luſtrare" ſignifies to go round; eſpecially on a religious or myſtical account. The ceremony here alluded to, as has been ſaid, was the "ſacrum ambervale," which in ſome old MSS. is placed as a title to this elegy. This moſt ſolemn of the rural ceremonies had the morning and forenoon allotted for its celebration. Cato, de R. R. cap. 141. and Virgil, have particularly deſcribed it. And as it may not be unpleaſing to moſt of our readers, to compare the different manners of Maro and Tibullus, in repreſenting the ſame objects we ſhall here place before them the picture of this rural ceremony, as drawn by the great Mantuan.

Imprimis venerare Deos, atque annua magnæ
Sacra refer cereri, lætis operatus in herbis,
Extremæ ſub caſum hiemis, jam vere ſereno,
Tum agni pingues, et tum molliſſima vina:
Tum ſomni dulces, denſæque in montibus umbræ,

Cuncta tibi cererem pubes agreſtis adoret,
Cui tu lacte favos, et miti dilue Baccho;
Terque novas circum ſelix eat hoſtia fruges;
Omnes, quam chorus et ſocii comitentur ovantes,
Et cererem clamore vocent in tecta.

Georg. i. *ver.* 338.

Some critics contend, that Tibullus, in this elegy, does not deſcribe the Ambarval ceremony, becauſe he mentions ſome circumſtances relating to it, which Virgil omits, and relates others differently from that poet. This argument needs no confutation.

Ver. 3. *Come Bacchus.*] This god is frequently called Tauricornis by the poets; but why horns were planted on his head mythologiſts are greatly divided. Some of them look upon horns as a mark of divinity; but why then do the other deities appear without this badge? Others of them aſſign horns to Bacchus, becauſe drinking cups were anciently formed of horn; and there are, who contend, that he is thus diſtinguiſhed, becauſe he was the firſt who ploughed with oxen. Thoſe who recollect the old ſentence,

Sine cerere et Baccho friget Venus,

may haply be able to afford as ſatisfactory a reaſon for the cornuted appearance of this deity, as any ſuggeſted above. River gods are frequently repreſented with horns; but on a very different account. Pindar makes Bacchus the παρεδρος, or aſſeſſor of Ceres: and in the Orphic hymn, addreſſed to that goddeſs, ſhe is called Βρομιοισι συνεζιος. They were commonly worſhipped together. See Callimachus's ſixth hymn.

Some critics, ſuperſtitiouſly bent to deduce from ſcripture the origin of every mythological practice, have, from the "cornuta facies," common to Moſes and Bacchus, ſuppoſed, that the lawgiver of the Jews, and that heathen god, were one and the ſame perſon. But theſe perſpicacious critics ſhould have conſidered, that as adoration is natural to man, and ignorance and conjecture were prior to wiſdom and philoſophy, idolatry, which is the offſpring of devotion and blind fancy, never was, nor could be, confined to thoſe few regions bordering on Judea; nor conſequently derived from the Jews, or any of their heroes. Were we permitted, becauſe of ſome faint reſemblances between them, to form one perſon out of two, we ſhould rather chooſe, from the ſimilar circumſtances of their births, deaths, &c. to make a Romulus, than a Bacchus, of Moſes. Chronology indeed forbids this odd incorporation; but writers would do better to interdict their pen, as Lord Bacon expreſſes it, all liberties of this kind, and not offer ſtrange fires at the altar of the Lord. *G.*

The Grecians had moſt probably an hero-god of their own, named Bacchus, to whom they were indebted for ſome of the improvements of life. But it is very certain, that many of the actions, inventions, and ſymbols of the Ægyptian Oſiris, were, in after times, attributed to him. We have here one inſtance of it. The bull was the eſtabliſhed hieroglyphic of Oſiris, as the inventor of agriculture. Greece adopted the invention for their own Bacchus; but not having the uſe of the hieroglyphic characters, they contented themſelves with borrowing an attribute for their deity, and aſſigned him the horns of the animal, by whoſe labours he was ſuppoſed to cultivate and introduce agriculture into the country. I might add, that whenever Bacchus and Ceres are ſpoken of together, as rural deities, almoſt every thing applied to them, more properly belongs to Oſiris and Iſis. See a remarkable inſtance of this, Virgil's Georgics, B. i. L. 5. *et ſeq.* to the 9th.

Vos, oh Clariſſima mundi, &c.

Here Bacchus and Ceres, the humble inventors of wine and agriculture, are exalted into the heavens, and become ſun and moon, the great leaders of the year through its ſeaſons. We know there is nothing in the Grecian mythology to ſupport this; and that thoſe heavenly luminaries are attributed to other deities. But it is certain, that the ſun and moon were worſhipped by the Ægyptians under the denomination of their hero-gods, Oſiris and Iſis. Vid. Div. Legation, B. 4. Sect. 5. *et alibi paſſim.* *B.*

Ver. 7. It was uſual at the time of theſe ſacrifices, to dreſs the cattle with garlands, and to give them a reſpite from labour. Vid. Faſt. lib. i. ver. 663. lib. vi. ver. 311.

The ploughing ox was held in great eſtimation among the ancients; reſpecting this, Varro, de R. R. lib. ii. l. 53. Columella in the preface to his ſixth book, and Pliny, lib. viii. c. 45. may be conſulted. But though we refer to theſe paſſages, the tranſlator cannot deny himſelf the pleaſure of tranſcribing from Ovid the following good natured apoſtrophe, in favour of thoſe uſeful animals.

Quid meruere boves animal ſine fraude doliſque
Innocuum, ſimplex, natum tolerare labores?
Immemor eſt demum, nec frugum munere dignus,
Qui potuit curvi demto modo pondere aratri
Ruricolam mactare ſuum; qui trita labore
Illa, quibus toties durum renovaverat annum
Tot dederat Meſſes, percuſſit colla ſecuri.

Met. lib. xv. *ver.* 120.

How did the toiling ox his death deſerve?
A down-right ſimple drudge, and born to ſerve?
O tyrant! with what juſtice canſt thou hope
The promiſe of the year, a plenteous crop;
When thou deſtroy'ſt the labouring ſteer who till'd, [field?
And plough'd with pains, thy elſe ungrateful
From his yet reeking neck to draw the yoke,
That neck with which the ſurly clods he broke;
And to thy hatchet yield thy huſbandman,
Who finiſh'd autumn, and the year began.

Dryden.

Accordingly we find, that in the ancient times of the Roman republic, a perſon was publicly condemned, for having ſelled a labouring ox "(bos domitus)," in order to gratify the longings of one he was fond of. Valer. Maxim. lib. viii. lin. 1. And, in the declenſion of that empire, Conſtan-

tine ordained, that no ploughing ox ſhould be either diſtrained for debt, or taken from the traveller, to ſupply the place of ſuch as were wanting to complete the number required at the public ſports and races.

Scaliger, on the authority of ſome old MSS. reads the original of the laſt line, as follows:

Plena coronato vertice ſtare boves:

Yet moſt MSS. and the beſt editions read it,

Plena coronato ſtare boves capite.

But without their concurrence, Broekhuſius juſtly obſerves, that Tibullus muſt have thus wrote it, as his ear taught him ſolicitouſly to avoid every combination of harſh hiſſing conſonants, ſuch as SC. SP. SQ. ST.

Ex Tibullo probanda eſt Tibullianæ ſcriptionis conſuetudo.

Ver. 10. There are ſome things, ſays Servius, which, if done on a holiday, pollute it. Hence it was, that the pontiffs, when they were to perform a ſacrifice, ſent out their beadles to prevent artificers from working, leſt the ſacred ceremony ſhould be contaminated. Serv. ad G. lib. i. ver. 268. And Macrobius tells us, that a herald alſo was employed on theſe occaſions to prohibit the people from all ſecular buſineſs. Thoſe, who unknowingly tranſgreſſed, were obliged to purchaſe their expiation by ſacrificing a hog; but the wilful guilt could not be expiated, in the opinion of Scævola the high-prieſt. Sat. lib. c. 16.

Theſe heralds, from their office, had the names of "Præclamitatores et præciæ" beſtowed upon them.

Yet was not all work forbidden to the huſbandman; for as Cato de R. R. informs us, they might, even on the moſt ſacred holiday, clean their ditches, mend the highways, cut down briars, dig their garden, burn thorns, weed their meadows, cleanſe their fiſh-ponds, bind withies, and do every office of cleanlineſs in their houſe. *C. 2. Broekhuſ.*

Pictures of life and manners, when truly copied from nature, however low the ſubject, never fail to delight us. And we have here a very faithful one exhibited to us. When the poet had diſmiſſed man and beaſt to reſt, proclaimed a general holiday, and a vacation from all buſineſs, he recollects that his laſt moſt difficult taſk was, to ſnatch the diſtaff out of the hands of the country houſewife. Whoever has peeped into a farm-houſe, muſt have obſerved the notable miſtreſs, whatever the reſt of the family were doing, always in an hurry, and acting as eagerly upon the leading principle of the country, frugality, as a court lady in purſuit of pleaſure. Perhaps one general reaſon might be aſſigned for the impetuoſity of both. And the fine lady Harriet, with the help of a little change of education, might have made a very notable Amaryllis in the country. *B.*

Ver. 12. All matrimonial converſe with women was ſtrictly prohibited, during a certain number of days preceding the Amberval ſacrifices.

Annua venerunt cerealis tempora ſacri.
Secubat in vacuo ſola puella toro.

Complains the amorous Ovid, El. Lib. iii. El. 9. but not only the unchaſte, but perſons defiled with recent blood, or polluted with the touch of a dead body, were forbidden to approach the altar.

Ver. 14. The pure veſtment mentioned in the original, was white, as Ovid, in that wonderful work of his, the Faſti, informs us.

Alba decent Cererem, veſtes Cerealibus albas
Sumite; nunc pulli velleris uſus abeſt.
Lib. iv. *ver.* 619.

Ver. 16. Although the Ambarval ſacrifice was, generally, either a ſow with pigs, or a lamb, yet the goat and bullock were ſometimes alſo uſed. But whatever was the animal, it was conducted thrice with great ſolemnity round the field! "(ter ambiens agros)" and thence obtained the name Ambarval.

If either in the proceſſion, or at the altar, it ſpurned, or ſhowed the leaſt reluctance, they removed it, as diſpleaſing to the deity; and ſubſtituted another victim in its ſtead. Hence the verb *eat*, in the original, and the epithet *willing*, in the tranſlation. At the altar the victim was unbound; for, as Servius obſerves,

Piaculum eſt, in ſacrificio aliquid eſſe religatum.

There is a ſenſible epigram in the Anthology, which informs us, that not only Ceres and Bacchus, but Hercules and Mercury had offerings made to them by the huſbandman. Hermes indeed was contented with milk and fruits; but, to the former, ſheep and oxen were ſacrificed. This, it ſeems, diſguſted the penurious farmer; who being told, Hercules deſerved victims of that value, he made this ſpirited reply, what difference is there to me, whether my flock is deſtroyed by wolves, or by the keeper?

Τι το πλεον ει το φυλακτεν
Ολλυται ὑπο λυκου εἰθ ὑπο του φυλακος.

Ver. 17. Clean hands were neceſſary in all ſacrifices. Thus Heſiod,

Μηδὲ ποτ' ἐξ ηους Δια λειβειν αιθοπα οινον
Χερσιν ανιπτοισιν, μηδὲ αλλοισ' αθανατοισιν.
Ου γαρ τοιγε κλυουσιν αποπτυουσι δὲ τ' αρας.
Εργ. και Ημερ. *Ver.* 724.

According to Macrobius, when the Romans ſacrificed to the "Di ſuperi," they waſhed the whole body with river water; but, in ſacrifices to the infernal gods, a bare ſprinkling was ſufficient. Sea water was alſo ſometimes uſed for the ſame purpoſes.

Ver. 19. *From ills, O ſylvan gods.*] The following is the form of prayer uſed by a farmer, upon a like occaſion:

"O father, I conjure and entreat you, that you will be propitious to me, to my houſe and family; that you will diſperſe all maladies, known and unknown; calamities, barrenneſs, mortalities, and

peſtilence; that you will give increaſe to my fruits, corn, trees, and vines; that you will preſerve my ſhepherds and my flocks: and give health and ſafety to us all." Vid. Cat. de R. R. c. 141.

Ver. 24. *So ſhall the bind.*] I ſhould not have hazarded an explanation of this paſſage, if I had not obſerved, that the meaning of it had eſcaped the notice of all the commentators. One of them ha produced from Horace, by way of explanation,

Ædificare caſas, ploſtello adjungere mures.

And again,

Ædificante caſas qui ſenior. *Lib.* ii. *Sat.* 3.

This is learning! this is that happy talent of criticiſm which explains a paſſage by authorities from his ſplendid fellows. But could this ſolemn trifler think that an action which Horace repreſents as the play of childhood, which he ſtigmatizes as a glaring mark of an unſound head in any one that had attained to manhood, could be conſidered by ſo exact a writer as Tibullus, as a proper expreſſion of gratitude from a country village to its divine protectors? The words we ſee are part of an addreſs to the "Dii patrii," upon a ſolemn luſtration of the villagers and their fields Firſt, Their protection is invoked for their harveſt and flocks, upon the grant of which, an aſſurance is given, that the happy farmer and his family would ſhow their ſenſe of the bleſſing by heaping high the hearth, and running up haſty huts of twigs; both of which muſt be ſuppoſed to be done in honour of thoſe very deities to whom the promiſe is made. Conſider then, that the Lares, the guardians, and protectors of families, muſt be eſpecially deſigned by, or at leaſt included amongſt the "Dii patrii." Now, comfortable houſes, and warm fires, were conſidered as their proper gifts, as peculiarly under their tutelage: And nothing could be more in the ſpirit of antiquity than for the farmer and his ſportive family, in the midſt of their feſtal joy, and in gratitude to the bounteous givers, to exhibit the repreſentation of the very gifts which they were ſuppoſed to have received from them. The warm hut and the blazing fire were as proper expreſſions of gratitude to the Lares, as arms which had been uſed ſucceſsfully to Hercules the firſt-fruits to Ceres, and the image of a reſtored limb to Æſculapius, or the hermæ to Mercury, the guide and protector of travellers.

Ver 28. *His numerous bond-ſlaves all in goodly rows.*] Theſe certain indications of a wealthy farmer, Horace, with his uſual courtlineſs of expreſſion, calls "Ditis examen Domus;" but as that would have appeared flat in Engliſh, Mr. Francis has judiciouſly paſſed it over in his verſion. So peculiar are languages!

The "vernæ" were ſlaves born of ſlaves.

Ver. 35. The original of this cannot be rendered into intelligible Engliſh. The Romans marked their wine caſks with the name of him who was conſul at the time when they were filled. They then faſtened them down with chains. The older the Falernian and Chian wines were, they became the more eſteemed. They were often mixed together; and this heightened the flavour of both.

Might not theſe lines have convinced Dacier, and the other commentators, who repreſent Tibullus as an indigent perſon, of their miſtake? A poor man could not have afforded to treat a whole village with old Falernian and Chian wines. *G.*

Though the Romans, by a very unlucky proverbial expreſſion, uſed "Græcari" for playing the good fellow, yet I think that debauchery and intemperance were the characteriſtic manners neither of the Greeks nor Romans. At their feſtivals, they indeed thought them an indiſpenſible part of their religious rejoicings. and if they were not wholly confined to theſe, it is certain, that by their means they firſt got footing amongſt them. Athenæus Deipn. l. iii. ch. 3. tells us, that the ancients never indulged themſelves with dainties, nor drank any quantity of wine, but at ſuch times. As a convincing proof of which, he obſerves, that the very names for luxurious eating and drinking have ſome relation to their religious ſacrifices. Thus Θοινη, a banquet, is ſo called, becauſe they thought themſelves obliged δια Θεως οινασθαι, to be drunk in honour of the gods, and to be drunk they called μεθυειν becauſe they were moſt accuſtomed to do it, μετα το θυειν, after ſacrifice. The Romans had adopted the ſame principles and practice, as appears from this very ſober exhortation of the poet. *B.*

Ver. 38. Upon certain occaſions the Romans drank a bumper for every letter of their friend or miſtreſs's name. They received this cuſtom from the Grecians.

Ver. 40. The firſt Romans wore beards, and were repreſented accordingly in their ſtatues and pictures. The "intonſis avis" of the original, therefore, ſhows the antiquity of Meſſala's family. Varro de R. R. informs us, that Fianius Mena was the firſt who introduced barbers into Rome; and he brought them from Sicily, A. U. C. 454. Such circumſtances, though ſeemingly inconſiderable, are yet neceſſary for a thorough underſtanding of the claſſics.

Ver. 28. *And thatch it o'er with turf, or leafy ſprays.*] Such were the rude beginnings of architecture! and ſuch wretched hovels are ſtill to be ſeen in the barren and mountainous parts of this great and civilized iſland! See Vitruv. Archit. l. ii. c. 1.

Houſes at firſt being only a defence from the weather, and built of whatever rude materials the country afforded, Rome was originally compoſed of mud-walled, ſtraw-thatched cottages. Even Romulus's palace was a hut, and as ill furniſhed as thoſe of his ſubjects.

Parva fuit ſi prima velis elementa referre,
Roma: ſed in parva ſpes tamen hujus erat.
Mænia jam ſtabant populis auguſta futuris;
Credita ſed turbæ nunc nimis ampla ſuæ;

Quæ fuerit noſtri ſi quæris regia nati,
Adſpice de canna ſtraminibuſque domum:
In ſtipulâ placidi carpebat munera ſomni.
Ov. Faſt. l. iii.

We are certain, that Rome at firſt was only a huddle of cottages, without any regular openings and ſtreets; nay, ſome philologiſts have conjectured, that that city never had regular ſtreets like ours, as there is no Latin word which properly ſignifies a ſtreet: Neither were Rome's firſt places of worſhip much more ſuperb than its houſes, ſince we know, from Pliny, that, till after the conqueſt of Aſia, the Romans had only wooden, or at beſt earthen gods in their temples.

The tranſlator muſt finiſh this note by correcting an error into which he has fallen, in his notes upon the firſt elegy of the firſt book. There, it is aſſerted, that no purchaſer was entitled to the ſpoils with which any houſe he might buy was adorned. But the fact is quite otherwiſe; for Pliny expreſsly ſays, it was unlawful to take down theſe trophies, "Affixis hoſtium ſpoliis, nec emptori refigere liceret."

Nat. Hiſt. l. xxxv. *c.* 2.

Thus it was that the Romans endeavoured to perpetuate the martial glory of their anceſtors.

Ver. 55. Broekhuſius, contrary to the opinion of moſt of the commentators, joins "verno" to "alveo;" and, in a far-fetched manner, juſtifies this conſtruction by a paſſage from Columella. The tranſlator cannot, however, help joining "verno" with "rure." It is certain, that Martial couples "æſtivum" to "rus," lib. viii. Ep. 61. Fruterius reads it,

Rure levis vernos flores, &c.

But the ear may eaſily convince any one, that Tibullus never wrote it ſo.

Ver. 59. *Pip'd to his houſehold gods.*] A noble origin this of poetry! After the hymns and ſacrifices were over, the villagers devoted the reſt of the day to feaſting and merriment. Their merriments, as Horace informs us, chiefly conſiſted in alternate, gay, extempore, innocent, and awkward jokes.

Verſibus alternis opprobria ruſtica fudit.

This holiday wit, and rude ſpecies of poetry, was called "Feſcennine et Saturnine," from the places in Tuſcany and Latium, where it chiefly prevailed.

From being practiſed by ruſtics, and only on theſe occaſions, this ſpecies of witty raillery ſoon became the entertainment of towns, at their public diverſions. Then it was, probably, that muſic and dancing, with geſtures ſuited to the ſubject, were added, and the raillery levelled not only at the actors, but ſpectators. The ſucceſs of this motely entertainment ſuggeſted in time the idea of another poem, as various and ſarcaſtic as the former.

From the country cuſtom of making preſents of baſkets filled with fruits, flowers, &c. *(ſature lances)* upon particular occaſions, this new entertainment aſſumed the name of "ſatura poemata," or ſatire. By degrees, both theſe kinds of raillery became ſo petulent, that worth and virtue were often treated by them with the ſame ſeverity as vice and folly. This obliged the magiſtrate to interpoſe his authority; in conſequence of which, a law was made, A. U. C. 302. ſubjecting not only the authors of theſe "mala carmina," but thoſe alſo who recited and acted them, to a drubbing; and hence the puniſhment was called "fuſtilegium." Thus was illiberal and dangerous wit reſtrained; and chaſte ſatire, by the ſucceſſive endeavours of Lucilius and others, advanced to an eminent degree of perfection. But as policy ſoon diſcovered that theatrical entertainments of one kind or another was neceſſary, a company of Tuſcan hiſtors, or players (for the Tuſcans were then the beſt actors), were invited to Rome about forty years after the law above-mentioned had paſſed. The language of theſe Tuſcans not being underſtood at Rome, they endeavoured to ſupply this deficiency by a dumb ſort of declamation, or eloquent action, wherein the motions and geſtures of the body were regulated by the flute, in ſuch a manner as to repreſent every ſentiment and paſſion to the eye of the ſpectator. This pantomimical entertainment ſoon, however, fell into diſuſe, either through the death of the Tuſcan performers, or becauſe it poſſeſſed not the poignant raillery of the former pieces. Accordingly, we find, that in A. U. C. 390. when a peſtilence (for ſo hiſtorians call it) raged at Rome, the magiſtrates were admoniſhed to avert the anger of the gods by exhibiting plays. In conſequence of this, a company was ſent for from Tuſcany; and now they began to act (as Mr. Dryden expreſſes it) a kind of civil cleanly farce, the muſic, dancing, and geſtures being retained. Theſe exhibitions, which had ſomething in them to entertain the ſenſes, and were not withal devoid of wit and ridicule, continued in quiet poſſeſſion of the Roman theatre for 124 years. Livius Andronicus was the firſt who brought a regular play upon the Roman ſtage. His plays were divided into acts, and modelled after the old comedy. Andronicus was a Grecian by birth, and had been taken captive by the Romans. Having acquired a competent knowledge of the language of that people, he was preſented with his freedom, by his maſter Salinator, whoſe children he had educated. This grand ſcenical revolution, as Tully informs us, happened a year after the firſt Punic war, and a year before Ennius was born. Now it was that, among the Romans, the learned began to ſtudy the Greek authors: and, as the tragic poets of Greece had carried the buſkin to ſo great perfection, thoſe among the Romans who wrote for the ſtage, thought they could not better employ their talents than in tranſlating thoſe great originals, for the entertainment of their countrymen: And it was not till the age of Auguſtus that any piece, entirely Roman, was introduced upon the ſtage.

Although Horace, as well as our poet, attribute the invention of poetry to the huſbandman,

yet many critics, and especially Scaliger, bestow that honour on the shepherd: And, indeed, when we consider that flocks were tended before the earth was ploughed, their opinion is not improbable. But as poetry is natural to man, and peculiar to no nation, who can ascertain its inventor?

Ver. 64. *Bleſt be the country.*] Broekhusius says, the poet means the sun by the "calidum sidus." It seems rather that he meant the dog-star. Tibullus calls the growing corn the earth's annual hair. This metaphor will not do in English.

Ver. 66. Tragedy was at first nothing but an annual hymn, sung by peasants, in honour of Bacchus; and he who acquitted himself best upon this topic, was rewarded with a goat. Hence the Greek name Τραγῳδία. But as the sameness of the subject must at last have proved irksome, not only to the poet, but to the audience; it was no wonder that this entertainment was afterwards diversified. Thespis, a native of Icaria, a mountainous part of Attica, where this ceremony first obtained, interrupted the Bacchic chorus, A. Mund. 3530, by recitation, on pretence of easing the chorus, and varying the amusement. He happily succeeded; and what at first was only a subsidiary interlude, soon became the principal entertainment. Rude, doubtless, it was; for Thespis, as Aristotle hints, employed but one interlocutor. The entertainment yet scarce merited the name of tragedy, which cannot subsist without dialogue. Succeeding poets saw this; and, by improving on one another, carried tragedy to perfection. The chorus was retained; but then it was no longer a hymn in honour of Bacchus. The subject of the song arose from the subject of the play; and those who performed it in the chorus, became essential persons in the drama.

Although the Greeks fix upon Attica as the place where tragedy made its first appearance, yet as man is an imitative animal, the source of this species of poetry, as well as of the other imitative arts, is to be sought for in human nature. The Chinese, from the earliest antiquity, have had dramatic entertainments; and that excellent historian, Garcilasso de la Vega, informs us, in the first part of his Commentarios Reales, that the Peruvians composed and acted several tragedies and comedies.

The reason for sacrificing a goat to the god of wine, the antiquarians tell us, was this: Bacchus, having found out the secret of cultivating the vine, and of making wine from the grape, taught his discovery to one Icarus (Vid. Bulinger. de Theat. l. i. c. 1.) a native of Icaria, who successfully continued the practice. One day, as Icarus was visiting his vineyard, he caught a goat, which had made great havoc among his vines. Interest, and gratitude to his instructor, equally conspiring, he sacrificed the creature to Bacchus. His peasants, who doubtless had been invited to see the foe immolated, danced around the sacrifice, and joyfully sung the praises of the god. Institutions of this kind need but be begun to make them continual. Hence what at first was merely accidental, became a part of annual devotion.

Ver. 71. See a fine description of wool-shearing in Mr. Thomson's Summer.

Ver. 74. Weaving was held in such estimation by the ancients, that the goddess of wisdom patronized that art. Hence not only the greatest queens of old, but Circe, the daughter of the sun, and a goddess, practised it. The reader who chooses to see this subject treated of, with all the importance it deserves, must peruse that most elegant of didactic poems, the Fleece.

Ver. 76. The author of that delicate poem, the Pervigilium Veneris, also makes the god of love to have been born in the country.

Ipse amor, puer Dionæ, rure natus dicitur.
Hunc ager, cum parturiret ipsa, suscepit sinu;
Ipsa florum delicatis educavit oculis.

Which are thus elegantly translated by Parnell,

E'en love (if fame the truth of love declare)
Drew first the breathings of a rural air.
Some pleasing meadow, pregnant beauty prest,
She laid her infant on its flow'ry breast,
From nature's sweets he sipp'd the fragrant dew,
He smil'd, he kiss'd them, and by kissing grew.
G.

This birth of love is prettily imagined; and the episodical address to him, in a precatory hymn to the rural deities, is not without its propriety. We know, that to gratify the farmer's hopes, his cattle must increase, as well as his grain flourish, and that beasts as well as men were supposed to feel the influence of almighty love. Poetry animates every thing. In an heathen poet's creed, not only hills, trees, fountains, are inhabited by superior intelligencies, but the very passions themselves must be exalted into deities. If we strip the description of Tibullus of its poetical ornaments, it will be found to agree very well with truth and nature. The workings of the passions in minds rude and uncultivated, such as an heathen poet must suppose the first man to have been, must needs be tumultuous and undistinguishing. Love in this case would be mere lust, without either choice or discernment, raised and gratified by the first object that offered; and when exalted into a person, may justly be supposed to have his birth amongst beasts, or men little superior to them, and to throw his arrows about at random. But when the mind begins to admit of refinement, becomes curious about its objects, and delicate in its pursuits, then love will only be excited in it by excellence, either real or imagined; and, despising promiscuous concubinage, and the possession of easier gratifications, it will, with much pain and anxiety, and severe distress upon miscarriage, confine itself to the pursuit of some favourite object. Then it is that the deified passion must be supposed to become skilful in its business, to take exact aim, and neglecting the bestial throng, to wound those hearts deepest that are capable of the most exquisite feeling. Thus does our poet keep close to nature, even when

his language is moſt figurative, and ſpeaks of the paſſions almoſt with as much preciſion as the moſt curious theoriſt. *B.*

Ver. 88. Arioſto, as Broekhuſius remarks, has happily imitated our poet, in his fable of Jocondo and Aſtolphus.

Il Greco, ſi come ella li diſegna
Quando ſente dormir tulla la torma,
Viene a l'uſcio, e lo ſpinge, e quel li cede.
Entra pian piano, e va à tenton col piede.

Fa lunghi paſſi, e ſempre in quel di dietro
Tutta ſi ſerma, e l'altro par che mova
A Guiſa, che di dar tema nel vetro
Non ch'l terreno habbia calcar, ma l'uoua:
E tien la mano inanzi ſimil metro
Va brancolando in fin che'l letto trova, &c.
Cant. 28. *St.* 62, 63.

Which is thus rendered by a late tranſlator,

The Greek, juſt as ſhe had deſigned at night,
When all the crowd he ſleeping did perceive,
Came to the door, and puſh'd it, and it op'd;
He enter'd ſoftly, and on tiptoe grop'd.

He makes long ſtrides, ſtill on his foot behind
Reſts firm, and ſeem'd as if he cautious led
His t'other foot, as fearing glaſs to find,
And that an egg, not ground, he had to tread:
And forward, keeping time, his hand inclin'd,
Still tottering on, until he found the bed, &c.

This ſweetneſs, however, the author of the Pervigilum Veneris has attained to.

Ipſa Nymphas Diva luco juſſit ire Myrteo,
It puer comes puellis, nec tamen credi poteſt
Eſſe amorem feriatum, ſi ſagittas vexerit.
Ite Nymphæ, poſuit arma, feriatus eſt Amor.
Juſſus eſt inermis ire, nudus ire juſſus eſt;
Neu quid arcu, neu ſagitta, neu quid igne læderet.
Sed tamen Nymphæ cavete, quod Cupido pulcer eſt.
Eſt in armis totus idem, quando nudus eſt Amor.

Now fair Dione to the myrtle grove
Sends the gay nymphs, and ſends her tender love.
And ſhall they venture? Is it ſafe to go? [bow?
While nymphs have hearts, and Cupid wears a
Yes, ſafely venture, 'tis his mother's will,
He walks unarm'd, and undeſigning ill,
His torch extinct, his quiver uſeleſs hung,
His arrows idle, and his bow unſtrung.
And yet, ye nymphs, beware, his eyes have charms,
And love that's naked, ſtill is love in arms.

And again,

Ruris hic erunt puellæ, &c.

To fill the preſence of the gentle court,
From every quarter, rural nymphs reſort.
From woods, from mountains, from their humble vales,
From waters curling with the wanton gales.
Pleas'd with the joyful train, the laughing queen
In circles ſeats them round the banks of green,
And "lovely girls, ſhe whiſpers, guard your hearts,
"My boy, though ſtript of arms, abounds in arts."

Ver. 93. *O come—but throw.*]

Come Cupid then, but throw thy ſhafts away,
Thy burning ſhafts, &c.

"Hæc ſunt belliſſima," as Broekhuſius juſtly remarks, "et amænæ ſimplicitatis lenocinio amabiliſſima. Fruſtra ad hanc ſuavitatem adſpirant illi, qui perſpicere non poſſunt, quid ſit pulchritudo naturalis."

Ver. 97. When the ſuperſtitious among the ancients were ſolicitous to obtain what morality forbade them to deſire, they put up private petitions to the gods, and imagined that the gods were, in that caſe, obliged to grant their requeſts; more eſpecially when the offerings they preſented were ſufficiently coſtly. See this abominable ſuperſtition, forcibly redargued by that great moral ſatiriſt Perſius, whom now the Engliſh reader may with pleaſure peruſe, in no leſs faithful than elegant poetical verſion. When the ancients were particularly anxious about the attainment of any thing, they uſed to bribe the keepers of the temple of their favourite god, to let them come neareſt his ſtatue, in order that their petition might be the beſt heard. Senec. Ep. 41.

Ver. 100. Evening and night are variouſly repreſented by both poets and painters: In one of the hymns uſually aſcribed by critics to Orpheus, the ſtars, as in our poet, are called the daughters of night. And Theocritus names them

Ευκηλοι κατ' αντυγα νυκτος οπαδοι.

Id. 2.

Mr. Thomſon's deſcription of a ſummer's eve and night is exquiſitely fine, containing many appropriated and original images: Neither is the following picture, by Mr. Smart, deſtitute of real poetry.

Night, with all her negro train,
Took poſſeſſion of the plain,
In a herſe ſhe rode, reclin'd,
Drawn by ſcreech-owls, ſlow and blind.
Cloſe to her, with printleſs feet,
Crept ſtillneſs, in a winding ſheet.
See his Orig. Poems, p. 13.

Mr. Spence, in the notes on his Dialogue of the Planets, Times, and Seaſons, converts the "Martis" of the original into "Martis," and ſo applies it to the planet Mars. But as this reading is unauthoriſed by any MSS. or good edition, and in truth has no ſort of connection with the context, night being there repreſented as the mother of the ſtars, we have been obliged to reject it.

Ver. 104. Statius and Claudian make ſleep the charioteer of night. But the poſt aſſigned Somnus by our poet, is both more poetical, and more conſonant to truth.

This night-piece is worthy the pencil of a Claude Lorraine or a Guido Reni.

ELEGY II.

Rise, happy morn, without a cloud arise!
This morn, Cornutus blest his mother's eyes!
Hence each unholy wish, each adverse sound,
As we his altar's hallowed verge surround!
Let rich Arabian odours scent the skies,
And sacred incense from his altar rise;
Implor'd, thou tutelary god, descend!
And deck'd with flowery wreaths the rites attend!
Then as his brows with precious unguents flow,
Sweet sacred cakes, and liberal wine bestow.
O genius, grant whate'er my friend desires:
The cake is scatter'd, and the flame aspires!
Ask then, my noble friend, whate'er you want:
What silent still? your prayer the god will grant:
Uncovetous of rural wide domains,
You beg no woody hills, no cultur'd plains:
Not vena!, your request no eastern stores,
Where ruddy waters lave the gemmy shores:
Your wish I guess; you wish a beauteous spouse,
Joy of your joy, and faithful to your vows.
'Tis done! my friend! see nuptial love appears!
See! in his hand a yellow zone he bears!
A yellow zone, that spite of years shall last,
And heighten fondness, even when beauty's past.
With happy sighs, great power, confirm our prayer,
With endless concord bless the married pair.
O grant, dread genius, that a numerous race
Of beauteous infants crown their fond embrace;
Their beauteous infants round thy feet shall play,
And keep, with custom'd rites, this happy day.

NOTES ON ELEGY II.

This elegy celebrates the birth-day of Cornutus; and is addressed to genius, a sort of divinity, who was supposed constantly to attend every man through the whole course of his life. It exhibits a description of the rites usually performed on that occasion.

In some less perfect editions, the person, on whose birth-day this elegy was written, is called Cerinthus; but as the laborious Broekhusius has proved, that Cerinthus is the foreign name of a slave, and slaves, according to him, were not permitted to marry, "servis enim non uxores, sed concubernales erant;" a wife being mentioned by the poet as the chief boon his friend had to demand of his natal god: and as the oldest MSS. and least corrupted editions read Cornutus, we also have retained that name.

After all, as we know nothing certain of either Cerinthus, or Cornutus, the reader may adopt what name he shall think proper.

Ver. 1. The god meant in the text is Genius. Plutarch (in Lib. de Oracul.) and Plato inform us, that being of a middle nature between gods and men, the genii were supposed to be the secret monitors, by whose insinuations mankind were inclined to the practice of goodness. According to Varro, in his book intituled Atticus, the ancients abstained from all bloody sacrifices at the festival of Genius: and the reason given for this conduct is, that they might not deprive other beings of life, on that day, wherefore they themselves joyfully commemorated the reception of it. They offered wine indeed, because that promotes hilarity; as also pulse, which they call "tritilla," that being in ancient times a child's first spoon meat. Vid. Censor de Die natal. & Boxhorn. Quæst. Rom. p. 94.

Genius is derived from "Gigno; and therefore Horace styles him

> Natale Comes qui temperat astrum,
> Humanæ Deus Naturæ.

Vid. Notes on El. viii. B. 1. and El. v. B. 4.

Ver. 2. This Cornutus, if Broekhusius is not mistaken in his conjecture, is he who was prætor of Rome A. U. C. 710. in the consulate of Hirtius and Pansa; who, in their absence, enjoyed the consular authority, and was appointed by the senate "supplicationes per 50 dies ad omnia pulvinaria constituere," for the victory obtained at Modena. Vid. Cicer. Lib. 10. Ep. fam. 12. & 16. See also the notes on El. v. B. 3.

However as this supposition is founded upon the sameness of name only, so the person, whose birth our poet celebrates, may have been some young nobleman of the Sulpician or Cœcilian families, Cornutus being a surname in both these houses.

It was the custom, says Dart, to enjoin silence at all religious invocations; the priest began with the known expression of "Favete linguis," lest

any words of ill omen ſhould injure the ſacrifice. Vid. Hor. Ep. Lib iii. Ode 1 and Virg. Æn. Lib. 5. but as Tibullus enjoins "bona verba," which Ovid calls "bonæ preces:" it would ſeem, that ſilence was not ſo much expected, as that the words and prayers of the ſpectators ſhould have a tendency to further the happineſs of him, for whom the offering was made.

The different manners in which theſe two lines are printed in the original, have occaſioned a variety of interpretations.

See a more particular account of the feſtival of Genius in Ovid. Lib 3. Triſt El. 13. Lib. 5. Triſt. El. 5. alſo Lib. 1. Faſt. V. 72. and Lib. 3. Pont. Epiſt. 4.

Ver. 9. Although among the Romans each perſon was ſuppoſed to have his own diſtinct genius, who was born and died with him, and conſequently, though genius was but a plebeian divinity, yet it appears from this, and ſome other paſſages in the claſſics, that the genii were thought to have a power of beſtowing important favours on thoſe they attended. They ſeem, however, to be nothing elſe, but the particular bent of each perſon, made into a deity; and as every body's own temper is, in a great meaſure, the cauſe of his happineſs or miſery, they were ſuppoſed to ſhare in all the enjoyments and ſufferings of the perſons they attended. Hence, probably, come thoſe expreſſions among the ancients, of indulging or defrauding your genius. The Comes, or preſiding genius of the ſex, was a female, and called Juno. The women, as well as their admirers, uſed to ſwear by this deity. Of the latter we have an inſtance in the laſt elegy of the laſt book of Tibullus: and Petronius gives us a pleaſant inſtance of the former, "Junonem meam iratem habeam," ſays the debauched Quartilla, "ſi me unquam virginum fuiſſe memini!" On medals theſe deities are ſometimes dreſſed, like the perſons over whom they preſided. Thus the Juno of a veſtal was habited like a nun of that order. There was no harm in this; but when the medalliſts repreſent the genius of that monſter Nero, with the inſignia of piety, plenty, and proſperity, we cannot help lamenting at leaſt the depravity of theſe artiſts.

Ver. 16 *Where ruddy waters lave*, &c.] A quotation from that accurate and curious Romao trave'ler Pietro della Valle, will ſhow the propriety of this expreſſion.

"Mi maravigliai ben' aſſai del nome di Roſſo, che ſi dà a queſto more: perche non è come il mar Nero, che per la ſicurezza ſua. che naſce dal fondo cupo e ſporcho, merita degnamente quel nome: in queſt' l'acqua ë chiariſſima, che ſi vede il fundo più, che non ſi fa a Poſilipo la ſtate; ed a vederla di lontano piglia, come gli altri mari, color di turchino. L'arena poi, dalla quale vogliono alcuni che il nome derivi, (ſon tutte bugie) è come le altre; anzi bianca aſſai più delle noſtre: di maniera, che il nome non può venir da altro, che dal nome proprio di quel rè Eythra, ſepolto in un' iſola del oceano meridionale come dice Strabone, che ſignificava Roſſo; dal quale, come ſi vede in uſo appreſſo i Latini, tutto quel mare, e non il ſolo ſeno Arabico, che è una particella di eſſo preſe di Roſſo il nome; che da' moderni poi, forſe perche così lo chiama la Sacra Scrittura nel paſſaggio degli Ebrei, al ſeno Arabico, di cui parliamo più ſpetialmente a ſtato appropriato."—Broekhuſ p 232.

Ver 19. The original of this paſſage Mr. Dart, in conformity to Achilles Statius, interprets,

Alas your prayers are ſlighted, &c.

But the ſubſequent part of the elegy ſhows the miſtake.

Beſides, we know the ancients ſuppoſed, that genius was never complaiſant upon thoſe occaſions, never refuſing any petition. The nuptial bed was conſecrated to this god.

Not only men, but cities and nations had their genii. The concealment of the names of the latter was looked upon as of the higheſt conſequence; it being believed, that when a town was inveſted, or a country haraſſed by wars, if the enemy implored them by their right appellation, they would abandon that city or nation.

Cicero twice uſes the word "cadere" in the ſame ſenſe that our poet uſes it.

Ver. 20. Yellow was conſecrated, by the ancients, to the god of marriage.

Ver. 23. The original of this paſſage is variouſly read. According to Heinſius's correction it is,

"Huc venias natalis avi, prolemque miniſtres."

But Scaliger, and other editors, print it thus,

"Huc veniat Natalis avis prolemque miniſtret."

The natal bird, which this reading ſuppoſes, was, according to them, the crow. It is true, Ælian (de Anim. Lib. iii. c. 9.) tells us, he was informed, that the ancients, in their marriages, were wont to invoke that bird, after their addreſſes to Hymenæus, it being regarded as a ſymbol of concord by thoſe who married on account of children. The paſſage, however, upon which they built this their interpretation, plainly ſhows, that the crow was not looked upon, in the days of Hadrian, as propitious to marriage; and we have the authority of Virgil and Horace, not to mention Pliny the elder, for aſſerting, that the crow was a bird of bad omen. The "hac Avi" then, of the original ſignifies "hoc Augurio," as is expreſſed in the verſion, where ſomething of Scaliger's interpretation is alſo retained

According to Vulpius they uſed to obſerve at the birth of a child, what birds either flew paſt or made a noiſe, and from theſe circumſtances predicted good or bad fortune to their progeny. But as Cupid ſome few lines before is repreſented with "Strepitantibus alis," that critic is of opinion that the "Natalis Avis" mentioned in the text, is the god of love, who, at the birth of Cornutus and his wife, gave happy omens. But though it is true, that Bion has repreſented love as a large bird, the interpretation ſeems too farfetched for Tibullus.

ELEGY III.

My fair, Cornutus, to the country's flown,
Oh how inſipid is the city grown!
No taſte have they for elegance refin'd;
No tender boſoms who remain behind:
Now Cytherea glads the laughing plain,
And ſmiles and ſports compoſe her ſylvan train.
Now Cupid joys to learn the ploughman's phraſe,
And clad a peaſant o'er the fallows ſtrays.
O how the weighty prong I'll buſy wield!
Should the fair wanderer to the labour'd field;
A farmer then the crooked ploughſhare hold,
Whilſt the dull ox prepares the vigorous mold:
I'd not complain though Phœbus burnt the lands,
And painful bliſters ſwell'd my tender hands.
Admetus' herds the fair Apollo drove,
In ſpite of med'cine's power, a prey to love;
Nor aught avail'd to ſooth his amorous care,
His lyre of ſilver ſound, or waving hair.
To quench their thirſt, the kine to ſtreams he led
And drove them from their paſture to the ſhed:
The milk to curdle then, the fair he taught,
And from the cheeſe to ſtrain the dulcet draught.
Oft, oft his virgin-ſiſter bluſh'd for ſhame,
As bearing lambkins o'er the field he came!
Oft would he ſing the lightning vales among,
Till lowing oxen broke the plaintive ſong.
To Delphi, trembling anxious chiefs repair,
But got no anſwer, Phœbus was not there.
Thy curling locks that charm'd a ſtepdame's eye,
A jealous ſtep-dame, now neglected fly!
To ſee thee, Phœbus, thus diſfigur'd ſtray!
Who could diſcover the fair god of day?
Conſtrain'd by Cupid in a cot to pine,
Where was thy Delos, where thy Pythian ſhrine?
Thrice happy days, when love almighty ſway'd!
And openly the gods his will obey'd.
Now love's ſoft power's became a common jeſt—
Yet thoſe, who feel his influence in their breaſt,
The prude's contempt, the wife man's ſneer deſpiſe,
Nor would his chains forego, to rule the ſkies.
Curſt farm! that forc'd my Nemeſis from town,
Blaſts taint thy vines, and rains thy harveſts drown.
Though hymns implore your aid, great god of wine!
Aſſiſt the lover, and neglect the vine;
To ſhades, unpuniſh'd, ne'er let beauty ſtray;
Not all your vintage can its abſence pay!
Rather than harveſt ſhould the fair detain,
May rills and acorns feed th' unactive ſwain!
The ſwains of old, no golden Ceres knew,
And yet how fervent was their love and true?
Their melting vows the Paphian queen approv'd,
And every valley witneſs'd how they lov'd.
Then lurk'd no ſpies to catch the willing maid;
Doorleſs each houſe in vain no ſhepherd pray'd.
Once more ye ſimple uſages obtain!
No—lead me, drive me to the cultur'd plain!
Enchain me, whip me, if the fair command;
Whipp'd and enchain'd, I'll plough the ſtubborn land!

NOTES ON ELEGY III.

Nemesis, to whom the remaining elegies in this book are addreſſed, had gone from Rome, to her eſtate in the country, to be preſent, as is ſuppoſed, at the feſtival of the god Terminus, which was annually celebrated about the 21ſt of February. As the poet was deeply enamoured of Nemeſis, her departure gave him great uneaſineſs; but being informed, that ſhe meant to continue at her ſeat till the vintage and harveſt were paſt, he determined to follow her in the dreſs of a peaſant, and by getting himſelf employed in her fields, thus to enjoy the ſatisfaction of beholding her undiſcovered. Cornutus probably objected to the diſgrace of this metamorphoſis; but to this Tibullus gave an appropriated anſwer; the god of poets, Apollo himſelf, in circumſtances analogous to mine, ſaid he, abandoned heaven, and became the herdſman of Admetus: Nay, ſo thoroughly was that deity maſtered by love, that he withdrew his attention from the Delphian ſhrine, &c. and ſubmitted to perform the meaneſt rural drudgeries.

As Tibullus deemed his friend's approbation of conſequence, he enumerates theſe ſervilities, and therefore the tranſlator cannot help thinking that the line

Ipſe Deus, &c.

and the three following, being deſcriptive of theſe, are genuine. What farther confirms the tranſlator in his opinion of their authenticity, is, that Ovid makes uſe of the ſame argument in his Art of Love.

But probably, the example of Apollo had not all the influence on the uninſpired and laughing Cor-

nutus, that our poet could have wiſhed. Tibullus therefore curſes the occaſion of his amorous traveſty, exclaims againſt agriculture, and wiſhes for a return of the golden age; but ſuddenly changing his tone, he offers himſelf to the meaneſt and moſt laborious employments of the country, to enjoy the felicity of obeying his miſtreſs.

Propertius's nineteenth elegy, Lib. 2. and Ovid's beautiful invitation to Corinna, from his country ſeat, may be compared with this.

Ver. 5. Hercules Strozza, no mean poet of Ferrara, has happily imitated this paſſage of Tibullus;

Rura peto; valeatque forum, valeanque ſodales.
Et Venus et Veneris ceſſit in arva puer.
Paſcit Amor pecus: at numerum Cytherea recenſet:
Vomera dura gravi jugera findit Hymen.
Et dominam mirantur Oves, dominumque volucrem:
Vicinaſque rudis combibit agna faces.
Plus ſolito petulans aries ſalit; ictaque tellus
Sentit aratori numen ineſſe ſuo.
Lib. i. *Am. El.* 2.

Strozza inherited the poetical talent of his father Titus.

Ver. 7. It is not improbable, as Broekhuſius remarks, that Tibullus was indebted to Moſchus's Epigram Εις ἐρωτα αροτριωντα, for this thought.

Ver. 9. Hammond's ſeventh elegy is almoſt a tranſlation of this.

Ver. 15. Mythologiſts aſſign different reaſons for Apollo's abſence from heaven; but whatever the cauſe was, love (according to theſe gentlemen) ſoon made him leſs ſolicitous to regain his native ſkies. Alceſtis, the wife of Admetus was his favourite; but it is probable, that all his endeavours to gain that lady proved ineffectual; for when Admetus, in a dangerous fit of illneſs, conſulted the oracle for a remedy, and was anſwered, that he muſt periſh unleſs another would die in his room, ſhe, with a diſintereſtedneſs and love peculiar to conjugal fidelity, became the willing ſacrifice, and by her death recovered her huſband. It happened fortunately, that Hercules arrived at Admetus's palace the very day that Alceſtis was ſacrificed; and having been well entertained by that prince, expreſſed his gratitude to him by deſcending into hell, foiling death, and bringing back again Alceſtis to her beloved huſband. Upon this fable Euripides has founded one of his moſt pathetic taagedies.

The ladies are not greatly indebted to the mythologiſts, who have unanimouſly repreſented Apollo, though αει καλος καὶ αει νεος, always beauful, and always young, as unſucceſsful in his amours: but whatever reaſon they have to complain, thoſe who are fond of poetry have none; as the repulſe that god met with from Daphne, hath given riſe to a piece in Waller, which for eaſe of numbers, and happineſs of fabulous alluſion, is ſurpaſſed by few modern poems. Vid. his ſtory of Daphne and Phœbus applied.

Ver. 19. If love had ſo much power over Apollo, as to make him undergo, not only the moſt ſervile drudgeries, but alſo to neglect the fate of nations; ſurely, I may be excuſed, argues our poet, when the ſame paſſion obliges me to become a ploughman. But ſhould not Tibullus have added, that as his Nemeſis every way excelled Apollo's flame; ſo he himſelf, in acting the part he did, was more excuſable than the deity? This gallant addition, Mr. Prior, had he produced Phœbus's conduct as an apology for his own, would not have omitted, though Mr. Hammond has.

Ver. 21. Homer, Il. 5. mentions the juice of the fig, as applied to this purpoſe. All acids coagulate milk.

Nor was Apollo only bountiful to the ſwains in thoſe reſpects: Callimachus records many other inſtances of bleſſings, which, in his abſence from heaven, he beſtowed on the country.

Φοῖβον καὶ Νόμιον κικλήσκομεν ἐξ ἑτι κεῖνα
Ἔξοτ' ἐπ' Ἀμφρήσω ζευγήτιδας ἔτρεφεν ἵππας
Ηἴδεα ὑπ' ἐρῶτι κεκαυσμένος Ἀδμήτοιο, &c.
Vid. his Hymn Εις Απολλωνα, V. 46. &c.

Which Prior has thus tranſlated,

Thee, Nomian, we adore, for that from heaven
Deſcending, thou on fair Amphryſus' banks
Didſt guard Admetus' herds; ſithence the cow
Produc'd an ampler ſtore of milk, and the ſhegoat
Not without pain dragg'd her diſtended udder,
And ewes that erſt brought forth but ſingle lambs, [cattle
Now dropp'd their twofold burdens; bleſt the
On which Apollo caſt his favouring eye.

Ver. 23. Valerius Flaccus has imitated this thought in the firſt book of his Argonauts; a poem, which, however little read, is by no means deſtitute of many ſtriking poetical beauties.

Te quoque dant campi tanto paſtore pheræi
Felices Admeti. Tuis nam pendet in arvis
Delius, irato Steropen quod fuderat arcu.
Ah quoties famuio notis ſoror obvia ſylvis
Flevit, ubi Oſſeæ captaret frigora quercus,
Pecteret et pingui merſos Bæbeide crines!
V. 444.

Ver. 31. As the ancients ſuppoſed, that Apollo ſhowed a particular fondneſs for fine long curling hair, they never failed in their addreſſes to that god, to praiſe him, as poſſeſſing that ornament. Hence, in the hymns aſcribed to Orpheus, Apollo is ſtyled χρυσοκομος, and by other Greek poets ακερεκομης and ακειροκομας, and by the Latins *Crinitus*. In imitation of their patron-god, the bards of old affected to wear long hair. Thus Virgil repreſents Jopas.

Phavorinus, in a quotation which Stobæus has preſerved of his, uſes Ζητειν in the ſame ſenſe as Tibullus uſes "quærere" in this paſſage. Serm. 64.

Ver. 34. Delos is an iſland in the Ægean ſea, the moſt famous of the Cyclades, the birth-place of Apollo and his ſiſter Diana; upon which account it was held in ſuch reverence by the an-

cients, that when the Perſians, in one of their expeditions againſt Greece, anchored there with a thouſand ſhips, nought belonging to the iſland was violated by the army.

Etymologiſts ſay, it obtained the name of Delos, απο τυ Δηλειν, from its ſuddenly emerging from the waves at the command of Neptune. Latona, not daring to remain long during her pregnancy in a known place, the jealous Juno having diſpatched the ſerpent Python in purſuit of her, was here ſafely delivered. Apollo afterwards ſlew this ſerpent. Vid. Ovid's Met. The Athenians, in performance of a vow made by Theſeus, ſent every year a ſacred veſſel to Delos, with offerings to that god. Till this veſſel returned to Athens, the puniſhment of criminals, however guilty they were, was reſpited. As ſoon as Apollo's prieſt crowned the poop of the veſſel, which was the ſignal for ſailing, the city was purified.

Delphi was a city of Phocis, in the neighbourhood of Parnaſſus, built by Delphus the ſon of Apollo, or Neptune. It was of difficult acceſs, being ſituated among rocks and frightful precipices. Here Apollo had a famous temple, to which other nations, as well as the Greeks, repaired in times of public diſtreſs, to learn, how an end might be put to their calamities, as alſo to be informed of the manner in which any enterpriſe ought to be conducted, or what would be the iſſue of any event. The pythoneſs, or prieſteſs of this temple was famed for the ambiguity of her anſwers. As nothing is more profuſe than ſuperſtitious credulity, the riches brought to this temple were immenſe; inſomuch that the retainers to the temple could well afford to maintain ſpies every where, to inform them of what paſſed, or was likely to happen, as well as poets, to verſify their reſponſes. The name by which Delphi now goes, is *Salona*. Vid. Steph. Dict. See alſo the Abbe Banier for the immenſe wealth of this temple.

Ver. 41. Editions in general read,

At tibi dura ſeges, &c.

And the commentators make "ſeges" here to ſignify Nemeſis's eſtate; but as there is no authority for this application of that term in any other claſſic, Broekhuſius adopts Heinſius's correction,

At tibi dura Ceres, &c.

And this the Dutchman thinks warranted by the immediate introduction of Bacchus in the original. The tranſlator, however, has preferred the firſt reading, that being ſupported by moſt MSS.

Ver. 48. *May rills and acorns*, &c.] This thought ſhows the intenſeneſs of our author's paſſion for Nemeſis. The Romans highly eſteemed agriculture. Cicero ſpeaks of it as "proxima ſapientiæ;" and Tibullus ſeems to have been of the ſame opinion.

The wiſe and good Boethius has drawn no contemptible picture of this primeval ſimplicity, Lib. ii. Carm. 5. although we cannot agree with him, when he wiſhes for a return of that ſtate.

Ver. 55. *Once more ye ſimple uſages obtain!*
No—lead me, drive me to the cultur'd plain!

This abrupt refuſal of a ſtate from which he expected ſo much happineſs, is ſo ſtrongly expreſſive of love, that it may be put in competition with any of the moſt boaſted paſſages in the heroic poets, where a ſudden change of impetuous deſire is expreſſed.

Slaves were employed in performing the more ſervile offices of huſbandry; and their moſt faithful labours ſeldom exempted them from the chain. It is indeed ſhocking to humanity to think, with what cruelty theſe unfortunate wretches were treated by their Roman maſters. See Mr. Hume's entertaining Diſcourſe on the Populouſneſs of Ancient Nations.

ELEGY IV.

Chains, and a haughty fair I fearleſs view!
Hopes of paternal freedom all adieu.
Ah when will love compaſſionate my woes?
In one ſad tenour my exiſtence flows:
Whether I kiſs or bite the galling chain,
Alike my pleaſure, and alike my pain.
I burn, I burn, O baniſh my deſpair!
Oh eaſe my torture, too too cruel fair:
Rather than feel ſuch vaſt, ſuch matchleſs woe,
I'd riſe ſome rock o'erſpread with endleſs ſnow!
Or frown a cliff on ſome diſaſtrous ſhore,
Where ſhips are wreck'd, and tempeſts ever roar?
In penſive gloomineſs I paſs the night,
Nor feel contentment at the dawn of light.
What though the god of verſe my woes indite,
What though I ſoothing elegies can write,
No ſtrains of elegy her pride controul;
Gold is the paſſport to her venal ſoul.
I aſk not of the nine the epic lay;
Ye nine! or aid my paſſion or away.
I aſk not to deſcribe in lofty ſtrain,
The ſun's eclipſes, or the lunar wane;
To win admiſſion to the haughty maid,
Alone I crave your elegiac aid;
But if ſhe ſtill contemns the tearful lay,
Ye, and your elegies, away, away!
In vain I aſk, but gold ne'er aſks in vain;
Then will I deſolate the world for gain!

For gold I'll impious plunder every ſhrine;
But chief, O Venus, will I plunder thine!
By thee compell'd, I love a venal maid,
And quit for bloody fields my peaceful ſhade:
By thee compell'd, I rob the hallowed ſhrine,
Then chiefly Venus will I plunder thine!
Periſh the man! whoſe curſt induſtrious toil
Or finds the gem, or dyes the woolly ſpoil;
Hence, hence the ſex's avarice aroſe,
And art with nature not enough beſtows:
Hence the fierce dog was poſted for a guard,
The fair grew venal, and their gates were barr'd.
But weighty preſents vigilance o'ercome,
The gate burſts open, and the dog is dumb.
From venal charms, ye gods! what miſchiefs flow!
The joy, how much o'er-balanc'd by the woe!
Hence, hence ſo few, ſweet love, frequent thy fane,
Hence impious ſlander loads thy guiltleſs reign.
But ye! who ſell your heavenly charms for hire,
Your ill-got riches be conſum'd with fire!
May not one lover ſtrive to quench the blaze,
But ſmile malicious, as o'er all it preys!

And when ye die, no gentle friend be near,
To catch your breath, or ſhed a genuine tear:
Behind the corpſe, to march in ſolemn ſhow,
Or Syrian odours on the pile beſtow.
Far other fates attend the generous maid,
Though age and ſickneſs bid her beauties fade,
Still ſhe's rever'd; and when death's eaſy call
Has freed her ſpirit from life's anxious thrall,
The pitying neighbours all her loſs deplore,
And many a weeping friend beſets the door;
While ſome old lover touch'd with grateful woe,
Shall yearly garlands on her tomb beſtow;
And home returning, thus the fair addreſs,
'Light may the turf thy gentle boſom preſs.'
'Tis truth; but what has truth with love to do?
Imperious Cupid, I ſubmit to you!
To ſell my father's ſeat ſhould you command;
Adieu my father's gods, my father's land!
From madding mares, whate'er of poiſon flows,
Or on the forehead of their offſpring grows,
Whate'er Medea brew'd of baleful juice,
What noxious herbs Emathian hills produce;
Of all, let Nemeſis a draught compoſe,
Or mingle poiſons, feller ſtill than thoſe;
If ſhe but ſmile, the deadly cup I'll drain,
Forget her avarice, and exult in pain!

NOTES ON ELEGY IV.

Tibullus, finding all his endeavours to gain the heart of Nemeſis unavailing, determined to conquer his affection for her; he accordingly put his reſolution in practice; but finding his every effort ineffectual, he gave over the ſtruggle, yielded to his deſtiny, and ſent her the foregoing beautiful elegy, in which he acknowledges the ſovereignty which her charms had gained over him, and entreats her to mitigate her cruelty.

The whole poem is a tempeſt (if the expreſſion may be allowed) of amorous and contrary affections. By theſe our author is particularly diſtinguiſhed from Ovid and Propertius. Theſe poets generally begin and end their elegies with the ſame paſſion; whereas, the reader will often find in one of Tibullus's, all thoſe contrarieties and tranſitions, which peculiarly characterize the paſſion of love, and are ſo beautiful in poetry. This juſtifies the elegant encomium, which Joannes Baptiſta Pius beſtows on our author; "Princeps elegorum poetarum eſt dubio procul Al. Tibullus, quia vere amantem agit. Modo ſuperbit, modo ſupplicat, annuit, renuit, minatur, intercedit, dedignatur, devovet, orat, inconſtans eſt, quod voluit, non vult, quod optavit, refugit, ſecum diſſidens, ut in vera Cupidinis rota circumagi credas."

Major Pack's verſion of this elegy, would have been more in the ſpirit of Tibullus, had he mingled leſs wit with it.

Ver. 1. Chains, impriſonment, flames, darts, have been huddled together, by many a gentle writer, who imagined himſelf qualified for telling a curious love-tale; and probably they have drawn much ſelf-complacency from this paſſage of Tibullus, who has expreſſed, and probably felt all the ſoft diſtreſſes of the tender paſſion, ſuperior to every other writer. But whatever Tibullus feels, he never loſes his judgment and correctneſs in writing. A little attention will convince us, that the metaphor here is ſimple, entire, and uniformly purſued throughout. The tyranny of the paſſion of love over reaſon; the waywardneſs of a love-ſtricken mind; and the diſtreſſes which it feels from the caprice and frowns of an haughty miſtreſs, ſuggeſted to Tibullus, that the moſt abject ſtate of ſlavery aptly repreſented the condition of a drooping lover. Let us not eſtimate the ſeverity of this ſervitude by our own cuſtoms and manners. We muſt ſtep into America to ſee cruel inſtances of it: or if we look into ancient times we ſhall find, that thoſe, who were ſervants utterly loſt their liberty, loſt all power over their actions, and almoſt over their thoughts themſelves: that thoſe of them whoſe condition was the worſt, were employed in the heavieſt labours; were conſtantly kept in chains; had ſevere taſk-maſters over them; and upon every ſlight occaſion, were expoſed to ſome of thoſe ſharp torments, which a ſlave in Plautus thus humourouſly deſcribes;

—Stimulos, laminas, cruceſque compedeſque,
Nervos, catenas, carceres numellas, pedicas, beias,
Indoctoreſque acerrimos, gnaroſque noſtri tergi.

"Laminas" here anſwers to "faces" in Tibullus. They were heated bars of iron uſed in the puniſhment of ſlaves. Thus Cicero, in his accuſation of Verres, for treating a Roman citizen as a ſlave, charges him, "Quid, cum ignes et ardentes laminæ, ceterique cruciatus admovebantur?" So that when Tibullus cries out, "io remove, ſæva puella, faces," he is ſtill deſcribing the metaphorical ſlavery he was fallen into. We ſhall now know what to do with the following line,

Et ſeu quid merui, ſeu quid peccavimus, uror.

One of the commentators thinking it hard that a man ſhould be burnt for his good deſerts, has explained "quid merui" by "quid deliqui;" he might as well have ſaid "peccavi;" but "peccavimus" followed, and the critic was reſolved to vary the word, if he could not the image; but Tibullus well knew how to do both. His deſign was to repreſent the hardneſs of his ſlavery; and to this purpoſe he declares, that ſuch was the capricious cruelty of his miſtreſs, ſuch the ſeverity of love his taſk-maſter and torturer, that he was not only cloſely kept in chains, but had the torture wantonly applied, whether he was faithful to the offices love enjoined, or was rebellious, mutinous, or negligent; that is, that his miſtreſs was cruel, and love a torment to him, as well when he attempted to pleaſe her, as when he was impatient under her harſh uſage, and endeavoured to regain his eaſe and liberty. B.

Ver. 10. As the ancients had but imperfect aſſurances of a future ſtate, many of them regarded mere animal life, as the greateſt of bleſſings, and dedicated every hour to ſome ſenſual gratification. This manner of living, at leaſt, was not unuſual among the Epicureans; a ſect, from which, we have reaſon to think, Tibullus was not averſe. His miſery, therefore, muſt have been extreme, when it forced him to wiſh for ſuch a metamorphoſis, as not only would have deprived him of every ſatisfaction of ſenſe, but rendered him an eternal curſe and reproach to all ſeafaring people.

Ver. 17. Some critics contend, that Tibullus here aſcribes to Apollo the invention of elegy, and thereby determines the diſpute, which ſo warmly engaged the grammarians of the Auguſtan age; but others with more reaſon ſuppoſe that the poet, in this place, intended only in general to repreſent this god as the author and patron of poetry. The tranſlator has given the line a ſenſe different from both; with what propriety the reader will determine

Ver. 29. The "facinus" and "cedes," in the original, allude to the many maſſacres and proſcriptions, which were the dreadful effects of thoſe civil wars, which at laſt extinguiſhed the liberty of Rome. The butcheries by which Octavius acquired the ſovereignty of the world, fixed ſuch diſgrace upon himſelf, and ſo deeply ſtained his family with the imputation of cruelty, that even the mercies of Cæſar are become ſuſpected. Indeed, neither Auguſtus nor Julius are to be accuſed of having been the firſt, who ſubverted the conſtitution of their country; for this was done in the days of Marius and Sylla: and if we conſider the venality of the people, the luxury of the ſenate, the ſmall number of good men, who ſurvived the public calamities; and add to this, the rapacioufneſs of the generals, and governors of provinces; we ſhall be induced, perhaps, to allow, that Auguſtus had it not in his power to comply with Agrippa's advice, of reſtoring Rome to its old plan of government.

Ver. 30. Our poet ſeems here unjuſtly to accuſe the god of love; for no paſſion is leſs mercenary than that which he inſpires. It muſt be admitted, however, that Tibullus acts a gallant part at leaſt, in endeavouring to remove an aſperſion from his miſtreſs; though his regard for Cupid may be called in queſtion, when he attempts to fix this odium upon him. He ſeems to be aware of this, and therefore involves alſo in his cenſure thoſe who certainly better deſerved it.

Ver. 35. Propertius derives female infidelity, and female avarice, from the ſame ſources. See Lib. iii. El. 11. which is a keen and witty, if not a juſt invective.

Ver. 42. A bawd, in Plautus, thus deſcribes the behaviour of a new lover.

——————Ubi de pleno promitur
Neque ille ſcit quid det, quid damni faciat, illi rei ſtudet.
Volt placere ſeſe Amicæ, volt mihi, volt pediſſequæ,
Volt famulis, volt etiam ancillis, et quoque catulo meo [gaudeat.
Subblanditur novus amator, ſe ut cum videat,
Aſin, Act i. *l.* 5.

Andreas Maranus, a poet of Vicenza, ſeems to have had this paſſage of Tibullus in his eye in one of his elegies.

Optamus ſero, quæ oblata remiſimus ultro.
Utere felici dum licet eſſe tibi.
Mox ſubeunt caſus, ſubeuntque pericula mille,
Advigelat cuſtos, advigelatque canis.
Interia obrepunt morbi vel decolor ætas,
Blanditias nec fas dicere, nec facere.
Vulp.

But more correſpondent to our poet's ſentiments is the following Greek Epigram:

Ην μεν το χαιρειν φησης φιλος ουτε θυρωρος
Εν στοιν, ουτε κυων εν προθυροις δεδεται.

Will the reader pardon me one quotation more? It is a humorous epitaph, on a dog which belonged to a married lady of intrigue.

Latratu fures excepi, mutus amantes,
Sic placui Domino, ſic placui Dominæ.

Ver. 48. By the pronoun "tibi," in the text, the poet ſeems to have had ſome particular perſon in his eye.

The ancients looked upon it as one of the moſt dreadful misfortunes, which could befal any perſon, to be deprived of funeral honours.

The inculcating of this, was one of the wiſeſt contrivances of ancient legiſlation, and was tranſmitted originally from Egypt to Greece. By it, not only private murders, but vices of all kinds, were, in a great meaſure, checked or prevented. For, as an ingenious writer obſerves, it was a cuſtom among the Egyptians, before they interred their dead, to canvaſs over their actions, and to bring their whole paſt life to a trial, before judges appointed for that purpoſe. Thoſe who, upon a fair and impartial examination, were found to have lived a virtuous and good life, were diſmiſſed from the tribunal, with praiſes proportionable to their merit, recommended as worthy examples to poſterity, and aſſigned over to the ſociety of the bleſſed in the ſhades below; but others, in whoſe characters vice and miſchief were predominant, were publicly branded with infamy, and aſſigned over to the regions of affliction. (*Diod. Sicul.*) As every one was convinced, that he ſhould undergo this impartial trial after death, wherein his former abilities, power, and fortune, could avail nothing to avert a proper and juſt ſentence; ſuch examples were powerful checks to vice, and pleaſing incentives to virtue. The legiſlators having found their end in this inſtitution, enforced the obſervance of it, by the ſuperſtition already mentioned, that thoſe whoſe bodies were unburied, ſhould wander in a ſtate of reſtleſſneſs a hundred years on the banks of the river Styx. Now, this was invented to obviate by terror, the clandeſtine interment of thoſe whom thou ſurviving parents or relations were afraid to bring to this teſt of juſtice, being deſirous to ſhelter the memory of the defunct from ignominy, by an omiſſion of this ceremony. The public interment of the body, being firſt inſiſted upon, only as concomitant to the rites, and by corruption afterwards, made a neceſſary part of them.

Ver. 62. Joannes Baptiſta Pius (Annot. poſter. c. 115.) imagines that theſe garlands were compoſed ſolely of parſley; but Magius has ſhown the falſity of this. Brockhuſius is of opinion, that the poet, in this place, meant garlands of roſes; and indeed innumerable quotations might be brought from the claſſics to prove, that roſes were uſed of old in the adorning of tombs.

Ver. 65. Propertius ſays,

Sit ſibi terra levis, mulier digniſſima vita.

Hence we often meet with the initial letters S. T. T. L. upon ancient tomb-ſtones.

Ver. 98. Upon ſuch verſes of our author as theſe, have the comentators reared the trite opinion, that Tibullus, by his extravagance, ſquandered away his fortune. The text, however, cannot be conſtrued into any ſuch meaning. Ovid, with more juſtice, might be ſaid to have ſpent his inheritance from the following lines;

Illud et illud habet, nec ea contenta, rapina eſt,
Sub titulum noſtros miſit avara lares.
Remed. Amor.

But, in truth, ſmall ſtreſs is to be laid upon ſuch expreſſions in the poets; and therefore Broekhuſius might have ſpared the cenſure he paſſes on Tibullus, on account of this paſſage, elegy delighting in imaginary diſtreſſes.

Ver. 69 Critics are greatly divided in their opinions about the "hippomanes." Theophraſtus, Ariſtotle, and Theocritus mention a plant of that name, the ſmell of which made mares run mad for the ſtallion. While ſome commentators aſſert, that it was a fig-like excreſcence which grew on the forehead of a foal; and which being bit off and ſwallowed by the mother, made her paſſionately fond of her offſpring. Hence it came to be uſed in philtres of old, and to be applied metaphorically, to expreſs love. Others contend, that it was a poiſon, "quod equæ in libidinem excitatæ e locis emittebant."

Ver. 72. The Theſſalians being a wild and uncivilized people, it is no wonder that they were addicted to the follies of witchcraft. Their country produced many powerful plants; and ſome of the firſt phyſicians we read of were born there.

The word "veneum" does not always mean poiſon, ſince Horace, and other approved writers, uſe it often to ſignify the juice of ſuch magical herbs, as were proper to correct the malignity of poiſon. It alſo ſometimes ſignifies a love-potion. In this place, however, it ſtands for poiſon, and not a philtre; for our poet at preſent was in no need of the latter, being already ſufficiently fond of Nemeſis: but whether he would have been in reality as good as his word, let the lover determine.

Mr. Hammond's firſt elegy is an imitation of this.

ELEGY V.

To hear our ſolemn vows, O Phœbus deign!
A novel pontiff treads thy ſacred fane:
Nor diſtant hear, dread power! 'tis Rome's requeſt,
That with thy golden lyre thou ſtand'ſt conſeſt:

Deign mighty bard! to ſtrike the vocal ſtring,
And praiſe thy pontiff; we, his praiſes ſing:
Around thy brows, triumphant laurels twine,
Thine altar viſit, and thy rites divine:

New flush thy charms, new curl thy waving hair;
O come the god in vestment, and in air!
When Saturn was dethron'd, so crown'd with bays,
So rob'd, thou sungst th' almighty victor's praise.
What fate, from gods and man, has wrapt in night,
Prophetic flashes on thy mental sight:
From thee, diviners learn their prescient lore,
On reeking bowels, as they thoughtful pore:
The seer thou teachest the success of things,
As flies the bird, or feeds, or screams, or sings:
The sibyl-leaves if Rome ne'er sought in vain;
Thou gav'st a meaning to the mystic strain:
Thy sacred influence may this pontiff know,
And as he reads them, with the prophet glow.
When great Æneas snatch'd his aged sire,
And burning Lares, from the Grecian fire,
She *, she foretold this empire fix'd by fate,
And all the triumphs of the Roman state;
Yet when he saw his Ilion wrapp'd in flame,
He scarce could credit the mysterious dame.
(Quirinus had not plann'd eternal Rome,
Nor had his brother met his early doom,
Where now Jove's temple swells, low hamlet's stood,
And domes ascend, where heifers crop'd their food.
Sprinkled with milk, Pan grac'd an oak's dun shade,
And scythe-arm'd Pales watch'd the mossy glade;
For help from Pan, to Pan on ev'ry bough
Pipes hung, the grateful shepherd's vocal vow,
Of reeds, still lessening, was the gift compos'd,
And friendly wax th' unequal junctures clos'd.
So where Velabrian streets like cities seem,
One little wherry plied the lazy stream,
O'er which the wealthy shepherd's favourite maid
Was to her swain, on holidays, convey'd;
The swain, his truth of passion to declare,
Or lamb, or cheese, presented to the fair.)
The Cumæan Sibyl speaks.
" Fierce brother of the power of soft desire,
" Who fly'st, with Trojan gods, the Grecian fire!
" Now Jove assigns thee Laurentine abodes,
" Those friendly plains invite thy banish'd gods!
" There shall a nobler Troy herself applaud,
" Admire her wanderings, and the Grecian fraud!
" There, thou from yonder sacred stream shalt rise
" A god thyself, and mingle with the skies!
" No more thy Phrygians for their country sigh,
" See conquest o'er your shatter'd navy fly!
" See the Rutulian tents, a mighty blaze!
" Thou, Turnus! soon shalt end thy hateful days!
" The camp I see, Lavinium greets my view!
" And Alba! brave Ascanius! built by you:
" I see thee, Ilia! leave the vestal fire;
" And, clasp'd by Mars, in amorous bliss expire!
" On Tyber's bank, thy sacred robes I see,
" And arms abandon'd, eager god! by thee.
" Your hills crop safe, ye herds! while fate allows;
" Eternal Rome shall rise, where now ye brouze:
" Rome, that shall stretch her irresistless reign,
" Wherever Ceres views her golden grain;
" Far as the east extends his purple ray,
" And where the west shuts up the gates of day.

" The truth I sing; so may the laurels prove
" Safe food, and I be screen'd from guilty love."
Thus sung the Sybil, and address'd her prayer,
Phœbus! to thee, and madding, loos'd her hair.
Nor, Phœbus! give him only these to know,
A farther knowledge on thy priest bestow:
Let him interpret what thy favourite maid,
What Amalthea, what Mermessia said:
Let him interpret what Albuna bore
Through Tyber's waves, unwet, to Tyber's farthest shore.
When stony tempests fell, when comets glar'd,
Intestine wars their oracles declar'd:
The sacred groves (our ancestors relate)
Foretold the changes of the Roman state:
To charge the clarion sounded in the sky,
Arms clash'd, blood ran, and warriors seem'd to die:
With monstrous prodigies the year began:
An annual darkness the whole globe o'er-ran;
Apollo, shorn of every beamy ray,
Oft strove, but strove in vain, to light the day:
The statues of the gods wept tepid tears;
And speaking oxen fill'd mankind with fears!
These were of old: No more, Apollo! frown,
But in the waves each adverse omen drown.
O! let thy bays, in crackling flames ascend;
So shall the year with joy begin and end!
The bays give prosp'rous signs; rejoice ye swains!
Propitious Ceres shall reward your pains.
With must the jolly rustic purpled o'er,
Shall squeeze rich clusters, which their tribute pour,
Till vats are wanting, to contain their store.
Far hence, ye wolves! the mellow shepherds bring
Their gifts to Pales, and her praises sing.
Now, fir'd with wine, they solemn bonfires raise,
And leap, untimorous, through the strawy blaze!
From every cott unnumber'd children throng,
Frequent the dance, and louder raise the song:
And while in mirth the hours they thus employ,
At home the grandsire tends his little boy;
And in each feature pleas'd himself to trace,
Foretells his prattler will adorn the race.
The sylvan youth, their grateful homage paid,
Where plays some streamlet, seek th' embowering shade;
Or stretch'd on soft enamell'd meadows lie,
Where thickest umbrage cools the summer sky:
With roses, see! the sacred cup is crown'd,
Hark! music breathes her animating sound:
The couch of turf, and festal tables stand
Of turf, erected by each shepherd-hand;
And all well-pleas'd, the votive feast prepare,
Each one his goblet, and each one his share.
Now drunk, they blame their stars and curse the maid;
But sober, deprecate whate'er they said.
Perish thy shafts, Apollo! and thy bow!
If love unarmed in our forests go.
Yet since he learn'd to wing th' unerring dart,
Much cause has man to curse his fatal art:
But most have I; the sun has wheel'd his round
Since first I felt the deadly festering wound;

* *The Sibyl.*

Yet, yet I fondly, madly, wiſh to burn,
Abjure indifference, and at comfort ſpurn;
And though from Nemeſis my genius flows;
Her ſcarce I ſing, ſo weighty are my woes!
O cruel love! how joyous ſhould I be,
Your arrows broke, and torch extinct to ſee!
From you, my want of reverence to the ſkies!
From you, my woes and imprecations riſe!
Yet I adviſe you, too relentleſs fair!
(As Heaven protects the bards) a bard to ſpare!
E'en now, the pontiff claims my loftieſt lay,
In triumph, ſoon he'll mount the ſacred way.
Then pictur'd towns ſhall ſhow ſucceſsful war,
And ſpoils and chiefs attend his ivory car:
Myſelf will bear the laurel in my hand;
And pleas'd, amid the pleas'd ſpectators ſtand:
While war-worn veterans, with laurels crown'd,
With Io-triumphs ſhake the ſtreets around.
His father hails him, as he rides along,
And entertains with pompous ſhows the throng.
O Phœbus! kindly deign to grant my prayer;
So may'ſt thou ever wave thy curled hair;
So ever may thy virgin-ſiſter's name
Preſerve the luſtre of a ſpotleſs fame.

NOTES ON ELEGY V

MESSALINUS, to whom the following noble elegy is addreſſed, was the ſon of the illuſtrious Meſſala. This young nobleman, whom both hiſtorians and poets repreſent, as inheriting his father's eloquence, had been appointed one of the quindecemviral prieſts, to whoſe care the keeping and interpretation of the Sibylline oracles were intruſted. As theſe venerable writings had been depoſited by Auguſtus, under the ſtatue of Apollo, in his new temple, erected on Mount Palatine, and as Apollo was ſuppoſed to preſide over vaticination, and in a particular manner, over theſe myſterious volumes, the poet begins his poem with an addreſs to Apollo, whom he earneſtly implores to be preſent at the inauguration of the new pontiff. Moreover, as theſe writings were never conſulted, but in the greateſt emergency, and then only when the ſenate paſſed a decree for that purpoſe; and as their interpretation, even then, was thought to be ſuggeſted by Apollo, Tibullus entreats the god to aſſiſt his young friend, whenever public calamities ſhould render it neceſſary for the prieſts to have recourſe to them

The Romans were proud of being thought the poſterity of the Trojans; and their poets embraced every opportunity of making their court to the people by adopting that notion. Nor was this prejudice confined to the meaner ſort of Romans: Julius Cæſar, and his ſucceſſor, either believed, or effected, from political motives, to believe that they were deſcendants of Æneas, (Vid. in Suet. in Vit. J. Cæſ. et Aug.) Nay, ſo far was this folly carried, that Auguſtus entertained a deſign of transferring the ſeat of empire from Rome to Troy; which city, by his and Julius's attention, was again in a flouriſhing ſituation. This, the Romans dreaded not a little; and to ſuch a height did their apprehenſions increaſe, A. U. C. 734. when Auguſtus was in Syria, that Horace, all courtier as he was, is ſuppoſed to have written that noble ode, "Juſtum et tenacem," lib. 3. ode 5, obliquely to diſſuade the emperor from that meaſure. As this, however, was a very delicate ſubject, and none knew better to flatter his patron than Horace, he abruptly breaks off,

Non hæc jocoſæ conveniunt Lyræ.

Tibullus, however, not lying under the ſame obligations to Auguſtus as the lyric poet, and neither courting the ſmiles, nor dreading the frowns of the court, he, like a true patriot, in all the enthuſiaſm of poetry, introduces the Sibyl, puſhing on Æneas to the new ſettlement, deſtined by Heaven for him and his followers, in Italy. This event, ſays the propheteſs, whenever it takes place, will effectually recompenſe you for your preſent loſs, and future diſaſters, you yourſelf being to become a god; as your poſterity, the Romans are predeſtined to conquer the world, of which Rome is to be the capital.

This ſurmiſe, which no commentator has touched on, throws a particular beauty on the whole of the Sibyl's ſpeech, which otherwiſe appears inaptly placed, where it now is inſerted.

Shall we pay a compliment to Horace and Tibullus (who probably let one another into the full ſcope of their patriot-productions), and ſuppoſe, that theſe had ſome weight with the emperor of the world? At all events, as Auguſtus profeſſed a great veneration for the Sibylline books, and was anxious to be thought the ſon of Apollo (ſee the notes), who, he ſaid, fought for him at the battle of Actium; the people (whoſe prejudices, to the removing their ſeat of empire, muſt have been augmented by our poet's well-timed prophecy), would have regarded Auguſtus's breach of the Sybil's orders, as the moſt impious of violations. Beſides ſo flagrant a diſreſpect, and in one too of ſuch eminence, might have produced the moſt fatal conſequences to his government, by weakening the reverence which his ſubjects entertained for the Sybilline writings. This Auguſtus was too ſenſible not to perceive, and too political not to avoid.

But if the tranſlator is deceived in his con-

jecture of the deſign, which Tibullus propoſed to himſelf, in writing this fine poem, he, however, ſincerely wiſhes, that the nine may always devote their raptures to the ſervice of their country, and never proſtitute their talents, in flattering tyranny, or inflaming the paſſions of guilty greatneſs. The people ſhall then joyfully acknowledge the language of the gods, and own the muſes for the legitimate daughters of Jove.

The remaining part of the elegy is thrown, we may ſuppoſe, on purpoſe into an artful obſcurity of connection. Moſt of the prodigies, which the poet mentions, are ſaid by hiſtorians to have happened at the death of Julius Cæſar; and may we not conjecture, that Tibullus meant, by recapitulating theſe, to inſinuate, that the gods cauſed the tyrant to be ſlain, for his attachment to Troy? This circumſtance could not fail to alarm his ſucceſſor, eſpecially too as he muſt have been conſcious, that he even outdid Julius in his affection to that city; and it is certain, that he, by no means, equalled that uſurper in point of perſonal courage.

But if Tibullus wrote with freedom, his freedom was accompanied with decorum; for, as a Roman expreſſes it, it is always dangerous, "Scribere in eum, qui poteſt pro ſcribere."

So the poet ſupplicates Apollo to avert ſuch preſages for the future; by which means, peace would return to bleſs Italy, and rural devotion again flouriſh. Tibullus ſuppoſes, that the god grants his petition, and deſcribes the joyful ceremonies, practiſed by the grateful villagers, upon the occaſion.

Theſe ſolemnities concluding, as uſual, with mirth and wine, the young peaſants begin to diſcloſe their loves, and condemn the cruelty of their miſtreſſes. This leads our poet inſenſibly into a recollection of his own amorous misfortunes; for Nemeſis was ſtill inflexible. This, he ſays, not only impaired his health, but affected his poetical powers; ſo that, far from being able to do juſtice to great ſubjects, he ſcarce could write a little elegy. This was an artful apology for the ſeeming inaccuracy of his preſent poem. Notwithſtanding all the conſequences of his ill-requited paſſion, ſo thorough a lover was our poet, that he did not wiſh to ſhake off his love; but only begged, that Nemeſis would at laſt condeſcend to abate of her rigour; for, as Meſſalinus, adds he, is puſhing forwards in the liſts of fame, the regard and friendſhip which I profeſs for his father and himſelf, abſolutely require a total freedom of genius, that I may celebrate thoſe triumphs which his grateful country will ſoon decree him.

In the concluſion, Meſſala is introduced as enjoying the felicity of ſeeing his ſon triumph; upon which occaſion the poet ſuppoſes, that his patron will entertain Rome with magnificent ſpectacles.

The poem ends with a petition to Apollo, that theſe things might be accompliſhed.

Hiſtory informs, that Meſſalinus, by ſteadily treading in the footſteps of his father, was honoured with a triumph; and A. U. C. 750, had the conſulſhip conferred upon him; but Tibullus died many years before theſe things happened.

It is not eaſy to determine how old Meſſalinus was, at the time this poem was written. He had not, probably, long put on the manly gown; for we find, that Lentulus, the ſon of Lentulus, was choſen into the college of augurs at 17 or 18 years of age; and from this college the quindecemvirs were elected. Upon theſe occaſions the friends of the pontiff were invited to a magnificent ſupper; and it is probable it was at this entertainment, that the following poem was firſt recited.

Ver. 9. The original here would ſeem extremely ridiculous to a mere modern reader. Literally tranſlated, it ſignifies neither more nor leſs, than an entreaty to his godſhip to put on his holiday ſuit, curl his hair, and waſh his face. A ſtrange hint this to ſo great, ſo young, and beautiful a divinity as Apollo. Is it from their patron god, that ſome of his modern vaſſals have derived their ideas of dreſs and cleanlineſs? The ſublimeſt geniuſes are not exempted from paying an attention to the little decencies of life, reſpecting which, the fair ſex are our beſt inſtructors.

The polite Callimachus, in his hymn to Apollo, draws a more amiable picture of the god of poetry, in the following verſes;

Τον χορευν ω παλλων οτι οι καλα θυμον αειδει
Τιμησει, δυναται γαρ επει Διι δεξιος ησται.
Ουδε ο χορος τον φοιβον εφ' εν μονον ημαρ αεισει
Εστι γαρ ευϋμνος, τις αν κ ρεα φοιβον αειδοι;
Χρυσεα τω κ λλωνι τοτ' ενδυλον ή τ' επιτορτις
Η τε λυρη, &c. *Ver.* 28, 29. *&c.*

Immortal honours wait the happy throng,
Who, grateful to the god, reſound the ſong:
And honours well Apollo can command,
For high in pow'r he ſits, at Jove's right hand.
But in the god, ſuch beaming glories blend,
The day unequal to his praiſe will end.
His praiſe, who cannot with delight reſound,
Where ſuch eternal theme for ſong is found;
A golden robe inveſts the glorious god,
His ſhining feet with golden ſandals ſhod:
Gold are his harp, his quiver, and his bow;
Round him bright riches in profuſion flow.
His Delphic fane illuſtrious proof ſupplies,
Where wealth immenſe fatigues the wond'ring eyes.
On his fair cheeks no tender down has ſprung,
A god for ever fair, for ever young:
His flagrant locks diſtil ambroſial dews,
Drop gladneſs down, and blooming health diffuſe, &c.

Dodd.

Ver. 12. Arioſto has imitated this paſſage in the beginning of his third canto. The proper emblems of Apollo the poet, lyriſt, or feſtal Apollo, were a crown of laurel, his hair finely dreſſed, flowing at full length, a lyre in his left hand, and wearing a magnificent robe that fell down to his feet. In this manner was this god repreſented in the temple which Auguſtus dedicated to him in the Palatium: and thus it was,

that the poets of old were habited, when they ſang to the lyre at the tables of the great. Hence, as Mr. Spence obſerves, the propriety of the epithet "crinitus" conferred on Jopas by Virgil, which ſome critics have too haſtily cenſured, as wholly foreign to the purpoſe.

So fond was Auguſtus of Apollo, that, in the medals, and other repreſentations of that emperor, his face is what the Romans called an Apollinean face. This we know from hiſtory, that Auguſtus was really very beautiful; and Suetonius informs us, that ſome writers had even aſſerted, that he was in fact the ſon of Apollo. Vit. Aug. ſect. 94. Accordingly Servius tells us, that there were ſtatues of Auguſtus in Rome, which repreſented him under the character, and with the attributes of that god. We alſo know, that in a certain infamous feaſt made by Auguſtus (at which he and five of his courtiers repreſented the ſix great celeſtial gods, as ſome of the ladies of his court repreſented the ſix great goddeſſes), he himſelf choſe to appear with the emblems of Apollo. All theſe circumſtances but too plainly ſhow, that the ſucceſſor of Julius gave in to the flattery that was paid him, and that he thought himſelf, at leaſt loved to be thought by others, like Apollo. But the greateſt abſurdity of all, as Mr. Spence juſtly obſerves, was, that becauſe Apollo was uſually repreſented with a particular flow of light beaming from his eyes, he muſt needs have it ſuppoſed that his eyes alſo, which were really fine, darted forth ſo ſtrong a brightneſs, as to dazzle thoſe who looked upon them too nearly, or too ſteadily. "Oculos habuit claros, ac nitidos," ſays Suetonius, "quibus etiam exiſtimari volebat ineſſe quoddam divini vigoris, gaudebatque ſi quis ſibi acrius contuenti quaſi ad fulgorem ſolis, vultum ſubmitteret." To ſuch a pitch of extravagance does abſolute power lead even the well meaning!

Ver. 16. For the lots, ſee notes on the third elegy of the firſt book; and who the augurs were, hath been explained already. The Haruſpices, to whom, according to the Tuſcan diſcipline, belong the province of explaining prodigies, by inſpecting the bowels of victims, were ſervants of the public, and had ſalaries for attending the magiſtrates in all their ſacrifices. Hence they never failed to accommodate their anſwers to the political views of thoſe who employed them.

As the order of prieſthood, among the Romans, was, for ſome ages, conferred upon none but ſuch as were of the firſt nobility; by their influence over a people naturally ſuperſtitious, the balance of power was thrown into the hands of the ſenate and optimates, who, by this means, as Cicero obſerves, De Legib. lib. iii. cap 12. were often enabled to check the factious attempts of the tribunes.

Minutius Felix, and other Chriſtian writers, aſcribe oracles, &c. to the intervention of the devil, or other impure ſpirits.

Polybius very ſenſibly deduces that ſuperiority, which the Roman ſtate had over all others, from the ſuperſtition of its vulgar. This was carried by the ſtateſmen, ſays he, to ſuch lengths, and ſo effectually introduced into the private lives of the citizens, and into public affairs, that one cannot help being ſurpriſed at it. This, continues our ſagacious politician, was, as I take it, projected entirely for the ſake of the vulgar; for if a ſociety of wiſe men only could be formed, ſuch a ſcheme would be ſuperfluous: But ſince the crowd is always giddy, and often agitated by the moſt unruly paſſions, ſecret terrors and tragical fictions are neceſſary to reſtrain them within due bounds. Lib. iv.

Nor is the Greek hiſtorian ſingular in his opinion. Appius Claudius Craſſus aſſerts, that the Romans owed the great ſucceſs of their arms to their obſervance of the ſacred chickens, "&c. "Parva ſunt hæc," as Livy makes him ſpeak, "ſed parva iſta non contemnendo, majores noſtri maximam hanc rem fecerunt."

While the augurs were taking the auſpices, or obſerving the heavens, all public buſineſs was intermitted: Julius Cæſar firſt broke through this; and Clodius, to facilitate the baniſhment of Cicero, among other laws to decoy the people, enacted, that no magiſtrate ſhould take the auſpices, or contemplate the heavens, while they were actually aſſembled on public buſineſs. This regulation took place A. U. C. 695. But the people, not content with this, extended the privilege to the uninterrupted proſecution of affairs on the "Dies faſti."

Ver. 20. *The Sybil-leaves, if Rome*, &c.] Theſe writings were kept anciently in a coffer of ſtone, and depoſited in a ſubterranean place in the Capitol. But that noble pile of buildings being deſtroyed by fire, A. U. C. 671, and the Sibylline books along with them, Sylla rebuilt the Capitol, and ſent deputies into Ionia, to collect all the Sibylline verſes, which tradition had ſtill preſerved. They ſucceeded ſo well, that a volume, conſiſting of a thouſand lines, was compoſed from their gleanings, and depoſited in the Capitol. Auguſtus Cæſar, after the death of Lepidus, when he took upon himſelf the office of high prieſt, "quidquid fatidicorum librorum Græci Latinique generis, nullis vel parum idoneis auctoribus vulgo ferebatur, ſupra 2, millia, contracta undique, cremavit ac ſolos retinuit Sibyllinos." Theſe, indeed, when purged of what he ſuppoſed to be ſpurious, Auguſtus placed in two golden lockers, under the ſtatue of Apollo, in the temple he had dedicated to that god on Mount Palatine, A. U. C. 726. Vide Sueton. in Vit. Aug. cap. 31.

According to Lactantius, the only Sibylline verſes which were preſerved ſacred from the imperfection of all, but that of the quindecemvirs, were thoſe of the Cumæan Sibyl. Her verſes, as well as thoſe of her ſiſters, were compoſed in heroic numbers, "ſenis pedibus;" and, if Symmachus may be depended upon, were written on linen volumes. Lib. v.

In the ſecond Punic war, when Rome was reduced to very great difficulties, the Romans conſulted the Sibylline books. Theſe made the expulſion of the enemy from Italy to depend upon

their inſtituting, with extraordinary pomp, certain annual games to Apollo.

The year in which the ſecular games were performed, the Apollinarian were blended with them, as Macrobius informs us, Lib. xvii.

The Sibylline books continued in high reverence, till about the time of Theodoſius the elder, when the greateſt part of the ſenate being converted to Chriſtianity, they began to be regarded as fables; and at laſt, in the reign of Honorius, Stilicho burnt them.

The book which at preſent goes under the name of the Sibylline Oracles (σιβυλλιακοι χρησμοι) is plainly a modern counterfeit.

Ver. 24. Troy was deſtroyed, A. M. 2820, Æneas landed in Italy ſome years after, where he married the daughter of King Latinus, and in her right ſucceeded to his throne. His poſterity enjoyed, from him, the ſovereignty, by regular ſucceſſion, till Aurelius ſeized on the crown, in prejudice of his elder brother Numitor, and continued in quiet poſſeſſion of the regal dignity, till he was ſlain by Romulus and Remus, the ſons of Illa, Numitor's daughter. Theſe ſeated their grandfather upon the throne; and two years after founded Rome. Uſher places this laſt event before the 8th Olympiad, A. M. 3250. Others, with Varro, fix it to the 3d Olympiad, and 433d year after the deſtruction of Troy, in the 3960th of the Julian period, 753 years before the nativity of our Saviour.

Ver. 29. Rome was uſually called "Urbs æterna," as the the antiquaries, poets and medals teſtify. But if Rome was predeſtined by the gods to laſt for ever, how vain, how impious, would it be to remove the ſeat of empire to any other place?

Ver. 31. Such, at that time, was the condition of thoſe hills, on which Rome was founded. But Petrarch and Dyer, in deſcribing their preſent ſtate, preſent us with a very different proſpect.

Qui fu quella di Imperio antica ſede
Temuta in pace e triomphante in guerra.
Fu! perch' altro che il loco hor non ſi vede.
Quella che Roma fu guace, s'atterra
Queſt cui l'herba copre e calca il piede
Fur Moli ad ciel vicine, & hor ſon terra.
Roma che'l mondo vinſe, al tempo cede
Che i piani inalza e che l'altezza alterra.
Roma in Roma non e, Volaano e Marte
La grandezza di Roma a Roma han tolta,
Struggendo l'opre e di natura e di arte.
Volio ſoſſopra il mondo e'n polve e volta
E fra queſte ruine a terra ſparte
In ſe ſteſſa cadea morta e ſepolta.

But more ſolemnly picturesque is the following deſcription of the ruins of Rome by Mr. Dyer:

The rough relics of Carinæ's ſtreet,
Where now the ſhepherd to his nibbling ſheep
Sits piping, with his oaten reed: as erſt
There pip'd the ſhepherd to his nibbling ſheep
When th' humble roof Anthiſe's ſon explor'd
Of good Evander, wealth-deſpiſing king,
Amid the thickets: So revolves the ſcene,
So time ordains, who rolls the things of pride
From duſt again to duſt. Behold that heap
Of mouldering urns (their aſhes blown away,
Duſt of the mighty!) the ſame ſtory tell;
And at its baſe, from whence the ſerpent glides
Down the green deſert ſtreet, yon hoary monk
Laments the ſame.

Dodſley's Collect. vol. i.

By Jove's temple, the poet means the Capitol; which in the days of Auguſtus, was, for ſtructure, embelliſhment, and riches, one of the moſt noble and magnificent edifices in the world. When it was deſtroyed by fire, an event which we have already taken notice of, Auguſtus undertook to rebuild it, but died ere it was finiſhed: this, it is ſaid, he, in his laſt moments, regretted as the only thing wanting to complete his felicity. It was not, however, wholly rebuilt till the conſulſhip of Catulus, who had the honour to dedicate it, and to have his name inſcribed upon it. And indeed Catulus well merited that diſtinction; for, beſides many other marks of his munificence, he gilded over with gold all the copper tiles of the temple. Pliny obſerves, that this was the firſt time gold was uſed on the outſide of buildings. Thus the fire, to ſpeak in the beautiful words of Cicero, ſeemed to have been ſent from heaven, not to deſtroy, but to raiſe to Jupiter a temple more worthy of his majeſty. On the firſt of January, the conſuls always went in proceſſion to this temple; and all who entered the city in triumph, repaired thither in pomp to pay their ſolemn thanks to Jove.

Grammarians made a difference between "Arx" and "Capitolium;" but, if we are not miſtaken, they are ſometimes indiſcriminately uſed.

The verſes from line twenty-ninth of the verſion, to that where the Sibyl addreſſes Æneas, may appear too long, as it diverts the attention from the Cumæan Sibyl, who is about to propheſy: But as the propheteſs's alluſion to the particular place, where the deſcendants of Æneas were to found their eternal city, might have, perhaps, appeared obſcure (a defect to which prophetic language is liable) without a previous and more full deſcription; our poet's conduct, it would ſeem, is not ſo foreign to the purpoſe, as might at firſt be imagined.

See Ovid, Faſt. and Propert. lib. iv. for ſimilar deſcriptions.

Ver. 32. In a former note we have taken notice of the meanneſs of infant Rome: Neither did it greatly improve in magnificence till many centuries after. Their temples indeed were adorned with trophies; but theſe, as Plutarch obſerves in his life of Marcellus, made the city rather dreadful than pleaſing. After the conqueſt of Syracuſe by Marcellus, the Romans became acquainted with the finer arts, and no doubt their architecture was alſo improved: And yet Auguſtus boaſted, that he had found Rome ill built of brick, but left a city of marble: "marmoream ſe relinquere, quam lateritiam accepiſſet." Suet. in Aug. § 28.

Ver. 33. It was cuſtomary to ſprinkle the ſylvan gods Pan and Pales with milk.

Plutarch informs us, that Rome was founded on the 21ſt of April; and that on that day a ſolemn feſtival was ever afterwards held. This feſtival was formerly called by the Romans Palilia; but, upon building a temple afterwards to Roma and Venus, they changed the name of this feſtival into that of Romana.

Ver. 36. The curious in antiquities may either conſult Servius, or Virgil's Bucolics, or Julius Scaliger, lib. i. Poet. cap. 4. concerning the ſylvan pipe of the ancient ſhepherds.

Some attribute the invention of it to Pan, and others to Marſyas. It conſiſted of ſeven reeds (joined together by thread and wax) equal at top, where the lips were applied, but unequal below, "qua exibat ſpiritus."

But no words can convey ſo diſtinct an idea of this ancient muſical inſtrument, as the inſpection of its figure upon antiques, of which many are to be found in Boiſſard, Gorlæus, and others. It appears from § 9. of the ſecond epiſtle of that famous Italian traveller, Pietro della Valle, that the Turks, in his time, uſed a pipe, which they called "muſcab," and which very much reſembled that played on by the ancients.

Ver. 39. *So where Velabrian ſtreets*, &c.] This was a large ſtreet in the eighth, or as others ſay, in the eleventh diviſion of Rome. The place which this ſtreet afterwards occupied, had been, in former times, a boggy lake, and expoſed to frequent inundations from the Tyber; but Tarquinius Priſcus having effectually drained it, it became, in proceſs of time, one of the nobleſt ſtreets in the city.

Ver. 45. In Virgil, Creuſa appeared to Æneas, and propheſies to him his future ſettlement. The ancients generally ſuppoſe, that the ſouls of the departed are endowed with a power of predicting future events; but no prophecy was ſo awfully ſtriking, none more to be depended upon, than what proceeded from the mouth of a Sibyl. Hence the reverence paid by the Romans to the Sibylline books; and hence it was that Auguſtus himſelf affected ſo much to rely upon their declarations. Thus has Tibullus happily blended ſublimity with art. The Sibyl concludes her prophecy with a prayer to Apollo, by which ſhe intereſts that god in the events of her prediction: and from this circumſtance, the propriety of our poet's addreſs to Apollo, in the beginning of the elegy, more conſpicuouſly appears.

Poetical prophecy makes the reader acquainted, before hand, with ſome events, which are to happen in the progreſs of the poem: and prevention (as an elegant critic calls it) is when ſuch things are ſpoken of at preſent, which nevertheleſs are not to come to paſs for years or ages.

The ſame critic obſerves, that poetical predictions are generally uttered by ſuperior beings; or if human beings are introduced, they are either ſuch as are already in another ſtate of exiſtence, or juſt on the verge of quitting this. Thus, Hector, in Homer, foretels the death of Achilles; and, in the ſame manner, Orodes, in Virgil, warns Mezentius of his fate. Both theſe kinds of prediction are great: and if the latter, as the ſame author alleges, is the greateſt; the firſt, however, by his own acknowledgement, is the moſt poetical.

Nor are theſe two the only kinds of poetical prophecy. Heroic poets often uſe another, by foretelling the death of a hero, at a time when he is perhaps exulting in victory. Virgil affords us an inſtance of this, Æn. x. in relation to the death of Pallas by Turnus.

That form of prophecy, diſtinguiſhed above by the title of prevention, gives an uncommon greatneſs and energy to the language: It places diſtant actions full before our eyes, and carries a certain boldneſs and aſſurance with it, that is wonderfully pleaſing, prophecy being of great ſtrength in poſſeſſing and captivating the reader, as we love to look into futurity. Thus it flatters the powers and capacity of our own minds, at the ſame time that it gives an air of ſuperior knowledge and authority to the poet. This ſpeech of the Sibyl includes in it all theſe advantages: It is not only preventive, but prophetical. Perhaps there are no ſpeeches in the fourth book of the Odyſſey, or ſixth of the Æneid, more remarkable for their prophetic beauty, than this is. The ſubject of this is loftier, the ſpeaker more venerable, and the deſign of the poet himſelf more truly great.

The terrifying raptures of Theochymenus, Od. xx. which repreſent the fall of the ſuitors, and which contain a higher orientaliſm than any we meet with in any other part of Homer's writings, may be compared, as Mr. Spence obſerves in his excellent Dialogues on the Odyſſey, with what Joel ſays in a truly inſpired language: "I will "ſhow thee wonders in the heavens and in the "earth: Blood, and fire, and pillars of ſmoke: "The ſun ſhall be turned into darkneſs, and the "moon into blood. I will cauſe the ſun to go "down at noon, and will darken the earth in clear "day. All the bright lights of heaven will I make "dark over thee, and ſet darkneſs upon the land." In that truly ſublime paſſage, the ſun and lights ſeem only to have left the heavens to ſhine with all their boundleſs majeſty in the poet's mind.

Ver. 51. *There, thou from yonder ſacred ſtream*
ſhalt riſe
A God thyſelf, &c.] The poet here plainly points out the river Numicius, which, as the Sibyl propheſied, waſhed away from Æneas all that was mortal, and fitted him for the company of the gods, as Ovid beautifully tells the ſtory. Vide Ovid's Metam. book xiv. line 609.

Such is the poetical account of Æneas's departure from life; but antiquaries differ widely as to the manner of his death. Some aſſert, that his body was found drowned in the Numicius, after his rencounter with Mezentius; while others maintain, that he was indeed killed on the banks of that river, but that his body, tumbling into the ſtream, could never be recovered; and that it was hence artfully given out by his ſucceſſors, that the gods had taken him to themſelves. Accordingly he was honoured with the appellation of "Deus

Indiges," or *ανθρωποθεμιον*; and Dionyſius Halicarnaſſeus (lib. i. p. 40.) informs us, that not only a chapel was dedicated to him, with the following inſcription:

PATRI. DEO. INDIGETI.
QVI. NVMICI. AMNIS.
VNDAS. TEMPERAT.

but that he had many monuments erected to him, in divers parts of Italy.

But why is Numicius called ſacred? "(veneranda Numici unda)." Servius, in his notes on the ſeventh Æneid, ver. 150. aſſigns the following reaſon: "Numicius ingens ante fluvius fuit; quo repertum eſt cadaver Æneæ, & conſecratum, poſt paulatim deſcreſcens, in fontem redactus eſt: qui ipſe ſiccatus eſt, ſacris interceptus. Veſtæ enim libari, non, niſi de hoc flumine, licebat." *Broekh.*

Ver. 56. In the firſt battle, which Æneas carried on againſt the Latins and Rutulians, "propter fraudatus Laviniæ nuptias," Latinus was ſlain; upon which, the Rutulian prince, Turnus, implored aid from Mezentius, king of the Tuſcans; and fell in the ſecond action: but Æneas never afterwards appeared, as the Scholiaſt tells us. In the third and laſt engagement, Aſcanius revenged the death of his father, by killing Mezentius.

But why does the poet beſtow on Turnus the epithet "Barbaro," ſince that prince, as Amata, in Virgil, informs us, was of Grecian original? Cyllenius endeavoured to ſolve this queſtion, by ſuppoſing, that Turnus ſpoke bad Latin, "vel blæſus, vel balbus erat." But there is no occaſion for any ſuch hypotheſis, ſince we find, from Plautus, that the Romans called both Italians and Latins, "Barbari." Vide Feſt. in voc. Barbar. *Broekh.*

Ver. 57. *Lavinium greets my view.*] This is the city, which Æneas is ſaid to have built in honour of his wife Lavinia. See more of this in the twenty-eight chapter of the firſt book of Dionyſ. Halicarnaſſ. in Virgil, Æn. i. ver. 258. in Livy, book i. cap. 1. and 3. in the author of the book intitled, De Orig. Roman. and in Juſtin. lib. xliii. cap. 1. *Broekh.*

Ver. 59. Broekhuſius is ample in citing authorities to prove, that Ilia was neither aſleep, or raviſhed (contrary to what is aſſerted in the text), when Mars, or whoever was the father of Romulus and Remus, begot theſe twins upon her. After her delivery ſhe drowned herſelf in the Tyber; and hence ſhe is ſaid, by the poets, to have been married to that river.

Ver. 62. Mars was ſo fond of his helmet, ſhield, and javelin, that he did not quit them, even when going upon his amours, of which he had ſeveral; but as the moſt famous of theſe was his intrigue with Ilia, or, as others call her, Rhea, Sylvia, the mother of Romulus and Remus, ſo it became a popular ſubject for the medaliſts, ſtatuaries and painters, as well as poets, among the Romans. In a relievo, in the poſſeſſion of the Mellini family, at Rome, we ſee Mars deſcended upon earth, and moving towards Rhea, who is aſleep on it. And on the reverſe of a medal which Mr. Addiſon mentions, and Mr. Spence has given an engraving of, that god is repreſented in an earlier point of time, in the air, as deſcending down to her. By means of this medal, that polite ſcholar, Mr. Addiſon (Vide Travels, p. 182.) was enabled to explain the two following lines in the eleventh ſatire of Juvenal, which had puzzled all the commentators:

Ac nudam effigiem clypeo fulgentis & haſtæ,
Pendentiſque Dei perituro oſtenderet hoſti.

For the Roman ſoldiers, who were not a little proud of their founder, and the military genius of their republic, uſed to bear on their helmets the firſt hiſtory of Romulus. On theſe occaſions, the figure of the god was made as deſcending on, that is, as ſuſpended in the air over the veſtal virgin; in which ſenſe, the word "pendentis" is extremely poetical.

Ver. 63. This apoſtrophe to the cattle that were feeding on the ſeven hills, where Rome afterwards ſtood, is highly picturesque; it more than places the object before the eyes of the reader: Such is the magic of poetry! The heroic poets, but eſpecially the ſacred and prophetic writers, abound with theſe bold ſallies of imagination.

Ver. 65. The Romans were early made to believe the gods had predetermined that their city ſhould be the metropolis of the world. Hence Horace writes,

Gentibus eſt aliis tellus data limite certo;
Romanæ ſpatium eſt urbis et orbis idem.

And Martial calls Rome

Terrarum domina gentiumque Roma.

Into how many misfortunes this belief plunged that ſtate, and eſpecially the nations around, let her own annals teſtify!

Ver. 69. A frequent chewing of the laurel was ſuppoſed to be of great efficacy in raiſing a ſpirit of divination and poetry. See Spanheim's learned notes on the ninty-fourth verſe of Callimachus's Hymn to Delos. With a view to this, we may ſuppoſe it was that Commodus, as Xiphilinus tells the ſtory, eat the laurel leaves with which he was crowned: *δάφνης φυλλα ἁ ἐκ τε στεφανε ἰσχον αὐτος διεφαγον.*

Ver. 71. Critics differ greatly in the number, as well as in the names of the Sibyls; nor are they better agreed with regard to their parentage, country, reputation, and the age in which they lived. Varro makes them to have been ten in number, Suidas, in his catalogue of them, gives us only nine. Ælian and Auſonius limit them to four; while Aulus Gellius and Pliny the elder acknowledge but one. But Roſinus adopted Varro's opinion; and has, from good authority too, given us their ſeveral names. Lib. iii. cap. 24.

Our poet mentions four of the Sibyls by name, viz. Herophile, Mermeſſia, Amalthea, and Albuna. Roſinus makes the firſt and third of theſe to be the ſame with the Cumæan Sibyl; but we have

the authority of Pauſanias for aſſerting that Herophile was born on Mount Ida, of a mortal father, but immortal mother; that ſhe lived before the time of the Trojan war, and predicted the rape of Helen, and the fall of the Trojan empire. In her verſes too, were probably ſcattered ſome admonitions, "admonuit," exciting the Romans, who by Æneas were of Trojan deſcent, to act a friendly part to the Phrygians, and by their good offices compenſate to them all the loſſes they had ſuſtained by the deſtruction of Troy; and therefore our poet mentions her, and deſires Apollo to guide Meſſalinus alſo in the interpretation of her prophetic writings, as well as in thoſe of the other three. This method of explaining

Quidquid Amalthea, quidquid Mermeſſia dixit,
Herophile Phœbo grata quod admonuit:
Quodque Albuna ſacras Tiberis per flumina ſortes
Portarit, ſicco perlueritque ſinu.

removes all the difficulty of connection, which commentators ſaw, but never offered to unriddle, till Vulpius, p. 259. by joining theſe four lines with

Phœbe ſacras Meſſalinum fine tangere chartas
Vatis: et ipſe, precor, quid canat illa, doce.

in one common petition to Apollo, made ſenſe of the paſſage.

Herophile is called in the text, "Grata Phœbo;" and Pauſanias, lib. x. cap. 12. tells us, that in her verſes, ſhe ſometimes called herſelf the wife, ſometimes the daughter, and ſometimes the ſiſter of Apollo. She viſited Claros, Delos, and Delphi, where, from a ſtone, which that ancient Greek traveller ſaw, ſhe uttered oracles: but ſhe paſt moſt of her time at Samos; and, dying at Troas, was buried in the grove of Smintheus, where he read her epitaph, which he has preſerved.

Mermeſſia, although our poet makes her a diſtinct perſon, was probably the ſame as the former, ſince antiquaries inform us that ſhe was born at Mermeſſus, a paſtoral village of Mount Ida. She is alſo called Marpeſſia; and we learn from Pauſanias, lib. x. that in his time the veſtiges of the ancient city of Marpeſſus were ſtill to be ſeen on Mount Ida.

Albuna was worſhipped as a goddeſs at Tibur, upon the banks of the Anio, in whoſe ſtream her image was found, holding in its hand a book, which being uninjured by the water, was conveyed, according to Lactantius, to the Capitol. But our poet ſeems to inſinuate, that ſhe ſwam acroſs the Tyber with her prophecies in her boſom; and that though its waters touched theſe compoſitions, yet had they not the power to wet them.

But though all theſe Sibyls were eminent, the Cumæan Sibyl was chiefly regarded by the Romans; who, according to Livy, brought nine books to Tarquinius Priſcus, offering them to him for three hundred pieces of gold *(Philippi)*. The king deriding her price, ſhe inſtantly burnt three of them in his ſight, and then demanded the ſame ſum for the ſix. Tarquin hereupon calling her an extravagant mad-woman, ſhe committed three more to the flames, and aſked him ſtill the ſame money for the remainder. The king, aſtoniſhed at this, paid her what ſhe demanded; and receiving the volumes, which were ſuppoſed to contain the future deſtinies of Rome, depoſited them in the Capitol, as above related.

Pliny, in talking of the oldeſt ſtatues which were to be found in his time at Rome, has the following paſſage: "Equidem et Sibyllæ juxta roſtra eſſe, non miror, tres ſint, licet; una quam Sex. Pacuvius Taurus ædilis plebis reſtituit: duæ quas M. Meſſala (Corvinus's father) primas putarem has, et Actii Navii, poſitas ætate Tarquinii Priſci, niſi regum antecedentium eſſent in Capitolio." Lib. xxxiv. cap. 5.

Ver. 79. *When ſtony tempeſts fell, &c.*] See inſtances of all theſe prodigies in the ſixth chapter of the firſt book of Valerius Maximus.

A late Italian author ingeniouſly accounts for ſhowers of ſtones, and all the other kinds of ſhowers, which hiſtorians and naturaliſts mention. See alſo Lucan's ninth book.

Ibid. *When comets glar'd.*] Few prejudices are more ancient than that which makes comets portend the downfal of empires. A ſounder philoſophy has at laſt taught us, that though they are leſs known, they are not more ominous than the planets; and yet Mr. Whiſton was of opinion that this earth will be finally deſtroyed by a comet.

Ver. 83. *To charge the clarion, &c.*] Inſtances of this prodigy are frequent in both the Roman poets and hiſtorians, to the diſgrace of the latter.

Ver. 86. Although an eclipſe of the ſun was ever regarded by the Romans as a prodigy; that which Tibullus ſpeaks of, and which happened when Cæſar was killed, was, ſays Broekhuſius, moſt prodigious, ſince it laſted almoſt a whole year.

What? and is nature then to be ſhook with convulſions, to be forced out of her natural courſe, when a tyrant is cut off? This is the language of baſe adulation, but not of ſound philoſophy. When, indeed, a friend to man periſhes, all the elements may with propriety be introduced as lamenting his fall; and yet, as the author of an excellent ode to mankind ſings, it too generally happens, that,

Thoſe have no charms to pleaſe the ſenſe,
No graceful port, no eloquence,
To win the muſes' throng;
Unknown, unſung, unmark'd they lie,
But Cæſar's fate o'ercaſts the ſky,
And nature mourns his wrong.

Ver. 92. Monſtrous births, by way of expiation, were either thrown into the ſea, or burnt with "pyrum ſylvaticum," and ſuch like "plantæ infelices," as the Romans called them, from the ſuppoſed circumſtance of their being under the protection of the "Dii Inferi et Avertentes." See inſtances of this in Livy and Julius Obſequens.

Ver. 102. Ovid, in that aſtoniſhing work of his, intituled Faſti, gives us the following accurate deſcription of the Palilia.

Certe ego de vitulo, cinerem, ſtipulaſque fatales
Sæpe tuli plena februa caſta manu.
Certe ego tranſilii poſitas ter in ordine flammas;
Virgaque lauratas aurea miſit aquas.

And again,

Tum licet, appoſita veluti cratere camella,
Lac niveum potes, purpureamque ſapam:
Moxque per ardentes ſtipulæ crepitantis acervos,
Trajicias celeri ſtrenua membra pede. *Lib.* iv.

Ver. 104. The original of this paſſage cannot be expreſſed in poetical Engliſh. It deſcribes a method of kiſſing, wherein the perſon to be kiſſed, was, by the ſaluter, held and pulled forward by the ears till his lips met the others. This, according to Broekhuſius, the Italians call a Florentine kiſs. *Vide Kemp. Diſſert. de Oſcul.*

Ver. 106. Such domeſtic deſcriptions are often more pleaſing than the boldeſt flights of poetry! Tibullus abounds in them: They are certain ſigns of the goodneſs of a writer's heart.

Ver. 121. The form of deprecation was this: To confeſs that the perſon injured did not deſerve the curſe; that they wiſhed it had not been pronounced; and owned themſelves actuated by a bad diſpoſition: "Mente mala, mala fatebantur." Nennius, as Broekhuſius remarks, was the firſt who explained the former part of the Latin deprecation, as Douza did the laſt. This was a better method ſurely of making ſatisfaction than what we moderns have ſubſtituted in its place, the piſtol and ſword.

Ver. 124. The reader by this time muſt have perceived a frequent recurrence of ideas in Tibullus; yet are both Ovid and Propertius equally reprehenſible on that account.

Ver. 139. Bacchus, or (as Sir Iſaac Newton has proved) the Egyptian Seſoſtris, after his return from his Indian conqueſt, gave the firſt inſtance of this ungenerous ceremony, which the Romans afterwards adopted. It is impoſſible to read the deſcription of thoſe arrogant exhibitions of proſperity, without being ſtruck with indignation: and we can never think highly of the humanity of that people who could behold with pleaſure ſuch ſtriking inſtances of calamity, and of the caprice of fortune, as thoſe ſolemnities afforded; when the greateſt monarchs of the earth were ſometimes dragged from their thrones, to attend in chains the inſolent parade of an inſulting conqueror. But it was natural for the Romans to enjoy that with inſolence which they gained by oppreſſion.

Ver. 140. Theſe were at firſt of wood; but in Cæſar's laſt triumph they were of ſilver.

Ver. 144. "Laureati milites (ſays Feſtus Pompeius) ſequebantur currum triumphantis, ut quaſi purgati, a cæde humana intrarent urbem."

Ver. 151. The poet, as Vulpius obſerves, wiſhes eternal chaſtity to Diana, becauſe Orion, one of the giants, had endeavoured, but in vain, to raviſh her.

Teſtis mearum centimanus Gyas
Sententiarum notus, et integræ
Tentator Orion Dianæ
Virginea domitus ſagitta.
Lib. iii. *Od.* 4.

This truth ſhall hundred-handed Gyas tell,
And warm Orion, who with impious love
Tempting the goddeſs of the ſylvan ſcene,
Was, by her virgin darts, gigantic victim, ſlain.
Francis.

ELEGY VI.

Macer campaigns; who now will thee obey,
O love! if Macer dare forego thy ſway?
Put on the creſt, and graſp the burniſh'd ſhield,
Purſue the baſe deſerter to the field:
Or if to winds he gives the looſen'd ſail,
Mount thou the deck, and riſk the ſtormy gale:
To dare deſert thy ſweetly-pleaſing pains,
For ſtormy ſeas, or ſanguinary plains!
'Tis, Cupid! thine, the wanderer to reclaim,
Regain thy honour, and avenge thy name!
If ſuch thou ſpar'ſt, a ſoldier I will be;
The meaneſt ſoldier, and abandon thee.
Adieu, ye trifling loves! farewel, ye fair!
The trumpet charms me, I to camps repair;
The martial look, the martial garb aſſume,
And ſee the laurel on my forehead bloom!
My vaunts how vain! debarr'd the cruel maid,
The warrior ſoftens, and my laurels fade.
Piqu'd to the ſoul, how frequent have I ſwore,
Her gate ſo ſervile to approach no more?
Unconſcious what I did, I ſtill return'd,
Was ſtill deny'd acceſs, and yet I burn'd!
Ye youths, whom love commands with angry ſway,
Attend his wars, like me, and pleas'd obey.
This iron age approves his ſway no more:
All fly to camps for gold, and gold adore:
Yet gold clothes kindred ſtates in hoſtile arms!
Hence blood and death, confuſion and alarms!
Mankind for luſt of gold, at once defy
The naval combat, and the ſtormy ſky!
The ſoldier hopes, by martial ſpoils, to gain!
Flocks without number, and a rich domain;

His hopes obtain'd by every horrid crime,
He ſeeks for marble in each foreign clime:
A thouſand yoke ſuſtain the pillar'd freight,
And Rome, ſurpris'd, beholds th'enormous weight.
Let ſuch with moles the furious deep encloſe,
Where fiſh may ſwim unhurt, though winter blows:
Let flocks and villas call the ſpoiler lord!
And be the ſpoiler by the fair ador'd!
Let one we know, a whipp'd barbarian ſlave,
Live like a king, with kingly pride behave!
Be ours the joys of economic eaſe,
From bloody fields remote, and ſtormy ſeas!

In gold, alas! the venal fair delight?
Since beauty ſighs for ſpoil, for ſpoil I'll fight!
In all my plunder Nemeſis ſhall ſhine,
Yours be the profit, be the peril mine:
To deck your heav'nly charms the ſilk-worm dies,
Embroidery labours, and the ſhuttle flies!
For you he rifled ocean's pearly ſtore!
To you Pactolus ſend his golden ore!
Ye Indians, blacken'd by the nearer ſun,
Before her ſteps in ſplendid liveries run;
For you ſhall wealthy Tyre and Afric vie,
To yield the purple, and the ſcarlet dye.

NOTES ON ELEGY VI.

This elegy is more than commonly difficult; and, what too frequently happens, the commentators, eſpecially Scaliger, have increaſed theſe difficulties, by endeavouring to explain them.

Æmilius Macer, a nobleman, even famous in the Auguſtan age for his gallantry and wit, had been intruſted by the ſucceſſor of Julius, with the execution of ſome military enterpriſe. At his departure from Rome, it is probable, he boaſted to our poet, that however deeply he ſeemed engaged in love, yet was his heart his own, and now only panted for military fame. As Tibullus could not but regard this declaration as a ſecret ſatire on his own conduct, he earneſtly addreſſes Cupid to follow Macer to the field; from which if he did not bring him back, he threatens to deſert his ſervice himſelf, and in the various life of a ſoldier, to diſſipate his tendreſſe for the fair. In fancy our poet becomes a military man, and bids adieu to love and its trifling purſuits; but his ardor ſoon cools; he owns, though Nemeſis was ſtill inſenſible to his ſufferings, that his paſſion for her was as violent as ever. From this, he takes occaſion to adviſe the young noblemen of Rome, who, to get rid of love, might flatter themſelves, that a military life would effectually anſwer, to lay aſide all their martial intentions, and, like him, implicitly ſerve under the banner of Cupid. His advice, however, does not ſeem to have been reliſhed by thoſe for whom it was deſigned: gold, which at that time was chiefly to be obtained by war, having, it would ſeem, corrupted them. This was one of the many diſaſters produced by the civil wars, in which ſuch immenſe fortunes had been amaſſed, that manumitted ſlaves then wallowed in miniſterial fortunes. With this known truth he concludes his panegyric on wealth; and therefore the two lines,

Nota loquor, &c.

which in all editions are placed at the end of this elegy, ſhould immediately follow

Negligat hybernas.

For by this change theſe two lines, which univerſally puzzled the commentators, have a connection, and may be made ſenſe of. But though the love of riches had ſo generally infected even the young, Tibullus only begs that he might enjoy the little he had, in all the ſimplicity of ancient times. Unfortunately, however, for our poet, Nemeſis liked opulence; and, as he was wholly attached to her, he ſuddenly determines to become rich by war; neither could Cupid be offended with this, as with his ſpoils he only meant to adorn his miſtreſs.

Ver. 1. This elegy, and the third and ſeventh of this book, have been miſerably mangled and blended together, in the Variorum edition: for inſtance, all the verſes of this, from "At tu quiſque is es," to the end, are in that edition foiſted into the third elegy, "rura tenent," &c. although theſe lines have no manner of connection with that elegy. But, by way of compenſation, the Variorum editors have not only laid the foreſaid third elegy under a contribution of four lines to this, beginning at "Acer amor fractas," &c. but have alſo tagged to it the next elegy, beginning "Finirent multi leto mala."

Joannes Baptiſta Pius, Achilles Statius and Glandorpius are all of opinion, that Tibullus means here Pompeius Macer, the ſon of Theophanes of Mitylene, to whom Auguſtus intruſted, as Suetonius informs us, the management of his library. The arguments they allege in defence of this, are chiefly taken from Ovid, who, in the eighteenth elegy of his ſecond book, ſpeaks thus of Macer:

Carmen ad iratum dum tu perducis Achillem,
Primæque juratis induis arma viris
Nos, Macer, ignavæ Veneris ceſſamus in umbra.

And again,

Tu canis, æterno quidquid reſtabat Homero
Ne careant ſumma Troica bella manu.
Pont. Ep. lib. ii. *ep.* 10. *ver.* 13.

From whence they conclude, that Pompeius Macer was a poet, and wrote the Paralipomena of Homer. This opinion is however unſupported by claſſical authority. But if there is no cauſe to believe that Theophanes was a poet, we know, that Æmilius Macer was a conſiderable one; and as he made a diſtinguiſhed figure in the court of Auguſtus, it is not unreaſonable to conclude, he was the nobleman whom Tibullus mentions in this elegy.

Æmilius Macer then was born at Verona, a city famous for the births of Lucretius, Catullus, and the architect Vitruvius. Ovid informs us, that Macer was his ſenior, and that he travelled with him through Aſia and Sicily. We alſo know from the ſame poet, as well as from Pliny, that Macer, beſides the pieces already mentioned, wrote likewiſe a poem on birds, ſerpents, and on the virtues of plants. Of this performance, which he uſed often to recite to Ovid, two or three lines only remain. In it he chiefly copied Nicander, a poet of Colophon. Nor were theſe his only poetical performances: he compoſed a piece, intituled Theriaca, of which Iſidorus and others have ſaved near half a dozen verſes. Nonius Marcellus adds, that he wrote a Theogony, of which he mentions one verſe: but ſome learned men think, that the line quoted muſt have belonged rather to his Ornithology. Beſides theſe uſeful works, he publiſhed ſomething on bees (probably in verſe), as Pliny informs us, lib. xi. Quintilian allows both Macer and Lucretius to have been elegant, but ſtigmatizes the one as obſcure, and the other as creeping. "Utinam" (ſays Brockhuſius) "hodie de Macro et nobis arbitrari liceret! Utinam ſaltem Iliaca exſtarent, quas tanti facit Naſo, ut ab his libris, honorificum dederit auctori cognomentum;"

Cum foret et Marſus, magnique Babirius oris,
Iliacuſque Macer ſideriuſque Pedo.
Lib. iv. *Pont. Ep.* 16.

Macer died in Aſia, about the time that Auguſtus adopted Caius and Lucius, the ſons of Agrippa; which, according to the Euſebian Chronicle, happened A. U. C. 737. in the conſulate of C. Furnius, and Juſ. Silanus.

The poem De Viribus Herbarum, which at preſent paſſes under the name of Æm. Macer, is the work of one Odo, who was as wretched a poet, as he was a bad phyſician. Vide Lilio Gyrald, J. C. Scaliger, and Gaudent. Merul. Ital. Illuſtr. We therefore wonder how that elegant ſcholar and excellent anatomiſt, Thomas Bartholin, could be ſo far impoſed upon, as to take this miſerable ſtuff for a poem, which was the delight of the Auguſtan age. See his Diſſert. de Medicis Poeticis.

Ver. 3. This paſſage in the original has mightily puzzled the interpreters. Scaliger and Broekhuſius explain it, as if the poet lamented the fate of little Cupid, who would now be obliged to attend Macer to the field, and to be his armour-bearer. Vulpius, on the other hand, condemns Scaliger's explanation, and ſays, that the poet ſeems to intimate, that Cupid himſelf ſhould put on arms. This ſenſe of the paſſage is what the tranſlator has adopted, as the moſt poetical.

We learn from Ovid, that Macer was not averſe to love, but even mixed ſtrokes of gallantry in his heroic compoſitions.

Nec tibi (qua tutum vati, Macer arma canenti)
Aureus in medio Marte, tacetur amor.
Et Paris eſt illic, et adultera nobile crimen;
Et comes extincto Laodamia viro.
Si bene te novi, non bella libentius iſtis
Dicis, et a veſtris in mea caſtra venis.
Lib. ii. *El.* 18. *ver.* 35.

Ver. 14. Read, inſtead of "facta," in the generality of editions,

& mihi grata tuba eſt.

Hammond has improved upon this elegy in his ſecond.

Adieu, ye walls, that guard my cruel fair!
No more I'll ſit in roſy fetters bound;
My limbs have learnt the weight of arms to bear,
My rouzing ſpirits feel the trumpet's ſound.

Few are the maids that now on merit ſmile;
On ſport and war is bent this iron age;
Yet pain and death attend on war and ſpoil,
Unfated vengeance, and remorſeleſs rage.

To purchaſe ſpoil, ev'n love itſelf is ſold:
Her lover's heart is leaſt Neæra's care.
And I through war, muſt ſeek deteſted gold;
Not for myſelf, but for my venal fair!

That while ſhe bends beneath the weight of dreſs,
The ſtiffen'd robe may ſpoil her eaſy mien;
And art miſtaken, make her beauty leſs,
While ſtill it hides ſome graces better ſeen.

But if ſuch toys can win her lovely ſmile,
Her's be the wealth of Tagus golden ſand,
Her's the bright gems that glow in India's ſoil,
Her's the black ſons of Afric's ſultry land.

To pleaſe her eye, let every loom contend;
For her be rifled ocean's pearly bed.
But where, alas! would idle fancy tend,
And ſooth with dreams a youthful poet's head!

Let others buy the cold unloving maid,
In forc'd embraces act the tyrant's part;
While I their ſelfiſh luxury upbraid,
And ſcorn the perſon where I doubt the heart.

Thus warm'd by pride, I think I love no more,
And hide in threats the weakneſs of my mind
In vain—Though reaſon fly the hated door,
Yet love, the coward love, ſtill lags behind.

Ver. 21. This, in the original, is,

pes tamen ipſe redit.

And, as Vulpius obſerves, it appears to have been a colloquial expreſſion, equally idiomatical both to Greeks and Romans.

Horace has a thought of the ſame nature, in his excellent epode to Pettius; where, complain-

ing of the cruelty of Inachia, whom he had reſolved to ſee no more, he thus expreſſes his own impotence of will:

Ubi hæc ſeverus te palam laudaveram
Juſſus abire domum
Ferebar incerto pede
Ad non amicos, heu mihi poſtes, et heu
Limina dura quibus
Lumbos, et infregi latos.

Ep. xi.

When thus, with vaunting air, I ſolemn ſaid;
Inſpir'd by thy advice, I homeward ſped
But, ah! my feet in wonted wandering ſtray,
And to no friendly doors my ſteps betray,
There I forget my vows, forget my pride,
And at her threſhold lay my tortur'd ſide.

Francis.

But are we, therefore, to conclude, that Horace was indebted to Tibullus for this thought? By no means. For, as one of the beſt critics that ever inſtructed this iſland, obſerves, "Many ſubjects "fall under the conſideration of an author, which "being limited by nature, can admit only of ſlight "and accidental diverſities. All definitions of the "ſame thing, muſt be nearly the ſame; and deſcriptions, which are definitions of a more looſe "and fanciful kind, muſt always have, in ſome "degree, that reſemblance to each other, which "they all have to their object. Different poets, "deſcribing the ſpring and the ſea, would mention the zephyrs and the flowers, the billows "and the rocks: reflecting on human life, they "would, without any communication of opinions, "lament the deceitfulneſs of hope, the fugacity "of pleaſure, the fragility of beauty, and the frequency of calamity; and, for palliatives of theſe "incurable miſeries, they would concur in recommending kindneſs, temperance, caution, and "fortitude." Rambler, No. 143.

Ver. 37. Would the reader know to what immenſe extravagance the Romans went in this article of ſea-fiſh-ponds, he may conſult Varro, De Re Ruſt. cap. 17 where he treats of theſe "piſcinæ marinæ."

Ver. 41. It is reported by hiſtorians, that Demetrius, the freed-man of Pompey, by attending that general in his conqueſts, amaſſed greater wealth than his maſter himſelf. It is probable, however, our poet, in this paſſage, glances at ſome of the Cæſarian party.

Ver. 43. *Be ours the joys of economic eaſe.*] From the original,

At mihi læta trahant Samiæ convivia teſtæ
Fictaque Cumana lubrica terra rota.

The tranſlator approves of Scaliger's correction, in inſerting "mihi." Although by rendering it *ours*, he takes in alſo "tibi," which is the other pronoun that contends for a place here. The poet particularly celebrates Samos and Cumæ, as marts of the beſt and cheapeſt earthen ware. Vide Pliny, lib xxxiii. cap. 12.

Ver. 45. Pliny informs us, that gold was not coined at Rome till the year 647, about ſixty-two years after ſilver had been firſt coined there. Until this period, the Romans, it ſeems, ſubſiſted on the money of the nations they conquered.

Ver. 50. *Embroidery labours*, &c.] This in the original is,

Illa gerat veſtes, &c.

The iſland Cos was remarkable of old for gold tiſſues and other luxuries of apparel. The great Hippocrates was born there.

Ver. 55. Authors make a difference between the Tyrian and Lybian dye, though they are ſometimes uſed promiſcuouſly by good claſſic writers. The Tyrian was the richeſt dreſs a lady could wear. The "pretexta" of the Roman magiſtrates was of purple, a colour which they ſometimes permitted ſuch foreign princes as depended on them to aſſume, but never till they had made exorbitant preſents to the conſuls.

ELEGY VII.

THOUSANDS in death would ſeek an end of woe,
But hope, deceitful hope! prevents the blow!
Hope plants the foreſt, and ſhe ſows the plain;
And feeds, with future granaries, the ſwain;
Hope ſnares the winged vagrants of the ſky,
Hope cheats in reedy brooks the ſcaly fry;
By hope, the fetter'd ſlave, the drudge of fate,
Sings, ſhakes his irons, and forgets his ſtate;
Hope promis'd you, you haughty ſtill deny;
Yield to the goddeſs, O my fair! comply.
Hope whiſper'd me, "Give ſorrow to the wind!
"The haughty fair-one ſhall at laſt be kind."
Yet, yet you treat me with the ſame diſdain:
O let not hope's ſoft whiſpers prove in vain!
Untimely fate your ſiſter ſnatch'd away;
Spare me, O ſpare me, by her ſhade I pray!
So ſhall my garlands deck her virgin tomb;
So ſhall I weep, no hypocrite, her doom!
So may her grave with riſing flowers be dreſt,
And the green turf lie lightly on her breaſt.
Ah me! will nought avail! the world I'll fly,
And, proſtrate at her tomb, a ſuppliant ſigh!
To her attentive ghoſt, of you complain;
Tell my long ſorrowing, tell of your diſdain:

Oft, when alive, in my behalf ſhe ſpoke:
Your endleſs coyneſs muſt her ſhade provoke:
With ugly dreams ſhe'll haunt your hour of reſt,
And weep before you, an unwelcome gueſt!
Ghaſtly and pale, as when beſmear'd with blood,
Oh fatal fall! ſhe paſs'd the Stygian flood.
No more, my ſtrains! your eyes with tears o'erflow,
This moving object renovates your woe:
You, you are guiltleſs! I your maid accuſe;
You generous are! ſhe, ſhe has ſelfiſh views.
Nay, were you guilty, I'll no more complain;
One tear from you o'erpays a life of pain!
She, Phryne, promis'd to promote my vows:
She took, but never gave my billet-doux.
You're gone abroad, ſhe confidently ſwears,
Oft when your ſweet-ton'd voice ſalutes mine ears:
Or, when you promiſe to reward my pains,
That you're afraid, or indiſpos'd, ſhe feigns:
Then madding jealouſy inflames my breaſt;
Then fancy repreſents a rival bleſt;
I wiſh thee, Phryne! then a thouſand woes;—
And if the gods with half my wiſhes cloſe,
Phryne! a wretch of wretches thou ſhalt be,
And vainly beg of death to ſet thee free!

NOTES ON ELEGY VII.

Suicide was not only not criminal, but eſteemed heroical by the Romans. We may ſuppoſe but few deſtroyed themſelves from philoſophical motives, although the Stoics permitted it. Under the emperors, indeed, thoſe eſpecially that diſgraced nature, ſelf-murder became too frequent, as then only the beſt men were doomed the victims of their barbarity; for by this means they preſerved their eſtates to their poſterity. Under ſuch circumſtances, ſuicide was in truth leſs blameable; but ſtill no circumſtances can be offered, which wholly abate its iniquity. Be that, however, as it will, even thoſe who condemn ſelf-murder as unjuſtifiable, will own that death ſounds prettily in the mouth of a lover; and this gives ſome countenance to the reading,

Jam mala finiſſem leto,

which makes the beginning of this elegy, in ſome editions; but as our poet everywhere elſe ſhows the utmoſt abhorrence at death, as the beſt MSS. read

Finirent multi leto mala, &c.

and as it appears by the line

Spes facilem Nemeſin, &c.

that he only was enumerating ſome of the many effects of that catholic cordial hope, the tranſlator has adopted the more common reading, and, with Broekhuſius, has made this a diſtinct elegy; which, in not a few editions, is prepoſterouſly tacked to the foregoing poem.

The whole exiſtence of a lover is made up of hope and fears: Though always diſappointed by Nemeſis, our poet ſtill hoped, that his amorous inclinations would at laſt be indulged: for this purpoſe, he entreats her, as was natural, by the things ſhe held moſt dear.—The text informs us, that her ſiſter had unfortunately fallen from a window, and broken her neck: this perſon had always warmly eſpouſed the intereſt of Tibullus; and as it was a point of pagan belief, that their ghoſts continued their attention to their friends on earth, eſpecially if theſe paid proper honours to their tombs, our poet informs his cruel fair one, that he means to repair to her ſiſter's monument, and by oblations of flowers, &c. to implore her aſſiſtance. But, as it was natural for him to imagine, that the mentioning ſo favourite an object would renew all Nemeſis's grief for her unfortunate end, he breaks off, and artfully throwing the blame of what he had ſuffered on her ſervant, he finiſhes the elegy with curſing her.

Ver. 1. Although the Romans looked upon ſuicide as heroical; yet Virgil thus deſcribes the evil condition and remorſe of thoſe who had laid violent hands upon themſelves:

Proxima deinde tenent mæſti loca, qui ſibi letum
Inſontes peperere manu, lucemque peroſi
Projecere animas: quam vellent in æthere alto
Nunc & pauperiem, & duros tolerare labores!
Fas obſtat, triſtique palus inamabilis unda
Adligat, et novies Styx interfuſa coercet.

In Plato's almoſt divine dialogue, intituled, Phædo, Socrates has fully evinced the unlawfulneſs of ſelf-murder. This dialogue Cicero ſeems to have copied in his admirable piece, intituled, Somnium Scipionis. "Quæſo, inquam, pater ſanctiſſime atque optime, quoniam hæc eſt vita, (ut Africanum audio dicere) quid moror in terra? quin hinc ad vos venire propero? Non eſt ita, inquit ille; niſi Deus is, cujus hoc templum eſt omne quod conſpicis, iſtis te corporis cuſtodiis liberaverit, huc tibi aditus patere non poteſt. Homines enim ſunt hac lege generati, qui tuerentur illum globum, quem in hoc templo medium vides, quæ terra dicitur; hiſque animus datus eſt ex illis ſempiternis ignibus, quæ ſidera, et ſtellas vocatis: quæ globoſæ, et rotundæ, circos ſuos orbeſque conficiunt celeritate mirabili. Quare et tibi, Publi, et piis omnibus retinendus eſt animus in cuſtodia corporis: nec injuſſu ejus, a quo ille eſt vobis datus, ex hominum vita migrandum eſt, ne munus humanum adſignatum a Deo defugiſſe videamini."

Ver. 2. Hope is a poetical ſubject, to which

many, both ancient and modern, have done great juſtice. Theognis ſuppoſes, that when the other gods left the earth, hope only ſtaid behind. This thought Ovid has adopted:

Hæc dea, quum fugerent ſceleratas numina terras,
In diis inviſa ſola remanſit humo.

As hope, as well as fear, is one of the barriers implanted in us by nature, to prevent our ruſhing out of life, ought it not to have been taken into the eſtimate of life in Hamlet's Soliloquy?

To be, or not to be;

which, however ſenſible, has, as a late critic well obſerves, nothing to do in the place where it is introduced.

This enumeration of the conſequences of hope, or what it may be productive of, though not frequent in our poet, is yet common in Ovid, and has indeed a fine effect even in perceptive poems; but in ſuch as are impaſſioned or heroic, ſeems eſſentially improper. Hence Marino and Davenant are reprehenſible; neither is Shakſpeare himſelf entirely free from blame on this ſcore.

St. Paul, with no leſs beauty than emphaſis of expreſſion, calls hope our early immortality. The excellent author of the Night Thoughts, thus expreſſes his ſentiments with regard to wiſhing:

Wiſhing of all employments, is the worſt,
Philoſophy's reverſe, and health's decay!
Were I as plump as ſtall'd theology,
Wiſhing would waſte me to this ſhade again.
Were I as wealthy as a South-Sea dream,
Wiſhing is an expedient to be poor.
Wiſhing, that conſtant hectic of a fool;
Caught at a court; purg'd off by purer air,
And ſimpler diet; gifts of rural life!

Ver. 9. The goddeſs, mentioned in the original, is, by ſome commentators, ſuppoſed to be Nemeſis: but as that would be more in the affected mode of Ovid, than in the natural way of Tibullus; and as the context, when carefully conſidered, ſhows that the poet meant hope, the tranſlator has kept to that interpretation in the verſion, notwithſtanding Otway, in his tranſlation of this elegy, retains the former.

Ver. 22. Vulpius has collected almoſt a century of quotations, to prove, that the ancients, when deeply affected with ſorrow generally ſat. "Graviter dolentes, veteri conſuetudine, fere ſemper ſedebant." A wonderful diſcovery this, and well worthy of critical inveſtigation!

Ver. 29. According to ancient ſuperſtition, ghoſts often appeared in the ſame diſmal circumſtances in which they had departed life. Of this we have a ſtriking inſtance in Virgil:

Tempus erat, quo prima quies mortalibus ægris
Incipit, et dono divum gratiſſima ſerpit.
In ſomnis, ecce ante oculos mœſtiſſimus Hector
Viſus adeſſe mihi, largoſque effundere fletus;
Raptatus bigis, ut quondam, atèrque cruento
Pulvere, perque pedes trajectus lora tumentes.
Hei mihi, qualis erat! quantum mutatus ab illo
Hectore, qui redit exuvias indutus Achillei!
Æn. ii. 268.

Inſtances of the ſame ſort may be found in Ovid, Met. lib. ii. ver 650. Faſt. lib. v. ver. 451. and in Statius, Theb. lib. ii. ver. 120. *Brockh.*

Ver. 31. Baptiſta Guarini, in a ſonnet where he blames his tongue for being unable to expreſs his love, thus addreſſes his eyes:

Ma ſe muta ſe' tu, fien gli occhi noſtri
Loquaci, e caldi; e'n lor le ſue profonde
Piaghe, e l' interno duol diſcopra il core.
Non e ſi chiuſo o ſi ſegreto ardore
Ch'un cigho a l'altro no'l riveli o moſtri
La dove amor vera eloquenza aſconde.
Son. xlv.

Many other paſſages might here be added, wherein ſpeaking eyes are mentioned; for this has been the language of lovers in all ages. But, as the excellent Rambler remarks, "There are flowers "of fiction ſo widely ſcattered, and ſo eaſily cropped, that it is ſcarcely juſt to tax the uſe of "them, as an act by which any particular writer "is deſpoiled of his garland; for they may be "ſaid to be planted by the ancients in the open "road of poetry, for the accommodation of their "ſucceſſors, and to be the right of every one "that has art to pluck them without injuring "their colours or their fragrance."

Ver. 35. *Nay, were you guilty*, &c.] This is nature; but the Arcadian lovers of Italy carry ſuch emotions beyond the bounds of probability.

ogni coſa (ſays Aminta)
O tentato per placarla fuor che morte
Mi reſta ſuol che per placarla io mora,
E morro volontier pur ch' io ſia certo
Ch'ella o ſe ne compiacera, o ſe ne doglia
Ne ſo de tai due coſe qual piu brami.

A mighty difficulty, in truth!

Ver. 37. If the reader is deſirous to know the ſtratagems practiſed by the bawds of antiquity, he may peruſe Ovid's El. viii. lib. i. and Propertius, lib. iv. el. 5. In this particular, however, the modern ſiſterhood, if the modeſt editor of a late juſtly famous romance deſcribes them aright, greatly ſurpaſs their ancient predeceſſors.

BOOK III.—ELEGY I.

INTRODUCTION.

Some words in the elegies of this book are of that ſort, which are frequently uſed by the beſt writers catachreſtically, ſometimes denoting more lax, ſometimes more intimate relations. The difficulty of aſcertaining the ſenſe in which Tibullus has uſed them, has thrown a ſeeming obſcurity on a poet, who will ever have the firſt place amongſt the wits of Greece and Rome, for elegant ſimplicity; and has cauſed ſuch illuſtrious annotators, as Scaliger, Lipſius, and Muretus, to ſtumble. The great difficulty is contained in the following lines; and if this can be cleared up, all the reſt will be eaſy and intelligible. El. i. lin. 23.

Hæc tibi vir quondam, nunc frater, caſta Neæra,
Mittit, et accipias munera parva, rogat.
Teque ſuis jurat carum magis eſſe medullis,
Sive ſibi conjunx ſive futura ſoror.
Sed potius conjunx hujus ſpem nominis illi
Auferet extincto pallida ditis aqua.

Where it is firſt inquired, what is meant by "frater," and "ſoror?" It is readily ſeen, that they cannot be underſtood in their primitive ſenſe, becauſe a marriage betwixt brother and ſiſter would never have been tolerated at Rome: the very thoughts of it would have been regarded with abhorrence. Theſe words ſometimes mean couſin-germans, and in this ſenſe Muretus here underſtands them; but this is too cold and unanimated, to be admitted into poetry, or to flow from the pen of Tibullus, when he is expreſſing the tender feelings of a fond doating lover. It is much more probable, that he deſigned to repreſent by them one of thoſe delicate connections, which have their foundation in the will and the affections; that by "frater" he would have us to underſtand a fond admirer; and by "ſoror," a beloved miſtreſs, who had entertained a reciprocal kindneſs and eſteem for her lover. This ſenſe of the words is familiar to moſt languages. Nothing can be more full to this purpoſe than what we meet with in the Canticles of Solomon,—"Thou haſt raviſhed my heart, my ſiſter, my ſpouſe,"—ch. iv. ver. 9. and in ſeveral other places.

Ovid alſo has uſed the words in this ſenſe:

Alloquor Hermione nuper fratremque virumque,
Nunc fratrem, nomen conjugis alter habet.

And the Greeks had ſo accuſtomed themſelves to this uſe of them, that we find their Venus has a title given her by Lycophron, which his Scholiaſt explains by "την αδελφοπρεπειαν, the author of brotherly aſſociations." And aſſigns this pretty whimſical reaſon for it: "For a commerce in love matters makes thoſe who were ſtrangers, brothers: and thoſe who would carry on an amorous commerce ſecretly, ſay of one they favour, he is my brother, he is my relation."

Having ſolved, we hope, this difficulty, we ſhall next conſider what is the import of "vir" and "conjunx." They certainly were deſigned to expreſs ſome nearer connection, ſome cloſer tie, than mere friendſhip, or whatever elſe is comprehended in "frater" and "ſoror." The epithet "caſta" given to Neæra, will not permit us to underſtand them of any looſe amour; that title never could belong to a jilt, who had granted favours to one lover, and, upon ſome caprice, had thrown herſelf into the arms of another: but divorces were common enough at Rome, ſo that even a wife might diſmiſs her huſband upon ſome diſpleaſure taken, at leaſt before actual matrimony without hurting her reputation by it: ſo that I think huſband and wife are the true meaning of "vir" and "conjunx."

This interpretation, however, is not without difficulties; the ſilence of antiquity, and ſeveral other circumſtances, make the marriage of Tibullus appear improbable; it has therefore been ſuppoſed by Lipſius, that "quandam" was intended to expreſs future, and not paſt time. It cannot be denied,

that it is ſometimes thus uſed; but it more commonly ſignifies the time paſt, or formerly; and to underſtand it otherwiſe here, would make the conſtruction harſh and ungrammatical. In further confirmation of this, it appears that the following elegies of this book relate to the ſame perſons and the ſame diſtreſs: they were probably the new-year's gift which Lygdamus, by the advice of the Muſes, propoſes to ſend to Neæra: now theſe furniſh us with paſſages which can be underſtood of nothing elſe but a marriage-contract, and a ſubſequent ſeparation: thus, in El. 2. we find,

Sed veniat caræ matris comitata dolore,
Mæreat hæc genero, mæreat illa viro.

And again,

Lygdamus hic ſitus eſt, dolor huic & cura Neæræ
Conjugis ereptæ cauſa perire fuit.

In the third elegy,

Oh niveam quæ te poterit mihi reddere lucem.

And again,

Aut, ſi fata negant reditum triſteſque ſorores.

In El. 4.

Nec gaudet caſta nupta Neæra domo.

One muſt torture theſe paſſages extremely, to make them conſiſtent with any thing elſe but a previous marriage, or at leaſt a very ſolemn contract. Was Tibullus then married? or did he intend at all to marry Neæra? I am not inclined to think ſo, as none of the ancient writers has given us the leaſt hint of it. But the poet is not tied down to actual life:

Pictoribus atque poetis
Quidlibet audendi ſemper fuit æqua poteſtas.

The ſacrifice of Iphigenia at Aulis, is probably a mere fable: and yet what noble, what affecting, what intereſting ſcenes of diſtreſs have both the tragedian and painter formed upon it? And might not Tibullus, to indulge his plaintive humour, and to diſplay the ſoft feelings of his ſoul, chooſe to repreſent himſelf in a ſituation that forms one of the moſt melting and agonizing diſtreſſes, to be found amongſt thoſe beds of thorns and roſes which love prepares for his capricious votaries? A beloved wife, grown dearer by more intimate acquaintance, charming without the help of artifice, and rooted in the ſoul by a thouſand repeated endearments, torn from the arms of an enraptured huſband, whilſt he ſtill doats upon her, and ready to be ſacrificed to another;—what feeling heart but ſhudders at the thought?—eſpecially when the delicate affecting colours are laid on by the pencil of Tibullus? The names certainly are fictitious; Neæra was as trite a name for a miſtreſs in Rome, as Phyllis or Cloe with our modern ſonnetteers, And what confirms me in the opinion, that the diſtreſs painted in theſe elegies is alſo fictitious, ſo far as Tibullus is concerned in it, is, that Ovid, in his poem on Tibullus's death, takes notice of no other miſtreſs but Delia and Nemeſis; to one of whom he aſſigns the laſt, to the other the firſt intereſt in him, without any intermediate favourite.

Sic Nemeſis longum, ſic Delia nomen habebit.
Altera cura recens, altera primus amor.

Ovid ſeems to have carefully ſearched out every curious particular of Tibullus's life, and therefore could not have overlooked ſo ſtriking a circumſtance as the diſtreſſes celebrated in theſe elegies, if they had really happened to Tibullus. He, and his cotemporaries of the Auguſtan age, were probably well informed of the true reaſon of Tibullus's compoſing the following book. Some ſuch diſtreſs might have happened, and been much talked of in Rome; and Tibullus might ſeize upon it as a favourable opportunity for diſplaying his elegiac genius in its full luſtre. Propertius has made the ſame uſe of the misfortunes of a noble family, in the twelfth elegy of book 4. It is a common artifice with delicate writers, to ſigh and tell a piteous tale, while their hearts are not at all affected. *B.*

Poet.

THY calends, Mars! are come from whence of old,
The year's beginning our forefathers told:
Now various gifts through every houſe impart,
The pleaſing tokens of the friendly heart.

To my Neæra, tuneful virgins! ſay,
What ſhall I give, what honour ſhall I pay?
Dear, e'en if fickle; dearer, if my friend!
To the lov'd fair, what preſent ſhall I ſend?

Muſes.

Gold wins the venal, verſe the lovely maid:
In your ſmooth numbers be her charms diſplay'd.
On poliſh'd ivory let the ſheets be roll'd,
Your name in ſignature, the edges gold.
No pumice ſpare to ſmooth each parchment ſcroll,
In a gay wrapper then ſecure the whole.
Thus to adorn your poems be your care;
And thus adorn'd, tranſmit them to the fair.

Poet.

Fair maids of Pindus! I your counſel praiſe:
As you adviſe me, I'll adorn my lays:
But by your ſtreams, and by your ſhades, I pray,
Yourſelves the volume to the fair convey.
O let it lowly at her feet be laid,
Ere the gilt wrapper, or the edges fade;
Then let her tell me, if her flames decline,
If quite extinguiſh'd, or if ſtill ſhe's mine.
But firſt your graceful ſalutations paid,
In terms ſubmiſſive thus addreſs the maid:
" Chaſte fair! the bard, who doats upon your charms,
" And once could claſp them in his nuptial arms,
" This volume ſends; and humbly hopes, that you,
" With kind indulgence, will the preſent view.
" You, you! he prizes more, he vows, than life;
" Still a lov'd ſiſter, or again his wife.
" But oh! may Hymen bleſs his virtuous fire,
" And once more grant you to his fond deſire!
" Fix'd in this hope, he'll reach the dreary ſhore,
" Where ſenſe ſhall fail, and memory be no more."

NOTES ON ELEGY I.

Romulus, who divided the year into ten months, dedicated the firſt to his father Mars: on the firſt day of this month the veſtal virgins lighted anew the ſacred fire, freſh laurels were hung up in the ſenate, and at the doors of the high-prieſts's houſe, &c. the comitia began, the revenues were farmed, and ſervants not only had their wages paid them (and hence theſe days were called "Mercedoniæ"), but, for one night this month, were attended upon at ſupper by their maſters.

The poet inquires of the muſes, what preſent he ſhould ſend to Neæra, who, as ſhe was ſtill the ſole object of his wiſhes, ſo he yet hoped to be again poſſeſſed of her in marriage.

The muſes anſwer (for with Muretus the tranſlator reads

Gaudeat, ut digna eſt, verſibus illa tuis),

that, as Neæra was a very competent judge of poetry, ſo he ought to preſent her with his performances in that way. Our author, however ſelf-denied, was yet too much of the poet not to reliſh their advice; but as the dignity of thoſe who carry a preſent, enhances the value thereof, he entreats the muſes to take the trouble themſelves of delivering into the hands of Neæra his poems; and to aſſure her, that he ſhall never forego the pleaſing expectation of being one day again united to her in marriage.

Scaliger, in his poetics, calls the beginning of this elegy "Plebeian," on account of its ſpondees, "& tantus ejuſdem vocalis ſonus."

His own correction, however, is not much better:

Romani feſtæ Martis, &c.

It is remarkable that this hypercritic does not find fault with one ſingle line of the two former books.

Ver. 1. Numa Pompilius, in imitation of the Greeks, added January and February to Romulus's calendar, and began the year with January. From the time of Numa to that of Julius Cæſar, the Roman year was lunar, and conſiſted of three hundred and fifty-five days. But as this fell about eleven days ſhort of the true ſolar courſe, table of intercalation or inſertion were invented, to adjuſt time as nearly as poſſible to the motions of the ſun and moon. The pontifex Maximus and college of prieſts had the care of inſerting theſe intercalary days; and they, from negligence, ſuperſtition, but chiefly from an arbitrary abuſe of their power, by which they could make the year either longer or ſhorter, as ſuited their own or friends intereſt, did not punctually inſert them; inſomuch that in Julius's time, the winter months became autumnal; and thoſe of autumn had fallen back into ſummer. This gave riſe, A. U. C. 707. to the Julian correction, or ſolar year, adjuſted to the exact meaſure of the ſun's revolution in the zodiac, and conſiſting of three hundred and ſixty-five days and ſix hours. This method of computing time continued in Europe till 1582, when Pope Gregory, by ſinking ten days between the 4th and 15th of October, reduced the vernal equinox to the 21ſt of October, the day which it had fallen upon, when the feſtivals were regulated by the council of Nice, and made the year conſiſt of three hundred and ſixty-five days, five hours, and forty-nine minutes. This new ſtyle, as it was called, to diſtinguiſh it from the Julian, being the moſt correct calculation of the flow of time, is authorized every where by law, and prevails now in almoſt all the kingdoms of Europe.

Ver. 3. It has been obſerved by the writers on antiquities, that a feaſt called "Matronalia," was celebrated on the calends of March, when ſolemn

ſacrifices were offered up to Juno by the Roman ladies, to whom alſo preſents were then ſent by their friends, in grateful remembrance of the interpoſition of the Sabine women betwixt their fathers and huſbands. But it is not this cuſtom which Tibullus alludes to. The beginning of the year in ancient times on the calends of March would have been an idle circumſtance here, if the preſents Tibullus ſpeaks of, were not what we call new year's gifts, the "ſtrenæ" of ancient Rome, which flew about in every corner, and which emperors themſelves did not diſdain to accept of. Ovid, indeed, and Suetonius, expreſsly aſſign the calends of January for theſe expreſſions of benevolence: but even two ſuch authorities are not ſufficient to convict Tibullus, in the judgment of one converſant with his writings, of either writing idly, or falſifying ancient cuſtoms. It ſhould ſeem, then, that the Romans continued to diſtribute theſe preſents as earneſts of their good wiſhes for their friends, on the calends of March, according to the inſtitution of Romulus, even after Numa had added two months to the year, and placed them at the head of it; that this remained thus, till the calendar took a more ſettled form, under Julius Cæſar, by whoſe directions the beginning of the year being certainly fixed to the calends of January; and the emperors being jealous of their authority, even in trifles, it became the court faſhion to confine this diſtribution of new year's gifts to that time only. No wonder then, that Ovid, who was a court-flatterer, and Suetonius, who wrote when the powers of the emperors had ſwallowed up all law and cuſtom, ſhould mention that obſervance only, which the firſt Cæſar had eſtabliſhed; nor that Tibullus ſhould honour that uſage which prevailed when his darling liberty flouriſhed, and diſdained to take notice of a change which was introduced by a tyrant. We know the obſtinacy of many of our own countrymen in favour of the old ſtyle; but amongſt the Romans it had ſomewhat of virtue in it; it was a generous indignation againſt the authority which had robbed their country of every valuable privilege. Suetonius himſelf ſeems to confirm this opinion: we find Tiberius, who thought his power undermined by the ſlighteſt deviation from the inſtitution of his predeceſſors, at the pains of making an edict to confine the new year's gifts to the calends of January: "edicto prohibuit—ſtrenarum commercium, ne ultra calend. Januarias exerceretur." The hiſtorian indeed aſſigns a different reaſon—that Tiberius did it for his own eaſe, as numbers, who could not get at him the firſt day, were plaguing him the whole month through: but what occaſion for a ſolemn edict, extended to all the people, for the eaſe of the emperor, when the bare notice of his pleaſure, ſupported by a few Prætorian guardſmen, would have ſufficiently ſecured it? Might not then the edict remain upon record, and the reaſon of it be forgot at ſuch diſtance of time; or be thought improbable by the hiſtorian, when the caprices which uſually attend the ſtruggles betwixt prerogative and liberty were buried in oblivion? *B.*

Ver. 9. The whole beauty of this elegy is loſt, by Scaliger and Broekhuſius's reading

gaudeat illa meis.

Whatever the wits allege, wherever "meum" and "tuum" contend for pre-eminence, it is a logomachia of real importance.

Ver. 11. To underſtand the original, it muſt be conſidered, that the ancients had very few "libri quadrati," or ſquare books, like ours; as they generally wrote on "membranæ," or ſuch large ſheets as reſembled our parchment: faſtening theſe, therefore, one to another, they rolled them up, when finiſhed, on a long piece of wood, which was tipped at both ends with horn or ivory, and ſometimes decorated with paint. Theſe are what the poet means by his "cornua." By "geminæ frontes" are to be underſtood the two ends of the wood next the "cornua," where the author's name was inſcribed on a label.

As the ancients, therefore, only wrote on one ſide of their "volumina," the other was generally ſtained with yellow or purple, both to preſerve them, and make the writing more legible. Add to this, that they wrapped up the folded ſcroll in a proper envelope. That wherein our poet here was to ſend his "volumina, was to be of a ſaffron colour, "lutea membrana."

The ſheets were ſmoothed with pumice, and hence "pumex" came metaphorically to ſignify an elaborate performance. The "ſtylus" was an inſtrument with one end of which they wrote, and with the other eraſed inaccuracies; hence "invertere ſtylum" ſignifies, in claſſical writers, to correct. But when not words only, but whole ſentences were to be changed, they uſed a ſponge, and hence, to ſponge out, even in our days, means to obliterate. The ink the ancients wrote with, was the juice of the loligo.

Ver. 25. In the original it was,

Sed primum nympham larga donate ſalute,

till Scaliger firſt changed it into

Sed primum meritam longa, &c.

And afterwards, in his poetics, read

Sed dominam rara primum donate ſalute,

to avoid the word "nympha," which, according to him, always ſignifies the daughter of a god and a mortal, or "vice verſa." Might, however, the tranſlator make any farther alteration upon this unhappy paſſage, he would read

Sed nympham facili primum donate ſalute.

As νυμφη, in Greek, ſignifies "nupta;" and as even ſome paſſages might be produced to ſhow, that "nympha" ſometimes meant a wife, among the Romans.

Ver. 35. The beauty of this paſſage has not, it is preſumed, been ſufficiently attended to. The literal tranſlation is, "The pale water of Pluto ſhall raviſh the hope of this title from him when he is dead," "extincto." Where it ſhould ſeem, that Tibullus, in this aſſumed character of a lover

and diſcarded huſband, in order to convince Neæra of his fond attachment to her, aſſures her, that not only life, but memory itſelf muſt fail him, before he can quit the pleaſing hope of being again united in marriage to her. Plato's metempſychoſis was at that time a faſhionable doctrine at Rome: which Virgil has thus repreſented, book vi. line 748, & ſeq.

Has omnes, ubi mille rotam volvere per annos,
Lethæum ad flumen Deus evocat agmine magno:
Scilicet immemores ſupera ut convexa reviſant,
Rurſus & incipiant in corpora velle reverti.

And as Tibullus, even in the midſt of a love tale, ſhows himſelf to be maſter of all the learning of his times, it is propable, that by "pallida Ditis aqua," is meant the river Lethe; and that the deſign of the whole paſſage is to aſſure Neæra, that he ſhould always, even in death, retain a fond remembrance of her charms: that in the ſeparate ſtate of his ſoul, he ſhould ſtill indulge the hope of a re-union with her, when they ſhould enter again upon the ſcene of life: and that he would not ſuffer this hope to be raviſhed from him by any thing elſe but the ſame waters of oblivion, in which he ſhould loſe the memory of every thing he had formerly been acquainted with. *B.*

ELEGY II.

Hard was the firſt, who ventur'd to divide
The youthful bridegroom, and the tender bride:
More hard the bridegroom, who can bear the day,
When force has torn his tender bride away.
Here too my patience, here my manhood fails;
The brave grow daſtards, when fierce grief aſſails:
Die, die I muſt! the truth I freely own;
My life too burdenſome a load is grown.
Then, when I flit a thin, an empty ſhade,
When on the mournful pile my corſe is laid,
With melting grief, with treſſes looſe and torn,
Wilt thou, Neæra! for thy huſband morn?
A parent's anguiſh will thy mother ſhow,
For the loſt youth, who liv'd, who dy'd for you?
But ſee the flames o'er all my body ſtray!
And now my ſhade ye call, and now ye pray
In black array'd; the flame forgets to ſoar;
And now pure water on your hands ye pour;
My lov'd remains next gather'd in a heap,
With wine ye ſprinkle, and in milk ye ſteep.
The moiſture dry'd, within the urn ye lay
My bones, and to the monument convey.
Panchaian odours thither ye will bring,
And all the produce of an eaſtern ſpring:
But what than eaſtern ſprings I held more dear,
O wet my aſhes with a genuine tear!
Thus, by you both lamented, let me die,
Be thus perform'd my mournful obſequy!
Then ſhall theſe lines, by ſome throng'd way, relate
The dear occaſion of my diſmal fate:
"Here lies poor Lygdamus; a lovely wife,
"Torn from his arms, cut ſhort his thread of life."

NOTES ON ELEGY II.

Lygdamus having by force been deprived of Neæra, he ſays in this elegy, that he can no longer ſupport life; and dwells, with ſuch a ſeeming ſatisfaction, on the rites which he deſires may attend his funeral, that we may ſuppoſe the loſs greatly affected him.

The beginning of this poem diſcovers a kind of animated indifference, befitting his ſituation of mind; for here wit, or too much care about language, would have been extremely improper: becauſe, as Cicero ſomewhere obſerves, "quædam etiam negligentia eſt diligens."

Although the tranſlator is afraid, that this elegy will afford but ſmall entertainment to the mere Engliſh reader, the ſcholar will not be ſurpriſed to be told, that it coſt him more trouble to tranſlate, than moſt of the other elegies.

Ver. 1. *Hard was the firſt*, &c.] This ſentiment is finely expreſſed by Hammond, El. 9.

He who could firſt two gentle hearts unbind,
And robe a lover of his weeping fair,
Hard was the man; but harder, in my mind,
The lover ſtill, who died not of deſpair.

With mean diſguiſe let others nature hide,
And mimic virtue with the paint of art;
I ſcorn the cheat of reaſon's fooliſh pride,
And boaſt the graceful weakneſs of my heart.

* * * *

Sad is my day, and ſad my lingering night,
When, wrapt in ſilent grief, I weep alone;
Delia is loſt! and all my paſt delight
Is now the ſource of unavailing moan.

What follows is an improvement on Tibullus:

Where is the wit, that heightned beauty's charms?
Where is the face, that fed my longing eyes?
Where is the ſhape, that might have bleſt my arms?
Where all thoſe hopes, relentleſs fate denies?

Ver. 3. What ſays the ſagacious Broekhuſius? "Sic mulier mutet mentem non nolens, tralato in alium amore; an & tunc moriendum miſero illi, ſpreto, atque rejecto? Quid ſi ſtupro alieno polluta fidem fallat?"

Ver. 10. This rite, which is altogether foreign to Engliſh manners, Mr. Hammond has, we fear, rather injudiciouſly transferred into his ninth elegy:

Wilt thou in tears thy lover's corſe attend?
With eyes averted light the ſolemn fire!
Till all around the doleful flames aſcend,
Then, ſlowly ſinking, by degrees expire.

If the reader is deſirous to know the manner in which the funeral pile was conſtructed, he may conſult Boxhornius, Quæſt. Rom. p. 99. who, by a figure explains the method the Romans took to diſtinguiſh between the aſhes of the burnt body, and the aſhes of the wood and other combuſtibles, which were thrown upon the fire: The ſolution of this formerly occaſioned mighty controverſies amongſt the critics; which might have been prevented, had they conſidered, that burning, or, as the chemiſts call it, calcination, does not change the figure of the bones.

Ver. 12. There is a thought ſimilar to this, in that beautiful paſtoral ballad called *Colin*.

At the funeral of their parents, the ſons attended "velatis capitibus," but the girls went uncovered and with diſhevelled hair, wearing white garments and white fillets. See Plutarch's Ῥωμαϊκα. Black, however, came afterwards to be the mourning colour, as it was in the time of our poet.

Ver. 15. When a perſon died at Rome, a branch of cypreſs was hung over the door of the houſe, that the pontiff, and others of the ſacred college, might not pollute themſelves by entering it. The old Commentator on Virgil ſays, that the bodies of the better ſort were kept ſeven days, burnt on the eighth, and buried on the ninth. By this, the moſt dreadful of calamities was prevented, that of coming to life on the pile, after it was ſet on fire. And that the bodies might not putrefy by being kept ſo long, they were waſhed with proper drenches, and anointed with antiſeptic unguents; after this they were ſplendidly clothed, and ſome pieces of money put into their mouths.

The body was attended by the male and female relations of the deceaſed; and ſometimes, as Homer mentions, by hired mourners. The attendants were called together by ſound of trumpet; and the body, preceded by the ſtatues of the deceaſed's anceſtors, was carried through the forum, to the place where it was to be burnt. Trumpets were blown on at the funerals of the men, during the proceſſion; as were flutes at thoſe of children, &c. The laws of the twelve tables limited the number of muſical inſtruments to twelve. While the pile was erecting, the praiſes of the deceaſed were ſung in melancholy ſtrains, accompanied with muſic ſad and ſolemn: and being kindled, the neareſt relations flung cypreſs and perfumes upon it both to feed the flames, and abate the ſtench, the dirge ſtill proceeding. When the body was burnt, the chief mourners, after waſhing their hands in water, ſeparated the bones from the aſhes; and, pouring new milk, old wine, and ſometimes blood upon them, wrapt them up in fine lawn, and then inurned them, placing ſometimes in the urn a bottle of tears (hence on old monuments; "cum lacrymis poſui)", but always ſome perfume, according to the quality of the deceaſed. When inurned, they conveyed them to a monument, in the building of which, in the times of the old republic, a certain ſum was not to be exceeded, without forfeiting an equal ſum to the ſtate. Theſe monuments the Greeks ſometimes anointed with rich unguents. The funeral ceremony being finiſhed, the relations were entertained with a ſupper: beſides which, antiquaries make alſo mention of three other kinds of mortuary banquets. The fulleſt, as well as moſt ancient account of funeral rites, is that contained in the 23d Iliad.

The "Venus Infera, or Ἐπιθυμβία, preſided over funerals. The Roman undertakers lived in a ſtreet called Libitina. If the reader is deſirous to inform himſelf of the funeral ceremonies of different nations, he may conſult Lucian's excellent diſcourſe Περὶ πενθους, and the notes in the Baſil edition, an. 1563, as alſo Kirchmannus "De funeribus."

Ver. 21. Vopius and others, authoriſed by all the MSS. read

carbaſeis humorem tollere ventis.

And farther ſupport their reading by the authority of that witty mimographer Publius Syrus, where the "carbaſei venti" ſignify a tranſparent covering of fine linen. Vulpius alſo finds great fault with the common interpretation of this paſſage: Quid enim frigidius excogitari potuit," ſays he, "quam oſſa in linteo ventilari ſolita, ut exſugeretur humor, quo ſparſa erant? Noſtra tempore," adds he, no doubt very archly, "ab oleribus ita guttas excutiunt coqui." And thus in particular he cenſures Scaliger: "Nullum præterea idoneum auctorem producat, quo ſententiam ſuam tueatur, ſed quaſi ex tripode ac lauro conſulentibus reſponſa daret, ſibi credi jubet." But notwithſtanding all this zeal, Broekhuſius underſtands the paſſage in the ſame ſenſe as Vulpius does, only he reads "carbaſeis velis," which he ſupports by two paſſages from Cicero's oration againſt Verres; adding, that though ſuch an expreſſion as "carbaſei venti" might be uſed on the

ſtage, or in ſatire, yet in ſerious compoſitions it would be as cold as Varro's "vitreæ togæ." The verſion includes both meanings.

Ver. 22. The monuments of the more wealthy were erected of marble; and in ſuch a one Tibullus deſires Neæra to place the aſhes of Lygdamus.

There are many inſcriptions in Gruterus, and ſome in Reinetius, which ſhow, that the Romans called a tomb "domus" (as in the original), with the adjective "æterna" annexed to it.

Ver. 29. It is certain that the Romans had often their monuments erected by ſome public road; and Broekhuſius interprets the "celebri fronte" of the original in this ſenſe. Although the tranſlator has adopted that meaning, he is alſo of opinion, that the "celebri fronte" may ſignify the fore part of the monument, which was to be rendered famous by its architecture, and eſpecially by the epitaph which was to be inſcribed on it.

Ver. 31. The ancients, as Broekhuſius obſerves, had the cauſe of their death inſcribed on their tombs, ſometimes that they might acquire glory hereby, and ſometimes to gain compaſſion. Theocritus affords us an inſtance of the latter, pretty ſimilar to that in our poet:

Τυῖον ἐγὼς ἐκτεινεν οἰδοιτορς μη παραδευσης
Αλλα ςτας τοδε λεξον, Απηνεα ειχεν ἑταιρον.

ELEGY III.

Why did I ſupplicate the powers divine?
Why votive incenſe burn at every ſhrine?
Not that a marble palaces might own,
To draw ſpectators, and to make me known;
Or that my teams might plough new purchas'd plains,
And bounteous autumn glad my countleſs ſwains:
I begg'd with you my youthful days to ſhare,
I begg'd in age to claſp the lovely fair;
And when my ſtated race of life was o'er,
I begg'd to paſs alone the Stygian ſhore.
Can treaſur'd gold the tortur'd breaſt compoſe?
Or plains, wide cultur'd, ſooth the lover's woes?
Can marble-pillar'd domes, the pride of art,
Secure from ſorrow the poſſeſſor's heart?
Not circling woods, reſembling ſacred groves,
Not Parian pavements, nor gay-gilt alcoves,
Not all the gems that load an eaſtern ſhore,
Not whate'er elſe the greedy great adore,
Poſſeſs'd, can ſhield the owner's breaſt from woe,
Since fickle fortune governs all below:
Such toys, in little minds, may envy raiſe;
Still little minds improper objects praiſe.
Poor let me be; for poverty can pleaſe
With you; without you, crowns could give no eaſe.
Shine forth, bright morn! and every bliſs impart,
Reſtore Neæra to my doating heart!
For if her glad return the gods deny,
If I ſolicit ſtill in vain the ſky,
Nor power, nor all the wealth this globe contains,
Can ever mitigate my heart-felt pains;
Let others theſe enjoy; be peace my lot,
Be mine Neæra, mine a humble cot!
Saturnia, grant thy ſuppliant's timid prayer!
And aid me, Venus! from thy pearly chair!
Yet, if the ſiſters, who o'er fate preſide,
My vows contemning, ſtill detain my bride,
Ceaſe, breaſt, to heave! ceaſe, anxious blood to flow!
Come, death! tranſport me to the realms below.

NOTES ON ELEGY III.

This elegy contains a fine picture of a true philoſophical lover; ſuch truly know the unſatisfactorineſs of riches or ambition, to remove the diſeaſes of the mind. Of this happy complexion was our poet; for a legitimate ſon of Apollo can ſcarce ſtoop to the mean purſuits of ſordid intereſt, but being enthuſiaſtically enamoured of the muſes, finds more rapture in their eaſy converſe, than in all the preferments which kings can beſtow (ſee Mr. Hurd's excellent notes on Horace's Epiſtle to Auguſtus, p, 109). The genuine poet not only immortalizes himſelf, but hands down the virtue of others, a fair example to lateſt poſterity, and thus he becomes the undoubted guardian of the temple of fame. But can wealth or grandeur effectuate this? Of difficult acquirement, and precarious in poſſeſſion, death inevitably bereaves us of both. No wonder then that our poetical inamorato only requeſted of the gods ſucceſs in his addreſſes to Neæra. In that one wiſh all his happineſs was centred: with her, any ſtation of life could pleaſe; without her, no ſtation, however ſplendid, could afford him the ſmalleſt comfort.

Ver. 3. How little theſe things are capable of making the poſſeſſors of them happy, has been

been known; and yet how keenly buſy are the great vulgar and the ſmall in the purſuit of them? Had mankind eſtimated the value of poſſeſſions, or the extenſiveneſs of them, by the felicity they conſer, and regulated their own conduct accordingly, how many diſaſtrous wars and other calamities would have been prevented?

Ver. 10. Not ſo my Lord Lyttleton, in his fine eclogue, intituled, Poſſeſſion:

When late old age our heads ſhall ſilver o'er,
And our ſlow pulſes dance with joy no more;
When time no longer will thy beauties ſpare,
And only Damon's eye ſhall think thee fair;
Then may the gentle hand of welcome death,
At one ſoft ſtroke, deprive us both of breath:
May we beneath one common ſtone be laid,
And the ſame cypreſs both our aſhes ſhade.
Perhaps ſome friendly muſe, in tender verſe,
Shall deign our faithful paſſion to rehearſe;
And future ages, with juſt envy mov'd,
Be told how Damon and his Delia lov'd.

Ver. 13. Tibullus mentions three kinds of marble; the Phrygian, which was then moſt in eſteem, the Lacedemonian, and the Eubœan. The Romans ran into immenſe expence in the article of marble pillars; although it appears, that the Julian law endeavoured, by taxes, to reſtrain that luxury; for they, not content with the native colours of the marble, not only painted, but ſtained it. In the Memoirs of the Academy of Sciences, there is an account how the latter proceſs may be performed. Pliny tells us, that Mamurra, who commanded Cæſar's artificers *(præfectus fabrorum)* in Gaul, was the firſt who incruſted the whole inſide of his houſe with marble. This Mamurra, who was a Roman knight, and born at Formiæ, is he whom Catullus laſhes in his verſes.

Ver. 15. The ancients diſtinguiſhed, according to Servius, between "nemus, lucus" (the words of the original), and "ſylva;" the firſt ſignifying a regular plantation of trees; the ſecond the ſame, but devoted to religion; and the third a foreſt *(diffuſa et inculta arborum multitudo)*. Roman writers, however, often uſe "nemus" and "ſylva" ſynonymouſly.

The inhabitants of Rome were even more expenſive in this article than they were with regard to marble itſelf. Take the following inſtance: Cheius Dometius having objected to Lucius Craſſus, in a public debate, that the portico of his houſe was ſupported by Kymettian pillars, was aſked by the latter, what price he put upon his own houſe? And being anſwered, "ſexagies ſeſtertia;" Craſſus again demanded, how much leſs it would be worth ſhould he cut down the ten little trees that ſtood before it; "tricies ſeſtertia," replied Domitius. To whom Craſſus, Whether am I then, who bought ten columns "centum millibus nummum," or you who value the ſhade of ten ſhrubs at "tricies ſeſtertium," the moſt extravagant man? And yet, adds the ſenſible miſcellany writer, from whom I copy here, all this was nothing when compared to the luxury of after-times, both in their buildings and groves. And, indeed, if it is conſidered, that a knight's houſe, in the upper part of Rome, would ſell for thirty thouſand pounds Sterling, a grove of ſmall extent to ſuch a houſe, muſt be vaſtly expenſive in a city, which, according to the moſt moderate calculation, contained as many people as any city at preſent in Europe.

Ver. 17. Horace has illuſtrated this with his uſual felicity of expreſſion:

Non enim Gazæ, neque conſularis
Summovet lictor miſeros tumultus
Mentis, et curas laqueata circum
Tecta volantis.

Nor wealth, nor grandeur can controul
The ſickly tumults of the ſoul;
Or bid grim care to ſtand aloof,
Which hovers round the vaulted roof.

The truth is, virtue is the ſole parent of happineſs. See Mr. Johnſon's admirable poem, intituled, the Vanity of Human Wiſhes.

Ver. 34. A critic of no ſmall learning, whom the Dutch editor mentions, ſuppoſes that our poet in this paſſage alludes to the ſtatue of Venus, which Phidias made of gold and ivory, for the Elians. In this work of Phidias, the goddeſs was repreſented as treading with one of her feet upon a tortoiſe; by which ſymbol the unpolite ſtatuary meant to inſinuate, that the ladies ought to keep ſilence, and mind their domeſtic affairs. Upon this, Broekhuſius wiſely obſerves, "non omnes ſapimus horis omnibus;" and, indeed, if it is conſidered, that Venus was, by the mythologiſts, ſuppoſed to ſpring from the ſea, and often to ride in a chair of ſhell, what occaſion was there for making Tibullus, who always thought naturally, allude to ſo remote an object? But thus it is to play the fool with learning! or, as an excellent poet better expreſſes it, we have here

Much hard ſtudy without ſenſe or breeding,
And all the grave impertinence of reading.
Verbal Criticiſm.

If Venus had her ſhell of old, a modern Latin poet, Hadrian Marius, has beſtowed a barge on love, in a beautiful poem he calls Cymba Amoris, on which his brother, Johannes Secundus, thus compliments him:

Ingenioſe Mari, ventura in ſæcula tecum
Me tua cymbat vehat, non grave pondus ero.
Cymba, renidentem qua mutet Cypria conchâm,
Quamque columbino præferat ipſa jugo.
Lib. ii. *El.* 1.

ELEGY IV.

Last night's ill-boding dreams, ye gods avert!
Nor plague, with portents, a poor lover's heart!
But why? From prejudice our terrors rise;
Vain visions have no commerce with the skies:
Th' event of things the gods alone foresee,
And Tuscan priests foretel what they decree.
Dreams flit at midnight round the lover's head,
And timorous man alarm with idle dread:
And hence oblations to divert the woe,
Weak superstitious minds on heaven bestow.
But since whate'er the gods foretel is true,
And man's oft warn'd, mysterious dreams! by you;
Dread Juno! make my nightly visions vain,
Vain make my boding fears, and calm my pain!
The blessed gods, you know, I ne'er revil'd,
And nought iniquous e'er my heart defil'd.
Now night had lav'd her courses in the main,
And left to dewy dawn a doubtful reign;
Bland sleep, that from the couch of sorrow flies,
(The wretch's solace) had not clos'd my eyes;
At last, when morn unbarr'd the gates of light,
A downy slumber shut my labouring sight:
A youth appear'd, with virgin-laurel crown'd,
He mov'd majestic, and I heard the sound.
Such charms, such manly charms, were never seen,
As fir'd his eyes, and harmoniz'd his mien;
His hair, in ringlets of an auburn hue,
Shed Syrian sweets, and o'er his shoulders flew;
As white as thine, fair Luna, was his skin,
So vein'd with azure, and as smoothly thin;
So soft a blush vermilion'd o'er his face,
As when a maid first melts in man's embrace;
Or when the fair with curious art unite
The purple amaranth, and lily white.
A bloom like his, when ting'd by autumn's pride,
Reddens the apple on the sunny side;
A Tyrian tunic to his ancles flow'd,
Which through its sirfled plaits his godlike beauties show'd.
A lyre the present Mulciber bestow'd,
On his left arm with easy grandeur glow'd;
The peerless work of virgin gold was made,
With ivory, gems, and tortoise interlaid;
O'er all the vocal strings his fingers stray,
The vocal strings his fingers glad obey,
And, harmoniz'd, a sprightly prelude play:
But when he join'd the music of his tongue,
These soft, sad elegiac lays he sung:
" All hail, thou care of Heaven! (a virtuous bard,
" The god of wine, the muses, I regard);
" But neither Bacchus, nor the Thespian nine,
" The sacred will of destiny divine:
" The secret book of destiny to see,
" Heaven's awful sire has given alone to me;
" And I, unerring god, to you explain
" (Attend and credit) what the fates ordain.
" She who is still your ever constant care,
" Dearer to you than sons to mothers are,
" Whose beauties bloom in every soften'd line,
" Her sex's envy, and the love of thine:
" Not with more warmth is female fondness mov'd,
" Not with more warmth are tenderest brides be-lov'd.
" For whom you hourly importune the sky,
" For whom you wish to live, nor fear to die,
" Whose form, when night has wrapp'd in black the pole,
" Cheats in soft vision your enamour'd soul;
" Neæra! whose bright charms your verse dis-plays,
" Seeks a new lover, and inconstant strays!
" For thee no more with mutual warmth she burns, [spurns,
" But thy chaste house, and chaste embrace, she
" O cruel, perjur'd, false, intriguing sex!
" O born with woes poor wretched man to vex!
" Whoe'er has learn'd her lover to betray,
" Her beauty perish, and her name decay!
" Yet, as the sex will change, avoid despair;
" A patient homage may subdue the fair.
" Fierce love taught man to suffer, laugh at pain;
" Fierce love taught man, with joy, to drag the chain;
" Fierce love, nor vainly fabulous the tale,
" Forc'd me, yes forc'd me, to the lonely dale:
" There I Admetus' snowy heifers drove,
" Nor tun'd my lyre, nor sung, absorb'd in love.
" The favourite son of Heaven's almighty fire,
" Preferr'd a straw-pipe to his golden lyre.
" Though false the fair, though love is wild, obey;
" Or, youth, you know not love's tyrannic sway.
" In plaintive strains address the haughty fair;
" The haughty soften at the voice of prayer.
" If ever true my Delphian answers prove,
" Bear this my message to the maid you love.
" Pride of your sex, and passion of the age!
" No more let other men your love engage;
" A bard on you the Delian god bestows,
" This match alone can warrant your repose."
He sung. When Morpheus from my pillow flew,
And plung'd me in substantial griefs anew.
Ah! who could think that thou hadst broke thy vows,
That thou, Neæra! sought'st another spouse?
Such horrid crimes, as all mankind detest,
Could they, how could they, harbour in thy breast?

The ruthleſs deep, I know, was not thy ſire;
Nor fierce chimæra, belching floods of fire;
Nor didſt thou from the triple monſter ſpring,
Round whom a coil of kindred ſerpents cling;
Thou art not of the Lybian lions' ſeed,
Of barking Scylla's, nor Charybdis' breed;
Nor Afric's ſands, nor Scythia gave thee birth;
But a compaſſionate, benignant earth.
No! thou, my fair, deriv'ſt thy noble race
From parents deck'd with every human grace.
Ye gods! avert the woes that haunt my mind,
And give the cruel phantoms to the wind.

NOTES ON ELEGY IV.

This is one of the fineſt poems in Tibullus. Our dreams are commonly the imperfect images of our waking thoughts, eſpecially when the mind is under the influence of ſome violent paſſion. Thus, in particular, it fares with the genuine inamorato, and ſuch a one at this time was the lover of Neæra. Swallowed up in his affection for that fair one, and diſtracted at her affected delays to make him happy, he one night ſolicited ſleep; but the drowſy god long reſiſted his importunities: at laſt, however, the lover being fatigued with the want thereof, but more with the ſucceſſion of unpromiſing forebodings, dropped into a ſlumber about the morning, but did not long enjoy this pleaſing ſtate of inſenſibility; for, ſoon after, Apollo appeared, and informed him, that Neæra was about to deſert him for another. As this news was of a moſt alarming nature, and could not fail to rouſe his indignation againſt the ſex; Apollo, by artfully adopting his ſentiments on that ſcore, paves the way for his recommending patience as his only remedy. Apollo's ſpeech concludes with a meſſage to Neæra, that if ſhe ever expected happineſs, ſhe muſt think of none elſe for her huſband but her former lover. This was a very dexterous way of reclaiming his miſtreſs; and it may with propriety be obſerved, that if Apollo did not appear to our poet, he certainly inſpired the deſcription which Tibullus gives of that god; as we half pardon Neæra her infidelity, in conſideration of this beautiful elegy.

Propertius has a fine viſion upon his miſtreſs's propoſing to go abroad.

Ver. 6. The Roman haruſpices, of whom before (Book ii. El. 6.) were called Tuſcan, becauſe their art was founded on the religious practice of Tuſcany. The firſt ſixteen lines of this elegy are an introduction to the viſion: reaſon and philoſophy ſeemed to perſuade our lover, that dreams were not to be minded; but ſuperſtition, and thoſe fears which are ſo natural to love, won him over to the other ſide. He therefore entreats Lucina, that as he was not conſcious of having acted any otherwiſe than as became a man of probity, ſhe would be pleaſed (ut velit) to render all his fears groundleſs.

Ver. 9. The oblations mentioned in the text are the holy cake (farre pio) and ſalt (et ſaliente ſale). This the Romans alſo learn from the Tuſcans, for whoſe application to haruſpicy, &c. Cicero aſſigns ſome extraordinary reaſons. "Etruſci autem (ſays that incomparable writer and good man) quod in religione imbuti, ſtudioſius et crebrius hoſtias immolabant, extorum cognitioni ſe maxime dediderunt: quodque propter aeris craſſitudinem de cœlo apud eos multa fiebant, et quod ob eandem cauſam multa inuſitata partim ex cœli, alia ex terra oriebantur, quædam etiam ex hominum pecudumve conceptu et ſatu; portentorum exercitatiſſimi interpretes extiterunt."

Ver. 13. Some interpreters underſtand Diana to be the Lucina of the original; but the poet certainly meant Juno Lucina, or the goddeſs of light and of matrimony. Feſtus and Varro derive the appellation Lucina from "lux, lucis;" but Pliny, with whom Ovid alſo, in one place of his Faſti, agrees, thinks that Juno was called Lucina from "lucus." Both etymologies, however, at laſt turn out to be the ſame. "Nam lucem (ſays Broekhuſius) dici a luce luminum religionis cauſa ex arboribus ſuſpenſorum ſatis conſtat."

Ver. 17. Tibullus is the only poet of antiquity who beſtows on night a chariot and four; as Marini is the only one among the moderns who has imitated him. This he does in a prologue, prefixed to a wretched paſtoral drama, intituled Filli de Sciro, compoſed by Count Giudubaldo de Bonarelli.

Chiunque haver deſia
Di mia condition piena contezza,
Quæſta bruna quadriga
Miri, e queſti aurei fregi: e ſoprà poi
Qual è quanta i' mi fia.

Our poet, in imitation of Homer, calls the ocean "cœruleus amnis," or a cærulean ſtream.

Ver. 21. The ancients thought that thoſe viſions were truly prophetic which appeared in the morning. "Certiora et colatiora (ſays Tertullian) de anima ſomniari affirmant ſub extremis noctibus;" or, as Ovid expreſſes it in his epiſtle of Hero to Leander,

ſub Auroram, jam dormitante lucerna,
Somnia quo cerni tempore vera ſolent.

Mr. Pope begins his intellectual viſion of the Temple of Fame at the ſame time:

What time the morn myſterious viſions brings,
While purer ſlumbers ſpread their golden wings.

Ver. 25. This is not a verſion of the hexameter and pentameter, which make the twenty fifth and twenty-ſixth lines of the original in all the editions the tranſlator ever ſaw: for, as Vulpius well obſerves, theſe lines,

Non illo quidquam formoſius ulla priorum
Ætas humanum nec videt illud opus,

cannot be applied to the beauties of Apollo. "Certe (ſays he) latet malignum ulcus, quod Chironis auxilio indigeat: ego lubens depono, et peritiori manui committo." Broekhuſius paſſes them over without any remark, although he muſt have ſeen the abſurdity of the paſſage. But are we to think that Tibullus wrote nonſenſe? By no means. Place the lines after the thirty-eighth (in the original), and you will find they exactly correſpond with that ſtation; and that there is no occaſion to change the "videt" in the pentameter, into "fuit," as Achilles Statius propoſes.

Ver. 27. The "myrtea coma" which Tibullus beſtows on Apollo, Ovid thus explains:

Nec tamen ater erat, nec erat color aureis illis,
Sed quamvis neuter, miſtus uterque color.

Nor of a black, nor of a golden hue,
They were, but of a dye between the two.

But as the painters (for thus Athenæus informs us) drew Apollo with black hair, and the poets gave him yellow or golden locks; why does Tibullus make the god's hair auburn? Neæra's own hair, ſay ſome critics, was of that colour,

Dic et argutæ properet Neæræ
Myrteum nodo cohibere crinem.
Hor. lib. iii. *Od.* 14.

For ſo Porphyrio, and Cunningham, upon the authority of ſeveral MSS. read it. This, therefore, add they, was a delicate compliment to his miſtreſs But this ſolution is more ingenious than ſolid; for though Horace's Neæra had "myrteus crinis," it by no means follows, that Tibullus's Neæra had hair of that colour; nor indeed is it of any conſequence. The emperor Commodus uſed to powder his hair, of which he was paſſionately fond, with gold-duſt.

Ver. 29. The whiteneſs of the moon has been a favourite reſemblance ſince the days of Solomon; the ſun, however, for ſome centuries paſt, appears to have been the more common ſimile. Taſſo, however, has a beautiful addreſs to the moon, which the reader will not be diſpleaſed to ſee.

In bianca e vaga Luna,
C'hai tanti ſpecchi quanti ſono i mari
Mira queſto candor, ch'è ſenza pari.
A lei mena i tuoi balli, a lei diſtilla
Le tue dolci rugiade;
Specchiati con lei con amoroſo affetto.

But, beſides this general reſemblance, there is a farther propriety in Tibullus's comparing Apollo to Diana, as ſhe was his ſiſter.

Ver. 30. As poetry is a great aſſiſtant to painting and ſtatuary, thoſe who have excelled in theſe arts, have always particularly cultivated the muſes. Thus Phidias obtained the idea of his Olympian Jove from the Iliad of Homer, and probably was indebted to Pindar's firſt Pythian ode for placing an eagle on the ſceptre of the ſame god. On the other hand, again, painting has been of uſe to poetry; thus, in this century, an excellent Italian poem was compoſed from the drawings of the famous Bolognian painter Spagnoletto.

Ver. 31. This is one of the ſtrokes which ſeems to me, ſays the author of the Polymitis, to have been borrowed from ſome painting in Rome, in which the mixture of colours here mentioned to be blended together, was remarkably well executed. Pliny, in ſpeaking of the beſt pieces by Echion there, inſtances in one on this ſubject; "nova nupta, verecundia notabilis," lib. xxxv. 10. The famous picture of the Aldobrandine palace in Rome is on the ſame ſubject, and the air of the new bride in it is remarkably modeſt. As that is ſo good, though done when the art of painting was extremely fallen at Rome, it was very probably copied from ſome celebrated picture there, and poſſibly from that piece of Echion's. The colours are all ſo faded in it (as one may well expect, after the courſe of almoſt ſeventeen hundred years), that we can ſee nothing of the beautiful bluſh, that was probably on the face of the bride. Dialogue 8.

Ver. 32. The word "deducta," in the original, has a peculiar beauty, being only applied to the modeſt, in oppoſition to "producta," a term uſed for women of the town.

Ver 33. Charmed with the beauties of his viſion, Tibullus here, contrary to cuſtom, multiplies his illuſtrations: the lily and the amaranth furniſhed the ancients with favourite alluſions; but, as the fineſt ſimiles, by repetition, become unaffecting, the moderns labour under great difficulties in this reſpect. It is true, they have exchanged the amaranth for the roſe; but that has been now ſo long employed, that it is grown ſtale, and the poets of this age may exclaim, with the old grammarians, "pereant iſti, qui, ante nos, noſtra dixerunt." It is a pity that Tibullus, who was ſo excellent an artiſt, did not leave more pictures of beauty behind him.

Although Ovid and others paint Apollo in much the ſame colours as our poet does, we are not, therefore, to ſuppoſe that they copied from one another. The figure, features, dreſs, &c. of the heathen gods, were as well known to the ancients from ſtatues, paintings, &c. of them, formed according to a common ſtandard, as St. Peter is now a-days to any Roman Catholic!

Ver. 36. Broekhuſius makes our poet indebted to the great Sicilian ſhepherd, Idyll. vii. for this ſimile. But why need we ſuppoſe this? It is only ſuch as grows in the poetical common of nature; and what no traveller, however little inſpired, could fail to pluck as he paſſed.

Ver. 37. The word, in the original is "palla," the name of a robe, with which not only Apollo,

but the poets and muſicians of old, were veſted. Valerius Flaccus clothes his bard Mopſus with a white "palla:" but the more common colour of it was purple, "Tyrio bis murice tincta."

Ver. 39. Who the inventor of the lyre was, is uncertain: ſome attribute it to Apollo, and others to Mercury. Diodorus informs us, that this inſtrument, in conformity to the ſeaſons, aſſumed at firſt four ſtrings; but ſoon after, it mounted ſeven, in imitation of the planets; and hence Pindar's epithet, when he calls it ſeven-tongued. It was at firſt made of gold, ſilver, or ivory, ornamented with precious ſtones; but, in the Auguſtan age, the ſhell of the ſea-tortoiſe coming into very high eſtimation, the body of the lyre was principally compoſed of it, yet ſtill adorned with gold, ſilver, &c. Hence Horace ſays,

O mutis quoque piſcibus
Donatura cygni, ſi libeat, ſonum.

Goddeſs of the ſweet-ſounding lute,
Which thy harmonious touch obeys;
Who canſt the finny race, though mute,
To Cygnets' dying accents raiſe.
Francis, Book iv. *Od.* 3.

The lyre was played upon with a plectrum of ivory. See a curious diſſertation on this ſubject, preſented by Mr. Molyneux to the Royal Society.

Ver. 50. In this paſſage Bacchus is deprived of the power of preſcience; and yet we know that many of the ancients regarded him as a prophetical deity. Thus Pauſanias tells us, that Bacchus had an oracle in Thrace. But eſpecially (book x. chap. 33.) a cave (ἄδυτον) at Ophitea, corruptly called Amphiclea, in which were performed his orgies. This cave was acceſſible by one road only; and there was in it no ſtatue of the god. There the inhabitants of the city and neighbourhood were, in their ſleep, informed by the divinity, of remedies appropriated to their diſeaſes; and his prieſt, inſpired by him, acquainted them with future events.

Ver. 70. There is a deſigned harſhneſs in theſe lines, as in the original. Engliſh tranſlators can never be at a loſs for unharmonious combinations; theſe however, like diſcord in muſic, when properly introduced, greatly increaſe the harmony.

The tranſlator cannot help thinking this a very unjuſt deſcription of the fair ſex, as they are commonly more conſtant than men.

Ver. 75. The poſture of a ſuppliant and vanquiſhed perſon is happily expreſſed in the original,

Tu modo cum multa brachia tende prece,

but could not be preſerved in the verſion. Achilles Statius and Douza miſunderſtood this paſſage.

Ver. 79. See the notes to Elegy iii. Book 2.

Ver. 92. The original paſſage was incomprehenſible, till Muretus reſtored it, from an old MS. thus,

Felix. Hoc alium deſine velle virum.

The ſenſe of which according to him, is, that Neæra muſt think of no other huſband but this, "alium ab hoc." But Scaliger and Douza allege, that the "felix hoc" alludes to the old form of nuptial contracts; as if they had ſaid, "feliciter felix hoc ſit." Salmaſius, however, and Broekhuſius interpret it in this manner: as this marriage is, on the word of Apollo, to be productive of perfect happineſs to you, Neæra; preſume not to wiſh for another lover; "felix hoc conjugio deſine alium virum velle."

Ver. 106. Theſe were the ſtrongeſt poetical emblems of barbariſm and infidel ferocity. The thought is originally Homer's (Il. xvi. ver. 34.) but adopted by Catullus and Virgil, traveſtied by Glambattiſta Lalli, often uſed by Ovid, and parodied by Boileau in his admirable Lutrin:

Non ton pere a Paris ne fut pas Boulanger, &c.

In the famous interview of Glaucus and Diomed, Glaucus thus deſcribes chimæra:

Firſt dire chimæra's conqueſt was enjoin'd;
A mingled monſter, of no mortal kind;
Behind, a dragon's fiery tail was ſpread;
A goat's rough body bore a lion's head;
Her pitchy noſtrils flaky flames expire,
Her gaping throat emits infernal fire. *Pope.*

Verſes nothing inferior to the original.

Ver. 108. This was an artful method of ſtill farther intereſting Neæra's family in favour of her lover.

ELEGY V.

While you at Tuſcan baths for pleaſure ſtay,
(Too hot when Sirius darts his ſultry ray,
Though now that purple ſpring adorns the trees,
Not Baia's more medicinal than theſe,)
Me harder fates attend, my youth decays;
Yet ſpare, Perſephone! my blameleſs days:

With ſecret wickedneſs unſtung my ſoul;
I never mix'd nor gave the baneful bowl;
I ne'er the holy myſteries proclaim'd;
I fir'd no temple, and no god defam'd;
Age has not ſnow'd my jetty locks with white,
Nor bent my body, nor decay'd my ſight;

(When both the conſuls fell, ah fatal morn!
Fatal to Roman freedom! I was born)
Apples unripe, what folly 'tis to pull,
Or cruſh the cluſter e'er the grapes are full!
Ye gloomy gods! whom Acheron obeys,
Diſpel my ſickneſs, and prolong my days!
Ere to the ſhades my dreary ſteps I take,
Or ferry o'er th' irremeable lake,
Let me (with age when wrinkled all my face)
Tell ancient ſtories to my liſtening race;
Thrice five long days and nights conſum'd with fire,
(O ſooth its rage!) I gradually expire;
While you the Naiad of your fountain praiſe,
Or lave, or ſpend in gentle ſport your days:
Yet, O my friends! whate'er the fates decree,
Joy guide your ſteps, and ſtill remember me!
Meantime, to deprecate the fierce diſeaſe,
And haſten glad returns of vigorous eaſe,
Milk, mix'd with wine, O promiſe to beſtow,
And ſable victims, on the gods below.

NOTES ON ELEGY V.

Some critics are of opinion, that this elegy was written by Tibullus when very young, and diſengaged from any amorous attachment, as in it he makes no mention of any of his former miſtreſſes. And indeed it muſt be confeſſed, that their conjectures are not always ſo well founded; for had his heart been engaged, his ſickneſs, which makes the ſubject of the poem, would have ſupplied him with as many pathetic thoughts as it did when he was left behind in the iſland of Corſu. But be this as it will, the elegy itſelf is valuable, for being the only one wherein our poet gives us any hints of his own perſon, which, as it really was amiable, is no ſmall proof of his modeſty.

It is addreſſed to ſome of his friends, who were then at the hot baths of Tuſcany, where, probably, our poet was to have been of the party, had not a violent fever prevented him. However deſirous the commentators may ſhow themſelves to diſcover the names of the poet's friends, that diſcovery is now impoſſible; but if we are not ignorant of this, the poem itſelf informs us, that Tibullus compoſed it on the fifteenth day of his diſorder, which he entreats Perſephone ſpeedily to bring to a happy criſis, as he was then young, and by his conduct had never merited any chaſtiſement from heaven.

Ver. 1. Critics have in vain endeavoured to determine which of the Tuſcan baths are here meant. Schoppius believes them to have been the Cluſin; but theſe were cold, as we learn from Horace, Ep. 15. lib. i. wherein thoſe, at which Tibullus's friends appear to have been, were warm.

Ver. 4. Baia was the moſt remarkable warm bath in Italy. The name of it came in time to ſtand for "therme" in general.

Ver. 9. The myſteries here meant, were thoſe of Ceres, the moſt revered of any in ancient times. As it was piacular to divulge them, the reader muſt not expect to find them deſcribed with the ſame exactneſs as the other religious ceremonies of paganiſm. But what is known of certainty of them, ſhall here briefly be collected.

The Eleuſinian myſteries, for ſo they were alſo called, were divided into the greater and the leſſer, and celebrated at Athens, at ſtated ſeaſons, with great pomp of machinery and ſolemn ſhows. Theſe drew together a vaſt concourſe of people from all nations; and many earneſtly deſired to be initiated, but that favour was beſtowed upon none but thoſe of the firſt rank and figure. The reverence with which Cicero ſpeaks of them, and the hints he drops of their uſe and end, ſeem to confirm Dr. Warburton's conjecture about them, viz. that they were intended to inculcate God's unity and the immortality of the ſoul. The ſhows are ſuppoſed to have repreſented Heaven, Hell, Elyſium, and whatever concerned a future ſtate. The poets often alluded to them; and we find Cicero, at the requeſt of Chilius a famous poet, requeſting Atticus to ſend him from Athens a detail of them. This intimates, that theſe ſhows were occaſionally varied; and Dr. Middleton conjectures, that the detail here deſired from Atticus was intended by the poet as epiſodes to ſome of his poetical performances. Is Virgil's ſixth Æneid a repreſentation of this kind? The ſuppoſition is highly ingenious, and Dr. Warburton has ſupported it with no leſs fancy than learning.

So cautious were the Athenians, in Cicero's time, of violating the ſolemnity of theſe myſteries, that the famous orator Craſſus, coming to Athens two days after the proceſſion was over, could not prevail on the magiſtrates to re-exhibit the ſhows, although he was one of the firſt ſenators of Rome.

Whoever divulged the Eleuſinian myſteries, was expelled the ſociety of human kind, and abhorred as a monſter unworthy the common benefits of life. It was eſteemed dangerous to converſe with him, leſt Jupiter, in his wrath, ſhould make no diſtinction between the innocent and the guilty. Thus Horace,

——vetabo, qui cereris ſacrum
Vulgarit arcanæ, ſub iſdem
Sit trabibus, fragilemve mecum
Solvat phaſelum. *Horat. Lib.* iii. *Ode* 2.

He who can friendſhip's ſecrets tell,
Or Ceres' hallow'd rites reveal;

The wretch with me shall never dwell.
With me shall never hoist the doubtful sail.
Francis.

The Greeks, according to Dacier, not only punished with death those who revealed, but those also to whom the mysteries were imparted. When the Athenians for two years were baffled in their attempts against Sicily, Alcibiades, who not only advised, but conducted that war, was accused by that superstitious people of having divulged the mysteries of Ceres.

Numenius, the celebrated Pythagorean, having published an account of the mysteries, some goddesses, in the wanton dress of courtesans, appeared to him. The philosopher, with surprise, asking the reason, was told by them in an angry tone, "Ab se, ipso adyto pudicitiæ abstractas, et passim adeuntibus prostitutas:" That he himself dragged them from the shrine of chastity, and prostituted their charms to every comer. Macrob. Somn Scip. cap. 2.

Ver. 10. Nothing tends so much to soften the horrors of death, as the consciousness of a well-spent life. Upon a death-bed, every object appears in its genuine colours: as the mind then often has the nicest perception of right and wrong.

Ver. 13. *When both the consuls fell, ah fatal morn! Fatal to Roman freedom! I was born.*] At the end of the year U. C. 709, the famous Mark Antony, under the specious pretext of revenging the murder of Cæsar, left Rome. Decimus Brutus (whose name, next to that of Marcus Brutus, the patrons of liberty will ever reverence for his glorious share in the death of Julius), was to feel the first effects of his bloody rage. Although Gaul had cheerfully declared in favour of Brutus, and had levied a considerable force, yet was that patriot, at the approach of Antony, obliged to throw himself into Modena. As Antony knew the aversion of the better and wiser senators to his conduct; how devoted the veterans were to his political, though young enemy. Octavius; and the levies that were vigorously carrying on by decree of the senate, to support the consuls elect, Hirtius and Pansa; he easily saw that no time was to be lost in the reduction of that city: accordingly he invested it with a formidable body of troops, posted to so great advantage, that even after Octavius and the consul Hirtius arrived with a veteran army, the place too defending itself with no less art than courage, he reduced the besieged to very great straits, and seldom was worsted in his rencounters with the consular army. Modena had now stood out near four months, when, on the 15th of April, U. C. 710, Antony having intelligence that the other consul, Pansa, with four legions, was to join the confederate chiefs, he resolved to attack him on his march, with two legions, two Prætorian cohorts, and part of the Evocati. It is scarce to be imagined but the plan would have succeeded; as the enemy was made up of raw levies, had not Hirtius privily in the night detached the martial legion and two Prætorian cohorts, to cover their march to the camp. By the eagerness of that reinforcement, which run forward to attack Antony, Pansa was obliged to follow after with two of the new legions, and a brisk engagement was fought at Castel-Franco, in which Pansa was mortally wounded, and the victory, by the retreat o his enemies, inclined to Antony. His joy, however, was short, for Hirtius, hearing of the engagement, marched out with twenty veteran cohorts, met Antony, entirely routed and put to flight his whole army, in the very plain so lately the scene of his glory. Antony, though now obliged to lie on the defensive in his strongly fortified camp, still hoped to make himself master of Modena, which was now reduced to the greatest difficulties. Octavius and Hirtius saw this; and, flushed with their late success, were determined at all hazards, to relieve the town. To effectuate this, after two or three days spent in finding out the weakest part of Antony's camp, they attacked the entrenchments with such vigour, that Antony, rather than suffer the town to be snatched at last from him, drew out all his forces, and came to a general battle. Little advantages were gained on either side, both armies fought like Romans, till D. Brutus, taking the opportunity, sallied out of the town at the head of his garrison, and helped greatly to determine the victory on the side of the republic. Hirtius pushed his advantages with great spirit, drove all before him to the middle of the enemy's camp, where he was unfortunately killed, near the general's tent. This probably would have turned the fortune of the day, had not Octavius made good the attempt, by keeping possession of Antony's camp, while that general, after the destruction of his best troops, fled precipitately, with his horse, towards the Alps. The other consul died the day after, of his wounds, at Bologna. This was the greatest loss the republic could possibly sustain at that time; as the death of the two consuls placed Octavius above all controul, left him sole master of their armies, especially the veterans, and first inspired him with the design of succeeding to his uncle's power as well as to his estate. That with inferior martial virtues, the successor of Julius was equally successful; and that after the most bloody proscriptions of the best families of the empire, he reigned quietly, nay gloriously; are particulars which our present purpose calls not upon us to explain: we only beg leave to remark, that if the two lines which gave rise to this note, are genuine, Tibullus must have been born A. U. C. 710, some time between the 14th and 15th of April, and perhaps on the very same day with Ovid. This was the opinion of Petrus Crinitus and Lelio Giraldi, and of every biographer till the time of Josephus Scaliger. That great scholar could not well reconcile that date to some other passages in Tibullus: but the affair remained undetermined, till Janus Douza the younger, attempted to prove, that the "cum cecidit fato." &c. was stolen from Ovid, and inserted in Tibullus. The reasons on which he, and those of his party, ground their opinion, and the

objections which may be urged againſt them, are as follow:

In the firſt place, it appears from the ſeventh elegy of the firſt book, that our poet not only attended Meſſala to the war of Aquitaine, but that he was alſo rewarded with military honours for his behaviour at that time. Now it is known, that the reduction of that province was accompliſhed A. U. C. 725: of courſe, if Tibullus was born 710, he muſt have had thoſe marks of ſucceſsful bravery conferred on him when he was only fifteen years of age; but the Romans did not put on the "toga virilis" at ſooneſt till the fifteenth year of their age; therefore, ſay they, Tibullus could not, if no older, ſerve with Meſſala. This argument, however, is more ſpecious than ſolid; for it is certain that ſome Roman youths had the manly gown conferred on them before their fifteenth year: and experience ſhows us, that young men at that age often behave with as much intrepidity, as thoſe who are more advanced in life.

Again, Horace, in the ode addreſſed to Tibullus, has the following lines:

Albi ne delas plus nimio memor, &c.

No more in elegiac ſtrain
Of cruel Glycera complain;
Though ſhe reſigns her faithful charms
To a new lover's younger arms.
Francis, Lib. i. *Ode* 33.

Now, argues Douza, as Horace was but about forty when this ode was wrote, Tibullus could only be about fifteen; and how could one at thoſe years write mournful elegies? or how could Glycera well prefer one younger than himſelf? To obviate this objection, Dacier explains *junior* by *a new lover*. But there is no occaſion for this ſtrained interpretation; for it will afterwards be proved, that younger folks have written, and with applauſe too, poems of a more difficult nature than elegy; and he muſt know little of life, who has not obſerved ſome women, even in our cold climate, prefer a lover of fourteen even to one of twenty; and Julius Cæſar divorced Coſſutia in the ſixteenth year of his age. But not to inſiſt on theſe arguments; the critics may be defied to prove Horace's age when the thirty-third ode of his firſt book was written: for though that poet was juſt forty when ſome of the odes of the ſecond book were compoſed, we know that his odes are not placed in the order they were written: hence there is no neceſſity of alleging, with ſome critics, that this ode was written to our poet's father.

But, ſays Vulpius, Horace, when upwards of forty "(octo luſtra prætergeſſum)", uſed to conſult Tibullus upon his ſatire, as appears from the following line,

Albi noſtrorum ſermonum candide judes.
Ep. 4. *Lib.* i.

Albius, in whom my ſatires find
A candid critic, and a kind. *Francis.*

Now this, adds the Italian editor, is not to be ſuppoſed; as Tibullus, at that time, muſt, if born in 710, have been nineteen years younger than the poet. To this it may be anſwered, that a perſon of nineteen, if endowed with good ſenſe, and ſome practice in poetry, may be capable of correcting the writings of a man of forty: thus Pope, when younger than Tibullus is ſuppoſed to be, amended Wycherley's poems, when that gentlemen was upwards of fifty; and even wrote the Eſſay on Criticiſm at twenty. But, what is of more conſequence, the critics are not agreed about the time when the fourth epiſtle of the firſt book was written: thus Sanadon ſays, it was compoſed about the year 720, when Horace was thirty-one, and Tibullus thirty years old. And the truth is, the preciſe time of it cannot be determined. Beſides, the commentators have proved, that Horace wrote an epiſtle to Lollius, when that nobleman attended Auguſtus in the Cantabrian war, A. U. C. 727, and was only ſixteen years of age.

Again, ſays Broekhuſius, our Roman knight fell ſick at Phæacia, in his voyage with Meſſala to Syria. Now it is certain, that excellent general went thither with an extraordinary command, A. U. C. 724; therefore Tibullus, if born 710, could only then be fourteen: and yet it appears from the elegy itſelf (which is much too fine a piece for a boy of theſe years), that he had been ſome time in love with Delia. To this argument, this ſhort reply may be made: that it cannot be proved that Meſſala was upon his Syrian expedition when our poet was left behind ſick in Phæacia; and, could that even be eſtabliſhed, inſtances are not wanting to prove, that poems, not inferior to the third elegy of the firſt book, have been the production of youths not much older. L. Valerius Prudens gained the prize of poetry, and was crowned, in the reign of Domitian, when only thirteen years old; Johannes Secundus was not twenty-five years old when he died; and there is good reaſon for aſſerting, that Cardinal Rovera, when only ten years of age, publiſhed at Pavia, a collection of his own poems; nay, it is a fact, that Cowley printed a volume of poems, all which were written before his fifteenth year.

Well; but, ſays Vulpius, it is not to be believed, that Ovid, who was ſo ſtudious of the memory of Tibullus, and ſo minutely exact in other things of leſs moment, would have paſſed by an event which did ſuch honour to his own birth, had Tibullus and he been born at the ſame time. To this it may be anſwered, that he had but a ſhort acquaintance with our poet, as he himſelf informs us,

——nec avara Tibullo
Tempus amicitiæ fata dedere meæ.

It may, however, be objected, ſay Douza and others, that Domitius Marſus calls Tibullus a youth when he died:

Te quoque Virgilio comitem non æqua, Tibulle,
Mors juvenem compos miſit ad Elyſios.

Now as Marſus lived at that time, Tibullus muſt have died when twenty-four or twenty-five years

of age, and therefore must have been born A. U. C. 710.

To this it may be opposed, that by the laws of Servius Tullus, the Romans considered every citizen as a *juvenis* till his forty-sixth year. After that time indeed they called them *seniores;* and therefore, as Tibullus was only forty-five when he died, Marsus might call him *juvenis*. Doubtless he might, according to the Tullian computation; but then, it may be observed, that Marsus does not say that Tibullus died the same year with Virgil, i. e. in his forty-fifth year; but only, that he was the first poet who died after him: and therefore he must either have been out of the class of *juvenis;* or born in 710, and consequently then only twenty-five or twenty-six when he died.

But had our author been so young, Ovid would not have omitted that circumstance, as it would have greatly added to the pathos of his famous elegy on his death; especially since, in that very poem, he mentions the youth of Catullus, who, by the by, was upwards of forty when he died, contrary to the common opinion.

Obvius huic venies, hedera juvenilia cinctus
Tempore, cum Calvo, docte Catulle, tuo.

This argument, indeed, is of moment; but the same poet affords some other arguments of still greater weight to prove that Tibullus could not be born in 710. In the first place, he says, that our poet was eminent for his reputation as a writer, when Augustus Cæsar was prince,

———jam te principe notus erat.

that is, when Cæsar was "princeps senatus," after having had the glorious but undeserved title of "pater patriæ" bestowed on him by Messala and the senate, A. U. C. 727. But how could a youth of seventeen be known as a poet? The answer to this has in part been anticipated; and when we add, that Heinsius reads "natus," it rather is an argument in support of Tibullus's being born in 710. as Octavius Cæsar and Pedius succeeded Hirtius and Pansa in the consulate. It must here, at the same time, be confessed, that Cæsar could not be styled "princeps," far less "princeps senatus," for being made consul: yet could even this be granted, Heinsius's reading is supported by MS. authority.

But the argument to which the least objection can be made, is that which follows, and Ovid furnishes it. It runs thus,

Virgilium vidi tantum; nec avara Tibullo
Tempus amicitiæ fata dedere meæ:
Successor fuit hic tibi, Galle; Propertius illi;
Quartus ab his serie temporis ipse fui.
Trist. Lib. iv. *el.* 10.

That is, I only saw Virgil, and the cruel fates did not long indulge me with the friendship of Tibullus. He (viz. Tibullus), was thy successor, Gallus; Propertius followed Gallus, and, in order of time, I myself was the fourth. Now, as Gallus was born A. U. C 681; and Propertius, by his own confession, did not put on the "toga virilis" till after the division of the municipal lands among the veterans, A. U. C. 711, when he was at least fifteen; Tibullus must have been born between the year 681, and the year 696, that is, about the year 690, one year after Horace. But why might he not be five years younger, as well as one year? And indeed, as this corresponds more with Marsus's epigram, it seems as likely that Tibullus was born 695. Some, indeed, object to the quotation from Ovid, as if that poet meant poetical fame, or the order in which the poets he there mentions were known to the world by their writings; and indeed, were it not for the former passage from Ovid, such a suggestion might invalidate the argument upon which Douza chiefly builds his opinion.

But (add Douza, and the rest who espouse his opinion), what if we can prove, from Tibullus himself, that he was not born A. U. C 710? Had he been so young when sick at Corfu, would he not, in a particular manner, have mentioned it? And would not a youth of twenty-five years, have expressed himself differently in the poem before us from

Et nondum cani nigros lædere capillos
Nec venit tardo curva senecta pede.

Besides, in his panegyric, which we know was written 722 (vide l. 121, &c.) he has the following lines,

———nam cura novatur,
Cum memor ante actos semper dolor admonet annos.

which could not be proper from a boy of twelve years of age. Nay, that poem itself, though inferior in every respect to his elegiac compositions, is yet too great a work for one so young. And if to this we add, that in this poem he talks of the old warrior of Arupinum, and of his having attended Messala in his Pannonian expedition; and if we consider, that this expedition took place A. U. C. 718, or 719. it must appear that 710 could not be the year of Tibullus's birth, and that, therefore, the

Cum cecidit fato consul uterque pari

is spurious, and foisted in by some librarian from Ovid. Nay, Vulpius, not content with putting a mark of reprobation on that line, even suspects the following one, as it is, according to him, not only languid, but interrupts the sentence, which is complete without it.

However immaterial these remarks may appear to the generality, the translator hopes, that the critical reader will pardon their length, as they may be found of some service to future biographers.

Ver. 15. *Apples unripe, what folly 'tis to pull?*] This sentiment would answer in pastoral; and were it not what every man might have thought, it might be said, that Ovid had almost transcribed it.

Quid plenam fraudas vitem crescentibus uvis?
Pomaque crudeli vellis acerba manu?
El 14. *Lib.* 2,

The "tolle cupidinem immitis uvæ" of Horace, is almost the same; but as the lyric bard in the ode where he uses these expressions describes Iaiage as a young frisking heifer, and her lover as a bull, the metaphor is not so happily exact.

Ver. 17. This and the foregoing thought are thus imitated by Mr. Hammond:

No stealth of time has thinn'd my flowing hair,
Nor age yet bent me with her iron hand;
Ah why so soon the tender blossom tear?
Ere autumn yet the ripen'd fruit demand.

Ye gods who dwell in gloomy shades below,
Now slowly tread your melancholy round;
Now wandering view the baleful rivers flow,
And musing hearken to their solemn sound:

O let me still enjoy the cheerful day,
Till many years unheeded o'er me roll'd,
Pleas'd in my age I rifle life away,
And tell how much I lov'd ere I grew old.

The whole fourth elegy, from which these stanzas are taken, is an improvement upon our author. In the original, the poet joins two adjectives to one noun, which Servius, in his notes on Virgil, blames as a vice in writing; and yet not only instances of this may be produced from the ancient Roman authors, but also from Lucretius, Cicero, Ovid, and Virgil.

Ver. 21. That man should be so solicitous for old age, is really astonishing, when we consider, with a great moral poet,

That life protracted is protracted woe.
Time hovers o'er, impatient to destroy,
And shuts up all the passages of joy:
In vain their gifts the bounteous seasons pour,
The fruit autumnal, and the vernal flower.
With listless eyes the dotard views the store;
He views, and wonders that they please no more.
Now pall the tasteless meats, and joyless wines,
And luxury, with sighs, her slave resigns.
Approach, ye minstrels, try the soothing strain,
And yield the tuneful lenitives of pain;
No sound, alas! would touch th' impervious ear,
Though dancing mountains witness'd Orpheus near:
Nor lute, nor lyre his feeble powers attend,
Nor sweeter music of a virtuous friend;
But everlasting dictates crowd his tongue,
Perversely grave, or positively wrong:
The still returning tale, and lingering jest,
Perplex the fawning niece and pamper'd guest,
While growing hopes scarce awe the gathering sneer,
And scarce a legacy can bribe to hear;
The watchful guests still hint the last offence,
The daughter's petulance, the son's expence;
Improve his heady rage with treacherous skill,
And mould his passions, till they make his will.
Unnumber'd maladies his joints invade,
Lay siege to life, and press the dire blockade:
But unextinguish'd avarice still remains,
And dreaded losses aggravate his pains;
He turns, with anxious heart and crippled hands,
His bonds of debt, and mortgages of lands;
Or views his coffers with suspicious eyes,
Unlocks his gold, and counts it till he dies.
But grant the virtues of a temperate prime,
Bless with an age exempt from scorn or crime;
An age that melts in unperceiv'd decay,
And glides in modest innocence away:
Whose peaceful days benevolence endears,
Whose nights congratulating conscience cheers;
The general favourite, as the general friend:
Such age there is, and who could wish its end?
Yet ev'n on this her load misfortune flings,
To press the weary minutes' flagging wings:
New sorrow rises as the day returns;
A sister sickens, or a daughter mourns;
Now kindred merit fills the sable bier,
Now lacerated friendship claims a tear.
Year chases year, decay pursues decay,
Still drops some joy from withering life away;
New forms arise, and different views engage,
Superfluous lags the veteran on the stage,
Till pitying nature signs the last release,
And bids afflicted worth retire to peace.
But few there are whom hours like these await,
Who set unclouded in the gulfs of fate;
From Lydia's monarch should the search descend,
By Solon caution'd to regard his end,
In life's last scene what prodigies surprise,
Fears of the brave, and follies of the wise;
From Marlborough's eyes the streams of dotage flow,
And Swift expires a driv'ler and a show.

Its great beauty will, it is presumed, excuse the length of this quotation.

Ver. 26. Swimming was much practised by the Romans; an exercise which they, as a military people, found serviceable to them on many accounts, and which Britons, both on that account, and as a naval people, would do well to practise more; for as the poet of the seasons sings,

This is the purest exercise for health,
The kind refresher of the summer heats;
Nor when cold winter keens the brightening flood,
Would I, weak-shivering, linger on the brink.
Thus life redoubles, and is oft preserv'd
By the bold swimmer, in the swift illapse
Of accident disastrous. Hence the limbs
Knit into force; and the same Roman arm
That rose victorious o'er the conquer'd earth,
First learn'd, while tender, to subdue the wave.
E'en from the body's purity, the mind
Receives a secret sympathetic aid.

Summer.

Ver. 28. Tibullus was as warm in his friendship as in his love, and certainly, if the love of fame is ever allowable, the wishing to be remembered after death, by one's friends, is highly natural. The

Oblitus meorum, obliviscendus et illis,

The world forgetting, by the world forgot,

of some authors, is too misanthropical for the love of fame being natural to man, and the source

from whence have ſprung moſt of the good actions which have aſtoniſhed or benefited humanity, the tranſlator cannot join iſſue with thoſe who condemn its exertion.

Ver. 31. The old Scholiaſt on Statius, whoſe comment Barthius had in his poſſeſſion, calls blood, honey, and milk, the banquet of the infernal powers, "inferorum paſtus." But this paſſage in our poet ſhows, that wine was alſo part of their cheer.

Black cattle were the only victims ſacrificed to the "dii inferni." The ancients, ſay the critics, generally offered to their gods, thoſe beaſts which they were ſuppoſed to hold in the greateſt abhorrence. When they ſacrificed to the infernal powers, they turned their palms downwards. There are two or three inſtances in the legendary part of the Roman ſtory, of the ceaſing of plagues at Rome, upon immolating on the altars of Pluto and Proſerpine. Pluto's altars at Tarentum were chiefly remarkable for miracles of this kind. Theſe ſacrifices, which in time gave riſe to the ſecular games, the jubilee of Paganiſm, were performed in the evening; as thoſe to the celeſtial powers were in the morning. The prieſts were ſprinkled with water, when offerings were made to the infernal deities. See the old Scholiaſt on the fourth Iſthmian ode of Pindar. And it is certain from Homer (Iliad ix. lin. 564.) that thoſe who addreſſed theſe powers, fell on their knees when they prayed to them.

ELEGY VI.

Lover.

COME, Bacchus, come! ſo may the myſtic vine
And verdant ivy round thy temples twine!
My pains, the anguiſh I endure, remove;
Oft haſt thou vanquiſh'd the fierce pangs of love.
Haſte, boy, with old Falernian crown the bowl,
In the gay cordial let me drench my ſoul.
Hence, gloomy care! I give you to the wind;
The god of fancy frolics in my mind!
My dear companions! favour my deſign,
Let's drown our ſenſes all, in roſy wine!

Companion.

Thoſe may the fair with practis'd guile abuſe,
Who, ſourly wiſe, the gay diſpute refuſe:
The jolly god can cheerfulneſs impart,
Enlarge the ſoul, and pour out all the heart.

Lover.

But love the monſters of the wood can tame,
The wildeſt tygers own the powerful flame:
He bends the ſtubborn to his awful ſway,
And melts inſenſibility away:
So wide the reign of love!

Companion.

Wine, wine, dear boy!
Can any here in empty goblets joy?
No, no, the god can never diſapprove,
That thoſe who praiſe him ſhould a bumper love.
What terrors arm his brow? the goblet drain:
To be too ſober is to be profane!
Her ſon, who mock'd his rites, Agave tore,
And furious ſcatter'd round the yelling ſhore!
Such fears be far from us, dread god of wine!
Thy rites we honour, we are wholly thine!
But let the ſober wretch thy vengeance prove:

Lover.

Or her whom all my ſufferings cannot move!
—What pray'd I raſhly for? my madding prayer,
Ye winds, diſperſe, unratified, in air:
For though, my love! I'm blotted from your ſoul,
Serenely riſe your days, ſerenely roll!

Companion.

The love-ſick ſtruggle paſt, again be gay:
Come crown'd with roſes, let's drink down the day!

Lover.

Ah me! loud-laughing mirth how hard to feign!
When doom'd a victim to love's dreadful pain:
How forc'd the drunken catch, the ſmiling jeſt,
When black ſolicitude annoys the breaſt!

Companion.

Complaints, away! the blithſome god of wine
Abhors to hear his genuine votaries whine.

* * * * *

Lover.

You, Ariadne! on a coaſt unknown,
The perjur'd Theſeus wept, and wept alone;
But learn'd Catullus, in immortal ſtrains,
Has ſung his baſeneſs, and has wept your pains.

* * * * *

* * * * *

Companion.

Thrice happy they, who hear experience call,
And ſhun the precipice where others fall.
When the fair claſps you to her breaſt, beware,
Nor truſt her, by her eyes although ſhe ſwear;
Not though, to drive ſuſpicion from your breaſt,
Or love's ſoft queen, or Juno ſhe atteſt;
No truth the women know; their looks are lies.

Lover.

Yet Jove connives at amorous perjuries.
Hence ſerious thoughts! then why do I complain?
The fair are licenc'd by the gods to feign.
Yet would the guardian powers of gentle love,
This once indulgent to my wiſhes prove,

Each day we then ſhould laugh, and talk, and toy,
And paſs each night in Hymeneal joy.
O let my paſſion fix thy faithleſs heart!
For ſtill I love thee, faithleſs as thou art!
Bacchus the Naiad loves; then haſte, my boy!
My wine to temper cooler ſtreams employ.
What though the ſmiling board Neæra ſlies,
And in a rival's arms perfidious lies,
The live-long night, all ſleepleſs, muſt I whine?
Not I—

Companion.

Quick, ſervants! bring us ſtronger wine.

Lover.

Now Syrian odours ſcent the feſtal room,
Let roſy garlands on our foreheads bloom.

NOTES ON ELEGY VI.

We have ſeen, with what cruelty Neæra had treated her lover, all his endeavours to fix her ſolely his, having proved hitherto ineffectual. But his miſery being now extreme, ſome remedy muſt be attempted; and wine, by the joint approbation of antiquity, being eſteemed the certain antidote of affliction, his friends ſtrongly recommended his making an experiment of its virtues: he follows their advice, and begins the preſent elegy with an addreſs to the god of wine, in full confidence of his being able to free him from his amorous inquietude.

This poem, which is one continued ſtruggle between the powers of love and wine, but in which the latter triumphs over the former, the tranſlator has thrown into a dialogue between the lover and one of his boon companions. This gives it a more ſpirited air, but does not entirely remove all its obſcurities; and hence the tranſlator has been led to believe, that it is imperfect; unleſs with ſome judicious critics, it is ſuppoſed, that as the author was agitated with a diverſity of paſſions at the time of his compoſing it, ſo the hyperbaton and diſorderly connection was the reſult of judicious choice, and not the fault of imperfection.

In ſome editions this elegy is improperly ſplit into two.

Ver. 1. *—ſo may the myſtic vine.*] Why myſtic? Becauſe thoſe who were initiated in the myſteries of Ceres and Bacchus carried *thyrſi*, round which were twiſted vine branches; or, becauſe theſe who aſſiſted at the orgies of Bacchus wore vine garlands. See a deſcription of theſe frantic ceremonies in the ſixth book of Ovid's Metamorphoſis, ver. 587.

Ver. 2. Bacchus wore grapes on his horns. See notes on the firſt elegy of the ſecond book; and ivy round his temples.

Cur hedera cincta eſt? hedera eſt gratiſſima Baccho:
Hoc quoque cur ita ſit, dicere nulla mora eſt.
Nyſiades Nymphæ, puerum quærente noverca,
Hanc frondem cunis appoſuere novis.
Lib. iii. *Faſt. ver.* 769.

But Conſtantius Cæſar, in the eleventh book of his Geopon, ſays, that Bacchus loved the ivy becauſe his favourite boy Ciſſus was metamorphoſed into that plant. *Brockh.*

The true reaſon however ſeems to have been, that the ancients thought ivy chaplets had a power of preventing intoxication.

Thoſe who conquered in poetical conteſts, had, of old, a wreath of ivy beſtowed upon them. Andreas Alciatus gives the following reaſon for it:

Haud quaquam areſcens hederæ eſt arbuſcula, Ciſſo
Quæ puero Bacchum dona dediſſe ferunt:
Errabunda, procax, auratis, fulva corymbis,
Exterius viridis, cætera pallor habet.
Hinc aptis vates cingunt ſua tempora ſertis;
Paleſcunt ſtudiis, laus diuturna viret.
Emb 204.

Ver. 15. The two great Italian paſtoral poets have enlarged upon this thought in their tragi-comedies.

Van le tigre in amore
Ama il leon ſuperbo, &c. *Amynt.*

Rugge il leon al boſco
Ne quel rugito è d'ira
Coſi d'amor ſoſpira, &c. *Paſt. Fido.*

Ver. 21. When the gods appeared in anger to mortals, they were ſuppoſed to become much taller than uſual. Thus Ceres, when ſhe appeared to Eryſychton, who had violated her ſacred grove, trod indeed on the ground, but with her head ſhe touched the ſkies.

Δαμαλὴς δ' ἀφελὸν, &c.
Callim. Hymn. in Cerer. ver. 58.

Ver. 23. Penthus, King of Thebes, was torn in pieces by his mother and the other Mænades, for having ridiculed the newly-introduced orgies of Bacchus. See Ovid, Met. lib. iii. and Theocritus, Idyll. 26. See alſo the Βακχαι of Euripides.

Ver. 29. This is a fine inſtance of amorous irreſolution; and the prayer the poet puts up to Heaven for the happineſs of his inconſtant fair, makes us compaſſionate him more, than if he had broke out into the moſt direful execrations.

Taſſo has given us a no leſs beautiful inſtance of this paſſionate figure in his Gierusalem. Liberat. Canto xx. where Armida, being abandoned by Rinaldo, breathes fury and revenge; and, purſuing him through the ranks of the battle, aims an arrow at his heart; but ſcarce had the ſhaft left the bow, when returning love compelled her to wiſh it might miſs its aim:

Lo ſtral volo; ma con lo ſtral, un voto
Subito uſcì, che vada il copo a voto.

Swift flies the ſhaft, as ſwiftly flies her prayer
That all its vehemence be ſpent in air.

Spence.

Such ſudden changes of paſſion give a vaſt energy to poetical compoſitions. They are frequent in the elegiac poets: but no inſtance of this kind ever afforded the tranſlator more pleaſure than the following of Lotichius, who deſiring his deceaſed miſtreſs's ſhade often to appear to him, ſuddenly checks himſelf:

Quid precor imprudens? non fas ita velle priumve
Otia ſint cineri, ſit ſopor uſque tuo.
Et tumulum myrti virides, & amaricus ornet;
Et ſedeat cuſtos ad tua buſta Venus.

B. iii. *El.* 3.

Ver. 37. This double paſſion is aptly termed diſſimulation, by Mr Spence, in his ingenious Obſervations on Pope's Odyſſey. Such figures are viewed in a juſter light, when we look upon them as naturally expreſſive of what we feel within us, than when we regard them only as the artful machineries of writing.

Ver. 43. Catullus is here called learned; and antiquity, with one conſent, beſtows upon him that diſtinguiſhed epithet. He certainly underſtood the Greek language, and tranſlated, with ſome applauſe, Callimachus's beautiful poem on Berenice's hair: but his verſion from Sappho is very indifferent. Yet theſe perhaps obtained him the reputation of learning; or perhaps it aroſe from his frequent uſe of cramp words. Men are often called learned, even now-a-days, for no better reaſons. The tranſlator, however, is not of opinion, that he merited that diſtinction, ſo much at leaſt as ſome of his Roman predeceſſors. Nay, are not the beſt critics now agreed, that had all his poems periſhed, the world would have been at no very great loſs, except for the piece here alluded to, his Epithalamium on Peleus and Thetis, and one or two more?

The moſt remarkable part of Catullus's character is, the freedom with which, in his writings, he attacked Julius Cæſar, at a time when he was the ſovereign maſter of the world. That great, but wicked Roman, underſtood the importance of having the men of abilities and learning on his ſide, and therefore invited the poet to ſup with him on the night his Paſquin was publiſhed. Could the poet ſatirize after ſuch an act of condeſcenſion? Something of the ſame kind is alſo told us, of that moſt conſummate of politicians, Philip, who more than paved the way for his ſon's conqueſt of the Eaſt. See Dr. Leland's excellently written Life of that monarch.

In the poem which Tibullus here had in his eye, there is an exquiſite ſtroke of nature, where Ariadne runs into the ſea, as if to reach Theſeus, who was ſailing off.

Tum tremuli ſalis adverſas percurrere undas
Mollia nundatæ tollentem tegmina ſuræ, &c.

Ovid has written on the ſame ſubject but there is more real beauty in the pathetic exclamations and frantic behaviour of Catallus's Ariadne, than in the witty, but unaffected epiſtle of Naſo.

There appears no connection between this ſtory of Ariadne, and what either goes before or follows it. But if the tranſlator durſt venture upon a tranſpoſition, he would join

Thrice happy they,

and ſo on, to

Hence, ſerious thoughts!

to the forty-ſecond line, and make it part of the advice which our poet's companion gave him. The manner of diſpoſing and connecting theſe verſes, would make the ſtory of Ariadne appear as part of Tibullus's anſwer, by which he would inſinuate, that if the women were deceitful, the men are not much better, as witneſs the treatment which Theſeus, whom they all deemed a hero, gave Ariadne.

Ver. 50. The common editions read

Junonemque ſuam, perque ſuam venerem.

But Broekhuſius is of opinion that Tibullus wrote

Junonemque ſuam, per Veneremque ſuam,

and produces ſeveral inſtances of his uſing the "que" in that manner. He cloſes his quotations on that ſubject with the following ſentence, which is in the true ſpirit of a verbal critic: "Hæc palæmonibus noſtris exila videbuntur, neque ſatis digna in quibus otium ponatur: mihi vero, quæ mea eſt humilitas, nihil exile habetur, quod faciat ad inluſtrationem ſermonis Latini."

Ver. 51. Female infidelity has been a common topic of invective with the wits of all ages; and yet, had they looked into their own conduct with the ſame virulent penetration, they would have found that the lion made a juſt obſervation to the man, who vauntingly ſhowed him a picture wherein one of the lion-kind was repreſented as conquered by a man, when that monarch of the woods ſaid, "We lions are not painters."

Ver. 52. Plato aſſigns a whimſical reaſon for Jupiter's good-nature in this affair; the pleaſures (ſays he) are infants, incapable of underſtanding and judgment, and therefore not liable to puniſhment for perjury, or breach of promiſe.

Ver. 59. "Nobis merenti," in the original, as Broekhuſius obſerves, is an elegant Græciſm (archaiſmus), which Terence and the moſt correct Roman poets have admitted. There are many ſuch Græciſms in both Milton and Shakſpeare; the former, no doubt, thought the joining a ſin-

gular with a plural an elegance; but it is a queſtion whether the inſtances of this kind which occur in the tragic bard are not the effect of chance, or fault of tranſcribers, &c. This pentameter is the only turn on words to be found in Tibullus. When ſparingly admitted, ſuch turns are doubtleſs beauties. Mr. Dryden makes Virgil the parent of this elegance in compoſition: that critic, however, is miſtaken, as Homer has a turn on the words, Il. 20, where Hector ſays, that at all events he will attack Achilles:

και ει πυρι χειρας ιοικεν
Ει πυρι χειρας ιοικε· μενος αιθωνι σιδηρω.

Not from yon boaſter ſhall your chief retire,
Not though his heart were ſteel, his hands were fire:
That fire, that ſteel, your Hector ſhould withſtand,
And brave the vengeful heart, and dreadful hand.

So very attentive was Mr. Pope not to loſe any of the beauties of his original. And if Mr. Dryden (Dedicat. to Juvenal) had looked, he would have found that Catullus uſed this charm in writing before Virgil.

Ut flos in ſeptis ſecretus naſcitur hortis,
Ignotus pecori, nullo convulſus aratro,
Quem mulcent auræ, firmat ſol, educat imber:
Multi illum pueri, multæ optavere puellæ:
Idem cum tenui carptus defloruit ungui,
Nulli illum pueri, nullæ optavere puellæ.
Sic virgo dum intacta manet, dum cara ſuis eſt.
Cum caſtum amiſit polluto corpore florem,
Nec pueris jucunda manet, nec cara puellis.
Carm. Nup' 60.

It muſt indeed be owned, that Virgil and Ovid more frequently uſe turns, both on words and thoughts. Neither is Milton wholly deſtitute of that beauty, though Mr. Dryden ſays, he could find none ſuch in his poems, as witneſs the following charming verſes, where Eve addreſſes our general anceſtor:

With thee converſing, I forget all time!
All ſeaſons, and their change, all pleaſe alike.
Sweet is the breath of morn, her riſing ſweet
With charm of earlieſt birds; pleaſant the ſun,
When firſt on this delightful land he ſpreads
His orient beams, on herb, tree, fruit, and flower
Gliſt'ring with dew; fragrant the fertile earth
After ſoft ſhowers; and ſweet the coming on
Of grateful evening mild; then ſilent night,
With this her ſolemn bird, and this fair moon,
And theſe the gems of heaven, her ſtarry train:
But neither breath of morn, when ſhe aſcends
With charm of earlieſt birds; nor riſing ſun
On this delightful land; nor herb, fruit, flower,
Gliſt'ring with dew: nor fragrance after ſhowers;
Nor grateful evening mild; nor ſilent night,
With this her ſolemn bird; nor walk by moon,
Or glittering ſtar-light, without thee is ſweet.

This quotation Mr. Addiſon has inſerted in one of the Tatlers (No. 114.), and indeed Mr. Maſon makes this turn on words characteriſtical of Milton's manner, in that beautiful poem of his, intituled Muſæus.

Various this peaceful ſcene, this mineral roof;
This 'ſemblance meet of coral, ore, and ſhell;
Theſe pointed cryſtals fair, 'mid each obſcure
Bright gliſtering; all theſe ſlowly-dripping rills,
That tinkling ſtray amid the cooly cave.
Yet not this various peaceful ſcene, with this
Its mineral roof, nor this aſſemblage meet
Of coral, ore, and ſhell; ner 'mid th' obſcure
Theſe pointed cryſtals glittering fair; nor rills
That ſtraying tinkle through the cooly cave,
Deal charms more various to the raptur'd ſenſe,
Than thy mellifluous lay.

Ver. 61. Bacchus was brought up by the nymphs; which, ſays Vulpius, is a poetical figment, ſignifying that wine ought to be mixed with water.

Αι Νυμφαι τον Βακχον οτ' εκ πυρος ηλαθ' ὁ κωρος
Νιψαν, ὑπερ τεφρης αρ]ι κυλιομενον
Τενικα σην Νυμφαις βρομιος φιλος, ην δε νιν εισης
Μισγεσθαι δειξη πυρ' ετι καιομενον.
Ανθολογια.

E cincere ut Bacchum nymphæ ceſſere ſorores,
Membraque lavarunt fonte perennis aquæ,
Junctus amicitia eſt Nymphis Si forte repellas,
Natum de flammis experiere Deum.

And Plato, in his poetical language, calls the mixing of wine with water, the taming a mad god with a ſober one.

Ver. 68. "Jam dudum" in the original, ſays Broekhuſius, "formula veruſta de tempore non longo in re præſente & ſcriptoribus elegantibus adamata."

Feſtus obſerves, that the boon companions of old uſed ſometimes to tie birds to their garlands, not only to amuſe themſelves with their ſongs, but alſo to be kept awake by their pecking; ſo ingenious were they in the article of drinking!

The garlands uſed at firſt upon theſe occaſions, were made of fine wool; and therefore Theocritus calls them ειος ωωτον, the flower of the ſheep.

Parſley, roſes, ivy, &c. came afterwards to be worn; for which, as well as for the introduction of eſſences in drinking, the topers of antiquity were indebted to the fair ſex. Lipſius has given us the "leges convivales" of the ancients.

ELEGY VII.

To you my tongue eternal fealty ſwore,
My lips the deed with conſcious rapture own;
A fickle libertine I rove no more,
You only pleaſe, and lovely ſeem alone.

The numerous beauties that gay Rome can boaſt,
With you compar'd, are uglineſs at beſt;
On me their bloom and practis'd ſmiles are loſt,
Drive then, my fair! ſuſpicion from your breaſt.

Ah no! ſuſpicion is the teſt of love:
I too dread rivals, I'm ſuſpicious grown;
Your charms the moſt inſenſate heart muſt move;
Would you were beauteous in my eyes alone!

I want not man to envy my ſweet fate,
I little care that others think me bleſt;
Of happy conqueſts let the coxcomb prate!
Vain-glorious vaunts the ſilent wiſe deteſt.

Supremely pleas'd with you, my heavenly fair!
In any trackleſs deſert I could dwell;
From our receſs your ſmiles would baniſh care,
Your eyes give luſtre to the midnight cell.

For various converſe I ſhould long no more,
The blithe, the moral, witty, and ſevere;
Its various arts are her's, whom I adore;
She can depreſs, exalt, inſtruct, and cheer.

Should mighty Jove ſend down from heaven a maid,
With Venus' ceſtus zon'd, my faith to try,
(So, as I truth declare, me Juno aid!)
For you I'd ſcorn the charmer of the ſky.

But hold! you're mad to vow, unthinking fool!
Her boundleſs ſway you're mad to let her know:
Safe from alarms, ſhe'll treat you as a tool—
Ah, babbling tongue! from thee what miſchiefs flow!

Yet let her uſe me with neglect, diſdain;
In all, ſubſervient to her will I'll prove;
Whate'er I feel, her ſlave I'll ſtill remain,
Who ſhrinks from ſorrow, cannot be in love!

Imperial queen of bliſs! with fetters bound,
I'll ſit me down before your holy fane;
You kindly heal the conſtant lover's wound,
Th' inconſtant torture with increaſe of pain.

NOTES ON ELEGY VII.

Although this poem is uſually publiſhed at the end of the fourth book, yet as ſome old critics aſſert, that Tibullus wrote only three books of elegies, and as this piece, in the opinion of Broekhuſius, has all the marks of Tibullian legitimacy, the tranſlator has taken the liberty to place it here; not ſtrictly rendered, but more paraphraſtically, as, in his opinion, better ſuited to the genius of the alternate ſtanza. What induced the tranſlator to turn paraphraſt with this elegy, was, that though the critics unanimouſly aſcribed it to Tibullus, yet did he think, that the thoughts had not that ſimplicity, which conſtitutes one of the characteriſtical beauties of our poet. And though Tibullus is mentioned in the poem, no argument can thence be drawn of it being the work of our poet, as in after-times, thoſe who excelled in elegy affected to ſtyle themſelves Tibullus: and it is known that Nero uſed to call the poet Nerva by that appellation.

Ver. 11. *Your charms the moſt inſenſate heart muſt move;*
Would you were charming in my eyes alone!]

This, exclaims the polite Dutch commentator, is ruſticity itſelf! For what more cruel, to a fine woman, could he wiſh, than that ſhe ſhould pleaſe one man only? And what do the ladies aim at, in all their finery and variety of dreſs, but to appear amiable even to thoſe whom they neither can, nor wiſh to love?

Delectant etiam caſtas præconia formæ.

And what woman did you ever ſee, however vile and wretched, whoſe face or perſon you dared, in her own preſence, to contemn with impunity; or who thought herſelf ugly? Beauty they prefer to life itſelf; and death they view without diſmay, if they carry their charms along with them. Thus far Broekhuſius.

D'Urſey, who was the firſt, that gave the

French an idea of paſtoral romance, has copied this thought of our author; and, indeed, it better ſuited ſuch languid unnatural compoſitions as the Aſtrea, than the ſerious ſenſibility of the elegiac muſe.

Ver. 12. Cowley has imitated this; or rather, ſuch conceits were in his way.

How happy here, ſhould I
And one dear ſhe, live, and embracing die;
She who is all the world, and can exclude
From deſerts, ſolitude.
I ſhould have then this only fear,
Leſt men, when they my pleaſure ſee,
Should hither throng to live like me,
And ſo make a city here.

How much more truly does Prior repreſent the contentment which lovers feel in one another's company?

My conqueror now, my lovely Abra held
My freedom in her chains; my heart was fill'd
With her; with her alone, in her alone
It ſought its peace and joy; while ſhe was gone,
It ſigh'd and griev'd, impatient of her ſtay;
Return'd, ſhe chas'd thoſe ſighs, that grief away;
Her abſence made the night, her preſence made the day.

The paſtoral writers often aſcribe ſtill greater force to the charms of their Galateas and Phylliſes, perhaps very impertinently.

Ver. 25. Thus finely imitated by Croxal:

Were I invited to a nectar feaſt
In heaven, and Venus nam'd me for her gueſt;
Though Mercury the meſſenger ſhould prove,
Or her own ſon, the mighty god of love;
At the ſame inſtant let but honeſt Tom
From Sylvia's dear terreſtrial lodging come,
With look important ſay—"deſires—at three,
"Alone—your company—to drink ſome tea."
Though Tom were mortal, Mercury divine,
Though Sylvia gave me water, Venus wine; [far
Though heaven was here, and Bow-ſtreet lay as
As the vaſt diſtance of the utmoſt ſtar;
To Sylvia's arms with all my ſtrength I'd fly:
Let who would meet the beauty of the ſky.

THE POEMS OF SULPICIA.

ADVERTISEMENT.

Some of the beſt modern commentators contend, that the little poems which compoſe this fourth book, are not the work of Tibullus. Their chief arguments are derived from the language and ſentiment; in both which, it is ſaid, and with more juſtice than is common on ſuch occaſions, that they bear no reſemblance to our poet's productions.

But if the following little pieces are not the compoſition of Tibullus, to whom ſhall we impute them? Shall we, with Caſpar Barthius, and Brockhuſius, aſcribe them to Sulpicia, the wife of Calenus, who flouriſhed in the reign of Domitian? This opinion is by no means improbable, for we know from Martial and Sidonius Apollinaris, that Sulpicia was eminent in thoſe days for her poetry.

Omnes Sulpiciam legant puellæ,
Uni quæ cupiunt viro placere.
Omnes Sulpiciam legant mariti,
Uni qui cupiunt placere nuptæ.
Non hæc Colchidos adferit furorem,
Diri prandia nec refert Thyeſtæ;
Scyllam, Byblida, nec fuiſſe credit:
Sed caſtos docet & pios amores,
Luſus, delicias, facetiaſque.
Cujus carmina qui bene æſtimarit,
Nullam dixerit eſſe nequiorem,
Nullam dixerit eſſe ſanctiorem.
Tales egregiæ jocos fuiſſe.
Udo crediderim Numæ ſub antro.
Hac condiſcipula, vel hac magiſtra
Eſſes doctior & pudica Sappho:
Sed tecum pariter ſimulque viſam
Durus Sulpiciam Phaon amaret.
Fruſtra: namque ea nec Tonantis uxor,
Nec Bacchi, nec Apollinis puella,
Erepto ſibi viveret Caleno.

Mart. Lib. x. *Ep.* 35.

But to this proof, it is objected by Vulpius, that as the following pieces are of a ſtrain different from thoſe celebrated by Martial, ſo they could not be written by the wife of Calenus, but are Tibullus's; and that the Sulpicia they praiſe, was the daughter of Servius Sulpicius, the famous lawyer, ſome of whoſe epiſtles to Cicero, are ſtill extant: For, ſhe who is called Sulpicia in this book, adds he, certainly lived in the reign of Auguſtus, as Horace himſelf mentions Cerinthus, and Meſſala is named in the eighth poem. To this it may be anſwered, that it cannot be proved, that Sulpicia had never been in love before ſhe married Calenus; or had never compoſed any other poems, beſides thoſe of the conjugal kind, ſo much extolled by Martial? Nay, have we not our own teſtimony, that ſhe wrote ſome thouſands of pieces?

Cetera quin etiam, quot denique millia luſi!

And we know from ſome of Sulpicia's lines, preſerved by the old Scholiaſt on Juvenal, that ſhe ſometimes wrote in a manner the very reverſe of that which the epigrammatiſt celebrates: and of courſe ſhe may ſtill be the author of theſe poems. Nor does it follow from Horace's having made mention of one Cerinthus (lib. i. ſat. 2. line 81.) who was fond of a rich miſtreſs, that therefore this miſtreſs was Sulpicia; unleſs it could be proved, that Cerinthus never loved any but Sulpicia; and that there never was a perſon of the name of Cerinthus, but in the age of Auguſtus. Again, though Meſſala is mentioned in the eighth poem of this book, it cannot thence be inferred, that this was our poet's patron; unleſs it could be proved that the name Meſſala (which is not true) expired with that illuſtrious Roman. Therefore the following poems may ſtill be the off-ſpring of Martial's Sulpicia.

But againſt this opinion it is farther urged by Vulpius, that Quintilian (lib. i. cap. 11.) plainly alludes to,

Illam quidquid agit, quoque veſtigia movet
Componit, furtim ſubſequiturque decor,

in the following ſentence: "Neque enim geſtum oratoris *componi* ad ſimilitudinem ſaltationis volo, ſed ſubeſſe aliquid ex hac exercitatione puerili, unde nos non id agentes, *furtem decor* ille diſcentibus traditus proſequatur." But that eloquent rhetorician, ſays Vulpius, would have been aſhamed to uſe the words of a woman, who was then alive; and therefore it is more probable, that he borrowed his illuſtration from Tibullus, a poet of an eſtabliſhed reputation.

We cannot ſee any reaſon, however, why Quintilian ſhould be more aſhamed to borrow from a cotemporary poeteſs, if her words ſuited his purpoſe, than from a dead poet, let his character be ever ſo great. Nay, the great rhetorician, we apprehend, would rather have choſen to have expreſſed himſelf in the words of a woman, who was honoured with the epithet of learned, which was Sulpicia's caſe, than to have uſed the language of Tibullus or any other perſon, when treating of a ſubject (viz Decency of Geſture) wherein the fair ſex muſt be allowed to be the moſt competent judges. But why might not Quintilian ſtumble upon "componit" and "furtim decor" without having ever read this poem? Can any reaſon be aſſigned to the contrary? Or, rather, did not his ſubject naturally lead him to expreſs his ſentiments of oratorial geſture in theſe very words?

Some critics, however, whom the tranſlator has conſulted, and who acknowledge the futility of Vulpius's arguments, are yet of opinion, that the firſt, third, and fifth poems of this book cannot be of Sulpicia's writing, but muſt be the works of Cerinthus, or ſome poet; as Sulpicia, they ſay, could not, with any grace, write the encomium on her own perſon; nor can the poem on her birth-day be, with any more propriety, aſcribed to her; and it is evident, they think, that the fifth poem is the compoſition of a common friend.

Nor, granting this, every difficulty is not yet ſurmounted: the twelfth poem, according to ſome others, cannot be Sulpicia's, for from the following lines:

Nunc licet, e cœlo, mittatur amica Tibullo;
Mittetur fruſtra, deficietque Venus.

it is, they aſſert, plainly the compoſition of Tibullus. "Tibulli carmen arbitror (ſays Broekhuſius) ipſa dictione ita perſuadente & numeris ad Albianum characterem artificioſe conformatis;" adding, that it has certainly ſlipped out of its place, and muſt belong to the third book, as the old critics inform us, that Tibullus wrote no more than three books of elegies.

Although we have ſo far admitted this opinion, as to place that poem at the end of the third book, yet that our poet certainly wrote more elegies than we have of his at preſent, is obvious, both from his works themſelves, and from Horace: nor can the tranſlator help being of opinion, that, however ſimilar the metrical compoſition in the twelfth poem may be to that of Tibullus, yet the mode of thinking is very different from his; and, therefore, if Tibullus is the author, he either in this piece, imitated Ovid, or the piece itſelf was written by ſome body elſe, perhaps in the age of Domitian, who was ſo fond of Tibullus, as to be willing to uſher his own productions into the world under the ſanction of his name.

But if the fourth book was compoſed by Sulpicia, how comes it, objects Vulpius, to be found in all the ancient MSS. of Tibullus? To this it may be anſwered, that the old librarians uſed commonly, in order to enhance the price of their MSS. to join to an author, who had not left many works behind him, any writer who compoſed in what they thought a ſimilar taſte. By this means, a ſatire, which our Sulpicia certainly wrote, was long aſcribed by ſome to Juvenal, and by others to Auſonius, from having been found in the MS. works of thoſe two poets; till ſome critics of more underſtanding * proved to the learned, neither Juvenal, nor Auſonius, but Martial's Sulpicia wrote it.

Such are the arguments by which the commentators ſupport their different opinions. The reader muſt determine for himſelf. But if the tranſlator might be permitted to pronounce on the ſubject, he would ſay, that if any weight might be laid on difference of ſtyle, and eſpecially of thought, the following poems cannot be the work of Tibullus:—but whether Martial's Sulpicia, or who elſe wrote them, is not in his power to determine. But as Sulpicia is the only perſon to whom the critics attribute them, the tranſlator, not knowing any one elſe, who can ſhow a preferable claim, has retained her name in the title page.

Notwithſtanding, however, it cannot be abſolutely aſcertained (and how can controverſies of this ſort be abſolutely aſcertained?) who was the perſon to whoſe happy talent we owe the following poems; every reader of taſte will allow, that

* *Scaliger, &c.*

they abound with ſtriking beauties; and that, upon the whole, thoſe critics do no great injury to Tibullus, who ſtill aſcribe them to that poet.

As Sulpicia and Cerinthus perfectly underſtood one another, we muſt not expect in their poems thoſe ſallies and tranſitions of paſſion, that frantic and deſpondent air, ſo obſervable in Tibullus: for theſe are the natural emanations of a heated fancy and a diſtracted heart. But the poems before us abound in what the moderns denominate gallant flattery. Moſt of them ſhow the poet and happy lover. They give us little anecdotes of their paſſion, and make us regret we have no more.

POEM I.

Great god of war! Sulpicia, lovely maid,
To grace your calends, is in pomp array'd.
If beauty warms you, quit th' etherial height,
E'en Cytherea will indulge the ſight:
But while you gaze o'er all her matchleſs charms,
Beware your hands ſhould meanly drop your arms!
When Cupid would the gods with love ſurpriſe.
He lights his torches at her radiant eyes.
A ſecret grace her every act improves,
And pleaſing follows whereſoe'er ſhe moves:
If looſe her hair upon her boſom plays;
Unnumber'd charms that negligence betrays:
Or if 'tis plaited with a labour'd care,
Alike the labour'd plaits become the fair.
Whether rich Tyrian robes her charms inveſt,
Or all in ſnowy white the nymph is dreſt,
All, all ſhe graces, ſtill ſupremely fair,
Still charms ſpectators with a fond deſpair.
A thouſand dreſſes thus Vertumnus wears,
And beauteous equally in each appears.
The richeſt tints and deepeſt Tyrian hue,
To thee, O wonderous maid! are ſolely due:
To thee th' Arabian huſbandman ſhould bring
The ſpicy produce of his eaſtern ſpring:
Whatever gems the ſwarthy Indians hoaſt,
Their ſhelly treaſures, and their golden coaſt,
Alone thou merit'ſt! come, ye tuneful choir!
And come, bright Phœbus! with thy plauſive lyre!
This ſolemn feſtival harmonious praiſe,
No theme ſo much deſerves harmonious lays.

POEM II.

Whether, fierce churning boars! in meads ye ſtray,
Or haunt the ſhady mountain's devious way;
Whet not your tuſks, my lov'd Cerinthus ſpare!
Know, Cupid! I conſign him to your care.
What madneſs 'tis, ſhagg'd trackleſs wilds to beat,
And wound, with pointed thorns, your tender feet:
O! why to ſavage beaſts your charms oppoſe?
With toils and blood-hounds why their haunts encloſe?
The luſt of game decoys you far away;
Ye blood-hounds periſh, and ye toils decay!
Yet, yet could I with lov'd Cerinthus rove
Through dreary deſarts, and the thorny grove:
The cumbrous meſhes on my ſhoulders bear,
And face the monſters with my barbed ſpear:
Could track the bounding ſtags through tainted grounds,
Beat up their cover, and unchain the hounds:
But moſt to ſpread our artful toils I'd joy,
For while we watch'd them, I could claſp the boy!
Then, as entranc'd in amorous bliſs we lay,
Mix'd ſoul with ſoul, and melted all away!
Snar'd in our nets, the boar might ſafe retire,
And owe his ſafety to our mutual fire.
O! without me ne'er taſte the joys of love,
But a chaſte hunter in my abſence prove.
And O! my boars the wanton fair deſtroy,
Who would Cerinthus to their arms decoy!
Yet, yet I dread!—Be ſports your father's care;
But you, all paſſion! to my arms repair!

POEM III.

Come, Phœbus! with your looſely floating hair,
O ſooth her torture, and reſtore the fair!
Come, quickly come! we ſupplicant implore,
Such charms your happy ſkill ne'er fav'd before!
Let not her frame, conſumptive pine away,
Her eyes grow languid, and her bloom decay;
Propitious come! and with you bring along
Each pain ſubduing herb, and ſoothing ſong;
Or real ills, or whate'er ills we fear,
To ocean's fartheſt verge let torrents bear.
O! rack no more, with harſh, unkind delays,
The youth, who ceaſeleſs for her ſafety prays;
'Twixt love and rage his tortur'd ſoul is torn;
And now he prays, now treats the gods with ſcorn.
Take heart, fond youth! you have not vainly pray'd
Still perſevere to love th' inchanting maid:
Sulpicia is your own! for you ſhe ſighs,
And ſlights all other conqueſts of her eyes:
Dry then your tears; your tears would fitly flow
Did ſhe on others her eſteem beſtow.
O come! what honour will be yours, to ſave
At once two lovers from the doleful grave?
Then both will emulous exalt your ſkill;
With grateful tablets, both your temples fill:
Both heap with ſpicy gums your ſacred fire;
Both ſing your praiſes to th' harmonious lyre:
Your brother-gods will prize your healing powers,
Lament their attributes, and envy yours.

POEM IV.

On my account, to grief a ceaſeleſs prey,
Doſt thou a ſympathetic anguiſh prove?

I would not wish to live another day,
If my recovery did not charm my love:
For what were life, and health, and bloom to me,
Were they displeasing, beauteous youth! to thee.

POEM V.

With feasts I'll ever grace the sacred morn,
When my Cerinthus, lovely youth was born.
At birth, to you th' unerring sisters sung
Unbounded empire o'er the gay and young:
But I, chief I! (if you my love repay),
With rapture own your ever-pleasing sway.
This I conjure you, by your charming eyes,
Where love's soft god in wanton ambush lies!
This by your genius, and the joys we stole,
Whose sweet remembrance still enchants my soul!
Great natal genius! grant my heart's desire,
So shall I heap with costly gums your fire!
Whenever fancy paints me to the boy,
Let his breast pant with an impatient joy:
But if the libertine for others sigh
(Which love forbid!) O love! your aid deny.
Nor, love! be partial, let us both confess
The pleasing pain, or make my passion less.
But O! much rather 'tis my soul's desire,
That both may feel an equal, endless fire.
In secret my Cerinthus begs the fame,
But the youth blushes to confess his flame:
Assent, thou god! to whom his heart is known,
Whether he public ask, or secret own.

POEM VI.

Accept, O natal queen! with placent air,
The incense offer'd by the learned fair.
She's rob'd in cheerful pomp, O power divine!
She's rob'd to decorate your matron-shrine;
Such her pretence; but well her lover knows
Whence her gay look, and whence her finery flows.
Thou, who dost o'er the nuptial bed preside,
O! let not envious night their joys divide,
But make the bridegroom amorous as the bride!
So shall they tally, matchless lovely pair!
A youth all transport, and a melting fair?
Then let no spies their secret haunts explore,
Teach them thy wiles, O love! and guard the door.
Assent, chaste queen! in purple pomp appear;
Thrice wine is pour'd and cakes await you, here.
Her mother tells her for what boon to pray;
Her heart denies it, though her lips obey.
She burns, that altar as the flames devour;
She burns, and slights the safety in her power.
So may the boy, whose chains you proudly wear,
Through youth the soft indulgent anguish bear;
And when old age has chill'd his every vein,
The dear remembrance may he still retain!

POEM VII.

I.

At last the natal odious morn draws nigh,
When to your cold, cold villa I must go;
There, far, too far from my Cerinthus sigh:
Oh why, Messala! will you plague me so?

II.

Let studious mortals prize the sylvan scene;
And ancient maidens hide them in the shade;
Green trees perpetually give me the spleen;
For crowds, for joy, for Rome, Sulpicia's made!

III.

Your too officious kindness gives me pain.
How fall the hailstones! hark! how howls the wind!
Then know, to grace your birth day should I deign,
My soul, my all, I leave at Rome behind.

POEM VIII.

At last the fair's determin'd not to go:
My Lord! you know the whimsies of the sex.
Then let us gay carouse, let odours flow;
Your mind no longer with her absence vex:
For O! consider, time incessant flies;
But every day's a birth-day to the wise!

POEM IX.

That I, descended of Patrician race,
With charms of fortune, and with charms of face,
And so indifferent grown to you of late,
So little car'd for, now excites no hate.
Rare taste, and worthy of a poet's brain.
To prey on garbage, and a slave adore!
In such to find out charms a bard must feign
Beyond what fiction ever feign'd of yore.
Her friends may think Sulpicia is disgrac'd;
No! no! she honours your transcendent taste.

POEM X.

If from the bottom of my love-sick heart,
Of last night's coyness I do not repent,
May I no more your tender anguish hear,
No longer see you shed th' impassion'd tear.
You grasp'd my knees, and yet to let you part—
O night more happy with Cerinthus spent!
My flame with coyness to conceal I thought,
But this concealment was too dearly bought.

POEM XI.

Fame says, my mistress loves another swain;
Would I were deaf, when fame repeats the wrong!
All crimes to her imputed, give me pain,
Not change my love: Fame, stop your saucy tongue!

POEM XII.

Let other maids, whose eyes less prosperous prove,
Publish my weakness, and condemn my love.
Exult, my heart! at last the queen of joy,
Won by the music of her votary's strain,
Leads to the couch of bliss herself the boy;
And bids enjoyment thrill in every vein:
Last night entranc'd in ecstasy we lay,
And chid the quick, too quick return of day!

But ſtop, my hand! beware what looſe you ſcrawl,
Leſt into curious hands the billet fall.
No—the remembrance charms!—begone, gri-
Matrons! be yours formality of face. [mace!

Know, with a youth of worth, the night I
ſpent,
And cannot, cannot, for my ſoul repent!

NOTES ON SULPICIA'S POEMS.

POEM I.

Ver. 4. One of the critics has obſerved upon this paſſage, that Venus muſt either have had great confidence in her own charms; or have been little ſolicitous what became of her paramour Mars, to indulge him in this interview.

Ver. 6. When Euryclea, in the Odyſſey (lib. xix) diſcovers Ulyſſes (whom ſhe was bathing) by the ſcar in his leg, her joyful ſurpriſe is finely imagined, by her being ready to faint, and her dropping the jar of water. Nor leſs beautiful is the ſurpriſe teſtified by Paris, when by chance he beheld the fair boſom of Helen:

Dum ſtupeo viſis (nam pocula ſorte tenebam)
Tortilis e digitis excidit anſa meis.
Ep. Her. lin. 251.

Menage, in his Bird-Catcher and Adonis, gives a no leſs fine inſtance of aſtoniſhment; but Milton has ſurpaſſed them all, in the picture he has drawn of Adam's conſternation and horror, upon being told by Eve that ſhe had eaten of the forbidden fruit, which is a beautiful contraſt to the joy which ſhe ſhowed in narrating the fact:

Thus Eve, with count'nance blithe, her ſtory told,
But in her cheek diſtemper flushing glow'd.
On th' other ſide, Adam, ſoon as he heard
The fatal treſpaſs done by Eve, amaz'd,
Aſtoned ſtood, and blank; while horror dull
Ran through his veins, and all his joints relax'd;
From his ſlack hand the garland, wreath'd for Eve,
Down dropt, and all the faded roſes ſhed:
Speechleſs he ſtood, and pale; till thus at length
Firſt to himſelf he inward ſilence broke.
Book ix. *l.* 886.

What the author of this poem aſcribes to the power of beauty, Pindar aſcribes (perhaps no leſs truly) to the force of harmony.

Χρυσεα φορμιγξ Απολλων, &c. *Pyth. Od.* 1.

which the late Mr. Weſt has thus poetically rendered:

Hail, golden lyre! whoſe heaven-invented ſtring
To Phœbus and the black hair'd nine belongs,
Who, in ſweet chorus, round their tuneful king,
Mix with thy ſounding chords their ſacred ſongs.
The dance, gay queen of pleaſure! thee attends;
Thy jocund ſtrains her liſtening feet inſpire:
And each melodious tongue its voice ſuſpends,
Till thou, great leader of the heavenly choir!
With wanton art preluding, giv'ſt the ſign—
Swells the full concert then with harmony divine.

DECADE II.

Then, of their ſtreaming lightnings all diſarm'd,
The ſmouldering thunderbolts of Jove expire:
Then, by the muſic of thy numbers charm'd,
The birds fierce monarch drops his vengeful ire;
Perch'd on the ſceptre of th' Olympian king,
The thrilling darts of harmony he feels;
And indolently hangs his rapid wing,
While gentle ſleep his cloſing eye-lid ſeals;
And o'er his heaving limbs in looſe array,
To every balmy gale, the ruffling feathers play.

But what gave riſe to this quotation follows Decade III.

Ev'n Mars, ſtern god of violence and war,
Sooths with thy lulling ſtrains his furious breaſt,
And, driving from his heart each bloody care,
His pointed lance conſigns to peaceful reſt.

Which image, as well as that of the eagle, are thus imitated by two excellent poets of our own days.

O! ſovereign of the willing ſoul
Parent of ſweet and ſolemn-breathing airs,
Enchanting ſhell! the ſullen cares
And frantic paſſions hear thy ſoft controul.
On Thracia's hills the lord of war
Has curb'd the fury of his car,
And dropp'd his thirſty lance at thy command.
Perching on the ſcepter'd hand
Of Jove, thy magic lulls the feather'd king
With ruffled plumes and flagging wing;
Quench'd in dark clouds of ſlumber lie
The terror of his beak, and lightning of his eye.
Ode by Gray.

What follows, is from Dr. Akenſide's Hymn to the Naiads:

With emulation all the ſounding choir,
And bright Apollo, leader of the ſong,
Their voices through the liquid air exalt,
And ſweep their lofty wings: thoſe awful ſtrings,
That charm the mind of gods; that fill the courts
Of wide Olympus with oblivion ſweet
Of evils, with immortal reſt from cares;
Aſſuage the terrors of the throne of Jove;
And quench the formidable thunderbolt
Of unrelenting fire, with ſlacken'd wings,
While now the ſolemn concert breathes around,
Incumbent o'er the ſceptre of his lord
Sleeps the ſtern eagle, by the number'd notes
Poſſeſs'd, and ſatiate with the melting tone;
Sovereign of birds. The furious god of war,
His darts forgetting, and the rapid wheels

That bear him vengeful o'er th' embattled plain
Relents, and ſooths his own fierce heart to eaſe.
Dodſley's Collect. vol. vi.

While ſuch imitations make it doubtful to whom the palm of preference ſhould be given, all complaints of decay of poetical genius among us, muſt be imputed, either to ignorance or malice.

Ver. 8. Andreas Schottus makes our authoreſs indebted to Euripides for this thought; and yet what he quotes from that excellent tragic poet, has little or no reference to the text. The words are,

Ερως ερως, ὁ κατ' ομμαϑων
Στειξις ϖϑον, εισαγων γλυκειαν
Ψυχα χαριν ϖς επιϑραϊευση *Hippol. ver.* 525.

Broekhuſius has collected moſt of the paſſages from the ancient and modern (Latin) poets, where love is either ſaid to lurk in the eye, or baſk in the cheek of a fine woman, but gives juſtly the preference to the text. Thoughts of this kind, however, are now-a-days too threadbare even to pleaſe a chambermaid.

Ver. 9 Cardinal Bembow and Count Caſtiglione have both imitated this paſſage. The latter inſerted his imitation in a poem he addreſſed to his wife Elizabeth Gonzaga, on her ſinging, and is as follows:

Quidquid agit, certant pariter componere furtim
Et Decor & charitis, & pudor ingenuus.

Elizabeth had a fine genius for poetry.

Ver. 13. "Comæ," απο τϖ κοσμειν, "dicuntur Capilli aliqua cura compoſiti; teſte Feſto." And Servius adds, that "coma" belongs to women's, as "cæſariis" does to men's hair: but this diſtinction is too refined; Tibullus himſelf applies "coma" to the hair of a boy. Vide Book i. El. 10.

Ver. 17. Lord Lanſdown has ſome thoughts analogous to theſe of our poeteſs.

When Myra walks, ſo charming is her mien,
In every motion every grace is ſeen.

And again,

With charms ſo numerous Myra can ſurpriſe
The gazer knows not by what darts he dies;
So thick the volley, and the wound ſo ſure,
No flight can ſave, no remedy can cure.

Ovid's Vertumnus is a maſterpiece. See Metamorphoſis, lib. 14.

Ver. 21. This and the remainder of the poem are alſo imitated by Caſtighone; and though he hath well performed, yet Francius, who has alſo adopted the ſentiments of our author, hath ſurpaſſed the Count in a poem addreſſed to that great ſcholar, but middling poet, Monſ. Menage

Ver. 23. It was ſo commonly believed, in the time of Auguſtus, that Arabia, beſides ſpices, contained immenſe quantities of gold, that the emperor marched thither a conſiderable army, A U. C. 729. which periſhed by ſickneſs. A like fate attend every army, which invades any country on ſuch an account.

POEM II.

Ver. 3. The Cerinthus whom Horace mentions, was a beautiful ſlave from Chalcis; and under this name, applied only to the handſome, Sulpicia probably veiled her regard for ſome young perſon of faſhion.

Ver. 4. Mr. Gay, in his fine ballad, intituled William and Sufan, has the following pretty if not true thought,

Love will ward off the bullets as they fly,
Leſt precious drops ſhould fall from Sufan's eye.

Ver. 11. However diſagreeable field-ſports were to the amiable Sulpicia, yet to have the pleaſure of Cerinthus's company, ſhe was willing to undergo all the fatigues and dangers of boar-hunting. Such is the nature of love!

Had Guarini our Sulpicia in his mind, when he made Dorinda thus addreſs Sylvio?

Te ſeguiro compagna
Del tuo fido, Melampo aſſai piu fida:
E quando farai ſtanco
T' auſchiugerò la fronte:
E fovra queſto ſianco,
Che per ti mai non poſa, havrai ripoſo.

It is thus that Prior deſcribes the diſguiſes which Henry aſſumed, in order to obtain the affection of the beautiful Emma:

When Emma hunts, in huntſman's habit dreſt,
Henry on foot purſues the bounding beaſt;
In his right hand his beachen pole he bears,
And graceful at his ſide his horn he wears, &c.

Again,

A falc'ner Henry is, when Emma hawks;
With her of tarſels and of lures he talks;
Upon his wriſt the towering merlin ſtands,
Practis'd to run, and ſtoop, at her commands, &c.

Again,

A ſhepherd now along the plain he roves,
And with his jolly pipe delights the groves:
The neighbouring ſwains around the ſtranger throng,
Or to admire, or emulate his ſong, &c.

And laſtly,

A frantic gypſy, now, the houſe he haunts,
And in wild phraſes ſpeaks diſſembled wants:
With the fond maids in palmeſtry he deals;
They tell the ſecret firſt, which he reveals, &c.

POEM III.

Ver. 1. Would not a long enumeration of the epithets of Apollo have been extremely improper here? and does not his immediate call for aſſiſtance ſhow the greatneſs of the writer's concern?

When Laura was at the point of death, how very coldly does Petrarch place her next to Jupiter, inſtead of breaking forth into paſſionate exclamations? and how poorly conſolitary is his viſion? Prim. Part. Canzon. 12, 13, 14, &c.

Ver. 9. Hence Apollo, from the Greeks, had the appellation of Θεος αλεξικακος, (deus malorum depulsor), bestowed on him; as the Latins called him *Averruncus*.

Ver. 10. All expiations and "purgamenta" were, by the ancients, performed either on the brink of a river, or on the sea-shore: this practice continued long after the introduction of Christianity, for we are informed by Petrarch, that he saw the women of Cologne, with garlands on their heads, wash their arms in the Rhine, while they muttered some foreign charm. The poet, wondering both at the crowd and the action, inquired the reason, and was told, that it was a very ancient rite, the common people believing that all the calamities of the ensuing year were prevented by the solemn ablution of that day. Vide lib i. Ep 4

Petrarch flourished in the fourteenth century, and was no less eminent for his Latin (insomuch that he obtained the appellation of the restorer of that language), than for his Italian compositions. In propriety, exactness, elegance, and melody he surpassed all his poetic predecessors; and so much was he esteemed, that a man, for having shot, out of wantonness, at his statue in Padua, and broke its nose, was hanged by the Venetians. Vindelino Spira published the first edition of his Rime, at Venice, A. D. 1470.

Ver. 18. Some editions read "fedula;" and indeed the epithet is more consonant to the interpretation which Broekhusius and the translator have given of the passage. Vulpius explains the "credula turba" to be those, who, either about Sulpicia's bed, or in the temples of the gods, put up petitions for her recovery.

Ver. 27. This is an elegant compliment on the professors of medicine.

POEM V.

Ver. 19. In this manner he prayed, lest any of the auditors should envy him, say the commentators; or lest a fascinating tongue "(lingua fascinatrix)" should prevent the completion of his prayers. None, add they, chose in an audible voice to lay open their real wants to the gods, lest the bystanders should overhear them; and therefore, all those, who desired of the gods what was extravagant, or what was immodest, or in short what they did not choose to own, either muttered their vows, or whispered them in the ear of their deity. And thus the ancients, as Seneca expresses it, told that to God, which they were ashamed a mortal should be made privy to. "Quanta dementia est hominum? turpissima vota Diis insusurrant: si quis admoverit aurem contiscescent; et quod scire hominem nolunt, Deo narrant." Ep. 10. See this impiety severely treated by Persius, in his second satire.

POEM VI.

Ver. 2. Sulpicia had a good title to that epithet; for in the following line, she said no more of her poetical endowments, than she modestly might,

Primaque Romanos docui contendere graiis.

That the Romans should have produced not one poetess before Sulpicia, to put them more upon a level with the Greeks, is matter of no small astonishment; since, as Cato observed, the Romans governed the world, but the women governed the Romans. How many fair poetesses has this island produced? and in particular, how many does Britain at present boast of, whose writings, both in prose and verse, may be compared, much to their advantage, with all the female productions of antiquity?

Besides Sulpicia, the poets mention Perilla and Theophila. Perilla lived in the Augustan age, and is praised by Ovid, Trist. lib. iii. el. 7. The other was a cotemporary of Martial's, who celebrates her, lib. 7. ep. 68. Their works, if ever they published any, are now lost. But we have a Virgilian canto on the life of our Saviour, written in the reign of Theodosius and Honorius, by Proba Falconia. This poetess, who was married to a person of proconsular dignity, is accused by some of having betrayed Rome into the hands of Alaric the Goth; but Cæsar Baronius has fully cleared her from that disloyal imputation.

Juvenal, Boileau, and others, have expressed, in their writings, a vast aversion to learned women; and indeed were all of the sex, who have learning, to be such as they represent them, the translator would heartily join with the satirists: but how can he do it, whilst he has the honour to know some ladies, who possess as great a fund of erudition, as most men are enriched with, and who, nevertheless, are entirely free from all those disagreeable concomitants, with which those poets have loaded their armed women? In short, when we consider in what manner the welfare of society depends upon the fair sex, we cannot but own, that their understandings ought to be cultivated with much assiduity: a fine woman, with a good heart, and an improved head, is the loveliest object in the creation.

Ver. 9. The word *componère*, in the original, is a metaphor taken from gladiators, who were then said *componi*, when they fought together, and were well matched. VULPIUS.

Ver. 3. ——*in purple pomp appear.*] That is, in a palla of purple; which not only Apollo and his votaries, with Osiris, wore, but in which also Bacchus, Mercury, Pallas, Night, the Furies, Discord, and even rivers were habited. "Adeo semper," says Macrobius, "ita se et sciri et coli numina maluerunt, qualiter in vulgus antiquitas fabulata est; quæ et imagines et simulacra formarum talium prorsus alienis, et ætates tam incrementi quam diminutionis ignaris, et amictus ornatusque varios corpus non habentibus adsignavit." BROEKH.

Ver. 16. Vulpius retains the old reading,

jam sua mente rogat,

and explains it, as if Sulpicia were now "sui juris

et arbitrii," of age, and fit to make vows for herſelf; but had that ingenious commentator attended to the words "clam et tacita" in the ſame line, he would have ſeen that the true reading was that which is retained in the text.

Ver. 17. Menage obſerves of the original of this paſſage. that an active ſhould not follow a paſſive verb; and therefore contends that the "urunt" ſhould be "uruntur:" and yet we know that the contrary practice is warranted by ſome of the pureſt writers of the Auguſtan age; and, if the tranſlator is not miſtaken, that learned grammarian himſelf has, in his Latin poems, fallen into the mode of expreſſion, which he here condemns in Sulpicia.

POEM VII.

Ver. 2. The villa, mentioned in the original, is Eretum, now Monte Ritondo. It was ſituated upon a high hill, not far from the banks of the Tiber, and was therefore cool, even in the midſt of ſummer. Cluverius places it at the diſtance of fourteen miles from Rome; but Holſtenius, in his Annot. Geogr. on the authority of Antoninus's Itinerary, and Ferrarius removes it four miles farther off.

POEM IX.

Ver. 1. From the original, the commentators conclude, that Sulpicia was the daughter of that famous Servius Sulpicius, who died at Modena, whilſt he was engaged in an embaſſy to Antony, which he had undertaken at the requeſt of the conſuls Hirtius and Panſa, and of the ſenate: but then they ſeem to forgot that Servius was a prænomen common to all the males of the Sulpician family and therefore not diſtinguiſhingly characteriſtic of any one of them. Thoſe who ſuppoſe that Tibullus wrote theſe poems, and believe he was born in 710, make him a poet before his birth; for, ſays Broekhuſius, Sulpicia ſpeaks of her parents as if both were alive. Although the tranſlator is perſuaded that the pieces in this book are not Tibullus's, yet he can ſee nothing in the poem to ſupport this aſſertion. Sure Sulpicia might call herſelf the daughter of Servius Sulpicius, notwithſtanding her father's death; and the two laſt lines of the original may be applied to her neareſt relations or guardians, with as much propriety as to her parents.
